**Original via Courier**

Ms. Erica M. Hamilton  
Commission Secretary  
BC Utilities Commission  
Sixth Floor, 900 Howe Street, Box 250  
Vancouver, BC V6Z 2N3

Dear Ms. Hamilton:

**Re:    *An Application for a CPCN for the Okanagan Transmission Reinforcement (OTR)***  
***Project No. 3698488***

Please find enclosed FortisBC Inc.'s ERRATA 3 with regard to the above CPCN Application. Twenty copies will be couriered to the Commission.

Sincerely,

A handwritten signature in black ink, appearing to read "DIBH".

David Bennett  
Vice President, Regulatory Affairs  
and General Counsel

cc:     Registered Intervenors

## **FortisBC Inc. - Okanagan Transmission Reinforcement (OTR) Project**

### **ERRATA 3**

**1. Exhibit B-1-1 - Section-3, page 18, lines 21-22,**

390 GWh should read **"11 GWh"**

**2. Exhibit B-1-1 - Section 3, page 19, Figure 3-1-3-5A: Annual Energy Shortfall, Normal Operating Conditions**

Please remove Section 3, page 19 and replace with enclosed "Updated May 13, 2008" Section 3, page 19

**3. Exhibit B-1-2 - Exhibit E - page 12 of 25**

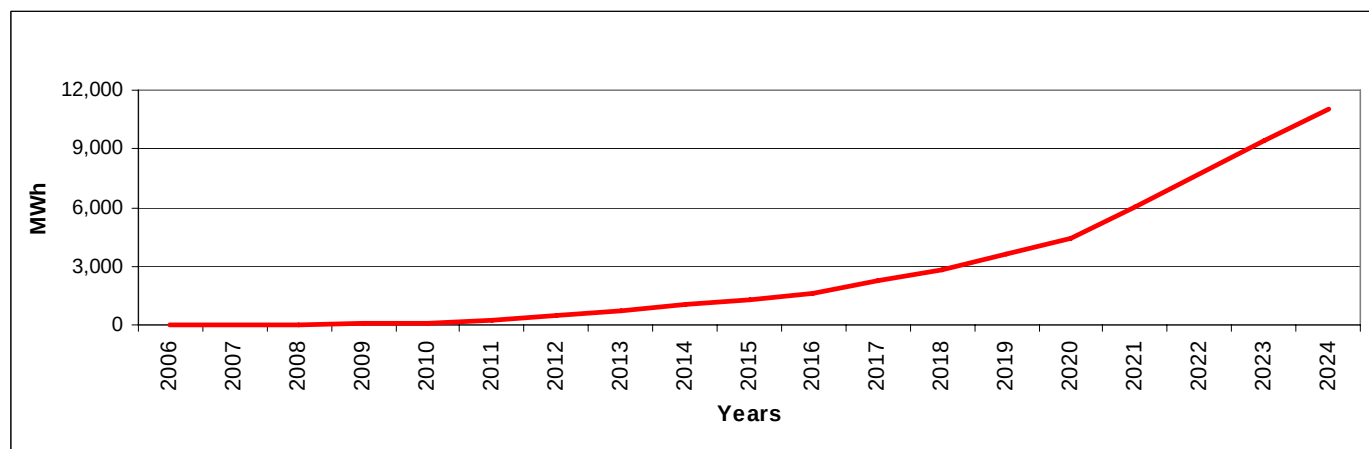

Please remove Exhibit E page 12 of 25 and replace with the enclosed Exhibit E - Updated May 13, 2008 with Structure Numbers

**4. Exhibit - B-3BCUC IR1 - A40.3 - page 168**

Please remove page 168 and replace with the attached BCUC IR1 - A40.3 - page 168 which identifies structure 76L-94 as a proposed double circuit monopole.

**5. Exhibit B-8 - SOFAR/Wiltse IR1 Attachment A6.1**

Please remove SOFAR/Wiltse Attachment A6.1 (contact list) and replace with the attached SOFAR/Wiltse IR1 Attachment A6.1 Updated May 13, 2008, which is the line list requested.

**Figure 3-1-3-5A: Annual Energy Shortfall, Normal Operating Conditions**

### 19 **Single Contingency (N-1)**

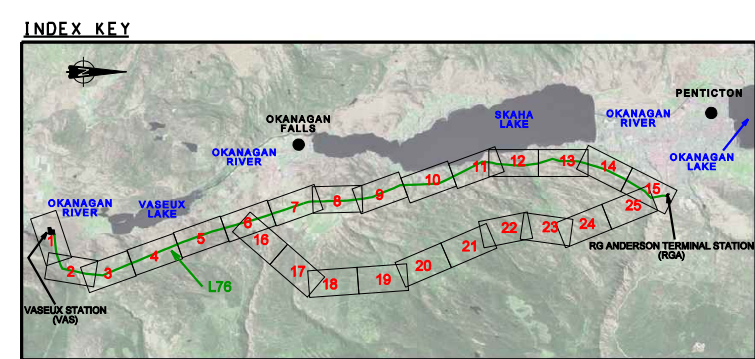

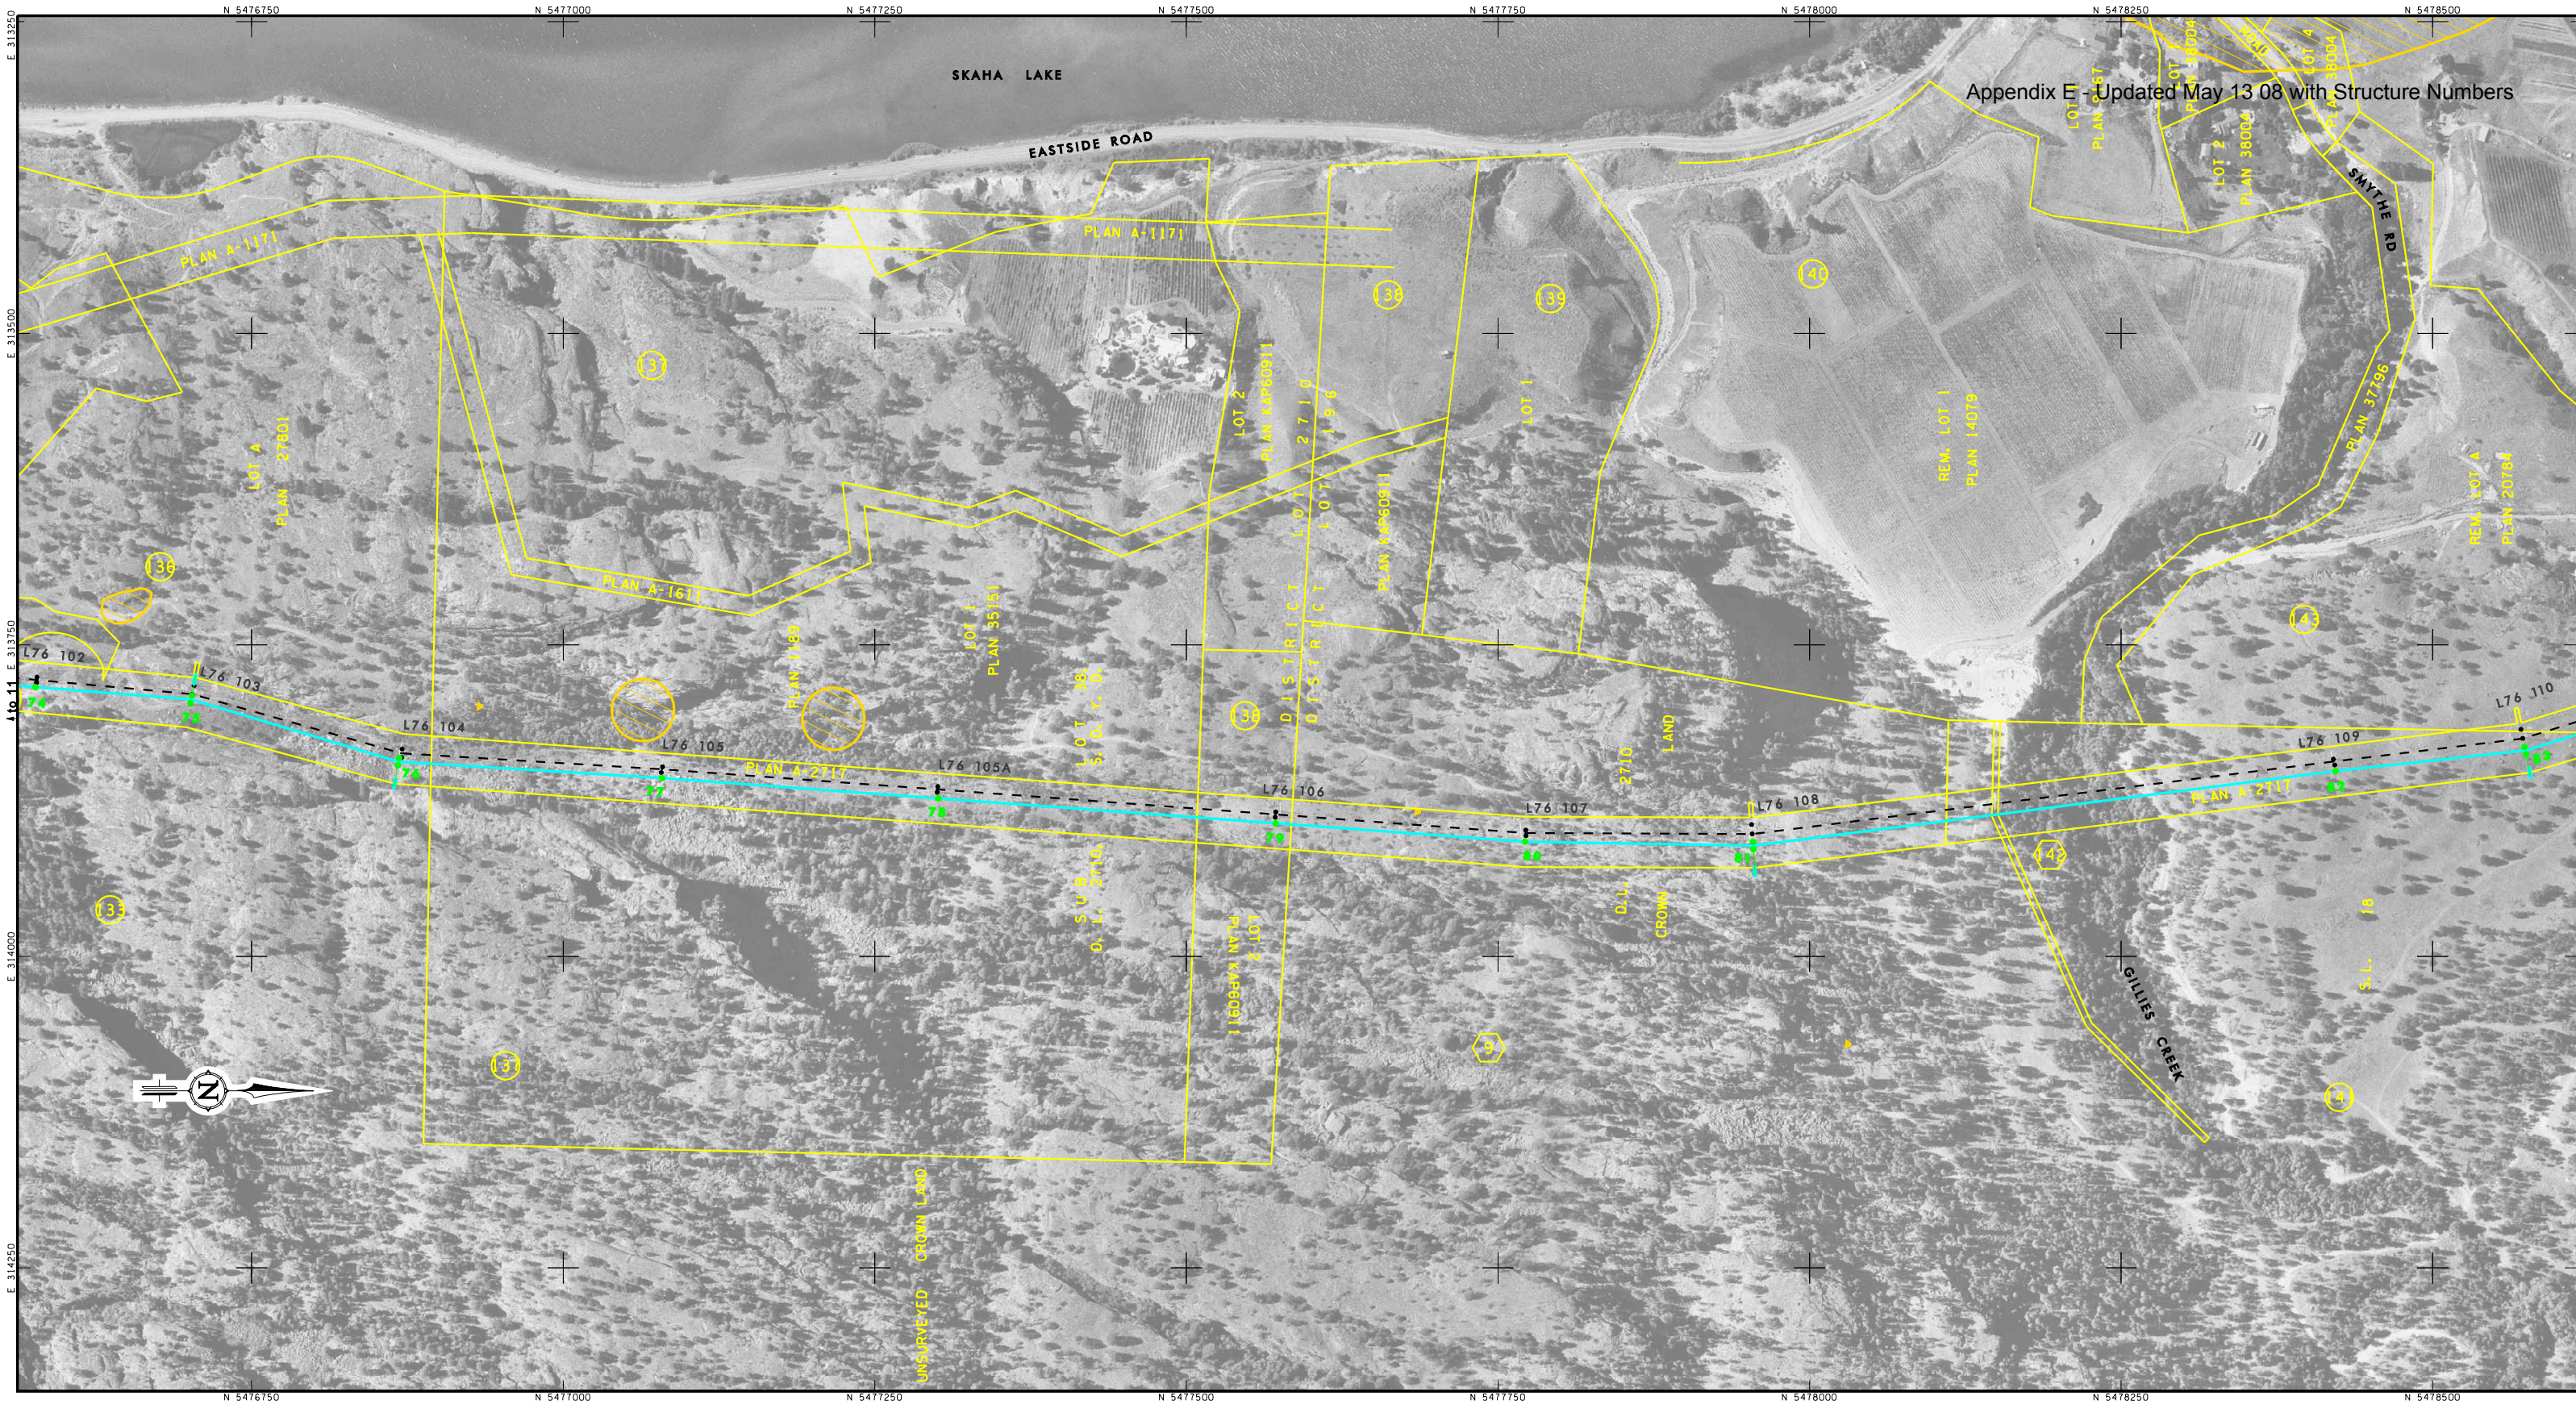

20 The single contingency capacity of the Kelowna to Penticton system has already been  
21 exceeded during system peak load periods. The capacity deficit is approximately 109  
22 MVA in 2007 (25% of Kelowna/ Penticton system peak), meaning that, under conditions  
23 of a single element failure, a subsequent equipment failure at any point in the area  
24 would result in forced load shedding.

25 As the Okanagan load continues to increase, the transmission system will be severely  
26 affected by a single contingency, for example the failure of 76 Line interconnecting  
27 Vaseux Lake and RG Anderson Terminal stations. The loss of 76 Line will have a  
28 greater impact than the loss of either 72 Line or 74 Line. By 2024, approximately 48% of  
29 regional peak demand, approximately 300 MVA, will be at risk.

### 30 **Double Contingency (N-1-1/N-2)**

31 The present Kelowna to Penticton system does not meet double contingency criteria.  
32 The N-1-1/N-2 criteria can only be met for approximately 1,575 hours (18%) during  
33 2007; outside of this, any sequential or coincidental outage of two system elements  
34 could result in the complete blackout of the Kelowna area. By 2014, double  
35 contingency criteria will only be met for approximately 440 hours (5%) per year.
