Connection Changes Review (the "Application") Project No. 3698472

Response to the British Columbia Utilities Commission ("BCUC" or the "Commission") Information Request ("IR") No. 2

In accordance with Commission Order No. G-114-07 setting out the amended Regulatory Timetable for the Application, the Companies were to receive IR No. 2 from the BCUC and Intervenors on Wednesday, September 26, 2007 and respond by Monday, October 1, 2007. The Companies received the BCUC IR No. 2 one day later, on Thursday, September 27, 2007, and upon determining that one additional day would be necessary to complete the response to BCUC IR No. 2, the Companies notified Commission staff that the submission would be filed on October 2, 2007.

TGI and TGVI respectfully submit the attached response to BCUC IR No. 2.

If there are any questions regarding the attached, please contact Mr. Tom Loski, Director, Regulatory Affairs at (604) 592-7464.

Yours very truly,

TERASEN GAS INC. and TERASEN GAS (VANCOUVER ISLAND) INC.

Application for System Extension & Customer Connection Changes Review

Submission Date: October 2, 2007

Response to British Columbia Utilities Commission Information Request No. 2

Page 1

35.0 Reference: Exhibit B-1, Application, pp. 12-15; MX Test Parameters

Exhibit B-3, BCUC IR No. 1, BCUC IR 5.3, Attachment 5.3

"The companies have reviewed TGI's 2006 actual cost data to determine the maximum allowance, or SLCA, based on the same methodology used in the 1996 application. This was done again by applying the current MX test to a single proxy customer based on current inputs and 2006 normalized annual consumption of a residential customer of 96.9 GJs."

35.1 Please provide the MX test parameters used to determine the maximum allowance/SLCA in 1996.

Response:

The MX Test parameters used in the 1996 SLCA calculation were as follows:

- Capital costs
 - Estimated direct cost of mains, services and meters/regulators
 - Overheads @t 37.5% of direct costs
- Delivery Margins
 - o Rate 1 \$75.84/year plus \$2.11/GJ
- Operation & Maintenance Expenses
 - o Rate 1 \$36/customer/year
- System Improvement Cost \$0.31/GJ
- Property taxes
 - o 2% times direct costs of mains and services
 - o 1% in Lieu equivalent to 1% of MX gross revenues
- Income and Capital Taxes
 - o Income tax rate 45.62%
 - Capital taxes provincial CCT and federal LCT
 - Capital Cost Allowance Class 1 4%
- Project Life 20 years
- Discount Rate 7.089% (Nominal After-tax WACC)
- 35.2 Please show the TGI and TGVI 2006 MX test parameters used to determine the target service line costs in Tables 4.2 and 4.3.

Response:

<u>TGI</u>

The 2007 MX Test parameters for TGI were used in the target service line cost calculations in Table 4.2 and were as follows:

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI")
(collectively the "Companies")

Application for System Extension & Customer Connection Changes Review

Submission Date: October 2, 2007

Response to British Columbia Utilities Commission Information Request No. 2

- Capital costs
 - Estimated direct cost of mains, services and meters/regulators
 - o Overheads @t 32% of direct costs
- Delivery Margins
 - o Rate 1 \$131.28/year plus \$2.736/GJ
- Operation & Maintenance Expenses
 - Rate 1 \$75/customer/year
- System Improvement Cost \$0.375/GJ
- Property taxes
 - 2.1% times direct costs of mains and services
 - o 1% in Lieu equivalent to 1% of MX gross revenues
- Income and Capital Taxes
 - o Income tax rate 34.12%
 - o Capital taxes n/a
 - o Capital Cost Allowance Class 1 4%
- Project Life 20 years
- Discount Rate 4.45% (Real after-tax WACC)

TGVI

The 2007 MX Test parameters for TGVI were used in the target service line cost calculations in Table 4.3 and were as follows:

- Capital costs
 - Estimated direct cost of mains, services and meters/regulators
 - Overheads @t 32% of direct costs
- Delivery Margins
 - o RGS-1 \$126/year plus \$4.885/GJ
- Operation & Maintenance Expenses
 - o RGS-1 \$62.48/customer/year
- System Improvement Cost \$0.50/GJ
- Property taxes
 - o 1.9% times direct costs of mains and services
 - o 1% in Lieu equivalent to 1% of MX revenues
- Income and Capital Taxes
 - o Income tax rate 34.12%
 - o Capital taxes n/a
 - Capital Cost Allowance Class 1 4%
- Project Life 20 years
- Discount Rate 4.2% (Real After-tax WACC)

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 3

35.3 Please show the calculation of the Maximum Allowance amounts in Tables 4.2 and 4.3.1.1 Please set out the Service Line Extension Policies of other gas distribution companies in Canada.

Response:

Please refer to Attachment 35.3 which provides the calculations of the maximum allowances in Tables 4.2 and 4.3. Attachment 35.3 includes three sheets for TGI and three sheets for TGVI corresponding to the average annual consumption values for TGI in the Table 4.2 and TGVI in Table 4.3. These sheets are adaptations of Appendix 3, Schedules 3 and 4 for TGI and TGVI respectively. Extra columns are added which impose an upper limit on the service line costs (i.e. the Maximum Allowance - equivalent to the SLCA) that reduces the average service line cost to the target service line cost. The Maximum Allowance results are determined by trial and error using the Goal Seek function of Excel. In one case for TGI with the annual consumption set at 96.9 GJ the target service line cost of \$1,181 is above the unadjusted average service line cost of \$1,161 so no upper limit can be derived.

For the service line policies of other Canadian Utilities, please see the response to BCUC IR No. 1, Question 1.1.

SLIF Parameters

36.1 Please calculate the impact on the 2007-2011 TGV and TGVI revenue requirements of eliminating the SLIF in 2006.

Response:

The impact of eliminating the SLIF in 2006 on the 2007-2011 revenue requirements is as follows below. These calculations do not attempt to model the benefits of any increase in customer attachments that may arise from eliminating the SLIF and other modifications to the system extension and connection policies sought in the Application. The calculations also assume that the same customers who chose to attach in 2006 would have attached if their contribution was higher. In all likelihood, the Company expects that some customers would not have attached to the system because of increased contribution charges. While the results below indicate revenue requirements will increase in the future it is important to recognize that customers being added to the system through new main extensions are more than paying for their incremental costs as indicated by MX PIs well in excess of 1.0 on average. These revenue requirement increases provide partial mitigation of the over-contribution being made by new customers.

BCUC Utility System Extension Test Guidelines, p. 18

System Improvement Charges - Recovery

"Terasen continues to be of the opinion that the accurate estimation of the cost and timing of large transmission system improvements is difficult and is subject to large swings driven at times by the decisions taken by large industrial customers. Misapplication of a transmission SI charge could prevent the attachment of otherwise economic customers which help to keep rates low for all ratepayers. To that effect, it is recommended that transmission SI costs be recovered through rates rather than through an SI charge applied to new customers."

37.1 If an existing customer increases its load and generates a transmission SI, does this impact the SI charge used in the main extension test? Is the customer responsible for any of the transmission SI costs?

Response:

Similar to the response to Question 37.2, generally speaking it is not appropriate to suggest that a specific existing customer has triggered a transmission SI. Transmission SIs are typically large capital expenditures that occur on an infrequent basis and cannot be uniquely attributed to a specific customer. They are necessitated by system growth that occurs over an extended period of time. A transmission SI may by happenstance occur around the same time a certain existing customer increases their load, but the load growth of many customers leading up to that time have used up available transmission system capacity. If transmission SIs are introduced into the main extension test, an existing customer whose load increases to the point of triggering a transmission SI, would cause an increase in the transmission SI charge in the main extension test for Existing customers under the current methodology are not future customers. responsible for the SI directly. However, all customers would still pay for the transmission SI by way of rates. Therefore, if transmission SIs are included in the main extension test, a new customer's MX test, and potentially their CIAOC would be affected by the SI. Additionally, the customer would also be required to pay rates that will increase in the future because of the transmission SI. However, this corresponding potential future increase in rates, and therefore margin, is not factored into the MX test. Ideally if a transmission SI charge for a potential transmission SI is included in the MX test, the margin revenue should also be increased to the extent that the transmission SI would cause an increase in rates.

If a transmission SI charge, based upon a future transmission SI, is included in the MX test, then the MX test will be more difficult to pass. However, once the asset has been built it would no longer be included in the calculation of the transmission SI. As such, customers who attached after the transmission SI was in place would have an easier time passing the MX test because the transmission SI charge would be lower and the margin rate would likely be higher. Therefore, including transmission SI's in the MX test sends the wrong signal to both current and new customers.

Please also refer to the response to Question 37.3.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 9

37.2 If a new customer generates a transmission SI, does this impact the SI charge used in the main extension test? Is the customer responsible for any of the transmission SI costs?

Response:

Generally speaking it is not appropriate to suggest that a specific new customer has triggered a transmission SI. Transmission SIs are typically large capital expenditures that occur on an infrequent basis and cannot be uniquely attributed to a specific customer. They are necessitated by system growth that occurs over an extended period of time. A transmission SI may by happenstance occur around the same time a certain customer is added to the system but the load growth of many customers leading up to that time have used up available transmission system capacity. A transmission SI allowance is therefore typically developed by analyzing load growth and growth-related transmission capital spending over an extended period of time such as 20 years. A levelization process is applied in the analysis to smooth out the lumpiness of the transmission SI capital spending.

If transmission SIs were to be included in the main extension test it would be expected that when the main extension parameters were updated, the new transmission SI in question would have been included in the determination of the transmission SI charge. The new customer would not directly pay for the transmission SI but would make an appropriate contribution to transmission SIs through rates and possibly through increased CIAOC (if transmission SIs were included in the MX Test).

37.3 Are distribution SI's for load increases from new and existing customers treated in the same manner as transmission SI's? If not, please explain.

Response:

Under the current test there are no transmission SI charges however there are distribution SI charges. The current practice is to review the distribution SI charge annually and adjust the charge as needed. Otherwise, distribution SIs are treated the same as what is described above if transmission SIs were to be included in the main extension test.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 10

Forecast Performance

38.1 Please confirm that TGVI under-collected contributions for service lines with cost greater than \$1,100 by \$1.1 million for the period April - December 2006.

Response:

In response to BCUC IR No.1, Question 6.1, the Companies provided a table that incorrectly tabulated the effect of contributions in aid of construction. Below is the table that shows a comparison between actual costs and forecast costs, and separately the level of actual contributions.

		1,816,559	3,364,686	-1,548,127	-560,635

This table shows that the difference between actual and forecast costs for TGI was \$1,991,878 and for TGVI the difference was \$1,548,127.

The information in this table however does not indicate that TGI and TGVI under collected contributions required from all new customers. What this table shows is that the forecast costs are less than the actual costs. If the forecast costs were higher, a higher contribution may be required in some cases and in other cases the contribution would not change. For example:

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission	

Response to British Columbia Utilities Commission Information Request No. 2

Page 12

- If a service line was forecast to be \$500, the customer would pay a contribution of \$215. If the actual cost ended up being \$1,000, the customer would still only pay a contribution of \$215.
- If the service line was forecast to be \$500, the customer would pay a contribution of \$215. If the actual cost ended up being \$1,300, and the increase in actual cost was due to increase length of service line the customer would have been charged an additional \$200 contribution (\$1,300-\$1,100), in addition to the \$215 SLIF, at the time of the forecast. Additionally, if the forecast was \$1300, the customer would have been charged \$215 plus \$200.

Therefore it can not be assumed that because the forecast was lower than the actual cost, that all new customers were under charged a contribution.

To be better able to analyze the data and provide responses to BCUC IR No. 2 questions, the Companies reorganized the data in the table provided above so that the service lines are grouped (\$500-\$599 etc.) based on the forecast cost rather than the actual cost. Ordering the data like this allows for an accurate comparison of forecast, actual, and contribution amounts (see Attachment 38.1).

The TGI table shows the same cumulative difference between forecast and actual costs as the table above. The majority of services are forecast to cost between \$600 and \$900. However, because the data is organized by forecast cost, a more appropriate comparison can now be made between forecast and actual for each \$100 increment. The data shows a relatively even distribution of forecast shortfall across all \$100 increments. In other words, the forecast cost was consistently less than actual cost no matter what the original forecast was.

As described above, while the forecast costs were less than the actual costs, this does not mean that all customers would necessarily have been required to pay a greater contribution. TGI will install services up to the \$1,100 SLCA for each service line with the customer paying the \$215 SLIF (which is treated as a CIAOC). If the forecast cost for a service line exceeds the SLCA, the customer must pay an additional contribution. When looking at new service line costs on average, the aggregate contribution amount other than the SLIF, would be expected to be the difference between actual costs per service line less the \$1,100 SLCA, multiplied by the number of customers. For the sample of customers for the period April 1 through December 31, 2006, based on average service line costs per customer, TGI could in aggregate install service lines up to a total of \$7,641,700 (6,947 customers @ \$1,100 each) without requiring a contribution other than the SLIF. For this sample of new service lines, the aggregate actual costs were \$7,909,802. The difference is \$268,102, which would be the expected amount of contribution that would have been paid, other than the SLIF. TGI recovered CIAOC of \$1,838,163 for this group of customers, including an aggregate amount for the SLIF of \$1,493,605 (6,947 customers X \$215). This means that TGI collected \$344,558 in additional contributions, which is \$76,456 greater than the expected aggregate contribution amount of \$268,102.

This indicates that while forecast costs were lower than actual costs, there was no detrimental impact on existing customers because aggregate service line costs were

Application for System Extension & Customer Connection Changes Review

Submission Date: October 2, 2007

Response to British Columbia Utilities Commission Information Request No. 2

Page 13

below the SLCA. However this data above is not intended to suggest that a SLCA of \$1,100 is appropriate for TGI. As noted in the Application the SLCA is intended to be the maximum capital expenditure that TGI would invest to install a service line. Maintaining a SLCA of \$1,100 would unfairly result in new customers paying more than the cost to serve required to serve this group. In effect this could result in new customers continuing to subsidize current customers. Increasing the SLCA to \$1,535 if there is no SLIF, \$1,750 if the SLIF remains in place, ensures that new customers do not pay more than their share of costs while also protecting the current customer from the addition of uneconomic customers.

This same analysis can be performed for TGVI, however in TGVI's case the actual costs exceed the aggregate allowed cost as based upon the SLCA (SLCA times the number of customers). When contributions are subtracted from the actual costs, the total SLCA allowed (\$1,100) is still lower than the actual costs less contributions. Therefore TGVI did not recover enough in contributions to offset the difference between total allowed SLCA (\$1,100) and total actual costs less additional contributions. However, if the total SLCA allowed is based upon the proposed SLCA of \$1,535, the picture changes. For this sample actual costs were \$3,363,052 and total allowed SLCA (\$1,535) was \$3,433,795 for a difference of \$70,743 before factoring in contributions. In order to comply with Commission Order No. G-126-05 for January 1, 2006, the SLCA for TGVI was set the same as TGI. In hindsight, TGVI believes that the SLCA was set too low for the 2006 period and should have been set higher. This supports TGVI's proposal to increase the SLCA from the current level of \$1,100 to \$1,535 assuming the SLIF is removed, or \$1,750 if the SLIF remains in place. By increasing the SLCA to these amounts, new customers would pay their fair share of costs for high cost service lines while at the same time ensuring that they are given the appropriate market signal to attach to the system. Lastly, current customers would benefit because of the addition of economic customers, but would also be shielded from the addition of uneconomic customers because of the ceiling provided by the SLCA.

As indicated in the responses to Questions 38.5.1 and 39.1, a review of service line cost parameters is currently underway that will determine appropriate forecast parameters to use.

38.2 For the TGI - TGVI Actual vs. Forecast Service Line Costs April - December 2006 data, please provide a table in the following format.

Service Line	Number of	Percentage of	Cumulative
Cost	Services	Total	Percentage
<\$1,100			
\$1,100 - 1,199			
\$1,200 - 1,299			
\$1,300 - 1,399			
\$1,400 - 1,499			
\$1,500 - 1,599			
\$1,600 - 1,699			
\$1,700 - 1,799			
\$1,800 - 1,899			
\$1,900 - 1,999			
\$2000 - 2,499			
\$2,500 - 2,999			
\$3,000 - 3,499			
> \$3,500			
Total			

Response:

Please refer to the response to Question 38.1

38.3 For the TGI and TGVI Actual vs. Forecast Service Line Costs April – December 2006 table, please provide a breakdown of the service line costs from \$2,000 - \$5,000 in \$100 increments.

Response:

Please refer to the response to Question 38.1

38.4 For TGI and TGVI, provide an Actual vs. Forecast Service Line Costs January – August 2007 table in the same format as the TGI –TGVI Actual vs. Forecast Service Line Costs April–December 2006.

Response:

Please find the requested tables below. Extracting the data to use in order to respond to this question is difficult mid year as the information on installed services changes daily

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 15

due to work continuing on services, services unbilled or being billed, and actual costing being incomplete. The data in the table represents approximately 80% of service lines installed for TGI and 50% of the service lines installed for TGVI. For those services that are in the sample many of the same data issues are present because the entire process for jobs may not be complete when the data was retrieved. When work is not complete a thorough comparison can not be made between forecast and actual. As such the data in these tables should only be used as a general indicator of what patterns exist between actual and forecast costs.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 18

38.5 Please explain the -\$987,492 (-54%) April - December 2006 TGVI service line cost variance.

Response:

As noted in response to Question 38.1, the Companies have provided an updated table that shows the variance between forecast and actual that is greater for both TGI and TGVI. As such, this response addresses the differences between forecast and actual for both TGI and TGVI.

The difference between forecast and actual costs is primarily because of two factors which are outlined below:

The Geographic Code ("Geo-code") pricing model used to determine the forecast service line costs did not include "indirect" costs such as costs that might accrue in standing jobs (drafters, OSRs, etc - any costs not charged directly to the job but considered part of the cost of installing services) in the determining the fixed or variable per meter service line geo-code charges. The inclusion of these costs increases the fixed and variable service line geo-code charges and should be included in determining the Geo-code. The costs that accrue in standing jobs are also partly recovered in the 32% overhead allowance that is added in the MX evaluation to the direct service line costs. The Companies are currently in the process of updating the Geo-code pricing model so that these costs are considered when deriving new Geo-code prices. With this change in the Geo-code pricing model there will need to be a corresponding reduction in the overhead allowance so that double counting does not occur.

The costs used to derive the Geo-code prices increased dramatically during 2006. Actual service line costs increased significantly in 2006 for a number of reasons including an increase in install contractor pricing effective June 1, 2006, increasing Company labour costs, and increases in permitting and paving costs.

In a rapid price escalating or declining environment a difference between forecast and actual costs would be expected. This difference would be further influenced by the time between when the forecast was provided and when the work actually took place. The longer this time period the greater the difference between forecast and actual.

38.5.1 What steps has TGVI undertaken to reduce the Actual vs. Forecast Service Line Cost variance?

Response:

As noted in the response above, the Companies have a process whereby main extension Geo-codes are reviewed annually, but regrettably the indirect costs were excluded. The Companies have set up a process to update both the main

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission	Page 19

extension and service line costs, a process that is currently underway. All Geocodes will be updated at the beginning of each year. In reviewing and updating the Geo-codes, both historical costs and a forecast of future costs will be used to determine the appropriate Geo-code for each area. The Companies expect future forecast costs will be closer to actual costs with the inclusion of the indirect costs. However, some variance between forecast and actual cost should be expected as a result of unanticipated increases in costs to install services.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 20

39.0 Reference: Exhibit B-3, BCUC IR No. 1, BCUC IR 6.1 and 7.2

Exhibit B-1, Application, Attachment 3, Schedule 5

TGVI Data

"...the TGVI sample suggests that the standard costing data may be underestimating actual costs. TGVI (as well as TGI) will be reviewing and updating the costing inputs used in the main extension test as part of the annual update of main extension parameters."

39.1 When will TGVI update the standard costing data and the main extension parameters?

Main Extension Costs Jan-Jul 2007										
TGVI										
Forecast	\$584,430									
Actual	724,796									
Variance	-\$140,366									
% Variance	-24%									

Response:

The parameters used in the main extension test for TGVI and for TGI were updated earlier this year and are considered current. They are next scheduled for review and updating in early 2008.

A review of the parameters used to forecast service line installation costs is currently underway, with an update planned over the next one to two months. A potential work stoppage arising from current labour negotiations at Terasen Gas may alter this work plan.

39.2 For the TGVI 2007 Main Extension Results table (Application, Attachment 3, Schedule 5) please increase the main direct cost by 24% and service line costs by 54% and recalculate the forecast 2007 TGVI P.I.'s and aggregate P.I.

Response:

The table below contains the original data from Schedule 5 of the Applications as well as the updated results based on the requested modifications to the main and service line costs. Increasing direct costs has the effect of increasing the NPV of the Cash Outflows while the calculated Cash Inflows remain unchanged. The net effect is a decrease of the P.I. ratio for each projected listed. Overall, the requested changes decreased the aggregate P.I. from 1.83 to 1.34.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission	Page 21

However, this analysis does not reflect what might have happened if customers were requested to pay higher connection charges. In many cases customers might have chosen to not install gas due to the high connection charges. As such, the Companies would expect that the aggregate PI to be different from that noted above.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 23

39.2.1 Please provide the P.I.'s and contribution amounts of the main extensions with a P.I. of less than 1.

Response:

The table below contains the subset of the data from the response to Question 39.2 above, where the P.I. is less than 1.0 under the revised main and service line costs. In the Original data analysis (P.I. = 1.83), two customers were required to pay contributions which totaled \$809. Under the revised costing, 16 customers would have had to pay a contribution which would have totaled \$45,278 in order to bring their P.I. to 1.0. When this revised data set is examined using a contribution threshold of P.I.=0.8, two customers would have been required to pay a total of \$1,485 in contributions.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission	D 01

Response to British Columbia Utilities Commission
Information Request No. 2

Page 25

40.0 Reference: Exhibit B-3, BCUC IR No. 1, BCUC IR 8.1

"In order to respond to this request, some simplifying assumptions needed to be applied to decrease the size of the task:

- "1. TGVI main extensions were excluded as there is insufficient data available on historical forecast values and main extension test results."
- 40.1 In the absence of the TGVI-specific data, why should it not be rightly concluded that there is insufficient evidence, at this time, on which to determine whether any changes to the TGVI main extension test are warranted?

Response:

The Companies do not believe that there is insufficient data to determine if changes to the TGVI main extension test are warranted. In the response to BCUC IR No. 1, Question 8.1, TGVI was asked to show the results of main extensions that had main extension tests and were installed prior to the adoption of the CAFÉ system and the billing system move from the MAST system to the Energy system. Although data was required from systems to which TGVI no longer has information access, more importantly, TGVI used a different main extension test prior to 2006 and as such, there is little value in comparing values from this test (if TGVI was able to review tests prior to 2006) to values from the new test.

A comparison of forecast to actual costs provides only a comparison of how well the Companies' forecast the cost of a main extension to the actual cost of the main extension. It does not indicate whether or not the main extension test is a good test or whether or not the test is appropriate. The Companies do agree that it is important to compare forecast to actual costs and that it is important to forecast accurately for any service connection. However, the forecast cost alone, within a main extension test, cannot be used to determine if the test is appropriate. One could use the same specific forecast cost for a main in a number of different main extension test models, (DCF tests, net revenue tests) each with different parameters within the test, and arrive at a different result to determine whether or not the main extension is economic. Therefore, one cannot look solely at the forecast vs. actual cost to decide if the changes proposed to a main extension test are warranted.

Not withstanding the fact that TGVI was not able to respond fully to BCUC IR No. 1, Question 8.1, TGVI believes that there is sufficient evidence to determine that changes to the main extension test are warranted. The Companies have requested changes to the PI threshold for main extension tests that include the ability to aggregate the PI results to determine if the tests are adding economic customers, and include credits for efficiency incentives. These requests are supported in the Application and in responses to BCUC IR No. 1 Questions 7, 17, 19, and 23, and are independent from a review of forecast to actual costs. The Companies believe it is important to forecast accurately so that whatever main extension test is used produces reliable and appropriate results. However, the appropriateness of changes to the proposed test is a separate issue from the comparison of forecast and actual costs. Further, both the market place and the energy industry in British Columbia have changed. Developers are opting for the lowest cost alternative when deciding on energy alternatives. The Energy Plan encourages

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI")	Sı
(collectively the "Companies")	30
Application for System Extension & Customer Connection Changes Review	(

Submission Date: October 2, 2007

Response to British Columbia Utilities Commission Information Request No. 2

Page 26

utilities to look at innovative rate design to encourage energy efficiency and conservation. TGI and TGVI have prudently addressed these changes with this Application and which the Companies believe will lead to the use of the right fuel at the right time and the right place, and as such, encourage developers to install gas appliances for heating which will result in a reduction in GHG emissions as noted in response to BC Hydro IR No. 1, Question 1.

Lastly, as per Commission Order No. G-126-05, TGVI changed its connection and attachment policies without any review of data. As a result of this the tests may not be performing as expected as noted in response to Question 38.1.

40.2 Please confirm that table of 26 main extensions only includes TGI mains and the results do not apply to TGVI.

Response:

Yes, all of the 26 main extensions included in the table in the response to BCUC IR No. 1, Question 8.1, apply to TGI only.

40.3 Please provide a breakdown of the average 93.1 GJ consumption between TGI and TGVI.

Response:

Of the 464 residential Terasen customers whose average consumption was 93.1 GJ/yr, 325 of those customers were from TGI and had an average consumption of 110.3 GJ/yr while the other 139 customers were from TGVI with an average consumption of 53.0 GJ/yr. This compares to 2006 normalized values of 96.8 GJ/yr and 60.2 GJ/yr for TGI and TGVI respectively.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 27

"During the period of April 1, 2006 to June 1, 2006, 981 new services were installed for TGI and TGVI."

40.4 Please provide the actual annual consumption (June 1, 2006 to May 31, 2007), for each of the 981 new services, by company (TGI/TGVI) and rate class.

Response:

The requested information is provided in the table below. The variance between the residential use rates detailed in the response to Question 40.3 above and the table below are due to the inclusion of a different customer subset for each response. In the case of the response to Question 40.3, the use rates (as explained in the response to BCUC IR No. 1, Question 8.1) were calculated from the 464 residential customers (from a total population of 981 customers) who showed a complete twelve months of consumption data. The table below includes all 981 customers, of which roughly half have a full year's consumption. Terasen Gas defines a new customer as one where a new service has been installed and billing activities have commenced. Often, several months may transpire beyond the start of billing before a building is inhabited and consumption patterns begin to take on normal levels. These early months of little or no consumption explain the lower use rates seen in the table below.

		Number of	Actual Annual
Company	Rate Class	Customers	Consumption
TGI	Rate 1	623	58,192.7
TGI	Rate 2	66	38,453.8
TGI	Rate 3	2	2,548.0
TGI	Rate 23	1	10,564.1
TGVI	RGS	263	10,663.1
TGVI	SCS1	21	4,342.3
TGVI	SCS2	2	1,113.4
TGVI	LGS1	3	3,890.8

40.5 Please provide, for each rate class, the median, mean and a histogram in the format below.

Use per Customer (Normalized)	Number of Customers	Number of Customers as a % of Total Customers
<10 GJ		
10 GJ - 19 GJ		
20 GJ -29 GJ		

Response:

The requested tables and histograms can be found in Attachment 40.5.

DSM Programs

41.1 Please identify the DSM programs associated with each of the notes to the 2006 Terasen DSM Incentive Programs table.

Response:

- Note 1: "Please note that Terasen Gas had contributions from partners for these programs so did not incur the entire incentive as an expense." This note applies to all programs except Build Smart.
- Note 2: "Please note that the EBP numbers are for all applications received and/or approved for New Construction only for 2006." This note applies to the Efficient Boiler Program.
- Note 3: "Please note that the figures for Switch and Save are for the entire program period, not just for 2006. The Program ran from September 1 2005 to February 28 2006." This note applies to all the variations for the Switch and Save program outlined in the table.
- Note 4: "Please note that some Yank the Tank participants were new customers and some were not." This note applies to the Yank the Tank program outlined in the table.
- Note 5: "Please note that some of the Energy Bandit participants were new customers and some were not." This note applies to both of the variations for the Energy Bandit program outlined in the table.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 29

"TGVI is to include an evaluation of the merit of using a standard TRC test. For each incentive program the evaluation information should include the RIM test, participant test, and Regulatory NPV Model (or TRC test) plus the estimated percentage of free-riders with an explanation of how TGVI designs its programs to mitigate free-riders."

- 41.2 For each program in the 2006 Terasen DSM Incentive Programs table:
 - (a) Please provide the forecast change in annual consumption (GJ) per participant as a result of the DSM program.

Response:

2006 Terasen Gas DSM Incentive Programs		
TGI	Consumption change per participant (GJ/year)	
Residential New Construction Heating Program	-9.1	
Energy Star Heating Upgrade	-13.8	
Efficient Boiler Program ¹	-4,848	
TGVI	Consumption change per participant (GJ/year)	
Think Grand	81	
Switch and Save - conversion of heating system	60	
Switch and Save - conversion of heating system to Energy Star	60	
Switch and Save - conversion of water heater	21	
Yank the Tank - conversion of water water	21	
Energy Bandit - conversion of heating system	60	
Energy Bandit - conversion of heating system to Energy Star	60	
Build Smart	5	

Note that the savings for the Efficient Boiler Program are not presented per participant per year, but are instead an aggregate of savings for all participants in the New Construction category for 2006

Please note that the TGI programs are conservation programs thus the forecast change in annual consumption is shown as a savings. The TGVI programs are designed to add efficient natural gas load to the system, thus the forecast change is shown as a gain.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 30

(b) Please provide the standard TRC test, RIM test, participant test and estimated percentage of free-riders.

Response:

As submitted in Terasen's June 5 2007 letter in response to Commission Order G-160-06, the standard TRC test, RIM test, participant test and estimated percentage of free-riders for the Terasen Gas Inc. programs are detailed in the table below.

TGI Program Name	BENEFIT/COST			
		Total	Rate Payer	
	Participant	Resource	Impact	FREE RIDERS
ENERGY * Qualified Heating				
Upgrade	3.03	1.29	0.54	50%
ENERGY * Qualified Heating No				
VSM	2.72	1.29	0.56	50%
Residential New Construction	3.59	1.60	0.75	20%
Commercial Boiler Upgrade	2.30	1.96	0.97	18%

The programs for TGVI have traditionally been load-building programs where the program is used to add efficient customers to the TGVI system where those customers would be engaging in fuel substitution from electricity or heating oil (and to a lesser degree, bottled propane) to natural gas. Until very recently, programs for Terasen Gas Vancouver Island had been evaluated based upon the "Regulatory NPV" model. In Appendix A to Commission Order G-161-06, as noted above, the Commission ordered that in 2007, TGVI commence to plan and evaluate its deferred incentive programs to include the standard RIM and participant cost tests, as well as provide an evaluation of using a standard TRC test. As the TGVI programs in the marketplace at that time were scheduled to close March 31, 2007, a decision was taken that until further analysis could be undertaken of the most appropriate planning and evaluation tool for loadbuilding/fuel substitution programs for TGVI, and a suitable analysis tool obtained, no further programs would be offered. Given that program activity was curtailed, and that cost-benefit analysis of these past programs will be complex as it will entail calculations based on the avoided cost of not only electricity but also of fuel oil, no further analysis has been completed to date on these programs

It is Terasen Gas's intent to submit an Energy Efficiency and Conservation application to the Commission before the end of 2007 that would include an analysis of the potential for economic load-building/fuel substitution for TGVI. Terasen Gas has engaged the assistance of a consultant who has prepared a high level cost-benefit analysis of the most promising load-building measures for TGVI. The initial result of that analysis for potential future programs for furnaces and domestic hot water systems for TGVI is presented below.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 31

TGVI Program Type	BENEFIT/COST			
	Participant	Total Resource	Rate Payer Impact	FREE RIDERS assumed
New Construction - Domestic Hot				
Water	0.7	1.5	1.1	10%
Retrofit - Furnace Fuel Switching	1.3	3.5	1.4	0%

Please note that the free ridership rate shown here is the rate that was assumed in the analysis for future programs and that further work will be required to refine assumptions specific to TGVI about free ridership levels. Also, please note that this analysis reflects solely the avoided cost of electricity and does not take into account the avoided cost of heating oil or propane, which would return more favourable participant and total resource cost results than are shown here, as heating oil and propane costs are higher than electricity costs. Please note as well that programs to encourage the use of high efficiency natural gas furnaces in new construction (such as Think Grand) will not be offered in the future since provincial regulations coming into effect January 1, 2008 require that all natural gas furnaces in new construction be high-efficiency, which is why a program for furnaces in new construction does not appear in the analysis above.

TGVI Data

43.1 Please provide the TGVI actual and normalised use rates for the RGS rate class for 1997-2006. If use rates for all years are not available, provide as many years as possible.

Response:

The RGS rate class came into existence in 2003. The actual and normalized use rates for 2003 to 2006 are presented in the tables below.

RGS Actual Residential Use Rate History

	2003	2004	2005	2006
RGS	60.7	56.0	57.3	59.4

RGS Normalized Residential Use Rate History

	2003	2004	2005	2006
RGS	60.6	57.6	58.7	60.2

Prior to 2003, TGVI residential customers were grouped into four separate rate classes. The actual and normalized use rates for these residential rate classes are presented in the tables below.

SGC - RES Actual Residential Use Rate History

	1997	1998	1999	2000	2001	2002
SGS 1 - RES	69.5	66.6	73.1	68.5	66.8	67.5
SGS 11 - RES	59.5	57.9	59.7	60.1	56.1	56.7
SGS 2 - RES	241	234	278	259	245	245
SGS 12 - RES	214	232	262	266	265	256

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 35

44.0 Reference: Exhibit B-3, BCUC IR No. 1, BCUC IR 17.5.1 Exhibit B-1, Application, pp. 8-10 Energy Choice and Marketing

"...The Company believes that a reduction in connection cost alone is not enough to persuade developers to use gas over electricity. As such the Company believes that in addition to the changes the Company is proposing with this Application and the changes it proposed with respect to the \$2,000 surcharge for new electric space heating customers, other incentives such as furnace rebates etc. that reduce the capital and installation costs of gas appliances are required to make a developer truly economically indifferent to using gas or electric."

44.1 Given the importance of the proposed \$2,000 surcharge for new electric space heating customers in making developers economically indifferent to using natural gas or electricity, should changes to TGI and TGVI's customer connection policies be considered after decision regarding the \$2,000 surcharge for new electric space heating customers?

Response:

No, the Companies believe that the requests made in this Application are entirely separate from and should not be impacted either way by a decision in the above noted proceeding. The Companies proposed the inclusion of a \$2,000 surcharge for new electric space heating to send potential new customers of BC Hydro the appropriate signal about the cost of incremental electricity purchases. The Companies still believe that this charge is warranted within the context of the BC Hydro test.

This Application concerns itself with the need to send potential new gas customers the proper gas price signal. As such it is independent of any BC Hydro decision. The proposals requested in this Application are not a trade off for what might come out of the BC Hydro application.

Also as noted above, the Companies believe that the changes sought in this Application are part of several initiatives designed to both send appropriate signals about energy efficiency and to provide market place signals to encourage gas for heating applications. The energy landscape has seen significant change over the last few years as a result of an increased focus on energy efficiency, conservation and climate change. These changes were also highlighted in the Energy Plan, which encouraged utilities to come up with innovative rate designs to meet the goals of reducing energy consumption.

The Companies have taken a number of proactive steps to encourage the efficient use of gas and thereby reduce consumption and GHG's. TGI applied for changes to it tariff to allow for individual thermal metering of energy consumption. Studies in Europe have shown that individual metering of energy can result in a reduction in consumption of 30%. The thermal metering application was approved by Commission Order No. G-65-07. The Companies are also currently developing an energy efficiency and conservation application that will address demand side management and offer innovative options for customers wishing to reduce consumption. The Companies expect this application to be filed before year end.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 36

"As noted in the response 16.1 an average heating electrical installation for an average home is approximately \$3,500. Average high efficiency natural gas heating system is approximately \$7,500.

- 44.2 Please compare the relative importance the following barriers to customers connecting to natural gas:
 - Customer connection fees, \$215 SLIF and \$85 Application Fee-New Customer;
 - The conception that natural gas space and water heating systems are now more expensive to operate that their electric equivalent;
 - The higher capital cost associated with installing a natural gas heating system.

Response:

All of these barriers are important and cause or contribute to consumer bias against natural gas heating systems. Since the higher capital cost associated with installing a natural gas heating system impacts the profitability of design and construction for builders and developers, it can encourage them to reinforce misconceptions or biases with potential customers. For most consumers the heating system is not the critical deciding factor when buying a home. Therefore it is the builder or developer who makes that decision for the consumer, and any costs that impact that decision for the builder and developer are probably most critical.

The perceptions of relative operating costs for natural gas systems versus electric systems can be used to rationalize the builders' and developers' decisions. Connection fees, if perceived as arbitrary or undue can create ill will toward a product or a company, further reinforcing any negative bias. However, if natural gas has been installed as the primary heating source, these fees are unlikely to cause the consumer to forego natural gas.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 37

45.0 Reference: Exhibit B-3, BCUC IR No. 1, BCUC IR 18.1

Exhibit B-1, Application, p. 1 Energy Choice and Marketing

"...the Company to unable to determine the specific cost to enroll an individual customer. However, as noted in response to 18.3, as enrollment costs are only a portion of the per customer total suite of costs charged to either TGI or TGVI, enrollment costs are less than they were in 1996."

"The Companies believe that these changes will help to reduce barriers and send the appropriate market signals to customers that are making decisions on using the right fuel for the right activity at the right time."

45.1 Given that enrolment costs are less than they were in 1996 and that the Companies seeks to reduce barriers and send the appropriate market signals to customers, please explain why no change to the Application Fee is proposed.

Response:

Removal of the SLIF as proposed in the Application constitutes the removal of the majority of the \$300 total bill typically associated with a new customer connection. In the majority of instances the SLIF is paid by a builder or developer while the \$85 Application Fee is typically paid by the customer upon activation of the account. With the barrier to the builder of connecting to the gas system reduced the likelihood of gas appliances being installed is enhanced. When a dwelling has been equipped with gas appliances the likelihood of the account being activated is very high so the Companies do not consider the \$85 Application Fee to be onerous. However, in recognition of the potential benefits of further reducing barriers to connecting to the gas system, the Companies intend to make further assessments of the value of reducing the \$85 fee in the future and may bring forward an application after these studies have been completed. Given that the current PBR Settlement Agreement includes revenue from the \$85 fee, the Company is of the view that the level of this fee can not be changed before the Settlement Agreement is no longer in effect. As discussed further in the response to Question 45.2 below, a more appropriate time for making an adjustment to the \$85 Application Fee would be when the current PBR expires at the end of 2009.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 38

46.0 Reference: Exhibit B-3, BCUC IR No. 1, BCUC IR 18.3 and 20.1 Marketing Costs

"For 2007, the TGI pays CustomerWorks \$55.36, and TGVI pays CustomerWorks \$43.07 per customer per year for the suite of services that include enrollment, billing, customer contact, meter reading and credit and collections."

46.1 For TGI and TGVI, calculate the decrease in 2006 – 2007 revenue if the Application Fee-New Installations was reduced from \$85 to \$40 per customer.

Response:

The table below sets out the decrease in revenue that can be expected by a reduction of the Application Fee for New Services from \$85 to \$40 per customer. The calculation is based on actual revenue collected in 2006. An amount for 2007 can not be determined until actual total service line installations are known for the year.

	<u>TGI</u>	<u>TGVI</u>
Revenue Collected based on \$85	937,380	255,255
Revenue Collected based on \$40	<u>441,120</u>	<u>120,120</u>
Total Revenue Decrease	(496,260)	(135,135)
PC Change	-53%	-53%

Given that the current PBR Settlement Agreement includes revenue from the \$85 fee, the Company is of the view that the level of this fee can not be changed before the Settlement Agreement is no longer in effect.

46.2 For TGI and TGVI, are the costs of the \$25 Application Fee-Existing Installation included in the suite of services provided by CustomerWorks?

Response:

Yes.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 39

Application for System Extension & Customer Connection Changes Review

Submission Date: October 2, 2007

Response to British Columbia Utilities Commission Information Request No. 2

Page 40

48.0 Reference: Exhibit B-3, BCUC IR 1.7.4 Cost Recovery – Past Performance

"Customers do not incur a penalty if actual consumption is less than the amount used in the MX Test. Conversely, there is no benefit accorded to a customer who exceeds the forecast consumption.

"Inputs into the main extension test represent the best available information at the time...variances in forecasted consumption do not materially impact existing customers when all of the main extension [is] considered as a whole."

48.1 The MX test relies on future use data. If a customer's actual use turns out to be sufficiently less than that on which the test was calculated, how does Terasen recover the balance of the costs of providing that customer's service?

Response:

The MX test relies on an estimate of future usage based upon current appliance specific usage data and is considered the best estimate for future usage. This use is assumed to remain unchanged for the 20 year period considered in the MX test. Actual usage over the 20 year period may be higher or lower than that actually forecast due to changes in usage patterns, efficiency and conservation measures, changes in building ownership, or government policy.

The main extension test is relatively conservative because it only considers revenue for 20 years, even though the assets have a depreciated life in excess of 40 years. This conservative methodology means that it's less likely that a customer's consumption, if lower than forecast, would not cover the installation costs and other incremental costs of the main extension over a 40 year asset life. As the revenue period in the test is less than half the life of the asset, a main extension test that had a PI of 1 could show much lower volume and still provide sufficient revenue over the full life of the asset for it to be economic.

Lastly, if consumption for either new or current customers decreases in the future, the effect of this change would be to cause an increase in rates, all things considered. As a result of such a decrease in consumption, the actual rates paid by the customer over time may be higher than the rates used in the MX test. With this change, customers may still be economic to the system.

The MX test is a test that essentially compares costs and revenues associated with adding a customer to the system. It is expected that over the course of 20 years many of the parameters that were used in the original test would change. However, the impact this might have on any customer is minimal at best. In context, the increase in rate base driven by customer additions on any given year is a small fraction of total rate base. Any variance in this increase in rate base due to customer additions is even less significant. The requests the Companies have made in this Application, such as taking an aggregate view of main extensions, take this into consideration and are supportive of this approach.

Therefore any changes in rate base and therefore corresponding margin would be paid for through customer rates.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 41

49.0 Reference: Exhibit B-3, BCUC IR 9.1; BCUC Order G-161-06

TGVI Tests – Past Performance

As per the response to BCUC IR 9.1, and further to Order G-161-06:

"The Commission finds that reporting in the first quarter of 2008 on a random sampling of 10 percent plus inclusion of each year's five highest cost main extensions installed from January 1, 2006 to December 31, 2007 is acceptable."

49.1 Please confirm that TGVI will submit a report to the Commission, by the end of the first quarter of 2008, of its main extension tests results, as described in Order G-161-06.

Response:

Confirmed.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 42

50.0 Reference: Exhibit B-3, BCUC IR 14.2

TGVI Data

The Application states that increasing annual use rates were based on an analysis which showed that average annual use in 2006 increased from the level experienced in 2005. "This change is illustrated in the graph provided in the response to 14.1. While the data needed to complete the type of detailed analysis to determine the reason for this increase is not available, it is believed to be caused by a combination of higher consumption by new customers and existing customers increasing consumption through the addition of new natural gas appliances."

50.1 What additional data are required in order to produce an analysis of changes in TGVI use rates?

Response:

In order to produce an analysis of changes in TGVI use rates, the following information would be required:

- Metered consumption by customer this would include meter read dates, consumption, number of days the consumption covers and the applicable tariff.
- 2. Customer information installation dates and the consumption status (current, past, locked-off, etc.)

In 2006, TGVI converted to TGI's customer billing system. Though consumption data from the prior system was converted to the new system, specific records of when each customer was active on the system are not available. Without knowing the appropriate time span to attribute to a given customer's consumption in 2005, it is not possible to compare annual consumption between 2005 and 2006.

50.2 At what time will TGVI have the required data to produce a detailed analysis concerning the factors causing the increased new customer use rate?

Response:

In August 2008 TGVI will have two full years of consumption in TGVI's current billing system with sufficient detail to complete this type of analysis. TGVI would then be able to compare the average use rate for those customers with a full year's consumption for the periods June 2006 to May 2007 and June 2007 to May 2008.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 43

51.0 Reference: Exhibit B-3, BCUC IR 23.1

Other Policies

"Terasen Gas does not believe that by themselves the adjustments sought through this application will be sufficient to swing the economic decision for all developers in favour of natural gas...The largest impact will likely come through the complete alignment of policies and programs that properly signal the efficient and responsible use of natural gas in heating applications."

51.1 Please identify the other policies alluded to in the last line of the above, and describe how those policies would be combined with the proposed system extension and customer connection charge revisions, as proposed in the application, to affect developers' fuel choice.

Response:

Policies and programs that affect the perception of natural gas for engineers, architects, builders, developers, and consumers include such things as marketing programs, demand side management incentives, tax incentives or disincentives, codes and standards, installation timing and practices and measurement standards. In this respect, the attachment policies of the Companies are just one important piece, but approval of this Application is not expected to win over or counter the bias of every builder developer.

As part of its 2006 Annual Review and its extension of the 2004-2207 Performance Based Rate making Settlement Agreement, Terasen Gas committed to filing an application with the Commission in 2007 with respect to energy efficiency and conservation funding programs. The development of that application is currently underway and the Companies expect to submit that application before year end to bring into alignment another important piece.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission	Page 44

52.0 Reference: Exhibit B-3, BCUC IR 26.1

MX Test - Performance Measurement

Information Request No. 2

"The Company is not advocating a verification process for all new customer connections to determine if customers actually install the appliances they committed to installing as part of a connection application. Verification of appliance attachments could be a very time consuming process requiring additional staff at a cost to all customers. The Company does not believe the potential costs to verify appliances are a prudent expenditure for the magnitude of the volume associated with the appliances in question."

52.1 Does TGI conduct any audits of new customer accounts, to determine the relationship between forecast load (before connection) and actual load (after connection)?

Response:

No, TGI and TGVI do not currently conduct audits of new customer accounts to determine the relationship between forecast load and actual load. As noted previously, changes in consumption can be driven by many factors. Consumption estimates used in the MX test are based on current usage and are used as a proxy for future consumption. Future usage would be expected to be different.

The system extension test and policies are meant to be a reasonable method to gauge whether or not the customer should be attached to the system and if so what they should pay. The tests are not perfect, in that they do not attempt to anticipate changes in consumption for example, from what customers indicate when the application for new service is made. The Companies could conduct audits, analyze, review and cost each service however this cost would be borne by current customers. When the impact of the customer additions and the variances between forecast and actual (costs and volumes) are compared to overall rate base and revenue, any difference is minor. The system extension test and processes should simple and efficient without adding any unnecessary costs to customers. Auditing individual accounts would run counter to this goal.

52.2 Does TGVI conduct any audits of new customer accounts, to determine the relationship between forecast load (before connection) and actual load (after connection)?

Response:

Please refer to the response to Question 52.1.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007

Page 45

53.0 Reference: Exhibit B-1, p. 28, Table 6.1; Exhibit B-3, BCUC IR 26.2; BCOAPO IR 10.1

MX Test – Energy Efficiency Adjustment

"The Company propose[s] a methodology of applying an efficiency usage credit thereby increasing the volumes used to calculate revenues to send the appropriate market signal to encourage energy conservation and efficient use of resources." (BCUC IR 26.2)

"The Company believed that this was a simple and easily understandable method to show this value of efficiency." (BCOAPO IR 10.1)

53.1 Please show how Terasen arrived at the proposed adjustment factors, shown in Table 6.1.

Response:

The Companies described in the response to BCUC IR No. 1, Question 26.2, the rationale for how the adjustment charge was derived. The adjustment of 5%, 10% and 15% were based on the difference between an average furnace and a high efficient furnace. However, instead of lowering the consumption, the difference is added to the average.

More important than the actual derivation of the adjustment factor is the reason for proposing to implement efficiency adjustments. The Companies strongly believe they have a responsibility to send customers signals that influence energy consumption, energy awareness and drive the behaviour regarding energy usage: at the right time, in the right place, for the right price. Using efficiency measures in the attachment tests helps to send these messages and signals.

53.2 Please identify other utilities already using the volume-adjustment approach.

Response:

The Companies are not aware of any other utilities using this approach. As noted in the Application, and the Energy Plan, the energy landscape is changing quickly and dramatically and there is a significant focus on reducing energy consumption. The changes sought with regard to energy efficiency in this Application are meant to begin to address these changes. The Companies are being proactive at addressing these issues and does not expect that many other utilities have already implemented similar policies.

Response:

Table 1 and Table 3 of Exhibit C7 23 of the 2007 BC Hydro Rate Design Application, which are based on the Terasen Gas 2006 Conservation Potential Review (CPR), continue to represent the best available <u>detailed</u> estimation of residential customer and related energy consumption by housing type, vintage and region.

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies")

Application for System Extension & Customer Connection Changes Review

Submission Date: October 2, 2007

Response to British Columbia Utilities Commission Information Request No. 2

Page 47

The CPR was completed by an outside consulting firm which based its results in part on Terasen customer data from 2004 as well as on BC Hydro data and NR Can modeling software results to arrive at their figures.

It is important to note the qualifiers that BC Hydro included with the submission of the tables above. These are attached below:

"Attached is a spreadsheet providing the requested information on space heating in gigajoules and kilowatt-hours, and by dwelling type. The data for the tables presented in the spreadsheet are taken from the Terasen Gas 2006 Conservation Potential Review (2006 CPR). The 2006 CPR was conducted for Terasen Gas Inc. and Terasen Gas Vancouver Island but did not include Terasen Gas Whistler. It was based on customer and load information from 2004.

While the 2006 CPR is the best source of information that the Terasen Utilities have available to respond to the request of the Chairman, it is important to consider the following comments and caveats:

- The information with respect to the numbers of customers is provided in "Residential Units". The distinction being brought out here is that in the multi-unit categories, particularly for apartments, there are many buildings which have natural gas as the primary heating source by a central boiler system and not through individually metered suites. These types of dwellings would typically be recorded as a single commercial or general service account in the Terasen billing system and customer records. The 2006 CPR made assessments of space heating energy consumption down to the level of individual suites within the multi-unit categories. This means that the number of "Residential Units" in the 2006 CPR is greater in aggregate than the Terasen Utilities residential customer accounts. A CPR analysis requires making various adjustments to available information and employing sampling techniques to derive results. As such, a number of factors would have to be considered to reconcile the number of CPR residential units to the residential customer counts of TGI and TGVI.
- A second issue to point out is that the space heating annual consumption amounts by housing type are estimates of the total annual space heating energy requirements for residential units with natural gas as the primary space heating source. The particular approach employed in the 2006 CPR calculated total space heating load based on heat loss through the building envelope less solar and internal gains. The results therefore include any space heating load that is met using non-gas supplemental heating.

The 2006 CPR identified common area gas space heating requirements for lowrise and high-rise apartments separately from space heating within the suites. The common area gas space heating has not been included in the attached tables."

Terasen Gas Inc. ("TGI") and Terasen Gas (Vancouver Island) Inc. ("TGVI") (collectively the "Companies") Application for System Extension & Customer Connection Changes Review	Submission Date: October 2, 2007
Response to British Columbia Utilities Commission Information Request No. 2	Page 48

Since the completion of the CPR, both TGI and TGVI have continued to add customers. For the years 2005 and 2006, TGI Rate 1 customers grew by 1.6% and 1.3% respectively while for TGVI, RGS growth in 2005 and 2006 was 5.4% and 4.8% respectively. However, as discussed above, the methodology of the consulting firm who prepared the CPR did so on the basis of residential 'units' which differs from Terasen Gas' approach of counting larger residential buildings that are served by one meter as one customer.

54.2 If the figures in the above tables are not representative of current data, please provide replacement tables with updated figures.

Response:

As discussed in the response to Question 54.1, the tables are based on 2004 customer data. The CPR was completed in support of Terasen's DSM activities and examined resource potential for efficiency, at specified milestones, by specific market and end-use over the 2005-2015 forecast period. It is the intent of Terasen Gas to conduct the CPR periodically - approximately every three to four years.

Updating the tables would require that the study be repeated by the consulting firm which originally conducted the work for Terasen. Given the size and complexity of the task, Terasen is not in a position to provide tables based on current data.

Adjusted Average Service Line Cost Target Service Line Cost

¹⁾ Total Service line costs include costs that were accumulated in orders that did not have specific risers posted ie standing jobs (\$821,735). These misc costs have been allocated based on the \$ per orders with a riser count .

²⁾ Categoriztion by cost per service based on the column labelled: Financial Unit Cost incl `no riser count` portion. This is due the fact that for the first few months of 2006 the services for TGVI were accounted for in blanket type orders ie... many units to one order number.

Attachment 38.1

Footnotes

¹⁾ Total Service line costs include costs that were accumulated in orders that did not have specific risers posted ie standing jobs. These misc costs have been allocated based on the \$ balance of those jobs with riser counts (approx \$157 per order).

²⁾ Total Allowed SLCA = numjber of services times the SLCA for each \$100 block

³⁾ Difference - Total Allowed SLCA \$1100 vs. Actual - this is the difference between the actual service line costs and those costs allowed up to the \$1100 SLCA currently in place. Does not take into account contributions.

⁴⁾ Difference - Total Allowed SLCA \$1535 vs Actual - this is the difference between the actual service line costs and those costs that would be allowed if the SLCA was \$1535. Does not account for contributions.

Footnotes:

¹⁾ Total Service line costs include costs that were accumulated in orders that did not have specific risers posted ie standing jobs. These misc costs have been allocated based on the \$ balance of those jobs with riser counts (approx \$157 per order).

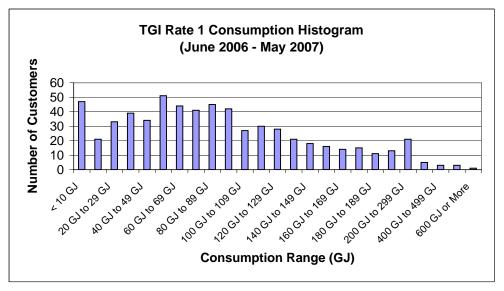

²⁾ Total Allowed SLCA = numiber of services times the SLCA for each \$100 block

³⁾ Difference - Total Allowed SLCA \$1100 vs. Actual - this is the difference between the actual service line costs and those costs allowed up to the \$1100 SLCA currently in place. Does not take into account contributions.

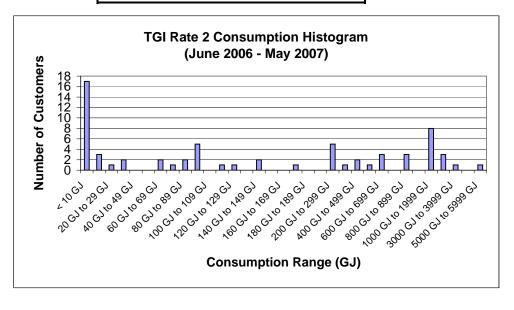

⁴⁾ Difference - Total Allowed SLCA \$1535 vs Actual - this is the difference between the actual service line costs and those costs that would be allowed if the SLCA was \$1535. Does not account for contributions.

New Loads and Changes to Existing Loads

Replaces: OI PLN 100-10 dated 6 July 1992

Overview

This policy describes the circumstances under which System Planning will be notified by way of a Load Information Memo (LIM) of significant new loads, the significant reduction or deletion of loads, increases in existing loads, changes in a customer's rate category, and significant changes in delivery pressure. In addition, this standard states how this notification will be made, and how the review and comments will be communicated.

References

• DES 01-07 Delivery Pressure Standards

When To Issue an LIM

Terasen Gas personnel who obtain information about new loads or increases or changes in system load must inform System Planning of the details.

Terasen Gas Operations personnel (i.e., Utility Planners, Marketing Reps), are responsible for advising System Planning of significant new loads or load increases using a Load Information Memo (LIM) (Form 1425). This form may be sent electronically or as hard copy.

An LIM must be issued when:

- a proposed new or increased load of 30 m3/h or greater is to be added on any DP or intermediate pressure (IP) systems
- a proposed new or increased load of 15 m3/h or greater is to be added on the Coastal low pressure (LP) distribution system
- an existing load of the magnitude indicated in the above conditions is removed from the system
- an existing customer changes rate category (i.e., from interruptible to firm, seasonal to firm, or vice versa)

New Loads and Changes to Existing Loads

- there are temporary changes or extensions to contracts or rate categories (e.g., extension of a seasonal cutoff)
- revised load or delivery pressure information is received on an existing customer or on a previously submitted LIM
- a change in non-standard delivery pressure is requested (i.e., from standard to non-standard, non-standard to a different non-standard, or vice versa)

Process

Utility Planners will initiate the LIM and process it as follows:

- in Energy Delivery Services, Planners will retain the gold copy and route the white, yellow, and pink copies to System Planning
- System Planning will comment on and return the copies of the LIM within 5 working days. System Planning will retain the white copy and return the yellow and pink copies to the originator
- when the new load addition or change outlined in the LIM has been connected, System Planning will be forwarded the gold copy by the originator which will indicate the status and completion date
- if the proposed load addition identified on the LIM, is deferred or cancelled, System Planning must be advised of the status and the date of cancellation.
