Financings: During 2008, Fortis and its utilities raised almost $1.2 billion of capital from a combination of preference share, common share and long-term debt issues. In the second quarter of 2008, the Corporation publicly issued 9.2 million 5.25% Five-Year Fixed-Rate Reset First Preference Shares, Series G ("First Preference Shares, Series G") for gross proceeds of approximately $230 million ($223 million net of costs). The net proceeds were used to repay $170 million under the Corporation's committed credit facility, fund equity requirements of FortisAlberta and the Corporation's regulated electric utilities in the Caribbean, and for general corporate purposes. In December 2008, the Corporation publicly issued 11.7 million common shares for gross proceeds of approximately $300 million ($287 million net of costs). The net proceeds were used to repay short-term debt primarily incurred to retire $200 million of debt at Terasen that matured on December 1, 2008 and for general corporate purposes. At the subsidiary level, TGVI issued $250 million of 30-year 6.05% unsecured debentures in February; FortisAlberta issued $100 million of 30-year 5.85% unsecured debentures in April; Maritime Electric issued $60 million of 30-year 6.05% secured first mortgage bonds in April; and TGI issued $250 million of 30-year 5.80% unsecured debentures in May. Proceeds from the long-term debt issues at the utilities were primarily used to repay indebtedness under credit facilities incurred in support of capital spending. Additionally, partial proceeds from the issuance of the $250 million unsecured debentures by TGI were used to refinance $188 million of debt that matured in May 2008.

Net Earnings Applicable to Common Shares	**245**	193	52

(1) Financial results are reported from May 17, 2007, the date of acquisition.

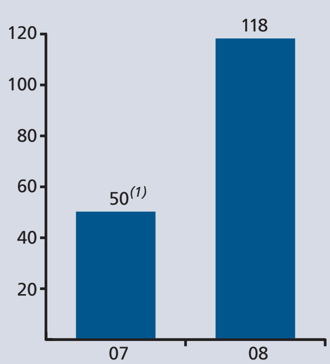
(2) Caribbean Utilities had an April 30 fiscal year end whereby, up to and including the third quarter of 2008, Caribbean Utilities' financial statements were consolidated in the financial statements of Fortis on a two-month lag basis. Caribbean Utilities changed its fiscal year end to December 31, which has resulted in the Corporation consolidating 14 months of financial results of Caribbean Utilities during 2008. Going forward, this change in fiscal year end will eliminate the previous two-month lag in consolidating Caribbean Utilities' financial results.

(3) Includes the results of the Fairmont Newfoundland hotel from November 2008, the date of acquisition

REGULATED UTILITIES

The Corporation's primary business is regulated utilities. In 2008, regulated earnings in Canada and the Caribbean represented approximately 83 per cent (2007 – 81 per cent) of the Corporation's earnings from its operating segments (excluding the Corporate and Other segment). Total regulated assets represented 92 per cent of the Corporation's total assets as at December 31, 2008 (December 31, 2007 – 92 per cent).

Regulated Gas Utilities – Canadian Earnings *($ millions)*



(1) Earnings are from May 17, 2007

Regulated Gas Utilities – Canadian

Regulated Gas Utilities – Canadian earnings for 2008 were $118 million (2007 – $50 million), which represented approximately 45 per cent of the Corporation's total regulated earnings (2007 – 24 per cent). Earnings for 2007 were from May 17, 2007, the date of acquisition of the Regulated Gas Utilities – Canadian. Regulated Gas Utilities – Canadian assets were approximately $4.6 billion as at December 31, 2008 (December 31, 2007 – $4.4 billion), which represented approximately 45 per cent of the Corporation's total regulated assets as at December 31, 2008 (December 31, 2007 – 47 per cent).

Terasen Gas Companies

Financial Highlights

Years Ended December 31	**2008**	2007 [1]	Variance
Gas Volumes *(TJ)*	**221,122**	118,309	102,813
($ millions)			
Revenue	**1,902**	905	997
Energy Supply Costs	**1,268**	559	709
Operating Expenses	**253**	150	103
Amortization	**97**	58	39
Finance Charges	**129**	80	49
Gain on Sale of Property	**–**	(8)	8
Corporate Taxes	**37**	16	21
Earnings	**118**	50	68

(1) Results are reported from May 17, 2007, the date of acquisition.

Gas Volumes: Gas volumes were 221,122 TJ for 2008 compared to 220,977 TJ reported by the Terasen Gas companies for the full year in 2007. Increased sales volumes to residential customers, as a result of increased consumption due to cooler weather year over year, and higher sales volumes to customers under fixed price contracts, were largely offset by lower transportation volumes to customers sourcing their own gas supplies.

The Terasen Gas companies earn approximately the same margin regardless of whether a customer contracts for the purchase of natural gas or contracts for the transportation of natural gas only.

As a result of the operation of British Columbia Utilities Commission ("BCUC")-approved regulatory deferral mechanisms, changes in consumption levels and energy supply costs from those forecasted to set gas distribution rates do not materially affect earnings.

During 2008, net customer additions at TGI and TGVI totalled approximately 12,800, bringing the total customer count at TGI and TGVI to approximately 929,000 at December 31, 2008. During 2007, net customer additions at TGI and TGVI totalled approximately 13,900. Net customer additions in 2008 were lower than expected, reflecting weakening housing and construction markets and growth in multi-family housing where natural gas use is less prevalent compared to single-family housing.

Revenue: Revenue was approximately $1.9 billion for 2008 compared to $905 million for the partial year in 2007. In addition to the impact of revenue contribution for the full year in 2008, revenue also increased year over year due to: (i) the higher commodity cost of gas charged to customers; (ii) increased residential customer consumption; and (iii) an increase in gas distribution rates, effective January 1, 2008, which included the impact of an increase in the 2008 allowed ROE for TGI and TGVI to 8.62 per cent and 9.32 per cent, respectively, from 8.37 per cent and 9.07 per cent, respectively.

Earnings: Earnings were $118 million for 2008 compared to $50 million for the partial year in 2007. Earnings for 2007 were favourably impacted by a $7 million after-tax gain on the sale of surplus land. Earnings for 2008 included an approximate $5.5 million tax reduction associated with the settlement of historical corporate tax matters. During the third quarter of 2008, Terasen reached a settlement with Revenu Québec and Canada Revenue Agency ("CRA") related to amounts owing as a result of amended Québec tax legislation. The legislation was passed in 2006 for the purpose of challenging certain interprovincial Canadian tax structures.

In addition to earnings' contribution for a full year in 2008 and the one-time tax reduction described above, earnings for 2008 were favourably impacted by the increase in gas distribution rates, effective January 1, 2008, reflecting a higher allowed ROE, partially offset by: (i) higher operating expenses driven by increased labour costs; (ii) higher amortization costs associated with the continued investment in capital assets; and (iii) higher finance charges reflective of higher borrowing rates.

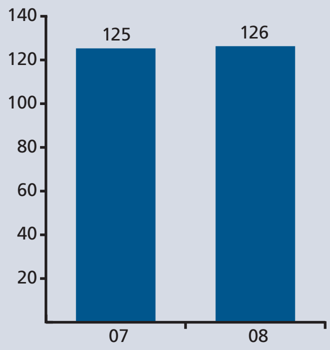
Seasonality materially impacts the earnings of the Terasen Gas companies as a major portion of the gas distributed is used for space heating. Virtually all of the annual earnings of the Terasen Gas companies are generated in the first and fourth quarters.

Outlook: TGI's allowed ROE for 2009 has been set at 8.47 per cent, down from 8.62 per cent in 2008. TGVI's allowed ROE for 2009 has been set at 9.17 per cent, down from 9.32 per cent in 2008. TGI and TGVI are currently preparing rate applications related to 2010 which are anticipated to be filed with the regulator in the second quarter of 2009.

In February 2009, TGI issued $100 million of 30-year 6.55% unsecured debentures. The net proceeds are being used to repay credit-facility borrowings incurred in support of working capital requirements and capital expenditures, and to repay $60 million of unsecured debentures that mature in June 2009.

A discussion of the nature of regulation and material regulatory decisions and applications pertaining to the Terasen Gas companies is provided under the heading "Regulatory Highlights". A summary of the forecast gross capital expenditures for 2009 for the Terasen Gas companies is provided under the heading "Liquidity and Capital Resources – Capital Program".

Regulated Electric Utilities – Canadian Earnings *($ millions)*



Regulated Electric Utilities – Canadian

Regulated Electric Utilities – Canadian earnings for 2008 were $126 million (2007 – $125 million), which represented approximately 48 per cent of the Corporation's total regulated earnings (2007 – 61 per cent). Regulated Electric Utilities – Canadian assets were approximately $4.6 billion as at December 31, 2008 (December 31, 2007 – $4.2 billion), which represented approximately 45 per cent of the Corporation's total regulated assets as at December 31, 2008 (December 31, 2007 – 45 per cent).

FortisAlberta

Financial Highlights

Years Ended December 31	2008	2007	Variance
Energy Deliveries *(GWh)*	**15,722**	15,378	344
($ millions)			
Revenue	**300**	270	30
Operating Expenses	**130**	122	8
Amortization	**85**	75	10
Finance Charges	**42**	36	6
Corporate Tax Recovery	**(3)**	(11)	8
Earnings	**46**	48	(2)

Energy Deliveries: Energy deliveries at FortisAlberta increased 344 gigawatt hours ("GWh"), or 2.2 per cent, year over year, mainly due to customer growth. During 2008, the number of customers at FortisAlberta increased by approximately 12,700, bringing the total number of customers at FortisAlberta to approximately 461,000 at the end of 2008.

As a significant portion of the Company's distribution revenue is derived from fixed or largely fixed billing determinants, changes in energy deliveries are not directly correlated with changes in revenue.

Revenue: Revenue was $30 million higher than the previous year, mainly due to: (i) a 6.8 per cent increase in customer distribution rates, effective January 1, 2008; (ii) the impact of customer and load growth; (iii) the accrual for collection in future customer distribution rates of the increase in the 2008 allowed ROE to 8.75 per cent from 8.51 per cent, effective January 1, 2008; and (iv) increased franchise fee revenue.

Earnings: Earnings were $2 million lower than the previous year, driven by lower future income tax recoveries primarily associated with the regulator-approved Alberta Electric System Operator ("AESO") charges deferral account. Additionally, higher revenue was partially offset by: (i) higher operating expenses due to increased contracted manpower costs, higher labour and employee-benefit costs associated with increased salaries and number of employees, and higher general operating expenses; (ii) increased amortization costs associated with continued investment in capital assets and higher amortization rates provided for in the 2008/2009 Negotiated Settlement Agreement ("NSA"); and (iii) increased finance charges driven by higher debt levels in support of the Company's significant capital expenditure program.

FortisAlberta's AESO charges deferral account captures variances between amounts charged by the AESO to FortisAlberta for transmission tariffs and amounts collected by FortisAlberta from customers through the transmission tariff component of basic customer rates. Subject to regulatory approval, amounts charged by the AESO in excess of amounts collected from customers are deferred as a regulatory asset for future recovery from customers, and amounts collected from customers in excess of amounts charged are deferred as a regulatory liability for future refund to customers. Generally, there is a two-year lag between the deferral of amounts in the AESO charges deferral account and their collection from, or refund to, customers in rates.

FortisAlberta records income taxes on the cash taxes payable method, as approved by its regulator, except for certain deferral accounts, including the AESO charges deferral account, whereby income taxes are recorded using the liability method. During the third quarter of 2008, FortisAlberta identified that taxable income from operations, before considering impacts associated with the AESO charges deferral account, could be fully offset by utilizing capital cost allowance deductions. Then, by applying the tax deductions related to transmission tariff payments made to the AESO, a tax loss carryforward could be created and a future income tax recovery could be recorded. Under the liability method of recording income taxes, a future income tax asset associated with the tax loss carryforward may be recorded when there is certainty of recovery. The transmission tariff payments made to the AESO are recoverable from customers in the future; therefore, a future income tax asset and future income tax recovery were recorded in each of the third and fourth quarters of 2008, which offset the future income tax liability and future income tax expense created by the AESO charges deferral as it was incurred.

Prior to the third quarter of 2008, FortisAlberta was not deducting transmission tariff payments made to the AESO to create tax loss carryforwards and was not recording the associated future income tax recoveries. This accounting treatment, in effect, resulted in a two-year lag of recording the future income tax impacts between the payments of transmission tariff amounts to the AESO and the timing of their collection from customers. Going forward, fluctuations in corporate income taxes associated with the operation of the AESO charges deferral account are not expected to occur.

During 2007, net future income tax recoveries of approximately $9 million were recorded, primarily due to the sale of amounts deferred to the AESO charges deferral account. In September 2007, the 2006 deferred AESO charges receivable balance of $28 million and, in December 2007, approximately $38 million of the 2007 deferred AESO charges receivable balance, were sold to a Canadian chartered bank and, as a result, the proceeds were recognized in 2007.

Outlook: During 2008, the Alberta Utilities Commission ("AUC") ruled that a 2009 Generic Cost of Capital Proceeding to review ROE levels, adjustment mechanisms and utility capital structures would be appropriate for all gas, electric and pipeline utilities in Alberta that it regulates. As directed by the AUC, FortisAlberta is to continue using the 2007 allowed ROE of 8.51 per cent for 2009, down from the allowed ROE of 8.75 per cent in 2008, pending the outcome of the AUC's 2009 Generic Cost of Capital Proceeding.

FortisAlberta expects to file a 2010 and 2011 revenue requirements application during the second quarter of 2009.

In December 2008, FortisAlberta filed a short-form base shelf prospectus for the issuance of up to $350 million in debentures. In February 2009, FortisAlberta issued $100 million of 30-year 7.06% unsecured debentures under the shelf prospectus. The net proceeds were used to repay committed credit-facility borrowings incurred in support of the Company's capital expenditure program and for general corporate purposes.

A discussion of the nature of regulation and material regulatory decisions and applications pertaining to FortisAlberta is provided under the heading "Regulatory Highlights". A summary of the forecast gross capital expenditures for 2009 for FortisAlberta is provided under the heading "Liquidity and Capital Resources – Capital Program".

FortisBC

Financial Highlights

Years Ended December 31	2008	2007	Variance
Electricity Sales *(GWh)*	**3,087**	3,091	(4)
($ millions)			
Revenue	**237**	229	8
Energy Supply Costs	**68**	67	1
Operating Expenses	**67**	69	(2)
Amortization	**34**	31	3
Finance Charges	**28**	26	2
Corporate Taxes	**6**	5	1
Earnings	**34**	31	3

Electricity Sales: Electricity sales at FortisBC decreased 4 GWh, or 0.1 per cent, year over year due to reduced industrial customer loads as a result of a general slowdown in the forestry sector, partially offset by the impact of residential, general service and wholesale customer growth.

Revenue: Revenue was $8 million higher than the previous year, driven by the impact of: (i) a 2.9 per cent increase in electricity rates, effective January 1, 2008, which included the impact of an increase in the 2008 allowed ROE to 9.02 per cent from 8.77 per cent; (ii) a 0.8 per cent increase in electricity rates, effective May 1, 2008, as a result of the flow through to customers of increased purchased power costs from BC Hydro; and (iii) a shift in sales mix from lower-rate to higher-rate customer classes. The increase was partially offset by lower revenue contributions from non-regulated operating, maintenance and management services and lower electricity sales.

Earnings: Earnings were $3 million higher than the previous year. The increase was primarily due to the 2.9 per cent increase in electricity rates, partially offset by higher amortization costs and finance charges related to the Company's significant capital expenditure program.

Operating expenses were $2 million lower than the previous year, mainly due to lower operating expenses associated with non-regulated operating, maintenance and management services, partially offset by the impact of higher labour costs and general inflationary cost increases year over year.

Outlook: FortisBC's allowed ROE for 2009 has been set at 8.87 per cent, down from 9.02 per cent in 2008. In December 2008, FortisBC received regulatory approval of the Company's 2009 Revenue Requirements Application, resulting in a general rate increase of 4.6 per cent, effective January 1, 2009. The approval of the 2009 Revenue Requirements Application also included an extension of the performance-based rate-setting ("PBR") mechanism for the years 2009 through 2011 under terms similar to the previous PBR agreement.

A discussion of the nature of regulation and material regulatory decisions and applications pertaining to FortisBC is provided under the heading "Regulatory Highlights". A summary of the forecast gross capital expenditures for 2009 for FortisBC is provided under the heading "Liquidity and Capital Resources – Capital Program".

Newfoundland Power

Financial Highlights

Years Ended December 31	2008	2007	Variance
Electricity Sales *(GWh)*	**5,208**	5,093	115
($ millions)			
Revenue	**517**	491	26
Energy Supply Costs	**337**	327	10
Operating Expenses	**50**	53	(3)
Amortization	**45**	34	11
Finance Charges	**33**	34	(1)
Corporate Taxes	**19**	12	7
Non-Controlling Interest	**1**	1	–
Earnings	**32**	30	2

Electricity Sales: Electricity sales at Newfoundland Power increased 115 GWh, or 2.3 per cent, year over year, primarily due to the combined impact of customer growth and higher average consumption.

Revenue: Revenue in 2008 was $26 million higher than the previous year. The increase was driven by an average increase in customer rates of 2.8 per cent, effective January 1, 2008, which included the impact of an increase in the 2008 allowed ROE to 8.95 per cent from 8.60 per cent, and electricity sales growth. The increase in revenue also reflected higher amortization of regulatory liabilities in accordance with prescribed regulatory orders.

Earnings: Earnings were $2 million higher than the previous year, driven by the average 2.8 per cent increase in customer rates, effective January 1, 2008, lower operating expenses driven by the timing of expenses and lower maintenance and pension costs, and lower finance charges. Finance charges decreased due to the refinancing of maturing debt in August 2007 at lower rates.

Amortization costs were higher year over year due to the regulator-approved recovery in customer rates, effective January 1, 2008, of previously deferred amortization costs.

Corporate tax expense increased year over year as a result of higher earnings before corporate taxes, combined with a higher effective corporate income tax rate, which was driven by decreased deductions taken for tax purposes compared to accounting purposes.

Outlook: Newfoundland Power's allowed ROE for 2009 has been set at 8.95 per cent, unchanged from 2008; consequently, there has been no change in base customer rates for 2009.

A discussion of the nature of regulation and material regulatory decisions and applications pertaining to Newfoundland Power is provided under the heading "Regulatory Highlights". A summary of Newfoundland Power's forecast gross capital expenditures for 2009 is provided under the heading "Liquidity and Capital Resources – Capital Program".

Other Canadian Electric Utilities[1]

Financial Highlights

Years Ended December 31	2008	2007	Variance
Electricity Sales *(GWh)*	**2,182**	2,209	(27)
($ millions)			
Revenue	**262**	263	(1)

Finance Charges	**18**	17	1
Corporate Taxes	**7**	10	(3)
Earnings	**14**	16	(2)

(1) Includes Maritime Electric and FortisOntario

Electricity Sales: Electricity sales at Other Canadian Electric Utilities decreased 27 GWh, or 1.2 per cent, year over year. The decrease was driven by the impact of the shut down of operations of certain industrial customers in Ontario and lower average consumption in Ontario.

Revenue: Revenue was $1 million lower than the previous year. During 2007, FortisOntario received a one-time refund of approximately $3 million ($2 million after-tax) from Niagara Mohawk Power Corporation ("NIMO") associated with cross-border transmission interconnection agreements. In April 2008, the US Federal Energy Regulatory Commission issued an order stating that the refund should not have been ordered. In May 2008, FortisOntario repaid the refunded amounts to NIMO.

Excluding the impact of the receipt of the $3 million refund in 2007 and its subsequent repayment in 2008, revenue increased $5 million year over year. The increase was primarily due to: (i) the flow through to customers of higher energy supply costs at FortisOntario; (ii) a 1.8 per cent increase in basic electricity rates at Maritime Electric, effective April 1, 2008; and (iii) an average 1.1 per cent increase in basic electricity distribution rates at FortisOntario, effective May 1, 2008, partially offset by the impact of lower electricity sales.

Earnings: Earnings were $2 million lower than the previous year. Excluding the impact of the receipt of the refund in 2007 and its subsequent repayment in 2008, earnings were $2 million higher year over year. The increase was driven by higher basic electricity rates, lower operating expenses and lower effective corporate taxes, partially offset by the impact of lower electricity sales and higher finance charges associated with increased borrowings. Operating expenses in 2007 included costs associated with an early retirement program at FortisOntario.

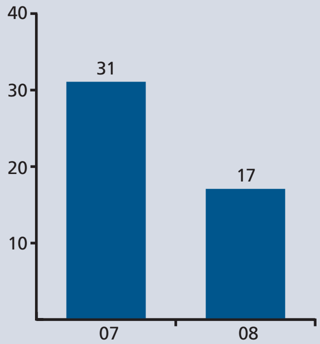
In October 2008, FortisOntario entered into a definitive agreement to acquire a 10 per cent strategic ownership in the electricity distribution business of Grimsby Power Inc. for a cash payment of approximately $1 million plus the provision of services to integrate Grimsby Power Inc.'s customer information system with FortisOntario's system. Grimsby Power Inc. serves approximately 10,000 distribution customers in the western area of the Niagara region. The transaction has been approved by the Ontario Energy Board ("OEB") and is pending approval from the Ontario Ministry of Finance.

Outlook: In March 2009, Maritime Electric received regulatory approval of its 2009 Rate Application, which will result in an increase in the amount of energy-related costs to be collected from customers through the basic rate component of customer billings, effective April 1, 2009. The regulator also approved, as filed, a maximum allowed ROE of 9.75 per cent for 2009, down from an allowed ROE of 10.00 per cent for 2008. The overall impact on residential customer rates for 2009 will be an increase of 5.3 per cent based on average consumption of 650 kWh per month.

Canadian Niagara Power filed a 2009 Cost of Service Application in August 2008 requesting the rebasing of distribution rates using 2009 as a forward test year. The application assumes a deemed capital structure of 56.7 per cent debt and 43.3 per cent equity and, as required by the OEB, reflects a preliminary ROE of 8.39 per cent. The Company expects a decision on the application to be received in April 2009.

A discussion of the nature of regulation and material regulatory decisions and applications pertaining to Other Canadian Electric Utilities is provided under the heading "Regulatory Highlights". A summary of forecast gross capital expenditures for the Other Canadian Electric Utilities for 2009 is provided under the heading "Liquidity and Capital Resources – Capital Program".

Regulated Electric Utilities – Caribbean Earnings *($ millions)*



Regulated Electric Utilities – Caribbean

Earnings' contribution from Regulated Electric Utilities – Caribbean for 2008 was $17 million (2007 – $31 million), which represented approximately 7 per cent of the Corporation's total regulated earnings (2007 – 15 per cent). Regulated Electric Utilities – Caribbean assets were approximately $1.0 billion as at December 31, 2008 (December 31, 2007 – $0.8 billion), which represented approximately 10 per cent of the Corporation's total regulated assets as at December 31, 2008 (December 31, 2007 – 8 per cent).

Regulated Electric Utilities – Caribbean(1)

Corporate Taxes	**2**	2	–
Non-Controlling Interest	**9**	13	(4)
Earnings	**17**	31	(14)

(1) Includes Belize Electricity, Caribbean Utilities and Fortis Turks and Caicos

(2) Caribbean Utilities had an April 30 fiscal year end whereby, up to and including the third quarter of 2008, Caribbean Utilities' financial statements were consolidated in the financial statements of Fortis on a two-month lag basis. Caribbean Utilities changed its fiscal year end to December 31, which has resulted in the Corporation consolidating 14 months of financial results of Caribbean Utilities during 2008.

(3) The reporting currency of Belize Electricity is the Belizean dollar, which is pegged to the US dollar at BZ$2.00 = US$1.00. The reporting currency of Caribbean Utilities and Fortis Turks and Caicos is the US dollar.

(4) Energy supply costs during 2008 included an $18 million (BZ$36 million) charge as a result of a regulatory rate decision by the Public Utilities Commission of Belize in June 2008.

(5) Operating expenses during 2007 included a $4.4 million (US$3.7 million) charge on the disposal of steam-turbine assets at Caribbean Utilities.

Electricity Sales: Electricity sales at Regulated Electric Utilities – Caribbean increased 145 GWh, or 13.8 per cent, year over year, driven by two additional months of contribution from Caribbean Utilities related to a change in the utility's fiscal year end, and customer and general economic growth. The increase was tempered by the loss of electricity sales at Fortis Turks and Caicos as a result of Hurricane Ike, including the delayed reopening for the fall tourist season of several large hotels on the Turks and Caicos Islands. Hurricane Ike was a Category 4 hurricane which struck the Turks and Caicos Islands in early September 2008. The increase was also tempered by the impact on electricity sales associated with the reduction in tourism activities related to global economic conditions towards the end of 2008.

Excluding the two additional months of contribution from Caribbean Utilities, electricity sales increased 6.0 per cent year over year. Electricity sales increased 8.7 per cent in 2007 compared to 2006.

Revenue: Revenue increased $101 million over the previous year; however, annual revenue for 2008 included the two additional months of contribution from Caribbean Utilities and an approximate $6 million favourable impact of foreign currency translation due to the weakening of the Canadian dollar against the US dollar year over year. Excluding the two additional months of contribution from Caribbean Utilities and the favourable impact of foreign currency translation, revenue increased year over year primarily due to: (i) the full flow through of higher fuel and oil costs to customers at Caribbean Utilities under the terms of the Company's new T&D licence; (ii) electricity sales growth; and (iii) an increase in the cost of power component of the average electricity rate at Belize Electricity, effective July 1, 2008. Partially offsetting the above factors were: (i) a decrease in the value-added delivery ("VAD") component of the average electricity rate at Belize Electricity, effective July 1, 2008; (ii) a 3.25 per cent reduction in basic electricity rates and the elimination of the hurricane cost recovery surcharge ("CRS") at Caribbean Utilities, effective January 1, 2008, under the terms of the Company's new T&D licence; and (iii) revenue loss of approximately $2 million at Fortis Turks and Caicos due to Hurricane Ike.

Earnings: Earnings' contribution was $14 million lower than the previous year. Earnings' contribution in 2008 was reduced by $13 million, representing the Corporation's approximate 70 per cent share of $18 million (BZ$36 million) of previously incurred fuel and purchased power costs at Belize Electricity disallowed by the regulator. Earnings' contribution in 2007 was reduced by approximately $2 million, representing the Corporation's share of a charge on the disposal of steam-turbine assets at Caribbean Utilities.

Excluding the one-time items in 2008 and 2007, as described above, earnings were $3 million lower year over year. The impact of electricity sales growth, $1 million of additional earnings' contribution from Caribbean Utilities, and the favourable impact on energy supply costs associated with the movement in deferred fuel costs at Caribbean Utilities was more than offset by: (i) the impact of the 3.25 per cent reduction in basic electricity rates and the elimination of the hurricane CRS at Caribbean Utilities; (ii) the reduction in the VAD component of the average electricity rate at Belize Electricity; (iii) revenue loss of approximately $2 million at Fortis Turks and Caicos due to Hurricane Ike; and (iv) increased operating expenses and amortization costs.

A large portion of the costs of reconnecting customers and restoring electricity service at Fortis Turks and Caicos as a result of Hurricane Ike was capital in nature and, therefore, did not affect earnings.

Excluding the impact of foreign currency translation and the charge on the disposal of steam-turbine assets in 2007, operating expenses increased mainly due to the impact of hiring additional employees and increased general and administrative expenses at Fortis Turks and Caicos, and the timing of maintenance activities. Amortization costs increased as a result of continued investment in capital assets.

In addition to the $18 million charge described above, Belize Electricity's targeted allowed ROA was reduced to 10 per cent from 12 per cent, effective July 1, 2008, which was reflected through a reduction in the VAD component of the average electricity rate.

In April 2008, Caribbean Utilities and the Government of the Cayman Islands entered into a new exclusive 20-year T&D licence and a new non-exclusive 21.5-year generation licence. Under the new T&D licence, customer rates are being set using an initial targeted ROA of 10 per cent, down from 15 per cent as allowed under the previous licence, which was reflected through the reduction in basic electricity rates, effective January 1, 2008.

Outlook: Growth in annual electricity sales at the Corporation's regulated utilities in the Caribbean for 2009 is expected to be approximately 4 per cent, reflecting the anticipated continued global economic downturn that is negatively affecting activity in the tourism, oil and related industries in the Caribbean region.

A discussion of the nature of regulation and material regulatory decisions and applications pertaining to Regulated Electric Utilities – Caribbean is provided under the heading "Regulatory Highlights". A summary of forecast gross capital expenditures for the Regulated Electric Utilities – Caribbean segment for 2009 is provided under the heading "Liquidity and Capital Resources – Capital Program".

NON-REGULATED

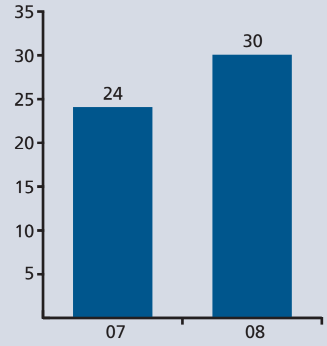
Non-Regulated – Fortis Generation(1)

Financial Highlights

Years Ended December 31	**2008**	2007	Variance
Energy Sales *(GWh)*	**1,217**	1,122	95
($ millions)			
Revenue	**82**	75	7
Energy Supply Costs	**7**	8	(1)
Operating Expenses	**14**	14	–
Amortization	**10**	10	–
Finance Charges	**8**	10	(2)
Corporate Taxes	**10**	8	2
Non-Controlling Interest	**3**	1	2
Earnings	**30**	24	6

(1) Includes the operations of non-regulated generation assets in Belize, Ontario, central Newfoundland, British Columbia and Upper New York State.

Non-Regulated – Fortis Generation Earnings *($ millions)*



Energy Sales: Energy sales from Non-Regulated – Fortis Generation increased 95 GWh, or 8.5 per cent, year over year, driven by higher production in central Newfoundland, Belize and Upper New York State. Higher production was mainly the result of higher rainfall.

Revenue: Revenue was $7 million higher year over year. Factors increasing revenue were: (i) higher production; (ii) increased average wholesale energy prices per megawatt hour ("MWh") in Ontario, which were $48.83 for 2008 compared to $47.81 for 2007; and (iii) increased average wholesale energy prices per MWh in Upper New York State, which were US$71.00 for 2008 compared to US$60.73 for 2007.

Earnings: Earnings were $6 million higher year over year, reflecting increased production and lower finance charges driven by the refinancing, in November 2007, of higher-cost external debt with lower-cost inter-company borrowings. Higher average wholesale energy prices also contributed to the increase in earnings year over year.

Outlook: Construction continued in 2008 on the US$53 million 19-MW hydroelectric generating facility at Vaca on the Macal River in Belize. The facility is expected to come into service at the beginning of 2010. The earnings' contribution from the Vaca facility, combined with the Corporation's planned consolidated capital program over the next couple of years, are expected to more than offset the loss of earnings upon the expiration, in April 2009, of the Niagara Exchange Agreement associated with the Rankine hydroelectric generating station in Ontario.

Further information on the Vaca hydroelectric generating facility and a summary of forecast non-regulated utility capital expenditures for 2009 is provided under the heading "Liquidity and Capital Resources – Capital Program".

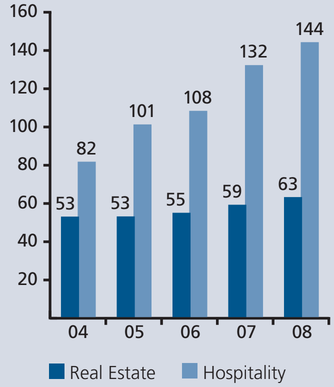
Non-Regulated – Fortis Properties

Financial Highlights

Years Ended December 31

($ millions)	**2008**	2007	Variance
Hospitality Revenue	**144**	132	12
Real Estate Revenue	**63**	59	4
Total Revenue	**207**	191	16
Operating Expenses	**135**	123	12
Amortization	**15**	14	1
Finance Charges	**24**	24	–
Corporate Taxes	**10**	6	4
Earnings	**23**	24	(1)

Fortis Properties
Revenue *($ millions)*



Revenue: Hospitality revenue was $12 million higher than the previous year, reflecting revenue contribution from the Delta Regina, acquired in August 2007, and the Fairmont Newfoundland hotel, which was acquired for approximately $22 million in November 2008 and rebranded the Sheraton Hotel Newfoundland in January 2009. Hospitality revenue also increased year over year due to improved performance at the Company's operations in Atlantic Canada.

Revenue per available room ("REVPAR") for 2008 was $80.39 compared to $79.31 for 2007. The increase in REVPAR was mainly due to higher average room rates, partially offset by decreased occupancy, at all of the Company's hospitality operating regions.

Real Estate revenue was $4 million higher year over year. The growth in Real Estate revenue was attributable to enhanced performance throughout all of the real estate operating regions, as well as the contribution from the real estate operations of the Delta Regina since August 2007. The occupancy rate of the Real Estate Division was 96.8 per cent as at December 31, 2008, consistent with the rate as at December 31, 2007.

Earnings: Earnings were $1 million lower than the previous year. Excluding a $2 million favourable corporate tax adjustment in 2007 associated with opening future income tax liability balances as a result of lower enacted corporate income tax rates, earnings were $1 million higher year over year. The increase was mainly due to a full year of earnings from the Delta Regina, which was acquired in August 2007.

Outlook: The Hospitality Division currently operates in eight Canadian provinces. Achieving organic revenue and earnings' growth at the Hospitality Division may prove challenging in 2009 as a result of the anticipated continued downturn in the global economy and its overall impact on leisure and business travel and hotel stays.

The Real Estate Division operates primarily in Atlantic Canada, with the majority of its properties located in large regional markets that contain a broad economic base. The buildings are occupied by a diversified tenant base characterized by long-term leases with staggered maturity dates to reduce the risk of vacancy exposure.

Corporate and Other(1)

Financial Highlights

Years Ended December 31

($ millions)	**2008**	2007(1)	Variance
Revenue	**26**	22	4
Operating Expenses	**16**	13	3
Amortization	**8**	6	2
Finance Charges(2)	**80**	70	10
Corporate Tax Recovery	**(23)**	(12)	(11)
Preference Share Dividends	**14**	6	8
Net Corporate and Other Expenses	**(69)**	(61)	(8)

(1) Includes Fortis net corporate expenses and, from May 17, 2007, the net expenses of non-regulated Terasen corporate-related activities and the financial results of Terasen's 30 per cent ownership interest in CWLP and Terasen's non-regulated wholly owned subsidiary TES

(2) Includes dividends on preference shares classified as long-term liabilities

Revenue: Revenue was $4 million higher than the previous year. Higher interest revenue from increased inter-company lending was combined with increased revenue contributions from CWLP. CWLP contributed revenue for a full year in 2008 compared to a partial year in 2007; however, this increase was partially offset by the impact of a decrease in the number of customer contracts at CWLP.

Net Corporate and Other Expenses: Net corporate and other expenses were $8 million higher than the previous year, primarily due to Terasen acquisition-related finance charges and other Terasen corporate-related expenses for a full year in 2008 compared to a partial year in 2007. The increase also reflected higher preference share dividends associated with the 9.2 million First Preference Shares, Series G issued in the second quarter of 2008 for gross proceeds of $230 million and higher business development costs. The increase in net corporate and other expenses was partially offset by a higher corporate tax recovery and higher interest revenue from increased inter-company lending. The corporate tax recovery in 2008 was favourably impacted by a $2 million tax reduction associated with the settlement of historical corporate tax matters at Terasen. The corporate tax recovery in 2007 was reduced as a result of purchase price allocation tax adjustments and by the impact of lower enacted future corporate income tax rates.

In December 2008, the Corporation publicly issued 11.7 million common shares for gross proceeds of approximately $300 million. The net proceeds were used to repay short-term debt that was primarily incurred to retire $200 million of debt at Terasen that matured on December 1, 2008 and for general corporate purposes.

Outlook: While currently not significant, financial results of TES are also reported in the Corporate and Other segment. TES expects to increase its activities in the development, building, owning and operating of geothermal energy systems, community piping and energy transfer systems to harness renewable energy sources. TES is entering into agreements with developers to provide alternative thermal energy systems for both residential and commercial development projects in British Columbia. In October 2008, TES signed an agreement to build a centralized heating and cooling system for a new Okanagan lakefront community project. TES will own and operate this alternative energy system. In December 2008, TES signed an agreement to build and manage an alternative district energy system in Coquitlam, British Columbia. The project is expected to commence in the fall of 2009 and be operational as early as 2011.

Regulatory Highlights

The nature of regulation and summary of material regulatory decisions and applications associated with each of the Corporation's regulated gas and electric utilities are summarized as follows:

Nature of Regulation

Regulated Utility	Regulatory Authority	Allowed Common Equity (%)	Allowed Returns (%) 2007	2008	2009	Supportive Features / Future or Historical Test Year Used to Set Rates
				ROE		Cost of Service ("COS")/ROE
						PBR mechanism through 2009:
TGI	BCUC	35	8.37	8.62	8.47	TGI: 50/50 sharing of earnings above or below the allowed ROE
TGVI	BCUC	40	9.07	9.32	9.17	TGVI: 100 per cent retention of earnings from lower-than-forecasted operating and maintenance costs but no relief from increased operating and maintenance costs
						ROE automatic adjustment formula tied to long-term Canada bond yields
						Future Test Year
FortisBC	BCUC	40	8.77	9.02	8.87	COS/ROE
						PBR mechanism for 2009 through 2011: 50/50 sharing of earnings above or below the allowed ROE up to an achieved ROE that is 200 basis points above or below the allowed ROE – excess to deferral account
						ROE automatic adjustment formula tied to long-term Canada bond yields
						Future Test Year
FortisAlberta	AUC	37	8.51	8.75	8.51[1]	COS/ROE
						ROE automatic adjustment formula tied to long-term Canada bond yields
						Future Test Year
Newfoundland Power	Newfoundland and Labrador Board of Commissioners of Public Utilities ("PUB")	45	8.60 +/– 50 bps	8.95 +/– 50 bps	8.95 +/– 50 bps	COS/ROE
						ROE automatic adjustment formula tied to long-term Canada bond yields
						Future Test Year

FortisOntario	OEB (Canadian Niagara Power)	43.3[2]	9.00	9.00	8.39	Canadian Niagara Power – COS/ROE
	Franchise Agreement (Cornwall Electric)					Cornwall Electric – Price cap with commodity cost flow through
						Future Test Year – beginning in 2009
				ROA		Four-year COS/ROA agreements
Belize Electricity	Public Utilities Commission ("PUC")	N/A	10.00 – 15.00	10.00	10.00[3]	Additional costs in the event of a hurricane would be deferred and the Company may apply for future recovery in customer rates.
						Future Test Year
Caribbean Utilities	Electricity Regulatory Authority ("ERA")	N/A	15.00	9.00 – 11.00	9.00 – 11.00	COS/ROA
						Rate-cap adjustment mechanism based on published consumer price indices
						Under the new licences, the Company may apply for a special additional rate to customers in the event of a disaster, including a hurricane.
						Historical Test Year
Fortis Turks and Caicos	Utilities make annual filings with the Energy Commission	N/A	17.50[4]	17.50[4]	17.50[4]	COS/ROA
						If the actual ROA is lower than the allowed ROA, due to additional costs resulting from a hurricane or other event, the Company may apply for an increase in customer rates in the following year.
						Future Test Year

(1) Interim ROE pending the outcome of the AUC's 2009 Generic Cost of Capital Proceeding
(2) Allowed deemed equity component of the capital structure for 2009. For 2008, the allowed deemed equity component of the capital structure was 46.7 per cent.
(3) Based on the June 2008 Final Decision on Belize Electricity's 2008/2009 rate application
(4) Amount provided under licence. Actual ROAs achieved in 2007 and 2008 were lower than the ROA allowed under the licence due to significant investment occurring at the utility.

Material Regulatory Decisions and Applications

Regulated Utility	Summary Description
TGI/TGVI	• In December 2007, the BCUC approved various rates at TGI and TGVI, including those for mid-stream and delivery for residential customers in several service areas, effective January 1, 2008. Increased mid-stream costs are flowed through to customers without markup. The approved rates also reflected the impact of an increase in the allowed ROE for 2008 to 8.62 per cent and 9.32 per cent for TGI and TGVI, respectively. • On April 1, 2008, final regulatory approval for the construction of the 1.5 billion-cubic foot liquefied natural gas storage facility on Vancouver Island was received for a total estimated cost of approximately $200 million. • Every three months, TGI and TGVI review natural gas and propane commodity prices with the BCUC in order to ensure the flow-through rates charged to customers are sufficient to cover the cost of purchasing natural gas and propane. Effective April 1, 2008 and July 1, 2008, the BCUC approved increases in the commodity rates charged to TGI customers for natural gas and propane. Effective October 1, 2008, the BCUC approved decreases in the commodity rates charged to TGI customers for natural gas. The commodity cost of natural gas and propane are flowed through to customers without markup. During 2008, no commodity rate changes were made at TGVI. • In December 2008, the BCUC approved various rates at TGI and TGVI, including those for mid-stream and delivery for residential customers in several service areas, effective January 1, 2009. The approved rates also reflected the impact of a decrease in the allowed ROE for 2009 to 8.47 per cent and 9.17 per cent for TGI and TGVI, respectively, resulting from the application of automatic ROE adjustment mechanisms. The commodity rate for natural gas will remain unchanged and the commodity rate for propane will decrease effective January 1, 2009. • TGI filed an application with the BCUC in the fourth quarter of 2008 requesting approval to perform extensive rehabilitation of certain underwater transmission pipeline crossings of the South Arm of the Fraser River serving Vancouver and Richmond. TGI expects to receive regulatory approval for this $27 million project in early 2009 with completion of the project anticipated in 2010. • TGI and TGVI are currently preparing rate applications related to 2010 which are anticipated to be filed with the BCUC in the second quarter of 2009. The BCUC approval of rates for 2010 and future years will be required as the current PBR agreements expire at the end of 2009. As part of the rate filings, TGI and TGVI plan to seek a review of the current generic ROE adjustment mechanisms and the deemed equity component of the utilities' capital structures.
FortisBC	• In December 2007, regulatory approval was received for the NSA associated with 2008 revenue requirements resulting in a customer rate increase of 2.9 per cent, effective January 1, 2008. The rate increase was primarily the result of the Company's capital expenditure program. Rates for 2008 reflected an allowed ROE of 9.02 per cent. • In April 2008, the BCUC approved an interim increase of 0.8 per cent to FortisBC's customer rates, effective May 1, 2008, as a result of BC Hydro's interim rate increase, which increased FortisBC's cost to purchase power from BC Hydro by 5.06 per cent. • In June 2008, FortisBC filed its 2009 and 2010 Capital Expenditure Plan for gross capital expenditures of approximately $193 million for 2009 and $196 million for 2010. In November 2008, the BCUC denied the costs relating to the Copper Conductor Replacement Project and Advanced Metering Infrastructure Project included in the 2009 and 2010 Capital Expenditure Plan. These projects would have totalled approximately $21 million in 2009 and $27 million in 2010. In February 2009, the BCUC issued its decision on the Company's 2009 and 2010 Capital Expenditure Plan. Total gross capital expenditures of $165 million were approved for 2009 and $156 million were approved for 2010. An additional $16 million of capital expenditures is subject to further regulatory processes. • In December 2008, the BCUC approved the Company's 2009 Revenue Requirements Application resulting in a general rate increase of 4.6 per cent, effective January 1, 2009. The rate increase is primarily the result of the Company's capital expenditure program and higher power purchases driven by customer growth and increased electricity demand. Rates for 2009 reflect an allowed ROE of 8.87 per cent as a result of the application of the automatic ROE adjustment mechanism. The approval of the 2009 Revenue Requirements Application also included an extension of the PBR mechanism for the years 2009 through 2011 under terms similar to the previous PBR agreement, except annual gross operating and maintenance expenses, before capitalized overhead, will be set by a formula incorporating customer growth and inflation, i.e., the consumer price index ("CPI") for British Columbia minus a productivity improvement factor ("PIF") of 3 per cent in 2009, 1.5 per cent in 2010 and 1.5 per cent in 2011. Should inflation be in excess of 3 per cent, the excess is to be added to the PIF, which effectively caps the CPI at 3 per cent.
FortisAlberta	• Effective January 1, 2008, FortisAlberta became regulated by the AUC due to the separation of the Alberta Energy and Utilities Board into two separate regulatory bodies. • In February 2008, regulatory approval was received of the NSA associated with 2008/2009 revenue requirements, resulting in distribution rate increases of 6.8 per cent, effective January 1, 2008, and 7.3 per cent, effective January 1, 2009. The approved NSA includes forecast gross capital expenditures of approximately $264 million for 2008 and $296 million for 2009, primarily to meet customer growth and improve system reliability. The 2008 revenue requirements included in the 2008/2009 NSA were determined using the 2007 allowed ROE of 8.51 per cent. The impact of the increase in the allowed ROE to 8.75 per cent for 2008 was subject to deferral-account treatment and, as such, was recognized as earned in 2008 and will be collected in customer rates in 2009.

Material Regulatory Decisions and Applications (cont'd)

Regulated Utility	Summary Description
FortisAlberta (cont'd)	• In June 2008, the AUC ruled that a review of ROE levels, adjustment mechanisms and utility capital structures in a generic proceeding would be appropriate. In July 2008, the AUC issued its notice of application, preliminary scoping document and minimum filing requirements for the 2009 Generic Cost of Capital Proceeding. The proceeding applies to all gas, electric and pipeline utilities in Alberta that are regulated by the AUC. • In November 2008, FortisAlberta submitted its evidence with respect to the 2009 Generic Cost of Capital Proceeding as requested by the AUC. A hearing is scheduled for the second quarter of 2009. • In December 2008, FortisAlberta received regulatory approval for its 2009 distribution rates to recover approved distribution costs. The result is a distribution rate increase of 8.6 per cent, effective January 1, 2009. The rate increase is slightly higher than the rate increase of 7.3 per cent contemplated in the 2008/2009 NSA due to the deferred recovery in customer rates in 2009 of the increase in the allowed ROE to 8.75 per cent in 2008. The approved rates for 2009 also reflect the impact of the Company's union agreement, which was settled after the 2008/2009 NSA was approved. As directed by the AUC, the Company is to continue using the 2007 allowed ROE of 8.51 per cent for 2009, pending the outcome of the 2009 Generic Cost of Capital Proceeding. • FortisAlberta expects to file a 2010 and 2011 revenue requirements application during the second quarter of 2009.
Newfoundland Power	• In December 2007, the PUB approved the Company's NSA associated with the 2008 general rate application, resulting in an average 2.8 per cent increase in customer rates, effective January 1, 2008. The rate increase was largely driven by higher amortization costs. The rate increase also reflected the impact of an increase in the allowed ROE to 8.95 per cent for 2008. • The PUB-approved NSA also results in, among other things: (i) the amortization of $7.2 million in 2008 and $4.6 million in each of 2009 and 2010 of the remaining $16.4 million balance of the original December 2005 unbilled revenue liability; (ii) amortization of approximately $3.9 million in each of 2008, 2009 and 2010 of previously deferred amortization expense; (iii) amortization over a period of three years to five years of certain deferred regulatory balances; and (iv) for 2008 through 2010, the deferral of variations in purchase power expense caused by differences in the actual unit cost of energy and the unit cost reflected in customer rates to be recovered from, or refunded to, customers through operation of the Company's rate stabilization account. • Effective July 1, 2008, the PUB approved an average 5.9 per cent increase in customer electricity rates, reflecting the flow through to customers, by operation of the rate stabilization account, of variances in the cost of fuel used to generate electricity that Newfoundland Hydro sells to Newfoundland Power. The increase in customer rates had no impact on Newfoundland Power's earnings in 2008. • In November 2008, the PUB approved, as filed, the Company's 2009 Capital Budget Application for approximately $62 million, with approximately half of the proposed capital expenditures relating to replacing aged and deteriorated components of the electricity system. • The Company's allowed ROE of 8.95 per cent remains unchanged for 2009 and, consequently, there has been no change in basic customer rates for 2009.
Maritime Electric	• In January 2008, IRAC approved, as filed, an increase in basic electricity rates of 1.8 per cent, effective April 1, 2008, and approved a maximum allowed ROE of 10.0 per cent for 2008. • In April 2008, IRAC ordered the energy cost adjustment mechanism ("ECAM") amortization period of 12 months to be set at 8 months, effective May 1, 2008. The result is an increase in the flow through in customer rates of the recovery of ECAM over the shorter amortization period. • In September 2008, IRAC approved, as filed, the Company's amendment of approximately $14 million to its 2008 Capital Budget to reflect the construction of a new transmission line to facilitate the expansion of merchant wind development. The project is being financed entirely by customer contributions. • In November 2008, IRAC approved, as filed, the Company's 2009 Capital Budget Application for approximately $20 million, before customer contributions. • In March 2009, IRAC approved Maritime Electric's 2009 Rate Application, which will result in an increase in the amount of energy-related costs to be collected from customers through the basic rate component of customer billings, effective April 1, 2009. The increase in the reference cost of energy in basic rates from 6.73 cents per kWh to 7.7 cents per kWh will result in a decrease in the amount of energy costs to be collected from customers through the operation of the ECAM. Additionally, IRAC approved the deferral of Point Lepreau Nuclear Generating Station replacement energy costs for 2009 and an increase in the amortization period of the ECAM to 12 months, effective April 1, 2009. IRAC also approved, as filed, a maximum allowed ROE of 9.75 per cent for 2009, down from an allowed ROE of 10.00 per cent for 2008. The overall impact on residential customer rates for 2009 will be an increase of 5.3 per cent based on average consumption of 650 kWh per month.
FortisOntario	• In March 2008, the OEB issued its decision relating to the 2008 Incentive Regulation Mechanism ("IRM") application filed by Canadian Niagara Power. The result was an average 1.1 per cent increase in electricity distribution rates for operations in Fort Erie, Port Colborne and Gananoque, effective May 1, 2008. The increase was comprised of a 2.1 per cent increase for inflation, partially offset by a 1.0 per cent decrease for a productivity adjustment. Under the 2008 IRM, Canadian Niagara Power's capital structure for 2008 was deemed at 53.3 per cent debt and 46.7 per cent equity, as part of the OEB's plan to move to a 60 per cent debt and 40 per cent equity capital structure over a three-year period.

Material Regulatory Decisions and Applications (cont'd)

Regulated Utility	Summary Description
FortisOntario (cont'd)	• Effective July 1, 2008, retail rates at Cornwall Electric decreased by approximately 6.2 per cent, attributable to a new 11.5-year wholesale electricity supply contract negotiated with Hydro-Québec Energy Marketing by Cornwall Electric on behalf of its customers. The new long-term agreement replaces an existing short-term contract and ensures reliability of supply and rate stability. • In August 2008, Canadian Niagara Power filed a 2009 Cost of Service Application requesting the rebasing of distribution rates using 2009 as a forward test year. The application assumes a deemed capital structure of 56.7 per cent debt and 43.3 per cent equity and, as required by the OEB, reflects a preliminary ROE of 8.39 per cent. The application proposes distribution rate increases of 4.9 per cent, 9.4 per cent and 7.1 per cent for Fort Erie, Gananoque and Port Colborne, respectively, effective May 1, 2009. The proposed increases are primarily driven by the impact of distribution system upgrades. The hearing process associated with the application commenced during the fourth quarter of 2008 and the Company expects a decision on the application to be received in April 2009.
Belize Electricity	• In March 2008, the newly elected Government of Belize repealed December 2007 amendments to the *Electricity (Tariffs, Charges and Quality of Services Standards) Bylaws*. The amendments had simplified Belize Electricity's rate-setting methodology, allowed for improved rate stabilization and settled outstanding matters related to the PUC's Final Decision on electricity rates for the period July 1, 2007 through June 30, 2008. • In March 2008, Belize Electricity filed an application requesting an increase in the cost of power component of the average electricity rate by 15 per cent, or BZ6.5 cents per kilowatt hour ("kWh"), as a result of the rapid increase in the cost of power due to increasing world oil prices. The application was disallowed by the PUC which cited that, in the interim, a decrease in the Company's operating expenses and capital expenditure levels would help offset the impact on cash flow of the increasing cost of power. Additionally, the PUC indicated it would defer its detailed analysis of the high deferrals of cost of power into Belize Electricity's cost of power rate stabilization account ("CPRSA") until the Annual Tariff Review Proceeding for the annual tariff period for July 1, 2008 to June 30, 2009. • In April 2008, Belize Electricity filed its Annual Tariff Review Application for the annual tariff period from July 1, 2008 to June 30, 2009 ("2008/2009 Rate Application") requesting a 13.4 per cent increase in the average electricity rate, as a result of an increase in the cost of power component of the rate and an increase in the recovery of the CPRSA. • In May 2008, the PUC issued its Initial Decision on Belize Electricity's 2008/2009 Rate Application. The Initial Decision denied any average rate increase and approved, among other things, a retroactive adjustment to Belize Electricity's CPRSA. Belize Electricity objected to the Initial Decision, which resulted in a review of the Initial Decision by a PUC-appointed Independent Expert. The report of the Independent Expert reiterated many of Belize Electricity's concerns pertaining to the Initial Decision. • In June 2008, the PUC issued its Final Decision on Belize Electricity's 2008/2009 Rate Application which rejected most of the recommendations of the Independent Expert and failed to increase the overall average electricity rate. The PUC also ordered a BZ$36 million retroactive adjustment associated with Belize Electricity's prior years' financial results. The adjustment, in substance, represented the disallowance of previously incurred fuel and purchased power costs. The PUC also reduced Belize Electricity's targeted allowed ROA to 10 per cent from 12 per cent through a reduction in the VAD component of the average electricity rate. The Final Decision would have the impact of reducing the Corporation's share of Belize Electricity's earnings by approximately $5 million over a 12-month period. The Final Decision does not impact the Corporation's non-regulated generation operations in Belize. • As a direct result of the Final Decision, Belize Electricity recorded an $18 million (BZ$36 million) charge ($13 million of which was the Corporation's share) to energy supply costs during the second quarter of 2008. • The Final Decision also proposed the use of an automatic mechanism, to be finalized by the PUC, to adjust monthly, on a two-month lag basis, the cost of power component of the rate to reflect actual costs of power. The automatic adjustment mechanism, which was retroactive effective September 1, 2008, allows for the collection from, or rebate to, customers of actual costs of power which vary from a reference cost of power by more than a threshold of 10 per cent. • In February 2009, the PUC amended the Final Decision on Belize Electricity's 2008/2009 Rate Application (the "Amendment"), effective for the period from January 1, 2009 through June 30, 2009. The Amendment provides for an increase in the VAD component of the average electricity rate to allow Belize Electricity to earn a targeted allowed ROA of 12 per cent but reduces the reference cost of power component of the average electricity rate, due to an overall decline in the cost of power. The Amendment, therefore, allows for an overall decrease in the average electricity rate from BZ44.1 cents per kWh to BZ37.5 cents per kWh. The Amendment also provides for a lower regulated asset value upon which the allowed ROA is calculated, while increasing operating expenses by the same amount, and reduces depreciation, taxes and fees and the related revenue requirement. • Changes made in electricity legislation by the Government of Belize and the PUC and the June 2008 Final Decision and Amendment, which were based on the changed legislation, have been judicially challenged by Belize Electricity in several proceedings. The judicial process is ongoing with interim rulings, judgments and appeals. The timing or likely outcome of the proceedings is indeterminable at this time.

Material Regulatory Decisions and Applications (cont'd)

Regulated Utility	Summary Description
Caribbean Utilities	• In December 2007, an Agreement in Principle ("AIP") was reached with the Government of the Cayman Islands on the terms of a new exclusive T&D licence and a new non-exclusive generation licence. • In April 2008, the new licences were granted. The terms of the new licences included competition for future generation capacity and general promotion of renewable sources of energy. The T&D licence is for an initial period of 20 years, expiring April 2028, with a provision for automatic renewal. The generation licence is for a period of 21.5 years, expiring September 2029. The terms of the new licences remained substantially the same as the terms outlined in the AIP. • Effective January 1, 2008, as a result of the AIP and subsequent granting of the new licences, basic customer rates were reduced by 3.25 per cent, the hurricane CRS was removed, a fuel-duty rebate funded by the Government of the Cayman Islands was implemented for residential customers consuming less than 1,500 kWh monthly, and basic rates were restructured to extract all fuel costs and licence fee amounts which are now being flowed through to customers. The 3.25 per cent reduction in basic rates reduced annual revenue by approximately US$2.1 million. Additionally, Caribbean Utilities has forgone US$2.6 million of revenue in 2008 as a result of the early elimination of the hurricane CRS. A new fuel and oil rate factor was also established to provide for the full flow through of fuel and oil costs to customers. • Following the initial basic rate reduction, customer rates will be frozen until May 31, 2009 and will be subject to annual review and adjustment each June thereafter. Under the new T&D licence, a mechanism will be used to adjust basic rates in accordance with a formula that is based on published CPIs, thereby taking inflation into account. The rate-adjustment mechanism is designed to maintain Caribbean Utilities' allowed ROA in a targeted range of 9 per cent to 11 per cent, down from an allowed ROA of 15 per cent permitted under the previous licence. The recently amended *Electricity Regulatory Authority Law* (2005 Revision) provides for the conduct of a competitive bid process to be managed by the ERA for new generating capacity and the replacement of retired generating capacity. The first competitive process under the new generation licence began in May 2008 with a filing of a Certificate of Need by Caribbean Utilities for the installation of 16 MW of additional generating capacity in each of 2011 and 2012. Based on slowing economic growth, the Company has advised the ERA that the capacity is not required until a year later. In March 2009, the ERA approved the Certificate of Need for 16 MW of generating capacity in each of 2012 and 2013. • In July 2008, Caribbean Utilities began a formal request for expressions of interest from qualified wind-generation developers for a wind-generation project for up to 10 MW. The ERA has endorsed this initiative and any power purchase agreements or generating licence arising from this initiative will be subject to ERA approval. • In July 2008, Caribbean Utilities filed with the regulator a Five-Year Capital Investment Plan ("CIP") totalling US$255 million. • In December 2008, Caribbean Utilities filed with the regulator a revised Five-Year CIP as a result of the change in the Company's fiscal year end. The revised CIP still totalled US$255 million, including approximately US$72 million related to new generation that is expected to be solicited. In January 2009, the regulator requested that the Company further review its non-generation capital expenditures to reflect the current economic environment and lower growth projections. A revised CIP totalling US$246 million was subsequently submitted to the ERA. A decision on the revised CIP is expected during the first quarter of 2009. • In January 2009, the ERA approved a new customer-owned renewable energy tariff that will allow customers on Grand Cayman to connect renewable energy systems to the Company's distribution system and generate their own power from renewable energy while remaining connected to Caribbean Utilities' grid. The Company expects to be able to connect customers to the grid by the end of the first quarter of 2009.
Fortis Turks and Caicos	• In May 2008, Fortis Turks and Caicos received approval from the Government of the Turks and Caicos Islands to supply wholesale electricity under an exclusive licence to Dellis Cay on the Turks and Caicos Islands. • In March 2009, Fortis Turks and Caicos submitted its 2008 annual regulatory filing outlining the Company's performance in 2008 and its capital expansion plans for 2009.

Consolidated Financial Position

The following table outlines the significant changes in the consolidated balance sheets of Fortis between December 31, 2008 and December 31, 2007.

Significant Changes in the Consolidated Balance Sheets between December 31, 2008 and December 31, 2007

Balance Sheet Account	Increase/ (Decrease) *($ millions)*	Explanation
Accounts receivable	46	The increase was primarily due to the impacts of cooler weather and an increase in the commodity cost of natural gas charged to customers at the Terasen Gas companies in December 2008 compared to December 2007.
Regulatory assets – current and long-term	48	The increase was driven by the deferral of 2008 AESO charges at FortisAlberta, an increase in the deferral of other post-employment benefit costs and the deferral of an increase in the cost of fuel and power at Maritime Electric and Caribbean Utilities. The increase was partially offset by a decrease in the deferral of the commodity cost of natural gas at the Terasen Gas companies and the cost of fuel and purchased power at Belize Electricity. The decrease at Belize Electricity was driven by an $18 million (BZ$36 million) adjustment as a result of a regulatory rate decision in 2008.
Inventories	22	The increase was primarily associated with inventories of natural gas at the Terasen Gas companies due to an increase in the average price of natural gas in December 2008 compared to December 2007.
Deferred charges and other assets	100	The increase was mainly due to the reclassification of hydroelectric generating facility assets of the Exploits Partnership from utility capital assets as at December 31, 2008. The increase was also due to $31 million in contributions made by FortisAlberta to the AESO for transmission capital projects during 2008 and an increase in deferred defined benefit pension costs. Refer to the "Contingencies" section of this MD&A for a further discussion of the Exploits Partnership.
Future income tax assets – long-term	17	The increase primarily related to future income tax recoveries associated with unrealized foreign exchange losses incurred upon the translation of the Corporation's US dollar-denominated long-term debt due to the weakening of the Canadian dollar against the US dollar.
Utility capital assets	619	The increase primarily related to $890 million invested in electricity and gas systems combined with the impact of foreign exchange on the translation of foreign currency-denominated utility capital assets. The increase was partially offset by customer contributions and amortization for 2008 and the reclassification of hydroelectric generating facility assets of the Exploits Partnership to deferred charges and other assets as at December 31, 2008.
Income producing properties	22	The increase primarily related to the acquisition of the Fairmont Newfoundland hotel in November 2008.
Goodwill	31	The increase primarily related to the impact of foreign exchange on the translation of US dollar-denominated goodwill and goodwill associated with the Corporation's additional investment in Caribbean Utilities as a result of the Corporation's participation in Caribbean Utilities' Rights Offering in August 2008. The increase was partially offset by a $6 million reduction associated with the recognition in 2008 of the benefit of tax losses at Terasen which related to periods prior to the Corporation's ownership of Terasen.
Short-term borrowings	(65)	The decrease was primarily due to the repayment of short-term borrowings by Maritime Electric and TGI with proceeds from the issuance of long-term debt.
Accounts payable and accrued charges	81	The increase was primarily due to higher natural gas costs payable at the Terasen Gas companies due to increased consumption as a result of cooler weather in December 2008 compared to December 2007, combined with higher accounts payable at Maritime Electric due to the timing of payments of energy supply costs. The increase was partially offset by a decrease in amounts owing at FortisAlberta due to the timing of payments to the AESO for transmission costs.
Income taxes payable	36	The increase was mainly due to taxes associated with regulatory-deferral accounts at the Terasen Gas companies combined with the timing of income tax payments and the accrual of current income taxes at the Terasen Gas companies and Newfoundland Power. The increase was partially offset by an approximate $17 million payment associated with the Québec Trust tax settlement at Terasen.
Regulatory liabilities – current and long-term	54	The increase was driven by the deferral, during the latter part of 2008, of amounts owing to customers due to lower actual commodity cost of natural gas at the Terasen Gas companies and lower cost of fuel and purchased power at Belize Electricity compared to amounts collected in customer rates and an increase in the regulatory provision for future asset removal and site restoration costs. The increase was partially offset by a decrease in the unbilled revenue liability at Newfoundland Power in accordance with PUB-approved amortization.
Deferred credits	16	The increase was primarily due to an increase in supplementary defined benefit pension and other post-employment benefit liabilities.

Significant Changes in the Consolidated Balance Sheets between December 31, 2008 and December 31, 2007 (cont'd)

Balance Sheet Account	Increase/ (Decrease) *($ millions)*	Explanation
Long-term debt and capital lease obligations (including current portion)	65	The increase was primarily due to the issuance of long-term debt and the impact of foreign exchange on the translation of foreign currency-denominated debt, partially offset by a net decrease in committed credit-facility borrowings, as well as by regularly scheduled debt maturities and repayments. The issuance of long-term debt, primarily to repay committed credit-facility borrowings, short-term borrowings and maturing long-term debt, was comprised of a $250 million unsecured debenture offering by TGI, a $250 million unsecured debenture offering by TGVI, a $100 million senior unsecured debenture offering by FortisAlberta and a $60 million secured first mortgage bond issue by Maritime Electric. The net $309 million decrease in committed credit-facility borrowings was driven by net repayments at the Terasen Gas companies and the Corporation, partially offset by net borrowings at FortisAlberta and FortisBC. The regularly scheduled debt repayments included the repayment of $188 million of maturing debt at TGI and $200 million of maturing debt at Terasen Inc.
Non-controlling interest	30	The increase primarily related to the impact of foreign exchange on the translation of foreign currency-denominated non-controlling interest amounts, combined with the Corporation's non-controlling interest in Caribbean Utilities' US$28 million Rights Offering in August 2008. The increase was partially offset by the Corporation's non-controlling interest in the net loss incurred at Belize Electricity in 2008, which was mainly the result of the PUC's decision on the Company's 2008/2009 Rate Application.
Shareholders' equity	670	The increase was driven by a $300 million common share issue ($291 million net of after-tax expenses) and a $230 million preference share issue ($225 million net of after-tax expenses), combined with net earnings reported for 2008, less common share dividends. The remainder of the increase related to the issuance of common shares under the Corporation's share purchase, dividend reinvestment and stock option plans and a decrease in accumulated other comprehensive loss.

Liquidity and Capital Resources

The table below outlines the Corporation's sources and uses of cash in 2008, as compared to 2007, followed by a discussion of the nature of the variances in cash flows year over year.

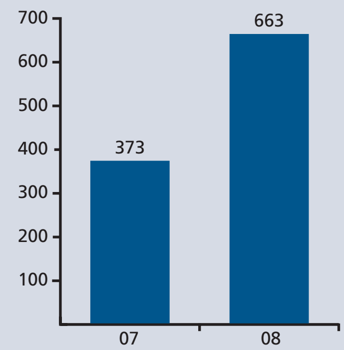
Summary of Cash Flows

Years Ended December 31

($ millions)	**2008**	2007	Variance
Cash, Beginning of Year	**58**	41	17
Cash Provided By (Used In)			
Operating Activities	**663**	373	290
Investing Activities	**(854)**	(2,033)	1,179
Financing Activities	**196**	1,680	(1,484)
Foreign Currency Impact on Cash Balances	**3**	(3)	6
Cash, End of Year	**66**	58	8

Operating Activities: Cash flow from operating activities, after working capital adjustments, in 2008 was $290 million higher than the previous year. An increase in cash flow from operating activities, after working capital adjustments, of $380 million at the Terasen Gas companies was combined with the impact of favourable working capital changes at Newfoundland Power. The Terasen Gas companies contributed to the financial results of the Corporation for a full year in 2008 compared to a partial year in 2007. The increase was partially offset by lower cash flow from operating activities, after working capital adjustments, at FortisAlberta. However, cash from operating activities in 2007 at FortisAlberta reflected the favourable impact of the sale of amounts in the Company's AESO charges deferral account, corporate tax refunds received and the timing of the payment of AESO transmission costs.

Cash Flow from Operating Activities
($ millions)



Investing Activities: Cash used in investing activities in 2008 was approximately $1.2 billion lower than the previous year. Investing activities in 2007, however, included the impact of the approximate $1.3 billion cash payment for the acquisition of Terasen in May 2007 and the approximate $50 million acquisition of the Delta Regina in August 2007. Excluding the impact of the acquisitions of Terasen and the Delta Regina in 2007, cash used in investing activities was $124 million higher year over year. The increase was driven by higher utility capital expenditures and changes in deferred charges, other assets and deferred credits, partially offset by an increase in contributions received in aid of construction and an increase in proceeds from the sale of capital assets. In January 2008, TGI received $14 million of proceeds associated with the sale of surplus land in December 2007. Investing activities for 2008 also included the approximate $22 million acquisition of the Fairmont Newfoundland hotel in November 2008.

Gross utility capital expenditures in 2008 were $890 million, $100 million higher than last year. The increase was driven by the Terasen Gas companies and FortisAlberta, partially offset by lower capital spending at FortisBC. The net increase in the use of cash associated with changes in deferred charges, other assets and deferred credits of $27 million was driven by higher contributions by FortisAlberta to AESO transmission capital projects. Contributions received in aid of construction in 2008 were $12 million higher than last year, primarily related to the Terasen Gas companies and Maritime Electric, partially offset by lower contributions received at FortisAlberta.

Financing Activities: Cash provided by financing activities in 2008 was approximately $1.5 billion lower than the previous year. Financing activities in 2007 included the issuance of common shares, for gross proceeds of $1.15 billion, to finance a significant portion of the cash purchase price of Terasen. Excluding the impact of financing the acquisition of Terasen in 2007, cash provided by financing activities was $382 million lower in 2008 compared to 2007. The decrease was mainly due to higher net repayments of short-term and committed credit-facility borrowings, lower proceeds from long-term debt and higher repayments of long-term debt. The decrease was partially offset by net proceeds from the $300 million common share issue during the fourth quarter of 2008 and the $230 million preference share issue during the second quarter of 2008 compared to net proceeds from a $150 million common share issue during the first quarter of 2007.

Net repayments of short-term borrowings were $69 million for 2008 compared to proceeds from net short-term borrowings of $103 million in 2007. The net repayments in 2008 were driven by Maritime Electric and the Terasen Gas companies, with partial proceeds from the issuance of long-term debt in 2008.

Proceeds from long-term debt, net of issue costs, repayments of long-term debt and capital lease obligations, and net borrowings (repayments) under committed credit facilities for 2008 compared to 2007 are summarized in the following tables.

Proceeds from Long-Term Debt, Net of Issue Costs

Years Ended December 31

($ millions)	**2008**	2007	Variance
Terasen Gas Companies	**496**[(1)(2)]	250[(3)]	246
FortisAlberta	**99**[(4)]	110[(5)]	(11)
FortisBC	**–**	104[(6)]	(104)
Newfoundland Power	**–**	70[(7)]	(70)
Maritime Electric	**60**[(8)]	–	60
Caribbean Utilities	**–**	48[(9)]	(48)
Corporate – Fortis Inc.	**–**	209[(10)]	(209)
Other	**7**	6	1
Total	**662**	797	(135)

(1) Issued February 2008, $250 million 6.05% Senior Unsecured Debentures by TGVI, due February 2038. The net proceeds were used to repay committed credit-facility borrowings.

(2) Issued May 2008, $250 million 5.80% Medium-Term Unsecured Note Debentures by TGI, due May 2038. The net proceeds were primarily used to repay maturing $188 million 6.20% debentures and short-term borrowings.

(3) Issued October 2007, $250 million 6.00% Medium-Term Unsecured Note Debentures by TGI, due October 2037. The net proceeds were used to repay maturing $250 million 6.50% long-term debt.

(4) Issued April 2008, $100 million 5.85% Senior Unsecured Debentures, due April 2038. The net proceeds were used to repay committed credit-facility borrowings.

(5) Issued January 2007, $110 million 4.99% Senior Unsecured Debentures, due January 2047. The net proceeds were used to repay committed credit-facility borrowings.

(6) Issued July 2007, $105 million 5.90% Senior Unsecured Debentures, due July 2047. The net proceeds were used to repay committed credit-facility borrowings and for general corporate purposes, including capital expenditures.

(7) Issued August 2007, $70 million 5.90% Secured First Mortgage Sinking Fund Bonds, due August 2037. The net proceeds were used to repay committed credit-facility borrowings and maturing $31.5 million 11.875% Secured First Mortgage Sinking Fund Bonds.

(8) Issued April 2008, $60 million 6.05% Secured First Mortgage Bonds, due April 2038. The proceeds were used to repay short-term borrowings.

(9) Issued June 2007, US$30 million 5.65% Senior Unsecured Notes, due June 2022. Issued November 2007, US$10 million 5.65% Senior Unsecured Notes, due June 2022. The net proceeds were used to repay debt and finance capital expenditures.

(10) Issued September 2007, US$200 million 6.60% Senior Unsecured Notes, due September 2037. The net proceeds were primarily used to repay committed credit-facility borrowings associated with the Terasen acquisition and for general corporate purposes.

Repayment of Long-Term Debt and Capital Lease Obligations

Years Ended December 31

Net (Repayments) Borrowings Under Committed Credit Facilities

Years Ended December 31

($ millions)	**2008**	2007	Variance
Terasen Gas Companies	**(261)**	–	(261)
FortisAlberta	**101**	(76)	177
FortisBC	**31**	(21)	52
Newfoundland Power	**(1)**	(2)	1
Corporate	**(179)**	124[(1)]	(303)
Total	**(309)**	25	(334)

(1) Borrowings under the Corporation's committed credit facility during 2007 primarily related to financing, on an interim basis, the remaining $125 million net cash purchase price of Terasen on May 17, 2007, in addition to certain acquisition costs and common share issue costs; to repay certain short-term indebtedness assumed upon the acquisition of Terasen; to finance a significant portion of the cash purchase price of the Delta Regina in August 2007; and in support of general corporate activities. Indebtedness under the credit facility was partially repaid with partial net proceeds from the $150 million common share issue and the issuance of US$200 million unsecured notes.

Borrowings by the utilities under credit facilities are primarily in support of their respective capital expenditure programs and/or for working capital requirements. Repayments are primarily financed through the issuance of long-term debt and/or cash from operations. From time to time, proceeds from preference share, common share and long-term debt issues are used to repay borrowings under the Corporation's committed credit facility.

Net proceeds associated with the issuance of common shares under the Corporation's share purchase and stock option plans in 2008 were $21 million compared to $23 million in 2007. In December 2008, the Corporation publicly issued 11.7 million common shares for gross proceeds of approximately $300 million ($287 million net of costs). The net proceeds were used to repay short-term debt primarily incurred to retire $200 million of debt at Terasen that matured on December 1, 2008, and for general corporate purposes. In May 2007, the Corporation publicly issued 44.3 million common shares for gross proceeds of approximately $1.15 billion ($1.1 billion net of costs) to finance a significant portion of the net cash purchase price of Terasen. In January 2007, 5.17 million common shares were publicly issued for gross proceeds of approximately $150 million ($143 million net of costs). Partial net proceeds from the common share issue in January 2007 were used to repay indebtedness incurred under the Corporation's committed credit facility. The remainder of the net proceeds was utilized to fund equity requirements of the Corporation's regulated electric utilities in western Canada, in support of their respective capital expenditure programs, and for general corporate purposes.

During the second quarter of 2008, the Corporation issued 9.2 million First Preference Shares, Series G for gross proceeds of approximately $230 million ($223 million net of costs). The net proceeds were used to repay $170 million under the Corporation's committed credit facility, to fund equity requirements of FortisAlberta and the Corporation's regulated electric utilities in the Caribbean, and for general corporate purposes.

Common share dividends were $162 million for 2008, up $34 million from 2007. The increase was due to an increase in the number of common shares outstanding, primarily as a result of the issuance of common shares pursuant to the Terasen acquisition in May 2007 and a higher dividend declared per common share compared to 2007. The dividend declared per common share in 2008 was $1.01, while the dividend declared per common share in 2007 was $0.88.

Preference share dividends increased $8 million year over year as a result of the dividends associated with the $230 million preference shares that were issued during the second quarter of 2008.

Contractual Obligations: Consolidated contractual obligations over the next five years and for periods thereafter, as at December 31, 2008, are outlined in the following table.

Contractual Obligations

As at December 31

($ millions)	**Total**	≤ 1 year	> 1–3 years	4–5 years	> 5 years
Long-term debt(1)	**5,122**	240	319	335	4,228
Brilliant Terminal Station(2)	**63**	3	5	5	50
Gas purchase contract obligations(3)	**466**	416	50	–	–
Power purchase obligations					
FortisBC(4)	**2,829**	40	76	78	2,635
FortisOntario(5)	**561**	45	94	99	323
Maritime Electric(6)	**72**	52	2	2	16
Belize Electricity(7)	**16**	4	4	2	6
Capital cost(8)	**400**	16	41	41	302
Joint-use asset and shared service agreements(9)	**62**	4	7	6	45
Office lease – FortisBC(10)	**19**	1	4	2	12
Operating lease obligations(11)	**166**	18	33	29	86
Other	**25**	4	10	6	5
Total	**9,801**	843	645	605	7,708

(1) In prior years, TGVI received non-interest bearing repayable loans from the federal and provincial governments of $50 million and $25 million, respectively, in connection with the construction and operation of the Vancouver Island natural gas pipeline. As approved by the BCUC, these loans have been recorded as government grants and have reduced the amounts reported for utility capital assets. The government loans are repayable in any fiscal year prior to 2012 under certain circumstances and subject to the ability of TGVI to obtain non-government subordinated debt financing on reasonable commercial terms. As the loans are repaid and replaced with non-government loans, utility capital assets and long-term debt will increase in accordance with TGVI's approved capital structure, as will TGVI's rate base, which is used in determining customer rates. The repayment criteria were met in

2008 and TGVI is expected to make an $8 million repayment on the loans in 2009 (2008 – $6 million). As at December 31, 2008, the outstanding balance of the repayable government loans was $61 million with $8 million classified as current portion of long-term debt. Repayments of the government loans beyond 2009 are not included in the contractual obligations table above as the amount and timing of the repayments are dependent upon annual BCUC approval of the recovery of TGVI's revenue deficiency deferral account and the ability of TGVI to replace the government loans with non-government subordinated debt financing on reasonable commercial terms.

(2) On July 15, 2003, FortisBC began operating the Brilliant Terminal Station ("BTS") under an agreement, the term of which expires in 2056, (unless the Company has earlier terminated the agreement by exercising its right, at any time after the anniversary date of the agreement in 2029, to give 36 months' notice of termination). The BTS is jointly owned by CPC/CBT and is used by the Company on its own behalf and on behalf of CPC/CBT. The agreement provides that FortisBC will pay CPC/CBT a charge related to the recovery of the capital cost of the BTS and related operating costs.

(3) Gas purchase contract obligations relate to various gas purchase contracts at the Terasen Gas companies. These obligations are based on market prices that vary with gas commodity indices. The amounts disclosed reflect index prices that were in effect as at December 31, 2008.

(4) Power purchase obligations for FortisBC include the Brilliant Power Purchase Agreement (the "BPPA") as well as the power purchase agreement with BC Hydro. On May 3, 1996, an Order was granted by the BCUC approving a 60-year BPPA for the output of the BTS located near Castlegar, British Columbia. The BPPA requires payments based on the operation and maintenance costs and a return on capital for the plant in exchange for the specified natural flow take-or-pay amounts of power. The BPPA includes a market-related price adjustment after 30 years of the 60-year term. The power purchase agreement with BC Hydro, which expires in 2013, provides for any amount of supply up to a maximum of 200 MW but includes a take-or-pay provision based on a five-year rolling nomination of the capacity requirements.

(5) Power purchase obligations for FortisOntario primarily include two long-term take-or-pay contracts between Cornwall Electric and Hydro-Québec Energy Marketing for the supply of electricity and capacity. The first contract provides approximately 237 GWh of energy per year and up to 45 MW of capacity at any one time. The second contract, supplying the remainder of Cornwall Electric's energy requirements, provides 100 MW of capacity and energy and provides a minimum of 300 GWh of energy per contract year. Both contracts expire in December 2019.

(6) Maritime Electric has two take-or-pay contracts for the purchase of either capacity or energy. These contracts total approximately $72 million through November 30, 2032. The take-or-pay contract with New Brunswick Power ("NB Power") includes, among other things, replacement energy and capacity for the NB Power Point Lepreau Nuclear Generating Station during its refurbishment outage. The other take-or-pay contract is for transmission capacity allowing Maritime Electric to reserve 30 MW of capacity on the new International Power Line into the United States.

(7) Power purchase obligations for Belize Electricity include a 15-year power purchase agreement, which commenced in February 2007, between Belize Electricity and Hydro Maya Limited for the supply of 3 MW of capacity and a two-year power purchase agreement, expiring in December 2010, between Belize Electricity and Comisión Federal de Electricidad of Mexico for the supply of 50 MW of firm capacity and associated energy. Belize Electricity has also signed two 15-year power purchase agreements with Belize Cogeneration Energy Limited ("Belcogen") and Belize Aquaculture Limited that provide for the supply of approximately 14 MW of capacity and up to 15 MW of capacity, respectively. As the generating plants are not yet connected to the electricity system, the obligations related to the power purchase agreements with Belcogen and Belize Aquaculture Limited have not been included in the Corporation's contractual obligations.

(8) Maritime Electric has entitlement to approximately 6.7 per cent of the output from the NB Power Dalhousie Generating Station and approximately 4.7 per cent from the NB Power Point Lepreau Nuclear Generating Station for the life of each unit. As part of its participation agreement, Maritime Electric is required to pay its share of the capital costs of these units.

(9) FortisAlberta and an Alberta transmission service provider have entered into an agreement in consideration for joint attachments of distribution facilities to the transmission system. The expiry terms of this agreement state that the agreement remains in effect until the Company no longer has attachments to the transmission facilities. Due to the unlimited term of this contract, the calculation of future payments after 2013 includes payments to the end of 20 years. However, the payments under this agreement may continue for an indefinite period of time. FortisAlberta and an Alberta transmission service provider have also

entered into a number of service agreements to ensure operational efficiencies are maintained through coordinated operations. The service agreements have minimum expiry terms of five years from September 1, 2005 and are subject to extensions based on mutually agreeable terms.

(10) Under a sale-leaseback agreement, on September 29, 1993, FortisBC began leasing its Trail, British Columbia office building for a term of 30 years. The terms of the agreement grant FortisBC repurchase options at approximately year 20 and year 28 of the lease term.

(11) Operating lease obligations include certain office, warehouse, natural gas T&D asset, and vehicle and equipment leases, and the lease of electricity distribution assets of Port Colborne Hydro Inc.

Other Contractual Obligations: Caribbean Utilities has a primary fuel supply contract with a major supplier and is committed to purchase 80 per cent of the Company's fuel requirements from this supplier for the operation of Caribbean Utilities' diesel-fired generating plant. The contract is for three years terminating in April 2010. The remaining approximate quantities, in millions of imperial gallons, required to be purchased annually for each of the 12-month periods ended December 31 are: 2009 – 27 and 2010 – 9.

Fortis Turks and Caicos has a renewable contract with a major supplier for all of its diesel fuel requirements associated with the generation of electricity. The approximate fuel requirements under this contract are 12 million imperial gallons per annum.

Pension Funding: As at December 31, 2008, the fair value of the Corporation's consolidated defined benefit pension plan assets was $579 million compared to $674 million as at December 31, 2007, which represented a 14 per cent decline in asset value. Details of the nature of the changes in the fair value of the plan assets are disclosed in Note 20 to the Corporation's 2008 Consolidated Financial Statements. The decrease in the fair value of the pension plan assets during 2008 was mainly driven by unfavourable market conditions during the year.

The decline in the fair value of the pension plan assets is expected to have the effect of increasing the Corporation's future consolidated defined benefit pension plan funding obligations. The amount of the increase will not be determinable until the next completion of actuarial valuations, which for Newfoundland Power, the Corporation and one of the defined benefit pension plans at Terasen is expected during 2009, related to December 31, 2008 valuation dates. The next scheduled actuarial valuations for the remaining larger defined benefit pension plans are not until December 2009 and December 2010.

Fortis expects any additional defined benefit pension plan funding requirements to be sourced primarily from a combination of cash generated from operations and amounts available for borrowing under existing credit facilities.

Based on the last completion of actuarial valuations, required defined benefit pension plan funding contributions are expected to total approximately $17 million for 2009 and $12 million for 2010. The level of the defined benefit pension plan funding contributions will be affected by the outcome of the December 31, 2008 actuarial valuations.

Capital Structure: The Corporation's principal businesses of regulated gas and electricity distribution require ongoing access to capital to allow the utilities to fund maintenance and expansion of infrastructure. Fortis raises debt at the subsidiary level to ensure regulatory transparency, tax efficiency and financing flexibility. To help ensure access to capital, the Corporation targets a consolidated long-term capital structure containing approximately 40 per cent equity, including preference shares, and 60 per cent debt, as well as investment-grade credit ratings. Each of the Corporation's regulated utilities maintains its own capital structure in line with the deemed capital structure reflected in the utilities' customer rates.

The consolidated capital structure of Fortis is presented in the following table.

Capital Structure

As at December 31	**2008**		2007	
	($ millions)	*(%)*	*($ millions)*	*(%)*
Total debt and capital lease obligations (net of cash)(1)	**5,468**	**59.5**	5,476	64.3
Preference shares(2)	**667**	**7.3**	442	5.2
Common shareholders' equity	**3,046**	**33.2**	2,601	30.5
Total	**9,181**	**100.0**	8,519	100.0

(1) Includes long-term debt, including current portion, and short-term borrowings, net of cash

(2) Includes preference shares classified as both long-term liabilities and equity

The improvement in the capital structure from December 31, 2007 was primarily due to a $300 million ($291 million net of after-tax expenses) common share issue in December 2008 and a $230 million ($225 million net of after-tax expenses) preference share issue in the second quarter of 2008. The capital structure was also favourably impacted by net earnings applicable to common shares, net of common share dividends, of $83 million during 2008.

The Corporation's credit ratings are as follows:

Standard & Poor's ("S&P")	A– (long-term corporate and unsecured debt credit rating)
DBRS	BBB(high) (unsecured debt credit rating)

During the fourth quarter of 2008, S&P and DBRS confirmed the Corporation's unsecured corporate debt credit ratings. The credit ratings reflect the diversity of the operations of Fortis, the stand-alone nature and financial separation of each of the regulated subsidiaries of Fortis, management's commitment to maintaining low levels of debt at the holding company level and the continued focus of Fortis on pursuing the acquisition of stable regulated utilities.

Capital Program: The Corporation's principal businesses of regulated gas and electricity distribution are capital intensive. Capital investment in infrastructure is required to ensure continued and enhanced performance, reliability and safety of the gas and electricity systems and to meet customer growth. All costs considered to be maintenance and repairs are expensed as incurred. Costs related to replacements, upgrades and betterments of capital assets are capitalized as incurred. During 2008, approximately $94 million in maintenance and repairs was expensed compared to approximately $87 million during 2007. The increase year over year largely reflected inclusion of the financial results of the Terasen Gas companies for a full year in 2008.

Actual gross consolidated capital expenditures for 2008 were $904 million, comparable to the estimate for 2008 as disclosed at December 31, 2007.

A summary of gross capital expenditures for 2008 by segment and asset category is provided in the following table.

Gross Capital Expenditures

Year Ended December 31, 2008

($ millions)	Terasen Gas Companies(1)	Fortis Alberta(1)(2)	Fortis BC(1)	Newfoundland Power(1)	Other Regulated Utilities – Canadian(1)	**Total Regulated Utilities – Canadian**	**Regulated Utilities – Caribbean**	**Non-Regulated – Utility(3)**	**Fortis Properties**	**Total(4)**
Generation	–	–	16	5	2	**23**	**37**	**18**	**–**	**78**
Transmission	93	–	47	6	14	**160**	**16**	**–**	**–**	**176**
Distribution	108	220	37	48	27	**440**	**43**	**–**	**–**	**483**
Facilities, equipment, vehicles and other	4	41	7	4	2	**58**	**13**	**10**	**14**	**95**
Information technology	15	41	10	4	1	**71**	**1**	**–**	**–**	**72**
Total	220	302	117	67	46	**752**	**110**	**28**	**14**	**904**

(1) Includes asset removal and site restoration expenditures which are permissible in rate base

(2) Excludes payments of $31 million made to the AESO for investment in transmission capital projects

(3) Includes non-regulated generation, non-regulated gas utility and Corporate capital expenditures

(4) Includes expenditures associated with assets under construction

Gross consolidated capital expenditures for 2009 are expected to be approximately $1 billion. Planned capital expenditures are based on detailed forecasts of customer demand, weather, and cost of labour and materials, as well as other factors, including economic conditions, which could change and cause actual expenditures to differ from forecasts.

A summary of forecast gross capital expenditures for 2009 by segment and by asset category is provided in the following table.

Forecast Gross Capital Expenditures

Year Ending December 31, 2009

($ millions)	Terasen Gas Companies[(1)]	Fortis Alberta[(2)]	Fortis BC[(1)]	Newfoundland Power[(1)]	Other Regulated Utilities – Canadian[(1)]	**Total Regulated Utilities – Canadian**	**Regulated Utilities – Caribbean**	**Non-Regulated – Utility[(3)]**	**Fortis Properties**	**Total[(4)]**
Generation	–	–	22	10	3	**35**	**43**	**34**	**–**	**112**
Transmission	160	–	66	5	2	**233**	**17**	**–**	**–**	**250**
Distribution	87	186	37	42	26	**378**	**36**	**1**	**–**	**415**
Facilities, equipment, vehicles and other	8	22	7	4	1	**42**	**19**	**21**	**33**	**115**
Information technology	32	84	10	4	2	**132**	**3**	**–**	**–**	**135**
Total	287	292	142	65	34	**820**	**118**	**56**	**33**	**1,027**

(1) Includes forecast asset removal and site restoration expenditures which are permissible in rate base

(2) Excludes forecast payments of $31 million to be made to the AESO for investment in transmission capital projects

(3) Includes forecast non-regulated generation, non-regulated gas utility and Corporate capital expenditures

(4) Includes forecast expenditures associated with assets under construction

The percentage breakdown of 2008 actual and 2009 forecast gross capital expenditures among growth, sustaining and other is as follows:

Gross Capital Expenditures

Year Ended December 31

(%)	**Actual 2008**	Forecast 2009
Growth	**49**	45
Sustaining[(1)]	**33**	31
Other[(2)]	**18**	24
Total	**100**	100

(1) Capital expenditures required to ensure continued and enhanced performance, reliability and safety of generation and T&D assets

(2) Related to facilities, equipment, vehicles, information technology systems and other assets

Significant capital expenditure projects in 2008 and 2009 are summarized in the table below.

Significant Capital Projects

($ millions) **Company**	**Nature of project**	**Actual 2008[(1)]**	Forecast 2009[(1)]	Forecast costs to complete after 2009[(1)]	Year of expected completion
Terasen Gas Companies	Liquefied natural gas storage facility – Vancouver Island	**47**	74	93	2011
	Squamish-to-Whistler pipeline lateral and system conversion	**13**	16	–	2009
	Customer Information System	**–**	14[(2)]	–[(2)]	–[(2)]
	Gateway Infrastructure Project	**–**	15	15	2010
	Fraser River South Bank South Arm Rehabilitation Project	**1**	25	1	2010
FortisAlberta	Automated Meter Infrastructure technology	**17**	73	27	2010
FortisBC	Okanagan Transmission Reinforcement Project	**3**	32	100	2011
	New substations and associated transmission lines	**27**	16	73	2013
	Generation asset Upgrade and Life-Extension Program	**11**	14	39	2012
Caribbean Utilities	New 16-MW diesel-fired generating unit	**8**	21	–	2009
Non-Regulated – Fortis Generation	19-MW Vaca hydroelectric generating facility in Belize	**18**	34	–	Beginning of 2010
Fortis Properties	Expansion of Holiday Inn Express Kelowna	**2**	12	–	Beginning of 2010

(1) Includes allowance for funds used during construction

(2) The total cost and timing of the project are subject to regulatory approval. An application requesting approval of the project is expected in 2009.

In April 2008, TGVI received approval from the BCUC to proceed with the engineering, procurement and construction ("EPC") of the liquefied natural gas ("LNG") storage facility on Vancouver Island for a total cost of approximately $200 million. As a result, the Company entered into an EPC contract with a third party for the construction of the facility. The contract includes approximately $55 million to be paid in US dollars. As a result, TGVI entered into a three-year US dollar forward-purchase contract which will mitigate currency fluctuations on the US dollar portion of the EPC contract. Construction commenced on the LNG storage facility during the second quarter of 2008 with completion of the project expected in late 2011.

TGVI's construction of a 50-kilometre pipeline lateral from Squamish to Whistler continued in 2008 and, as at December 31, 2008, approximately 49 kilometres of the pipeline had been constructed. Originally scheduled to be completed by summer 2008, the pipeline lateral is now expected to be completed in April 2009, later than originally planned due to changes in the way the Company can sequence the pipeline construction as a result of the Government of British Columbia's Sea-to-Sky Highway Improvement Project Plan ("Highway Project"). The pipeline is being built in conjunction with the Highway Project and the pipeline route mainly falls within the highway right of way. Upon completion of the pipeline, the Company will convert the Resort Municipality of Whistler from propane to natural gas during spring and summer of 2009. The total cost of the pipeline lateral and system conversion is expected to be approximately $51 million.

TGI is currently conducting a review of the existing customer care services arrangements with its outsourced provider to ensure the needs of customers will be met in the future. Later in 2009, TGI expects to file an application with the BCUC requesting approval and funding for the development of a replacement customer information system with capital spending related to this project estimated at $14 million for 2009.

As a result of the Government of British Columbia's Gateway Initiative, a regional infrastructure program to improve the movement of people, goods and transit throughout Greater Vancouver, TGI will be required to relocate some of its pipeline system. Total capital spending for the project, which is expected to be fully funded from contributions from the Government of British Columbia, is estimated at approximately $30 million, with $15 million expected to be spent in 2009.

In the fourth quarter of 2008, TGI filed an application with the BCUC requesting approval to perform extensive rehabilitation of certain underwater transmission pipeline crossings of the South Arm of the Fraser River serving Vancouver and Richmond. TGI expects to receive approval for this project in early 2009 with completion of the project anticipated in 2010. The total capital cost of the project is anticipated to be approximately $27 million.

During the third quarter of 2008, FortisAlberta began the second phase of deployment of the replacement of conventional meters with new Automated Meter Infrastructure ("AMI") technology. This phase is part of an overall $124 million project to convert all of FortisAlberta's customers to AMI technology over a four-year period that began in 2007.

In October 2008, the BCUC approved FortisBC's proposed $141 million Okanagan Transmission Reinforcement Project, which was included in FortisBC's 2009 and 2010 Capital Expenditure Plan. The project relates to upgrading the existing overhead transmission line from 161 kilovolts ("kV") to 230 kV from Vaseux Lake to Oliver and Penticton and building a new 230-kV transmission line from Vaseux Lake to Penticton and a substation. FortisBC anticipates that construction of the project will begin in spring 2009 for expected completion in 2011.

During 2008, work continued at FortisBC on a number of new substations and associated transmission lines. Approximately 82 per cent of capital expenditures after 2009 related to this project are subject to regulatory approval.

Since 1998, FortisBC's hydroelectric generating facilities have been subject to an Upgrade and Life-Extension Program which is forecast to conclude in 2012. Approximately 57 per cent of capital expenditures after 2009 related to this project are subject to regulatory approval.

In April 2008, Caribbean Utilities entered into an agreement to purchase a 16-MW diesel generating unit and related equipment from a supplier in Germany for approximately US$24 million over the period 2008 and 2009, with the unit scheduled for completion in September 2009.

Construction continued in 2008 on the US$53 million 19-MW hydroelectric generating facility at Vaca on the Macal River in Belize. The facility is being constructed downstream from the Chalillo and Mollejon hydroelectric generating facilities and is expected to increase average annual energy production from the Macal River by approximately 80 GWh to 240 GWh. The facility is expected to come into service at the beginning of 2010, slightly later than originally planned due to labour and weather-related delays.

Late in 2008, Fortis Properties commenced the expansion of its Holiday Inn Express Kelowna hotel which includes adding 70 rooms and 4,000 square feet of meeting room space. Completion of the expansion is expected by January 2010 at a total capital cost of approximately $14 million.

Over the next five years, consolidated gross capital expenditures are expected to total approximately $4.5 billion. Approximately $3.1 billion of the capital spending is expected be incurred at the regulated electric utilities, driven by FortisAlberta, FortisBC and the Corporation's regulated utility operations in the Caribbean. Approximately $1.2 billion is expected to be incurred at the regulated gas utilities. Capital expenditures at the regulated utilities are subject to regulatory approval. Non-regulated capital expenditures are expected to total approximately $200 million over the same period.

Cash Flow Requirements: At the operating subsidiary level, it is expected that operating expenses and interest costs will generally be paid out of subsidiary operating cash flows, with varying levels of residual cash flow available for subsidiary capital expenditures and/or dividend payments to Fortis. Borrowings under credit facilities may be required from time to time to support seasonal working capital requirements. Cash required to complete subsidiary capital expenditure programs is also expected to be financed from a combination of borrowings under credit facilities, equity injections from Fortis and long-term debt issues.

The Corporation's ability to service its debt obligations and pay dividends on its common shares and preference shares is dependent on the financial results of the operating subsidiaries and the related cash payments from these subsidiaries. Certain regulated subsidiaries may be subject to restrictions which may limit their ability to distribute cash to Fortis. Cash required of Fortis to support subsidiary capital expenditure programs and finance acquisitions is expected to be derived from a combination of borrowings under its committed credit facility and proceeds from the issuance of common shares, preference shares and long-term debt. Depending on the timing of cash payments from the subsidiaries, borrowings under the Corporation's committed credit facility may be required from time to time to support the servicing of debt and payment of dividends.

The Corporation does not expect any significant decrease in subsidiary operating cash flows in 2009 as a result of the anticipated continued downturn in the global economy. The subsidiaries expect to be able to source the cash required to fund their 2009 capital expenditure programs.

Management expects consolidated long-term debt maturities and repayments to be approximately $240 million in 2009 and to average approximately $180 million annually over the next five years. The combination of available credit facilities, as discussed in more detail below, and low annual debt maturities and repayments will provide the Corporation and its subsidiaries with flexibility in the timing of access to the capital markets. For a discussion of capital resources and liquidity risk, refer to the "Business Risk Management – Capital Resources and Liquidity Risk" section of this MD&A.

As a result of the regulator's Final Decision on Belize Electricity's 2008/2009 Rate Application, Belize Electricity does not meet certain debt covenant financial ratios related to loans with the International Bank for Reconstruction and Development and the Caribbean Development Bank totalling $11 million (BZ$18 million) as at December 31, 2008. The Company has informed the lenders of the defaults and has requested appropriate waivers. Belize Electricity is also in default of certain debt covenants which has resulted in Belize Electricity being prohibited from incurring new indebtedness or declaring dividends.

As a result of legislation passed in 2008 by the Government of Newfoundland and Labrador expropriating most of the Newfoundland assets of Abitibi-Consolidated, the Exploits Partnership is potentially in default of a $61 million term loan. The Exploits Partnership is owned 51 per cent by Fortis Properties and 49 per cent by Abitibi-Consolidated. The term loan, which is non-recourse to Fortis, has been reclassified to current portion of long-term debt on the consolidated balance sheet as at December 31, 2008. A further discussion of the Exploits Partnership is provided in the "Critical Accounting Estimates – Contingencies" section of this MD&A.

Fortis and its subsidiaries, except for Belize Electricity and debt associated with the Exploits Partnership as described above, were in compliance with debt covenants as at December 31, 2008 and are expected to remain compliant in 2009.

Credit Facilities: As at December 31, 2008, the Corporation and its subsidiaries had consolidated credit facilities of $2.2 billion, of which approximately $1.5 billion was unused, including $568 million unused under the Corporation's $600 million committed revolving credit facility. The credit facilities are syndicated almost entirely with the seven largest Canadian banks, with no one bank holding more than 25 per cent of these facilities.

Approximately $2.0 billion of the total credit facilities are committed facilities, the majority of which have maturities between 2011 and 2013.

In 2009, FortisBC expects to have the term of its committed $100 million 364-day revolving credit facility extended for a further year beyond its original maturity in May 2009. Terasen Inc. expects to renew its $100 million committed revolving credit facility, which matures in May 2009. In March 2009, Maritime Electric renegotiated its $50 million demand credit facility and had it converted into a 364-day revolving committed credit facility.

The cost of renewed and extended credit facilities may increase as a result of current economic conditions and tightened credit markets; however, any increased interest expense and/or fees is not expected to have a material financial impact on the Corporation and its subsidiaries in 2009 as the majority of the committed credit facilities have maturities beyond 2009.

The following summary outlines the credit facilities of the Corporation and its subsidiaries.

Credit Facilities

As at December 31 *($ millions)*	Corporate and Other	Regulated Utilities	Fortis Properties	**Total 2008**	Total 2007
Total credit facilities	715	1,500	13	**2,228**	2,234
Credit facilities utilized					
Short-term borrowings	–	(410)	–	**(410)**	(475)
Long-term debt	(32)	(192)	–	**(224)**	(530)
Letters of credit outstanding	(1)	(102)	(1)	**(104)**	(159)
Credit facilities available	682	796	12	**1,490**	1,070

At December 31, 2008 and December 31, 2007, certain borrowings under the Corporation's and subsidiaries' credit facilities were classified as long-term debt. These borrowings are under long-term committed credit facilities and management's intention is to refinance these borrowings with long-term permanent financing during future periods.

Significant changes in total credit facilities from December 31, 2007 to December 31, 2008 are described below. The nature and terms of the credit facilities outstanding as at December 31, 2008 are detailed in Note 26 to the 2008 Consolidated Financial Statements.

Corporate and Other

Letters of credit of $50 million previously outstanding at Terasen Inc., related to its previously owned petroleum transportation business and secured by a letter of credit from the former parent company, were cancelled during the second quarter of 2008.

Regulated Utilities

In April 2008, FortisBC renegotiated and amended its $150 million unsecured committed revolving credit facility, extending the maturity date of the $50 million portion of the facility to May 2011 from May 2010 and extending the $100 million portion to May 2009 from May 2008. The Company has the option to increase the credit facility to an aggregate of $200 million, subject to bank approval.

In April 2008, Maritime Electric repaid all outstanding borrowings under its $25 million unsecured credit facility with partial proceeds from a $60 million bond issue. The credit facility matured in May 2008 and was not renewed.

In July 2008, TGI renegotiated, on substantially similar terms, its $500 million unsecured committed revolving credit facility, extending the maturity date of the facility to August 2013 from August 2012.

In August 2008, Newfoundland Power renegotiated, on substantially similar terms, its $100 million committed revolving credit facility, extending the maturity date to August 2011 from January 2009.

In November 2008, First Caribbean International Bank withdrew its credit facility with Belize Electricity, requiring the Company to repay approximately BZ$4 million outstanding under the facility. Scotiabank has also put Belize Electricity on notice that it may not renew its BZ$5 million credit facility with the Company if financial conditions do not show signs of improvement. As at December 31, 2008, the Scotiabank credit facility was undrawn. A continuation of lower energy supply costs should provide Belize Electricity with some liquidity relief in the near term.

Off-Balance Sheet Arrangements

As at December 31, 2008, the Corporation had no off-balance sheet arrangements such as transactions, agreements or contractual arrangements with unconsolidated entities, structured finance entities, special purpose entities or variable interest entities that are reasonably likely to materially affect liquidity or the availability of, or requirements for, capital resources.

Business Risk Management

The following is a summary of the Corporation's significant business risks.

Regulatory Risk: The Corporation's key business risk is regulation. Each of the Corporation's regulated utilities is subject to some form of regulation that can affect future revenue and earnings. Management at each utility is responsible for working closely with regulators and local governments to ensure both compliance with existing regulations and the proactive management of regulatory issues.

Approximately 93 per cent of the Corporation's operating revenue was derived from regulated utility operations in 2008 (2007 – 90 per cent), while approximately 83 per cent of the Corporation's operating earnings, before corporate and other net expenses, were derived from regulated utility operations in 2008 (2007 – 81 per cent). The regulated utilities, the Terasen Gas companies, FortisAlberta, FortisBC, Newfoundland Power, Maritime Electric, FortisOntario, Belize Electricity, Caribbean Utilities, and Fortis Turks and Caicos, are subject to the normal uncertainties faced by regulated entities. The uncertainties include approvals by the respective regulatory authorities of gas and electricity rates that permit a reasonable opportunity to recover, on a timely basis, the estimated costs of providing services, including a fair rate of return on rate base. Generally, the ability of the utilities to recover the actual costs of providing services and earn the approved rates of return depends on achieving the forecasts established in the rate-setting processes. Upgrades of existing gas and electricity systems and facilities and the addition of new infrastructure and facilities require the approval of the regulatory authorities either through the approval of capital expenditure plans or through regulatory approval of revenue requirements for the purpose of setting rates, which include the impact of capital expenditures on rate base and/or cost of service. There is no assurance that capital projects perceived as required or completed by the Corporation's regulated utilities will be approved or that conditions to such approvals will not be imposed. Capital cost overruns subject to such approvals might not be recoverable. In addition, there is no assurance that the regulated utilities will receive regulatory decisions in a timely manner and, therefore, costs may be incurred prior to having an approved revenue requirement.

Rate applications that establish revenue requirements may be subject to negotiated settlement procedures, as well as pursued through public hearing processes. There can be no assurance that rate orders issued will permit the Corporation's utilities to recover all costs actually incurred and to earn the expected rates of return. A failure to obtain acceptable rate orders may adversely affect the business carried on by the utilities, the undertaking or timing of proposed capital projects, ratings assigned by rating agencies, the issuance and sale of securities, and other matters which may, in turn, negatively affect the results of operations and financial position of the Corporation's utilities.

Although Fortis considers the regulatory frameworks in most of the jurisdictions it operates in to be fair and balanced, uncertainties do exist at the present time. The June 2008 regulatory decision on Belize Electricity's 2008/2009 Rate Application and changes in electricity legislation made by the Government of Belize and the PUC create uncertainty in the regulatory regime and the rate-setting process in Belize and violate both established regulatory practice and contractual obligations made by the Government of Belize at the time Fortis made its initial investment in Belize Electricity.

Regulatory frameworks in Alberta and Ontario have undergone significant changes since the deregulation of electricity generation and the introduction of retail competition. The regulations and market rules in these jurisdictions, which govern the competitive wholesale and retail electricity markets, are relatively new and there may be significant changes in these regulations and market rules that could adversely affect the ability of FortisAlberta and FortisOntario to recover costs or to earn reasonable returns on capital. As these companies and their applicable regulators work through the regulatory processes, it is expected that there will be more certainty in evolving regulatory frameworks and environments.

Although all of the Corporation's regulated utilities currently operate under traditional cost of service and/or rate of return on rate base methodologies, PBR and other rate-setting mechanisms, such as automatic rate of return formulas, are also being employed to varying degrees. A discussion of the impact of changes in interest rates on allowed ROEs is provided in the "Business Risk Management – Interest Rate Risk" section of this MD&A.

TGI, TGVI and FortisBC are regulated by the BCUC and are subject to approved PBR mechanisms. The PBR mechanisms at TGI and TGVI expire in 2009. In December 2008, the PBR mechanism at FortisBC was extended for the periods from 2009 to 2011 under terms similar to the previous PBR agreement, except annual gross operating and maintenance expenses, before capitalized overhead, will be set by a different formula. The PBR mechanisms provide the utilities an opportunity to earn returns in excess of the allowed ROEs determined by the BCUC. Upon expiry of the PBR mechanisms, there is no certainty as to whether new PBR mechanisms will be entered into or what the particular terms of any renewed PBR mechanisms will be.

Further information on the new PBR mechanism at FortisBC and the nature of regulation and various regulatory matters pertaining to the Corporation's utilities is provided in the "Regulatory Highlights" section of this MD&A.

Operating and Maintenance Risks: The Terasen Gas companies are exposed to various operational risks, such as pipeline leaks; accidental damage to, or fatigue cracks in mains and service lines; corrosion in pipes; pipeline or equipment failure; other issues that can lead to outages and/or leaks; and any other accidents involving natural gas which could result in significant operational and/or environmental liability. The business of electricity transmission and distribution is also subject to operational risks including the potential to cause fires, mainly as a result of equipment failure, falling trees and lightning strikes to lines or equipment. The infrastructure of the subsidiaries is also exposed to the effects of severe weather conditions and other acts of nature. In addition, a significant portion of the infrastructure is located in remote areas, which may make access difficult for repair of damage due to weather conditions and other acts of nature. The Terasen Gas companies and FortisBC operate facilities in a terrain with a risk of loss or damage from earthquakes, forest fires, floods, washouts, landslides, avalanches and similar acts of nature. The Corporation and its subsidiaries have insurance that provides coverage for business interruption, liability and property damage, although the coverage offered by this insurance is limited. In the event of a large uninsured loss caused by severe weather conditions or other natural disasters, application will be made to the respective regulatory authority for the recovery of these costs through higher rates to offset any loss. However, there can be no assurance that the regulatory authorities would approve any such application in whole or in part. See the "Business Risk Management – Insurance Coverage Risk" section of this MD&A for a further discussion on insurance.

The Corporation's gas and electricity systems require ongoing maintenance, improvement and replacement. Accordingly, to ensure the continued performance of the physical assets, the utilities determine expenditures that must be made to maintain and replace the assets. If the systems are not able to be maintained, service disruptions and increased costs may be experienced. The inability to obtain regulatory approval to reflect in rates the expenditures the utilities believe are necessary to maintain, improve and replace their assets; the failure by the utilities to properly implement or complete approved capital expenditure programs; or the occurrence of significant unforeseen equipment failures, despite maintenance programs, could have a material effect on the operations of the utilities.

The Corporation's utilities continually develop capital expenditure programs and assess current and future operating and maintenance expenses that will be incurred in the ongoing operation of their gas and electricity systems. Management's analysis is based on assumptions as to costs of services and equipment, regulatory requirements, revenue requirement approvals, and other matters, which involve some degree of uncertainty. If actual costs exceed regulator-approved capital expenditures, it is uncertain as to whether any additional costs will receive regulatory approval for recovery in future customer rates. The inability to recover these additional costs could have a material effect on the financial condition and results of operations of the utilities.

Economic Conditions: Typical of utilities, economic conditions in the Corporation's service territories influence energy sales. Energy sales are influenced by economic factors such as changes in employment levels, personal disposable income, energy prices and housing starts. Also, in the service territories in which the Terasen Gas companies operate, the growth of new multi-family housing starts is continuing to outpace that of new single-family housing starts. Natural gas has a lower penetration rate in multi-family housing; therefore, gas distribution volumes may not grow as quickly as in the past. In the Caribbean, the level of and fluctuations in tourism and related activities, which are closely tied to economic conditions, influence electricity sales as they affect electricity demand of the large hotels and condominium complexes that are serviced by the Corporation's regulated utilities in that region.

Higher energy prices can result in reduced consumption by customers. Natural gas and crude oil exploration and production activity in certain of the Corporation's service territories are closely correlated with natural gas and crude oil prices. The level of these activities can influence energy demand.

An extended decline in economic conditions would be expected to have the effect of reducing demand for energy over time. The regulated nature of utility operations, including various mitigating measures approved by regulators, helps to reduce the impact that lower energy demand, associated with poor economic conditions, may have on the utilities' earnings. However, a severe and prolonged downturn in economic conditions could materially affect the utilities, despite regulatory measures available for compensating for reduced demand. For instance, significantly reduced energy demand in the Corporation's service territories could reduce capital spending which would, in turn, impact rate base and earnings' growth.

In addition to the impact of reduced energy demand, an extended decline in economic conditions could also impair the ability of customers to pay for gas and electricity consumed, thereby affecting the aging and collection of the utilities' trade receivables.

Fortis also holds investments in both commercial real estate and hotel properties. The hotel properties, in particular, are subject to operating risks associated with industry fluctuations and local economic conditions. Fortis Properties' real estate exposure to lease expiries averages approximately 11 per cent per annum over the next five years. Approximately 57 per cent of Fortis Properties' operating income was derived from hotel investments in 2008 (2007 – 58 per cent). Achieving organic revenue and earnings' growth at the Hospitality Division may prove challenging in 2009 as a result of the anticipated continued downturn in the global economy and its overall impact on leisure and business travel and hotel stays. It is estimated that a 10 per cent decrease in revenue at the Hospitality Division would decrease annual basic earnings per common share of Fortis by approximately 2 cents.

Capital Resources and Liquidity Risk: The Corporation's financial position could be adversely affected if it, or its subsidiaries, fails to arrange sufficient and cost-effective financing to fund, among other things, capital expenditures and the repayment of maturing debt. The ability to arrange sufficient and cost-effective financing is subject to numerous factors, including the results of operations and the financial position of the Corporation and its subsidiaries, conditions in the capital and bank credit markets, ratings assigned by rating agencies and general economic conditions. Funds generated from operations after payment of expected expenses (including interest payments on any outstanding debt) will not be sufficient to fund the repayment of all outstanding liabilities when due as well as all anticipated capital expenditures. There can be no assurance that sufficient capital will continue to be available on acceptable terms to fund capital expenditures and to repay existing debt.

Generally, the Corporation and its currently rated regulated utilities are subject to financial risk associated with changes in the credit ratings assigned to them by credit rating agencies. Credit ratings affect the level of credit risk spreads on new long-term debt issues and on the Corporation's and its utilities' credit facilities. A change in the credit ratings could potentially affect access to various sources of capital and increase or decrease the finance charges of the Corporation and its utilities. Also, a significant downgrade in TGI or Terasen Inc.'s credit ratings could trigger margin calls and other cash requirements under TGI's natural gas purchase and natural gas derivative contracts. As discussed in the "Liquidity and Capital Resources – Capital Structure" section of this MD&A, the Corporation's corporate investment-grade credit ratings were confirmed and maintained during the fourth quarter of 2008. Fortis and its regulated utilities do not anticipate any material adverse rating actions by the credit rating agencies in the near term. However, the current global financial crisis has placed increased scrutiny on rating agencies and rating agency criteria which may result in changes to credit rating practices and policies.

The volatility in the global financial and capital markets may increase the cost of, and affect the timing of, issuance of long-term capital by the Corporation and its utilities in 2009. While the cost of borrowing is expected to increase, as new long-term debt is expected to be issued at higher rates due to an increase in credit spreads, the Corporation and its utilities expect to continue to have reasonable access to capital in the near to medium terms. Due to the regulated nature of the Corporation's utilities, increased borrowing costs are eligible to be recovered in future customer rates.

To help mitigate liquidity risk, the Corporation and its larger regulated utilities have secured committed credit facilities to support short-term financing of capital expenditures and seasonal working capital requirements. The committed credit facility at the Corporation is available for interim financing of acquisitions and for general corporate purposes. The cost of renewed and extended credit facilities may also increase going forward; however, any increased interest expense and/or fees is not expected to have a material financial impact on the Corporation and its utilities in 2009 as the majority of the total committed credit facilities have maturities beyond 2009.

Further information about the Corporation's credit facilities, contractual obligations, including long-term debt maturities and repayments, and consolidated cash flow requirements is provided in the "Liquidity and Capital Resources" section of this MD&A and under "Liquidity Risk" in Note 26 to the 2008 Consolidated Financial Statements.

Weather and Seasonality: The physical assets of the Corporation and its subsidiaries are exposed to the effects of severe weather conditions and other acts of nature. Although the physical assets have been constructed and are operated and maintained to withstand severe weather, there is no assurance that they will successfully do so in all circumstances. At Newfoundland Power, exposure to climatic factors is addressed through the operation of a regulator-approved weather normalization reserve. The operation of this reserve mitigates year-to-year volatility in earnings that would otherwise be caused by variations in weather conditions. At TGI, a BCUC-approved rate stabilization account serves to mitigate the effect on earnings of volume volatility, caused principally by weather, by allowing TGI to accumulate the margin impact of variations in the actual-versus-forecast gas volumes consumed by customers.

At the Terasen Gas companies, weather has a significant impact on distribution volume, as a major portion of the gas distributed is ultimately used for space heating for residential customers. Because of gas-consumption patterns, the Terasen Gas companies normally generate quarterly earnings that vary by season and may not be an indicator of annual earnings. Virtually all of the annual earnings of the Terasen Gas companies are generated in the first and fourth quarters.

Fluctuations in the amount of electricity used by customers can vary significantly in response to seasonal changes in weather. In Canada, cool summers may reduce air-conditioning demand while warm winters may reduce electric heating load. In the Caribbean, the impact of seasonal changes in weather on air-conditioning demand is less pronounced due to less variable climatic conditions that exist in the region. Significant fluctuations in weather-related demand for electricity could materially impact the operations, financial condition and results of operations of the electric utilities.

Despite preparation for severe weather, extraordinary conditions such as hurricanes and other natural disasters will always remain a risk to utilities. The Corporation uses a centralized insurance management function to create a higher level of insurance expertise and reduce its liability exposure.

The assets and earnings of Belize Electricity, Caribbean Utilities and Fortis Turks and Caicos are subject to hurricane risk. Similar to other Fortis utilities, these companies manage weather risks through insurance on generation assets, business-interruption insurance and self-insurance on T&D assets. In Belize, additional costs in the event of a hurricane would be deferred and the Company may apply for future recovery in customer rates. Under its new T&D licence, Caribbean Utilities may apply for a special additional customer rate in the event of a disaster, including a hurricane. Fortis Turks and Caicos does not have a specific hurricane cost recovery mechanism; however, the Company may apply for an increase in customer rates in the following year if the actual ROA is lower than the allowed ROA due to additional costs resulting from a hurricane or other significant event.

Earnings from non-regulated generation assets are sensitive to rainfall levels but the geographic diversity of the Corporation's generation assets mitigates the risk associated with rainfall levels.

Commodity Price Risk: The Terasen Gas companies are exposed to commodity price risk associated with changes in the market price of natural gas. The companies employ a number of tools to reduce exposure to natural gas price volatility. These tools include purchasing gas for storage and adopting hedging strategies to reduce price volatility and ensure, to the extent possible, that natural gas commodity costs remain competitive with electricity rates. The use of natural gas derivatives effectively fixes the price of natural gas purchases. Activities related to the hedging of gas prices are currently approved by the BCUC and gains or losses effectively accrue entirely to customers. The operation of BCUC-approved rate stabilization accounts to flow through in customer rates the commodity cost of natural gas serves to mitigate the effect on earnings of natural gas cost volatility.

Most of the Corporation's regulated electric utilities are exposed to commodity price risk associated with changes in world oil prices, which affects the cost of fuel and purchased power. The risk is substantially mitigated through the utilities' ability to flow through to customers the cost of fuel and purchased power through basic rates and/or through the use of rate-stabilization and other mechanisms, as approved by the various regulatory authorities. The ability to flow through to customers the cost of fuel and purchased power alleviates the effect on earnings of the variability in the cost of fuel and purchased power.

There can be no assurance that the current regulator-approved mechanisms allowing for the flow through of the cost of natural gas, fuel and purchased power will continue to exist in the future. An inability of the regulated utilities to flow through the full cost of natural gas, fuel and/or purchased power could materially affect the utilities' results of operations, financial position and cash flows.

Derivative Financial Instruments and Hedging: From time to time, the Corporation and its subsidiaries hedge exposures to fluctuations in interest rates, foreign exchange rates and natural gas commodity prices through the use of derivative financial instruments. The derivative financial instruments, such as interest rate swap contracts, foreign exchange future contracts and natural gas commodity swaps and options, are used by the Corporation and its subsidiaries only to manage risk. The Corporation and its subsidiaries do not hold or issue derivative financial instruments for trading purposes. All derivative financial instruments must be measured at fair value. If a derivative financial instrument is designated as a hedging item in a qualifying cash flow hedging relationship, the effective portion of changes in fair value is recorded in other comprehensive income. Any change in fair value relating to the ineffective portion is recorded immediately in earnings. At the Terasen Gas companies, any difference between the amount recognized upon a change in the fair value of a derivative financial instrument, whether or not in a qualifying hedging relationship, and the amount recovered from customers in current rates is subject to regulatory deferral treatment to be recovered from, or refunded to, customers in future rates.

The Corporation's earnings from, and net investment in, its self-sustaining foreign subsidiaries are exposed to fluctuations in the US dollar-to-Canadian dollar exchange rate. The Corporation has effectively decreased the above exposure through the use of US dollar borrowings at the corporate level. The foreign exchange gain or loss on the translation of US dollar-denominated interest expense partially offsets the foreign exchange loss or gain on the translation of the Corporation's foreign subsidiaries' earnings, which are denominated in US dollars or in a currency pegged to the US dollar. Belize Electricity's reporting currency is the Belizean dollar, while the reporting currency of Caribbean Utilities, FortisUS Energy, BECOL and Fortis Turks and Caicos is the US dollar. The Belizean dollar is pegged to the US dollar at BZ$2.00 = US$1.00. The Corporation has also designated all of its US$403 million corporately held US dollar-denominated long-term debt as a hedge of a portion of the Corporation's foreign net investments. Foreign currency exchange rate fluctuations associated with the translation of the Corporation's corporately held US dollar borrowings designated as hedges are recorded in other comprehensive income and serve to help offset unrealized foreign currency exchange gains and losses on the foreign net investments, which are also recorded in other comprehensive income. As at December 31, 2008, the Corporation had approximately US$119 million in foreign net investments remaining to be hedged.

Interest Rate Risk: Generally, allowed returns for regulated utilities in North America are exposed to changes in the general level of long-term interest rates. Earnings of such regulated utilities are exposed to changes in long-term interest rates associated with rate-setting mechanisms. The rate of return is affected either directly through automatic adjustment mechanisms or indirectly through regulatory determinations of what constitutes an appropriate rate of return on investment. Automatic adjustment mechanisms currently apply to the Terasen Gas companies, FortisAlberta, FortisBC and Newfoundland Power. Due to a decline in long-term Canada bond yields during 2008 and the operation of the automatic adjustment mechanisms, the allowed ROEs for TGI and FortisBC have been reset for 2009. The 2008 allowed ROEs for the Corporation's four largest utilities, TGI, FortisAlberta, FortisBC and Newfoundland Power, were 8.62 per cent, 8.75 per cent, 9.02 per cent and 8.95 per cent, respectively. Effective January 1, 2009, the allowed ROEs for TGI and FortisBC have decreased to 8.47 per cent and 8.87 per cent, respectively, while the allowed ROE for Newfoundland Power remains unchanged at 8.95 per cent. FortisAlberta is currently engaged in a Generic Cost of Capital Proceeding with its regulator to review, among other things, 2009 ROE calculations and capital structures for regulated gas, electric and pipeline utilities in Alberta. In the interim, as directed by its regulator, customer rates for 2009 for FortisAlberta have been set using the utility's 2007 allowed ROE of 8.51 per cent. The National Energy Board is also undertaking a review of existing ROE levels.

A continuation of current ROE adjustment mechanisms combined with declining long-term Canada bond yields, in an environment where the cost of capital is increasing, could materially affect the ability of the Corporation's utilities to earn reasonable ROEs, the absence of which could negatively impact the regulated utilities' financial condition, results of operations and cash flows.

The Corporation and its subsidiaries are also exposed to interest rate risk associated with short-term borrowings and floating rate debt. However, the Terasen Gas companies and FortisBC have regulatory approval to defer any increase or decrease in interest rate expense resulting from fluctuations in interest rates associated with variable rate debt for recovery from, or refund to, customers in future rates. As described in the "Business Risk Management – Derivative Financial Instruments and Hedging" section of this MD&A, the Corporation and its subsidiaries may also enter into interest rate swap agreements from time to time to help reduce interest rate risk.

As at December 31, 2008, approximately 84 per cent of the Corporation's consolidated long-term debt facilities and capital lease obligations had maturities beyond five years. With a significant portion of the Corporation's consolidated debt having long-term maturities, interest rate risk on debt refinancing has been reduced for the near and medium terms.

The following table outlines the nature of the Corporation's consolidated debt at December 31, 2008.

Total Debt

As at December 31, 2008	*($ millions)*	*(%)*
Short-term borrowings	**410**	**7.4**
Utilized variable-rate credit facilities classified as long-term	**224**	**4.0**
Variable-rate long-term debt and capital lease obligations (including current portion)	**22**	**0.4**
Fixed-rate long-term debt and capital lease obligations (including current portion)	**4,878**	**88.2**
Total	**5,534**	**100.0**

A change in the level of interest rates could materially affect the measurement and recording of changes in the fair value of interest rate swaps. The impact of a material change in interest rates on the fair value measurement of the interest rate swaps outstanding as at December 31, 2008 is not expected to materially affect the Corporation's consolidated earnings and comprehensive income due to the low notional value of the interest rate swaps and their near-term maturities.

The nature and fair value of the interest rate swaps outstanding as at December 31, 2008 is provided in the "Financial Instruments" section of this MD&A. A sensitivity analysis of a change in interest rates as that change would have affected 2008 financial results is disclosed in Note 26 to the 2008 Consolidated Financial Statements.

It is estimated that a 6 cent, or 5 per cent, increase (decrease) in the US dollar-to-Canadian dollar exchange rate from the exchange rate of 1.22, as at December 31, 2008, would increase (decrease) basic earnings per common share of Fortis by 1 cent in 2009.

Management will continue to hedge future exchange rate fluctuations related to the Corporation's foreign net investments and US dollar and Belizean dollar earnings' streams, where possible, through future US dollar borrowings and will continue to monitor the Corporation's exposure to foreign currency fluctuations on a regular basis.

Counterparty Risk: The Terasen Gas companies are exposed to credit risk in the event of non-performance by counterparties to derivative financial instruments. The Terasen Gas companies are also exposed to significant credit risk on physical off-system sales. The Terasen Gas companies deal with high credit-quality institutions in accordance with established credit approval practices. Due to recent events in the capital markets, including significant government intervention in the banking system, the Terasen Gas companies have further limited the financial counterparties they transact with and have reduced available credit to, or taken additional security from, the physical off-system sales counterparties with which they transact. To date, the Terasen Gas companies have not experienced any counterparty defaults and they do not expect any counterparties to fail to meet their obligations; however, the credit quality of counterparties, as recent events have indicated, can change rapidly.

FortisAlberta is exposed to credit risk associated with sales to retailers. Significantly all of FortisAlberta's distribution-service billings are to a relatively small group of retailers. As required under regulation, FortisAlberta minimizes its credit exposure associated with retailer billings by obtaining from the retailer a cash deposit, bond, letter of credit, an investment-grade credit rating from a major rating agency, or by having the retailer obtain a financial guarantee from an entity with an investment-grade credit rating. See also the "Business Risk Management – Economic Conditions" section of this MD&A.

Competitiveness of Natural Gas: In recent years, the price of natural gas has been only marginally lower than the comparable price for electricity for residential customers in British Columbia, especially on Vancouver Island. There is no assurance that natural gas will continue to maintain a competitive price advantage in the future. If natural gas pricing becomes uncompetitive with electricity pricing or pricing for alternative energy sources, the ability of the Terasen Gas companies to add new customers could be impaired and existing customers could reduce their consumption of natural gas or eliminate its usage altogether as furnaces, water heaters and other appliances are replaced. This may result in higher rates and, in an extreme case, could ultimately lead to an inability to fully recover the cost of service of the Terasen Gas companies in rates charged to customers. The ability of the Terasen Gas companies to add new customers and increase sales volumes could also be affected by lower prices of other competitive energy sources, as some commercial and industrial customers have the ability to switch to an alternative fuel. See also the "Business Risk Management – Government of British Columbia's Energy Plan" and "Business Risk Management – Risks Related to TGVI" sections of this MD&A.

Natural Gas Supply: The Terasen Gas companies are dependent on a limited number of pipeline and storage providers, particularly in the Vancouver, Fraser Valley and Vancouver Island service areas where the majority of the natural gas distribution customers of the Terasen Gas companies are located. Regional market prices have been higher from time to time than prices elsewhere in North America, as a result of insufficient seasonal and peak storage and pipeline capacity to serve the increasing demand for natural gas in British Columbia and the US Pacific Northwest. In addition, the Terasen Gas companies are critically dependent on a single-source transmission pipeline. In the event of a prolonged service disruption of the Spectra Pipeline System, residential customers of the Terasen Gas companies could experience outages, thereby affecting revenue and incurring costs to safely relight customers.

Defined Benefit Pension Plan Performance and Funding Requirements: Each of Terasen, FortisAlberta, FortisBC, Newfoundland Power, FortisOntario, Caribbean Utilities and Fortis maintain defined benefit pension plans for certain of their employees; however, only 61 per cent of the above utilities' total employees are members of such plans. The recent volatility in the global financial and capital markets is expected to affect the Corporation's consolidated future defined benefit pension funding requirements, as discussed in the "Liquidity and Capital Resources – Pension Funding" section of this MD&A. Future pension benefit obligations and related pension expense may also be affected. The Corporation's and subsidiaries' defined benefit pension plans are subject to judgments utilized in the actuarial determination of the accrued pension benefit obligation and related pension expense. The primary assumptions utilized by management are the expected long-term rate of return on pension plan assets and the discount rate used to value the accrued pension benefit obligation. A discussion of the critical accounting estimates associated with defined benefit pension plans is provided in the "Critical Accounting Estimates – Employee Future Benefits" section of this MD&A.

There is no assurance that the pension plan assets will earn the assumed long-term rates of return in the future. With the exception of Newfoundland Power and Terasen, the pension plan assets are valued at fair value. At Newfoundland Power and Terasen, the pension plan assets are valued using the market-related value as disclosed in Note 2 to the 2008 Consolidated Financial Statements. Market-driven changes impacting the performance of the pension plan assets may result in material variations in actual return on pension plan assets from the assumed long-term return on the assets. This may cause material changes in future pension funding requirements from current estimates and material changes in future pension expense.

Market-driven changes impacting the discount rate, which is used to value the accrued pension benefit obligation as at the measurement date of each of the defined benefit pension plans, may result in material changes in future pension funding requirements from current estimates and material changes in future pension expense.

There is also risk associated with measurement uncertainty inherent in the actuarial valuation process as it affects the measurement of pension expense, future funding requirements, the accrued benefit asset, accrued benefit liability and benefit obligation.

The above risks are mitigated as any increase or decrease in future pension funding requirements and/or pension expense at the regulated utilities is expected to be recovered from, or refunded to, customers in future rates, subject to forecast risk. At the Terasen Gas companies and FortisBC, however, actual pension expense above or below the forecast pension expense approved for recovery in customer rates for the year is subject to deferral account treatment for recovery from, or refund to, customers in future rates, subject to regulatory approval. Also mitigating the above risks is the fact that the defined benefit pension plans at FortisAlberta and Newfoundland Power are closed to all new employees.

Risks Related to TGVI: TGVI is a franchise under development in the price-competitive service area of Vancouver Island, with a customer base and revenue that is insufficient to meet the Company's current cost of service and to recover revenue deficiencies from prior years. Recovery of accumulated revenue deficiencies from prior years puts gas at a cost disadvantage relative to electricity. To assist with competitive rates during franchise development, the Vancouver Island Natural Gas Pipeline Agreement ("VINGPA") provides royalty revenues from the Government of British Columbia which currently cover approximately 20 per cent of the current cost of service. These revenues are due to expire at the end of 2011, after which time TGVI's customers will be required to absorb the full commodity cost of gas, all other costs of service and the recovery of any remaining accumulated revenue deficiencies. When VINGPA expires in 2011, the remaining amount outstanding under non-interest bearing senior government loans, which is currently treated as a government contribution against rate base, will be required to be fully repaid. As at December 31, 2008, the balance outstanding under these loans was $61 million. As the debt is repaid, the cost of the higher rate base will increase the cost of service and customer rates, making gas less competitive with electricity on Vancouver Island.

Government of British Columbia's Energy Plan: The Government of British Columbia released its Energy Plan in February 2007. The Energy Plan is a progression from the previous plan with a focus on environmental leadership, energy conservation and efficiency, and investing in innovation. The Energy Plan outlines various measures to address the challenges of global warming including that all electricity produced in British Columbia will be required to have zero net greenhouse gas emissions by 2016. The Energy Plan places a significant responsibility on British Columbians to conserve energy by requiring 50 per cent of British Columbia's incremental resource needs to be achieved through conservation by 2020. The Energy Plan emphasizes efficiency by requiring BC Hydro to eliminate electricity imports and become fully self-sufficient by 2016. The Energy Plan also states that 90 per cent of British Columbia's electricity will come from renewable sources and that British Columbia will become the first jurisdiction in North America to require 100 per cent carbon sequestration for any coal-fired electricity project. FortisBC and the Terasen Gas companies continue to assess the impacts and opportunities provided by the Energy Plan and will consider which policy actions they may support. Many of the principles of the Energy Plan were adopted when *Bill 15-2008, the Utilities Commission Amendment Act, 2008*, received Royal Assent by the Legislative Assembly of British Columbia on May 1, 2008. In addition, the *Carbon Tax Act*, which received Royal Assent by the Legislative Assembly of British Columbia on May 29, 2008, introduced a consumption tax on carbon-based fuels which impacts the competitiveness of natural gas versus non-carbon-based energy sources. The legislation did not, however, introduce a carbon tax on imported electricity generated through the combustion of carbon-based fuels. The future impact of the Government of British Columbia's Energy Plan and the recent legislation may have a material impact on the competitiveness of natural gas relative to other energy sources.

Environmental Risks: The Corporation and its subsidiaries are subject to numerous laws, regulations and guidelines governing the generation, management, storage, transportation, recycling and disposal of hazardous substances and other waste materials and otherwise relating to the protection of the environment. Environmental damage and associated costs could potentially arise due to a variety of events, including the impact of severe weather and natural disasters on facilities and equipment and equipment failure. Costs arising from environmental protection initiatives, compliance with environmental laws, regulations and guidelines, or damages may become material to the Corporation and its subsidiaries. In addition, the process of obtaining environmental regulatory approvals, including any necessary environmental assessments, can be lengthy, contentious and expensive. During 2008, costs arising from environmental protection, compliance or damages were not material to the Corporation's consolidated results of operations, cash flows or financial position. The Corporation believes that it and its subsidiaries are materially compliant with environmental laws, regulations and guidelines applicable to them in the various jurisdictions in which they operate. As at December 31, 2008, there were no material environmental liabilities recorded in the Corporation's 2008 Consolidated Financial Statements and there were no material unrecorded environmental liabilities known to management. The regulated utilities would seek to recover in customer rates the costs associated with environmental protection, compliance or damages; however, there is no assurance that the regulators will agree with the utilities' requests and, therefore, unrecovered costs, if substantial, could materially affect the results of operations, cash flows and financial position of the utilities.

From time to time, it is possible that the Corporation and its subsidiaries may become subject to government orders, investigations, inquiries or other proceedings relating to environmental matters. The occurrence of any of these events, or any changes in applicable environmental laws, regulations and guidelines or their enforcement or regulatory interpretation, could materially impact the results of operations, cash flows and financial position of the Corporation and its subsidiaries.

The Corporation's gas and electricity businesses are subject to inherent risks, including risk of fires and contamination of air, soil or water from hazardous substances. Risks associated with fire damage relate to the extent of forest and grassland cover, habitation and third-party facilities located on or near the land on which the utilities' facilities are situated. The utilities may become liable for fire suppression costs, regeneration and timber value costs and third-party claims in connection with fires on lands on which its facilities are located if it is found that such facilities were the cause of a fire, and such claims, if successful, could be material. Risks also include the responsibility for remediation of contaminated properties, whether or not such contamination was actually caused by the property owner. The risk of contamination of air, soil and water at the electric utilities primarily relates to the storage and handling of large volumes of fuel, the use and disposal of petroleum-based products, mainly transformer and lubricating oil, in the utilities' day-to-day operating and maintenance activities, and emissions from the combustion of fuel required in the generation of electricity. The risk of contamination of air, soil or water at the natural gas utilities primarily relates to natural gas and propane leaks and other accidents involving these substances. The management of greenhouse gas emissions is the main environmental concern of the Corporation's regulated gas utilities, primarily due to recent changes to the Government of British Columbia's Energy Plan and related legislation as discussed above. Any changes in environmental laws, regulations or guidelines governing contamination could lead to significant increases in costs to the Corporation and its subsidiaries.

The key environmental hazards related to hydroelectric generation operations include the creation of artificial water flows that may disrupt natural habitats and the storage of large volumes of water for the purpose of electricity generation.

Scientists and public health experts in Canada, the United States and other countries are studying the possibility that exposure to electric and magnetic fields from power lines, household appliances and other electricity sources may cause health problems. If it were to be concluded that electric and magnetic fields present a health hazard, litigation could result and the electric utilities could be required to pay damages and take mitigation measures on its facilities. The costs of litigation, damages awarded and mitigation measures, if not approved by regulators for recovery in customer rates, could materially impact the results of operations, cash flows and financial condition of the electric utilities.

While the Corporation and its subsidiaries maintain insurance, there can be no assurance that all possible types of liabilities that may arise related to environmental matters will be covered by the insurance. For further information on insurance, refer to the "Business Risk Management – Insurance Coverage Risk" section of this MD&A.

The Corporation's utilities address environmental matters in their operations through the use of Environmental Management Systems ("EMS"). As part of their respective EMS, the utilities are continuously establishing and implementing programs and procedures to identify potential environmental impacts, mitigate those impacts and monitor environmental performance.

Insurance Coverage Risk: While the Corporation and its subsidiaries maintain insurance, a significant portion of the Corporation's regulated electric utilities' T&D assets are not covered under insurance, as is customary in North America, as the cost of the coverage is not considered economical. Insurance is subject to coverage limits as well as time-sensitive claims discovery and reporting provisions and there can be no assurance that the types of liabilities that may be incurred by the Corporation and its subsidiaries will be covered by insurance. The Corporation's regulated utilities would likely apply to their respective regulatory authorities to recover the loss or liability through increased customer rates. However, there can be no assurance that regulatory authorities would approve any such application in whole or in part. Any major damage to the physical assets of the Corporation and its subsidiaries could result in repair costs and customer claims that are substantial in amount and which could have an adverse effect on the Corporation's and subsidiaries' business, results of operations and financial condition. In addition, the occurrence of significant uninsured claims, claims in excess of the insurance coverage limits maintained by the Corporation and its subsidiaries, or claims that fall within a significant self-insured retention could have a material adverse effect on the Corporation's and subsidiaries' business, results of operations and financial position.

It is anticipated that such insurance coverage will be maintained. However, there can be no assurance that the Corporation and its subsidiaries will be able to obtain or maintain adequate insurance in the future at rates considered reasonable or that insurance will continue to be available on terms as favourable as the existing arrangements or that the insurance companies will meet their obligations to pay claims.

Licences and Permits: The acquisition, ownership and operation of gas and electric utilities and assets require numerous licences, permits, approvals and certificates from various levels of government and government agencies. The Corporation's regulated utilities and non-regulated generation operations may not be able to obtain or maintain all required regulatory approvals. If there is a delay in obtaining any required regulatory approval, or if there is a failure to obtain or maintain any required approval or to comply with any applicable law, regulation or condition of an approval, the operation of the assets and the sale of gas and electricity could be prevented or become subject to additional costs, any of which could materially affect the subsidiaries.

Loss of Service Area: FortisAlberta serves customers residing within various municipalities throughout its service areas. From time to time, municipal governments in Alberta give consideration to creating their own electric distribution utilities by purchasing the assets of FortisAlberta that are located within their municipal boundaries. Upon the termination of its franchise agreement, a municipality has the right, subject to AUC approval, to purchase FortisAlberta's assets within its municipal boundaries pursuant to the *Municipal Government Act* (Alberta). Under the *Hydro and Electric Energy Act* (Alberta), if a municipality that owns an electric utility expands its boundaries, it can acquire FortisAlberta's assets in the annexed area. In such circumstances, the *Hydro and Electric Energy Act* (Alberta) provides for compensation, including payment for FortisAlberta's assets on the basis of replacement cost less depreciation. Given the historical growth of Alberta and its municipalities, FortisAlberta may be affected by transactions of this type.

The consequence to FortisAlberta of a municipality purchasing its distribution assets would be an erosion of the Company's rate base, which would reduce the capital upon which FortisAlberta could earn a regulated return. No transactions are currently in progress with FortisAlberta pursuant to the *Municipal Government Act* (Alberta). However, upon expiration of franchise agreements, there is a risk that municipalities will opt to purchase the distribution assets existing within their boundaries, the loss of which could materially affect the financial condition and results of operations of FortisAlberta.

Market Energy Sales Prices: The Corporation's primary exposure to changes in market energy sales prices at its electricity operations has related to its non-regulated energy sales in Ontario, where energy is sold to the Independent Electricity System Operator at market prices. Non-regulated energy sales in Ontario largely relate to a power-for-water exchange agreement, known as the Niagara Exchange Agreement, associated with the Rankine hydroelectric generating station. In accordance with this agreement, FortisOntario's water entitlement on the Niagara River will expire on April 30, 2009 and, as a result, the Corporation's exposure to market price fluctuations in Ontario will be substantially reduced and earnings related to the Niagara Exchange Agreement will cease after that date. During 2008, earnings' contribution associated with the Niagara Exchange Agreement was approximately $16 million. The Corporation is also exposed to changes in energy prices related to energy sales from its non-regulated generation assets in Upper New York State. All energy produced by these assets is sold to the National Grid at market prices. Energy from the Corporation's non-regulated generation assets in Belize, central Newfoundland and British Columbia is sold under medium- and long-term fixed-price contracts.

Transition to International Financial Reporting Standards: Effective January 1, 2011, Canadian publicly accountable enterprises are required to adopt International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB"). IFRS will require increased financial statement disclosure compared to Canadian GAAP and accounting policy differences between Canadian GAAP and IFRS will need to be addressed by Fortis. The Corporation is currently assessing the impact a conversion to IFRS would have on its future financial reporting. In the event regulated assets and liabilities are not permissible under IFRS, this could result in increased volatility in the Corporation's consolidated earnings and balance sheet from that reported under Canadian GAAP. Information on the Corporation's IFRS conversion project is provided in the "Future Accounting Changes" section of this MD&A.

Changes in Tax Legislation: The Government of Canada has enacted legislative changes that will challenge the continuation of the tax-deferred status of offshore earnings derived from foreign affiliates. The legislative changes will require that the governments of these tax-free jurisdictions enter into tax treaties or other comprehensive tax information-exchange agreements ("TIEAs") with Canada before 2015. If the jurisdictions are unable to establish these treaties or agreements, the earnings of Canadian subsidiaries operating in these jurisdictions will be taxed on an accrual basis after 2014 as if they were in Canada. Conversely, if treaties or agreements can be reached, the earnings from these jurisdictions will be able to be repatriated to Canada tax free. In the event that the offshore earnings become taxable, earnings' contribution from the Corporation's Caribbean Regulated Electric utilities and BECOL will decrease.

On December 10, 2008, the Advisory Panel on Canada's System of International Taxation (the "Advisory Panel") provided its recommendations to the Minister of Finance of the Government of Canada in its final report, "Enhancing Canada's International Tax Advantage". The Advisory Panel was formed by the Government of Canada in November 2007 to provide recommendations to improve Canada's international tax policy respecting foreign investment by Canadian businesses and investment in Canada by foreign businesses. The Advisory Panel's recommendations seek to improve Canada's tax system regarding outbound and inbound business investment, non-resident withholding taxes, and administration, compliance and legislative processes. Specifically, the Advisory Panel recommended that the Government of Canada pursue TIEAs on a government-to-government basis without resorting to accrual taxation for foreign active business income if a TIEA is not obtained. The Advisory Panel also recommended that the Government of Canada broaden the existing exemption system to cover all foreign active business income earned by foreign affiliates.

On January 27, 2009, the Government of Canada introduced its 2009 Budget. In the budget documents, the Government of Canada indicated that it is studying the Advisory Panel's report and will provide a response in due course on which consultations will be held. The Government of Canada also indicated that it will consider the Advisory Panel's recommendations relating to foreign affiliates before proceeding with the remaining foreign affiliate measures announced in February 2004, as modified to take into account consultations and deliberations since their release.

Any future changes in other tax legislation could also materially affect the Corporation's consolidated earnings.

First Nations' Lands: The Terasen Gas companies and FortisBC provide service to customers on First Nations' lands and maintain gas and electric distribution facilities on lands that are subject to land claims by various First Nations. A treaty negotiation process involving various First Nations and the Government of British Columbia is underway, but the basis upon which settlements might be reached in the service areas of the Terasen Gas companies and FortisBC is not clear. Furthermore, not all First Nations are participating in the process. To date, the policy of the Government of British Columbia has been to endeavour to structure settlements without prejudicing existing rights held by third parties, such as the Terasen Gas companies and FortisBC. However, there can be no certainty that the settlement process will not materially affect the business of the Terasen Gas companies and FortisBC. In addition, FortisAlberta has distribution assets on First Nations' lands with access permits to these lands held by FortisAlberta's predecessor, TransAlta Utilities Corporation ("TransAlta"). In order for FortisAlberta to acquire these access permits, both the Department of Indian and Northern Affairs Canada and the individual Band councils must grant approval. FortisAlberta may not be able to acquire the access permits from TransAlta and may be unable to negotiate land-usage agreements with property owners or, if negotiated, such agreements may be on terms that are less than favourable to FortisAlberta and, therefore, may have a material effect on the business of FortisAlberta.

Labour Relations: Approximately 60 per cent of the employees of the Corporation's subsidiaries are members of labour unions or associations which have entered into collective bargaining agreements with the subsidiaries. The provisions of such collective bargaining agreements affect the flexibility and efficiency of the businesses carried out by the subsidiaries. The Corporation considers the relationships of its subsidiaries with its labour unions and associations to be satisfactory but there can be no assurance that current relations will continue in future negotiations or that the terms under the present collective bargaining agreements will be renewed. The inability to maintain or renew the collective bargaining agreements on acceptable terms could result in increased labour costs or service interruptions arising from labour disputes that are not provided for in approved rate orders at the regulated utilities and which could have a material effect on the results of operations, cash flow and earnings of the utilities.

The collective agreement between FortisBC and the International Brotherhood of Electrical Workers ("IBEW"), Local 213, expired on January 31, 2009. A new four-year collective agreement was ratified by the union in February 2009.

In September 2008, two collective agreements governing Newfoundland Power's unionized employees represented by IBEW, Local 1620, expired. In February 2009, one of the groups represented by IBEW, Local 1620, ratified a new collective agreement. This new collective agreement will be effective October 1, 2008 and will expire on September 30, 2011. The second collective agreement is subject to a conciliation process which began in March 2009.

In December 2008, the collective agreement governing Maritime Electric's unionized employees represented by IBEW, Local 1432, expired. Maritime Electric and IBEW are currently negotiating a new collective agreement.

Human Resources: The ability of Fortis to deliver superior operating performance in a cost-effective manner is dependent on the ability of the Corporation's subsidiaries to attract, develop and retain skilled workforces. Like other utilities across Canada and the Caribbean, the Corporation's utilities are faced with demographic challenges relating to trades, technical staff and engineers. The growing size of the Corporation and an increasingly competitive job market present ongoing recruitment challenges. The Corporation's significant consolidated capital expenditure program over the next several years will present challenges in ensuring the Corporation's utilities have the qualified workforce necessary to complete the capital work initiatives.

Changes in Accounting Standards

The nature of, and impact on Fortis of, adopting the new Canadian Institute of Chartered Accountants ("CICA") accounting standards for Inventories, Capital Disclosures, and Disclosure and Presentation of Financial Instruments, effective January 1, 2008, are described in detail in Notes 5, 24, 25 and 26 to the 2008 Consolidated Financial Statements. The most significant impacts of adopting the new standards were: (i) the reclassification of $26 million of inventories to utility capital assets from inventories on the consolidated balance sheet as at December 31, 2007; (ii) additional disclosures about the Corporation's capital, including quantitative and qualitative information regarding the Corporation's objectives, policies and processes for managing capital; and (iii) additional disclosures of both qualitative and quantitative information that enable users of financial statements to evaluate the nature and extent of risks from financial instruments to which the Corporation is exposed. The adoption of the accounting standards did not have a material impact on the Corporation's 2008 Consolidated Financial Statements.

Future Accounting Changes

IFRS: In February 2008, the Canadian Accounting Standards Board ("AcSB") confirmed that the use of IFRS will be required in 2011 for publicly accountable enterprises in Canada. In April 2008, the AcSB issued an IFRS Omnibus Exposure Draft proposing that publicly accountable enterprises be required to apply IFRS, in full and without modification, on January 1, 2011.

On June 27, 2008, the Canadian Securities Administrators ("CSA") issued Staff Notice 52-321, *Early Adoption of IFRS* which indicated that the CSA would be prepared to grant an exemption to allow Canadian financial statement issuers to adopt IFRS early on a case-by-case basis, provided that they could demonstrate that they met certain conditions. Fortis is not planning to early adopt IFRS.

The adoption date of January 1, 2011 will require the restatement, for comparative purposes, of amounts reported by the Corporation for its year ended December 31, 2010 and of the opening balance sheet as at January 1, 2010. The AcSB proposes that CICA Handbook Section – *Accounting Changes*, paragraph 1506.30, which would require an entity to disclose information relating to a new primary source of GAAP that has been issued, but is not yet effective and that the entity has not applied, not be applied with respect to the IFRS Omnibus Exposure Draft.

Fortis is continuing to assess the financial reporting impacts of the adoption of IFRS and, at this time, the impact on future financial position and results of operations is not reasonably determinable or estimable. Fortis does anticipate a significant increase in disclosure resulting from the adoption of IFRS and is continuing to assess the level of disclosure required as well as systems changes that may be necessary to gather and process the required information.

Fortis commenced its IFRS conversion project in 2007 and has established a formal project governance structure which includes the audit committees, senior management and project teams from each of the Corporation's subsidiaries. Overall project governance, management and support are coordinated by Fortis Inc. Regular reporting occurs to the Audit Committee of the Board of Directors of Fortis and of the subsidiaries, where appropriate. An external expert advisor has been engaged to assist in the IFRS conversion project.

The Corporation's IFRS conversion project consists of three phases: Scoping and Diagnostics, Analysis and Development, and Implementation and Review.

Phase One: Scoping and Diagnostics, which involved project planning and staffing and identification of differences between current Canadian GAAP and IFRS, has been completed. The resulting identified areas of accounting difference of highest potential impact to Fortis, based on existing IFRS, are rate-regulated accounting; property, plant and equipment; investment property; provisions and contingent liabilities; employee benefits; impairment of assets; income taxes; business combinations; and initial adoption of IFRS under the provisions of IFRS 1, *First-Time Adoption of IFRS*.

Phase Two: Analysis and Development is nearing completion and involves detailed diagnostics and evaluation of the financial reporting impacts of various options and alternative methodologies provided for under IFRS; identification and design of operational and financial business processes; initial staff and audit committee training; analysis of IFRS 1 optional exemptions and mandatory exceptions to the general requirement for full retrospective application upon transition to IFRS; summarization of 2011 IFRS disclosure requirements; and development of required solutions to address identified issues.

The Corporation has completed a preliminary assessment of the impacts of adopting IFRS; however, a final assessment cannot be completed at this time pending the outcome of the project on rate-regulated activities that was recently added to the IASB's technical agenda.

It is anticipated that the adoption of IFRS will have an impact on information systems requirements. Each of the Corporation's subsidiaries is assessing the need for system upgrades or modifications to ensure an efficient conversion to IFRS. As part of Phase Two, information systems plans are being prepared for implementation in Phase Three. The extent of the impact on each of the subsidiary's information systems is not reasonably determinable at this time.

During 2008, several regulatory authorities with jurisdiction over the Corporation's regulated utilities began their own IFRS projects to determine the nature of any changes that should be made in regulatory accounting requirements in response to IFRS. The Corporation's regulated utilities have worked and will continue to work with their respective regulatory authorities to identify transitional issues and suggest how those issues might be addressed.

Phase Three: Implementation and Review, expected to commence mid-year 2009, will involve the execution of changes to information systems and business processes; completion of formal authorization processes to approve recommended accounting policy changes; and further training programs across the Corporation's finance and other affected areas, as necessary. It will culminate in the collection of financial information necessary to compile IFRS-compliant financial statements and reconciliations; embedding of IFRS in business processes and Audit Committee approval of IFRS-compliant financial statements.

Fortis will continue to review all proposed and continuing projects of the IASB, particularly the project on rate-regulated activities that was recently added to the IASB's technical agenda and proposed amendments to IFRS 1 for entities with operations subject to rate regulation, and will participate in any related processes as appropriate.

Rate-Regulated Operations: Effective January 1, 2009, the AcSB amended: (i) CICA Handbook Section 1100, *Generally Accepted Accounting Principles* removing the temporary exemption providing relief to entities subject to rate regulation from the requirement to apply the Section to the recognition and measurement of assets and liabilities arising from rate regulation; and (ii) Section 3465, *Income Taxes* to require the recognition of future income tax liabilities and assets as well as offsetting regulatory assets and liabilities by entities subject to rate regulation.

Effective January 1, 2009, the impact on Fortis of the amendment to Section 3465, *Income Taxes* will be the recognition of future income tax assets and liabilities and related regulatory liabilities and assets for the amount of future income taxes expected to be refunded to, or recovered from, customers in future gas and electricity rates. Currently, the Terasen Gas companies, FortisAlberta, FortisBC and Newfoundland Power use the cash taxes payable method of accounting for income taxes. The effect on the Corporation's consolidated financial statements, if it had adopted amended Section 3465, *Income Taxes* as at December 31, 2008, would have been an increase in future income tax assets and future income tax liabilities of $24 million and $497 million, respectively, and a corresponding increase in regulatory liabilities and regulatory assets of $24 million and $497 million, respectively. Included in the amounts are the future income tax effects of the subsequent settlement of the related regulatory assets and liabilities through customer rates and the separate disclosure of future income tax assets and liabilities that are currently not recognized.

Effective January 1, 2009, with the removal of the temporary exemption in Section 1100, the Corporation must now apply Section 1100 to the recognition of assets and liabilities arising from rate regulation. Certain assets and liabilities arising from rate regulation continue to have specific guidance under a primary source of Canadian GAAP that applies only to the particular circumstances described therein, including those arising under Section 1600, *Consolidated Financial Statements*, Section 3061, *Property, Plant and Equipment*, Section 3465, *Income Taxes*, and Section 3475, *Disposal of Long-Lived Assets and Discontinued Operations*. The assets and liabilities arising from rate regulation, as described in Note 4 to the 2008 Consolidated Financial Statements, do not have specific guidance under a primary source of Canadian GAAP. Therefore, Section 1100 directs the Corporation to adopt accounting policies that are developed through the exercise of professional judgment and the application of concepts described in Section 1000, *Financial Statement Concepts*. The Corporation's regulatory assets and liabilities qualify for recognition as assets and liabilities under Section 1000. Therefore, there would be no effect on the Corporation's consolidated financial statements if it had adopted the removal of the temporary exemption in Section 1100 for the year ended December 31, 2008. Fortis is continuing to assess any additional implications on its financial reporting related to accounting for rate-regulated operations.

Goodwill and Intangible Assets: Effective January 1, 2009, the Corporation will adopt the new CICA Handbook Section 3064, *Goodwill and Intangible Assets*. This Section, which replaces Section 3062, *Goodwill and Other Intangible Assets*, and Section 3450, *Research and Development Costs*, establishes standards for the recognition, measurement and disclosure of goodwill and intangible assets. The currently estimated effect on the Corporation's consolidated financial statements, if it had adopted amended Section 3064 as at December 31, 2008, would have been an increase in intangible assets of $234 million, a reduction in utility capital assets of $232 million and a reduction in deferred charges and other assets of $2 million for the reclassification of the net book value of land and transmission rights, computer software costs and franchise costs. The Corporation is continuing to assess and quantify any additional financial reporting impacts from adopting this standard.

Credit Risk and the Fair Value of Financial Assets and Financial Liabilities: Effective January 1, 2009, the Corporation will adopt the new Emerging Issues Committee ("EIC")-173, *Credit Risk and the Fair Value of Financial Assets and Financial Liabilities*, which was issued on January 20, 2009. EIC-173 requires that the Corporation's own credit risk and the credit risk of its counterparties be taken into account in determining the fair value of a financial instrument. As at December 31, 2008, only the Corporation's derivative financial instruments were recorded at fair value, the majority of which were out-of-the-money and recorded as a liability. The Corporation is continuing to assess any additional financial reporting impacts of adopting this EIC.

Financial Instruments

The carrying values of financial instruments included in current assets, current liabilities, deferred charges and other assets, and deferred credits in the Corporation's consolidated balance sheets approximate their fair value, reflecting the short-term maturity, normal trade credit terms and/or the nature of these instruments. The fair value of long-term debt is calculated by using quoted market prices when available. When quoted market prices are not available, the fair value is determined by discounting the future cash flows of the specific debt instrument at an estimated yield to maturity equivalent to benchmark government bonds or treasury bills, with similar terms to maturity, plus a market credit risk premium equal to that of issuers of similar credit quality. Since the Corporation does not intend to settle the long-term debt prior to maturity, the fair value estimate does not represent an actual liability and, therefore, does not include exchange or settlement costs. The fair value of the Corporation's preference shares is determined using quoted market prices.

An increase in credit risk and spreads as a result of the volatility experienced in the financial and capital markets has resulted in lower fair values for the Corporation's consolidated long-term debt and preference shares as at December 31, 2008 compared to December 31, 2007.

The carrying and fair values of the Corporation's consolidated long-term debt and preference shares as at December 31 were as follows.

Financial Instruments[(1)]

As at December 31	**2008**		2007	
($ millions)	**Carrying Value**	**Estimated Fair Value**	Carrying Value	Estimated Fair Value
Long-term debt, including current portion[(1)]	**5,088**	**4,927**	5,023	5,635
Preference shares, classified as debt[(2)]	**320**	**329**	320	346

(1) Carrying value as at December 31, 2008 is net of unamortized deferred financing costs of $34 million (December 31, 2007 – $33 million).

(2) Preference shares classified as equity do not meet the definition of a financial instrument; however, the estimated fair value of the Corporation's $347 million of preference shares classified as equity was $268 million at December 31, 2008 (December 31, 2007 – carrying value $122 million; fair value $107 million).

The Corporation and its subsidiaries hedge exposures to fluctuations in interest rates, foreign exchange rates and natural gas prices through the use of derivative financial instruments. The Corporation does not hold or issue derivative financial instruments for trading purposes.

The following table summarizes the valuation of the Corporation's derivative financial instruments as at December 31.

Derivative Financial Instruments

As at December 31	2008				2007	
Asset (Liability)	**Term to Maturity** *(years)*	**Number of Contracts**	**Carrying Value** *($ millions)*	**Estimated Fair Value** *($ millions)*	Carrying Value *($ millions)*	Estimated Fair Value *($ millions)*
Interest Rate Swaps	**1 to 2**	**2**	**–**	**–**	–	–
Foreign Exchange Forward Contract	**<3**	**1**	**7**	**7**	–	–
Natural Gas Derivatives:						
Swaps and Options	**Up to 3**	**228**	**(84)**	**(84)**	(79)	(79)
Gas Purchase Contract Premiums	**Up to 3**	**74**	**(8)**	**(8)**	5	5

The interest rate swaps are held by Fortis Properties and are designated as hedges of the cash flow risk related to floating-rate long-term debt and mature in July 2009 and October 2010. The effective portion of changes in the fair value of the interest rate swaps at Fortis Properties is recorded in other comprehensive income. During 2008, the interest rate swaps of the Terasen Gas companies matured.

The foreign exchange forward contract is held by TGVI and is designated as a hedge of the cash flow risk related to approximately US$55 million required to be paid under a contract for the construction of an LNG storage facility.

The natural gas derivatives are used to fix the effective purchase price of natural gas as the majority of the natural gas supply contracts have floating, rather than fixed, prices. At the Terasen Gas companies, changes in the fair value of interest rate swaps, the foreign exchange forward contract and natural gas derivatives are deferred as a regulatory asset or liability, subject to regulatory approval, for recovery from, or refund to, customers in future rates. The fair values of the natural gas derivatives were recorded in accounts payable as at December 31, 2008 (December 31, 2007 – accounts payable and accounts receivable).

The interest rate swaps are valued at the present value of future cash flows based on published forward future interest rate curves. The foreign exchange forward contract is valued using the present value of future cash flows based on published forward future foreign exchange market rate curves. The fair values of the natural gas derivatives reflect the estimated amounts, based on published forward curves, the Terasen Gas companies would have to receive or pay if forced to settle all outstanding contracts at the balance sheet date.

The fair value of the Corporation's financial instruments, including derivatives, reflects a point-in-time estimate based on current and relevant market information about the instruments as at the balance sheet dates. The estimates cannot be determined with precision as they involve uncertainties and matters of judgment and, therefore, may not be relevant in predicting the Corporation's future earnings or cash flows.

Critical Accounting Estimates

The preparation of the Corporation's consolidated financial statements in accordance with Canadian GAAP requires management to make estimates and judgments that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the reporting periods. Estimates and judgments are based on historical experience, current conditions and various other assumptions believed to be reasonable under the circumstances.

Due to changes in facts and circumstances and the inherent uncertainty involved in making estimates, actual results may differ significantly from current estimates. Estimates and judgments are reviewed periodically and, as adjustments become necessary, are reported in earnings in the period they become known. The Corporation's critical accounting estimates are discussed below.

Regulation: Generally, the accounting policies of the Corporation's regulated utilities are subject to examination and approval by the respective regulatory authorities. These accounting policies may differ from those used by entities not subject to rate regulation. The timing of the recognition of certain assets, liabilities, revenues and expenses, as a result of regulation, may differ from that otherwise expected using Canadian GAAP for entities not subject to rate regulation. Regulatory assets and regulatory liabilities arise as a result of the rate-setting process at the regulated utilities and have been recorded based on previous, existing or expected regulatory orders or decisions. Certain estimates are necessary since the regulatory environments in which the Corporation's regulated utilities operate often require amounts to be recorded at estimated values until these amounts are finalized pursuant to regulatory decisions or other regulatory proceedings. The final amounts approved by the regulatory authorities for deferral as regulatory assets and regulatory liabilities and the approved recovery or settlement periods may differ from those originally expected. Any resulting adjustments to original estimates are reported in earnings in the period in which they become known. As at December 31, 2008, Fortis recorded $360 million in current and long-term regulatory assets (December 31, 2007 – $312 million) and $446 million in current and long-term regulatory liabilities (December 31, 2007 – $392 million). The increase in regulatory assets year over year was primarily due to amounts deferred in FortisAlberta's AESO charges deferral account in 2008 and the deferral of an increase in the cost of fuel and power at Maritime Electric and Caribbean Utilities. The increase in regulatory liabilities year over year was largely associated with BCUC-approved rate stabilization accounts at the Terasen Gas companies. The nature of the Corporation's regulatory assets and liabilities is described in Note 4 to the 2008 Consolidated Financial Statements.

Capital Asset Amortization: Amortization, by its nature, is an estimate based primarily on the useful life of assets. Estimated useful lives are based on current facts and historical information and take into consideration the anticipated physical life of the assets. As at December 31, 2008, the Corporation's consolidated utility capital assets and income producing properties were approximately $7.9 billion, or approximately 71 per cent of total consolidated assets, compared to consolidated utility capital assets and income producing properties of $7.3 billion, or approximately 71 per cent of total consolidated assets, as at December 31, 2007. The increase in capital assets was primarily associated with capital expenditures, which totalled $904 million in 2008. Amortization expense for 2008 was $348 million compared to $273 million for 2007. Changes in amortization rates may have a significant impact on the Corporation's consolidated amortization expense.

As part of the customer rate-setting process at the Corporation's regulated utilities, appropriate amortization rates are approved by the respective regulatory authorities. As required by the respective regulators, amortization rates at FortisAlberta, FortisBC, Newfoundland Power and Maritime Electric include an amount for regulatory purposes to provide for future asset removal and site restoration costs, net of salvage proceeds, over the life of the assets. Actual asset removal and site restoration costs, net of salvage proceeds, are recorded against the provision when incurred. The accrual of the estimated costs is included with amortization expense and the provision balance is recorded as a long-term regulatory liability. The estimate of the future asset removal and site restoration costs, net of salvage proceeds, is based on historical experience and future expected cost trends. The balance of this regulatory liability at December 31, 2008 was $337 million (December 31, 2007 – $319 million). The amount of future asset removal and site restoration costs provided for and reported in amortization expense during 2008 was $35 million (2007 – $33 million).

The amortization periods used and the associated rates are reviewed on an ongoing basis to ensure they continue to be appropriate. From time to time, third-party depreciation studies are performed at the regulated utilities. Based on the results of these depreciation studies, the impact of any over or under amortization, as a result of actual experience differing from that expected and provided for in previous amortization rates, is generally reflected in future amortization rates and amortization expense, when the differences are refunded or collected in customer rates as approved by the regulator. Changes in regulator-approved amortization rates at FortisAlberta and Newfoundland Power during 2008 did not have a material impact on consolidated amortization expense.

Capitalized Overhead: As required by their respective regulators, the Terasen Gas companies, FortisBC, Newfoundland Power, Maritime Electric, FortisOntario, Belize Electricity and, commencing in May 2008, Caribbean Utilities capitalize overhead costs which are not directly attributable to specific capital assets but which relate to the overall capital expenditure program. These general expenses capitalized ("GEC") are allocated over constructed capital assets and amortized over their estimated service lives. The methodology for calculating and allocating these general expenses to utility capital assets is established by the respective regulators. In 2008, GEC totalled $57 million (2007 – $42 million). Any change in the methodology of calculating and allocating general overhead costs to utility capital assets could have a material impact on the amount recorded as operating expenses versus utility capital assets.

Goodwill Impairment Assessments: Goodwill represents the excess, at the dates of acquisition, of the purchase price over the fair value of the net amounts assigned to individual assets acquired and liabilities assumed relating to business acquisitions. Goodwill is carried at initial cost, less any previous amortization and write-down for impairment. The Corporation is required to perform an annual impairment test and at such time any event occurs or if circumstances change that would indicate that the fair value of a reporting unit was below its carrying value. In July of each year, the Corporation reviews for impairment of goodwill and updates its review as at year end. To assess for impairment, the fair value of each of the Corporation's reporting units is determined and compared to the book value of the reporting unit. If the fair value of the reporting unit is less than the book value, then a second test is performed to determine the amount of the impairment. The amount of the impairment is determined by deducting the fair value of the reporting unit's assets and liabilities from the fair value of the reporting unit to determine the implied fair value of goodwill and then by comparing that amount to the book value of the reporting unit's goodwill. Any excess of the book value of the goodwill over the implied fair value of the goodwill is the impairment amount. Fair market value is determined using net present value financial models and management's assumption of future profitability of the reporting units. There was no impairment provision required on $1.6 billion of goodwill recorded on the Corporation's balance sheet as at December 31, 2008. For a discussion of the nature of the change in goodwill during 2008, refer to the "Consolidated Financial Position" section of this MD&A.

Employee Future Benefits: The Corporation's and subsidiaries' defined benefit pension plans and other post-employment benefit ("OPEB") plans are subject to judgments utilized in the actuarial determination of the expense and related obligation. The main assumptions utilized by management in determining pension expense and obligations are the discount rate for the accrued pension benefit obligation and the expected long-term rate of return on plan assets.

The assumed long-term rates of return on the defined benefit pension plan assets, for the purpose of estimating pension expense for 2009, range from 6.75 per cent to 7.25 per cent for the larger defined benefit pension plans. These rates compare to assumed long-term rates of return used in 2008 that ranged from 6.50 per cent to 7.50 per cent. The defined benefit pension plan assets experienced total negative returns during 2008 of approximately $92 million compared to expected positive returns of $49 million. The assumed expected long-term rates of return on pension plan assets fall within the range of expected returns as provided by the actuaries' internal models.

The assumed discount rates used to measure the accrued pension benefit obligations on the applicable measurement dates in 2008 and to determine pension expense for 2009 ranged from 6.00 per cent to 7.50 per cent for the larger defined benefit plans. These rates compare to assumed discount rates used to measure the accrued pension benefit obligations in 2007 and determine pension expense for 2008 that ranged from 5.25 per cent to 5.60 per cent. The discount rates increased as a result of the impact of increased credit risk spreads on investment-grade corporate bonds due to volatility in the capital markets. Discount rates reflect market interest rates on high-quality bonds with cash flows that match the timing and amount of expected pension payments. The methodology in determining the discount rates was consistent with that used to determine the discount rates in the previous year.

As the measurement date for FortisAlberta, FortisBC and FortisOntario's defined benefit pension plans is September 30, 2008, the further impact on credit risk spreads of capital market volatility that continued through the remainder of 2008 was not reflected in the discount rates assumed by these utilities as at September 30, 2008, nor was the further erosion of capital market value reflected in the fair value of the pension plan assets measured as at September 30, 2008.

Fortis expects no material increase in its consolidated pension expense for 2009 related to its defined benefit pension plans. The amortization of 2008 losses associated with the pension plan assets is expected to be largely offset by the impact of higher assumed discount rates. The impact of the decline in pension plan assets in 2008, as it relates to 2009 pension expense, is being mitigated by the use of the market-value related method for valuing pension assets at the Terasen Gas companies and Newfoundland Power.

Consolidated defined benefit pension expense and pension funding obligations for 2009 may be affected, however, by the outcome of December 31, 2008 actuarial valuations which, for Newfoundland Power, the Corporation and for one of the defined benefit pension plans at Terasen, are expected to be completed in 2009.

The following table provides the sensitivities associated with a 100 basis point move in the expected long-term rate of return on pension plan assets and the discount rate on 2008 net defined benefit pension expense, and the related accrued defined benefit pension asset and liability recorded in the Corporation's consolidated financial statements, as well as the impact on the accrued defined benefit pension obligation. The sensitivity analysis applies to the Corporation's Regulated Gas Utilities and Regulated Electric Utilities.

Sensitivity Analysis of Changes in Rate of Return on Plan Assets and Discount Rate

Year Ended December 31, 2008

Increase (decrease)	Net benefit expense		Accrued benefit asset		Accrued benefit liability		Benefit obligation	
($ millions)	Regulated Gas Utilities	Regulated Electric Utilities	Regulated Gas Utilities	Regulated Electric Utilities	Regulated Gas Utilities	Regulated Electric Utilities	Regulated Gas Utilities	Regulated Electric Utilities
Impact of increasing the rate of return assumption by 100 basis points	(3)	(4)	3	4	–	–	–	–
Impact of decreasing the rate of return assumption by 100 basis points	3	4	(3)	(4)	–	–	–	–
Impact of increasing the discount rate assumption by 100 basis points	–	(3)	(1)	3	(1)	–	(19)	(38)
Impact of decreasing the discount rate assumption by 100 basis points	4	6	(3)	(5)	1	–	21	46

Other assumptions applied in measuring defined benefit pension expense and/or the accrued pension benefit obligation were the average rate of compensation increase, average remaining service life of the active employee group, and employee and retiree mortality rates.

The OPEB plans of the Corporation and its subsidiaries are also subject to judgments utilized in the actuarial determination of the expense and related obligation. The assumptions described above, except for the assumptions of the expected long-term rate of return on pension plan assets and average rate of compensation increase, along with health care cost trends, were also utilized by management in determining OPEB plan expense and obligations.

As approved by the respective regulators, FortisAlberta and Newfoundland Power record the cost of defined benefit pension and/or OPEB plan benefits on a cash basis, whereby differences between the cash payments made during the year and the expense incurred during the year are deferred as a regulatory asset or regulatory liability. Therefore, changes in assumptions cause changes in regulatory assets and liabilities for these companies and do not affect earnings. As disclosed in the "Business Risk Management – Defined Benefit Pension Plan Performance and Funding Requirements" section of this MD&A, the Terasen Gas companies and FortisBC have regulator-approved mechanisms to defer variations in pension expense from forecast pension expense, used to set customer rates, as a regulatory asset or regulatory liability.

As at December 31, 2008, the Corporation had a consolidated accrued benefit asset of $133 million (December 31, 2007 – $120 million) and a consolidated accrued benefit liability of $168 million (December 31, 2007 – $150 million). During 2008, the Corporation recorded consolidated net benefit expense of $27 million (2007 – $26 million).

Asset-Retirement Obligations: The measurement of fair value of asset-retirement obligations ("AROs") requires making reasonable estimates concerning the method of settlement and settlement dates associated with the legally obligated asset-retirement costs. While the Corporation has AROs associated with hydroelectric generating facilities, interconnection facilities, wholesale energy supply agreements, removal of certain distribution system assets from rights of way at the end of the life of the systems and the remediation of certain land, there were no amounts recorded as at December 31, 2008 and 2007. The nature, amount and timing of costs associated with land and environmental remediation and/or removal of assets cannot be reasonably estimated at this time as the hydroelectric generation and distribution and transmission assets are reasonably expected to operate in perpetuity due to the nature of their operation; applicable licences, permits, interconnection facilities agreements and wholesale energy supply agreements are reasonably expected to be renewed or extended indefinitely to maintain the integrity of the related assets and ensure the continued provision of service to customers; a land-lease agreement is expected to be renewed indefinitely; and the exact nature and amount of land remediation is indeterminable. In the event that environmental issues are known and identified, assets are decommissioned, or the applicable licences, permits, agreements or leases are terminated, AROs will be recorded at that time provided the costs can be reasonably estimated.

Revenue Recognition: All of the Corporation's regulated utilities, except for Belize Electricity, recognize revenue on an accrual basis. As required by the PUC, Belize Electricity recognizes electricity revenue on a billed basis. Recording revenue on an accrual basis requires use of estimates and assumptions. Customer bills are issued throughout the month based on meter readings that establish gas and electricity consumption by customers since the last meter reading. The unbilled revenue accrual for the period is based on estimated gas and electricity sales to customers for the period since the last meter reading at the rates approved by the respective regulatory authorities. The development of the gas and electricity sales estimates generally requires analysis of consumption on a historical basis in relation to key inputs such as the current price of gas and electricity, population growth, economic activity, weather conditions and system losses. The estimation process for accrued unbilled gas and electricity consumption will result in adjustments of gas and electricity revenue in the periods they become known when actual results differ from the estimates. As at December 31, 2008, the amount of accrued unbilled revenue recorded in accounts receivable was approximately $365 million (December 31, 2007 – $309 million) on annual consolidated revenue of approximately $3.9 billion (2007 – $2.7 billion).

Contingencies: The Corporation and its subsidiaries are subject to various legal proceedings and claims associated with ordinary course business operations. Management believes that the amount of liability, if any, from these actions would not have a material effect on the Corporation's consolidated financial position or results of operations.

The following describes the nature of the Corporation's contingent liabilities.

Terasen

On March 26, 2007, the Minister of Small Business and Revenue and Minister Responsible for Regulatory Reform (the "Minister") in British Columbia issued a decision in respect of the appeal by TGI of an assessment of additional British Columbia Social Service Tax in the amount of approximately $37 million associated with the Southern Crossing Pipeline, which was completed in 2000. The Minister reduced the assessment to $7 million, including interest, which has been paid in full to avoid accruing further interest and recorded as a long-term regulatory deferral asset. The matter is currently under appeal to the Supreme Court of British Columbia.

During 2007 and 2008, a non-regulated subsidiary of Terasen received Notices of Assessment from CRA for additional taxes related to the taxation years 1999 through 2003. The exposure has been fully provided for in the 2008 Consolidated Financial Statements. Terasen has begun the appeal process associated with the assessments.

In 2008, the Vancouver Island Gas Joint Venture commenced a claim against TGVI seeking damages for alleged past overpayments and a future reduction in tolls. The Statement of Claim does not quantify damages and, as such, the Company cannot determine the amount of the claim at this time. It is the Company's view that the claim is without merit. No amount, therefore, has been accrued in the 2008 Consolidated Financial Statements.

FortisBC

The British Columbia Ministry of Forests has alleged breaches of the Forest Practices Code and negligence relating to a fire near Vaseux Lake and has filed and served a writ and statement of claim against FortisBC. In addition, the Company has been served with a filed writ and statement of claim by a private landowner in relation to the same matter. The Company is currently communicating with its insurers and has filed a statement of defence in relation to all of the actions. The outcome cannot be reasonably determined and estimated at this time and, accordingly, no amount has been accrued in the 2008 Consolidated Financial Statements.

Maritime Electric

In April 2006, CRA reassessed Maritime Electric's 1997–2004 taxation years. The reassessment encompasses the Company's tax treatment, specifically the Company's timing of deductions, with respect to: (i) the ECAM in the 2001–2004 taxation years; (ii) customer rebate adjustments in the 2001–2003 taxation years; and (iii) the Company's payment of approximately $6 million on January 2, 2001 associated with a settlement with NB Power regarding its $450 million write-down of the Point Lepreau Nuclear Generating Station in 1998. Maritime Electric believes it has reported its tax position appropriately in all respects and has filed a Notice of Objection with the Chief of Appeals at CRA. In December 2008, the Appeals Division of CRA issued a Notice of Confirmation which confirmed the April 2006 reassessments. The Company will file an Appeal to the Tax Court of Canada.

Should the Company be unsuccessful in defending all aspects of the reassessment, the Company would be required to pay approximately $13 million in taxes and accrued interest. As at December 31, 2008, Maritime Electric has provided for this amount through future and current income taxes payable. The provisions of the *Income Tax Act* (Canada) require the Company to deposit one-half of the assessment under objection with CRA. The amount currently on deposit with CRA arising from the reassessment is approximately $6 million.

FortisUS Energy

During 2008, a statutory discontinuance and final release of FortisUS Energy was issued in relation to legal proceedings initiated by the Village of Philadelphia (the "Village"), New York. The Village had claimed that FortisUS Energy should honour a series of current and future payments set out in an agreement between the Village and a former owner of the hydroelectric site, located in the municipality of the Village, now owned by FortisUS Energy, totalling approximately $9 million (US$7 million). There was no impact on the 2008 Consolidated Financial Statements as a result of the settlement of these legal proceedings.

Exploits Partnership

On December 16, 2008, the Government of Newfoundland and Labrador passed legislation expropriating most of the Newfoundland assets of Abitibi-Consolidated. Prior to that date, Abitibi-Consolidated announced the closure of its Grand Falls-Windsor, Newfoundland newsprint mill, effective March 31, 2009. The hydroelectric generating facility assets of the Exploits Partnership were included as part of the expropriation legislation. The Exploits Partnership is owned 51 per cent by Fortis Properties and 49 per cent by Abitibi-Consolidated. The financial statements of the Exploits Partnership are consolidated in the financial statements of Fortis. The Exploits Partnership has a $61 million term loan, which is non-recourse to Fortis, with several lenders which is secured by the assets of the Exploits Partnership.

Discussions are ongoing with Exploits Partnership's lenders with respect to the above matters. The Government of Newfoundland and Labrador has publicly stated that it is not its intention to adversely affect the business interests of lenders or independent partners of Abitibi-Consolidated. Pending resolution of these matters, the deferred financing costs of $2 million and utility capital assets of $61 million related to the Exploits Partnership have been reclassified to deferred charges and other assets and the $61 million term loan has been reclassified as current on the consolidated balance sheet of Fortis as at December 31, 2008.

Selected Annual Financial Information

The following table sets forth the annual financial information for the years ended December 31, 2008, 2007 and 2006. The financial information has been prepared in Canadian dollars and in accordance with Canadian GAAP and as required by utility regulators. The timing of the recognition of certain assets, liabilities, revenues and expenses as a result of regulation may differ from that otherwise expected using Canadian GAAP for non-regulated entities.

Selected Annual Financial Information

Years Ended December 31 *($ millions, except per share amounts)*	**2008**	2007(1)	2006
Revenue and equity income	**3,903**	2,718	1,472
Net earnings	**259**	199	149
Net earnings applicable to common shares	**245**	193	147
Total assets	**11,178**	10,273	5,441
Long-term debt and capital lease obligations (net of current portion)	**4,884**	4,623	2,558
Preference shares(2)(3)	**667**	442	442
Common shareholders' equity	**3,046**	2,601	1,276
Basic earnings per common share	**1.56**	1.40	1.42
Diluted earnings per common share	**1.52**	1.32	1.37
Dividends declared per common share	**1.01**	0.88	0.70
Dividends declared per First Preference Share, Series C	**1.3625**	1.3625	1.3625
Dividends declared per First Preference Share, Series E	**1.2250**	1.2250	1.2250
Dividends declared per First Preference Share, Series F(4)	**1.2250**	1.2250	0.5211
Dividends declared per First Preference Share, Series G(3)	**1.0184**	–	–

(1) Financial results for 2007 were significantly impacted by the acquisition of Terasen on May 17, 2007.

(2) Includes preference shares classified as equity and long-term debt

(3) A total of 9.2 million First Preference Shares, Series G were issued on May 23, 2008 and June 4, 2008 at $25.00 per share for net after-tax proceeds of $225 million and are entitled to receive cumulative dividends in the amount of $1.3125 per share per annum.

(4) 5 million First Preference Shares, Series F were issued on September 28, 2006 at $25.00 per share for net after-tax proceeds of $122 million and are entitled to receive cumulative dividends in the amount of $1.2250 per share per annum.

2008/2007 – Revenue increased 43.6 per cent over 2007. The increase was driven by contributions from the Terasen Gas companies for a full year in 2008 compared to a partial year in 2007. Net earnings applicable to common shares grew 26.9 per cent over 2007. The increase in earnings was primarily due to earnings' contributions from the Terasen Gas companies for a full year in 2008 compared to a partial year in 2007, rate base growth and higher allowed ROEs at the Corporation's Canadian Regulated Utilities, and increased non-regulated hydroelectric production due to higher rainfall. The increase was tempered by a one-time $13 million loss related to a June 2008 regulatory rate decision at Belize Electricity and lower corporate tax recoveries at FortisAlberta. The growth in total assets and increase in long-term debt in 2008 was primarily due to the Corporation's continued investment in energy systems, driven by the capital expenditure programs at FortisAlberta, FortisBC and the Terasen Gas companies, combined with the impact of foreign exchange associated with translation of foreign currency-denominated assets and liabilities. The Corporation issued $230 million preference shares in 2008, the net proceeds of which were primarily used to repay borrowings under the Corporation's committed credit facility, to fund equity requirements of FortisAlberta and the Corporation's regulated electric utilities in the Caribbean, and for general corporate purposes. The Corporation also issued $300 million common shares in 2008, the net proceeds of which were used to repay short-term debt primarily incurred to retire $200 million of maturing debt at Terasen, and for general corporate purposes. Basic earnings per common share increased 11.4 per cent from 2007, primarily due to growth in earnings.

2007/2006 – Revenue, including equity income, increased 84.6 per cent over 2006. The increase was driven by contributions from the Terasen Gas companies, from the date of acquisition, and the impact of consolidating the Corporation's approximate 54 per cent controlling ownership in Caribbean Utilities during 2007 compared to recording the Corporation's 37 per cent interest in Caribbean Utilities during 2006 on an equity basis. Net earnings applicable to common shares grew 31.3 per cent over 2006, attributable to the acquisition of Terasen in May 2007, the first full year of ownership of Fortis Turks and Caicos, significant investment in electrical infrastructure at FortisAlberta and FortisBC, stronger performance at Fortis Properties and lower effective corporate taxes. The growth in total assets and increase in long-term debt in 2007 was driven by assets acquired and debt assumed upon the acquisition of Terasen in May 2007. The remaining increase in assets and long-term debt was primarily due to the Corporation's continued investment in energy systems, driven by the capital expenditure programs at FortisAlberta and FortisBC and the acquisition of the Delta Regina, partially offset by the impact of foreign exchange associated with translation of foreign currency-denominated assets and liabilities. Common shareholders' equity more than doubled during 2007, driven by the issuance of approximately $1.15 billion in common equity required to fund a significant portion of the net cash purchase price of Terasen. Basic earnings per common share decreased 1.4 per cent from 2006. Basic earnings per common share in 2007 were diluted by the common shares issued to fund the acquisition of Terasen and seasonality of earnings at the Terasen Gas companies.

Fourth Quarter Results

The following tables set forth unaudited financial information for the quarters ended December 31, 2008 and 2007. The financial information has been prepared in Canadian dollars and in accordance with Canadian GAAP and as required by utility regulators. A discussion of the financial results for the fourth quarter of 2008 is also contained in the Corporation's fourth quarter 2008 media release, dated and filed on SEDAR at www.sedar.com on February 5, 2009, which is incorporated by reference in this MD&A.

Summary of Volumes, Sales and Revenue

Fourth Quarters Ended December 31 *(Unaudited)*	Gas Volumes *(TJ)* Energy and Electricity Sales *(GWh)*			Revenue *($ millions)*		
	2008	2007	Variance	**2008**	2007	Variance
Regulated Gas Utilities – Canadian *(TJ)*						
Terasen Gas Companies	**66,816**	69,108	(2,292)	**606**	548	58
Regulated Electric Utilities – Canadian *(GWh)*						
FortisAlberta	**4,068**	4,002	66	**78**	68	10
FortisBC	**842**	839	3	**66**	61	5
Newfoundland Power	**1,412**	1,384	28	**139**	132	7
Other Canadian	**543**	554	(11)	**65**	66	(1)
	6,865	6,779	86	**348**	327	21
Regulated Electric Utilities – Caribbean *(GWh)*	**361**	272	89	**159**	76	83
Non-Regulated – Fortis Generation *(GWh)*	**312**	303	9	**20**	19	1
Non-Regulated – Fortis Properties				**52**	50	2
Corporate and Other				**7**	6	1
Inter-Segment Eliminations				**(10)**	(8)	(2)
Total				**1,182**	1,018	164

Gas Volumes: Gas volumes at the Terasen Gas companies decreased quarter over quarter, primarily due to lower transportation volumes to customers sourcing their own gas supplies, partially offset by higher sales volumes to residential customers as a result of increased consumption due to cooler weather compared to the same period for the previous year.

Energy and Electricity Sales: Increased energy and electricity sales at the Corporation's regulated electric utilities quarter over quarter were driven by: (i) two additional months of contribution from Caribbean Utilities related to a change in the utility's fiscal year end; (ii) an increase at FortisAlberta mainly due to customer growth; and (iii) an increase at Newfoundland Power primarily due to the combined impact of customer growth and higher average consumption. The increases were partially offset by decreased sales at Other Canadian Electric Utilities, driven by the impact of the shut down of operations of certain industrial customers in Ontario and lower average consumption in Ontario.

The increase in energy sales at Non-Regulated – Fortis Generation was mainly due to higher production in central Newfoundland and Upper New York State. Higher production was mainly the result of higher rainfall.

Revenue: Revenue for the fourth quarter of 2008 was $164 million higher than the same quarter in 2007. The increase was driven by the Terasen Gas companies and the Corporation's Regulated Electric Utilities. Revenue at the Terasen Gas companies increased quarter over quarter mainly due to higher commodity cost of gas charged to customers, increased residential consumption and an increase in customer gas distribution rates effective January 1, 2008, reflecting a higher allowed ROE for 2008. Increased revenue at Regulated Electric Utilities – Canadian quarter over quarter was mainly due to customer rate increases, which included the impact of higher allowed ROEs for 2008 and customer growth. Revenue at Regulated Electric Utilities – Caribbean increased quarter over quarter primarily due to two additional months of revenue contribution from Caribbean Utilities, an approximate $30 million favourable impact of foreign exchange associated with the translation of foreign currency-denominated revenue, due to the weakening of the Canadian dollar against the US dollar quarter over quarter, and the flow through to customers of higher energy supply costs.

Summary of Net Earnings Applicable to Common Shares

Fourth Quarters Ended December 31 *(Unaudited)*

($ millions)	**2008**	2007	Variance
Regulated Gas Utilities – Canadian			
Terasen Gas Companies	**47**	52	(5)
Regulated Electric Utilities – Canadian			
FortisAlberta	**11**	6	5
FortisBC	**7**	7	–
Newfoundland Power	**8**	9	(1)
Other Canadian	**3**	3	–
	29	25	4
Regulated Electric Utilities – Caribbean	**8**	9	(1)
Non-Regulated – Fortis Generation	**8**	7	1
Non-Regulated – Fortis Properties	**4**	8	(4)
Corporate and Other	**(20)**	(22)	2
Net Earnings Applicable to Common Shares	**76**	79	(3)

Earnings: Earnings for the fourth quarter of 2008 were $76 million or $3 million lower than $79 million for the same quarter in 2007. Fourth quarter results for 2007 were favourably impacted by one-time items totalling approximately $13 million related to: (i) the sale of surplus land at TGI; (ii) the reduction of future income tax liability balances at Fortis Properties related to lower enacted corporate income tax rates; and (iii) an interconnection agreement-related refund at FortisOntario. Excluding these one-time items, earnings were $10 million higher quarter over quarter. The increase was driven by stronger performance and lower corporate taxes at FortisAlberta, lower corporate expenses and $1 million of additional earnings from Caribbean Utilities related to a change in the utility's fiscal year end. The increase was partially offset by the impact of: (i) a lower allowed ROA at Belize Electricity, effective July 1, 2008; (ii) an approximate $1 million loss of revenue at Fortis Turks and Caicos related to Hurricane Ike; and (iii) an approximate $2 million reduction in fourth quarter 2008 earnings at Newfoundland Power associated with a shift in the quarterly distribution of the utility's annual purchased power expense. Newfoundland Power's annual earnings were not affected by the shift in the quarterly distribution of annual purchased power expense.

Summary of Cash Flows

Fourth Quarters Ended December 31 *(Unaudited)*

($ millions)	**2008**	2007	Variance
Cash, Beginning of Period	**68**	51	17
Cash Provided By (Used In)			
Operating Activities	**214**	152	62
Investing Activities	**(277)**	(234)	(43)
Financing Activities	**58**	89	(31)
Foreign Currency Impact on Cash Balances	**3**	–	3
Cash, End of Period	**66**	58	8

Cash flow provided from operating activities, after working capital adjustments, increased $62 million quarter over quarter. The increase was mainly due to favourable working capital changes at the Terasen Gas companies related to the impact of cooler weather and higher commodity natural gas costs charged to customers during the fourth quarter of 2008 compared to the fourth quarter of 2007. The increase was partially offset by lower cash from operating activities at FortisAlberta. However, during the fourth quarter of 2007, FortisAlberta received cash from the sale of amounts in its 2007 AESO charges deferral account.

Cash used in investing activities increased $43 million quarter over quarter, reflecting higher utility capital expenditures and the acquisition of the Fairmount Newfoundland hotel in November 2008.

Cash provided from financing activities was $31 million lower quarter over quarter. Increased cash associated with the $300 million common share issue in the fourth quarter of 2008 was more than offset by the impact of a net decrease in debt during the fourth quarter of 2008 compared to a net increase in debt during the same quarter for the previous year.

Quarterly Results

The following table sets forth unaudited quarterly information for each of the eight quarters ended March 31, 2007 through December 31, 2008. The quarterly information has been prepared in Canadian dollars and obtained from the Corporation's interim unaudited consolidated financial statements which, in the opinion of management, have been prepared in accordance with Canadian GAAP and as required by utility regulators. The timing of the recognition of certain assets, liabilities, revenues and expenses as a result of regulation may differ from that otherwise expected using Canadian GAAP for non-regulated entities. These financial results are not necessarily indicative of results for any future period and should not be relied upon to predict future performance.

Summary of Quarterly Results

(Unaudited)

Quarter Ended	Revenue *($ millions)*	Net Earnings Applicable to Common Shares *($ millions)*	Earnings per Common Share Basic *($)*	Earnings per Common Share Diluted *($)*
December 31, 2008	1,182	76	0.48	0.46
September 30, 2008	727	49	0.31	0.31
June 30, 2008	848	29	0.19	0.18
March 31, 2008	1,146	91	0.58	0.55
December 31, 2007	1,018	79	0.51	0.49
September 30, 2007	651	31	0.20	0.20
June 30, 2007	566	41	0.31	0.27
March 31, 2007	483	42	0.38	0.35

A summary of the past eight quarters reflects the Corporation's continued organic growth, growth from acquisitions, as well as the seasonality associated with its businesses. Interim results will fluctuate due to the seasonal nature of gas and electricity demand and water flows, as well as the timing and recognition of regulatory decisions. Given the diversified group of companies, seasonality may vary. Financial results for the fourth quarter of 2008 include two additional months of contribution from Caribbean Utilities resulting from a change in the utility's fiscal year end. Financial results from May 17, 2007 were impacted by the acquisition of Terasen.

Virtually all of the annual earnings of the Terasen Gas companies are generated in the first and fourth quarters. Financial results for the second quarter of 2008 reflected the $13 million unfavourable impact to Fortis of a charge recorded at Belize Electricity as a result of the June 2008 regulatory rate decision. Due to a shift in the quarterly distribution of annual purchased power expense at Newfoundland Power, the Company's earnings in 2008 were lower in the first and fourth quarters and higher in the second and third quarters compared to the same periods in 2007. Newfoundland Power's annual earnings were not affected by the shift in the quarterly distribution of annual purchased power expense. Financial results from August 1, 2007 were impacted by the acquisition of the Delta Regina in Saskatchewan.

December 2008/December 2007 – Net earnings applicable to common shares were $76 million, or $0.48 per common share, for the fourth quarter of 2008, compared to earnings of $79 million, or $0.51 per common share, for the fourth quarter of 2007. A discussion on the variances between the financial results for the fourth quarter of 2008 and the fourth quarter of 2007 is provided in the "Fourth Quarter Results" section of this MD&A.

September 2008/September 2007 – Net earnings applicable to common shares were $49 million, or $0.31 per common share, for the third quarter of 2008 compared to earnings of $31 million, or $0.20 per common share, for the third quarter of 2007. Third quarter 2008 results included a tax reduction of approximately $7.5 million associated with the settlement of historical corporate tax matters at Terasen. Excluding the tax reduction at Terasen, earnings for the third quarter of 2008 were $41.5 million or $0.26 per common share. Excluding the above one-time item, growth in earnings quarter over quarter was mainly due to higher earnings at Newfoundland Power associated with a shift in the quarterly distribution of annual purchased power expense, higher non-regulated hydroelectric production, increased earnings at FortisBC primarily due to lower energy supply costs and higher earnings at FortisAlberta mainly due to higher corporate tax recoveries. The increase was partially offset by lower earnings at Caribbean Regulated Utilities driven by a 3.25 per cent reduction in basic electricity rates at Caribbean Utilities, a lower allowed ROA at Belize Electricity and a loss of revenue at Fortis Turks and Caicos due to the impact of Hurricane Ike.

June 2008/June 2007 – Net earnings applicable to common shares were $29 million, or $0.19 per common share, for the second quarter of 2008 compared to earnings of $41 million, or $0.31 per common share, for the second quarter of 2007. Second quarter 2008 results included a $13 million, or $0.08 per common share, charge representing the Corporation's approximate 70 per cent share of disallowed previously incurred fuel and purchased power costs at Belize Electricity as well as a $2 million one-time charge at FortisOntario associated with repayment of interconnection-agreement related amounts received in the fourth quarter of 2007. Excluding the above one-time items, earnings for the second quarter of 2008 were $44 million compared to $41 million for the second quarter of 2007. Earnings were favourably impacted by a full quarter of earnings' contribution from the Terasen Gas companies, higher earnings at Newfoundland Power associated with a shift in the quarterly distribution of annual purchased power expense, increased non-regulated hydroelectric production and improved performance at Fortis Properties. Partially offsetting those items were lower earnings at FortisAlberta associated with higher corporate income taxes and higher corporate financing costs associated with the Terasen acquisition.

March 2008/March 2007 – Net earnings applicable to common shares were $91 million, or $0.58 per common share, for the first quarter of 2008, up $49 million from earnings of $42 million, or $0.38 per common share, for the first quarter of 2007. Growth in earnings was primarily attributable to the contribution from the Terasen Gas companies, acquired on May 17, 2007, and also reflected improved performance at Caribbean Utilities. The growth was partially offset by higher corporate financing costs associated with the Terasen acquisition and lower earnings at Newfoundland Power associated with a shift in the quarterly distribution of annual purchased power expense. Earnings' contribution from Caribbean Utilities during the first quarter of 2007 was reduced by $2 million associated with a one-time charge on the disposal of steam-turbine assets.

Management's Evaluation of Disclosure Controls and Procedures and Internal Controls over Financial Reporting

Disclosure Controls and Procedures

The President and Chief Executive Officer ("CEO") and the Vice President, Finance and Chief Financial Officer ("CFO") of Fortis, together with management, have established and maintained disclosure controls and procedures for the Corporation in order to provide reasonable assurance that material information relating to the Corporation is made known to them in a timely manner, particularly during the period in which the annual filings are being prepared. The CEO and CFO of Fortis, together with management, have evaluated the design and operating effectiveness of the Corporation's disclosure controls and procedures as of December 31, 2008 and, based on that evaluation, have concluded that these controls and procedures are effective in providing such reasonable assurance.

Internal Controls over Financial Reporting

The CEO and the CFO of Fortis, together with management, are also responsible for establishing and maintaining internal controls over financial reporting ("ICFR") within the Corporation in order to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with Canadian GAAP. The CEO and CFO of Fortis, together with management, have evaluated the design and operating effectiveness of the Corporation's ICFR as of December 31, 2008 and, based on that evaluation, have concluded that the controls are effective in providing such reasonable assurance.

During the fourth quarter of 2008, there was no change in the Corporation's ICFR that has materially affected, or is reasonably likely to materially affect, the Corporation's ICFR.

Subsequent Events

In February 2009, FortisAlberta issued $100 million of 30-year 7.06% unsecured debentures under the short-form base shelf prospectus that was filed in December 2008. The net proceeds were used to repay committed credit-facility borrowings incurred in support of the Company's capital expenditure program and for general corporate purposes.

In February 2009, TGI issued $100 million of 30-year 6.55% unsecured debentures. The net proceeds are being used to repay credit-facility borrowings incurred in support of working capital requirements and capital expenditures, and to repay $60 million of unsecured debentures that mature in June 2009.

Outlook

Gross consolidated capital expenditures are estimated to be approximately $1 billion in 2009 and approximately $4.5 billion over the next five years. The Corporation's capital program should drive growth in earnings and dividends.

With its substantial credit facilities and conservative capital structure, Fortis believes it has the financial flexibility to respond to the global economic downturn and volatility in the capital markets anticipated to continue in 2009. The Corporation and its utilities also expect to continue to have reasonable access to long-term capital in 2009.

The Corporation continues to pursue acquisitions for profitable growth, focusing on opportunities to acquire regulated natural gas and electric utilities in Canada, the United States and the Caribbean. Fortis will also pursue growth in its non-regulated businesses in support of its regulated utility growth strategy.

Outstanding Share Data

As at March 10, 2009, the Corporation had issued and outstanding 169.8 million common shares; 5.0 million First Preference Shares, Series C; 8.0 million First Preference Shares, Series E; 5.0 million First Preference Shares, Series F; and 9.2 million First Preference Shares, Series G. Only the common shares of the Corporation have voting rights.

The number of common shares that would be issued upon conversion of share options, convertible debt and First Preference Shares, Series C and First Preference Shares, Series E as at March 10, 2009 is as follows:

Conversion of Securities into Common Shares

As at March 10, 2009 *(Unaudited)*

Security	Number of Common Shares *(millions)*
Stock Options	**4.1**
Convertible Debt	**1.8**
First Preference Shares, Series C	**6.0**
First Preference Shares, Series E	**9.7**
Total	**21.6**

Additional information, including the Fortis 2008 Annual Information Form, Management Information Circular and Consolidated Financial Statements, is available on SEDAR at www.sedar.com and on the Corporation's website at www.fortisinc.com.

Management's Report

The accompanying Annual Consolidated Financial Statements of Fortis Inc. and all information in the 2008 Annual Report have been prepared by management, who are responsible for the integrity of the information presented including amounts that must, of necessity, be based on estimates and informed judgments. These Annual Consolidated Financial Statements were prepared in accordance with accounting principles generally accepted in Canada. Financial information contained elsewhere in the 2008 Annual Report is consistent with that in the Annual Consolidated Financial Statements.

In meeting its responsibility for the reliability and integrity of the Annual Consolidated Financial Statements, management has developed and maintains a system of accounting and reporting which provides for the necessary internal controls to ensure transactions are properly authorized and recorded, assets are safeguarded and liabilities are recognized. The systems of the Corporation and its subsidiaries focus on the need for the training of qualified and professional staff and the effective communication of management guidelines and policies. The effectiveness of the internal controls of Fortis Inc. is evaluated on an ongoing basis.

The Board of Directors oversees management's responsibilities for financial reporting through an Audit Committee which is composed entirely of outside independent directors. The Audit Committee oversees the external audit of the Corporation's Annual Consolidated Financial Statements and the accounting and financial reporting and disclosure processes and policies of the Corporation. The Audit Committee meets with management, the shareholders' auditors and the internal auditor to discuss the results of the external audit, the adequacy of the internal accounting controls and the quality and integrity of financial reporting. The Corporation's Annual Consolidated Financial Statements are reviewed by the Audit Committee with each of management and the shareholders' auditors before the statements are recommended to the Board of Directors for approval. The shareholders' auditors have full and free access to the Audit Committee. The Audit Committee has the duty to review the adoption of, and changes in, accounting principles and practices which have a material effect on the Corporation's Annual Consolidated Financial Statements and to review and report to the Board of Directors on policies relating to the accounting and financial reporting and disclosure processes.

The Audit Committee has the duty to review financial reports requiring Board of Directors' approval prior to the submission to securities commissions or other regulatory authorities, to assess and review management judgments material to reported financial information and to review the shareholders' auditors' independence and auditors' fees. The 2008 Annual Consolidated Financial Statements and Management Discussion and Analysis contained in the 2008 Annual Report were reviewed by the Audit Committee and, on their recommendation, were approved by the Board of Directors of Fortis Inc. Ernst & Young, LLP, independent auditors appointed by the shareholders of Fortis Inc. upon the recommendation of the Audit Committee, have performed an audit of the 2008 Annual Consolidated Financial Statements and their report follows.

Auditors' Report

To the Shareholders of Fortis Inc.

We have audited the consolidated balance sheets of Fortis Inc. as at December 31, 2008 and 2007 and the consolidated statements of earnings, retained earnings, comprehensive income and cash flows for the years then ended. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2008 and 2007 and the results of its operations and its cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

Notes to Consolidated Financial Statements

December 31, 2008 and 2007

1. Description of the Business

Nature of Operations

Fortis Inc. ("Fortis" or the "Corporation") is principally an international distribution utility holding company. Fortis segments its utility operations by franchise area and, depending on regulatory requirements, by the nature of the assets. Fortis also holds investments in non-regulated generation, and commercial real estate and hotels, which are treated as two separate segments. The Corporation's reporting segments allow senior management to evaluate the operational performance and assess the overall contribution of each segment to the Corporation's long-term objectives. Each reporting segment operates as an autonomous unit, assumes profit and loss responsibility and is accountable for its own resource allocation.

The following summary describes the operations included in each of the Corporation's reportable segments.

Regulated Utilities

The following summary describes the Corporation's interests in regulated gas and electric utilities in Canada and the Caribbean by utility:

Regulated Gas Utilities – Canadian

Terasen Gas Companies: Includes Terasen Gas Inc. ("TGI"), Terasen Gas (Vancouver Island) Inc. ("TGVI") and Terasen Gas (Whistler) Inc. ("TGWI"), which Fortis acquired through the acquisition of Terasen Inc. ("Terasen") on May 17, 2007.

TGI is the largest distributor of natural gas in British Columbia, serving primarily residential, commercial and industrial customers in a service area that extends from Vancouver to the Fraser Valley and the interior of British Columbia.

TGVI owns and operates the natural gas transmission pipeline from the Greater Vancouver area across the Georgia Strait to Vancouver Island and the distribution system on Vancouver Island and along the Sunshine Coast of British Columbia, serving primarily residential, commercial and industrial customers.

In addition to providing transmission and distribution services to customers, TGI and TGVI also obtain natural gas supplies on behalf of most residential and commercial customers. Gas supplies are sourced primarily from northeastern British Columbia and, through TGI's Southern Crossing Pipeline, from Alberta.

TGWI owns and operates the propane distribution system in Whistler, British Columbia, providing service to mainly residential and commercial customers.

Regulated Electric Utilities – Canadian

a. *FortisAlberta*: FortisAlberta owns and operates the electricity distribution system in a substantial portion of southern and central Alberta.

b. *FortisBC*: Includes FortisBC Inc., an integrated electric utility operating in the southern interior of British Columbia. FortisBC Inc. owns four hydroelectric generating facilities with a combined capacity of 223 megawatts ("MW"). Included with the FortisBC component of the Regulated Electric Utilities – Canadian segment are the operating, maintenance and management services relating to the 450-MW Waneta hydroelectric generating facility owned by Teck Cominco Metals Ltd., the 269-MW Brilliant Hydroelectric Plant owned by Columbia Power Corporation and the Columbia Basin Trust ("CPC/CBT"), the 185-MW Arrow Lakes Hydroelectric Plant owned by CPC/CBT and the distribution system owned by the City of Kelowna.

c. *Newfoundland Power*: Newfoundland Power is the principal distributor of electricity in Newfoundland. Newfoundland Power has an installed generating capacity of 140 MW, of which 97 MW is hydroelectric generation.

d. *Other Canadian*: Includes Maritime Electric and FortisOntario. Maritime Electric is the principal distributor of electricity on Prince Edward Island. Maritime Electric also maintains on-Island generating facilities with a combined capacity of 150 MW. FortisOntario provides integrated electric utility service to customers in Fort Erie, Cornwall, Gananoque and Port Colborne in Ontario. FortisOntario's operations primarily include Canadian Niagara Power Inc. ("Canadian Niagara Power") and Cornwall Street Railway, Light and Power Company, Limited ("Cornwall Electric"). Included in Canadian Niagara Power's accounts is the operation of the electricity distribution business of Port Colborne Hydro Inc., which has been leased from the City of Port Colborne under a ten-year lease agreement that expires in April 2012.

Regulated Electric Utilities – Caribbean

a. *Belize Electricity*: Belize Electricity is the principal distributor of electricity in Belize, Central America. The Company has an installed generating capacity of 34 MW. Fortis holds an approximate 70 per cent controlling ownership interest in Belize Electricity.

b. *Caribbean Utilities*: Caribbean Utilities is the sole provider of electricity on Grand Cayman, Cayman Islands. The Company has an installed generating capacity of 137 MW. Fortis has an approximate 57 per cent controlling ownership interest in Caribbean Utilities. Caribbean Utilities is a public company traded on the Toronto Stock Exchange (TSX:CUP.U). Caribbean Utilities had an April 30 fiscal year end whereby, up to and including the third quarter of 2008, its financial statements were consolidated in the financial statements of Fortis on a two-month lag basis. Caribbean Utilities changed its fiscal year end to December 31, which has resulted in the Corporation consolidating 14 months of financial results of Caribbean Utilities during 2008. The impact on 2008 earnings was not material. Going forward, this change in the Company's fiscal year end will eliminate the previous two-month lag in consolidating Caribbean Utilities' financial results.

c. *Fortis Turks and Caicos*: Includes P.P.C. Limited ("PPC") and Atlantic Equipment & Power (Turks and Caicos) Ltd. ("Atlantic"). Fortis Turks and Caicos is the principal distributor of electricity on the Turks and Caicos Islands. The Company has a combined diesel-fired generating capacity of 48 MW.

Non-Regulated – Fortis Generation

a. *Belize*: Operations consist of the 25-MW Mollejon and 7-MW Chalillo hydroelectric generating facilities in Belize. All of the output of these facilities is sold to Belize Electricity under a 50-year power purchase agreement expiring in 2055. The hydroelectric generation operations in Belize are conducted through the Corporation's indirect wholly owned subsidiary Belize Electric Company Limited ("BECOL") under a franchise agreement with the Government of Belize.

b. *Ontario*: Includes 75 MW of water-right entitlement associated with the Niagara Exchange Agreement, which expires April 30, 2009; a 5-MW gas-fired cogeneration plant in Cornwall; and six small hydroelectric generating stations in eastern Ontario with a combined capacity of 8 MW.

c. *Central Newfoundland*: Through the Exploits River Hydro Partnership ("Exploits Partnership"), a partnership between the Corporation, through its wholly owned subsidiary Fortis Properties, and Abitibi-Consolidated Company of Canada ("Abitibi-Consolidated"), 36 MW of additional capacity was developed and installed at two of Abitibi-Consolidated's hydroelectric generating plants in central Newfoundland. Fortis Properties holds directly a 51 per cent interest in the Exploits Partnership and Abitibi-Consolidated holds the remaining 49 per cent interest. The Exploits Partnership sells its output to Newfoundland and Labrador Hydro Corporation under a 30-year power purchase agreement expiring in 2033 (Note 28).

d. *British Columbia*: Includes the 16-MW run-of-river Walden hydroelectric power plant near Lillooet, British Columbia. This plant sells its entire output to BC Hydro under a long-term contract expiring in 2013.

e. *Upper New York State*: Includes the operations of four hydroelectric generating stations in Upper New York State, with a combined capacity of approximately 23 MW, operating under licences from the US Federal Energy Regulatory Commission. Hydroelectric generation operations in Upper New York State are conducted through the Corporation's indirect wholly owned subsidiary FortisUS Energy Corporation ("FortisUS Energy").

Non-Regulated – Fortis Properties

Fortis Properties owns and operates 20 hotels comprised of more than 3,800 rooms in eight Canadian provinces and approximately 2.8 million square feet of commercial real estate primarily in Atlantic Canada.

Corporate and Other

The Corporate and Other segment captures expense and revenue items not specifically related to any reportable segment. This segment includes finance charges, including interest on debt incurred directly by Fortis and Terasen Inc. and dividends on preference shares classified as long-term liabilities; dividends on preference shares classified as equity; other corporate expenses, including Fortis and Terasen Inc. corporate operating costs, net of recoveries from subsidiaries; interest and miscellaneous revenues; and corporate income taxes.

Also included in the Corporate and Other segment are the financial results of CustomerWorks Limited Partnership ("CWLP"). CWLP is a non-regulated shared-services business in which Terasen holds a 30 per cent interest. CWLP operates in partnership with Enbridge Inc. and provides customer service contact, meter reading, billing, credit, support and collection services to the Terasen Gas companies and several smaller third parties. CWLP's financial results are recorded using the proportionate consolidation method of accounting. While currently not significant, financial results of Terasen Energy Services Inc. ("TES") are also reported in the Corporate and Other segment. TES is a non-regulated wholly owned subsidiary of Terasen that provides alternative energy solutions.

2. Summary of Significant Accounting Policies

The consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"), including selected accounting treatments that differ from those used by entities not subject to rate regulation. The timing of the recognition of certain assets, liabilities, revenue and expenses, as a result of regulation, may differ from that otherwise expected using Canadian GAAP by entities not subject to rate regulation. The differences are described in Note 2 under the headings "Regulation", "Utility Capital Assets", "Employee Future Benefits", "Income Taxes" and "Revenue Recognition", and in Note 4.

All amounts presented are in Canadian dollars unless otherwise stated.

Regulation

Terasen Gas Companies and FortisBC

The Terasen Gas companies and FortisBC are regulated by the British Columbia Utilities Commission ("BCUC"). The BCUC administers acts and regulations pursuant to the *Utilities Commission Act* (British Columbia), covering such matters as tariffs, rates, construction, operations, financing and accounting. TGI, TGVI and FortisBC operate under both cost-of-service regulation and performance-based rate-setting ("PBR") methodologies as administered by the BCUC. The BCUC provides for the use of a future test year in the establishment of rates and, pursuant to this method, provides for the forecasting of energy to be sold, together with all the costs of the utilities, and provides a rate of return on a deemed capital structure applied to approved rate base assets. Rates are fixed to permit the utilities to collect all of their costs, including the allowed rate of return on common shareholders' equity ("ROE").

Under the PBR mechanism, TGI and customers equally share in achieved earnings above or below the allowed ROE. When TGI's earned ROE is greater than 200 basis points above the allowed ROE for two consecutive years, the PBR mechanism may be reviewed. Under the PBR mechanism, TGVI is permitted to retain 100 per cent of earnings derived from lower-than-forecasted controllable operating and maintenance expenses; however, TGVI is not provided any relief from increased controllable operating and maintenance expenses. The PBR agreements at TGI and TGVI have been extended until 2009. During 2008, the BCUC extended the PBR agreement for FortisBC for the years 2009 through 2011. Under the PBR agreement, FortisBC and customers equally share achieved earnings above or below the allowed ROE up to an achieved ROE that is 200 basis points above or below the allowed ROE. Any excess is subject to deferral treatment. FortisBC's portion of the PBR incentive is subject to the Company meeting certain performance standards and BCUC approval.

TGI's allowed ROE was 8.62 per cent for 2008 (2007 – 8.37 per cent) on a deemed capital structure of 35 per cent common equity. TGVI's allowed ROE was 9.32 per cent for 2008 (2007 – 9.07 per cent) on a deemed capital structure of 40 per cent common equity. FortisBC's allowed ROE was 9.02 per cent for 2008 (2007 – 8.77 per cent) on a deemed capital structure of 40 per cent common equity. The allowed ROE at each of TGI, TGVI and FortisBC is adjusted annually through the operation of an automatic adjustment formula to adjust for forecast changes in long-term Canada bond yields. TGI, TGVI and FortisBC apply for tariff revenue based on estimated cost of service. Once the tariff is approved, it is not adjusted as a result of actual cost of service being different from that which was estimated, other than for certain prescribed costs that are eligible for deferral account treatment and/or through the operation of the PBR mechanisms.

FortisAlberta

FortisAlberta is regulated by the Alberta Utilities Commission ("AUC"), pursuant to the *Electric Utilities Act* (Alberta), the *Public Utilities Board Act* (Alberta), the *Hydro and Electric Energy Act* (Alberta) and the *AUC Act* (Alberta). The AUC administers these acts and regulations, covering such matters as tariffs, rates, construction, operations and financing.

FortisAlberta operates under cost-of-service regulation as prescribed by the AUC. The AUC provides for the use of a future test year in the establishment of rates associated with the distribution business and, pursuant to this method, rate orders issued by the AUC establish the Company's revenue requirements, being those revenues required to recover approved costs associated with the distribution business and provide a rate of return on a deemed capital structure applied to approved rate base assets. FortisAlberta's allowed ROE was 8.75 per cent for 2008 (2007 – 8.51 per cent) on a deemed capital structure of 37 per cent common equity. FortisAlberta's allowed ROE is adjusted annually through the operation of an automatic adjustment formula to adjust for forecast changes in long-term Canada bond yields. The Company applies for tariff revenue based on estimated cost of service. Once the tariff is approved, it is not adjusted as a result of actual cost of service being different from that which was estimated, other than for certain prescribed costs that are eligible for deferral account treatment.

Newfoundland Power

Newfoundland Power is regulated by the Newfoundland and Labrador Board of Commissioners of Public Utilities ("PUB") under the *Public Utilities Act* (Newfoundland and Labrador). The *Public Utilities Act* (Newfoundland and Labrador) provides for the PUB's general supervision of the Company's utility operation and requires the PUB to approve, among other things, customer rates, capital expenditures and the issuance of securities of Newfoundland Power. Newfoundland Power operates under cost-of-service regulation as administered by the PUB. The PUB provides for the use of a future test year in the establishment of rates for the utility and, pursuant to this method, the determination of the forecast rate of return on approved rate base and deemed capital structure, together with the forecast of all reasonable and prudent costs, establish the revenue requirement upon which Newfoundland Power's customer rates are determined. Between test years, Newfoundland Power's allowed ROE is adjusted annually through the operation of an automatic adjustment formula to adjust for forecast changes in long-term Canada bond yields. Newfoundland Power's allowed ROE for 2008 was 8.95 per cent (2007 – 8.60 per cent) on a deemed capital structure of 45 per cent common equity. The Company applies for tariff revenue based on estimated cost of service. Once the tariff is approved, it is not adjusted as a result of actual cost of service being different from that which was estimated, other than for certain prescribed costs that are eligible for deferral account treatment.

Maritime Electric

Maritime Electric operates under a traditional cost-of-service regulatory model as prescribed by the Island Regulatory and Appeals Commission ("IRAC") under the provisions of the *Electric Power Act* (Prince Edward Island). IRAC uses a future test year in the establishment of rates for the utility and, pursuant to this method, rate orders are based on estimated costs and provide an approved rate of return on a deemed capital structure applied to approved rate base assets. Maritime Electric's allowed ROE was 10.00 per cent for 2008 (2007 – 10.25 per cent) on a deemed capital structure of 40 per cent common equity. Maritime Electric applies for tariff revenue based on estimated cost of service. Once the tariff is approved, it is not adjusted as a result of actual cost of service being different from that which was estimated, other than for certain prescribed costs that are eligible for deferral account treatment.

FortisOntario

Canadian Niagara Power and Cornwall Electric operate under the *Electricity Act* (Ontario) and the *Ontario Energy Board Act* (Ontario) as administered by the Ontario Energy Board ("OEB"). Canadian Niagara Power operates under cost-of-service regulation and earnings are regulated on the basis of rate of return on rate base, plus a recovery of allowable distribution costs. In 2008, the utility's electricity distribution rates were based upon costs derived from a 2004 test year using a deemed capital structure of 46.7 per cent common equity. In accordance with the OEB's plan, the utility will move to a 40 per cent common equity capital structure over a three-year period. FortisOntario's allowed ROE was 9 per cent for 2008 (2007 – 9 per cent).

Cornwall Electric is exempt from many aspects of the above Acts and is also subject to a 35-year Franchise Agreement with the City of Cornwall, expiring in 2033. The rate-setting mechanism is subject to a price cap with commodity cost flow through. The base revenue requirement is adjusted annually for inflation, load growth and customer growth.

Belize Electricity

Belize Electricity is regulated by the Public Utilities Commission ("PUC") under the terms of the *Electricity Act* (Belize), the *Electricity (Tariffs, Charges and Quality of Service Standards) By-Laws* (Belize) and the *Public Utilities Commission Act* (Belize). The PUC oversees the rates that may be charged in respect of utility services and the standards that must be maintained in relation to such services and uses a future test year to set rates. In addition, the PUC is responsible for the award of licences and for monitoring and enforcing compliance with licences' conditions. The basic electricity rate at Belize Electricity is comprised of two components. The first component is value-added delivery ("VAD") and the second is the cost of fuel and purchased power ("COP"), including the variable cost of generation, which is a flow through in customer rates. The VAD component of the tariff allows the Company to recover its operating expenses, transmission and distribution expenses, taxes and amortization, and an allowed rate of return on rate base assets ("ROA"). Belize Electricity's allowed ROA was set at 10.00 per cent effective July 1, 2008 (2007 – 10.00 to 15.00 per cent).

Caribbean Utilities

Caribbean Utilities has been generating and distributing electricity in its franchise area of Grand Cayman, Cayman Islands, under a licence from the Government of the Cayman Islands (the "Government") since May 10, 1966. Effective January 1, 2008, new licences were granted to Caribbean Utilities. The new exclusive transmission and distribution ("T&D") licence is for an initial period of 20 years, expiring April 2028, with a provision for automatic renewal. The new generation licence is for a period of 21.5 years, expiring September 2029. The new licences establish a rate cap and adjustment mechanism ("RCAM") based on published consumer price indices. Customer rates are set using an initial targeted allowed ROA of 10 per cent, down from an allowed ROA of 15 per cent that was permitted under the previous licence. The new licences detail the role of the Electric Regulatory Authority, which will oversee all licences, establish and enforce licence standards, review the RCAM and annually approve capital expenditures.

Fortis Turks and Caicos

Fortis Turks and Caicos provides electricity to Providenciales, North Caicos and Middle Caicos through PPC and provides electricity to South Caicos through Atlantic for terms of 50 years under licences dated October 1987 and November 1986 (collectively, the "Agreements"), respectively. Among other matters, these Agreements describe how electricity rates are to be set by the Government of the Turks and Caicos Islands, using a future test year, in order to provide Fortis Turks and Caicos with an allowed ROA of 17.5 per cent (the "Allowable Operating Profit") based on a calculated rate base, and including interest on the amounts by which actual operating profits fall short of Allowable Operating Profits on a cumulative basis (the "cumulative shortfall").

2. *Summary of Significant Accounting Policies (cont'd)*

Regulation (cont'd)

Fortis Turks and Caicos makes annual submissions to the Government of the Turks and Caicos Islands calculating the amount of the Allowable Operating Profit and the cumulative shortfalls. The submissions for 2008 calculated the Allowable Operating Profit for 2008 to be $22 million (US$18 million) and the cumulative shortfall at December 31, 2008 to be $22 million (US$18 million). Fortis Turks and Caicos has a legal right under the Agreements to request an increase in electricity rates to begin to recover the cumulative shortfalls. The recovery would, however, be dependent on future sales volumes and expenses.

Cash and Cash Equivalents

Cash and cash equivalents include cash and short-term deposits with maturities of three months or less from the date of acquisition.

Inventories

Inventories are valued at the lower of weighted-average cost and net realizable value.

Utility Capital Assets

Utility capital assets of Newfoundland Power are stated at values approved by the PUB as at June 30, 1966 with subsequent additions at cost. Utility capital assets of Caribbean Utilities are stated on the basis of appraised values as at November 30, 1984 with subsequent additions at cost. Utility capital assets of Fortis Turks and Caicos are stated at appraised values as at September 18, 1986. Subsequent additions are at cost except for the distribution systems on Middle, North and South Caicos, transferred by the Government of the Turks and Caicos Islands to Fortis Turks and Caicos by agreements dated November 29, 1986 and October 8, 1987 for US$2.00, in aggregate, as valued in the books of the companies. Utility capital assets of all other utility operations are stated at cost.

Contributions in aid of construction represent amounts contributed by customers and governments for the cost of utility capital assets. These contributions are recorded as a reduction in the cost of utility capital assets and are being reduced annually by an amount equal to the charge for amortization provided on the related assets.

As required by their respective regulators, amortization expense at FortisAlberta, FortisBC, Newfoundland Power and Maritime Electric includes an amount allowed for regulatory purposes to provide for future asset removal and site restoration costs, net of salvage proceeds. The amount provided for in amortization expense is recorded as a long-term regulatory liability. Actual asset removal and site restoration costs, net of salvage proceeds, are recorded against the regulatory liability when incurred. At December 31, 2008, the long-term regulatory liability for future asset removal and site restoration costs was $337 million (December 31, 2007 – $319 million) (Note 4 *(xii)*). The Terasen Gas companies record actual asset removal and site restoration costs, net of salvage proceeds, against accumulated amortization. In the absence of a current depreciation study approved by its regulator, a reasonable estimate of any regulatory asset or liability associated with future asset removal and site restoration costs for the Terasen Gas companies cannot be made as at December 31, 2008. FortisOntario, Belize Electricity, Caribbean Utilities and Fortis Turks and Caicos record asset removal and site restoration costs in earnings when incurred, and these costs did not have a material impact on the Corporation's 2008 and 2007 earnings.

Upon retirement or disposal of utility capital assets, the capital cost of the assets is charged to accumulated amortization by the Terasen Gas companies, FortisAlberta, FortisBC, Newfoundland Power, Maritime Electric, Belize Electricity and, commencing May 2008, Caribbean Utilities, as required by their respective regulators, with no loss, if any, reflected in earnings. It is expected that any loss charged to accumulated amortization will be reflected in future amortization expense when it is collected in customer gas and electricity rates. At FortisOntario and Fortis Turks and Caicos, any remaining net book value, less salvage proceeds, upon retirement or disposal of utility capital assets is recorded immediately in earnings. In the absence of rate regulation, any loss on the retirement or disposal of utility capital assets at the Terasen Gas companies, FortisAlberta, FortisBC, Newfoundland Power, Maritime Electric and Belize Electricity would be recognized in the current period. The loss charged to accumulated amortization in 2008 was approximately $31 million (2007 – $26 million).

Utility capital assets include inventories held for the development, construction and maintenance of other utility capital assets. When put into service, the inventories are amortized using the straight-line method based on estimated service lives of the capital assets to which they are added.

Maintenance and repairs of utility capital assets are charged to earnings in the period incurred while replacements and betterments are capitalized.

As required by their respective regulators, the Terasen Gas companies, FortisBC, Newfoundland Power, Maritime Electric, FortisOntario, Belize Electricity and, commencing May 2008, Caribbean Utilities capitalize overhead costs that are not directly attributable to specific utility capital assets but which relate to the overall capital expenditure program. The methodology for calculating and allocating capitalized general overhead costs to utility capital assets is established by the respective regulators. In the absence of rate regulation, only those overhead costs directly attributable to construction activity would be capitalized. The general expenses capitalized ("GEC") are allocated over constructed capital assets and amortized over their estimated service lives. In 2008, GEC totalled $57 million (2007 – $42 million).

As required by their respective regulators, the Terasen Gas companies, FortisAlberta, FortisBC, Newfoundland Power, Maritime Electric, Belize Electricity and, commencing May 2008, Caribbean Utilities include an equity component in the allowance for funds used during construction ("AFUDC") that is included in the cost of utility capital assets. Since AFUDC includes both an interest component and an equity component, it exceeds the amount allowed to be capitalized in similar circumstances by entities not subject to rate regulation. AFUDC is deducted from finance charges and AFUDC capitalized during 2008 was $13 million (2007 – $8 million) (Note 17), including an equity component of $6 million (2007 – $3 million). AFUDC is charged to operations through amortization expense over the estimated service lives of the applicable utility capital assets.

FortisAlberta maintains a regulatory tax basis adjustment account, which represents the excess of the deemed tax basis of the Company's utility capital assets for regulatory rate-making purposes as compared to the Company's tax basis for income tax purposes. The regulatory tax basis adjustment is being amortized over the estimated service lives of the Company's utility capital assets by an offset against the provision for amortization. The regulatory tax basis adjustment is recorded as a reduction in utility capital assets. During 2008, amortization expense was reduced by $4 million (2007 – $5 million) for the amortization of the regulatory tax basis adjustment.

Utility capital assets are being amortized using the straight-line method based on the estimated service lives of the capital assets. Amortization rates range from 0.4 per cent to 39.0 per cent. The composite rate of amortization before reduction for amortization of contributions in aid of construction for 2008 was 3.5 per cent (2007 – 3.6 per cent).

The service life ranges and average remaining service life of the Corporation's distribution, transmission, generation and other assets as at December 31 were as follows.

	2008		2007	
	Service Life Ranges (Years)	**Average Remaining Service Life (Years)**	Service Life Ranges (Years)	Average Remaining Service Life (Years)
Distribution				
Gas	**10–100**	**35**	10–100	33
Electricity	**5–75**	**28**	10–75	28
Transmission				
Gas	**10–50**	**37**	10–50	38
Electricity	**10–75**	**35**	10–75	34
Generation	**5–75**	**29**	5–75	32
Other	**5–67**	**14**	5–67	14

Income Producing Properties

Income producing properties of Fortis Properties, which include office buildings, shopping malls, hotels, land and related equipment and tenant inducements, are recorded at cost. Buildings are being amortized using the straight-line method over an estimated useful life of 60 years. Fortis Properties amortizes tenant inducements over the initial terms of the leases to which they relate. The lease terms vary to a maximum of 20 years. Equipment is recorded at cost and is amortized on a straight-line basis over a range of 2 years to 25 years.

Maintenance and repairs of income producing properties are charged to earnings in the period incurred while replacements and betterments are capitalized.

Leases

Leases which transfer to the Corporation substantially all of the risks and benefits incidental to ownership of the leased item are capitalized at the present value of the minimum lease payments. Capital leases are depreciated over the lease term. Operating lease payments are recognized as an expense in earnings on a straight-line basis over the lease term.

2. Summary of Significant Accounting Policies (cont'd)

Intangibles

Intangibles include the estimated fair value of water rights associated with the Rankine hydroelectric generating station in Ontario and intangibles associated with the acquisition of Terasen. The Rankine water rights are being amortized using the straight-line method over the estimated life of the asset to April 30, 2009. As at April 30, 2009, in accordance with the Niagara Exchange Agreement, the Corporation's water entitlement on the Niagara River associated with the Rankine hydroelectric generating station will expire and associated earnings' contribution will cease.

Upon the acquisition of Terasen, $10 million was assigned as the value associated with customer contracts at CWLP. The intangible is being amortized using the straight-line method over the remaining term of the contracts to December 31, 2011. Approximately $1 million was assigned to the Terasen trade-name associated with non-regulated activities and is not subject to amortization.

As at December 31, 2008, the net book value of intangibles was $9 million (net of accumulated amortization of $28 million) (December 31, 2007 – $15 million (net of accumulated amortization of $21 million)).

Impairment of Long-Lived Assets

The Corporation reviews the valuation of utility capital assets, income producing properties, intangible assets with finite lives and deferred charges and other assets when events or changes in circumstances may indicate that the asset's carrying value exceeds the total undiscounted cash flows expected from its use and eventual disposition. An impairment loss, calculated as the difference between the asset's carrying value and its fair value, which is determined using present value techniques, is recognized in earnings in the period in which it is identified. There was no impact on the consolidated financial statements as a result of asset impairments for the years ended December 31, 2008 and 2007.

The process for asset-impairment testing differs for non-regulated generation assets compared to regulated utility assets. Since each non-regulated generating facility provides an individual cash inflow stream, such an asset is tested individually and an impairment is recorded if the future cash inflows are no longer sufficient to recover the carrying value of the generating facility. Asset-impairment testing at the regulated utilities is carried out at the enterprise level to determine if assets are impaired. The recovery of a regulated asset's carrying value, including a fair return on capital or assets, is provided through customer gas and electricity rates approved by the respective regulatory authorities. The cash inflows for regulated enterprises are not asset-specific but are pooled for the entire regulated enterprise.

Goodwill

Goodwill represents the excess, at the dates of acquisition, of the purchase price over the fair value of the net amounts assigned to individual assets acquired and liabilities assumed relating to business acquisitions. Goodwill is carried at initial cost less any previous amortization and any write-down for impairment. The Corporation is required to perform an annual impairment test and any impairment provision is charged to earnings. To assess for impairment, the fair value of each of the Corporation's reporting units is determined and compared to the book value of the reporting unit. If the fair value of the reporting unit is less than the book value, then a second test is performed to determine the amount of the impairment. The amount of the impairment is determined by deducting the fair value of the reporting unit's assets and liabilities from the fair value of the reporting unit, to determine the implied fair value of goodwill, and then by comparing that amount to the book value of the reporting unit's goodwill. Any excess of the book value of the goodwill over the implied fair value of the goodwill is the impairment amount. In addition to the annual impairment test, the Corporation also performs an impairment test if any event occurs or if circumstances change that would indicate that the fair value of a reporting unit was below its carrying value. No goodwill impairment provision has been determined for the years ended December 31, 2008 and 2007.

Employee Future Benefits

Defined Benefit and Defined Contribution Pension Plans

The Corporation and its subsidiaries each maintain one or a combination of defined benefit pension plans, defined contribution pension plans and group Registered Retirement Savings Plans ("RRSPs") for its employees. The costs of the defined contribution pension plans and RRSPs are expensed as incurred. The accrued pension benefit obligation and the value of pension costs of the defined benefit pension plans are actuarially determined using the projected benefits method prorated on service and management's best estimate of the discount rate, expected plan investment performance, salary escalation and retirement ages of employees.

With the exception of the Terasen Gas companies and Newfoundland Power, pension plan assets are valued at fair value. At the Terasen Gas companies and Newfoundland Power, plan assets are valued using the market-related value, where investment returns in excess of or below expected returns are recognized in the asset value over a period of three years. The excess of any cumulative net actuarial gain (loss) over 10 per cent of the greater of the benefit obligation and the fair value of plan assets (the market-related value of plan assets at the Terasen Gas companies and Newfoundland Power), at the beginning of the fiscal year, along with unamortized past service costs, are deferred and amortized over the average remaining service period of active employees.

On January 1, 2000, Newfoundland Power prospectively applied Section 3461 of the Canadian Institute of Chartered Accountants' ("CICA") Handbook. The Company is amortizing the resulting transitional obligation on a straight-line basis over 18 years, the expected average remaining service period of the plan members at that time.

As approved by the regulator, the cost of defined benefit pension plans at FortisAlberta is being recovered in customer rates based on the cash payments made.

Any difference between the expense recognized under Canadian GAAP and that recovered from customers in current rates for defined benefit and defined contribution pension plans, which is expected to be recovered, or refunded, in future customer rates, is subject to deferral treatment (Note 4 *(viii)* and *(xvii)*).

Supplementary and Other Post-Employment Benefit ("OPEB") Plans
The Corporation, the Terasen Gas companies, FortisAlberta, FortisBC, Newfoundland Power, Maritime Electric and FortisOntario also offer other non-pension post-employment benefits through defined benefit plans, including certain health and dental coverage, for qualifying members.

Additionally, the Corporation, Terasen Gas companies, FortisAlberta, Newfoundland Power and Maritime Electric provide retirement allowances and supplemental retirement plans for certain of its executive employees. The accrued benefit obligation and the value of the costs associated with the supplementary and OPEB plans are actuarially determined using the projected benefits method prorated on service and best-estimate assumptions. The excess of any cumulative net actuarial gain (loss) over 10 per cent of the benefit obligation, at the beginning of the fiscal year, and any unamortized past service costs are deferred and amortized over the average remaining service period of active employees.

As approved by the respective regulators, the costs of OPEB plans at FortisAlberta and Newfoundland Power are recovered in customer rates based on the cash payments made, with the exception of retirement allowances arising from Newfoundland Power's 2005 Early Retirement Program. The cost of supplemental pension plans at FortisAlberta is also recovered in customer rates based on the cash payments made.

Any difference between the expense recognized under Canadian GAAP and that recovered from customers in current rates for OPEB and supplemental pension plans, which is expected to be recovered, or refunded, in future customer rates, is subject to deferral treatment (Note 4 *(iv)*).

Stock-Based Compensation

The Corporation records compensation expense upon the issuance of stock options granted under its 2002 Stock Option Plan ("2002 Plan") and 2006 Stock Option Plan ("2006 Plan") (Note 15). Compensation expense is measured at the date of grant using the Black-Scholes fair value option-pricing model and is amortized over the four-year vesting period of the options granted. The offsetting entry is an increase to contributed surplus for an amount equal to the annual compensation expense related to the issuance of stock options. Upon exercise, the proceeds of the options are credited to capital stock at the option prices, and the fair value of the options, as previously recorded, is reclassified from contributed surplus to capital stock. An exercise of options below the current market price has a dilutive effect on capital stock and shareholders' equity.

The Corporation also records compensation expense associated with its Directors' Deferred Share Unit ("DSU") and Performance Share Unit ("PSU") Plans using the fair value method, recognizing compensation expense over the vesting period on a straight-line basis. The fair value of the DSU and PSU liabilities is based on the Corporation's common share closing price at the end of each reporting period.

2. Summary of Significant Accounting Policies (cont'd)

Foreign Currency Translation

The assets and liabilities of foreign operations, all of which are self-sustaining and denominated in US dollars or in a currency pegged to the US dollar, are translated at the exchange rate in effect at the balance sheet dates. Belize Electricity's reporting currency is the Belizean dollar, while the reporting currency of Caribbean Utilities, FortisUS Energy, BECOL and Fortis Turks and Caicos is the US dollar. The Belizean dollar is pegged to the US dollar at BZ$2.00 = US$1.00. The exchange rate in effect at December 31, 2008 was US$1.00 = CDN$1.22 (December 31, 2007 – US$1.00 = CDN$0.99). The resulting unrealized translation gains and losses are accumulated as a separate component of shareholders' equity within accumulated other comprehensive loss and the current period change is recorded in other comprehensive income. Revenue and expense items are translated at the average exchange rate in effect during the period.

Foreign exchange translation gains and losses on foreign currency-denominated long-term debt that is designated as an effective hedge of foreign net investments are recorded separately in other comprehensive income.

Monetary assets and liabilities denominated in foreign currencies are translated at the exchange rate prevailing on the balance sheet date. Revenue and expense items denominated in foreign currencies are translated at the exchange rate prevailing on the transaction date. Gains and losses on translation are included in earnings.

Financial Instruments

The Corporation designates its financial instruments into one of the following five categories: (i) held for trading, (ii) available for sale, (iii) held to maturity, (iv) loans and receivables, or (v) other financial liabilities. All financial instruments are initially measured at fair value. Financial instruments classified as held for trading or available for sale are subsequently measured at fair value with any change in fair value recorded in earnings and other comprehensive income, respectively. All other financial instruments are subsequently measured at amortized cost.

Derivative financial instruments, including derivative features embedded in financial instruments or other contracts that are not considered closely related to the host financial instrument or contract, are generally classified as held for trading and, therefore, must be measured at fair value with changes in fair value recorded in earnings. If a derivative financial instrument is designated as a hedging item in a qualifying cash flow hedging relationship, the effective portion of changes in fair value is recorded in other comprehensive income. Any change in fair value relating to the ineffective portion is recorded immediately in earnings. At the Terasen Gas companies, any difference between the amount recognized upon a change in the fair value of a derivative financial instrument, whether or not in a qualifying hedging relationship, and the amount recovered from customers in current rates is subject to regulatory deferral treatment to be recovered from, or refunded to, customers in future rates (Note 4 *(xvi)*). Currently, the Corporation limits the use of derivative financial instruments to those that qualify as hedges, as discussed under "Hedging Relationships".

The Corporation has selected January 1, 2003 as the transition date for recognizing embedded derivatives and, therefore, recognizes as separate assets and liabilities only those derivatives embedded in hybrid instruments issued, acquired or substantially modified on or after January 1, 2003. While some of the Corporation's long-term debt contracts have prepayment options that qualify as embedded derivatives to be separately recorded, none have been recorded as they are immaterial to the Corporation's results of operations and financial position.

The Corporation's policy is to recognize transaction costs associated with financial assets and liabilities, that are classified as other than held for trading, as an adjustment to the cost of those financial assets and liabilities recorded on the balance sheet. These transaction costs are amortized into earnings using the effective interest rate method over the life of the related financial instrument.

Effective January 1, 2008, the Corporation has adopted CICA Handbook Section 3862, *Financial Instruments – Disclosures* and Section 3863, *Financial Instruments – Presentation*, which require disclosures of both qualitative and quantitative information that enables users of financial statements to evaluate the nature and extent of risks from financial instruments to which the Corporation is exposed. The new disclosures are provided in Notes 25 and 26.

Hedging Relationships

At December 31, 2008, the Corporation's hedging relationships consisted of interest rate swap contracts, a foreign exchange forward contract, natural gas derivatives and US dollar borrowings. Derivative financial instruments are used only to manage risk and are not used for trading purposes.

Fortis Properties has designated its interest rate swap contracts as hedges of the cash flow risk related to floating-rate long-term debt. The interest rate swap contracts are valued at the present value of future cash flows based on published forward future interest rate curves. The fair value and subsequent changes in fair value of interest rate swap contracts that are in effective hedging relationships are recorded in other comprehensive income.

The foreign exchange forward contract is held by TGVI and is designated as a hedge of the cash flow risk related to approximately US$55 million required to be paid under a contract for the construction of a liquefied natural gas ("LNG") storage facility. The foreign exchange forward contract is valued at the present value of future cash flows based on published forward future foreign exchange market rate curves. Any change in the fair value of the foreign exchange forward contract is deferred as a regulatory asset or liability for recovery from, or refund to, customers in future rates, as permitted by the regulator.

The natural gas derivatives are used to fix the effective purchase price of natural gas, as the majority of the natural gas supply contracts at the Terasen Gas companies have floating, rather than fixed, prices. The fair values of the natural gas derivatives reflect the estimated amounts, based on published forward curves, that the Corporation would have to receive or pay if forced to settle all outstanding contracts at the balance sheet date. As at December 31, 2008, none of the natural gas derivatives were designated as hedges of the natural gas supply contracts. However, any changes in the fair value of the natural gas derivatives are deferred as a regulatory asset or liability for recovery from, or refund to, customers in future rates, as permitted by the regulator.

The Corporation's earnings from and net investments in self-sustaining foreign subsidiaries are exposed to fluctuations in the US dollar-to-Canadian dollar exchange rate. The Corporation has effectively decreased the above exposure through the use of US dollar borrowings at the corporate level. The Corporation has designated its corporately held US dollar long-term debt as a hedge of the foreign exchange risk related to its net investments in self-sustaining foreign subsidiaries. The unrealized foreign exchange gains and losses on the US dollar-denominated long-term debt and the partially offsetting unrealized foreign exchange losses and gains on the foreign net investments are recognized in other comprehensive income.

Income Taxes

Except as described below for the Terasen Gas companies, FortisAlberta, FortisBC and Newfoundland Power, the Corporation and its subsidiaries follow the asset and liability method of accounting for income taxes. Under this method, future income tax assets and liabilities are recognized for temporary differences between the tax and accounting basis of assets and liabilities, as well as for the benefit of losses available to be carried forward to future years for tax purposes that are likely to be realized. The future income tax assets and liabilities are measured using the enacted or substantively enacted income tax rates and laws that will be in effect when the differences are expected to be recovered or settled. The effect of a change in income tax rates on future income tax assets and liabilities is recognized in earnings in the period that the change occurs. Current income tax expense (recovery) is recognized for the estimated income taxes payable (receivable) in the current year.

The Terasen Gas companies, FortisAlberta, FortisBC and Newfoundland Power follow the cash taxes payable method of accounting for income taxes, as prescribed by their respective regulators. Under this methodology, except for certain deferred accounts specifically prescribed by the respective regulators, current customer rates do not include the recovery of future income taxes related to certain temporary differences between the tax basis of assets and liabilities and their carrying amounts for regulatory purposes, as these taxes are expected to be collected in customer rates when they become payable.

Entities not subject to rate regulation generally recognize future income tax assets and liabilities for temporary differences between the tax and accounting basis of all assets and liabilities. In the absence of rate regulation, future income tax assets and liabilities would have been recorded and the Corporation's future income tax liabilities and future income tax assets would have increased by approximately $364 million and $18 million, respectively, as at December 31, 2008 (December 31, 2007 – $344 million and $29 million, respectively).

Belize Electricity is subject to corporate tax; however, it is capped at 1.75 per cent of gross revenues. Caribbean Utilities and Fortis Turks and Caicos are not subject to income tax as they operate in tax-free jurisdictions. BECOL is not subject to income tax as it was granted tax-exempt status by the Government of Belize for the term of the 50-year power purchase agreement.

The Corporation does not provide for income taxes on undistributed earnings of foreign subsidiaries that are not expected to be repatriated in the foreseeable future.

2. Summary of Significant Accounting Policies (cont'd)

Revenue Recognition

Revenue at the Corporation's regulated utilities is recognized in a manner approved by each utility's regulatory authority. Revenue at the regulated utilities is billed at rates approved by the applicable regulatory authorities and is generally bundled to include service associated with generation, transmission and distribution, except at FortisAlberta and FortisOntario.

Transmission is the conveyance of gas at high pressures (generally at 2,070 kilopascals ("kPa") and higher) and electricity at high voltages (generally at 69 kilovolts ("kV") and higher). Distribution is the conveyance of gas at lower pressures (generally below 2,070 kPa) and electricity at lower voltages (generally below 69 kV). Distribution networks convey gas and electricity from transmission systems to end-use customers.

As required by the respective regulatory authorities, revenue from the sale of gas by the Terasen Gas companies and electricity by FortisAlberta, FortisBC, Newfoundland Power, Maritime Electric, FortisOntario, Caribbean Utilities and Fortis Turks and Caicos is recognized on the accrual basis. Gas and electricity are metered upon delivery to customers and recognized as revenue using approved rates when consumed. Meters are read periodically and bills are issued to customers based on these readings. At the end of each period, a certain amount of consumed gas and electricity will not have been billed. Gas and electricity consumed but not yet billed to customers are estimated and accrued as revenue at each period end.

As required by the PUC, revenue from the sale of electricity by Belize Electricity is recognized as monthly billings are rendered to customers. In the absence of rate regulation, revenue would be recorded on an accrual basis. The difference between recognizing revenue on a billed versus an accrual basis is recorded on the balance sheet as a regulatory liability (Note 4 *(xiii)*).

FortisAlberta reports revenue and expenses related to transmission services on a net basis in revenue. At the Corporation's other regulated utilities, transmission revenue and expenses are recorded on a gross basis. As stipulated by the AUC, FortisAlberta is required to arrange and pay for transmission service with Alberta Electric System Operator ("AESO") and collect transmission revenue from its customers, which is achieved through invoicing the customers' retailers through FortisAlberta's transmission component of its AUC-approved rates. FortisAlberta is solely a distribution company and, as such, does not operate or provide any transmission or generation services. The Company is a conduit for the flow through of transmission costs to end-use customers, as the transmission provider does not have a direct relationship with these customers. The rates collected are based on forecasted transmission expenses and, for certain elements of the transmission costs, FortisAlberta is subject to the risk of actual expenses being different from the forecast revenue relating to transmission services. All other differences are subject to deferral treatment and are either collected, or refunded, in future customer rates (Note 4 *(iii)*).

FortisOntario's regulated operations are primarily comprised of the operations of Cornwall Electric and Canadian Niagara Power. Electricity rates at Cornwall Electric are bundled due to the nature of the Franchise Agreement with the City of Cornwall. Electricity rates at Canadian Niagara Power are not bundled. At Canadian Niagara Power, the cost of power and transmission are a flow through to customers and these costs and revenue associated with the recovery of these costs are tracked and recorded separately. This treatment is consistent with other regulated utilities in Ontario as required under OEB regulation. The amount of transmission revenue tracked separately at Canadian Niagara Power is not significant in relation to the consolidated revenue of Fortis.

All of the Corporation's non-regulated generation operations record revenue on an accrual basis and revenue is recognized on delivery of output at rates fixed under contract or based on observed market prices as stipulated in contractual arrangements. Generally, production from the Corporation's generation stations is metered at or near month end and production data is used to record revenue earned.

Hospitality revenue is recognized when services are provided. Real estate revenue is derived from leasing retail and office space to tenants for varying periods of time. Revenue is recorded in the month that it is earned at rates in accordance with lease agreements. The leases are primarily of a net nature, with tenants paying basic rental plus a pro rata share of certain defined overhead expenses. Certain retail tenants pay additional rent based on a percentage of the tenant's sales. Expenses recovered from tenants are recorded as revenue. The escalation of lease rates included in long-term leases is recorded in earnings using the straight-line method over the term of the lease.

Asset-Retirement Obligations ("AROs")

AROs, including conditional AROs, are recorded as a liability at fair value, with a corresponding increase to utility capital assets or income producing properties. The Corporation recognizes AROs in the periods in which they are incurred if a reasonable estimate of a fair value can be determined.

The Corporation has AROs associated with hydroelectric generation facilities, interconnection facilities and wholesale energy supply agreements. While each of the foregoing will have legal AROs, including land and environmental remediation and/or removal of assets, the final date and cost of remediation and/or removal of the related assets cannot be reasonably determined at this time.

No significant environmental issues have been identified with respect to the Corporation's hydroelectric generation and transmission and distribution assets. These assets are reasonably expected to operate in perpetuity due to the nature of their operation. The licences, permits, interconnection facilities agreements and wholesale energy supply agreements are reasonably expected to be renewed or extended indefinitely to maintain the integrity of the assets and ensure the continued provision of service to customers. In the event that environmental issues are identified, assets are decommissioned or the applicable licences, permits or agreements are terminated, AROs will be recorded at that time provided the costs can be reasonably estimated.

The Corporation also has AROs associated with the removal of certain electricity distribution system assets from rights of way at the end of the life of the system. As it is expected that the system will be in service indefinitely, an estimate of the fair value of asset removal costs cannot be reasonably determined at this time.

The Corporation has determined that AROs may exist regarding the remediation of certain land. Certain leased land contains assets integral to operations and it is reasonably expected that the land-lease agreement will be renewed indefinitely; therefore, an estimate of fair value of remediation costs cannot be reasonably determined at this time. Certain other land may require environmental remediation but the amount and nature of the remediation is indeterminable at this time. AROs associated with land remediation will be recorded when the timing, nature and amount of costs can be reasonably estimated.

Capital Disclosures

Effective January 1, 2008, the Corporation adopted CICA Handbook Section 1535, *Capital Disclosures*, which requires the Corporation to disclose additional information about its capital and the manner in which it is managed. The additional disclosure includes quantitative and qualitative information regarding the Corporation's objectives, policies and processes for managing capital. The new disclosures are provided in Note 24.

Use of Accounting Estimates

The preparation of financial statements in accordance with Canadian GAAP requires management to make estimates and judgments that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the reporting periods. Estimates and judgments are based on historical experience, current conditions and various other assumptions believed to be reasonable under the circumstances. Additionally, certain estimates are necessary since the regulatory environments in which the Corporation's utilities operate often require amounts to be recorded at estimated values until these amounts are finalized pursuant to regulatory decisions or other regulatory proceedings. Due to changes in facts and circumstances and the inherent uncertainty involved in making estimates, actual results may differ significantly from current estimates. Estimates and judgments are reviewed periodically and, as adjustments become necessary, are reported in earnings in the period in which they become known.

3. Future Accounting Changes

International Financial Reporting Standards ("IFRS")

In February 2008, the Canadian Accounting Standards Board ("AcSB") confirmed that the use of IFRS will be required in 2011 for publicly accountable enterprises in Canada. In April 2008, the AcSB issued an Omnibus Exposure Draft proposing that publicly accountable enterprises be required to apply IFRS, in full and without modification, on January 1, 2011. The adoption date of January 1, 2011 will require the restatement, for comparative purposes, of amounts reported by the Corporation for its year ended December 31, 2010 and of the opening balance sheet as at January 1, 2010. The AcSB proposes that CICA Handbook Section – *Accounting Changes*, paragraph 1506.30, which would require an entity to disclose information relating to a new primary source of GAAP that has been issued but is not yet effective and that the entity has not applied, not be applied with respect to this Exposure Draft. Fortis is continuing to assess the financial reporting impacts of the adoption of IFRS and, at this time, the impact on future financial position and results of operations is not reasonably determinable or estimable. Fortis does anticipate a significant increase in disclosure resulting from the adoption of IFRS and is continuing to assess the level of disclosure required, as well as system changes that may be necessary to gather and process the information.

3. Future Accounting Changes (cont'd)

Rate-Regulated Operations

Effective January 1, 2009, the AcSB amended: (i) CICA Handbook Section 1100, *Generally Accepted Accounting Principles* removing the temporary exemption providing relief to entities subject to rate regulation from the requirement to apply the Section to the recognition and measurement of assets and liabilities arising from rate regulation; and (ii) Section 3465, *Income Taxes* to require the recognition of future income tax liabilities and assets as well as offsetting regulatory assets and liabilities by entities subject to rate regulation.

Effective January 1, 2009, the impact on Fortis of the amendment to Section 3465, *Income Taxes* will be the recognition of future income tax assets and liabilities and related regulatory liabilities and assets for the amount of future income taxes expected to be refunded to, or recovered from, customers in future gas and electricity rates. Currently, the Terasen Gas companies, FortisAlberta, FortisBC and Newfoundland Power use the cash taxes payable method of accounting for income taxes. The effect on the Corporation's consolidated financial statements, if it had adopted amended Section 3465, *Income Taxes* as at December 31, 2008, would have been an increase in future income tax assets and future income tax liabilities of $24 million and $497 million, respectively, and a corresponding increase in regulatory liabilities and regulatory assets of $24 million and $497 million, respectively. Included in the amounts are the future income tax effects of the subsequent settlement of the related regulatory assets and liabilities through customer rates and the separate disclosure of future income tax assets and liabilities that are currently not recognized.

Effective January 1, 2009, with the removal of the temporary exemption from Section 1100, the Corporation must now apply Section 1100 for the recognition of assets and liabilities arising from rate regulation. Certain assets and liabilities arising from rate regulation continue to have specific guidance under a primary source of Canadian GAAP that applies only to the particular circumstances described therein, including those arising under Section 1600, *Consolidated Financial Statements*, Section 3061, *Property, Plant and Equipment*, Section 3465, *Income Taxes*, and Section 3475, *Disposal of Long-Lived Assets and Discontinued Operations*. All assets and liabilities arising from rate regulation described in Note 4 do not have specific guidance under a primary source of Canadian GAAP. Therefore, Section 1100 directs the Corporation to adopt accounting policies that are developed through the exercise of professional judgment and the application of concepts described in Section 1000, *Financial Statement Concepts*. The Corporation's regulatory assets and liabilities qualify for recognition as assets and liabilities under Section 1000. Therefore, there would be no effect on the Corporation's consolidated financial statements if it had adopted the removal of the temporary exemption from Section 1100 for the year ended December 31, 2008. Fortis is continuing to assess any additional implications on its financial reporting related to accounting for rate-regulated operations.

Goodwill and Intangible Assets

Effective January 1, 2009, the Corporation will adopt the new CICA Handbook Section 3064, *Goodwill and Intangible Assets*. This Section, which replaces Section 3062, *Goodwill and Other Intangible Assets*, and Section 3450, *Research and Development Costs*, establishes standards for the recognition, measurement and disclosure of goodwill and intangible assets. The currently estimated effect on the Corporation's consolidated financial statements, if it had adopted amended Section 3064 as at December 31, 2008, would have been an increase in intangible assets of $234 million, a reduction in utility capital assets of $232 million and a reduction in deferred charges and other assets of $2 million for the reclassification of the net book value of land and transmission rights, computer software costs and franchise costs. The Corporation is continuing to assess and quantify any additional financial reporting impacts from adopting this standard.

Credit Risk and the Fair Value of Financial Assets and Financial Liabilities

Effective January 1, 2009, the Corporation will adopt the new Emerging Issues Committee ("EIC")-173, *Credit Risk and the Fair Value of Financial Assets and Financial Liabilities*, which was issued on January 20, 2009. EIC-173 requires that the Corporation's own credit risk and the credit risk of its counterparties be taken into account in determining the fair value of a financial instrument. As at December 31, 2008, only the Corporation's derivative financial instruments were recorded at fair value (Note 25), the majority of which were out-of-the-money and recorded as a liability. The Corporation is continuing to assess any additional financial reporting impacts of adopting this EIC.

4. Regulatory Assets and Liabilities

Regulatory assets and liabilities arise as a result of the rate-setting process at the Corporation's regulated utilities. Regulatory assets represent future revenues associated with certain costs incurred that will be or are expected to be recovered from customers in future periods through the rate-setting process. Regulatory liabilities represent future reductions or limitations of increases in revenues associated with amounts that will be or are expected to be refunded to customers through the rate-setting process.

All amounts deferred as regulatory assets and liabilities are subject to regulatory approval. As such, the regulatory authorities could alter the amounts subject to deferral, at which time the change would be reflected in the financial statements. Certain remaining recovery and settlement periods are those expected by management and the actual recovery or settlement periods could differ based on regulatory approval.

Based on previous, existing or expected future regulatory orders or decisions, the Corporation's regulated utilities have recorded the following amounts expected to be recovered from, or refunded to, customers in future periods.

Regulatory Assets

(in millions)	**2008**	2007	**Remaining recovery period (Years)**
Rate stabilization accounts – Terasen Gas companies *(i)*	**$ 76**	$ 99	1–3
Rate stabilization accounts – electric utilities *(ii)*	**78**	66	Various
AESO charges deferral *(iii)*	**64**	8	2
Regulatory OPEB plan asset *(iv)*	**51**	44	Indeterminable
Income taxes recoverable on OPEB plans *(v)*	**18**	16	Indeterminable
Deferred capital asset amortization *(vi)*	**8**	12	1–2
Residential unbundling *(vii)*	**7**	9	1–3
Deferred pension costs *(viii)*	**7**	8	7
Southern Crossing Pipeline tax reassessment *(ix)*	**7**	7	Indeterminable
Energy management costs *(x)*	**7**	6	1–8
Other regulatory assets *(xi)*	**37**	37	Indeterminable
Total regulatory assets	**360**	312	
Less: current portion	**(157)**	(119)	1
Long-term regulatory assets	**$ 203**	$ 193	

Regulatory Liabilities

(in millions)	**2008**	2007	**Remaining settlement period (Years)**
Future asset removal and site restoration provision *(xii)*	**$ 337**	$ 319	Indeterminable
Rate stabilization accounts – Terasen Gas companies *(i)*	**32**	–	1–3
Rate stabilization accounts – electric utilities *(ii)*	**9**	–	1
Unbilled revenue liability *(xiii)*	**15**	22	Indeterminable
PBR incentive liabilities *(xiv)*	**13**	14	1
Southern Crossing Pipeline deferral *(xv)*	**9**	5	1–5
Fair value of the foreign exchange forward contract *(xvi)*	**7**	–	Indeterminable
Pension deferral *(xvii)*	**4**	6	1–5
Other regulatory liabilities *(xviii)*	**20**	26	Indeterminable
Total regulatory liabilities	**446**	392	
Less: current portion	**(45)**	(20)	1
Long-term regulatory liabilities	**$ 401**	$ 372	

Description of the Nature of Regulatory Assets and Liabilities

(i) *Rate Stabilization Accounts – Terasen Gas Companies*

The rate stabilization accounts at the Terasen Gas companies are amortized and recovered through customer rates as approved by the BCUC. The rate stabilization accounts mitigate the effect on earnings of unpredictable and uncontrollable factors, namely volume volatility caused principally by weather and natural gas cost volatility.

4. Regulatory Assets and Liabilities (cont'd)

Description of the Nature of Regulatory Assets and Liabilities (cont'd)

At TGI, a Revenue Stabilization Adjustment Mechanism ("RSAM") accumulates the margin impact of variations in the actual-versus-forecast gas volumes consumed by residential and commercial customers. Additionally, a Commodity Cost Reconciliation Account ("CCRA") and a Midstream Cost Reconciliation Account ("MCRA") accumulate differences between actual natural gas costs and forecast natural gas costs as recovered in base rates. The CCRA also accumulates the changes in fair value of TGI's natural gas commodity swaps.

At TGVI, a Gas Cost Variance Account ("GCVA") is used to mitigate the effect on TGVI's earnings of natural gas cost volatility. The GCVA also accumulates the changes in the fair value of TGVI's natural gas commodity swaps. TGVI also maintains a Revenue Deficiency Deferral Account ("RDDA") to accumulate unrecovered costs of providing service to customers or to draw down such costs where earnings exceed the allowed ROE as set by the BCUC. During 2008 and 2007, the RDDA has decreased as achieved earnings have exceeded the allowed ROE.

The RSAM is anticipated to be refunded through rates over a three-year period, with a total balance outstanding as at December 31, 2008 of $8 million. The MCRA, CCRA and GCVA accounts are anticipated to be fully recovered, or refunded, within the next fiscal year. In the absence of rate regulation, the amounts in the rate stabilization accounts would not be deferred but would be recorded in earnings as incurred. The recovery or refund of amounts in the rate stabilization accounts is dependent on actual natural gas consumption volumes and on annually approved customer rates.

As at December 31, 2008, the balances in the RSAM and MCRA were in a payable position, as compared to a receivable position as at December 31, 2007.

(ii) Rate Stabilization Accounts – Electric Utilities

The rate stabilization accounts associated with the Corporation's regulated electric utilities (Newfoundland Power, Maritime Electric, Belize Electricity, Caribbean Utilities and Fortis Turks and Caicos) are recovered, or refunded, through customer rates as approved by the respective regulatory authorities. The rate stabilization accounts primarily mitigate the effect on earnings of the variability in the cost of fuel and/or purchased power above or below a forecast or predetermined level. Additionally, at Newfoundland Power the PUB has ordered the provision of a weather normalization account to adjust for the effect of variations in weather conditions when compared to long-term averages. This reduces Newfoundland Power's year-to-year earnings volatility that would otherwise result from such fluctuations in revenue and purchased power. The recovery period of the rate stabilization accounts, with the exception of Newfoundland Power's weather normalization account, whose recovery period is not determinable, ranges from one year to five years and is subject to periodic review by the respective regulators.

As at December 31, 2008, the balance in Belize Electricity's rate stabilization account was in a payable position, as compared to a receivable position as at December 31, 2007. During the second quarter of 2008, a downward $18 million adjustment was made to Belize Electricity's cost of power rate stabilization account reflecting, in substance, the disallowance of previously incurred fuel and purchased power costs as a result of the Final Decision by the PUC on Belize Electricity's 2008/2009 rate application.

The balance in Newfoundland Power's weather normalization account should approach zero over time because it is based on long-term averages for weather conditions. As ordered by the PUB, approximately $7 million of the weather normalization account is to be amortized equally over 2008 through 2012. In the absence of rate regulation, the fluctuations in revenue and purchased power would be recorded in earnings in the period in which they occurred. The recovery period of the remaining balance of the weather normalization account is not determinable as it depends on weather conditions in the future.

As at December 31, 2008, $12 million in pre-2004 costs deferred in the Energy Cost Adjustment Mechanism ("ECAM") account at Maritime Electric remained to be amortized. As approved by IRAC, the remaining amount is to be amortized and collected from customers at a rate of $2 million per year over a recovery period of six years. Annual deferral of energy costs to the ECAM account is recovered from, or refunded to, customers, as approved by IRAC, over a rolling eight-month period.

In the absence of rate regulation, the cost of fuel and/or purchased power would be expensed as incurred.

(iii) AESO Charges Deferral

FortisAlberta maintains an AESO charges deferral account that represents expenses incurred in excess of revenues collected for various items, such as transmission costs incurred and billed through to customers, that are subject to deferral to be collected in future customer rates. As at December 31, 2008, the balance of the AESO charges deferral account, comprised of the 2008 AESO charges deferral balance of $57 million and the unsold portion of the 2007 AESO charges deferral balance, is expected to be collected in customer rates in 2010 and 2009, respectively. In the absence of rate regulation, the costs would be expensed as incurred and no deferral treatment would be permitted.

During 2007, FortisAlberta sold approximately $28 million and $38 million of the 2006 and 2007 AESO charges deferral accounts, respectively, to a Canadian chartered bank for proceeds of approximately $28 million and $38 million, respectively. Proceeds included cash consideration of $64 million and receivables of approximately $2 million due in February 2009 and 2010.

(iv) *Regulatory OPEB Plan Asset*
At FortisAlberta and Newfoundland Power, and prior to 2005 at FortisBC, the cash cost of providing OPEB plans is being collected in customer rates as permitted by the respective regulators. Effective 2005, as permitted by the BCUC, the recovery from customers of the cost of OPEB plans at FortisBC is based on cash costs plus a partial recovery of the full accrual cost of OPEB plans. The regulatory OPEB asset represents the deferred portion of the benefit expense at FortisAlberta, FortisBC and Newfoundland Power that is expected to be recovered from customers in future rates. In the absence of rate regulation, the benefit expense would be recognized on an accrual basis as actuarially determined with no deferral of costs recorded on the balance sheet. FortisAlberta's and FortisBC's regulatory OPEB assets are not subject to a regulatory return.

(v) *Income Taxes Recoverable on OPEB Plans*
At TGI, the regulator allows OPEB plan costs to be collected in customer gas rates on an accrual basis, rather than on a cash basis, which creates timing differences for income tax purposes. Since TGI accounts for income taxes using the cash taxes payable method, the tax effect of this timing difference is deferred as a regulatory asset and will be reduced as cash payments for OPEB plans exceed required accruals and amounts collected in customer gas rates. In the absence of rate regulation, the income tax would not be deferred.

(vi) *Deferred Capital Asset Amortization*
Newfoundland Power deferred the recovery of a $6 million increase in capital asset amortization in each of 2006 and 2007, in accordance with a PUB order. The approximate $12 million balance at December 31, 2007 is being amortized as an increase in amortization costs and included in customer rates equally over 2008 through 2010. In the absence of rate regulation, the deferral of the capital asset amortization would not have been recorded.

(vii) *Residential Unbundling*
Residential unbundling costs are related to costs incurred by TGI to develop a third-party marketer alternative for residential customers to purchase natural gas from suppliers other than TGI. The BCUC approved the deferral of these costs and the recovery of these costs over a three-year period. In the absence of rate regulation, these costs would have been expensed in the period incurred.

(viii) *Deferred Pension Costs*
Deferred pension costs are incremental pension costs arising from Newfoundland Power's 2005 Early Retirement Program that were deferred and are being amortized over a ten-year period that began on April 1, 2005, as ordered by the PUB. In the absence of rate regulation, these costs would have been expensed in 2005.

(ix) *Southern Crossing Pipeline Tax Reassessment*
The Southern Crossing Pipeline tax-reassessment deferral relates to an assessment of additional British Columbia Social Services Tax, for which TGI has filed an appeal. In 2006, the Company made a payment of $10 million pending resolution of the appeal as a good faith payment. During 2007, the assessment was reduced to $7 million and the overpayment was refunded to TGI. Depending on the success of the appeal, TGI will either be refunded the balance or, alternatively, expects to recover the costs from customers in future rates. In the absence of rate regulation, the payment would continue to be recorded as a receivable pending resolution of the appeal. Any final assessed tax, upon resolution of the appeal, would be expensed in the period in which it becomes known (Note 28).

(x) *Energy Management Costs*
FortisBC provides energy management services to promote energy efficiency programs to its customers. As required by a BCUC order, the Company has capitalized related expenditures and is amortizing these expenditures on a straight-line basis over eight years. This regulatory asset represents the unamortized balance of the energy management costs. In the absence of rate regulation, the costs of the energy management services would have been expensed in the period incurred.

(xi) *Other Regulatory Assets*
Other regulatory assets primarily relate to the Terasen Gas companies, FortisAlberta, FortisBC, Newfoundland Power, FortisOntario, Maritime Electric and Caribbean Utilities. The balance is comprised of various items each individually less than $5 million. As at December 31, 2008, $32 million of the balance was approved for recovery from customers in future rates, with the remaining balance expected to be approved. As at December 31, 2008, $7 million (December 31, 2007 – $9 million) of the balance was not subject to a regulatory return. In the absence of rate regulation, the deferrals would not be permitted.

4. *Regulatory Assets and Liabilities (cont'd)*

Description of the Nature of Regulatory Assets and Liabilities (cont'd)

(xii) Future Asset Removal and Site Restoration Provision

As required by the respective regulators, this regulatory liability represents amounts collected in customer electricity rates over the life of certain utility capital assets at FortisAlberta, FortisBC, Newfoundland Power and Maritime Electric attributable to asset removal and site restoration costs that are expected to be incurred in the future. As required by the respective regulators, amortization rates at FortisAlberta, FortisBC, Newfoundland Power and Maritime Electric include an amount allowed for regulatory purposes to provide for these future asset removal and site restoration costs, net of salvage proceeds. Actual asset removal and site restoration costs, net of salvage proceeds, are recorded against the regulatory liability when incurred.

The regulatory liability represents the amount of expected future asset removal and site restoration costs associated with utility capital assets in service as at the balance sheet date, calculated using current amortization rates as approved by the respective regulators. Any difference between actual costs incurred and those assumed in the collected amounts, and any cumulative adjustments resulting from changes to the regulator-approved amortization rates at which these costs are collected, are reflected in the regulatory liability with the offset recorded as an adjustment to accumulated amortization.

During 2008, the amount included in amortization expense associated with the provision for future asset removal and site restoration costs was $35 million (2007 – $33 million). During 2008, actual asset removal and site restoration costs, net of salvage proceeds, were $21 million (2007 – $19 million). In the absence of rate regulation, asset removal and site restoration costs, net of salvage proceeds, would have been recognized in earnings as incurred rather than provided for over the life of the assets through amortization expense.

(xiii) Unbilled Revenue Liability

Belize Electricity and, prior to 2006, Newfoundland Power record revenue derived from electricity sales on a billed basis (Note 2). The difference between revenue recognized on a billed basis and revenue recognized on an accrual basis is recorded on the balance sheet as a regulatory liability. Effective January 1, 2006, Newfoundland Power prospectively changed its revenue recognition policy to an accrual basis, as approved by the PUB. As a result, the $24 million cumulative difference between billed revenue as of December 31, 2005 and revenue that would have been recognized on the accrual basis was recorded as a regulatory liability. As ordered by the PUB, Newfoundland Power amortized $7 million of this regulatory liability in 2008 (2007 – $3 million). The remaining balance as at December 31, 2008 will be amortized by approximately $5 million in each of 2009 and 2010. In the absence of rate regulation, revenue would be recorded on an accrual basis and the deferral of unbilled revenue would not have been permitted. Belize Electricity's unbilled revenue liability of $6 million as at December 31, 2008 (December 31, 2007 – $5 million) is not subject to a regulatory return.

(xiv) PBR Incentive Liabilities

TGI and FortisBC's regulatory frameworks include PBR mechanisms that allow for the recovery from, or refund to, customers of a portion of certain increased or decreased costs, as compared to the forecast costs used to set customer rates. The final disposition of amounts deferred as regulatory PBR incentive assets and liabilities is determined by the sharing mechanisms with customers as approved per BCUC orders (Note 2). TGI's regulatory PBR incentive liability of $11 million is expected to be refunded to customers through reduced rates in 2009. Based on the current PBR framework, FortisBC's 2008 regulatory PBR incentive liability of $2 million has been approved by the BCUC for settlement in 2009 through a reduction in 2009 electricity revenue. In the absence of rate regulation, the regulatory PBR incentive amounts would not be recorded.

(xv) Southern Crossing Pipeline Deferral

This regulatory liability represents the difference between actual revenue received from third parties for the use of the Southern Crossing Pipeline and what has been approved in revenue requirements. The balance is amortized over five years. In the absence of rate regulation, the revenue would be recognized when services are rendered.

(xvi) Fair Value of the Foreign Exchange Forward Contract

This regulatory liability captures the change in the fair value of the foreign exchange forward contract, which hedges the US dollar payments required under the LNG construction contract. In the absence of rate regulation, the change in fair value of the foreign exchange forward contract would be recorded in earnings. This regulatory deferral is not subject to a regulatory return.

(xvii) Pension Deferral

This regulatory liability represents pension surplus at FortisAlberta that has not been reflected in customer rates and will result in a reduction in future customer rates when recognized. When future customer rates are reduced, this liability will be drawn down and reflected as a reduction of pension expense. In the absence of rate regulation, the pension deferral would not be permitted and the amortization of the liability would not have occurred. This regulatory pension deferral is not subject to a regulatory return.

(xviii) *Other Regulatory Liabilities*

Other regulatory liabilities primarily relate to the Terasen Gas companies, FortisAlberta, Newfoundland Power and FortisOntario. The balance is comprised of various items each individually less than $5 million. As at December 31, 2008, $17 million of the balance was approved for refund to customers or reduction in future rates, with the remaining balance expected to be approved. As at December 31, 2008, $2 million (December 31, 2007 – $7 million) of the balance was not subject to a regulatory return. In the absence of rate regulation, the deferrals would not be permitted.

Financial Statement Effect of Rate Regulation

In the absence of rate regulation and, therefore, in the absence of recording regulatory assets and liabilities as described above, the total impact on the consolidated financial statements would have been as follows:

(in millions)	**2008**	2007
Decrease in regulatory assets	**$ (349)**	$ (303)
Decrease in regulatory liabilities	**(446)**	(392)
Decrease in accumulated other comprehensive loss	**(18)**	(48)
Decrease in opening retained earnings	**(61)**	(60)
Increase in revenue	**$ 582**	$ 343
Increase in energy supply costs	**540**	340
Increase in operating expense	**79**	62
Decrease in amortization expense	**(39)**	(28)
Increase in finance charges	**–**	3
Decrease in corporate taxes	**(16)**	(15)
Net increase (decrease) in earnings	**$ 18**	$ (19)

5. Inventories

(in millions)	**2008**	2007
Gas in storage	**$ 212**	$ 195
Materials and supplies	**17**	12
	$ 229	$ 207

During 2008, inventories of $1,268 million (2007 – $559 million) were expensed and reported in energy supply costs in the consolidated statement of earnings. Inventories expensed to operating expenses were $14 million for 2008 (2007 – $13 million), which included $9 million for food and beverage costs at Fortis Properties (2007 – $8 million).

Effective January 1, 2008, the Corporation adopted CICA Handbook Section 3031, *Inventories* and inventories of $26 million were reclassified to utility capital assets from inventories on the balance sheet, as they were held for the development, construction and maintenance of other utility capital assets (January 1, 2007 – $18 million).

6. Deferred Charges and Other Assets

(in millions)	**2008**	2007
Deferred pension costs *(Note 20)*	**$ 128**	$ 114
Exploits Partnership hydroelectric generating facility capital assets *(Note 28)*	**61**	–
AESO contributions	**48**	19
Long-term accounts receivable (due 2040)	**9**	7
Deferred recoverable and project costs	**8**	7
Energy management loans	**6**	6
Corporate income tax deposit at Maritime Electric *(Note 28)*	**6**	6
Other deferred charges and assets	**13**	20
	$ 279	$ 179

6. Deferred Charges and Other Assets (cont'd)

As at December 31, 2008, the Exploits Partnership hydroelectric generating facility capital assets and deferred financing costs were reclassified to deferred charges and other assets from utility capital assets and long-term debt, respectively, as further discussed in Note 28.

AESO contributions represent payments to AESO by FortisAlberta for investment in transmission facilities that are needed for reliability or contingency planning in accordance with AESO Terms and Conditions of Service. These assets are recovered in customer rates through an AUC-approved amortization rate of approximately 3.8 per cent.

Deferred recoverable costs are amortized over the estimated remaining useful lives of the projects. Project costs are deferred until a capital project has been identified, at which time the costs are transferred to utility capital assets or income producing properties.

Energy management loans are loans to residential and general service customers for energy efficiency initiatives and related products, are interest bearing and range in terms from one year to ten years.

Other deferred charges and assets are recorded at cost and are recovered or amortized over the estimated period of future benefit.

7. Utility Capital Assets

2008 *(in millions)*	**Cost**	**Accumulated Amortization**	**Contributions in Aid of Construction (Net)**	**Regulatory Tax Basis Adjustment (Net)**	**Net Book Value**
Distribution					
Gas	**$ 2,426**	**$ (495)**	**$ (180)**	**$ –**	**$ 1,751**
Electricity	**3,948**	**(1,042)**	**(490)**	**(87)**	**2,329**
Transmission					
Gas	**1,304**	**(316)**	**(100)**	**–**	**888**
Electricity	**970**	**(252)**	**(2)**	**–**	**716**
Generation	**971**	**(280)**	**(1)**	**–**	**690**
Assets under construction	**317**	**–**	**(11)**	**–**	**306**
Other	**1,090**	**(390)**	**(13)**	**–**	**687**
	$ 11,026	**$ (2,775)**	**$ (797)**	**$ (87)**	**$ 7,367**

2007 *(in millions)*	Cost	Accumulated Amortization	Contributions in Aid of Construction (Net)	Regulatory Tax Basis Adjustment (Net)	Net Book Value
Distribution					
Gas	$ 2,233	$ (364)	$ (174)	$ –	$ 1,695
Electricity	3,542	(961)	(463)	(91)	2,027
Transmission					
Gas	1,277	(286)	(102)	–	889
Electricity	873	(224)	–	–	649
Generation	914	(240)	–	–	674
Assets under construction	195	–	–	–	195
Other	970	(337)	(14)	–	619
	$ 10,004	$ (2,412)	$ (753)	$ (91)	$ 6,748

Gas distribution assets are those used to transport natural gas at low pressures (generally below 2,070 kPa). These assets include distribution stations, telemetry, distribution pipe for mains and services, meter sets and other related equipment. Electricity distribution assets are those used to distribute electricity at lower voltages (generally below 69 kV). These assets include poles, towers and fixtures, low-voltage wires, transformers, overhead and underground conductors, street lighting, meters, metering equipment and other related equipment.

Gas transmission assets are those used to transport natural gas at higher pressures (generally at 2,070 kPa and higher). These assets include transmission stations, telemetry, transmission pipe and other related equipment. Electricity transmission assets are those used to transmit electricity at higher voltages (generally at 69 kV and higher). These assets include poles, wires and conductors, substations, support structures and other related equipment.

Generation assets are those used to generate electricity. These assets include hydroelectric and thermal generation stations, gas and combustion turbines, dams, reservoirs and other related equipment.

Other assets include buildings, equipment, vehicles, inventory and information technology assets.

The cost of utility capital assets under capital lease as at December 31, 2008 was $56 million (December 31, 2007 – $51 million) and related accumulated amortization was $24 million (December 31, 2007 – $19 million).

8. Income Producing Properties

2008

(in millions)	**Cost**	**Accumulated Amortization**	**Net Book Value**
Buildings	**$ 485**	**$ (51)**	**$ 434**
Land	**61**	**–**	**61**
Tenant inducements	**24**	**(14)**	**10**

2007

(in millions)	Cost	Accumulated Amortization	Net Book Value
Buildings	$ 469	$ (42)	$ 427
Land	54	–	54
Tenant inducements	22	(13)	9
Equipment	46	(18)	28
Construction in progress	1	–	1
	$ 592	$ (73)	$ 519

The cost of income producing property assets under capital lease as at December 31, 2008 was $1 million (December 31, 2007 – $6 million) and related accumulated amortization was $0.1 million (December 31, 2007 – $4 million).

9. Goodwill

(in millions)	**2008**	2007
Balance, beginning of year	**$ 1,544**	$ 661
Acquisition of Terasen *(Note 21)*	**(4)**	907
Reversal of restructuring accrual	**–**	(2)
Step-acquisition of Caribbean Utilities	**6**	–
Foreign currency translation impacts	**29**	(22)
Balance, end of year	**$ 1,575**	$ 1,544

During 2008, the Terasen Gas companies recognized the benefit of tax losses, which related to periods prior to the Corporation's ownership of Terasen resulting in a reduction in goodwill.

Goodwill associated with the acquisitions of Caribbean Utilities and Fortis Turks and Caicos is denominated in US dollars as the reporting currency of these companies is the US dollar. Foreign currency translation impacts are the result of the translation of US dollar-denominated goodwill and the impact of the movement of the Canadian dollar relative to the US dollar.

Less: Deferred financing costs		**(34)**	(33)
Less: Current installments of long-term debt and capital lease obligations		**(240)**	(436)
		$ 4,884	$ 4,623

Certain of the long-term debt instruments held by the Corporation and its subsidiaries are secured as identified in the table above. When security is provided, it is typically a fixed or floating charge on the specific assets of the company to which the long-term debt is associated.

The purchase money mortgages of the Terasen Gas companies are secured equally and rateably by a first fixed and specific mortgage and charge on TGI's coastal division assets. The aggregate principal amount of the purchase money mortgages that may be used is limited to $425 million.

Repayment of Long-Term Debt and Capital Lease Obligations

The consolidated annual requirements to meet principal repayments and maturities in each of the next five years and thereafter are as follows:

Year	$ millions
2009	240
2010	219
2011	104
2012	254
2013	85
Thereafter	4,256

Regulated Utilities

FortisBC has a capital lease obligation with respect to the operation of the Brilliant Terminal Station. Future minimum lease payments associated with this capital lease obligation are approximately $3 million per year over the remaining term of the lease agreement to 2032. The capital lease obligation bears interest at a composite rate of 8.62 per cent.

Belize Electricity's unsecured debentures can be called by the Company at any time after certain dates until maturity by giving holders not more than 60 days' nor less than 30 days' written notice, and are repayable at the option of the holders at any time on or after certain dates by giving 12 months' written notice to Belize Electricity. Redemption by agreement between Belize Electricity and the debenture holders at any time is also allowed.

10. Long-Term Debt and Capital Lease Obligations (cont'd)

Corporate – Fortis and Terasen

Of the unsecured debentures, $100 million are redeemable at the option of Fortis at a price calculated as the greater of the principal amount to be redeemed and an amount equal to the net present value of interest and principal based on the Government of Canada Yield, plus a premium ranging from 0.43% to 0.87%, together with accrued and unpaid interest.

The unsecured subordinated convertible debentures, due 2016, are redeemable by Fortis at par at any time on or after November 7, 2011 and are convertible, at the option of the holder, into the Corporation's common shares at $35.46 per share (US$29.11 per share). The debentures are subordinated to all other indebtedness of the Corporation, other than subordinated indebtedness ranking equally to the debentures.

The unsecured subordinated convertible debentures are being accounted for in accordance with their substance and are presented in the financial statements in their component parts. The liability and equity components are classified separately on the consolidated balance sheet and are measured at their respective fair values at the time of issue. The equity portion of convertible debentures was $6 million as at December 31, 2008 (December 31, 2007 – $6 million).

Terasen may elect to defer payment on the 8.00% capital securities and settle such deferred payments in either cash or common shares of the Company and has the option to settle principal at maturity through the issuance of common shares of the Company. The securities are also exchangeable at the option of the holder on or after April 19, 2010 for common shares of the Company at 90 per cent of the market price, subject to the right of the Company to redeem the securities for cash at par as of the same date.

11. Deferred Credits

(in millions)	**2008**	2007
OPEB plan liabilities *(Note 20)*	**$ 129**	$ 112
Defined benefit liabilities *(Note 20)*	**34**	32
Deferred gains on the sale of natural gas transmission and distribution assets	**46**	50
Deferred payment	**43**	40
Other deferred credits	**25**	27
	$ 277	$ 261

The deferred gains on the sale of natural gas transmission and distribution assets occurred upon the sale and leaseback of pipeline assets to certain municipalities in 2001, 2002, 2004 and 2005. The pre-tax gains of $71 million on combined cash proceeds of $141 million are being amortized over the 17-year terms of the operating leases that commenced at the time of the sale transactions. These operating lease commitments are included in the table in Note 27.

The deferred payment resulted from Terasen's acquisition of TGVI, effective January 1, 2002. The deferred payment has a face value of $52 million but was discounted at May 17, 2007 to its present value. At December 31, 2008, its present value was $43 million (December 31, 2007 – $40 million). The payment is due on December 31, 2011 or sooner if TGVI realizes revenue from transportation revenue contracts to serve power-generating plants that may be constructed in TGVI's service area. If any part of the deferred payment is paid prior to December 31, 2011, the difference between the payment and the carrying value of the debt will be treated as contingent consideration for the acquisition of TGVI and will be added to the cost of the purchase at that time.

Other deferred credits primarily include customer deposits, DSU and PSU liabilities and unfunded defined contribution pension liabilities.

Total classified as equity		**14,200,000**	**$ 347**	5,000,000	$ 122

First Preference Shares Classified as Debt

As the First Preference Shares, Series C and Series E are convertible at the option of the shareholder into a variable number of common shares of the Corporation based on a market-related price of such common shares, they meet the definition of financial liabilities and, therefore, are classified as long-term liabilities with associated dividends classified as finance charges.

The First Preference Shares, Series C and Series E are entitled to receive fixed cumulative preferential cash dividends at rates of $1.3625 and $1.2250 per share per annum, respectively.

On or after June 1, 2010 and 2013, the Corporation has the option to redeem for cash the outstanding First Preference Shares, Series C and Series E, respectively, in whole at any time or in part from time to time, at prices ranging from $25.75 to $25.00 per share plus all accrued and unpaid dividends up to but excluding the date fixed for redemption.

On or after June 1, 2010 and 2013, the Corporation has the option to convert all, or from time to time any part, of the outstanding First Preference Shares, Series C and Series E, respectively, into fully paid and freely tradable common shares of the Corporation. The number of common shares into which each preference share may be so converted will be determined by dividing the then-applicable redemption price per first preference share, together with all accrued and unpaid dividends, by the greater of $1.00 and 95 per cent of the then-current market price of the common shares at such time.

On or after September 1, 2013 and 2016, each First Preference Share, Series C and Series E, respectively, will be convertible at the option of the holder on the first day of September, December, March and June of each year into fully paid and freely tradable common shares of the Corporation determined by dividing $25.00, together with all accrued and unpaid dividends, by the greater of $1.00 and 95 per cent of the then-current market price of the common shares. If a holder of First Preference Shares, Series C and Series E elects to convert any of such shares into common shares, the Corporation can redeem such first preference shares for cash or arrange for the sale of those shares to other purchasers.

First Preference Shares Classified as Equity

In May 2008, the Corporation issued 8 million 5.25% Cumulative Redeemable Five-Year Fixed-Rate Reset First Preference Shares, Series G ("First Preference Shares, Series G") and in June 2008 issued an additional 1.2 million First Preference Shares, Series G, following the exercise in full of an over-allotment option in connection with the offering of the 8 million First Preference Shares, Series G. The 9.2 million First Preference Shares, Series G were issued at $25.00 per share for net after-tax proceeds of $225 million.

As the First Preference Shares, Series F and Series G are not redeemable at the option of the shareholder, they are classified as equity and the associated dividends are deducted on the consolidated statement of earnings immediately before arriving at net earnings applicable to common shares.

The First Preference Shares, Series F are entitled to receive fixed cumulative preferential cash dividends in the amount of $1.2250 per share per annum. The First Preference Shares, Series G are entitled to receive fixed cumulative preferential cash dividends in the amount of $1.3125 per share per annum for each year up to and including August 31, 2013. For each five-year period after this date, the holders of First Preference Shares, Series G are entitled to receive reset fixed cumulative preferential cash dividends. The reset annual dividends per share will be determined by multiplying the $25.00 per share by the annual fixed dividend rate, which is the sum of the five-year Government of Canada Bond Yield on the applicable reset date plus 2.13%.

13. Preference Shares (cont'd)

First Preference Shares Classified as Equity (cont'd)

On or after December 1, 2011, the Corporation has the option to redeem for cash the outstanding First Preference Shares, Series F, in whole at any time or in part from time to time, at prices ranging from $26.00 to $25.00 per share plus all accrued and unpaid dividends. On September 1, 2013, and on September 1 every five years thereafter, the Corporation has the option to redeem for cash the outstanding First Preference Shares, Series G, in whole at any time or in part from time to time, at a price of $25.00 per share plus all accrued and unpaid dividends up to but excluding the date fixed for redemption.

14. Common Shares

Authorized: an unlimited number of common shares without nominal or par value.

Issued and Outstanding	**2008**		2007	
	Number of Shares	**Amount *(in millions)***	Number of Shares	Amount *(in millions)*
Common shares	**169,190,917**	**$ 2,449**	155,521,313	$ 2,126

Common shares issued during the year were as follows:

	2008		2007	
	Number of Shares	**Amount *(in millions)***	Number of Shares	Amount *(in millions)*
Balance, Beginning of Year	**155,521,313**	**$ 2,126**	104,091,542	$ 829

Consumer Share Purchase Plan	**88,686**	**2**	79,463	3
Dividend Reinvestment Plan	**230,601**	**6**	203,763	5
Employee Share Purchase Plan	**272,095**	**7**	240,578	6
Stock Option Plans	**336,351**	**6**	578,341	9
Balance, End of Year	**169,190,917**	**$ 2,449**	155,521,313	$ 2,126

In December 2008, Fortis issued 11.7 million common shares for $25.65 per common share. The common share issue resulted in gross proceeds of approximately $300 million, or approximately $291 million net of after-tax expenses.

During 2008, holders of the Corporation's former 6.75% and 5.50% unsecured subordinated convertible debentures converted approximately US$11 million of the debentures into approximately 1.0 million common shares of the Corporation.

In January 2007, Fortis issued 5.17 million common shares for $29.00 per common share. The common share issue resulted in gross proceeds of approximately $150 million, or approximately $146 million net of after-tax expenses.

In March 2007, to finance a significant portion of the net cash purchase price of Terasen, the Corporation sold approximately 44.3 million Subscription Receipts at $26.00 each for gross proceeds of approximately $1.15 billion. Upon closing of the acquisition of Terasen on May 17, 2007, each Subscription Receipt was exchanged, without payment of additional consideration, for one common share of Fortis. Each Subscription Receipt holder also received a cash payment of $0.21 per Subscription Receipt, which was an amount equal to the dividend declared per common share of Fortis to holders of record as of May 4, 2007. The net proceeds to the Corporation upon conversion of the Subscription Receipts were approximately $1.12 billion net of after-tax expenses.

During 2007, holders of the Corporation's former 6.75% and 5.50% unsecured subordinated convertible debentures converted approximately US$9 million of the US$20 million debentures into approximately 0.9 million common shares of the Corporation.

As at December 31, 2008, 9.8 million (December 31, 2007 – 6.2 million) common shares remained reserved for issuance under the terms of the above-noted share purchase, dividend reinvestment and stock option plans. During 2008, an additional 5 million common shares were reserved under the dividend reinvestment plan in accordance with an enhancement made to the plan. The Corporation amended and restated its dividend reinvestment plan to provide a 2 per cent discount on the purchase of common shares issued from treasury, with reinvested dividends, effective March 1, 2009.

As at December 31, 2008, common shares reserved for issuance under the terms of the Corporation's convertible debentures and preference shares were 1.4 million and 26 million, respectively (December 31, 2007 – 2.4 million and 26 million, respectively).

As at December 31, 2008, $3 million (December 31, 2007 – $3 million) of common share equity had not been fully paid relating to amounts outstanding under employee share purchase and executive stock option loans.

Earnings per Common Share

The Corporation calculates earnings per common share on the weighted average number of common shares outstanding. The weighted average number of common shares outstanding was 157.4 million for 2008 and 137.6 million for 2007.

Diluted earnings per common share are calculated using the treasury stock method for options and the "if-converted" method for convertible securities.

Earnings per common share are as follows:

	2008			2007		
	Earnings *(in millions)*	**Weighted Average Shares** *(in millions)*	**Earnings per Common Share**	Earnings *(in millions)*	Weighted Average Shares *(in millions)*	Earnings per Common Share
Basic Earnings per Common Share	**$ 245**	**157.4**	**$ 1.56**	$ 193	137.6	$ 1.40
Effect of Potential Dilutive Securities:						
Subscription Receipts[1]	**–**	**–**		–	7.8	
Stock Options	**–**	**1.0**		–	1.2	
Preference Shares *(Notes 13 and 17)*	**17**	**13.9**		17	11.5	
Convertible Debentures	**2**	**1.4**		3	2.8	
	264	**173.7**		213	160.9	
Deduct Anti-Dilutive Impacts:						
Convertible Debentures	**–**	**–**		(2)	(1.4)	
Diluted Earnings per Common Share	**$ 264**	**173.7**	**$ 1.52**	$ 211	159.5	$ 1.32

[1] Dilution relates to the period the Subscription Receipts were outstanding from March 15, 2007 to May 16, 2007, prior to their conversion into common shares.

15. Stock-Based Compensation Plans

Stock Options

The Corporation is authorized to grant officers and certain key employees of Fortis and its subsidiaries options to purchase common shares of the Corporation. As at December 31, 2008, the Corporation had the following stock option plans: 2006 Plan, 2002 Plan and Executive Stock Option Plan. The 2002 Plan was adopted at the Annual and Special General Meeting on May 15, 2002 to ultimately replace the Executive and the former Directors' Stock Option Plans. The Executive Stock Option Plan will cease to exist when all outstanding options are exercised or expire in or before 2011. The 2006 Plan was approved at the May 2, 2006 Annual Meeting at which Special Business was conducted. The 2006 Plan will ultimately replace the 2002 Plan. The 2002 Plan will cease to exist when all outstanding options are exercised or expire in or before 2016. The Corporation has ceased to grant options under the Executive Stock Option Plan and 2002 Plan and all new options are being granted under the 2006 Plan.

Options granted under the 2006 Plan have a maximum term of seven years and expire no later than three years after the termination, death or retirement of the optionee and vest evenly over a four-year period on each anniversary of the date of grant. Directors are not eligible to receive grants of options under the 2006 Plan.

Number of Options:	**2008**	2007
Options outstanding, beginning of year	**3,691,771**	3,550,055
Granted	**827,504**	754,800
Cancelled	**(42,462)**	(34,743)
Exercised	**(336,351)**	(578,341)
Options outstanding, end of year	**4,140,462**	3,691,771
Options vested, end of year	**2,279,240**	1,901,811

15. Stock-Based Compensation Plans (cont'd)

Weighted Average Exercise Prices:	2008	2007
Options outstanding, beginning of year	**$ 18.86**	$ 16.11
Granted	**28.27**	27.75
Cancelled	**24.20**	22.43
Exercised	**14.48**	13.35
Options outstanding, end of year	**21.04**	18.86

Details of stock options outstanding and vested as at December 31, 2008 are as follows:

Number of Options Outstanding	Number of Options Vested	Exercise Price	Expiry Date
97,842	97,842	$ 9.57	2011
166,473	166,473	$ 12.03	2012
472,393	472,393	$ 12.81	2013
572,528	572,528	$ 15.28	2014
10,000	10,000	$ 15.23	2014
32,793	32,793	$ 14.55	2014
637,902	457,808	$ 18.40	2015
28,000	21,000	$ 18.11	2015
17,500	9,065	$ 20.82	2015
556,615	256,072	$ 22.94	2016
596,232	149,058	$ 28.19	2014
136,832	34,208	$ 25.76	2014
815,352	–	$ 28.27	2015
4,140,462	2,279,240		

The weighted average exercise price of stock options vested as at December 31, 2008 was $16.81.

In February 2008, the Corporation granted 827,504 options to purchase common shares under its 2006 Plan at the five-day volume weighted average trading price of $28.27 immediately preceding the date of grant. The fair value of each option granted was $4.76 per option.

The fair value was estimated on the date of grant using the Black-Scholes fair value option-pricing model and the following assumptions:

Dividend yield *(%)*	2.90
Expected volatility *(%)*	20.7
Risk-free interest rate *(%)*	3.92
Weighted average expected life *(years)*	4.5

The Corporation records compensation expense upon the issuance of stock options granted under its 2002 and 2006 Plans. Using the fair value method, the compensation expense is amortized over the four-year vesting period of the options granted. Under the fair value method, compensation expense associated with stock options was $3 million for the year ended December 31, 2008 (2007 – $2 million).

Directors' DSU Plan

In 2004, the Corporation introduced the Directors' DSU Plan as an optional vehicle for directors to elect to receive credit for their annual retainer to a notional account of DSUs in lieu of cash. Each DSU represents a unit with an underlying value equivalent to the value of one common share of the Corporation. The Corporation may also determine from time to time that special circumstances exist that would reasonably justify the grant of DSUs to a director as compensation in addition to any regular retainer or fee to which the director is entitled. Effective 2006, directors who are not officers of the Corporation are eligible for grants of DSUs representing the equity portion of directors' annual compensation.

Number of DSUs:	2008	2007
DSUs outstanding, beginning of year	**69,722**	46,959
Granted	**27,224**	20,859
Granted – notional dividends reinvested	**3,671**	1,904
DSUs outstanding, end of year	**100,617**	69,722

For the year ended December 31, 2008, expense of $0.2 million (2007 – $0.8 million) was recorded in relation to the DSU Plan.

PSU Plan

In 2004, the Corporation introduced the PSU Plan, which is included as a component of the long-term incentives awarded only to the President and Chief Executive Officer ("CEO") of the Corporation. Each PSU represents a unit with an underlying value equivalent to the value of one common share of the Corporation.

Number of PSUs:	2008	2007
PSUs outstanding, beginning of year	**67,615**	66,845
Granted	**32,940**	19,570
Granted – notional dividends reinvested	**3,011**	1,883
PSUs paid out	**(18,019)**	(20,683)
PSUs outstanding, end of year	**85,547**	67,615

In March 2008, 18,019 PSUs were paid out to the President and CEO of the Corporation at $28.36 per PSU for a total of approximately $0.5 million. The payout was made upon the three-year maturation period in respect of the PSU grant made in March 2005, and the President and CEO satisfying the payment requirements as determined by the Human Resources Committee of the Board of Directors of Fortis.

For the year ended December 31, 2008, expense of $0.6 million (2007 – $0.6 million) was recorded in relation to the PSU Plan.

16. Accumulated Other Comprehensive Loss

Accumulated other comprehensive loss includes unrealized foreign currency translation gains and losses, net of hedging activities, gains and losses on cash flow hedging activities and gains and losses on discontinued cash flow hedging activities, as discussed in Note 2.

	2008		
(in millions)	Opening balance January 1	Net change	**Ending balance December 31**
Unrealized foreign currency translation (losses) gains, net of hedging activities and tax	**$ (82)**	**$ 36**	**$ (46)**
Losses on derivative instruments designated as cash flow hedges, net of tax	**(1)**	**–**	**(1)**
Net losses on derivative instruments previously discontinued as cash flow hedges, net of tax	**(5)**	**–**	**(5)**
Accumulated other comprehensive loss	**$ (88)**	**$ 36**	**$ (52)**

	2007			
(in millions)	Opening balance January 1	Transition amount January 1	Net change	Ending balance December 31
Unrealized foreign currency translation losses, net of hedging activities and tax	$ (51)	$ –	$ (31)	$ (82)
Losses on derivative instruments designated as cash flow hedges, net of tax	–	(1)	–	(1)
Net losses on derivative instruments previously discontinued as cash flow hedges, net of tax	–	(5)	–	(5)
Accumulated other comprehensive loss	$ (51)	$ (6)	$ (31)	$ (88)

16. Accumulated Other Comprehensive Loss (cont'd)

During 2008, unrealized foreign currency translation gains of $115 million (2007 – losses of $70 million) were recorded in accumulated other comprehensive loss related to the Corporation's net investment in foreign currency-denominated self-sustaining foreign operations. These unrealized foreign currency translation gains were partially offset by the effective portion of unrealized after-tax losses of $79 million (2007 – after-tax gains of $39 million) related to the translation of corporately held US dollar-denominated long-term debt designated as a foreign currency risk hedge. There was no ineffective portion.

As at January 1, 2007, in accordance with the transitional provisions of CICA Handbook Section 3865, *Hedges*, a net loss of $5 million associated with unamortized deferred gain and loss balances related to previously cancelled swap agreements was reclassified to accumulated other comprehensive loss. The deferred gain and loss balances are amortized to comprehensive income on a straight-line basis over the life of the related debt.

On January 1, 2007, as required upon initial application of CICA Handbook Section 3855, *Financial Instruments – Recognition and Measurement*, all adjustments to the carrying amount of financial instruments were recognized as an adjustment to the opening balance of accumulated other comprehensive loss. The Corporation was not required to remeasure any assets or liabilities upon adoption of Section 3855; therefore, no adjustments were made to the opening balance of retained earnings.

17. Finance Charges

(in millions)	**2008**	2007
Interest – Long-term debt and capital lease obligations	**$ 329**	$ 266
– Short-term borrowings	**32**	27
AFUDC *(Note 2)*	**(13)**	(8)
Interest earned	**(2)**	(4)
Unrealized foreign exchange loss on long-term debt	**–**	1
Dividends on preference shares *(Notes 13 and 14)*	**17**	17
	$ 363	$ 299

18. Gain on Sale of Property

In December 2007, TGI sold surplus land resulting in an $8 million ($7 million after-tax) gain on the sale.

19. Corporate Taxes

Corporate taxes differ from the amount that would be expected to be generated by applying the enacted combined Canadian federal and provincial statutory tax rate to earnings before corporate taxes and non-controlling interest. The following is a reconciliation of consolidated statutory taxes to consolidated effective taxes.

(in millions, except as noted)	**2008**	2007
Combined Canadian federal and provincial statutory income tax rate	**33.5%**	36.1%
Statutory income tax rate applied to earnings before corporate taxes and non-controlling interest	**$ 113**	$ 90
Preference share dividends	**6**	6
Difference between Canadian statutory rate and rates applicable to foreign subsidiaries	**(12)**	(18)
Difference in Canadian provincial statutory rates applicable to subsidiaries in different Canadian jurisdictions	**(6)**	(3)
Items capitalized for accounting but expensed for income tax purposes	**(33)**	(21)
Difference between capital cost allowance ("CCA") and other deductions claimed for income tax purposes and amounts recorded for accounting purposes[(1)]	**5**	(12)
Impact of reduction in income tax rates on future income taxes	**–**	(6)
Québec Tax Trust and other tax settlements – Terasen[(2)]	**(7)**	2
Maritime Electric tax reassessment	**–**	3
Pension costs	**(2)**	(2)
Other	**1**	(3)
Corporate taxes	**$ 65**	$ 36
Effective tax rate	**19.3%**	14.4%

(1) During 2008, CCA deductions at FortisAlberta were lower than amortization expense. However, during 2007, CCA deductions at FortisAlberta were higher than amortization expense. The higher CCA deductions in 2007 were required to offset taxable income on the sale, in 2007, of the 2006 AESO charges deferral receivable balance.

(2) During 2008, Terasen reached a settlement with Revenu Québec and Canada Revenue Agency related to amounts owing as a result of amended Québec tax legislation. The legislation was passed in 2006 for the purpose of challenging certain interprovincial Canadian tax structures. As a result of the settlement, Terasen recorded an approximate $7.5 million tax reduction in 2008.

The components of the provision for corporate taxes are as follows:

(in millions)	**2008**	2007
Canadian		
Current taxes	**$ 47**	$ 33
Future income taxes	**16**	–
	63	33
Foreign		
Current taxes	**4**	3
Future income taxes	**(2)**	–
	2	3
Corporate taxes	**$ 65**	$ 36

19. Corporate Taxes (cont'd)

Future income taxes are provided for temporary differences. Future income tax assets and liabilities are comprised of the following:

(in millions)	**2008**	2007
Future income tax liability (asset)		
Income producing properties	**$ 26**	$ 22
Utility capital assets	**17**	13
ECAM	**16**	10
Other regulatory assets and liabilities	**2**	2
Intangible assets	**3**	5
Employee future benefits	**(14)**	(14)
Loss carryforwards	**(11)**	(10)
Share issue and debt financing costs	**(14)**	(16)
Unrealized foreign currency translation (losses) gains on long-term debt	**(5)**	8
Other	**2**	5
Net future income tax liability	**$ 22**	$ 25
Current future income tax liability	**$ 15**	$ 7
Long-term future income tax asset	**(54)**	(37)
Long-term future income tax liability	**61**	55
Net future income tax liability	**$ 22**	$ 25

As at December 31, 2008, the Corporation had approximately $104 million (December 31, 2007 – $51 million) in non-capital and capital loss carryforwards, of which $8 million (December 31, 2007 – $3 million) in capital losses has not been recognized in the financial statements. The non-capital loss carryforwards expire between 2009 and 2028.

20. Employee Future Benefits

The Corporation and its subsidiaries each maintain one or a combination of defined benefit pension plans, defined contribution pension plans and group RRSPs for its employees. The Corporation, Terasen Gas companies, FortisAlberta, FortisBC, Newfoundland Power, Maritime Electric and FortisOntario also offer OPEB plans for qualifying employees.

For the defined benefit pension arrangements, the accrued pension benefit obligation and the market-related value or fair value of plan assets are measured for accounting purposes as at December 31 of each year for the Corporation, Terasen Gas companies, Newfoundland Power and Caribbean Utilities commencing December 2008 (2007 – measured as at April 30), and as at September 30 of each year for FortisAlberta, FortisBC and FortisOntario. The most recent actuarial valuation of the pension plans for funding purposes was as of December 31, 2007 for FortisAlberta and FortisBC; as of December 31, 2006 for FortisOntario; as of December 31, 2005 for the Corporation and Newfoundland Power; and as of December 31, 2008 for Caribbean Utilities. For the Terasen Gas companies, the most recent actuarial valuations of the pension plans for funding purposes were between December 31, 2005 and December 31, 2007. The next required valuations will be, at the latest, three years from the date of the most recent actuarial valuation for each company.

Actuarial valuations of the pension plans for funding purposes are currently being completed as of December 31, 2008 for the Corporation, Newfoundland Power and one of the pension plans at the Terasen Gas companies. The valuations are expected to be completed in 2009.

The Corporation's consolidated defined benefit pension plan asset allocation is as follows:

Plan assets as at December 31

(%)	**2008**	2007
Canadian equities	**42**	50
Fixed income	**44**	38
Foreign equities	**8**	8
Real estate	**6**	4
	100	100

The following is a breakdown of the Corporation's and subsidiaries' defined benefit pension plans and their respective funded or unfunded status:

(in millions)	**2008** Accrued Benefit Obligation	Plan Assets	Net Funded (Unfunded)	2007 Accrued Benefit Obligation	Plan Assets	Net Funded (Unfunded)
Terasen Gas companies	**$ 253**	**$ 227**	**$ (26)**	$ 254	$ 261	$ 7

For 2008, the effects of changing the health-care cost trend rate by 1 per cent are as follows:

(in millions)	1 per cent increase in rate	1 per cent decrease in rate
Increase (decrease) in accrued benefit obligation	**$ 22**	**$ (16)**
Increase (decrease) in current service and interest costs	**2**	**(2)**

The following table provides the sensitivities associated with a 100 basis point move in the expected long-term rate of return on pension plan assets and the discount rate on 2008 net defined benefit pension expense, and the related accrued defined benefit pension asset and liability recorded in the Corporation's consolidated financial statements, as well as the impact on the accrued defined benefit pension obligation.

Increase (Decrease) *(in millions)*	Net Benefit Expense	Accrued Benefit Asset	Accrued Benefit Liability	Accrued Benefit Obligation
Impact of increasing the rate of return assumption by 100 basis points	$ (7)	$ 7	$ –	$ –
Impact of decreasing the rate of return assumption by 100 basis points	7	(7)	–	–
Impact of increasing the discount rate assumption by 100 basis points	(3)	2	(1)	(57)
Impact of decreasing the discount rate assumption by 100 basis points	10	(8)	1	67

During 2008, the Corporation expensed $11 million (2007 – $10 million) related to defined contribution pension plans.

21. Business Acquisitions

2008

Fairmont Newfoundland Hotel

In November 2008, Fortis Properties purchased the Fairmont Newfoundland hotel for an aggregate cash purchase price of approximately $22 million, including acquisition costs.

The acquisition has been accounted for using the purchase method, whereby the results of operations have been consolidated in the financial statements of Fortis commencing November 2008.

The purchase price allocation to assets, based on their fair values, was as follows:

(in millions)	**Total**
Fair value assigned to net assets:	
Income producing properties	**$ 22**

2007

a. Terasen

On May 17, 2007, Fortis acquired all of the issued and outstanding common shares of Terasen for aggregate consideration of approximately $3.7 billion. The net cash purchase price of approximately $1.25 billion, including acquisition costs, was primarily financed through proceeds from the issuance of common equity, with the remaining $125 million of the net cash purchase price being financed, on an interim basis, through drawings on the Corporation's committed credit facility.

Terasen owns and operates a gas distribution business carried on by TGI, TGVI and TGWI. Terasen is the principal natural gas distributor in British Columbia.

The acquisition has been accounted for using the purchase method, whereby the consolidated results of Terasen have been included in the consolidated financial statements of Fortis commencing May 17, 2007. The financial results of the Terasen Gas companies have been included in the Regulated Gas Utilities – Canadian segment, while net expenses of non-regulated Terasen corporate-related activities, Terasen's 30 per cent investment in non-regulated CWLP and Terasen's 100 per cent investment in non-regulated TES have been included in the Corporate and Other segment. The Terasen Gas companies are regulated under traditional cost of service. The determination of revenue and earnings is based on regulated rates of return that are applied to historic values which do not change with a change of ownership. Therefore, for substantially all of the individual assets and liabilities associated with the Terasen Gas companies, no fair market value adjustments were recorded as part of the purchase price because all of the economic benefits and obligations associated with them beyond regulated rates of return accrue to the customers. Accordingly, the book value of substantially all of the assets and liabilities of the Terasen Gas companies has been assigned as fair value for the purchase price allocation. Substantially all of the fair market value adjustments, including intangibles, recorded as part of the purchase price allocation are related to non-regulated Terasen and its non-regulated investments.

The following table summarizes the fair value of the assets acquired and liabilities assumed at the date of acquisition. The amount of the purchase price assignable to goodwill is entirely associated with the regulated Terasen Gas companies. Approximately $40 million of goodwill is deductible for tax purposes. Of the $11 million in intangible assets, $10 million was assigned as the value associated with customer contracts at CWLP. Approximately $1 million was assigned to the Terasen trade-name associated with non-regulated activities and is not subject to amortization.

During 2008, the Terasen Gas companies recognized the benefit of tax losses, which related to periods prior to the Corporation's ownership of Terasen, resulting in a $6 million reduction in goodwill. Partially offsetting the above was a final purchase adjustment of $2 million, which increased goodwill.

21. Business Acquisitions (cont'd)

a. Terasen (cont'd)

(in millions)	Total
Fair value assigned to net assets:

	$ 1,256

b. Delta Regina

In August 2007, Fortis Properties purchased the Delta Regina, comprising the Delta Regina hotel, the Saskatchewan Trade and Convention Centre, 52,000 square feet of commercial office space and a parking garage in Regina, Saskatchewan for an aggregate cash purchase price of approximately $50 million, including acquisition costs.

The acquisition has been accounted for using the purchase method, whereby the results of operations have been consolidated in the financial statements of Fortis commencing August 2007.

The purchase price allocation to assets, based on their fair values, was as follows:

(in millions)	Total
Fair value assigned to net assets:	
Income producing properties	$ 50

(1) The Terasen Gas companies were acquired on May 17, 2007.

(2) Includes Maritime Electric and FortisOntario

(3) Includes Belize Electricity, Caribbean Utilities and Fortis Turks and Caicos. Results for 2008 include two additional months of contribution from Caribbean Utilities due to a change in the utility's fiscal year end.

22. Segmented Information (cont'd)

Inter-segment transactions are in the normal course of operations and are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties. The significant inter-segment transactions primarily related to the sale of energy from Fortis Generation to Belize Electricity and FortisOntario, electricity sales from Newfoundland Power to Fortis Properties and finance charges on inter-segment borrowings. The significant inter-segment transactions during the years ended December 31 were as follows:

(in millions)	**2008**	2007
Sales from Fortis Generation to Regulated Electric Utilities – Caribbean	**$ 17**	$ 15
Sales from Fortis Generation to Other Canadian Electric Utilities	**1**	1
Sales from Newfoundland Power to Fortis Properties	**4**	4
Inter-segment finance charges on borrowings from:		
Corporate to Regulated Electric Utilities – Canadian	**2**	2
Corporate to Regulated Electric Utilities – Caribbean	**5**	1
Corporate to Fortis Properties	**8**	8

23. Supplementary Information to Consolidated Statements of Cash Flows

(in millions)	**2008**	2007
Interest paid	**$ 373**	$ 288
Income taxes paid	**33**	53

24. Capital Management

The Corporation's principal businesses of regulated gas and electricity distribution require ongoing access to capital in order to allow the utilities to fund the maintenance and expansion of infrastructure. Fortis raises debt at the subsidiary level to ensure regulatory transparency, tax efficiency and financing flexibility. To help ensure access to capital, the Corporation targets a consolidated long-term capital structure containing approximately 40 per cent equity, including preference shares, and 60 per cent debt, as well as investment-grade credit ratings.

Each of the Corporation's regulated utilities maintains its own capital structure in line with the deemed capital structure reflected in the utilities' customer rates. Fortis generally finances a significant portion of acquisitions with proceeds from common and preference share issuances.

The consolidated capital structure of Fortis is presented in the following table.

	As at December 31, 2008		As at December 31, 2007	
	(in millions)	*(%)*	*(in millions)*	*(%)*
Total debt and capital lease obligations (net of cash)[(1)]	**$ 5,468**	**59.5**	$ 5,476	64.3
Preference shares[(2)]	**667**	**7.3**	442	5.2
Common shareholders' equity	**3,046**	**33.2**	2,601	30.5
Total	**$ 9,181**	**100.0**	$ 8,519	100.0

(1) Includes long-term debt and capital lease obligations, including current portion, and short-term borrowings, net of cash

(2) Includes preference shares classified as both long-term liabilities and equity

Certain of the Corporation's long-term debt obligations have covenants restricting the issuance of additional debt such that consolidated debt cannot exceed 70 per cent of the Corporation's consolidated capital structure, as defined by the long-term debt agreements. As at December 31, 2008, the Corporation and its subsidiaries, except for Belize Electricity and the Exploits Partnership as described below, were in compliance with their debt covenants.

As a result of the regulator's Final Decision on Belize Electricity's 2008/2009 rate application, Belize Electricity does not meet certain debt covenant financial ratios related to loans totalling $11 million (BZ$18 million) as at December 31, 2008. The Company has informed the lenders of the defaults and has requested appropriate waivers. Belize Electricity is also in default of certain debt covenants which has resulted in Belize Electricity being prohibited from incurring new indebtedness or declaring dividends.

As a result of legislation passed in 2008 by the Government of Newfoundland and Labrador expropriating most of the Newfoundland assets of Abitibi-Consolidated, the Exploits Partnership is potentially in default on a $61 million term loan. The Exploits Partnership is owned 51 per cent by Fortis Properties and 49 per cent by Abitibi-Consolidated. The term loan, which is non-recourse to Fortis, has been reclassified to current portion of long-term debt on the consolidated balance sheet as at December 31, 2008. See Note 28 for a further discussion of the Exploits Partnership.

The Corporation's credit ratings and consolidated credit facilities are discussed further under "Liquidity Risk" in Note 26.

25. Financial Instruments

The Corporation has designated its non-derivative financial instruments as follows:

	December 31, 2008		December 31, 2007	
(in millions)	**Carrying Value**	**Estimated Fair Value**	Carrying Value	Estimated Fair Value
Held for trading				
Cash and cash equivalents(1)	**$ 66**	**$ 66**	$ 58	$ 58
Loans and receivables				
Trade and other accounts receivable(1)(2)(3)	**674**	**674**	630	630
Other receivables due from customers(1)(3)(4)	**8**	**8**	7	7
Other financial liabilities				
Short-term borrowings(1)(3)	**410**	**410**	475	475
Trade and other accounts payable(1)(3)(5)	**782**	**782**	714	714
Dividends payable(1)(3)	**47**	**47**	43	43
Customer deposits(1)(3)(6)	**6**	**6**	5	5
Long-term debt, including current portion(7)(8)	**5,088**	**4,927**	5,023	5,635
Preference shares, classified as debt(7)(9)	**320**	**329**	320	346

(1) Due to the nature and/or short-term maturity of these financial instruments, carrying value approximates fair value.
(2) Included in accounts receivable on the balance sheet
(3) Carrying value approximates amortized cost
(4) Included in deferred charges and other assets on the balance sheet
(5) Included in accounts payable and accrued charges on the balance sheet
(6) Included in deferred credits on the balance sheet
(7) Carrying value is measured at amortized cost using the effective interest rate method.
(8) Carrying value at December 31, 2008 is net of unamortized deferred financing costs of $34 million (December 31, 2007 – $33 million).
(9) Preference shares classified as equity are excluded from the requirements of CICA Handbook Section 3855, *Financial Instruments – Recognition and Measurement*; however, the estimated fair value of the Corporation's $347 million preference shares classified as equity was $268 million as at December 31, 2008 (December 31, 2007 – carrying value $122 million; fair value $107 million).

The carrying values of financial instruments included in current assets, current liabilities, deferred charges and other assets, and deferred credits in the consolidated balance sheets approximate their fair value, reflecting the short-term maturity, normal trade credit terms and/or the nature of these instruments. The fair value of long-term debt is calculated by using quoted market prices, when available. When quoted market prices are not available, the fair value is determined by discounting the future cash flows of the specific debt instrument at an estimated yield to maturity equivalent to benchmark government bonds or treasury bills, with similar terms to maturity, plus a market credit risk premium equal to that of issuers of similar credit quality. Since the Corporation does not intend to settle the long-term debt prior to maturity, the fair value estimate does not represent an actual liability and, therefore, does not include exchange or settlement costs. The fair value of the Corporation's preference shares is determined using quoted market prices.

The Corporation and its subsidiaries hedge exposures to fluctuations in interest rates, foreign exchange rates and natural gas prices through the use of derivative financial instruments. The Corporation does not hold or issue derivative financial instruments for trading purposes. The following table summarizes the valuation of the Corporation's derivative financial instruments as at December 31.

	2008				2007	
Asset (Liability)	**Term to Maturity** *(years)*	**Number of Contracts**	**Carrying Value** *(in millions)*	**Estimated Fair Value** *(in millions)*	Carrying Value *(in millions)*	Estimated Fair Value *(in millions)*
Interest rate swaps(1)	**1 to 2**	**2**	**$ –**	**$ –**	$ –	$ –
Foreign exchange forward contract	**< 3**	**1**	**7**	**7**	–	–
Natural gas derivatives:(2)						
Swaps and options	**Up to 3**	**228**	**(84)**	**(84)**	(79)	(79)
Gas purchase contract premiums	**Up to 3**	**74**	**(8)**	**(8)**	5	5

(1) Interest rate swap contracts mature in July 2009 and October 2010. The contracts have the effect of fixing the rate of interest on the non-revolving credit facilities of Fortis Properties at 6.16 per cent and 5.32 per cent, respectively.
(2) The fair values of the natural gas derivatives were recorded in accounts payable as at December 31, 2008 (December 31, 2007 – in accounts payable and accounts receivable).

25. Financial Instruments (cont'd)

The fair value of the Corporation's financial instruments, including derivatives, reflects a point-in-time estimate based on current and relevant market information about the instruments as at the balance sheet dates. The estimates cannot be determined with precision as they involve uncertainties and matters of judgment and, therefore, may not be relevant in predicting the Corporation's future earnings or cash flows.

26. Financial Risk Management

The Corporation is primarily exposed to credit risk, liquidity risk and market risk as a result of holding financial instruments in the normal course of business.

Credit risk — Risk that a third party to a financial instrument might fail to meet its obligations under the terms of the financial instrument.

Liquidity risk — Risk that an entity will encounter difficulty in raising funds to meet commitments associated with financial instruments.

Market risk — Risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in market prices. The Corporation is exposed to the following market risks:

- Foreign exchange risk
- Interest rate risk
- Commodity price risk

Credit Risk

For cash and cash equivalents, trade and other accounts receivable, and other receivables due from customers, the Corporation's credit risk is limited to the carrying value on the balance sheet. The Corporation generally has a large and diversified customer base, which minimizes the concentration of credit risk. The Corporation and its subsidiaries have various policies to minimize credit risk, which include requiring customer deposits and credit checks for certain customers and performing disconnections and/or using third-party collection agencies for overdue accounts.

FortisAlberta has a concentration of credit risk as a result of its distribution-service billings being to a relatively small group of retailers and, as at December 31, 2008, its gross credit risk exposure was approximately $87 million, representing the projected value of retailer billings over a 60-day period. The Company has reduced its exposure to approximately $3 million by obtaining from the retailers either a cash deposit, bond, letter of credit, an investment-grade credit rating from a major rating agency or by having the retailer obtain a financial guarantee from an entity with an investment-grade credit rating.

The aging analysis of the Corporation's consolidated trade and other accounts receivable is as follows:

(in millions)	**As at December 31, 2008**
Not past due	**$ 587**
Past due 0–30 days	**70**
Past due 31–60 days	**14**
Past due 61 days and over	**19**
	690
Less: allowance for doubtful accounts	**(16)**
	$ 674

As at December 31, 2008, other receivables due from customers of $8 million and the receivable associated with the foreign exchange forward contract of $7 million will be received over the next six years, with $7 million expected to be received in 2009, $5 million over 2010 and 2011, $2 million over 2012 and 2013 and $1 million in 2014.

Liquidity Risk

The Corporation's financial position could be adversely affected if it, or its operating subsidiaries, fail to arrange sufficient and cost-effective financing to fund, among other things, capital expenditures and the repayment of maturing debt. The ability to arrange sufficient and cost-effective financing is subject to numerous factors, including the results of operations and financial position of the Corporation and its subsidiaries, conditions in the capital and bank credit markets, ratings assigned by rating agencies and general economic conditions.

To mitigate liquidity risk, the Corporation and its larger regulated utilities have secured committed credit facilities to support short-term financing of capital expenditures and seasonal working capital requirements.

Committed credit facilities at Fortis are available for interim financing of acquisitions and for general corporate purposes. Depending on the timing of cash payments from the subsidiaries, borrowings under the Corporation's committed credit facility may be required from time to time to support the servicing of debt and payment of dividends. Over the next five years, average consolidated annual long-term debt maturities and repayments are expected to be approximately $180 million. The combination of available credit facilities and low annual debt maturities and repayments provide the Corporation and its subsidiaries with flexibility in the timing and access to capital markets.

As at December 31, 2008, the Corporation and its subsidiaries had consolidated credit facilities of $2.2 billion, of which $1.5 billion was unused. The credit facilities are syndicated almost entirely with the seven largest Canadian banks with no one bank holding more than 25 per cent of these facilities.

The following summary outlines the credit facilities of the Corporation and its subsidiaries.

(in millions)	Corporate and Other	Regulated Utilities	Fortis Properties	**Total as at December 31, 2008**	Total as at December 31, 2007
Total credit facilities	$ 715	$ 1,500	$ 13	**$ 2,228**	$ 2,234
Credit facilities utilized:					
Short-term borrowings	–	(410)	–	**(410)**	(475)
Long-term debt *(Note 10)*[(1)]	(32)	(192)	–	**(224)**	(530)
Letters of credit outstanding	(1)	(102)	(1)	**(104)**	(159)
Credit facilities available	$ 682	$ 796	$ 12	**$ 1,490**	$ 1,070

[(1)] As at December 31, 2008, credit-facility borrowings classified as long-term debt included $8 million that was included in current installments of long-term debt and capital lease obligations on the balance sheet.

As at December 31, 2008 and December 31, 2007, certain borrowings under the Corporation's and its subsidiaries' credit facilities have been classified as long-term debt. These borrowings are under long-term committed credit facilities and management's intention is to refinance these borrowings with long-term permanent financing during future periods.

Corporate and Other

Terasen Inc. has a $100 million unsecured committed revolving credit facility, maturing May 2009, that is available for general corporate purposes. Letters of credit of $50 million previously outstanding at Terasen Inc., related to its previously owned petroleum transportation business and secured by a letter of credit from the former parent company, were cancelled during the second quarter of 2008.

Fortis has a $600 million unsecured committed revolving credit facility, maturing May 2012, and a $15 million unsecured demand facility. Both facilities are available for general corporate purposes and the committed facility is also available for interim financing of acquisitions.

Regulated Utilities

TGI has a $500 million unsecured committed revolving credit facility, maturing August 2013. TGVI has a $350 million unsecured committed revolving credit facility, maturing January 2011. The facilities are utilized to finance working capital requirements and capital expenditures, and for general corporate purposes. TGVI also has a $20 million subordinated unsecured committed non-revolving credit facility, maturing in January 2013. This facility can only be utilized for refinancing annual repayments on non-interest bearing government loans.

FortisAlberta has a $200 million unsecured committed revolving credit facility, maturing May 2012, utilized to finance capital expenditures and for general corporate purposes and, with the consent of the lenders, the amount of the facility can be increased to $250 million. FortisAlberta also has a $10 million unsecured demand credit facility.

FortisBC has a $150 million unsecured committed revolving credit facility of which $50 million matures May 2011 and the remaining $100 million matures May 2009. Additionally, the Company has the option to increase the credit facility to an aggregate of $200 million, subject to bank approval. This facility is utilized to finance capital expenditures and for general corporate purposes. FortisBC also has a $10 million unsecured demand facility.

Newfoundland Power has $120 million of unsecured credit facilities, comprised of a $100 million committed revolving credit facility, which matures August 2011, and a $20 million uncommitted demand facility.

Maritime Electric had a $50 million unsecured demand revolving credit facility at December 31, 2008. In March 2009, the credit facility was renegotiated and converted into a 364-day revolving committed credit facility.

FortisOntario has secured lines of credit totalling $20 million of which $12 million is authorized solely for letters of credit.

26. Financial Risk Management (cont'd)

Regulated Utilities (cont'd)

Caribbean Utilities has credit facilities of US$33 million ($40 million), comprised of a capital expenditure line of credit of US$18 million ($22 million), including amounts available for letters of credit, a US$7.5 million ($9 million) operating line of credit and a US$7.5 million ($9 million) catastrophe standby loan.

Fortis Turks and Caicos has credit facilities of US$21 million ($25.5 million), comprised of an operating credit facility of US$5 million ($6 million), a capital expenditure line of credit of US$7 million ($8.5 million) and a US$9 million ($11 million) emergency standby loan.

Belize Electricity has a BZ$2 million ($1 million) and BZ$5 million ($3 million) demand overdraft credit facility with Belize Bank Limited and Scotiabank, respectively.

In November 2008, First Caribbean International Bank withdrew its credit facility with Belize Electricity requiring the Company to repay approximately BZ$4 million ($2 million) outstanding under the facility. Scotiabank has also put Belize Electricity on notice that it may not renew its BZ$5 million ($3 million) credit facility with the Company if financial conditions do not show signs of improvement. As at December 31, 2008, the credit facility was undrawn.

Fortis Properties

Fortis Properties has a $13 million secured revolving demand facility utilized for general corporate purposes.

Furthermore, the Corporation and its currently rated subsidiaries target investment-grade credit ratings to maintain capital market access at reasonable interest rates. As at December 31, 2008, the Corporation's credit ratings were as follows:

Standard & Poor's	A– (long-term corporate and unsecured debt credit rating)
DBRS	BBB(high) (unsecured debt credit rating)

The credit ratings reflect the diversity of the operations of Fortis, the stand-alone nature and financial separation of each of the regulated subsidiaries of Fortis, management's commitment to maintaining low levels of debt at the holding company level and the continued focus of Fortis on pursuing the acquisition of stable regulated utilities.

The following is an analysis of the contractual maturities of the Corporation's financial liabilities as at December 31, 2008.

Financial Liabilities

(in millions)	≤ 1 year	>1–3 years	4–5 years	>5 years	**Total**
Short-term borrowings	$ 410	$ –	$ –	$ –	**$ 410**
Trade and other accounts payable	782	–	–	–	**782**
Natural gas derivatives	70	22	–	–	**92**
Dividends payable	47	–	–	–	**47**
Customer deposits	2	2	1	1	**6**
Long-term debt, including current portion[(1)]	240	319	335	4,228	**5,122**
Interest obligations on long-term debt	304	698	583	3,993	**5,578**
Preference shares, classified as debt	–	–	–	320	**320**
	$ 1,855	$ 1,041	$ 919	$ 8,542	**$ 12,357**

[(1)] Excluding deferred financing costs of $34 million included in the carrying value as per Note 25

Market Risk

Foreign Exchange Risk

The Corporation's earnings from, and net investment in, its self-sustaining foreign subsidiaries are exposed to fluctuations in the US dollar-to-Canadian dollar exchange rate. The Corporation has effectively decreased the above exposure through the use of US dollar borrowings at the corporate level. The foreign exchange gain or loss on the translation of US dollar-denominated interest expense partially offsets the foreign exchange loss or gain on the translation of the Corporation's foreign subsidiaries' earnings, which are denominated in US dollars or in a currency pegged to the US dollar. Belize Electricity's reporting currency is the Belizean dollar while the reporting currency of Caribbean Utilities, Fortis Turks and Caicos, FortisUS Energy and BECOL is the US dollar. The Belizean dollar is pegged to the US dollar at BZ$2.00 = US$1.00.

As at December 31, 2008, all of the Corporation's corporately held US$403 million of long-term debt had been designated as a hedge of a portion of the Corporation's foreign net investments. As at December 31, 2008, the Corporation had approximately US$119 million in foreign net investments remaining to be hedged. Foreign currency exchange rate fluctuations associated with the translation of the Corporation's corporately held US dollar borrowings that are designated as hedges are recorded in other comprehensive income and serve to help offset unrealized foreign currency exchange gains and losses on the foreign net investments, which are also recorded in other comprehensive income.

A 5 per cent appreciation of the US dollar relative to the Canadian dollar would have increased earnings by $0.6 million for the year ended December 31, 2008 and would have decreased other comprehensive income by $25 million for the year ended December 31, 2008. This sensitivity analysis is limited to the net impact on earnings of the translation of US dollar interest expense and earnings' streams from the Corporation's foreign subsidiaries and the impact on other comprehensive income of the translation of the US dollar borrowings. The sensitivity analysis excludes the risk arising from the translation of self-sustaining foreign net investments to the Canadian dollar because such investments are not financial instruments. However, a 5 per cent appreciation of the US dollar relative to the Canadian dollar associated with the translation of the Corporation's net investment in self-sustaining foreign subsidiaries would have increased other comprehensive income by $32 million for the year ended December 31, 2008.

TGVI's US dollar payments under a contract for the construction of an LNG storage facility exposes TGVI to fluctuations in the US dollar-to-Canadian dollar exchange rate. TGVI has entered into a foreign exchange forward contract to hedge this exposure. At December 31, 2008, a 5 per cent appeciation of the US dollar relative to the Canadian dollar, as it affects the measurement of the fair value of the foreign exchange forward contract, in the absence of rate regulation and with all other variables remaining constant, would have increased earnings by $3 million for the year ended December 31, 2008. Furthermore, TGVI has regulatory approval to defer any increase or decrease in the fair value of the foreign exchange forward contract for recovery from, or refund to, customers in future rates. Therefore, any change in fair value would have impacted regulatory assets or liabilities rather than other comprehensive income.

Interest Rate Risk

The Corporation and its subsidiaries are exposed to interest rate risk associated with short-term borrowings and floating-rate debt. The Corporation and its subsidiaries may enter into interest rate swap agreements to help reduce this risk and, during 2008, the Terasen Gas companies and Fortis Properties were parties to interest rate swap agreements that effectively fixed the interest rates on their variable-rate borrowings. During the fourth quarter of 2008, the Terasen Gas companies' interest rate swaps matured. A 100 basis point increase in interest rates associated with variable-rate debt, with all other variables remaining constant, would have decreased earnings by $5 million for the year ended December 31, 2008. Furthermore, the Terasen Gas companies and FortisBC have regulatory approval to defer any increase or decrease in interest expense resulting from fluctuations in interest rates associated with variable-rate debt for recovery from, or refund to, customers in future rates.

As at December 31, 2008, a 100 basis point increase in interest rates as it affects the measurement of fair value of the interest rate swap agreements would have increased other comprehensive income by $0.1 million during the year ended December 31, 2008.

In addition, certain of the committed credit facilities have fees that are linked to the Corporation's or its subsidiaries' credit ratings. A downward change in the credit ratings of the Corporation and its currently rated subsidiaries by one level, with all other variables remaining constant, would have decreased earnings by $0.9 million for the year ended December 31, 2008.

Commodity Price Risk

The Terasen Gas companies are exposed to commodity price risk associated with changes in the market price of natural gas. This risk is minimized by entering into natural gas derivatives that effectively fix the price of natural gas purchases. The natural gas derivatives are recorded on the balance sheet at fair value and any change in the fair value is deferred as a regulatory asset or liability, subject to regulatory approval, for recovery from, or refund to, customers in future rates.

Had the price of natural gas, with all other variables remaining constant, increased by $1 per gigajoule, the fair value of the natural gas derivatives would have increased and, in the absence of rate regulation, other comprehensive income would have increased by $54 million for the year ended December 31, 2008. However, the Terasen Gas companies defer any changes in fair value of the natural gas derivatives, subject to regulatory approval, for future recovery from, or refund to, customers in future rates. Therefore, instead of increasing other comprehensive income, current regulatory assets would have decreased by $54 million.

27. Commitments

(in millions)	Total	< 1 year	1–3 years	4–5 years	> 5 years
Gas purchase contract obligations(1)	**$ 466**	$ 416	$ 50	$ –	$ –
Power purchase obligations					
FortisBC(2)	**2,829**	40	76	78	2,635
FortisOntario(3)	**561**	45	94	99	323
Maritime Electric(4)	**72**	52	2	2	16
Belize Electricity(5)	**16**	4	4	2	6
Capital cost(6)	**400**	16	41	41	302
Joint-use asset and shared service agreements(7)	**62**	4	7	6	45
Office lease – FortisBC(8)	**19**	1	4	2	12
Operating lease obligations(9)	**166**	18	33	29	86
Other	**25**	4	10	6	5
Total	**$ 4,616**	$ 600	$ 321	$ 265	$ 3,430

(1) Gas purchase contract obligations relate to various gas purchase contracts at the Terasen Gas companies. These obligations are based on market prices that vary with gas commodity indices. The amounts disclosed reflect index prices that were in effect as at December 31, 2008.

(2) Power purchase obligations of FortisBC include the Brilliant Power Purchase Agreement (the "BPPA") as well as the power purchase agreement with BC Hydro. On May 3, 1996, an Order was granted by the BCUC approving a 60-year BPPA for the output of the Brilliant hydroelectric generating plant located near Castlegar, British Columbia. The BPPA requires payments based on the operation and maintenance costs and a return on capital for the plant in exchange for the specified natural flow take-or-pay amounts of power. The BPPA includes a market-related price adjustment after 30 years of the 60-year term. The power purchase agreement with BC Hydro, which expires in 2013, provides for any amount of supply up to a maximum of 200 MW but includes a take-or-pay provision based on a five-year rolling nomination of the capacity requirements.

(3) Power purchase obligations for FortisOntario primarily include two long-term take-or-pay contracts between Cornwall Electric and Hydro-Québec Energy Marketing for the supply of electricity and capacity. The first contract provides approximately 237 gigawatt hours ("GWh") of energy per year and up to 45 MW of capacity at any one time. The second contract, supplying the remainder of Cornwall Electric's energy requirements, provides 100 MW of capacity and energy and provides a minimum of 300 GWh of energy per contract year. Both contracts expire in December 2019.

(4) Maritime Electric has two take-or-pay contracts for the purchase of either capacity or energy. The contracts total approximately $72 million through November 30, 2032. The take-or-pay contract with New Brunswick Power ("NB Power") includes, among other things, replacement energy and capacity for the NB Power Point Lepreau Nuclear Generating Station during its refurbishment outage. The other take-or-pay contract is for transmission capacity allowing Maritime Electric to reserve 30 MW of capacity on the new International Power Line into the United States.

(5) Power purchase obligations for Belize Electricity include a 15-year power purchase agreement, which commenced in February 2007, between Belize Electricity and Hydro Maya Limited for the supply of 3 MW of capacity and a two-year power purchase agreement, expiring in December 2010, between Belize Electricity and Comisión Federal de Electricidad of Mexico for the supply of 50 MW of firm capacity and associated energy. Belize Electricity has also signed two 15-year power purchase agreements with Belize Cogeneration Energy Limited ("Belcogen") and Belize Aquaculture Limited that provide for the supply of approximately 14 MW of capacity and up to 15 MW of capacity, respectively. As the generating plants are not yet connected to the electricity system, the obligations related to the power purchase agreements with Belcogen and Belize Aquaculture Limited have not been included in the Corporation's commitments table above.

(6) Maritime Electric has entitlement to approximately 6.7 per cent of the output from the NB Power Dalhousie Generating Station and approximately 4.7 per cent from the NB Power Point Lepreau Nuclear Generating Station for the life of each unit. As part of its participation agreement, Maritime Electric is required to pay its share of the capital costs of these units.

[7] FortisAlberta and an Alberta transmission service provider have entered into an agreement in consideration for joint attachments of distribution facilities to the transmission system. The expiry terms of this agreement state that the agreement remains in effect until the Company no longer has attachments to the transmission facilities. Due to the unlimited term of this contract, the calculation of future payments after 2013 includes payments to the end of 20 years. However, the payments under this agreement may continue for an indefinite period of time. FortisAlberta and an Alberta transmission service provider have also entered into a number of service agreements to ensure operational efficiencies are maintained through coordinated operations. The service agreements have minimum expiry terms of five years from September 1, 2005 and are subject to extensions based on mutually agreeable terms.

[8] Under a sale-leaseback agreement, on September 29, 1993, FortisBC began leasing its Trail, British Columbia office building for a term of 30 years. The terms of the agreement grant FortisBC repurchase options at approximately year 20 and year 28 of the lease term.

[9] Operating lease obligations include certain office, warehouse, natural gas transmission and distribution asset, and vehicle and equipment leases, and the lease of electricity distribution assets of Port Colborne Hydro Inc.

The Corporation's regulated utilities are obligated to provide service to customers within their respective service territories. The regulated utilities' capital expenditures are largely driven by customer requests and by large capital projects specifically approved by their respective regulatory authorities. The consolidated capital program of the Corporation, including non-regulated segments, is forecasted to be approximately $1 billion for 2009. This commitment has not been included in the commitments table above.

In prior years, TGVI received non-interest bearing repayable loans from the federal and provincial governments of $50 million and $25 million, respectively, in connection with the construction and operation of the Vancouver Island natural gas pipeline. As approved by the BCUC, these loans have been recorded as government grants and have reduced the amounts reported for utility capital assets. The government loans are repayable in any fiscal year prior to 2012 under certain circumstances and are subject to the ability of TGVI to obtain non-government subordinated debt financing on reasonable commercial terms. As the loans are repaid and replaced with non-government loans, utility capital assets and long-term debt will increase in accordance with TGVI's approved capital structure, as will TGVI's rate base, which is used in determining customer rates.

The repayment criteria were met in 2008 and TGVI is expected to make an $8 million repayment on the loans in 2009 (2008 – $6 million). As at December 31, 2008, the outstanding balance of the repayable government loans was $61 million with $8 million classified as current portion of long-term debt. Repayments of the government loans beyond 2009 are not included in the commitments table above as the amount and timing of the repayments are dependent upon annual BCUC approval of the recovery of TGVI's RDDA and the ability of TGVI to replace the government loans with non-government subordinated debt financing on reasonable commercial terms.

Caribbean Utilities has a primary fuel supply contract with a major supplier and is committed to purchase 80 per cent of the Company's fuel requirements from this supplier for the operation of Caribbean Utilities' diesel-fired generating plant. The contract is for three years terminating in April 2010. The remaining approximate quantities, in millions of imperial gallons, required to be purchased annually for each of the 12-month periods ended December 31 are: 2009 – 27 and 2010 – 9.

Fortis Turks and Caicos has a renewable contract with a major supplier for all of its diesel fuel requirements associated with the generation of electricity. The approximate fuel requirements under this contract are 12 million imperial gallons per annum.

Based on the last completion of actuarial valuations, the Corporation's required consolidated defined benefit pension plan funding contributions are expected to be approximately $17 million for 2009 and $12 million for 2010. The level of the defined benefit pension plan funding contributions will be affected by the outcome, in 2009, of December 31, 2008 actuarial valuations for Newfoundland Power, the Corporation and one of the defined benefit pension plans at Terasen. The next scheduled actuarial valuations for the remaining larger defined benefit pension plans are not until December 2009 and December 2010.

28. Contingent Liabilities

The Corporation and its subsidiaries are subject to various legal proceedings and claims associated with ordinary course business operations. Management believes that the amount of liability, if any, from these actions would not have a material effect on the Corporation's consolidated financial position or results of operations.

The following describes the nature of the Corporation's contingent liabilities.

Terasen

On March 26, 2007, the Minister of Small Business and Revenue and Minister Responsible for Regulatory Reform (the "Minister") in British Columbia issued a decision in respect of the appeal by TGI of an assessment of additional British Columbia Social Service Tax in the amount of approximately $37 million associated with the Southern Crossing Pipeline, which was completed in 2000. The Minister reduced the assessment to $7 million, including interest, which has been paid in full to avoid accruing further interest and it is recorded as a long-term regulatory deferral asset. The matter is currently under appeal to the Supreme Court of British Columbia (Note 4 *(ix)*).

During 2007 and 2008, a non-regulated subsidiary of Terasen received Notices of Assessment from Canada Revenue Agency ("CRA") for additional taxes related to the taxation years 1999 through 2003. The exposure has been fully provided for in the consolidated financial statements. Terasen has begun the appeal process associated with the assessments.

In 2008, the Vancouver Island Gas Joint Venture commenced a claim against TGVI seeking damages for alleged past overpayments and a future reduction in tolls. The Statement of Claim does not quantify damages and, as such, the Company cannot determine the amount of the claim at this time. It is the Company's view that the claim is without merit. No amount, therefore, has been accrued in the consolidated financial statements.

FortisBC

The British Columbia Ministry of Forests has alleged breaches of the Forest Practices Code and negligence relating to a fire near Vaseux Lake and has filed and served a writ and statement of claim against FortisBC. In addition, the Company has been served with a filed writ and statement of claim by a private landowner in relation to the same matter. The Company is currently communicating with its insurers and has filed a statement of defence in relation to all of the actions. The outcome cannot be reasonably determined and estimated at this time and, accordingly, no amount has been accrued in the consolidated financial statements.

Maritime Electric

In April 2006, CRA reassessed Maritime Electric's 1997–2004 taxation years. The reassessment encompasses the Company's tax treatment, specifically the Company's timing of deductions, with respect to: (i) the ECAM in the 2001–2004 taxation years; (ii) customer rebate adjustments in the 2001–2003 taxation years; and (iii) the Company's payment of approximately $6 million on January 2, 2001 associated with a settlement with NB Power regarding its $450 million write-down of the NB Power Point Lepreau Nuclear Generating Station in 1998. Maritime Electric believes it has reported its tax position appropriately in all respects and has filed a Notice of Objection with the Chief of Appeals at CRA. In December 2008, the Appeals Division of CRA issued a Notice of Confirmation which confirmed the April 2006 reassessments. The Company will file an Appeal to the Tax Court of Canada.

Should the Company be unsuccessful in defending all aspects of the reassessment, the Company would be required to pay approximately $13 million in taxes and accrued interest. As at December 31, 2008, Maritime Electric has provided for this amount through future and current income taxes payable. The provisions of the *Income Tax Act* (Canada) require the Company to deposit one-half of the assessment under objection with CRA. The amount currently on deposit with CRA arising from the reassessment is approximately $6 million.

FortisUS Energy

During 2008, a statutory discontinuance and final release of FortisUS Energy was issued in relation to legal proceedings initiated by the Village of Philadelphia (the "Village"), New York. The Village had claimed that FortisUS Energy should honour a series of current and future payments set out in an agreement between the Village and a former owner of the hydroelectric site, located in the municipality of the Village, now owned by FortisUS Energy, totalling approximately $9 million (US$7 million). There was no impact on the consolidated financial statements as a result of the settlement of these legal proceedings.

Exploits Partnership

On December 16, 2008, the Government of Newfoundland and Labrador passed legislation expropriating most of the Newfoundland assets of Abitibi-Consolidated. Prior to that date, Abitibi-Consolidated announced the closure of its Grand Falls-Windsor, Newfoundland newsprint mill, effective March 31, 2009. The hydroelectric generating facility assets of the Exploits Partnership were included as part of the expropriation legislation. The Exploits Partnership is owned 51 per cent by Fortis Properties and 49 per cent by Abitibi-Consolidated. The financial statements of the Exploits Partnership are consolidated in the financial statements of Fortis. The Exploits Partnership has a $61 million term loan, which is non-recourse to Fortis, with several lenders which is secured by the assets of the Exploits Partnership.

Discussions are ongoing with the Exploits Partnership's lenders with respect to the above matters. The Government of Newfoundland and Labrador has publicly stated that it is not its intention to adversely affect the business interests of lenders or independent partners of Abitibi-Consolidated. Pending resolution of these matters, the deferred financing costs of $2 million and utility capital assets of $61 million related to the Exploits Partnership have been reclassified to deferred charges and other assets and the $61 million term loan has been classified as current on the consolidated balance sheet of Fortis as at December 31, 2008.

29. Subsequent Events

In February 2009, FortisAlberta issued $100 million of 30-year 7.06% unsecured debentures under the short-form base shelf prospectus that was filed in December 2008. The net proceeds were used to repay committed credit-facility borrowings incurred in support of the Company's capital expenditure program and for general corporate purposes.

In February 2009, TGI issued $100 million of 30-year 6.55% unsecured debentures. The net proceeds are being used to repay credit-facility borrowings incurred in support of working capital requirements and capital expenditures, and to repay $60 million of unsecured debentures that mature in June 2009.

30. Comparative Figures

Certain comparative figures have been reclassified to comply with the current year's classifications.

Historical Financial Summary

[1] As at December 31, 2006, the regulatory provision for future asset removal and site restoration costs was reallocated from accumulated amortization to long-term regulatory liabilities, with 2005 comparative figures restated. The effect of this change in presentation at December 31, 2006 was a $306.5 million (December 31, 2005 – $280.9 million) increase in long-term regulatory liabilities and a $306.5 million (December 31, 2005 – $280.9 million) increase in net utility capital assets.

Board of Directors (l-r): David G. Norris, Peter E. Case, Harry McWatters, John S. McCallum, Geoffrey F. Hyland, Roy P. Rideout, Linda L. Inkpen, Michael A. Pavey, H. Stanley Marshall, Frank J. Crothers

Board of Directors

Geoffrey F. Hyland ∗★✷ *Chair, Fortis Inc., Caledon, ON*
Mr. Hyland, 64, joined the Fortis Inc. Board in May 2001 and was appointed Chair of the Board in May 2008. He retired as President and CEO of Shawcor Ltd. in June 2005 after 37 years of service. Mr. Hyland is a Director of FortisOntario Inc. He continues to serve on the Board of ShawCor Ltd. and is a Director of Enerflex Systems Income Fund, SCITI Total Return Trust and Exco Technologies Limited.

Peter E. Case ∗ *Corporate Director, Freelton, ON*
Mr. Case, 54, joined the Fortis Inc. Board in May 2005. After 17 years as a utility and pipeline analyst, he retired in February 2003 as Executive Director, Institutional Equity Research at CIBC World Markets. Prior to that position, he was Managing Director at BMO Nesbitt Burns. Mr. Case has been a Director of FortisOntario Inc. since March 2003.

Frank J. Crothers *Chairman & CEO, Island Corporate Holdings, Nassau, Bahamas*
Mr. Crothers, 64, joined the Fortis Inc. Board in May 2007. Over the past 35 years, Mr. Crothers has served on many public and private sector boards. He served a three-year term as Chairman of CARILEC, the Caribbean Association of Electrical Utilities. Mr. Crothers is the former President of P.P.C. Limited, which was acquired by Fortis Inc. in August 2006. He serves as Vice Chair of the Board of Caribbean Utilities Company, Limited and serves on the Board of Belize Electricity. Mr. Crothers also serves as a Director of Franklin Templeton Resources, Talon Metals Corp, Fidelity Merchant Bank & Trust (Cayman) Limited and Victory Nickel Inc.

Linda L. Inkpen ★ *Corporate Director, St. John's, NL*
Dr. Inkpen, 61, joined the Fortis Inc. Board in 1994. She retired from her medical practice in December 2008 after 35 years of service and is past Chair of the Medical Advisory Committee for the St. John's Hospitals for Eastern Health. Dr. Inkpen is a past President of the College of the North Atlantic. She also served on the Royal Commission on Employment and Unemployment. Dr. Inkpen is past Chair of the Boards of Fortis Properties Corporation and Newfoundland Power Inc. She will be retiring from the Fortis Inc. Board at the Annual Meeting on May 5, 2009.

H. Stanley Marshall *President and CEO, Fortis Inc., St. John's, NL*
Mr. Marshall, 58, has served on the Fortis Inc. Board since 1995. He joined Newfoundland Power Inc. in 1979 and was appointed President and CEO of Fortis Inc. in 1996. Mr. Marshall serves on the Boards of all Fortis utilities in western Canada and the Caribbean and the Board of Fortis Properties Corporation. He is also a Director of Toromont Industries Ltd.

John S. McCallum ∗★ *Professor of Finance, University of Manitoba, Winnipeg, MB*
Mr. McCallum, 65, joined the Fortis Inc. Board in July 2001 and is Chair of the Governance and Nominating Committee of the Board. He was Chairman of Manitoba Hydro from 1991 to 2000 and Policy Advisor to the Federal Minister of Finance from 1984 to 1991. Mr. McCallum is a Director of FortisBC Inc. and FortisAlberta Inc. He also serves as a Director of IGM Financial Inc., Toromont Industries Ltd. and Wawanesa.

Harry McWatters ★ *Wine Consultant, Summerland, BC*
Mr. McWatters, 63, joined the Fortis Inc. Board in May 2007. He is the founder and past President of Sumac Ridge Estate Wine Group. Mr. McWatters is President of Harry McWatters Inc., Vintage Consulting Group Inc., Okanagan Wine Academy and Black Sage Vineyards Ltd. He was appointed Chair of the Board of FortisBC Inc. in 2006. Mr. McWatters has been a Director of FortisBC Inc. since 2005 and a Director of Terasen Inc. since November 2007.

David G. Norris ∗✷ *Corporate Director, St. John's, NL*
Mr. Norris, 61, joined the Fortis Inc. Board in May 2005 and was appointed Chair of the Audit Committee of the Board in May 2006. He has been a financial and management consultant since 2001, prior to which he was Executive Vice-President, Finance and Business Development, Fishery Products International Limited. Previously, he held Deputy Minister positions with Department of Finance and Treasury Board, Government of Newfoundland and Labrador. Mr. Norris was appointed Chair of the Board of Newfoundland Power Inc. in 2006. He has been a Director of Newfoundland Power Inc. since 2003 and a Director of Fortis Properties Corporation since 2006.

Michael A. Pavey ✷ *Corporate Director, Moncton, NB*
Mr. Pavey, 61, joined the Fortis Inc. Board in May 2004. He retired as Executive Vice-President and Chief Financial Officer of Major Drilling Group International Inc. in 2006. Prior to joining Major Drilling in 1999, he held senior executive positions with a major integrated electric utility in western Canada. Mr. Pavey was previously a Director of Maritime Electric Company, Limited.

Roy P. Rideout ★✷ *Corporate Director, Halifax, NS*
Mr. Rideout, 61, joined the Fortis Inc. Board in March 2001 and is Chair of the Human Resources Committee of the Board. He retired as Chairman and CEO of Clarke Inc. in October 2002. Prior to 1998, Mr. Rideout served as President of Newfoundland Capital Corporation Limited and held senior executive positions in the Canadian airline industry. He also serves as a Director of the Halifax International Airport Authority and NAV CANADA.

Investor Information

Transfer Agent and Registrar

Computershare Trust Company of Canada ("Computershare") is responsible for the maintenance of shareholder records and the issue, transfer and cancellation of stock certificates. Transfers can be effected at its Halifax, Montreal and Toronto offices. Computershare also distributes dividends and shareholder communications. Inquiries with respect to these matters and corrections to shareholder information should be addressed to the Transfer Agent.

Computershare Trust Company of Canada

9th Floor, 100 University Avenue
Toronto, ON M5J 2Y1
T: 514.982.7555 or 1.866.586.7638
F: 416.263.9394 or 1.888.453.0330
W: www.computershare.com/fortisinc

Direct Deposit of Dividends

Shareholders may obtain automatic electronic deposit of dividends to their designated Canadian financial institutions by contacting the Transfer Agent.

Duplicate Annual Reports

While every effort is made to avoid duplications, some shareholders may receive extra reports as a result of multiple share registrations. Shareholders wishing to consolidate these accounts should contact the Transfer Agent.

Eligible Dividend Designation

For purposes of the enhanced dividend tax credit rules contained in the *Income Tax Act* (Canada) and any corresponding provincial and territorial tax legislation, all dividends paid on common and preferred shares after December 31, 2005 by Fortis to Canadian residents are designated as "eligible dividends." Unless stated otherwise, all dividends paid by Fortis hereafter are designated as "eligible dividends" for the purposes of such rules.

Dividend Reinvestment Plan and Consumer Share Purchase Plan

Fortis Inc. offers a Dividend Reinvestment Plan ("DRIP")(1) and a Consumer Share Purchase Plan ("CSPP")(2) to Common Shareholders as a convenient method of increasing their investments in Fortis Inc. Participants have dividends plus any optional contributions (DRIP: minimum of $100, maximum of $30,000 annually; CSPP: minimum of $25, maximum of $20,000 annually) automatically deposited in the Plans to purchase additional Common Shares. Shares can be purchased quarterly on March 1, June 1, September 1 and December 1 at the average market price then prevailing on the Toronto Stock Exchange. Inquiries should be directed to the Transfer Agent.

(1) *All registered holders of Common Shares who are residents of Canada are eligible to participate in the DRIP. Shareholders residing outside Canada may also participate unless participation is not allowed in that jurisdiction. Residents of the United States, its territories or possessions are not eligible to participate.*

(2) *The CSPP is offered to residents of the provinces of Newfoundland and Labrador and Prince Edward Island.*

Share Listings

The Common Shares; First Preference Shares, Series C; First Preference Shares, Series E; First Preference Shares, Series F; and First Preference Shares, Series G of Fortis Inc. are listed on the Toronto Stock Exchange and trade under the ticker symbols FTS, FTS.PR.C, FTS.PR.E, FTS.PR.F and FTS.PR.G, respectively.

Valuation Day

For capital gains purposes, the valuation day prices are as follows:

December 22, 1971	$ 1.531
February 22, 1994	$ 7.156

CONSOLIDATED FINANCIAL STATEMENTS OF

TERASEN GAS INC.

YEARS ENDED DECEMBER 31, 2004 AND 2003

Management's Responsibility

The consolidated financial statements have been prepared by management, which is responsible for the integrity and objectivity of this information. These financial statements have been prepared in conformity with Canadian generally accepted accounting principles and, where appropriate, include some amounts that are based on management's best estimates and judgments. The financial information presented elsewhere in the annual report is consistent with that in the consolidated financial statements.

Management has established systems of internal control which are designed to provide reasonable assurance that assets are safeguarded from loss and that reliable financial records are maintained. These systems are monitored by internal auditors.

KPMG LLP, the independent auditors appointed by the shareholders, have audited the consolidated financial statements of the Company in accordance with Canadian generally accepted auditing standards and have expressed their opinion upon completion of such audits in the following report. In order to provide their opinion on these consolidated financial statements, the shareholders' auditors review the system of internal controls and conduct their work to the extent they consider appropriate.

The Board of Directors, through its Audit Committee, oversees management's responsibilities for financial reporting and internal control. The Audit Committee meets with the internal auditors, the independent auditors and management to discuss auditing and financial matters and to review the consolidated financial statements and the independent auditors' report. The Audit Committee reports its findings to the Board for consideration in approving the consolidated financial statements for issuance to the shareholders.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the consolidated statements of financial position of Terasen Gas Inc. as at December 31, 2004 and 2003 and the consolidated statements of earnings, retained earnings and cash flows for the years then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2004 and 2003 and the results of its operations and its cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

Cash is defined as cash or bank indebtedness.

1. SIGNIFICANT ACCOUNTING POLICIES

The preparation of these consolidated financial statements in conformity with Canadian generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses in the financial statements, as well as the disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

In the opinion of Management, these consolidated financial statements have been properly prepared within reasonable limits of materiality and reflect the following summary of significant accounting policies.

(a) BASIS OF PRESENTATION

On April 25, 2003, the Company changed its name from BC Gas Utility Ltd. to Terasen Gas Inc. The consolidated financial statements include the accounts of the Company and its subsidiaries, including Terasen Gas (Squamish) Inc. ("Squamish").

Certain comparative figures have been reclassified to conform with the current year's presentation.

(b) REGULATION

The Company and Squamish are primarily engaged in the transmission and retail distribution of natural gas for residential, commercial and large industrial customers in British Columbia and are subject to the regulation of the British Columbia Utilities Commission ("the BCUC").

The BCUC exercises statutory authority over such matters as rates of return, construction and operation of facilities, accounting practices, rates, and contractual agreements with customers.

In order to recognize the economic effects of regulation, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under generally accepted accounting principles.

(c) INVENTORIES

Inventories of gas in storage are valued at weighted-average cost. Supplies and other inventories are valued at the lower of cost and net realizable value.

(d) PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment are stated at cost less accumulated depreciation and unamortized contributions in aid of construction. Cost includes all direct expenditures for system expansions, betterments and replacements, an allocation of overhead costs and an allowance for funds used during construction. When allowed by the BCUC, regulated operations capitalize an allowance for equity funds used during construction at approved rates.

Depreciation of regulated assets is recorded on a straight-line basis over their useful lives. Depreciation rates for regulated assets are approved by the respective regulator.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

The cost of regulated depreciable property retired, together with removal costs less salvage, is charged to accumulated depreciation as is any gain or loss incurred on disposal.

(e) IMPAIRMENT OF LONG-LIVED ASSETS

On January 1, 2004, the Company adopted the Canadian Institute of Chartered Accountants ("CICA") standard for recognizing, measuring and disclosing impairment of long-lived assets held for use. A long-lived asset is tested for recoverability when events or circumstances indicate that its carrying amount may not be recoverable. The new standard has had no impact on the Company's financial results.

(f) ASSET RETIREMENT OBLIGATIONS

On January 1, 2004, the Company adopted the new CICA standard for the recognition, measurement and disclosure of liabilities for asset retirement obligations and the associated asset retirement costs. Under the new standard the fair value of a liability for an asset retirement obligation must be recognized in the period in which it is incurred if a reasonable estimate of fair value can be made. The fair value is added to the carrying amount of the associated asset, which is then expensed over the asset's estimated useful life. The liability is accreted over the useful life of the asset through charges to expenses.

As the fair value of future removal and site restoration costs are not currently determinable, the adoption of the policy does not result in the recording of an asset retirement liability and therefore the consolidated financial statements have not been impacted by the new standard. In addition, for regulated operations there is a reasonable expectation that asset retirement costs would be recoverable through future rates.

(g) RATE STABILIZATION ACCOUNTS

The Company is authorized by the BCUC to maintain rate stabilization accounts to mitigate the effect on its earnings of unpredictable and uncontrollable factors, namely volume volatility caused principally by weather and natural gas cost volatility. The Revenue Stabilization Adjustment Mechanism ("RSAM") accumulates the margin impact of variations in the actual versus forecast use for residential and commercial customers.

In 2004 the Gas Cost Reconciliation Account ("GCRA"), which accumulates differences between actual natural gas costs and forecast natural gas costs as recovered in base rates, was replaced by the Commodity Cost Reconciliation Account ("CCRA") and the Midstream Cost Reconciliation Account ("MCRA"). The two new accounts were approved by the BCUC to segregate costs that are allocable to all sales customers (MCRA) and all residential customers and certain commercial and industrial customers for whom Terasen Gas acquires gas supply (CCRA).

All rate stabilization account balances are amortized and recovered through rates as approved by the BCUC.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

(h) DEFERRED CHARGES

The Company defers certain charges which the regulatory authorities or contractual arrangements require or permit to be recovered through future rates. Deferred charges are amortized over various periods as approved by the BCUC and depending on the nature of the charges.

Deferred charges include long-term debt issue costs which are amortized over the term of the related debt.

Deferred charges not subject to regulation relate to projects which may benefit future periods and will be capitalized on completion, expensed on project abandonment, or are being amortized on a straight-line basis over their useful lives.

(i) DERIVATIVE FINANCIAL INSTRUMENTS

The Company utilizes derivatives and other financial instruments to manage its exposure to changes in foreign currency exchange rates, interest rates and energy commodity prices.

A derivative must be designated and effective to be accounted for as a hedge. The Company designates each derivative instrument as a hedge of specific assets or liabilities on the balance sheet or specific firm commitments or anticipated transactions. The Company also assesses, both at inception and on an ongoing basis, whether the derivative instruments that are used in each hedging transaction are effective in offsetting changes in fair values or cash flows of the hedged items.

As approved by the regulator, derivatives are used to manage natural gas price risk in the natural gas distribution operations. The majority of the natural gas supply contracts have floating, rather than fixed prices. The Company uses natural gas price swap contracts to fix the effective purchase price. Any differences between the effective cost of natural gas purchased and the price of natural gas included in rates are recorded in deferral accounts (CCRA and MCRA), and subject to regulatory approval, are passed through in future rates to customers.

The Company's short-term borrowings and variable rate long-term debt are exposed to interest rate risk.

Foreign currency risk in natural gas distribution operations relates mainly to purchases and sales of natural gas denominated in U.S. dollars, and is thereby managed through regulatory deferral accounts. Certain foreign currency risks in the natural gas distribution operations are managed through the use of foreign currency derivatives on behalf of customers.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

(j) REVENUE RECOGNITION

The Company recognizes revenues when products have been delivered or services have been performed.

Revenues from natural gas sales are recorded on the basis of regular meter readings and estimates of customer usage since the last meter reading date to the end of the year and adjusted for the Revenue Stabilization Adjustment Mechanism and other BCUC approved orders.

(k) POST-EMPLOYMENT BENEFIT PLANS

The Company sponsors a number of employee benefits plans. These plans include both defined benefit and defined contribution pension plans, and various other post-retirement benefit plans.

The cost of pensions and other post-retirement benefits earned by employees is actuarially determined as the employee provides service, except when the BCUC requires costs to be expensed as paid. The Company uses the projected benefit method based on years of service and estimates of expected returns on plan assets, salary escalation, retirement age of employees, mortality and expected future health-care costs. The discount rate used to value liabilities is based on AA Corporate bond yields. The Company accrues the cost of defined benefit pensions and post-employment benefits as the employee provides services, except when the BCUC requires costs to be expensed as paid.

The expected return on plan assets is based on management's estimate of the long-term expected rate of return on plan assets and a market-related value of plan assets. The market-related value of assets as of December 31, 2004 is calculated as the average of the market value of invested assets at December 31, 2004 and two actuarially determined extrapolated market values of invested assets at December 31, 2004. The two extrapolated market values are calculated by using the market value of invested assets at December 31, 2002 rolled forward to December 31, 2004 using 2003 and 2004 net contributions and assumed investment returns, and the market value of invested assets at December 31, 2003 rolled forward to December 31, 2004 using 2004 net contributions and assumed investment returns. These three amounts are then averaged to determine the market-related value of plan assets used in calculating net benefit expense.

Adjustments, in excess of 10% of the greater of the accrued benefit obligation and plan asset value, that result from plan amendments, changes in assumptions and experience gains and losses are amortized over the expected average remaining service life of the employee group covered by the plan. Experience will often deviate from the actuarial assumptions resulting in actuarial gains and losses.

Defined contribution plan costs are expensed by the Company as contributions are payable.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

(l) INCOME TAXES

The Company and Squamish account for and recover income tax expense in rates as prescribed by the BCUC for ratemaking purposes. This includes accounting for income taxes by the taxes payable method and accounting for certain deferral and rate stabilization accounts on a net of realized tax basis, as approved by the BCUC. Therefore, future income taxes related to temporary differences are not recorded. The taxes payable method is followed as there is reasonable expectation that all future income taxes will be recovered in rates when they become payable.

2. RESTRUCTURING

During the year ended December 31, 2003, the Company's parent undertook a management and administrative restructuring and integration of its natural gas distribution operations. The initiative was undertaken to generate efficiencies and harmonize processes and systems between the Company and Terasen Gas (Vancouver Island) Inc., a company related by common ownership. As a result of the restructuring, the Company recorded a charge of $3.0 million in 2003 and $0.4 million in 2004, net of previously recorded accruals, tax and the deferral of an amount for future recovery from customers through rates. The pre-tax charges have been included in operations and maintenance expense.

3. PROPERTY, PLANT AND EQUIPMENT

2004	Weighted average depreciation rate	Cost	Accumulated depreciation	Net book Value
Natural gas distribution systems	**2.40%**	**$ 2,556.0**	**$ 505.8**	**$ 2,050.2**
Plant, buildings and equipment	**9.30%**	**223.1**	**94.5**	**128.6**
Land and land rights	**0.60%**	**82.5**	**1.3**	**81.2**
		$ 2,861.6	**$ 601.6**	**$ 2,260.0**

2003	Weighted average depreciation rate	Cost	Accumulated depreciation	Net book Value
Natural gas distribution systems	2.40%	$ 2,546.4	$ 470.6	$ 2,075.8
Plant, buildings and equipment	8.40%	240.2	102.4	137.8
Land and land rights	0.60%	73.1	0.9	72.2
		$ 2,859.7	$ 573.9	$ 2,285.8

4. RATE STABILIZATION ACCOUNTS

	2004	2003
Current Assets		
RSAM	$ 11.1	$ 8.8
CCRA	2.7	-
	13.8	8.8
Long-Term Assets		
RSAM	27.9	32.2
	27.9	32.2
Current Liabilities		
MCRA	(27.6)	-
GCRA	-	(2.5)
	(27.6)	(2.5)
Net rate stabilization accounts	$ 14.1	$ 38.5

The current portion of the rate stabilization accounts represents the amounts expected to be recovered in rates over the next twelve months. Actual recoveries will vary depending on actual natural gas consumption and recovery amounts approved by the BCUC.

The RSAM account is anticipated to be recovered in rates over three years. Recovery of the RSAM balance is dependent upon annually approved rates and actual gas consumption volumes. The MCRA and CCRA accounts are anticipated to be fully recovered or paid within the next fiscal year.

5. LONG-TERM DEBT

	2004	2003
(a) Purchase Money Mortgages:		
11.80% Series A, due September 30, 2015	$ 74.9	$ 74.9
10.30% Series B, due September 30, 2016	200.0	200.0
(b) Debentures and Medium Term Note Debentures:		
9.75% Series D, due December 17, 2006	20.0	20.0
10.75% Series E, due June 8, 2009	59.9	59.9
6.20% Series 9, due June 2, 2008	188.0	188.0
6.95% Series 11, due September 21, 2029	150.0	150.0
6.50% Series 12, due July 20, 2005	200.0	200.0
6.50% Series 13, due October 16, 2007	100.0	100.0
6.15% Series 16, due July 31, 2006	100.0	100.0
Floating Rate Series 17, interest rate of 2.93% (2003 – 3.02%) due September 26, 2005	150.0	150.0
6.50% Series 18, due May 1, 2034	150.0	-
Various series, weighted-average interest rate of 9.63% (2003 – 9.63%) due in 2005	45.0	45.0
Obligations under capital leases, at 6.23% (2003 – 6.20%)	10.8	11.7
Total long-term debt	1,448.6	1,299.5
Less: current portion of long-term debt	397.2	2.2
	$ 1,051.4	$ 1,297.3

5. LONG-TERM DEBT (CONTINUED)

(a) PURCHASE MONEY MORTGAGES:

The Series A and Series B Purchase Money Mortgages are secured equally and rateably by a first fixed and specific mortgage and charge on the Company's Coastal Division assets, and are subject to the restrictions of the Trust Indenture dated December 3, 1990. The aggregate principal amount of Purchase Money Mortgages that may be issued under the Trust Indenture is limited to $425 million.

(b) DEBENTURES AND MEDIUM TERM NOTE DEBENTURES:

The Company's debentures are unsecured obligations but are subject to the restrictions of the Trust Indenture dated November 1, 1977, as amended and supplemented.

The Company's Series B Purchase Money Mortgages, Series E Debentures, and Series 11, Series 13, Series 16 and Series 18 Medium Term Note Debentures are redeemable in whole or in part at the option of the Company at a price equal to the greater of the Canada Yield Price, as defined in the applicable Trust Indenture, and the principal amount of the debt to be redeemed, plus accrued and unpaid interest to the date specified for redemption. The Canada Yield Price is calculated as an amount that provides a yield slightly above the yield on an equivalent maturity Government of Canada bond.

Required principal repayments over the next five years are as follows:

2005	$ 397.2
2006	122.2
2007	102.2
2008	190.2
2009	62.1

6. OTHER LONG-TERM LIABILITIES AND DEFERRED CREDITS

	2004	2003
Pension and other post-employment benefit liabilities	**$ 19.9**	$ 18.7
Deferred gains on sale of natural gas distribution assets	**60.3**	30.2
	$ 80.2	$ 48.9

The deferred gains on sale of natural gas distribution assets occurred upon the sale of pipeline assets to certain municipalities in 2001, 2002 and 2004. The pre-tax gains of $66.5 million on combined cash proceeds of $135.9 million are being amortized over the 17-year terms of the operating leases that commenced at the time of the sale transactions. These operating lease commitments are included in the table in Note 14.

7. SHARE CAPITAL

The Company is authorized to issue 500,000,000 common shares, 100,000,000 first preference shares and 100,000,000 second preference shares, all without par value.

	2004	2003
Common shares, 59,591,732 shares issued	**$ 594.0**	$ 594.0

CONTRIBUTED SURPLUS

Income tax benefits in the amount of $33.7 million (2003 - $17.0 million) relating to transactions with entities under common control were recorded as a credit to contributed surplus in 2004.

8. EMPLOYEE BENEFIT PLANS

The Company is a sponsor of pension plans for eligible employees. The plans include registered defined benefit pension plans, supplemental unfunded arrangements, which provide pension benefits in excess of statutory limits, and defined contributory plans. The Company also provides post-employment benefits other than pensions for retired employees. The following is a summary of each type of plan:

DEFINED BENEFIT PLANS

Retirement benefits under the defined benefit plans are based on employees' years of credited service and remuneration. Company contributions to the plan are based upon independent actuarial valuations. The most recent actuarial valuations of the defined benefit pension plans for funding purposes were at December 31, 2002 and December 31, 2001 and the date of the next required valuations are December 31, 2005 and December 31, 2004. The December 31, 2004 valuation will not be completed until the second quarter of 2005. The expected weighted average remaining service life of employees covered by the defined benefit pension plans is 9.5 years (2003 - 9.5 years).

DEFINED CONTRIBUTION PLAN

Effective in 2000 all new non-union employees become members of defined contribution pension plans. Company contributions to the plan are based upon employee age and pensionable earnings.

SUPPLEMENTAL PLANS

Certain employees are eligible to receive supplemental benefits under both the defined benefit and defined contribution plans. The supplemental plans provide pension benefits in excess of statutory limits. The supplemental plans are unfunded and are secured by letters of credit.

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

OTHER POST-EMPLOYMENT BENEFITS

The Company provides retired employees with other post-employment benefits that include, depending on circumstances, supplemental health, and life insurance coverage. Post-employment benefits are unfunded and annual expense is recorded on an accrual basis based on independent actuarial determinations, considering among other factors, health care cost escalation. The most recent actuarial valuations were completed as at December 31, 2002. The expected weighted average remaining service life of employees covered by these benefit plans is 9.0 years (2003 - 9.0 years).

The Company measures its accrued benefit obligations and the fair value of plan assets for accounting purposes as at December 31 each year. The financial positions of the employee defined benefit pension plans and other benefit plans are presented in the tables below:

	Pension benefit plans		Other benefit plans	
	2004	2003	**2004**	2003
Plan assets				
Fair value, beginning of year	**$ 169.8**	$ 146.8	**$ -**	$ -
Transfer to parent	**(2.4)**	-	**-**	-
Actual return on plan assets	**19.2**	20.5	**-**	-
Employers' contributions	**3.7**	7.4	**0.8**	0.6
Employees' contributions	**2.4**	2.4	**-**	-
Benefits and settlements paid	**(7.4)**	(7.1)	**(0.8)**	(0.6)
Other	**(0.1)**	(0.2)	**-**	-
Fair value, end of year	**185.2**	169.8	**-**	-
Accrued benefit obligation				
Obligation, beginning of year	**189.4**	171.4	**48.5**	36.0
Transfer to parent	**(12.0)**	-	**(0.8)**	-
Current service cost	**4.8**	5.5	**0.8**	0.9
Interest cost	**11.1**	11.3	**3.0**	2.4
Employees' contributions	**2.4**	2.4	**-**	-
Benefits and settlements paid	**(7.4)**	(7.1)	**(0.8)**	(0.6)
Change in discount rate	**3.2**	3.6	**2.1**	2.0
Actuarial loss	**-**	1.0	**-**	10.8
Past service cost and other	**0.2**	1.3	**0.1**	(3.0)
Balance, end of year	**191.7**	189.4	**52.9**	48.5
Funded status - plan deficit	**(6.5)**	(19.6)	**(52.9)**	(48.5)
Unamortized transitional obligation (benefit)	**(14.0)**	(16.7)	**6.2**	7.8
Unamortized actuarial loss	**21.1**	29.4	**23.4**	23.9
Unamortized past service costs	**3.8**	6.3	**(1.0)**	(1.3)
Accrued benefit asset (liability)	**$ 4.4**	$ (0.6)	**$ (24.3)**	$ (18.1)

The net accrued benefit liability is included in other long-term liabilities and deferred credits (Note 6).

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

Included in the accrued benefit obligation and fair value of the plan assets at year-end are the following amounts in respect of plans with accrued benefit obligations in excess of fair value of assets:

	Pension benefit plans		Other benefit plans	
	2004	2003	**2004**	2003
Accrued benefit obligations:				
Unfunded plans	**$ 8.4**	$ 17.1	**$ 52.9**	$ 48.5
Funded plans	**137.6**	125.3	**-**	-
	146.0	142.4	**52.9**	48.5
Fair value of plan assets	**136.5**	120.5	**-**	-
Funded status deficit	**$ (9.5)**	$ (21.9)	**$ (52.9)**	$ (48.5)

The accrued benefit obligations for unfunded pension benefit plans are secured by letters of credit.

The net benefit plan expense is as follows:

	Pension benefit plans		Other benefit plans	
	2004	2003	**2004**	2003
Current service cost	**$ 4.8**	$ 5.5	**$ 0.8**	$ 0.9
Interest cost on projected benefit obligations	**11.1**	11.3	**3.0**	2.4
Actual positive return on plan assets	**(19.2)**	(15.0)	**-**	-
Net actuarial losses	**3.2**	2.8	**2.1**	2.2
Past service costs	**0.2**	0.8	**-**	(4.4)
Net benefit plan expense before adjustments	**0.1**	5.4	**5.9**	1.1
Adjustments to recognize the long-term nature of employee future benefit costs:				
Difference between actual and expected return on plan assets	**7.0**	3.0	**-**	-
Difference between actual and recognized actuarial losses in year	**(1.7)**	(2.4)	**(0.2)**	(12.0)
Difference between actual and recognized past service costs in year	**0.2**	(0.1)	**-**	4.4
Amortization of transitional obligation (benefit)	**(1.8)**	(1.9)	**1.6**	12.8
Other	**1.1**	0.2	**0.1**	-
Net benefit plan expense	**$ 4.9**	$ 4.2	**$ 7.4**	$ 6.3
Defined contribution plan expense	**$ 0.9**	$ 1.1		
	$ 5.8	$ 5.3		

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

BENEFIT PLAN ASSETS

The weighted-average asset allocation by asset category of the Company's defined benefit pension plans and other funded benefit plans is as follows:

	Pension Benefit Plans	
	2004	2003
Equity securities	**54%**	56%
Fixed income securities	**38%**	35%
Other assets	**8%**	9%
Total assets	**100%**	100%

The investment policy for benefit plan assets is to optimize the risk-return using a portfolio of various asset classes. The Company's primary investment objectives are to secure registered pension plans, and maximize investment returns in a cost-effective manner while not compromising the security of the respective plans. The pension plans utilize external investment managers to manage the investment policy. Assets in the plan are held in trust by independent third parties.

The pension plans do not directly hold any shares of the Company's parent.

SIGNIFICANT ASSUMPTIONS

The discount rate assumption used in determining pension and post-retirement benefit obligations and net benefit expense reflects the market yields, as of the measurement date, on high-quality debt instruments. The expected rate of return on plan assets assumption is reviewed annually by management, in conjunction with actuaries. The assumption is based on the expected returns for the various asset classes, weighted by the portfolio allocation.

The weighted average significant actuarial assumptions used to determine the accrued benefit obligation and the benefit plan expense are as follows:

	Pension benefit plans		Other benefit plans	
	2004	2003	**2004**	2003
Accrued benefit obligation				
Discount rate at December 31, based on AA Corporate bonds	**6.00%**	6.25%	**6.25%**	6.50%
Rate of compensation increase	**3.33%**	3.32%	**-**	-
Net benefit plan expense				
Discount rate at January 1, based on AA Corporate bonds	**6.25%**	6.50%	**6.25%**	6.50%
Expected rate of return on plan assets	**7.50%**	7.50%	**-**	-

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

The assumed health-care cost trend rates for other post-employment benefit plans are as follows:

	2004	2003
Extended health benefits		
Initial health care cost trend rate	**9.0%**	10.0%
Annual rate of decline in trend rate	**1.0%**	1.0%
Ultimate health care cost trend rate	**5.0%**	5.0%
Year that the rate reaches the ultimate trend rate	**2008**	2008
Medical Services Plan Benefits Premium trend rate	**4.0%**	4.0%

A one percentage-point change in assumed health-care cost trend rates would have the following effects:

2004	One percentage-point increase	One percentage-point decrease
Effect on the total of the service costs and interest cost components of the benefit plan expense	**$ 0.9**	**$ (0.7)**
Effect on accrued benefit obligation	**10.7**	**(8.9)**

CASH FLOWS

Total cash contributions for employee benefits plans consist of:

	Pension benefit plans	
	2004	2003
Funded plans	**$ 3.3**	$ 6.6
Beneficiaries of unfunded plans	**1.3**	1.5
Defined contribution plans	**0.9**	1.1
Total	**$ 5.5**	$ 9.2

The contributions for 2005 are anticipated to be approximately the same as 2004 for defined pension benefit plans and other benefit plans.

BENEFIT CHANGES

Effective January 1, 2004, the Company modified its post-employment benefit program for non-union active employees in order to provide future retirees with more choice of coverage and to reduce the Company's exposure to future health and group life cost increases. The new plan is predominantly a defined contribution plan incorporating a Company-paid health spending account, a security health plan and life insurance. Provincial medical services plan premiums will now be paid by the retiree.

All plan members who have retired on or before December 31, 2004 receive benefits under the plans that were in effect when they retired, which includes the payment of provincial medical services plan premiums by the Company. Employees electing to retire during 2005 will have a choice between the new and old plan, and employees retiring after December 31, 2005 will participate in the new plan.

These assumptions, including the post-employment benefit plan changes, were included in the calculation of the accrued benefit obligation at December 31, 2003 and 2004.

9. STOCK-BASED COMPENSATION

The Company's parent, Terasen Inc., grants stock options to employees of the Company under its stock option plans. In 2004, 192,200 options (2003 – 148,200 options) to purchase shares in the Company's parent were issued to employees of the Company at an average exercise price of $23.88 (2003 - $19.75). In 2004, the Company was charged, and recorded as an expense, $0.3 million (2003 - $0.1 million) for the fair value of the stock compensation granted in 2004 by Terasen Inc.

10. FINANCING COSTS

	2004	2003
Interest and expense on long-term debt	**$ 99.2**	$ 104.7
Interest on short-term debt	**7.7**	7.8
Interest capitalized	**(0.5)**	(0.6)
	$ 106.4	$ 111.9

11. INCOME TAXES

VARIATION IN EFFECTIVE INCOME TAX RATE

Consolidated income taxes vary from the amount that would be computed by applying the federal and provincial combined statutory income tax rate of 34.58% (2003 – 36.02%) to earnings before income taxes as shown in the following table:

	2004	2003
Earnings before income taxes	**$ 106.2**	$ 109.5
Combined statutory income tax rate	**34.58%**	36.02%
Combined income taxes at statutory rate	**$ 36.7**	$ 39.4
Increase (decrease) in income taxes resulting from:		
Capital cost allowance and other deductions claimed for income tax purposes over amounts recorded for accounting purposes	**(8.4)**	(6.9)
Large Corporations Tax in excess of surtax	**4.3**	5.0
Non-deductible expenses and non-taxable income	**4.2**	3.1
Other	**(1.4)**	(1.5)
Actual consolidated income taxes	**$ 35.4**	$ 39.1
Effective Income Tax Rate	**33.33%**	35.71%

FUTURE INCOME TAXES

As a result of the Company accounting for income taxes following the taxes payable method for its regulated operations, the Company has not recognized net future income tax liabilities amounting to $215.8 million at December 31, 2004 (2003 – $206.1 million) and has not recognized a future income tax expense of $9.7 million for the year ended December 31, 2004 (2003 – $9.8 million), all of which were calculated using the asset and liability method.

12. FINANCIAL INSTRUMENTS

FAIR VALUE ESTIMATES

The carrying values of cash and short-term investments, accounts receivable, bank indebtedness, short-term notes and accounts payable and accrued liabilities approximate their fair values due to the relatively short period to maturity of the instruments.

The fair value of the Company's long-term debt, calculated by discounting the future cash flow of each debt issue at the estimated yield to maturity for the same or similar issues at December 31, 2004, or by using available quoted market prices, is estimated at $1,649.8 million (2003 - $1,480.8 million). The majority of the Company's long-term debt relates to regulated operations which enables the Company to recover the existing financing charges through rates or tolls.

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates cannot be determined with precision as they are subjective in nature and involve uncertainties and matters of judgment.

DERIVATIVE INSTRUMENTS

The Company uses derivative instruments to hedge its exposures to fluctuations in natural gas prices, interest rates and foreign currency exchange rates.

Asset (Liability)			**2004**		2003	
December 31 (in millions)	Number of swaps	Term to maturity (years)	Carrying Value	Fair Value	Carrying Value	Fair Value
Natural Gas Commodity Swaps	122	Up to 2	**$ 1.7**	**$ (6.8)**	$ (7.4)	$ 4.6
Foreign Currency Swaps	-	-	**-**	**-**	-	(0.9)

The natural gas derivatives fair value reflects only the value of the natural gas derivatives and not the offsetting change in value of the underlying future purchases of natural gas. These fair values reflect the estimated amounts the Company would receive or pay to terminate the contracts at the stated dates.

The Company is exposed to credit risk in the event of non-performance by counterparties to derivative instruments. Because it deals with high credit quality institutions in accordance with established credit approval practices, the Company does not expect any counterparties to fail to meet their obligations.

13. RELATED PARTY TRANSACTIONS

(a) The Company sold property, plant and equipment totaling $3.1 million in 2004 (2003 – nil) to its parent company, Terasen Inc., at net book value and transferred accrued employee benefit plan liabilities of $6.5 million to its parent in 2004.

(b) The Company received $4.0 million in 2004 (2003 - $3.9 million) from Terasen Gas (Vancouver Island) Inc. ("TGVI"), a subsidiary company of Terasen Inc., for transporting gas through the Company's pipeline system.

(c) The Company paid approximately $42.4 million during the year ended December 31, 2004 (2003 - $42.4 million) for customer care and billing services to a limited partnership. Terasen Inc. holds a 30% interest in the limited partnership and jointly controls it. The Company is committed to pay approximately $42.0 million per year as base contract fees through the end of 2006.

14. RELATED PARTY TRANSACTIONS (CONT'D)

(d) The Company paid $8.6 million in 2004 to its parent company for management services. At the beginning of 2004 employees and assets relating to corporate services were transferred from the Company to Terasen Inc. to separate these functions from the regulated operations. As a result of the separation, a management fee was established that would retain the level of cost as approved in the 2003 revenue requirement. In 2003, $8.6 million of operating expenses were included in the Company's financial results related to these employees and assets.

(e) The Company charged affiliated companies $3.6 million in 2004 (2003 – $0.3 million) for management services. During the fourth quarter of 2003 the Company and TGVI incurred restructuring charges, as disclosed in Note 2, to facilitate the operational integration of the two companies. The integration exercise facilitates a shared services approach that enables both companies to harness the benefits from economies of scale by having a single management and support structure that avoids duplication of work and allows customers to benefit from the synergies created.

14. COMMITMENTS AND CONTINGENCIES

The Company has entered into operating leases for certain building space and natural gas distribution assets. In addition, the Company enters into gas purchase contracts.

The following table sets forth the Company's operating lease and purchase obligations due in the years indicated:

	Operating leases	Purchase obligations	Total
2005	$ 16.0	$ 710.7	$ 726.7
2006	15.7	318.7	334.4
2007	15.2	70.6	85.8
2008	15.8	20.1	35.9
2009	15.7	16.0	31.7
2010 and later	135.0	-	135.0
	$ 213.4	$ 1,136.1	$ 1,349.5

Gas purchase contract commitments are based on market prices that vary with gas commodity indices. The amounts disclosed reflect index prices that were in effect at December 31, 2004.

On January 4, 2005 the Company terminated an operating lease for a certain building and paid $49.4 million to acquire the related building. Accordingly, payments related to this operating lease are not included in the above table. Effective January 4, 2005 the building is included in property, plant and equipment and has been included in the Company's rate base revenue requirement for 2005.

A number of claims and lawsuits seeking damages and other relief are pending against the Company. Management is of the opinion, based upon information presently available, that it is unlikely that any liability, to the extent not provided for through insurance or otherwise, would be material in relation to the Company's consolidated financial statements.

CONSOLIDATED FINANCIAL STATEMENTS OF

TERASEN GAS INC.

YEARS ENDED DECEMBER 31, 2005 AND 2004

MANAGEMENT'S RESPONSIBILITY

The consolidated financial statements have been prepared by management, which is responsible for the integrity and objectivity of this information. These financial statements have been prepared in conformity with Canadian generally accepted accounting principles and, where appropriate, include some amounts that are based on management's best estimates and judgments. The financial information presented elsewhere in the annual report is consistent with that in the consolidated financial statements.

Management has established systems of internal control which are designed to provide reasonable assurance that assets are safeguarded from loss and that reliable financial records are maintained. These systems are monitored by internal auditors.

KPMG LLP, the independent auditors, have audited the consolidated financial statements of the Company in accordance with Canadian generally accepted auditing standards and have expressed their opinion upon completion of such audits in the following report. In order to provide their opinion on these consolidated financial statements, the independent auditors review the system of internal controls and conduct their work to the extent they consider appropriate.

The Board of Directors, through its Audit Committee, oversees management's responsibilities for financial reporting and internal control. The Audit Committee meets with the internal auditors, the independent auditors and management to discuss auditing and financial matters and to review the consolidated financial statements and the independent auditors' report. The Audit Committee reports its findings to the Board for consideration in approving the consolidated financial statements for issuance to the shareholders.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the consolidated statements of financial position of Terasen Gas Inc. as at December 31, 2005 and 2004 and the consolidated statements of earnings, retained earnings and cash flows for the years then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2005 and 2004 and the results of its operations and its cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

1. SIGNIFICANT ACCOUNTING POLICIES

The preparation of these consolidated financial statements in conformity with Canadian generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses in the financial statements, as well as the disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

In the opinion of Management, these consolidated financial statements have been properly prepared within reasonable limits of materiality and reflect the following summary of significant accounting policies.

(a) BASIS OF PRESENTATION

The consolidated financial statements include the accounts of the Company and its subsidiaries, including Terasen Gas (Squamish) Inc. (“Squamish”).

Certain comparative figures have been reclassified to conform with the current year’s presentation.

(b) REGULATION

The Company and Squamish are subject to the regulation of the British Columbia Utilities Commission (“the BCUC”), an independent regulatory authority. The Company has a multi-year agreement that will expire at the end of 2007. This multi-year agreement is a cost-of-service based agreement with allowed rates of return on approved rate base set by the BCUC. For 2005, the Company’s allowed rate of return was 9.03%. The allowed rate of return is based on a notional debt-equity ratio of 67% debt and 33% equity. The Company has an annual review process for rate approvals and allowed rates of return are reset annually, unless directed differently by the BCUC.

The BCUC exercises statutory authority over such matters as rates of return, construction and operation of facilities, accounting practices, rates, and contractual agreements with customers.

In order to recognize the economic effects of regulation, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under generally accepted accounting principles for non-regulated businesses.

The impacts of rate regulation on the Company’s operations for the twelve months ending December 31, 2005 and as at December 31, 2005 are described in the Significant Accounting Policies, and in Note 2 “Property, Plant and Equipment”, Note 3 “Rate Stabilization Accounts”, Note 4 “Other Assets”, Note 6 “Other Long-Term Liabilities and Deferred Credits”, Note 8 “Employee Benefit Plans”, Note 10 “Financing Costs”, and Note 11 “Income Taxes”.

(c) INVENTORIES

Inventories of gas in storage are valued at weighted-average cost. Supplies and other inventories are valued at the lower of cost and net realizable value.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

(d) PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment are stated at cost less accumulated depreciation and unamortized contributions in aid of construction. Cost includes all direct expenditures for system expansions, betterments and replacements, an allocation of overhead costs and an allowance for funds used during construction. When allowed by the BCUC, regulated operations capitalize an allowance for equity funds used during construction at approved rates.

Depreciation of regulated assets is recorded on a straight-line basis over their useful lives. Depreciation rates for regulated assets are approved by the respective regulator.

The cost of regulated depreciable property retired, together with removal costs less salvage, is charged to accumulated depreciation as is any gain or loss incurred on disposal.

(e) IMPAIRMENT OF LONG-LIVED ASSETS

Long-lived assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets is measured by a comparison of the carrying amount of an asset to estimated undiscounted future cash flows expected to be generated by the asset. If the carrying amount of an asset exceeds its estimated future cash flows, an impairment charge is recognized by the amount by which the carrying amount of the asset exceeds the fair value of the asset.

(f) ASSET RETIREMENT OBLIGATIONS

The Company recognizes the fair value of a future asset retirement obligation as a liability in the period in which it incurs a legal obligation associated with the retirement of tangible long-lived assets that results from the acquisition, construction, development, and/or normal use of the assets. The Company concurrently recognizes a corresponding increase in the carrying amount of the related long-lived asset that is depreciated over the life of the asset. The fair value of the asset retirement obligation is estimated using the expected cash flow approach that reflects a range of possible outcomes discounted at a credit-adjusted risk-free interest rate. Subsequent to the initial measurement, the asset retirement obligation is adjusted at the end of each period to reflect the passage of time and changes in the estimated future cash flows underlying the obligation. Changes in the obligation due to the passage of time are recognized in income as an operating expense using the interest method. Changes in the obligation due to changes in estimated cash flows are recognized as an adjustment of the carrying amount of the related long-lived asset that is depreciated over the remaining life of the asset.

As the fair value of future removal and site restoration costs for the Company’s natural gas distribution systems are not currently determinable, the Company has not recognized an asset retirement obligation at December 31, 2005 and 2004. For regulated operations there is a reasonable expectation that asset retirement costs would be recoverable through future rates.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

(g) RATE STABILIZATION ACCOUNTS

The Company is authorized by the BCUC to maintain rate stabilization accounts to mitigate the effect on its earnings of unpredictable and uncontrollable factors, namely volume volatility caused principally by weather and natural gas cost volatility. The Revenue Stabilization Adjustment Mechanism (“RSAM”) accumulates the margin impact of variations in the actual versus forecast use for residential and commercial customers.

In 2004 the Gas Cost Reconciliation Account (“GCRA”), which accumulates differences between actual natural gas costs and forecast natural gas costs as recovered in base rates, was replaced by the Commodity Cost Reconciliation Account (“CCRA”) and the Midstream Cost Reconciliation Account (“MCRA”). The two new accounts were approved by the BCUC to segregate costs that are allocable to all sales customers (MCRA) and all residential customers and certain commercial and industrial customers for whom Terasen Gas acquires gas supply (CCRA).

All rate stabilization account balances are amortized and recovered through rates as approved by the BCUC.

(h) DEFERRED CHARGES

The Company defers certain charges which the regulatory authorities or contractual arrangements require or permit to be recovered through future rates. Deferred charges are amortized over various periods as approved by the BCUC and depending on the nature of the charges.

Deferred charges include long-term debt issue costs which are amortized over the term of the related debt.

Deferred charges not subject to regulation relate to projects which are expected to benefit future periods and will be capitalized on completion, expensed on project abandonment, or amortized over their useful lives.

(i) DERIVATIVE FINANCIAL INSTRUMENTS

The Company utilizes derivatives and other financial instruments to manage its exposure to changes in foreign currency exchange rates, interest rates and energy commodity prices.

A derivative must be designated and effective to be accounted for as a hedge. The Company designates each derivative instrument as a hedge of specific assets or liabilities on the balance sheet or specific firm commitments or anticipated transactions. The Company also assesses, both at inception and on an ongoing basis, whether the derivative instruments that are used in each hedging transaction are effective in offsetting changes in fair values or cash flows of the hedged items. Derivatives accounted for as a hedge are not recognized in the consolidated financial statements.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Derivative financial instruments not designated as effective as a hedge are recorded at fair value at the balance sheet date. The carrying amount of these derivatives, which comprise unrealized gains and losses, are included in accounts receivable in the case of contracts in a gain position and accounts payable and accrued liabilities in the case of contracts in a loss position. The offsetting gain/loss is recorded in the rate stabilization accounts, as realized gains/losses are included in rates and passed on to customers.

As approved by the regulator, derivatives are used to manage natural gas price risk in the natural gas distribution operations. The majority of the natural gas supply contracts have floating, rather than fixed prices. The Company uses natural gas price swap contracts to fix the effective purchase price. Any differences between the effective cost of natural gas purchased and the price of natural gas included in rates are recorded in deferral accounts (CCRA and MCRA), and subject to regulatory approval, are passed through in future rates to customers.

Foreign currency risk in natural gas distribution operations relates mainly to purchases and sales of natural gas denominated in U.S. dollars, and is thereby managed through regulatory deferral accounts.

The Company's short-term borrowings and variable rate long-term debt are exposed to interest rate risk.

(j) REVENUE RECOGNITION

The Company recognizes revenues when products have been delivered or services have been performed.

Revenues from natural gas sales are recorded on the basis of regular meter readings and estimates of customer usage since the last meter reading date to the end of the year and are adjusted for the Revenue Stabilization Adjustment Mechanism and other BCUC approved orders.

(k) POST-EMPLOYMENT BENEFIT PLANS

The Company sponsors a number of employee benefits plans. These plans include both defined benefit and defined contribution pension plans, and various other post-retirement benefit plans.

The cost of pensions and other post-retirement benefits earned by employees is actuarially determined as the employee provides service, except when the BCUC requires costs to be expensed as paid. The Company uses the projected benefit method based on years of service and estimates of expected returns on plan assets, salary escalation, retirement age of employees, mortality and expected future health-care costs. The discount rate used to value liabilities is based on AA Corporate bond yields. The Company accrues the cost of defined benefit pensions and post-employment benefits as the employee provides services, except when the BCUC requires costs to be expensed as paid.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

The expected return on plan assets is based on management's estimate of the long-term expected rate of return on plan assets and a market-related value of plan assets. The market-related value of assets as of December 31, 2005 is calculated as the average of the market value of invested assets at December 31, 2005 and two actuarially determined extrapolated market values of invested assets at December 31, 2005. The two extrapolated market values are calculated by using the market value of invested assets at December 31, 2003 rolled forward to December 31, 2005 using 2004 and 2005 net contributions and assumed investment returns, and the market value of invested assets at December 31, 2004 rolled forward to December 31, 2005 using 2005 net contributions and assumed investment returns. These three amounts are then averaged and reported as the market-related value of plan assets.

Adjustments, in excess of 10% of the greater of the accrued benefit obligation and plan asset value, that result from plan amendments, changes in assumptions and experience gains and losses, are amortized over the expected average remaining service life of the employee group covered by the plan. Experience will often deviate from the actuarial assumptions resulting in actuarial gains and losses.

Defined contribution plan costs are expensed by the Company as contributions are payable.

(l) INCOME TAXES

The Company and Squamish account for and recover income tax expense in rates as prescribed by the BCUC for ratemaking purposes. This includes accounting for income taxes by the taxes payable method and accounting for certain deferral and rate stabilization accounts on a net of realized tax basis, as approved by the BCUC. Therefore, future income taxes related to temporary differences are not recorded. The taxes payable method is followed as there is reasonable expectation that all future income taxes will be recovered in rates when they become payable.

(m) VARIABLE INTEREST ENTITIES

Effective January 1, 2005, the Company adopted the CICA Handbook Accounting Guideline 15 "Consolidation of Variable Interest Entities". The Company has performed a review of the entities with whom it conducts business and has concluded that there are no entities that are required to be consolidated or variable interests that are required to be disclosed under the requirements of the Guideline.

(Tabular amounts in millions of dollars, except where stated otherwise)

2. PROPERTY, PLANT AND EQUIPMENT

2005	Weighted average depreciation rate	Cost	Accumulated depreciation	Net book Value
Natural gas distribution systems	**2.30%**	**$ 2,623.8**	**$ 546.8**	**$ 2,077.0**
Plant, buildings and equipment	**9.80%**	**277.5**	**106.7**	**170.8**
Land and land rights	**0.00%**	**82.8**	**1.4**	**81.4**
		$ 2,984.1	**$ 654.9**	**$ 2,329.2**

2004	Weighted average depreciation rate	Cost	Accumulated depreciation	Net book Value
Natural gas distribution systems	2.40%	$ 2,556.0	$ 505.8	$ 2,050.2
Plant, buildings and equipment	9.30%	223.1	94.5	128.6
Land and land rights	0.60%	82.5	1.3	81.2
		$ 2,861.6	$ 601.6	$ 2,260.0

As allowed by the regulators, during the year ended December 31, 2005 the Company capitalized an allowance for equity funds during construction at approved rates of $0.6 million (2004 - $0.4 million) and approved capitalized overhead of $26.3 million (2004 - $26.1 million), with offsetting inclusions in earnings.

3. RATE STABILIZATION ACCOUNTS

	2005	2004
Current Assets		
RSAM	**$ 13.0**	$ 11.1
CCRA	**-**	2.7
	13.0	13.8
Long-Term Assets		
RSAM	**25.9**	27.9
	38.9	27.9
Current Liabilities		
CCRA	**(21.3)**	-
MCRA	**(26.6)**	(27.6)
	(47.9)	(27.6)
Net rate stabilization accounts	**$ (9.0)**	$ 14.1

The current portion of the rate stabilization accounts represents the amounts expected to be recovered or refunded in rates over the next twelve months. Actual recoveries/(refunds) will vary depending on natural gas consumption and recovery amounts approved by the BCUC.

(Tabular amounts in millions of dollars, except where stated otherwise)

3. RATE STABILIZATION ACCOUNTS (CONTINUED)

The RSAM account is anticipated to be recovered in rates over three years. Recovery of the RSAM balance is dependent upon annually approved rates and actual gas consumption volumes. The MCRA and CCRA accounts are anticipated to be fully recovered or paid within the next fiscal year.

4. OTHER ASSETS

	2005	2004
Deferred charges		
Subject to rate regulation and approved for recovery in rates		
Income taxes recoverable on post-employment benefits	**$ 10.6**	$ 8.4
Long-term debt issue costs	**7.7**	6.9
Commercial commodity unbundling costs	**3.2**	4.0
Replacement transportation agreement	**3.2**	3.6
Other items approved for recovery in rates	**8.9**	7.0
Subject to rate regulation but not yet approved for recovery in rates		
Inland Pacific Connector Development costs	**-**	5.4
Other items subject to rate regulation but not yet approved	**1.8**	0.3
	35.4	35.6
Investments	**-**	0.3
Long-term receivables	**10.0**	9.6
	$ 45.4	$ 45.5

Amortization of these deferred charges in rates for the year ended December 31, 2005 totalled $7.7 million (2004 - $4.9 million).

The deferral account for income taxes on post-employment benefits relates to income tax amounts on post employment benefit expense. The BCUC allows post-employment benefits to be collected from customers through rates calculated on the accrual basis, rather than a cash paid basis, which produces a timing difference for income tax purposes. Since the Company accounts for income taxes using the taxes payable basis of accounting, the tax effect of this timing difference is included in other assets, and will be reduced as cash payments for post-employment benefits exceed required accruals and amounts collected from customers in rates.

Long-term debt issue costs are amortized over the terms of the related debt, whose maturity dates are provided in Note 5 “Long-Term Debt”.

The commercial commodity unbundling costs deferred are costs incurred to develop a third-party marketer alternative for commercial customers to purchase natural gas from suppliers other than the Company. The BCUC has approved the recovery of these costs in rates over a five-year period, of which four years remain at December 31, 2005.

4. OTHER ASSETS (CONTINUED)

The deferral account for the replacement transportation agreement relates to amounts that the Company is allowed to recover from customers in rates in order to cover any shortfall in revenues relative to a minimum amount approved by the BCUC on the Company's Southern Crossing Pipeline. The deferral account is being amortized and recovered in rates over a five-year period, of which four years remain at December 31, 2005.

Deferred charges and deferred credits for rate regulated entities that have been aggregated in the table above and in Note 6 relate to more than fifty deferral accounts, none of which exceed $1.6 million individually. All of these accounts have been approved by regulators in prior annual rate approvals or orders and are being amortized over various periods depending on the nature of the costs.

On October 5, 2005, the BCUC issued a decision that denied recovery of approximately $5.4 million of costs that the Company incurred to develop the Inland Pacific Connector pipeline project that is planned to bring new gas transmission capacity to the Lower Mainland of British Columbia when economic conditions make the project viable. The Company still believes that the project is viable and intends to keep all existing permits and land right approvals in place that have already been granted. The Company has filed an application to have the decision reconsidered, but has recorded an after-tax provision of $3.6 million at December 31, 2005.

(Tabular amounts in millions of dollars, except where stated otherwise)

5. LONG-TERM DEBT

	2005	2004
(a) Purchase Money Mortgages:		
11.80% Series A, due September 30, 2015	**$ 74.9**	$ 74.9
10.30% Series B, due September 30, 2016	**200.0**	200.0
(b) Debentures and Medium Term Note Debentures:		
9.75% Series D, due December 17, 2006	**20.0**	20.0
10.75% Series E, due June 8, 2009	**59.9**	59.9
6.20% Series 9, due June 2, 2008	**188.0**	188.0
6.95% Series 11, due September 21, 2029	**150.0**	150.0
6.50% Series 12, due July 20, 2005	**-**	200.0
6.50% Series 13, due October 16, 2007	**100.0**	100.0
6.15% Series 16, due July 31, 2006	**100.0**	100.0
Floating Rate Series 17, interest rate of 2.93% (2004) due September 26, 2005	**-**	150.0
6.50% Series 18, due May 1, 2034	**150.0**	150.0
5.90% Series 19, due February 26, 2035	**150.0**	-
Floating rate, Series 20, interest rate of 3.36% due October 24, 2007	**150.0**	-
Various series, weighted average interest rate of 9.63% (2004 – 9.63%) due in 2005	**-**	45.0
Obligations under capital leases, at 6.07% (2004 – 6.23%)	**8.8**	10.8
Total long-term debt	**1,351.6**	1,448.6
Less: current portion of long-term debt	**121.7**	397.2
	$ 1,229.9	$ 1,051.4

(a) PURCHASE MONEY MORTGAGES:

The Series A and Series B Purchase Money Mortgages are secured equally and rateably by a first fixed and specific mortgage and charge on the Company's Coastal Division assets, and are subject to the restrictions of the Trust Indenture dated December 3, 1990. The aggregate principal amount of Purchase Money Mortgages that may be issued under the Trust Indenture is limited to $425 million.

(b) DEBENTURES AND MEDIUM TERM NOTE DEBENTURES:

The Company's debentures are unsecured obligations but are subject to the restrictions of the Trust Indenture dated November 1, 1977, as amended and supplemented.

(Tabular amounts in millions of dollars, except where stated otherwise)

5. LONG-TERM DEBT (CONTINUED)

The Company's Series B Purchase Money Mortgages, Series E Debentures, and Series 11, Series 13, Series 16, Series 18, and Series 19 Medium Term Note Debentures are redeemable in whole or in part at the option of the Company at a price equal to the greater of the Canada Yield Price, as defined in the applicable Trust Indenture, and the principal amount of the debt to be redeemed, plus accrued and unpaid interest to the date specified for redemption. The Canada Yield Price is calculated as an amount that provides a yield slightly above the yield on an equivalent maturity Government of Canada bond.

Required principal repayments over the next five years are as follows:

2006	$ 121.7
2007	251.8
2008	189.8
2009	61.6
2010	1.8

6. OTHER LONG-TERM LIABILITIES AND DEFERRED CREDITS

	2005	2004
Pension and other post-employment benefit liabilities	**$ 26.3**	$ 19.9
Deferred gains on sale of natural gas distribution assets	**59.2**	60.3
Deferred credits		
Subject to rate regulation and approved for recovery in rates		
Earnings Sharing Mechanism	**8.8**	1.6
Deferred Interest Mechanism	**2.4**	2.5
Other items approved for recovery in rates	**6.8**	7.8
Other deferred credits subject to rate regulation	**1.6**	1.0
	$ 105.1	$ 93.1

The deferred gains on sale of natural gas distribution assets occurred upon the sale of pipeline assets to certain municipalities in 2001, 2002, 2004 and 2005. The pre-tax gains of $70.5 million on combined cash proceeds of $141.1 million are being amortized over the 17-year terms of the operating leases that commenced at the time of the sale transactions. These operating lease commitments are included in the table in Note 14.

Amortization of these deferred credits in rates for the year ended December 31, 2005 totalled $4.5 million (2004 - $3.8 million).

The Earnings Sharing Mechanism is a mechanism agreed to in the Company's multi-year agreement to share, on a 50/50 basis, amounts earned by the Company on its regulated activities that exceed or are less than amounts allowed by the BCUC in the cost-of-service allowed return calculations. These amounts are shared on an after-tax basis, and are returned to customers in rates.

(Tabular amounts in millions of dollars, except where stated otherwise)

6. OTHER LONG-TERM LIABILITIES AND DEFERRED CREDITS (CONTINUED)

The Company has a deferred interest mechanism which has been approved by the BCUC which requires that variances due to differences in long-term and short-term borrowings and interest rates from those that have been approved in rates be returned to customers in future rates. The impact of this mechanism was to increase financing costs for the year ended December 31, 2005 by $2.0 million (2004 - $1.4 million). The balance of the account is being amortized on a straight-line basis over three years.

7. SHARE CAPITAL

The Company is authorized to issue 500,000,000 common shares, 100,000,000 first preference shares and 100,000,000 second preference shares, all without par value.

	2005	2004
Common shares, 59,591,732 shares issued	**$ 594.0**	$ 594.0

CONTRIBUTED SURPLUS

Income tax benefits in the amount of $30.9 million (2004 - $33.7 million) relating to transactions with entities under common control were recorded as a credit to contributed surplus in 2005.

DIVIDEND POLICY

As part of its approval of the acquisition of Terasen Inc. by Kinder Morgan, Inc., the BCUC imposed a number of conditions intended to ring-fence the Company from its parent companies. These restrictions included a prohibition on the payment of dividends unless the Company has in place at least as much common equity as that deemed by the BCUC for rate-making purposes. As a result of this and the Decision issued by the BCUC on March 2, 2006 described in Note 15, the Company must maintain a percentage of common equity to total capital that is at least as much as that determined by the BCUC from time to time for ratemaking purposes. Dividends from the Company will not be allowed by the regulator if the requisite equity is not in place. The Company’s dividend policy is intended to ensure that it maintains at least as much common equity as that deemed by the BCUC for rate-making purposes.

8. EMPLOYEE BENEFIT PLANS

The Company is a sponsor of pension plans for eligible employees. The plans include registered defined benefit pension plans, supplemental unfunded arrangements, which provide pension benefits in excess of statutory limits, and defined contributory plans. The Company also provides post-employment benefits other than pensions for retired employees. The following is a summary of each type of plan:

DEFINED BENEFIT PLANS

Retirement benefits under the defined benefit plans are based on employees' years of credited service and remuneration. Company contributions to the plan are based upon independent actuarial valuations. The most recent actuarial valuations of the defined benefit pension plans for funding purposes were at December 31, 2002 and December 31, 2004 and the dates of the next required valuations are December 31, 2005 and December 31, 2007. The December 31, 2005 valuations will not be completed until the second quarter of 2006. The expected weighted average remaining service life of employees covered by the defined benefit pension plans is 9.5 years (2004 - 9.5 years).

DEFINED CONTRIBUTION PLAN

Effective in 2000 all new non-union employees become members of defined contribution pension plans. Company contributions to the plan are based upon employee age and pensionable earnings.

SUPPLEMENTAL PLANS

Certain employees are eligible to receive supplemental benefits under both the defined benefit and defined contribution plans. The supplemental plans provide pension benefits in excess of statutory limits. The supplemental plans are unfunded and are secured by letters of credit.

OTHER POST-EMPLOYMENT BENEFITS

The Company provides retired employees with other post-employment benefits that include, depending on circumstances, supplemental health, and life insurance coverage. Post-employment benefits are unfunded and annual expense is recorded on an accrual basis based on independent actuarial determinations, considering among other factors, health care cost escalation. The most recent actuarial valuations were completed as at December 31, 2002 and the date of the next required valuation is December 31, 2005 which will not be completed until the second quarter of 2006. The expected weighted average remaining service life of employees covered by these benefit plans is 9.0 years (2004 - 9.0 years).

(Tabular amounts in millions of dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

The Company measures its accrued benefit obligations and the fair value of plan assets for accounting purposes as at December 31 each year. The financial positions of the employee defined benefit pension plans and other benefit plans are presented in the tables below:

	Defined benefit pension plans		Other benefit plans	
	2005	2004	**2005**	2004
Plan assets				
Fair value, beginning of year	**$ 185.2**	$ 169.8	$ -	$ -
Transfer to parent	**-**	(2.4)	**-**	-
Actual return on plan assets	**18.9**	19.2		-
Company contributions	**4.3**	3.7	**0.9**	0.9
Contributions by members	**2.9**	2.4	**-**	-
Benefits and settlements paid	**(8.8)**	(7.4)	**(0.8)**	(0.8)
Other	**(0.1)**	(0.1)	**(0.1)**	(0.1)
Fair value, end of year	**202.4**	185.2	**-**	-
Accrued benefit obligation				
Obligation, beginning of year	**191.7**	189.4	**52.9**	48.5
Transfer to parent	**-**	(12.0)	**-**	(0.8)
Current service cost	**5.1**	4.8	**0.9**	0.9
Interest cost	**11.5**	11.1	**3.2**	3.0
Contributions by members	**2.8**	2.4	**-**	-
Benefits and settlements paid	**(8.8)**	(7.4)	**(0.8)**	(0.8)
Actuarial losses	**0.6**	-	**-**	-
Change in discount rate	**10.6**	3.2	**8.1**	2.1
Past service cost and other	**0.2**	0.2	**-**	0.1
Balance, end of year	**213.7**	191.7	**64.3**	52.9
Funded status - plan deficit	**(11.3)**	(6.5)	**(64.3)**	(52.9)
Unamortized transitional obligation (benefit)	**(12.2)**	(14.0)	**4.7**	6.2
Unamortized actuarial loss	**24.7**	21.1	**29.5**	23.4
Unamortized past service costs	**3.6**	3.8	**(1.0)**	(1.0)
Accrued benefit asset (liability)	**$ 4.8**	$ 4.4	**$ (31.1)**	$ (24.3)

The net accrued benefit liability is included in other long-term liabilities and deferred credits (Note 6).

(Tabular amounts in millions of dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

Included in the accrued benefit obligation and fair value of the plan assets at year-end are the following amounts in respect of plans with accrued benefit obligations in excess of fair value of assets:

	Pension benefit plans		Other benefit plans	
	2005	2004	**2005**	2004
Accrued benefit obligations:				
Unfunded plans	**$ 10.2**	$ 8.4	**$ 64.3**	**$ 52.9**
Funded plans	**153.0**	137.6	**-**	-
	163.2	146.0	**64.3**	52.9
Fair value of plan assets	**150.1**	136.5	**-**	-
Funded status deficit	**$ (13.1)**	$ (9.5)	**$ (64.3)**	$ (52.9)

The accrued benefit obligations for unfunded pension benefit plans are secured by letters of credit.

The net benefit plan expense is as follows:

	Pension benefit plans		Other benefit plans	
	2005	2004	**2005**	2004
Current service cost	**$ 5.1**	$ 4.8	**$ 0.9**	$ 0.8
Interest cost on projected benefit obligations	**11.5**	11.1	**3.2**	3.0
Actual positive return on plan assets	**(18.9)**	(19.2)	**-**	-
Net actuarial losses	**11.2**	3.2	**8.1**	2.1
Past service costs	**0.3**	0.2	**0.1**	-
Net benefit plan expense before adjustments	**9.2**	0.1	**12.3**	5.9
Adjustments to recognize the long-term nature of employee future benefit costs:				
Difference between actual and expected return on plan assets	**6.1**	7.0	**-**	-
Difference between actual and recognized actuarial losses in year	**(9.9)**	(1.7)	**(6.1)**	(0.2)
Difference between actual and recognized past service costs in year	**0.3**	0.2	**(0.1)**	-
Amortization of transitional obligation (benefit)	**(1.8)**	(1.8)	**1.6**	1.6
Other	**-**	1.1	**-**	0.1
Net benefit plan expense	**$ 3.9**	$ 4.9	**$ 7.7**	$ 7.4
Defined contribution plan expense	**$ 1.0**	$ 0.9		
	$ 4.9	$ 5.8		

(Tabular amounts in millions of dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

BENEFIT PLAN ASSETS

The weighted-average asset allocation by asset category of the Company's defined benefit pension plans and other funded benefit plans is as follows:

	Defined Benefit Pension Plans	
	2005	2004
Equity securities	**58%**	54%
Fixed income securities	**34%**	38%
Other assets	**8%**	8%
Total assets	**100%**	100%

The investment policy for benefit plan assets is to optimize the risk-return using a portfolio of various asset classes. The Company's primary investment objectives are to secure registered pension plans, and maximize investment returns in a cost-effective manner while not compromising the security of the respective plans. The pension plans utilize external investment managers to manage the investment policy. Assets in the plan are held in trust by independent third parties.

The pension plans do not directly hold any shares of the Company's parent.

SIGNIFICANT ASSUMPTIONS

The discount rate assumption used in determining pension and post-retirement benefit obligations and net benefit expense reflects the market yields, as of the measurement date, on high-quality debt instruments. The expected rate of return on plan assets assumption is reviewed annually by management, in conjunction with actuaries. The assumption is based on the expected returns for the various asset classes, weighted by the portfolio allocation.

The weighted average significant actuarial assumptions used to determine the accrued benefit obligation and the benefit plan expense are as follows:

	Pension benefit plans		Other benefit plans	
	2005	2004	**2005**	2004
Accrued benefit obligation				
Discount rate at December 31, based on AA Corporate bonds	**5.00%**	6.00%	**5.00%**	6.00%
Rate of compensation increase	**3.36%**	3.33%	**-**	-
Net benefit plan expense				
Discount rate at January 1, based on AA Corporate bonds	**6.00%**	6.25%	**6.00%**	6.25%
Expected rate of return on plan assets	**7.50%**	7.50%	**-**	-

(Tabular amounts in millions of dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

The assumed health-care cost trend rates for other post-employment benefit plans are as follows:

	2005	2004
Extended health benefits		
Initial health care cost trend rate	**8.0%**	9.0%
Annual rate of decline in trend rate	**1.0%**	1.0%
Ultimate health care cost trend rate	**5.0%**	5.0%
Year that the rate reaches the ultimate trend rate	**2008**	2008
Medical Services Plan Benefits Premium trend rate	**4.0%**	4.0%

A one percentage-point change in assumed health-care cost trend rates would have the following effects:

2005	One percentage-point increase	One percentage-point decrease
Effect on the total of the service costs and interest cost components of the benefit plan expense	**$ 1.3**	**$ (1.0)**
Effect on accrued benefit obligation	**12.6**	**(10.5)**

CASH FLOWS

Total cash contributions for employee benefit plans consist of:

	Employee benefit plans	
	2005	2004
Funded plans	**$ 3.8**	$ 3.3
Beneficiaries of unfunded plans	**1.4**	1.3
Defined contribution plans	**1.0**	0.9
Total	**$ 6.2**	$ 5.5

The contributions for 2006 are anticipated to be approximately the same as 2005 for defined pension benefit plans and other benefit plans.

BENEFIT CHANGES

Effective January 1, 2004, the Company modified its post-employment benefit program for non-union active employees in order to provide future retirees with more choice of coverage and to reduce the Company's exposure to future health and group life cost increases. The new plan is predominantly a defined contribution plan incorporating a Company-paid health spending account, a security health plan and life insurance. Provincial medical services plan premiums will now be paid by the retiree.

(Tabular amounts in millions of dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

All plan members who have retired on or before December 31, 2004 receive benefits under the plans that were in effect when they retired, which includes the payment of provincial medical services plan premiums by the Company. Employees who retired during 2005 had a choice between the new and old plan, and employees retiring after December 31, 2005 will participate in the new plan.

These assumptions, including the post-employment benefit plan changes, were included in the calculation of the accrued benefit obligation at December 31, 2003.

IMPACT OF RATE REGULATION

As required by the regulator, the Company is required under its approved cost of service model to defer the amounts of pension benefit expense that exceed or are less than the amounts approved by the regulator to be recovered in rates each year. During the year ended December 31, 2005 the Company has deferred pension expense of $0.3 million that exceeded the amount approved by the regulator to be recovered in rates for 2005.

9. STOCK-BASED COMPENSATION

The Company's parent, Terasen Inc., granted stock options to employees of the Company under its stock option plans until November 30, 2005, when all of the outstanding shares of Terasen Inc. were purchased by Kinder Morgan, Inc. In 2005, 164,500 options (2004 – 192,200 options) to purchase shares in Terasen Inc. were issued to employees of the Company at an average exercise price of $29.45 (2004 - $23.88). In 2005, the Company was charged, and recorded as an expense, $0.4 million (2004 - $0.3 million) for the fair value of the stock compensation granted in 2005 by Terasen Inc.

10. FINANCING COSTS

	2005	2004
Interest and expense on long-term debt	**$ 102.4**	$ 99.2
Interest on short-term debt	**9.3**	7.7
Interest capitalized	**(0.6)**	(0.5)
	$ 111.1	$ 106.4

As allowed by the regulators, during the year ended December 31, 2005, the Company capitalized interest for borrowing requirements for construction of assets that have not been included in rate base of $0.6 million (2004 - $0.5 million).

(Tabular amounts in millions of dollars, except where stated otherwise)

11. INCOME TAXES

VARIATION IN EFFECTIVE INCOME TAX RATE

Consolidated income taxes vary from the amount that would be computed by applying the federal and provincial combined statutory income tax rate of 33.97% (2004 – 34.58%) to earnings before income taxes as shown in the following table:

	2005	2004
Earnings before income taxes	**$ 104.9**	$ 106.2
Combined statutory income tax rate	**33.97%**	34.58%
Combined income taxes at statutory rate	**$ 35.7**	$ 36.7
Increase (decrease) in income taxes resulting from:		
Capital cost allowance and other deductions claimed for income tax purposes over amounts recorded for accounting purposes	**(1.5)**	(8.4)
Large Corporations Tax in excess of surtax	**3.7**	4.3
Non-deductible expenses and non-taxable income	**3.6**	4.2
Other	**(1.9)**	(1.4)
Actual consolidated income taxes	**$ 39.6**	$ 35.4
Effective Income Tax Rate	**37.75%**	33.33%

FUTURE INCOME TAXES

As a result of the Company accounting for income taxes following the taxes payable method for its regulated operations, the Company has not recognized net future income tax liabilities amounting to $230.9 million at December 31, 2005 (2004 – $215.8 million) and has not recognized a future income tax expense of $15.1 million for the year ended December 31, 2005 (2004 – $9.7 million), all of which were calculated using the asset and liability method.

12. FINANCIAL INSTRUMENTS

FAIR VALUE ESTIMATES

The carrying values of cash and short-term investments, accounts receivable, short-term notes and accounts payable and accrued liabilities approximate their fair values due to the relatively short period to maturity of the instruments.

12. FINANCIAL INSTRUMENTS (CONTINUED)

The fair value of the Company's long-term debt, calculated by discounting the future cash flow of each debt issue at the estimated yield to maturity for the same or similar issues at December 31, 2005, or by using available quoted market prices, is estimated at $1,580.7 million (2004 - $1,649.8 million). The majority of the Company's long-term debt relates to regulated operations which enables the Company to recover the existing financing charges through rates or tolls.

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates cannot be determined with precision as they are subjective in nature and involve uncertainties and matters of judgment.

DERIVATIVE INSTRUMENTS

The Company uses derivative instruments to hedge its exposures to fluctuations in natural gas prices, interest rates and foreign currency exchange rates.

Asset (Liability)			**2005**		2004	
December 31 *(in millions)*	Number of swaps and options	Term to maturity (years)	Carrying Value	Fair Value	Carrying Value	Fair Value
Natural Gas						
Commodity Swaps and Options	145	Up to 3	**$ 21.2**	**$ 97.9**	$ -	$ (6.8)
Interest Swaps	3	Up to 2	**-**	**(1.6)**	-	-

The natural gas derivatives fair value reflects only the value of the natural gas derivatives and not the offsetting change in value of the underlying future purchases of natural gas. These fair values reflect the estimated amounts the Company would receive or pay to terminate the contracts at the stated dates.

Included in the carrying value of the natural gas derivatives is $22.2 million of unrealized fair value gains associated with derivative instruments which were deemed to be ineffective at December 31, 2005 and $1.0 million of derivative instruments which did not qualify for hedge accounting that are in a liability position.

The derivatives entered into by the Company relate to regulated operations and any resulting gains or losses are recorded in rate stabilization accounts, subject to regulatory approval, and passed through to customers in future rates.

The Company is exposed to credit risk in the event of non-performance by counterparties to derivative instruments. Because it deals with high credit quality institutions in accordance with established credit approval practices, the Company does not expect any counterparties to fail to meet their obligations.

(Tabular amounts in millions of dollars, except where stated otherwise)

13. RELATED PARTY TRANSACTIONS

(a) The Company sold property, plant and equipment totaling $3.1 million in 2004 to its parent company, Terasen Inc., at net book value and transferred accrued employee benefit plan liabilities of $6.5 million to its parent in 2004.

(b) The Company received $4.1 million in 2005 (2004 – $4.0 million) from Terasen Gas (Vancouver Island) Inc. (“TGVI”), a subsidiary company of Terasen Inc., for transporting gas through the Company’s pipeline system.

(c) The Company paid approximately $43.6 million during the year ended December 31, 2005 (2004 – $42.4 million) for customer care and billing services to a limited partnership. Terasen Inc. holds a 30% interest in the limited partnership and jointly controls it. The Company is committed to pay approximately $42.0 million per year as base contract fees through the end of 2006.

(d) The Company paid $8.7 million in 2005 (2004 – $8.6 million) to its parent company for management services. At the beginning of 2004 employees and assets relating to corporate services were transferred from the Company to Terasen Inc. to separate these functions from the regulated operations. As a result of the separation, a management fee was established that would retain the level of cost as approved in the 2003 revenue requirement.

(e) The Company charged affiliated companies $5.6 million in 2005 (2004 – $3.6 million) for management services.

14. COMMITMENTS AND CONTINGENCIES

The Company has entered into operating leases for certain building space and natural gas distribution assets. In addition, the Company enters into gas purchase contracts.

The following table sets forth the Company’s operating lease and gas purchase obligations due in the years indicated:

	Operating leases	Purchase obligations	Total
2006	$ 16.4	$ 808.9	$ 825.3
2007	16.0	113.6	129.6
2008	16.4	33.2	49.6
2009	16.3	30.2	46.5
2010	16.0	-	16.0
2011 and later	124.6	-	124.6
	$ 205.7	$ 985.9	$ 1,191.6

14. COMMITMENTS AND CONTINGENCIES (CONTINUED)

Gas purchase contract commitments are based on market prices that vary with gas commodity indices. The amounts disclosed reflect index prices that were in effect at December 31, 2005.

A number of claims and lawsuits seeking damages and other relief are pending against the Company. Management is of the opinion, based upon information presently available, that it is unlikely that any liability, to the extent not provided for through insurance or otherwise, would be material in relation to the Company's consolidated financial statements.

15. SUBSEQUENT EVENT

(a) On March 2, 2006 a Decision was issued by the BCUC approving changes to the Company's deemed equity components from 33% to 35%, with effect from January 1, 2006. The same Decision also modified the previously existing generic return on equity ("ROE") reset formula resulting in an increase in allowed ROE's from the levels that would have resulted from the old formula. The changes increased the allowed ROE for 2006 from 8.29% to 8.80% for the Company.

(b) Subsequent to year-end, the Company received a letter dated March 31, 2006 from the British Columbia Social Service tax authority indicating their intention to assess additional provincial sales tax on the Southern Crossing Pipeline which was completed in 2000. The letter received does not indicate the amount to be assessed and a formal notice of assessment has not been received. Any assessment will be appealed when it is received and the Company believes this assessment is without merit and it will not have a material adverse impact on the financial results of the Company.

CONSOLIDATED FINANCIAL STATEMENTS OF

TERASEN GAS INC.

YEARS ENDED DECEMBER 31, 2006 AND 2005

MANAGEMENT'S REPORT

Financial Reporting

Management is responsible for the accompanying consolidated financial statements. These financial statements have been prepared in conformity with Canadian generally accepted accounting principles and, where appropriate, include amounts that are based on management's best estimates and judgments.

The Board of Directors, through its Audit Committee, oversees Management's responsibilities for financial reporting and internal control. The Audit Committee meets with the internal auditors, the independent auditors and management to discuss auditing and financial matters and to review the consolidated financial statements and the independent auditors' report. The Audit Committee reports its findings to the Board for consideration in approving the consolidated financial statements for issuance to the shareholders.

Internal Control over Financial Reporting

Management is also responsible for establishing and maintaining adequate internal control over the Company's financial reporting. The internal control system was designed to provide reasonable assurance to the Company's Management regarding the preparation and presentation of the consolidated financial statements.

Internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management has assessed the effectiveness of the Company's internal control over financial reporting as at December 31, 2006. In making its assessment, Management has used the Committee of Sponsoring Organizations of the Treadway Commission ("COSO") framework in Internal Control – Integrated Framework to evaluate the effectiveness of the Company's internal control over financial reporting. Based on our evaluation, Management has concluded that the Company's internal control over financial reporting was effective as at December 31, 2006.

The Company's independent auditors, PricewaterhouseCoopers LLP, conduct an audit in accordance with Canadian generally accepted auditing standards. Their report outlines the scope of their audit and gives their opinion on the consolidated financial statements.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the consolidated statements of financial position of Terasen Gas Inc. as at December 31, 2006 and the consolidated statements of earnings, retained earnings and cash flows for the year then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2006 and the results of its operations and its cash flows for the year then ended in accordance with Canadian generally accepted accounting principles.

The consolidated financial statements as at December 31, 2005 and for the year then ended were audited by other auditors who expressed an opinion without reservation on those statements in their report dated February 3, 2006, except as to notes 7 and 15 (a), which are as of March 2, 2006 and note 15 (b) which is as of March 31, 2006.

Cash is defined as cash or bank indebtedness.

The accompanying notes are an integral part of these consolidated financial statements.

1. SIGNIFICANT ACCOUNTING POLICIES

The preparation of these consolidated financial statements in conformity with Canadian generally accepted accounting principles (GAAP) requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses in the financial statements, as well as the disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

In the opinion of Management, these consolidated financial statements have been properly prepared within reasonable limits of materiality and reflect the following summary of significant accounting policies.

(a) BASIS OF PRESENTATION

The consolidated financial statements include the accounts of the Company and its subsidiaries, including Terasen Gas (Squamish) Inc. (“Squamish”).

Certain comparative figures have been reclassified to conform with the current year’s presentation.

(b) REGULATION

The Company and Squamish are subject to the regulation of the British Columbia Utilities Commission (“the BCUC”), an independent regulatory authority. The Company has a multi-year agreement that will expire at the end of 2007. This multi-year agreement is a cost-of-service based agreement with allowed rates of return on approved rate base set by the BCUC. On March 2, 2006 a decision was issued by the BCUC approving changes to the Company’s deemed equity components from 33% to 35%, with effect from January 1, 2006. The same decision also modified the previously existing generic return on equity (“ROE”) reset formula resulting in an increase in allowed ROE’s from the levels that would have resulted from the old formula. The changes increased the allowed ROE for 2006 from 8.29% to 8.80% for the Company. For 2007, the allowed ROE was set at 8.37%.

The allowed rate of return is based on a notional debt-equity ratio of 65% debt and 35% equity. The Company has an annual review process for rate approvals and allowed rates of return are reset annually, unless directed differently by the BCUC.

The BCUC exercises statutory authority over such matters as rates of return, construction and operation of facilities, accounting practices, rates, and contractual agreements with customers.

In order to recognize the economic effects of regulation, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under generally accepted accounting principles for non-regulated businesses.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates. In the absence of rate regulation, GAAP would not permit the recognition of regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned. Long-term regulatory assets are recorded in other assets whereas current regulatory assets are recorded in accounts receivable. Regulatory liabilities are recorded in other long-term liabilities and deferred credits.

The impacts of rate regulation on the Company's operations for the twelve months ending December 31, 2006 and as at December 31, 2006 are described in the Significant Accounting Policies, and in Note 2 "Property, Plant and Equipment", Note 3 "Rate Stabilization Accounts", Note 4 "Other Assets", Note 6 "Other Long-Term Liabilities and Deferred Credits", Note 8 "Employee Benefit Plans", Note 10 "Financing Costs", and Note 11 "Income Taxes".

(c) INVENTORIES

Inventories of gas in storage are valued at weighted-average cost. The cost of gas in storage is recovered from customers in future rates. Supplies and other inventories are valued at the lower of cost and net realizable value.

(d) PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment are stated at cost less accumulated depreciation and unamortized contributions in aid of construction. Cost includes all direct expenditures for system expansions, betterments and replacements, an allocation of overhead costs and an allowance for funds used during construction. When allowed by the BCUC, regulated operations capitalize an allowance for equity funds used during construction at approved rates.

Depreciation of regulated assets is recorded on a straight-line basis over their useful lives. Depreciation rates for regulated assets are approved by the respective regulator.

The cost of regulated depreciable property retired, together with removal costs less salvage, is charged to accumulated depreciation, as is any gain or loss incurred on disposal.

(e) IMPAIRMENT OF LONG-LIVED ASSETS

Long-lived assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets is measured by a comparison of the carrying amount of an asset to estimated undiscounted future cash flows expected to be generated by the asset. If the carrying amount of an asset exceeds its estimated future cash flows, an impairment charge is recognized by the amount by which the carrying amount of the asset exceeds the fair value of the asset.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

(f) ASSET RETIREMENT OBLIGATIONS

The Company recognizes the fair value of a future asset retirement obligation as a liability in the period in which it incurs a legal obligation associated with the retirement of tangible long-lived assets that results from the acquisition, construction, development, and/or normal use of the assets. The Company concurrently recognizes a corresponding increase in the carrying amount of the related long-lived asset that is depreciated over the remaining life of the asset. The fair value of the asset retirement obligation is estimated using the expected cash flow approach that reflects a range of possible outcomes discounted at a credit-adjusted risk-free interest rate. Subsequent to the initial measurement, the asset retirement obligation is adjusted at the end of each period to reflect the passage of time and changes in the estimated future cash flows underlying the obligation. Changes in the obligation due to the passage of time are recognized in income as an operating expense using the interest method. Changes in the obligation due to changes in estimated cash flows are recognized as an adjustment of the carrying amount of the related long-lived asset that is depreciated over the remaining life of the asset.

As the fair value of future removal and site restoration costs for the Company's natural gas distribution systems are not currently determinable, the Company has not recognized an asset retirement obligation at December 31, 2006 and 2005. For regulated operations there is a reasonable expectation that asset retirement costs would be recoverable through future rates.

(g) RATE STABILIZATION ACCOUNTS

The Company is authorized by the BCUC to maintain rate stabilization accounts to mitigate the effect on its earnings of unpredictable and uncontrollable factors, namely volume volatility caused principally by weather and natural gas cost volatility. The Revenue Stabilization Adjustment Mechanism ("RSAM") accumulates the margin impact of variations in the actual versus forecast use for residential and commercial customers.

The Commodity Cost Reconciliation Account ("CCRA") and the Midstream Cost Reconciliation Account ("MCRA") accumulate differences between actual natural gas costs and forecast natural gas costs as recovered in base rates. The two accounts segregate costs that are allocable to all sales customers (MCRA) and all residential customers and certain commercial and industrial customers for whom Terasen Gas acquires gas supply (CCRA).

All rate stabilization account balances are recovered through rates as approved by the BCUC.

(h) DEFERRED CHARGES

The Company defers certain charges which the regulatory authorities or contractual arrangements require or permit to be recovered through future rates. Deferred charges are amortized over various periods as approved by the BCUC and depending on the nature of the charges.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Deferred charges include long-term debt issue costs which are amortized over the term of the related debt.

Deferred charges not subject to regulation relate to projects which are expected to benefit future periods and will be capitalized on completion, expensed on project abandonment, or amortized over their useful lives.

(i) DERIVATIVE FINANCIAL INSTRUMENTS

The Company utilizes derivatives and other financial instruments to manage its exposure to changes in foreign currency exchange rates, interest rates and energy commodity prices.

A derivative must be designated and effective to be accounted for as a hedge. The Company designates each derivative instrument as a hedge of specific assets or liabilities on the balance sheet or specific firm commitments or anticipated transactions. The Company also assesses, both at inception and on an ongoing basis, whether the derivative instruments that are used in each hedging transaction are effective in offsetting changes in fair values or cash flows of the hedged items. Derivatives accounted for as a hedge are not recognized in the consolidated financial statements.

Derivative financial instruments not designated as effective as a hedge are recorded at fair value at the balance sheet date. The carrying amount of these derivatives, which comprise unrealized gains and losses, are included in accounts receivable in the case of contracts in a gain position and accounts payable and accrued liabilities in the case of contracts in a loss position. The offsetting gain/loss is recorded in the rate stabilization accounts, as realized gains/losses are included in rates and passed on to customers.

As approved by the regulator, derivatives are used to manage natural gas price risk in the natural gas distribution operations. The majority of the natural gas supply contracts have floating, rather than fixed prices. The Company uses natural gas price swap contracts to fix the effective purchase price. Any differences between the effective cost of natural gas purchased and the price of natural gas included in rates are recorded in deferral accounts (CCRA and MCRA), and subject to regulatory approval, are passed through in future rates to customers.

Foreign currency risk in natural gas distribution operations relates mainly to purchases and sales of natural gas denominated in U.S. dollars, and is thereby managed through regulatory deferral accounts.

The Company's short-term borrowings and variable rate long-term debt are exposed to interest rate risk. The Company manages interest rate risk through the use of interest rate derivatives with payments and receipts under interest rate swap contracts being recognized as adjustments to financing costs.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

(j) REVENUE RECOGNITION

The Company recognizes revenues when products have been delivered or services have been performed.

Revenues from natural gas sales are recorded on the basis of regular meter readings and estimates of customer usage since the last meter reading date to the end of the year and are adjusted for the RSAM and other BCUC approved orders.

(k) POST-EMPLOYMENT BENEFIT PLANS

The Company sponsors a number of employee benefits plans. These plans include both defined benefit and defined contribution pension plans, and various other post-retirement benefit plans.

The cost of pensions and other post-retirement benefits earned by employees is actuarially determined as the employee provides service, except when the BCUC requires costs to be expensed as paid. The Company uses the projected benefit method based on years of service and estimates of expected returns on plan assets, salary escalation, retirement age of employees, mortality and expected future health-care costs. The discount rate used to value liabilities is based on AA Corporate bond yields. The Company accrues the cost of defined benefit pensions and post-employment benefits as the employee provides services, except when the BCUC requires costs to be expensed as paid.

The expected return on plan assets is based on management's estimate of the long-term expected rate of return on plan assets and a market-related value of plan assets. The market-related value of assets as of December 31, 2006 is calculated as the average of the market value of invested assets at December 31, 2006 and two actuarially determined extrapolated market values of invested assets at December 31, 2006. The two extrapolated market values are calculated by using the market value of invested assets at December 31, 2004 rolled forward to December 31, 2006 using 2005 and 2006 net contributions and assumed investment returns, and the market value of invested assets at December 31, 2005 rolled forward to December 31, 2006 using 2006 net contributions and assumed investment returns. These three amounts are then averaged and reported as the market-related value of plan assets.

Adjustments, in excess of 10% of the greater of the accrued benefit obligation and plan asset value, that result from plan amendments, changes in assumptions and experience gains and losses, are amortized over the expected average remaining service life of the employee group covered by the plan. Experience will often deviate from the actuarial assumptions resulting in actuarial gains and losses.

Defined contribution plan costs are expensed by the Company as contributions are payable.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

(l) INCOME TAXES

The Company and Squamish account for and recover income tax expense in rates as prescribed by the BCUC for ratemaking purposes. This includes accounting for income taxes by the taxes payable method and accounting for certain deferral and rate stabilization accounts on a net of realized tax basis, as approved by the BCUC. Therefore, future income taxes related to temporary differences are not recorded. The taxes payable method is followed as there is reasonable expectation that all future income taxes will be recovered in rates when they become payable.

(m) VARIABLE INTEREST ENTITIES

Effective January 1, 2005, the Company adopted the Canadian Institute of Chartered Accountants (CICA) Handbook Accounting Guideline 15 "Consolidation of Variable Interest Entities". The Company has performed a review of the entities with whom it conducts business and has concluded that there are no entities that are required to be consolidated or variable interests that are required to be disclosed under the requirements of the Guideline.

2. PROPERTY, PLANT AND EQUIPMENT

2006

	Weighted average depreciation rate	Cost	Accumulated depreciation	Net book Value
Natural gas distribution systems	**2.33%**	**$ 2,687.9**	**$ 576.5**	**$ 2,111.4**
Plant, buildings and equipment	**8.25%**	**304.5**	**145.3**	**159.2**
Land and land rights	**0.00%**	**83.6**	**1.3**	**82.3**
		$ 3,076.0	**$ 723.1**	**$ 2,352.9**

2005

	Weighted average depreciation rate	Cost	Accumulated depreciation	Net book Value
Natural gas distribution systems	2.34%	$ 2,623.8	$ 546.8	$ 2,077.0
Plant, buildings and equipment	9.81%	277.5	106.7	170.8
Land and land rights	0.00%	82.8	1.4	81.4
		$ 2,984.1	$ 654.9	$ 2,329.2

As allowed by the regulators, during the year ended December 31, 2006 the Company capitalized an allowance for equity funds during construction at approved rates of $0.7 million (2005 - $0.6 million) and approved capitalized overhead of $27.2 million (2005 - $26.3 million), with offsetting inclusions in earnings.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

3. RATE STABILIZATION ACCOUNTS

	2006	2005
Current Assets		
RSAM	**$ 11.3**	$ 13.0
CCRA	**81.3**	-
MCRA	**25.5**	-
	118.1	13.0
Long-Term Assets		
RSAM	**24.7**	25.9
	24.7	25.9
Current Liabilities		
CCRA	**-**	(21.3)
MCRA	**-**	(26.6)
	-	(47.9)
Net rate stabilization accounts	**$ 142.8**	$ (9.0)

The current portion of the rate stabilization accounts represents the amounts expected to be recovered or refunded in rates over the next twelve months. Actual recoveries/(refunds) will vary depending on natural gas consumption and recovery amounts approved by the BCUC. Rate stabilization accounts are presented net of tax, where applicable.

The RSAM account is anticipated to be recovered in rates over three years. Recovery of the RSAM balance is dependent upon annually approved rates and actual gas consumption volumes. The MCRA and CCRA accounts are anticipated to be fully recovered or paid within the next fiscal year.

In the absence of rate regulation, the costs in the rate stabilization accounts above would have been expensed as incurred which would have resulted in decreased margin of $230.9 million (2005 – increased $34.3 million), increased natural gas distribution revenues of $4.3 million (2005 - $0.1 million) and decreased income taxes expense of $74.8 million (2005 – increased $11.4 million).

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

4. OTHER ASSETS

	2006	2005
Deferred charges		
Subject to rate regulation and approved for recovery in rates		
Income taxes recoverable on post-employment benefits	**$ 13.1**	$ 10.6
Long-term debt issue costs	**7.8**	7.7
Commercial commodity unbundling costs	**2.5**	3.2
Replacement transportation agreement	**2.2**	3.2
Other items approved for recovery in rates	**8.5**	8.9
Subject to rate regulation but not yet approved for recovery in rates		
Southern Crossing Pipeline PST Reassessment	**10.0**	-
Other items subject to rate regulation but not yet approved	**-**	1.8
	44.1	35.4
Long-term receivables	**9.6**	10.0
Pension assets (Note 8)	**8.5**	4.9
	$ 62.2	$ 50.3

Amortization of these deferred charges in rates for the year ended December 31, 2006 totaled $2.3 million (2005 - $7.7 million).

The deferral account for income taxes on post-employment benefits relates to income tax amounts on post employment benefit expense. The BCUC allows post-employment benefits to be collected from customers through rates calculated on the accrual basis, rather than a cash paid basis, which produces a timing difference for income tax purposes. Since the Company accounts for income taxes using the taxes payable basis of accounting, the tax effect of this timing difference is included in other assets, and will be reduced as cash payments for post-employment benefits exceed required accruals and amounts collected from customers in rates.

Long-term debt issue costs are amortized over the terms of the related debt, whose maturity dates are provided in Note 5 “Long-Term Debt”.

The commercial commodity unbundling costs deferred are costs incurred to develop a third-party marketer alternative for commercial customers to purchase natural gas from suppliers other than the Company. The BCUC has approved the recovery of these costs in rates over a five-year period, of which three years remain at December 31, 2006.

The deferral account for the replacement transportation agreement relates to amounts that the Company is allowed to recover from customers in rates in order to cover any shortfall in revenues relative to a minimum amount approved by the BCUC on the Company’s Southern Crossing Pipeline. The deferral account is being amortized and recovered in rates over a five-year period, of which three years remain at December 31, 2006.

4. OTHER ASSETS (CONTINUED)

The deferral account for the Southern Crossing Pipeline PST reassessment relates to a payment made in regards to a possible assessment of additional provincial sales tax on the Southern Crossing Pipeline. See Note 14.

The Company made a payment of $10 million pending resolution of the appeal as a good faith payment in order to forestall an order from the Province of British Columbia (“the Province”) to provide full payment or security. Depending on the success of the appeal, the Company will either be refunded this payment from the Province or alternatively expects to recover the costs from customers in future rates.

On October 6, 2005, the BCUC issued a decision that denied recovery of approximately $5.4 million of costs that Terasen Gas incurred to develop the Inland Pacific Connector pipeline project that is planned to bring new gas transmission capacity to the Lower Mainland of British Columbia when economic conditions make the project viable. Terasen Gas recorded an after-tax provision of $3.7 million at December 31, 2005. The Company still intends to proceed with the project when market conditions are supportive and intends to keep all existing permits and land right approvals in place that have already been granted. The Company will again seek to recover such costs in the future when it proceeds with the project.

Deferred charges and deferred credits for rate regulated entities that have been aggregated in the table above and in Note 6 relate to more than 40 deferral accounts, none of which exceed $2.0 million individually. All of these accounts have been approved by regulators in prior annual rate approvals or orders and are being amortized over various periods depending on the nature of the costs.

In the absence of rate regulation, the deferred charges in the above table would have been expensed, except from the costs related to the pension asset. This would have resulted in increased income taxes of $2.5 million (2005 - $2.2 million), increased financing costs of $0.1 million (2005 – $0.8 million) and increased operation and maintenance costs of $5.7 million (2005 – $2.6 million).

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

5. LONG-TERM DEBT

	2006	2005
(a) Purchase Money Mortgages:		
11.80% Series A, due September 30, 2015	**$ 74.9**	$ 74.9
10.30% Series B, due September 30, 2016	**200.0**	200.0
(b) Debentures and Medium Term Note Debentures:		
9.75% Series D, due December 17, 2006	**-**	20.0
10.75% Series E, due June 8, 2009	**59.9**	59.9
6.20% Series 9, due June 2, 2008	**188.0**	188.0
6.95% Series 11, due September 21, 2029	**150.0**	150.0
6.50% Series 13, due October 16, 2007	**100.0**	100.0
6.15% Series 16, due July 31, 2006	**-**	100.0
6.50% Series 18, due May 1, 2034	**150.0**	150.0
5.90% Series 19, due February 26, 2035	**150.0**	150.0
Floating rate, Series 20, interest rate of 4.25% (2005 - 3.36%) due October 24, 2007	**150.0**	150.0
5.55% Series 21, due September 25, 2036	**120.0**	-
Obligations under capital leases, at 5.62% (2005 – 6.07%)	**7.2**	8.8
Total long-term debt	**1,350.0**	1,351.6
Less: current portion of long-term debt	**251.4**	121.7
	$ 1,098.6	$ 1,229.9

(a) PURCHASE MONEY MORTGAGES:

The Series A and Series B Purchase Money Mortgages are secured equally and rateably by a first fixed and specific mortgage and charge on the Company's Coastal Division assets, and are subject to the restrictions of the Trust Indenture dated December 3, 1990. The aggregate principal amount of Purchase Money Mortgages that may be issued under the Trust Indenture is limited to $425 million.

(b) DEBENTURES AND MEDIUM TERM NOTE DEBENTURES:

The Company's debentures are unsecured obligations but are subject to the restrictions of the Trust Indenture dated November 1, 1977, as amended and supplemented.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

5. LONG-TERM DEBT (CONTINUED)

The Company's Series B Purchase Money Mortgages, Series E Debentures, and Series 11, Series 13, Series 18, Series 19, and Series 21 Medium Term Note Debentures are redeemable in whole or in part at the option of the Company at a price equal to the greater of the Canada Yield Price, as defined in the applicable Trust Indenture, and the principal amount of the debt to be redeemed, plus accrued and unpaid interest to the date specified for redemption. The Canada Yield Price is calculated as an amount that provides a yield slightly above the yield on an equivalent maturity Government of Canada bond.

Required principal repayments over the next five years are as follows:

2007	$ 251.4
2008	189.4
2009	61.4
2010	1.5
2011	1.5

6. OTHER LONG-TERM LIABILITIES AND DEFERRED CREDITS

	2006	2005
Pension and other post-employment benefit liabilities (Note 8)	**$ 39.2**	$ 31.2
Deferred gains on sale of natural gas distribution assets	**54.8**	59.2
Deferred credits		
Subject to rate regulation and approved for recovery in rates		
Earnings Sharing Mechanism	**12.6**	8.8
SCP Net Mitigation Revenue	**3.8**	0.8
Large Corporation Tax Elimination	**3.1**	-
Deferred Interest Mechanism	**0.4**	2.4
Other items approved for recovery in rates	**7.1**	6.0
Other deferred credits subject to rate regulation	**-**	1.6
	$ 121.0	$ 110.0

The deferred gains on sale of natural gas distribution assets occurred upon the sale of pipeline assets to certain municipalities in 2001, 2002, 2004 and 2005. The pre-tax gains of $70.5 million on combined cash proceeds of $141.1 million are being amortized over the 17-year terms of the operating leases that commenced at the time of the sale transactions. These operating lease commitments are included in the table in Note 14.

Amortization of these deferred credits in rates for the year ended December 31, 2006 totaled $4.1 million (2005 - $4.5 million).

The Earnings Sharing Mechanism is a mechanism agreed to in the Company's multi-year agreement to share, on a 50/50 basis, amounts earned by the Company on its regulated activities that exceed or are less than amounts allowed by the BCUC in the cost-of-service allowed return calculations. These amounts are shared on an after-tax basis, and are returned to customers in rates.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

6. OTHER LONG-TERM LIABILITIES AND DEFERRED CREDITS (CONTINUED)

The SCP Net Mitigation Revenue is revenue that is received from third parties for the use of the SCP transportation capacity that has not been utilized by the firm transportation agreement customers. This account is used to record differences between actual revenues from SCP mitigation and what has been approved in the current revenue requirement. Amounts are being amortized to income over 5 years.

The large corporation tax elimination costs resulted from the British Columbia government eliminating the tax on large corporations in 2006. The BCUC allows large corporation tax to be recovered from customers through rates. These costs were collected from customers through rates in 2006 and now are owed back to customers in future rates upon the elimination of the large corporation tax. The costs will be returned to customers in rates over a three year period beginning January 1, 2007.

The Company has a deferred interest mechanism which has been approved by the BCUC which requires that variances due to differences in long-term borrowings and long-term and short-term interest rates from those that have been approved in rates be returned to customers in future rates. The impact of this mechanism was to decrease financing costs for the year ended December 31, 2006 by $0.6 million (2005 – increase by $2.0 million). The balance of the account is being amortized on a straight-line basis over three years.

In the absence of rate regulation, the other long-term liabilities and deferred credits in the above table would have been expensed, aside for the pension and other post-employment benefit liabilities. This would have resulted in decreased operation and maintenance costs of $1.9 million (2005 - $5.7 million), increased financing costs of $2.0 million (2005 – $0.1 million) and decreased property and other taxes of $3.1 million (2005 – nil).

7. SHARE CAPITAL

The Company is authorized to issue 500,000,000 common shares, 100,000,000 first preference shares and 100,000,000 second preference shares, all without par value.

	2006	2005
Common shares, 59,591,732 shares issued	**$ 594.0**	$ 594.0

CONTRIBUTED SURPLUS

Income tax benefits in the amount of $27.3 million (2005 - $30.9 million) relating to transactions with entities under common control were recorded as a credit to contributed surplus in 2006.

7. SHARE CAPITAL (CONTINUED)

DIVIDEND POLICY

As part of its approval of the acquisition of Terasen Inc. by Kinder Morgan, Inc., the BCUC imposed a number of conditions intended to ring-fence the Company from its parent companies. These restrictions included a prohibition on the payment of dividends unless the Company has in place at least as much common equity as that deemed by the BCUC for rate-making purposes. As a result of this and the decision issued by the BCUC on March 2, 2006 described in Note 1(b), the Company must maintain a percentage of common equity to total capital that is at least as much as that determined by the BCUC from time to time for ratemaking purposes. Dividends from the Company will not be allowed by the regulator if the requisite equity is not in place. The Company's dividend policy is intended to ensure that it maintains at least as much common equity as that deemed by the BCUC for rate-making purposes.

8. EMPLOYEE BENEFIT PLANS

The Company is a sponsor of pension plans for eligible employees. The plans include registered defined benefit pension plans, supplemental unfunded arrangements, which provide pension benefits in excess of statutory limits, and defined contributory plans. The Company also provides post-employment benefits other than pensions for retired employees. The following is a summary of each type of plan:

DEFINED BENEFIT PLANS

Retirement benefits under the defined benefit plans are based on employees' years of credited service and remuneration. Company contributions to the plan are based upon independent actuarial valuations. The most recent actuarial valuations of the defined benefit pension plans for funding purposes were at December 31, 2004 and December 31, 2005 and the dates of the next required valuations are December 31, 2007 and December 31, 2008. The expected weighted average remaining service life of employees covered by the defined benefit pension plans is 10.2 years (2005 - 9.5 years).

DEFINED CONTRIBUTION PLAN

Effective in 2000, all new non-union employees became members of defined contribution pension plans. Company contributions to the plan are based upon employee age and pensionable earnings.

SUPPLEMENTAL PLANS

Certain employees are eligible to receive supplemental benefits under both the defined benefit and defined contribution plans. The supplemental plans provide pension benefits in excess of statutory limits. The supplemental plans are unfunded and are secured by letters of credit.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

OTHER POST-EMPLOYMENT BENEFITS

The Company provides retired employees with other post-employment benefits that include, depending on circumstances, supplemental health, and life insurance coverage. Post-employment benefits are unfunded and annual expense is recorded on an accrual basis based on independent actuarial determinations, considering among other factors, health care cost escalation. The most recent actuarial valuations were completed as at December 31, 2005 and the date of the next required valuation is December 31, 2008. The expected weighted average remaining service life of employees covered by these benefit plans is 9.0 years (2005 - 9.0 years).

The Company measures its accrued benefit obligations and the fair value of plan assets for accounting purposes as at December 31 each year. The financial positions of the employee defined benefit pension plans and other benefit plans are presented in the tables below:

	Defined benefit pension plans		Other benefit plans	
	2006	2005	**2006**	2005
Plan assets				
Fair value, beginning of year	**$ 202.4**	$ 185.2	**$ -**	$ -
Actual return on plan assets	**28.6**	18.9	**-**	-
Company contributions	**5.3**	4.3	**1.2**	0.9
Contributions by members	**3.0**	2.9	**-**	-
Benefits and settlements paid	**(10.3)**	(8.8)	**(1.1)**	(0.8)
Other	**(0.1)**	(0.1)	**(0.1)**	(0.1)
Fair value, end of year	**228.9**	202.4	**-**	-
Accrued benefit obligation				
Obligation, beginning of year	**213.7**	191.7	**64.3**	52.9
Current service cost	**5.3**	5.1	**1.2**	0.9
Interest cost	**10.7**	11.5	**3.3**	3.2
Contributions by members	**3.0**	2.8	**-**	-
Benefits and settlements paid	**(10.3)**	(8.8)	**(1.1)**	(0.8)
Actuarial losses	**4.9**	0.6	**0.7**	-
Change in discount rate	**-**	10.6	**-**	8.1
Past service cost and other	**-**	0.2	**(0.2)**	-
Balance, end of year	**227.3**	213.7	**68.2**	64.3
Funded status - plan surplus (deficiency)	**1.6**	(11.3)	**(68.2)**	(64.3)
Unamortized transitional (benefit) obligation	**(10.5)**	(12.2)	**3.1**	4.7
Unamortized actuarial loss	**13.3**	24.7	**27.7**	29.5
Unamortized past service costs	**3.2**	3.6	**(0.9)**	(1.0)
Accrued benefit asset (liability)	**$ 7.6**	$ 4.8	**$ (38.3)**	$ (31.1)
Represented by				
Pension assets	**$ 8.5**	$ 4.9	**$ -**	$ -
Accrued benefit liability	**(0.9)**	(0.1)	**(38.3)**	(31.1)
	$ 7.6	$ 4.8	**$ (38.3)**	$ (31.1)

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

The net accrued benefit liability is included in other long-term liabilities and deferred credits (Note 6) and the pension asset is included in other assets (Note 4).

Included in the accrued benefit obligation and fair value of the plan assets at year-end are the following amounts in respect of plans with accrued benefit obligations in excess of fair value of assets:

	Pension benefit plans		Other benefit plans	
	2006	2005	**2006**	2005
Accrued benefit obligations:				
Unfunded plans	**$ 10.2**	$ 10.2	**$ 68.2**	$ 64.3
Funded plans	**162.2**	153.0	**-**	-
	172.4	163.2	**68.2**	64.3
Fair value of plan assets	**173.0**	150.1	**-**	-
Funded status surplus (deficit)	**$ 0.6**	$ (13.1)	**$ (68.2)**	$ (64.3)

The accrued benefit obligations for unfunded pension benefit plans are secured by letters of credit.

The net benefit plan expense is as follows:

	Pension benefit plans		Other benefit plans	
	2006	2005	**2006**	2005
Current service cost	**$ 5.3**	$ 5.1	**$ 1.2**	$ 0.9
Interest cost on projected benefit obligations	**10.7**	11.5	**3.3**	3.2
Actual positive return on plan assets	**(28.6)**	(18.9)	**-**	-
Net actuarial losses	**4.9**	11.2	**0.7**	8.1
Past service costs	**-**	0.3	**(0.2)**	0.1
Other	**0.1**	-	**0.1**	-
Net benefit plan (income) expense before adjustments	**(7.6)**	9.2	**5.1**	12.3
Adjustments to recognize the long-term nature of employee future benefit costs:				
Difference between actual and expected return on plan assets	**14.8**	6.1	**-**	-
Difference between actual and recognized actuarial losses in year	**(3.4)**	(9.9)	**1.8**	(6.1)
Difference between actual and recognized past service costs in year	**0.5**	0.3	**-**	(0.1)
Amortization of transitional (benefit) obligation	**(1.8)**	(1.8)	**1.6**	1.6
Other	**-**	-	**-**	-
Net benefit plan expense	**$ 2.5**	$ 3.9	**$ 8.5**	$ 7.7
Defined contribution plan expense	**$ 1.1**	$ 1.0		
	$ 3.6	$ 4.9		

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

BENEFIT PLAN ASSETS

The weighted-average asset allocation by asset category of the Company's defined benefit pension plans and other funded benefit plans is as follows:

	Defined Benefit Pension Plans	
	2006	2005
Equity securities	**58%**	58%
Fixed income securities	**34%**	34%
Other assets	**8%**	8%
Total assets	**100%**	100%

The investment policy for benefit plan assets is to optimize the risk-return using a portfolio of various asset classes. The Company's primary investment objectives are to secure registered pension plans, and maximize investment returns in a cost-effective manner while not compromising the security of the respective plans. The pension plans utilize external investment managers to manage the investment policy. Assets in the plan are held in trust by independent third parties.

The pension plans do not directly hold any shares of the Company's parent.

SIGNIFICANT ASSUMPTIONS

The discount rate assumption used in determining pension and post-retirement benefit obligations and net benefit expense reflects the market yields, as of the measurement date, on high-quality debt instruments. The expected rate of return on plan assets assumption is reviewed annually by management, in conjunction with actuaries. The assumption is based on the expected returns for the various asset classes, weighted by the portfolio allocation.

The weighted average significant actuarial assumptions used to determine the accrued benefit obligation and the benefit plan expense are as follows:

	Pension benefit plans		Other benefit plans	
	2006	2005	**2006**	2005
Accrued benefit obligation				
Discount rate at December 31, based on AA Corporate bonds	**5.00%**	5.00%	**5.00%**	5.00%
Rate of compensation increase for five years and 3.36% thereafter	**3.64%**	3.36%	**-**	-
Net benefit plan expense				
Discount rate at January 1, based on AA Corporate bonds	**5.00%**	6.00%	**5.00%**	6.00%
Expected rate of return on plan assets	**7.25%**	7.50%	**-**	-

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

The assumed health-care cost trend rates for other post-employment benefit plans are as follows:

	2006	2005
Extended health benefits		
Initial health care cost trend rate	**10.0%**	8.0%
Annual rate of decline in trend rate	**1.0%**	1.0%
Ultimate health care cost trend rate	**5.0%**	5.0%
Year that the rate reaches the ultimate trend rate	**2011**	2008
Medical Services Plan Benefits Premium trend rate	**4.0%**	4.0%

A one percentage-point change in assumed health-care cost trend rates would have the following effects:

2006	One percentage-point increase	One percentage-point decrease
Effect on the total of the service costs and interest cost components of the benefit plan expense	**$ 0.6**	**$ (0.5)**
Effect on accrued benefit obligation	**8.2**	**(7.4)**

CASH FLOWS

Total cash contributions for employee benefit plans consist of:

	Employee benefit plans	
	2006	2005
Funded plans	**$ 4.5**	$ 3.8
Beneficiaries of unfunded plans	**2.0**	1.4
Defined contribution plans	**1.1**	1.0
Total	**$ 7.6**	$ 6.2

The contributions for 2007 are anticipated to be approximately the same as 2006 for defined pension benefit plans and other benefit plans.

IMPACT OF RATE REGULATION

As required by the regulator, the Company is required under its approved cost of service model to defer the amounts of pension benefit expense that exceed or are less than the amounts approved by the regulator to be recovered in rates each year. During the year ended December 31, 2006 the Company has deferred pension expense of $2.7 million (2005 – $0.3 million) that was in excess of the amount approved by the regulator to be refunded in rates in 2007.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

9. STOCK-BASED COMPENSATION

The Company's parent, Terasen Inc., granted stock options to employees of the Company under its stock option plans until November 30, 2005, when all of the outstanding shares of Terasen Inc. were purchased by Kinder Morgan, Inc. In 2005, 164,500 options to purchase shares in Terasen Inc. were issued to employees of the Company at an average exercise price of $29.45. In 2005, the Company was charged, and recorded as an expense, $0.4 million for the fair value of the stock compensation granted in 2005 by Terasen Inc.

10. FINANCING COSTS

	2006	2005
Interest and expense on long-term debt	$ 98.8	$ 102.4
Interest on short-term debt	7.1	9.3
Interest capitalized (note 2)	(0.7)	(0.6)
	$ 105.2	$ 111.1

As allowed by the regulators, during the year ended December 31, 2006, the Company capitalized interest for borrowing requirements for construction of assets that have not been included in rate base of $0.7 million (2005 - $0.6 million).

11. INCOME TAXES

VARIATION IN EFFECTIVE INCOME TAX RATE

Consolidated income taxes vary from the amount that would be computed by applying the federal and provincial combined statutory income tax rate of 34.12% (2005 – 33.97%) to earnings before income taxes as shown in the following table:

	2006	2005
Earnings before income taxes	$ 112.0	$ 104.9
Combined statutory income tax rate	34.12%	33.97%
Combined income taxes at statutory rate	$ 38.2	$ 35.7
Decrease in income taxes resulting from capital cost allowance and other deductions claimed for income tax purposes over amounts recorded for accounting purposes	(7.5)	(1.5)
Large Corporations Tax in excess of (surtax credit) surtax	(1.1)	3.7
Deferred Large Corporations Tax	3.1	-
Non-deductible expenses and non-taxable income	2.5	3.6
Provincial income tax applicable to prior years	11.6	-
Other	(3.2)	(1.9)
Actual consolidated income taxes	$ 43.6	$ 39.6
Effective Income Tax Rate	38.93%	37.75%

11. INCOME TAXES (CONTINUED)

FUTURE INCOME TAXES

As a result of the Company accounting for income taxes following the taxes payable method for its regulated operations, the Company has not recognized net future income tax liabilities amounting to $217.5 million at December 31, 2006 (2005 – $230.9 million) and has not recognized a future income tax recovery of $13.4 million for the year ended December 31, 2006 (2005 – expense of $15.1 million), all of which were calculated using the asset and liability method.

12. FINANCIAL INSTRUMENTS

FAIR VALUE ESTIMATES

The carrying values of cash and short-term investments, accounts receivable, short-term notes and accounts payable and accrued liabilities approximate their fair values due to the relatively short period to maturity of the instruments.

The fair value of the Company's long-term debt, calculated by discounting the future cash flow of each debt issue at the estimated yield to maturity for the same or similar issues at December 31, 2006, or by using available quoted market prices, is estimated at $1,547.2 million (2005 - $1,580.7 million). The majority of the Company's long-term debt relates to regulated operations which enables the Company to recover the existing financing charges through rates or tolls.

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates cannot be determined with precision as they are subjective in nature and involve uncertainties and matters of judgment.

DERIVATIVE INSTRUMENTS

The Company uses derivative instruments to hedge its exposures to fluctuations in natural gas prices, interest rates and foreign currency exchange rates.

Asset (Liability)			**2006**		2005	
December 31 *(in millions)*	Number of swaps and options	Term to maturity (years)	Carrying Value	Fair Value	Carrying Value	Fair Value
Natural Gas						
Commodity Swaps and Options	225	Up to 3	**$ (133.0)**	**$ (133.6)**	$ 21.2	$ 97.9
Interest Swaps	3	Up to 1	-	**(0.9)**	-	(1.6)

The natural gas derivatives fair value reflects only the value of the natural gas derivatives and not the offsetting change in value of the underlying future purchases of natural gas. These fair values reflect the estimated amounts the Company would receive or pay to terminate the contracts at the stated dates.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

12. FINANCIAL INSTRUMENTS (CONTINUED)

Included in the carrying value of the natural gas derivatives is $133.7 million of unrealized fair value losses associated with derivative instruments which were deemed to be ineffective at December 31, 2006 and $0.7 million of derivative instruments which did not qualify for hedge accounting that are in a liability position.

The derivatives entered into by the Company relate to regulated operations and any resulting gains or losses are recorded in rate stabilization accounts, subject to regulatory approval, and passed through to customers in future rates.

The Company is exposed to credit risk in the event of non-performance by counterparties to derivative instruments. Because it deals with high credit quality institutions in accordance with established credit approval practices, the Company does not expect any counterparties to fail to meet their obligations.

13. RELATED PARTY TRANSACTIONS

(a) The Company received $4.1 million in 2006 (2005 – $4.1 million) from Terasen Gas (Vancouver Island) Inc. ("TGVI"), a subsidiary company of Terasen Inc., for transporting gas through the Company's pipeline system.

(b) The Company paid approximately $44.6 million during the year ended December 31, 2006 (2005 – $43.6 million) for customer care and billing services to a limited partnership. Terasen Inc. holds a 30% interest in the limited partnership and jointly controls it. The Company is committed to pay approximately $42.6 million as base contract fees for 2007.

(c) The Company paid $8.5 million in 2006 (2005 – $8.7 million) to Terasen Inc. for management services.

(d) The Company charged affiliated companies $6.6 million in 2006 (2005 – $5.6 million) for management services.

14. COMMITMENTS AND CONTINGENCIES

The Company has entered into operating leases for certain building space and natural gas distribution assets. In addition, the Company enters into gas purchase contracts. The following table sets forth the Company's operating lease and gas purchase obligations due in the years indicated:

	Operating leases	Purchase obligations	Total
2007	$ 15.5	$ 474.1	$ 489.6
2008	15.6	22.9	38.5
2009	15.2	27.7	42.9
2010	14.8	-	14.8
2011	14.5	-	14.5
2012 and later	107.6	-	107.6
	$ 183.2	$ 524.7	$ 707.9

14. COMMITMENTS AND CONTINGENCIES (CONTINUED)

Gas purchase contract commitments are based on market prices that vary with gas commodity indices. The amounts disclosed reflect index prices that were in effect at December 31, 2006.

The Company received a Notice of Assessment dated July 31, 2006 from the British Columbia Social Service Tax authority for $37.1 million of additional provincial sales tax and interest on the Southern Crossing Pipeline, which was completed in 2000. This has not been provided for as the Company will appeal this assessment since management believes that this assessment is without merit and will not have a material adverse impact on our business, financial position, results of operations or cash flows. In October 2006, the Company made a payment of $10 million pending resolution of the appeal as a good faith payment in order to forestall an order from the Province to provide full payment or security. The payment has been recorded as a long term receivable and a request for regulatory deferral account treatment has been made. This payment does not reflect Management's belief as to the ultimate sustainability of the assessment. Subsequent to year end a decision was issued with respect to the appeal filed by Terasen Gas see note 15.

A number of claims and lawsuits seeking damages and other relief are pending against the Company. Management is of the opinion, based upon information presently available, that it is unlikely that any liability, to the extent not provided for through insurance or otherwise, would be material in relation to the Company's consolidated financial statements.

15. SUBSEQUENT EVENTS

On January 1, 2007, the Company and its subsidiary, Squamish, were amalgamated.

On February 26, 2007, Kinder Morgan Inc., the Company's parent announced that it entered into a definitive agreement with Fortis, Inc. to sell Terasen Inc. and its principal natural gas distribution assets, including its subsidiaries Terasen Gas and TGVI as well as other activities including Terasen Energy Services. The sale does not include the petroleum transportation subsidiaries nor investments under the Kinder Morgan Canada name. The purchase price of approximately $3.7 billion includes the assumption of approximately $2.4 billion of debt. The transaction is expected to close in mid-2007 subject to the fulfillment of customary closing conditions and required regulatory approvals.

On March 26, 2007, the Minister of Small Business and Revenue and Minister Responsible for Regulatory Reform issued a decision in respect of the Company's appeal of an assessment of British Columbia Social Service Tax in the amount of $37.1 million. The Minister has reduced the assessment to $7.0 million including interest. The Social Service Tax Act provides for a further appeal to the courts that must be commenced within 90 days of the Minister's decision. The Company is reviewing its options with respect to the appeal process.

CONSOLIDATED FINANCIAL STATEMENTS OF

TERASEN GAS INC.

YEARS ENDED DECEMBER 31, 2007 AND 2006

MANAGEMENT'S REPORT

Financial Reporting

Management is responsible for the accompanying consolidated financial statements. These financial statements have been prepared in conformity with Canadian generally accepted accounting principles and, where appropriate, include amounts that are based on management's best estimates and judgments.

The Board of Directors, through its Audit Committee, oversees Management's responsibilities for financial reporting and internal control. The Audit Committee meets with the internal auditors, the independent auditors and management to discuss auditing and financial matters and to review the consolidated financial statements and the independent auditors' report. The Audit Committee reports its findings to the Board for consideration in approving the consolidated financial statements for issuance to the shareholders.

Internal Control over Financial Reporting

Management is also responsible for establishing and maintaining adequate internal control over the Company's financial reporting. The internal control system was designed to provide reasonable assurance to the Company's Management regarding the preparation and presentation of the consolidated financial statements.

The Company's independent auditors, Ernst and Young, LLP, conducted their audit in accordance with Canadian generally accepted auditing standards. Their report outlines the scope of their audit and gives their opinion on the consolidated financial statements.

AUDITORS' REPORT

To the Shareholder of
Terasen Gas Inc.

We have audited the consolidated balance sheet of **Terasen Gas Inc.** as at December 31, 2007 and the consolidated statements of earnings and comprehensive earnings and cash flows for the year then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2007 and the results of its operations and its cash flows for the year then ended in accordance with Canadian generally accepted accounting principles.

The consolidated financial statements as at December 31, 2006 and for the year then ended were audited by other auditors who expressed an opinion without reservation on those statements in their report dated March 29, 2007.

Cash is defined as cash or bank indebtedness.

The accompanying notes are an integral part of these consolidated financial statements.

1. SIGNIFICANT ACCOUNTING POLICIES

The preparation of these consolidated financial statements in conformity with Canadian generally accepted accounting principles (GAAP) requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses in the financial statements, as well as the disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

In the opinion of management, these consolidated financial statements have been properly prepared within reasonable limits of materiality and reflect the following summary of significant accounting policies.

On February 26, 2007, Knight Inc. (formerly known as Kinder Morgan Inc.), Terasen Inc.'s former parent announced that it had entered into a definitive agreement with Fortis Inc. to sell Terasen Inc. and its principal natural gas transmission and distribution assets, including its subsidiaries Terasen Gas and Terasen Gas (Vancouver Island) Inc. as well as other activities including Terasen Energy Services. The sale did not include the petroleum transportation subsidiaries nor investments under the Kinder Morgan Canada name. The transaction closed on May 17, 2007.

BASIS OF PRESENTATION

The consolidated financial statements include the accounts of the Company and its subsidiaries, including Terasen Gas (Squamish) Inc. ("Squamish"). On January 1, 2007, the Company and its subsidiary, Squamish, were amalgamated.

Certain comparative figures have been reclassified to conform with the current year's presentation.

CHANGES IN ACCOUNTING POLICIES

ACCOUNTING CHANGES

Effective January 1, 2007, the Company adopted the Canadian Institute of Chartered Accountants (CICA) revised Handbook Section 1506, *Accounting Changes,* relating to changes in accounting policies, changes in accounting estimates and errors.

Under revised Section 1506, voluntary changes in accounting policies are made only if they result in the financial statements providing reliable and more relevant information. Additional disclosure is required when the Company has not applied a new primary source of Canadian GAAP that has been issued but is not yet effective, as well as when changes in accounting estimates and errors occur. Adoption of this revised standard had no material impact on the Company's consolidated financial statements for the year ended December 31, 2007.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

FINANCIAL INSTRUMENTS

The Company utilizes derivatives and other financial instruments to manage its exposure to changes in foreign currency exchange rates, interest rates and energy commodity prices.

Effective January 1, 2007, the Company adopted the following new accounting standards issued by the CICA.

a) Section 3855, *Financial Instruments – Recognition and Measurement*, prescribes the criteria for recognition and presentation of financial instruments on the balance sheet and the measurement of financial instruments according to prescribed classifications. This section also addresses how financial instruments are measured subsequent to initial recognition and how the gains and losses are recognized.

   The Company is required to designate its financial instruments into one of the following five categories: held for trading; available for sale; held to maturity; loans and receivables; and other financial liabilities. All financial instruments are to be initially measured at fair value. Financial instruments classified as held for trading or available for sale are subsequently measured at fair value with any change in fair value recorded in net earnings and other comprehensive income, respectively. All other financial instruments are subsequently measured at amortized cost.

   All derivative financial instruments are recorded on the balance sheet at fair value. Mark-to-market adjustments on these instruments are included in net earnings, unless the instruments are designated as part of a cash flow hedge relationship, and then the effective portion of changes in fair value are recorded in other comprehensive income. Any change in fair value relating to the ineffective portion is recorded immediately in net earnings. For regulated financial instruments, any difference between the amount recognized upon a change in the fair value of a derivative financial instrument, whether or not in a qualifying hedging relationship, and the amount recovered from customers in current rates, is subject to regulatory deferral treatment to be recovered from or refunded to customers in future rates.

   In accordance with the standard's transitional provisions, the Company recognizes as separate assets and liabilities only embedded derivatives acquired or substantively modified on or after January 1, 2003.

   The Company has designated its financial instruments as follows:

   - Cash and short-term investments are classified as "*Held for Trading*" and are recorded at fair value. Due to the relatively short period to maturity of these financial instruments the carrying values approximate their fair values.
   - Accounts receivable and long-term receivables and investments are classified as *"Loans and Receivables"*. These financial assets are recorded at values that approximate their amortized cost using the effective interest method.
   - Short-term notes, accounts payable and accrued liabilities, long-term debt, and related issue costs are classified as "*Other Financial Liabilities*". These financial liabilities are recorded at values that approximate their amortized cost using the effective interest method.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

As a result of adopting Section 3855, deferred financing costs of $10.8 million as at December 31, 2007 (2006 - $7.8 million), relating to long-term debt, have been reclassified from other assets to long-term debt on the balance sheet. These costs will be taken into earnings using the effective interest method over the life of the related debt. Prior to January 1, 2007, deferred financing costs were amortized using the straight-line method of amortization. As allowed by the standard a one-time adjustment of $1.5 million has been made to retained earnings to reflect the difference between the straight-line method and the effective interest method of amortization prior to January 1, 2007.

The Company recognizes transaction costs associated with financial assets and liabilities, that are classified as other than held for trading, as an adjustment to the cost of those financial assets and liabilities recorded on the balance sheet. These transaction costs are amortized into earnings using the effective interest rate method over the life of the related financial instrument.

b) Section 1530, *Comprehensive Income*, requires the presentation of a statement of comprehensive income and provides guidance for the reporting and display of other comprehensive income. Comprehensive income represents the change in equity of an enterprise during a period from transactions and other events arising from non-owner sources including gains and losses arising on translation of self-sustaining foreign operations, gains and losses from changes in fair value of available for sale financial assets and changes in fair value of the effective portion of cash flow hedging instruments. The Company has not recognized any adjustments through other comprehensive income for the year ended December 31, 2007 and did not identify any components of comprehensive income on adoption of this standard.

c) Section 3865, *Hedges,* specifies the criteria under which hedge accounting may be applied, how hedge accounting should be performed under permitted hedging strategies and the required disclosures. The majority of the Company's cash flow hedges are for the purchase of natural gas. Given that the Company is subject to rate regulation, the ineffective portion of changes in the fair value of these hedges is deferred as an asset or liability until it is settled, offset by an asset or liability on behalf of customers. Upon settlement, the recognized gain or loss is recorded as a regulatory asset or liability and is collected from or refunded to ratepayers in subsequent periods. The Company recognized an additional liability of $1.1 million to counterparties for unrealized losses related to gas purchase hedges at January 1, 2007 and an amount recoverable from ratepayers of $1.1 million. Amounts recoverable from ratepayers are recorded in rate stabilization accounts.

The Company utilizes cash flow hedges to hedge the variability in interest payments on the underlying debt instruments. Cash flow hedges for rate regulated businesses are recorded in Other assets with the offset to Other long- term liabilities and deferred credits. The adoption of this new standard on January 1, 2007 increased Other assets by $0.8 million and increased Other long-term liabilities and deferred credits by $0.8 million.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

REGULATION

The Company is subject to the regulation of the British Columbia Utilities Commission ("the BCUC"), an independent regulatory authority. The Company has a multi-year agreement that expired at the end of 2007. On March 22, 2007, the BCUC approved the Company's application for a two-year extension to the current multi-year agreement extending the existing term until the end of 2009. This multi-year agreement is a cost-of-service based agreement with allowed rates of return on approved rate base set by the BCUC. For 2007, the allowed ROE was set at 8.37%. The allowed rate of return is based on a notional debt-equity ratio of 65% debt and 35% equity. The Company has an annual review process for rate approvals and allowed rates of return are reset annually, unless directed differently by the BCUC. For 2008, the allowed ROE has been set at 8.62%.

The BCUC exercises statutory authority over such matters as rates of return, construction and operation of facilities, accounting practices, rates, and contractual agreements with customers. Rates are bundled to include transmission and distribution services, where applicable.

In order to recognize the economic effects of regulation, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under generally accepted accounting principles for non-regulated businesses.

Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates. In the absence of rate regulation, GAAP would not permit the recognition of regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned. Long-term regulatory assets are recorded in other assets whereas current regulatory assets are recorded in accounts receivable. Regulatory liabilities are recorded in other long-term liabilities and deferred credits.

The impacts of rate regulation on the Company's operations for the twelve months ending December 31, 2007 and as at December 31, 2007 are described in the Significant Accounting Policies, and in Note 2 "Property, Plant and Equipment", Note 3 "Rate Stabilization Accounts", Note 4 "Other Assets", Note 6 "Other Long-Term Liabilities and Deferred Credits", Note 8 "Employee Benefit Plans", Note 9 "Financing Costs", and Note 10 "Income Taxes".

INVENTORIES

Inventories of gas in storage are valued at weighted-average cost. The cost of gas in storage is recovered from customers in future rates. Supplies and other inventories are valued at the lower of cost and net realizable value.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment are stated at cost less accumulated depreciation and unamortized contributions in aid of construction. Cost includes all direct expenditures for system expansions, betterments and replacements, an allocation of overhead costs and an allowance for funds used during construction. When allowed by the BCUC, regulated operations capitalize an allowance for equity funds used during construction at approved rates.

Depreciation of regulated assets is recorded on a straight-line basis over their useful lives. Depreciation rates for regulated assets are approved by the respective regulator.

The cost of regulated depreciable property retired, together with removal costs less salvage, is charged to accumulated depreciation, as is any gain or loss incurred on disposal.

IMPAIRMENT OF LONG-LIVED ASSETS

Long-lived assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets is measured by a comparison of the carrying amount of an asset to estimated undiscounted future cash flows expected to be generated by the asset. If the carrying amount of an asset exceeds its estimated future cash flows, an impairment charge is recognized by the amount by which the carrying amount of the asset exceeds the fair value of the asset. There was no impairment of long-lived assets for the year ended December 31, 2007.

ASSET RETIREMENT OBLIGATIONS

The Company recognizes the fair value of a future asset retirement obligation as a liability in the period in which it incurs a legal obligation associated with the retirement of tangible long-lived assets that results from the acquisition, construction, development, and/or normal use of the assets. The Company concurrently recognizes a corresponding increase in the carrying amount of the related long-lived asset that is depreciated over the remaining life of the asset. The fair value of the asset retirement obligation is estimated using the expected cash flow approach that reflects a range of possible outcomes discounted at a credit-adjusted risk-free interest rate. Subsequent to the initial measurement, the asset retirement obligation is adjusted at the end of each period to reflect the passage of time and changes in the estimated future cash flows underlying the obligation.

Changes in the obligation due to the passage of time are recognized in income as an operating expense using the interest method. Changes in the obligation due to changes in estimated cash flows are recognized as an adjustment of the carrying amount of the related long-lived asset that is depreciated over the remaining life of the asset.

As the fair value of future removal and site restoration costs for the Company's natural gas transmission and distribution systems are not currently determinable, the Company has not recognized an asset retirement obligation at December 31, 2007 and 2006. For regulated operations there is a reasonable expectation that asset retirement costs would be recoverable through future rates.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

RATE STABILIZATION ACCOUNTS

The Company is authorized by the BCUC to maintain rate stabilization accounts to mitigate the effect on its earnings of unpredictable and uncontrollable factors, namely volume volatility caused principally by weather and natural gas cost volatility. The Revenue Stabilization Adjustment Mechanism ("RSAM") accumulates the margin impact of variations in the actual versus forecast use for residential and commercial customers.

The Commodity Cost Reconciliation Account ("CCRA") and the Midstream Cost Reconciliation Account ("MCRA") accumulate differences between actual natural gas costs and forecast natural gas costs as recovered in base rates. The two accounts segregate costs that are allocable to all sales customers (MCRA) and all residential customers and certain commercial and industrial customers for whom Terasen Gas acquires gas supply (CCRA).

All rate stabilization account balances are recovered through rates as approved by the BCUC.

DEFERRED CHARGES

The Company defers certain charges which the regulatory authorities or contractual arrangements require or permit to be recovered through future rates. Deferred charges are amortized over various periods as approved by the BCUC and depending on the nature of the charges.

Deferred charges not subject to regulation relate to projects which are expected to benefit future periods and will be capitalized on completion, expensed on project abandonment, or amortized over their useful lives.

REVENUE RECOGNITION

The Company recognizes revenues when products have been delivered or services have been performed.

Revenues from natural gas sales are recorded on the basis of regular meter readings and estimates of customer usage since the last meter reading date to the end of the year and are adjusted for the RSAM and other BCUC approved orders.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

POST-EMPLOYMENT BENEFIT PLANS

The Company sponsors a number of employee benefits plans. These plans include both defined benefit and defined contribution pension plans, and various other post-retirement benefit plans.

The cost of pensions and other post-retirement benefits earned by employees is actuarially determined as the employee provides service. The Company uses the projected benefit method based on years of service and estimates of expected returns on plan assets, salary escalation, retirement age of employees, mortality and expected future health-care costs. The discount rate used to value liabilities is based on AA Corporate bond yields. The Company accrues the cost of defined benefit pensions and post-employment benefits as the employee provides services, except when the BCUC requires costs to be expensed as paid.

The expected return on plan assets is based on management’s estimate of the long-term expected rate of return on plan assets and a market-related value of plan assets. The market-related value of assets as of December 31, 2007 is calculated as the average of the market value of invested assets at December 31, 2007 and two actuarially determined extrapolated market values of invested assets at December 31, 2007. The two extrapolated market values are calculated by using the market value of invested assets at December 31, 2005 rolled forward to December 31, 2007 using 2006 and 2007 net contributions and assumed investment returns, and the market value of invested assets at December 31, 2006 rolled forward to December 31, 2007 using 2007 net contributions and assumed investment returns. These three amounts are then averaged and reported as the market-related value of plan assets.

Adjustments, in excess of 10% of the greater of the accrued benefit obligation and plan asset value, that result from plan amendments, changes in assumptions and experience gains and losses, are amortized over the expected average remaining service life of the employee group covered by the plan. Experience will often deviate from the actuarial assumptions resulting in actuarial gains and losses.

Defined contribution plan costs are expensed by the Company as contributions are payable.

INCOME TAXES

The Company accounts for and recover income tax expense in rates as prescribed by the BCUC for ratemaking purposes. This includes accounting for income taxes by the taxes payable method and accounting for certain deferral and rate stabilization accounts on a net of realized tax basis, as approved by the BCUC. Therefore, future income taxes related to temporary differences are not recorded. The taxes payable method is followed as there is reasonable expectation that all future income taxes will be recovered in rates when they become payable.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

VARIABLE INTEREST ENTITIES

The Company has performed a review of the entities with whom it conducts business and has concluded that there are no entities that are required to be consolidated or variable interests that are required to be disclosed under the requirements of the Guideline.

FUTURE ACCOUNTING PRONOUNCEMENTS

a) *International Financial Reporting Standards ("IFRS"):* In 2006, the Canadian Accounting Standards Board ("AcSB") published a new strategic plan that will significantly affect financial reporting requirements for Canadian companies. The AcSB strategic plan outlines the convergence of Canadian GAAP with IFRS over an expected five year transitional period. By no later than March 31, 2008, the AcSB is expected to issue a report confirming or revising the expected transition date of January 1, 2011 for the conversion to IFRS. The proposed transition date of January 1, 2011 will require the restatement for comparative purposes of amounts reported by the Company for the year ended December 31, 2010. While the Company has begun assessing the adoption of IFRS for 2011, the financial reporting impact of the transition to IFRS cannot be reasonably estimated at this time.

b) *Rate-Regulated Operations:* In March 2007, the AcSB issued an Exposure Draft on rate-regulated operations that proposed: (i) the temporary exemption in Section 1100, *Generally Accepted Accounting Principles*, of the CICA Handbook providing relief to entities subject to rate regulation from the requirement to apply the Section to the recognition and measurement of assets and liabilities arising from rate regulation be removed; (ii) the explicit guidance for rate-regulated operations provided in Section 1600, *Consolidated Financial Statements*, Section 3061, *Property, Plant and Equipment*, Section 3465, *Income Taxe*s, and Section 3475, *Disposal of Long-Lived Assets and Discontinued Operations*, be removed; and (iii) Accounting Guideline 19, *Disclosures by Entities Subject to Rate Regulation*, be retained as is. The AcSB has also observed that relying on US Statement of Financial Accounting Standards No. 71, *Accounting for the Effects of Certain Types of Regulation* ("FAS 71"), as another source of Canadian GAAP in the absence of CICA Handbook guidance addressing the specific circumstances of entities subject to rate regulation, is consistent with Section 1100 when the qualifying criteria of FAS 71 are met.

In August 2007, the AcSB issued a Decision Summary on the Exposure Draft that supported the removal of the temporary exemption in Section 1100, *General Accepted Accounting Principles*, and the amendment to Section 3465, *Income Taxes,* to recognize future income tax liabilities and assets as well as an offsetting regulatory asset or liabilities for entities subject to rate regulation. Both changes will apply prospectively for fiscal years beginning on or after January 1, 2009. It was also decided that the current guidance pertaining to property, plant and equipment and disposal of long-lived assets and discontinued operations and consolidated financial statements be maintained and that the existing AcG-19 will not be withdrawn from the Handbook but that the guidance will be updated as a result of the other changes. The AcSB also decided that the final Background Information and Basis for Conclusions associated with its rate regulation project would not express any views of the AcSB regarding the status of US Statement of Financial Accounting Standards No. 71, *Accounting for the Effects of Certain Types of Regulation*, as an "other source of GAAP" within the Canadian GAAP hierarchy.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Effective January 1, 2009, the impact on the Company of the amendment to Section 3465, *Income Taxes,* will be the recognition of future income tax assets and liabilities and related regulatory liabilities and assets for the amount of future income taxes expected to be refunded to or recovered from customers in future gas rates. Currently, the Company uses the taxes payable method of accounting for income taxes on regulated earnings. The estimated effect on the Company's consolidated financial statements, if it had adopted amended Section 3465, *Income Taxes*, as at December 31, 2007, would have been an increase in future tax assets of $16.1 million and an increase in future tax liabilities of $262.3 million, including that associated with income taxes that will become payable on future revenues as they are collected from customers when the tax timing differences reverse. There would also be a corresponding increase in regulatory liabilities of $16.1 million and an increase in regulatory assets of $262.3 million. The Company is continuing to assess and monitor any additional implications on its financial reporting related to accounting for rate regulated operations.

c) *Inventories:* In March 2007, the AcSB approved a new standard with respect to inventories effective for fiscal years beginning on or after January 1, 2008. The new standard requires inventories to be measured at the lower of cost or net realizable value; disallows the use of a last-in first-out inventory costing methodology; and requires that, when circumstances which previously caused inventories to be written down below cost no longer exist, the amount of the write-down is to be reversed. This new standard is not expected to have a material impact on the Company's earnings.

d) *Capital Disclosures:* As a result of new Section 1535, *Capital Disclosures,* the Company will be required to include additional information in the notes to the financial statements about its capital and the manner in which it is managed. This additional disclosure includes quantitative and qualitative information regarding an entity's objectives, policies and processes for managing capital. This Section is applicable for the fiscal year beginning on January 1, 2008.

e) *Disclosure and Presentation of Financial Instruments:* New accounting recommendations for disclosure and presentation of financial instruments are effective for the Company beginning January 1, 2008. The new recommendations require disclosures of both qualitative and quantitative information that enables users of financial statements to evaluate the nature and extent of risks from financial instruments to which the Company is exposed.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

2. PROPERTY, PLANT AND EQUIPMENT

2007

	Weighted average depreciation rate	Cost	Accumulated depreciation	Net book Value
Natural gas transmission and distribution systems	**2.34%**	**$ 2,769.6**	**$ 634.3**	**$ 2,135.3**
Plant, buildings and equipment	**7.41%**	**256.3**	**92.6**	**163.7**
Land and land rights	**0.00%**	**82.3**	**1.4**	**80.9**
		$ 3,108.2	**$ 728.3**	**$ 2,379.9**

2006

	Weighted average depreciation rate	Cost	Accumulated depreciation	Net book Value
Natural gas transmission and distribution systems	2.33%	$ 2,687.9	$ 576.5	$ 2,111.4
Plant, buildings and equipment	8.25%	304.5	145.3	159.2
Land and land rights	0.00%	83.6	1.3	82.3
		$ 3,076.0	$ 723.1	$ 2,352.9

As allowed by the regulators, during the year ended December 31, 2007 the Company capitalized an allowance for equity funds during construction at approved rates of $0.8 million (2006 - $0.7 million) and approved capitalized overhead of $27.5 million (2006 - $27.2 million), with offsetting inclusions in earnings.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

3. RATE STABILIZATION ACCOUNTS

	2007	2006
Current Assets		
RSAM	**$ 5.9**	$ 11.3
CCRA	**34.8**	81.3
MCRA	**20.4**	25.5
	61.1	118.1
Long-Term Assets		
RSAM	**11.8**	24.7
	11.8	24.7
Net rate stabilization accounts	**$ 72.9**	$ 142.8

The current portion of the rate stabilization accounts represents the amounts expected to be recovered or refunded in rates over the next year. Actual recoveries/(refunds) will vary depending on natural gas consumption and recovery amounts approved by the BCUC. Rate stabilization accounts are presented net of tax, where applicable.

The RSAM account is anticipated to be recovered in rates over three years. Recovery of the RSAM balance is dependent upon annually approved rates and actual gas consumption volumes. The MCRA and CCRA accounts are anticipated to be fully recovered or paid within the next fiscal year.

In the absence of rate regulation, the costs in the rate stabilization accounts above would have been expensed as incurred which would have resulted in increased natural gas transmission and distribution revenues of $568.6 million (2006 – $639.7 million), increased cost of natural gas of $494.6 million (2006 - $789.8 million) and increased income tax expense of $4.1 million (2006 – $1.7 million).

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

4. OTHER ASSETS

	2007	2006
Deferred charges		
Subject to rate regulation and approved for recovery in rates		
Income taxes recoverable on post-employment benefits	**$ 15.5**	$ 13.1
Residential unbundling costs	**8.6**	0.8
Replacement transportation agreement	**1.3**	2.2
Commercial commodity unbundling costs	**1.2**	2.5
Other items approved for recovery in rates	**6.1**	7.7
Subject to rate regulation but not yet approved for recovery in rates		
Southern Crossing Pipeline PST Reassessment	**7.2**	10.0
	39.9	36.3
Long-term receivables	**9.2**	9.6
Pension assets (Note 8)	**13.5**	8.5
	$ 62.6	$ 54.4

Amortization of these deferred charges in rates for the year ended December 31, 2007 totalled $2.6 million (2006 - $2.3 million).

The deferral account for income taxes on post-employment benefits relates to income tax amounts on post employment benefit expense. The BCUC allows post-employment benefits to be collected from customers through rates calculated on the accrual basis, rather than a cash paid basis, which produces a timing difference for income tax purposes. Since the Company accounts for income taxes using the taxes payable basis of accounting, the tax effect of this timing difference is included in other assets, and will be reduced as cash payments for post-employment benefits exceed required accruals and amounts collected from customers in rates.

The residential and commercial commodity unbundling costs deferred are costs incurred to develop a third-party marketer alternative for residential and commercial customers to purchase natural gas from suppliers other than the Company. The BCUC has approved the recovery of these costs in rates over a three-year period. For commercial commodity unbundling, two years remain at December 31, 2007. Residential commodity unbundling costs will be recovered commencing in 2008.

The deferral account for the replacement transportation agreement relates to amounts that the Company is allowed to recover from customers in rates in order to cover any shortfall in revenues relative to a minimum amount approved by the BCUC on the Company's Southern Crossing Pipeline. The deferral account is being amortized and recovered in rates over a five-year period, of which two years remain at December 31, 2007.

4. OTHER ASSETS (CONTINUED)

The deferral account for the Southern Crossing Pipeline PST reassessment relates to a payment made in regards to a possible assessment of additional provincial sales tax on the Southern Crossing Pipeline. See Note 13. In 2006, the Company made a payment of $10 million pending resolution of the appeal as a good faith payment in order to forestall an order from the Province of British Columbia (the "Province") to provide full payment or security. During 2007, the assessment was reduced to $7 million and the overpayment was refunded to the Company. Depending on the success of the appeal, the Company will either be refunded this payment from the Province or alternatively expects to recover the costs from customers in future rates.

Deferred charges and deferred credits for rate regulated entities that have been aggregated in the table above and in Note 6 relate to more than 40 deferral accounts, none of which exceed $1.7 million individually. All of these accounts have been approved by regulators in prior annual rate approvals or orders and are being amortized over various periods depending on the nature of the costs.

In the absence of rate regulation, the deferred charges in the above table would have been recorded in income, except for the costs related to the pension asset and the Southern Crossing Pipeline PST Reassessment. This would have resulted in increased natural gas transmission and distribution revenues of $2.1 million (2006 - $2.1 million), increased operation and maintenance costs $12.9 million (2006 - $2.1 million), decreased depreciation and amortization of $2.6 million (2006 - $2.3 million), increased financing costs of $0.6 million (2006 - $1.0 million), and decreased income tax expense of $1.3 million (2006 – increased $2.3 million)

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

5. LONG-TERM DEBT

	2007	2006
(a) Purchase Money Mortgages:		
11.80% Series A, due September 30, 2015	**$ 74.9**	$ 74.9
10.30% Series B, due September 30, 2016	**200.0**	200.0
(b) Debentures and Medium Term Note Debentures:		
10.75% Series E, due June 8, 2009	**59.9**	59.9
6.20% Series 9, due June 2, 2008	**188.0**	188.0
6.95% Series 11, due September 21, 2029	**150.0**	150.0
6.50% Series 13, due October 16, 2007	**-**	100.0
6.50% Series 18, due May 1, 2034	**150.0**	150.0
5.90% Series 19, due February 26, 2035	**150.0**	150.0
Floating rate, Series 20, interest rate 2006 - 4.25% due October 24, 2007	**-**	150.0
5.55% Series 21, due September 25, 2036	**120.0**	120.0
6.00% Series 22, due October 2, 2037	**250.0**	-
Obligations under capital leases, at 6.88% (2006 – 5.62%)	**8.6**	7.2
Total long-term debt	**1,351.4**	1,350.0
Less: current portion of long-term debt	**189.7**	251.4
Less: long term debt issue costs	**10.8**	7.8
	$ 1,150.9	$ 1,090.8

(a) PURCHASE MONEY MORTGAGES:

The Series A and Series B Purchase Money Mortgages are secured equally and rateably by a first fixed and specific mortgage and charge on the Company's Coastal Division assets, and are subject to the restrictions of the Trust Indenture dated December 3, 1990. The aggregate principal amount of Purchase Money Mortgages that may be issued under the Trust Indenture is limited to $425 million.

(b) DEBENTURES AND MEDIUM TERM NOTE DEBENTURES:

The Company's debentures are unsecured obligations but are subject to the restrictions of the Trust Indenture dated November 1, 1977, as amended and supplemented.

On October 2, 2007, Terasen Gas issued $250.0 million of Medium Term Note Debentures at a coupon interest rate of 6.00%. The debentures mature on October 2, 2037 and are unsecured and subject to restrictions of the Trust Indenture. The proceeds were used to repay Terasen Gas' Series 13 and Series 20 Medium Term Debentures which matured in 2007.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

5. LONG-TERM DEBT (CONTINUED)

Long-term debt issue costs are amortized using the effective interest rate method as discussed in Note 1.

The Company's Series B Purchase Money Mortgages, Series E Debentures, and Series 11, Series 18, Series 19, Series 21, and Series 22 Medium Term Note Debentures are redeemable in whole or in part at the option of the Company at a price equal to the greater of the Canada Yield Price, as defined in the applicable Trust Indenture, and the principal amount of the debt to be redeemed, plus accrued and unpaid interest to the date specified for redemption. The Canada Yield Price is calculated as an amount that provides a yield slightly above the yield on an equivalent maturity Government of Canada bond.

Required principal repayments over the next five years and thereafter are as follows:

2008	$ 189.7
2009	61.6
2010	1.7
2011	1.7
2012	1.7
Thereafter	1,095.0

6. OTHER LONG-TERM LIABILITIES AND DEFERRED CREDITS

	2007	2006
Pension and other post-employment benefit liabilities (Note 8)	**$ 47.6**	$ 39.2
Deferred gains on sale of natural gas transmission and distribution assets	**50.5**	54.8
Deferred credits		
Subject to rate regulation and approved for recovery in rates		
Earnings Sharing Mechanism	**12.5**	12.6
SCP Net Mitigation Revenue	**4.4**	3.8
Pension cost variance	**2.3**	1.5
Large Corporation Tax Elimination	**2.1**	3.1
Customer share of land sale	**1.7**	-
	$128.3	$121.0

The deferred gains on sale of natural gas transmission and distribution assets occurred upon the sale of pipeline assets to certain municipalities in 2001, 2002, 2004 and 2005. The pre-tax gains of $70.5 million on combined cash proceeds of $141.1 million are being amortized over the 17-year terms of the operating leases that commenced at the time of the sale transactions. These operating lease commitments are included in the table in Note 13.

Amortization of these deferred credits in rates for the year ended December 31, 2007 totalled $5.4 million (2006 - $4.1 million).

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

6. OTHER LONG-TERM LIABILITIES AND DEFERRED CREDITS (CONTINUED)

The Earnings Sharing Mechanism is a mechanism agreed to in the Company's multi-year agreement to share, on a 50/50 basis, amounts earned by the Company on its regulated activities that exceed or are less than amounts allowed by the BCUC in the cost-of-service allowed return calculations. These amounts are shared on an after-tax basis, and are returned to customers in rates.

The SCP Net Mitigation Revenue is revenue that is received from third parties for the use of the SCP transportation capacity that has not been utilized by the firm transportation agreement customers. This account is used to record differences between actual revenues from SCP mitigation and what has been approved in the current revenue requirement. Amounts are being amortized to income over 5 years.

The pension cost variance account accumulates differences between pension expense that is approved for recovery in rates and actuarial pension expense. Amounts are amortized to income in the following year.

The large corporation tax elimination costs resulted from the federal government eliminating the tax on large corporations in 2006. The BCUC allows large corporation tax to be recovered from customers through rates. These costs were collected from customers through rates in 2006 and now are owed back to customers in future rates upon the elimination of the large corporation tax. The costs are being returned to customers in rates over a three year period beginning January 1, 2007.

The customer share of land sale represents the customers' portion of the net of tax gain on the sale of surplus land that will be refunded to customers in 2008.

In the absence of rate regulation, the other long-term liabilities and deferred credits in the above table would have been recorded in income, aside for the pension and other post-employment benefit liabilities and the deferred gains on sale of natural gas transmission and distribution assets. This would have resulted in increased natural gas transmission and distribution revenues of $6.2 million (2006 - $10.2 million), increased cost of natural gas of $0.4 million (2006 – decreased $0.6 million), decreased operation and maintenance costs of $2.3 million (2006 – $2.5 million), decreased property and other taxes of $1.1 million (2006 - $0.9 million), increased depreciation and amortization of $5.4 million (2006 - $4.1 million), decreased financing costs of $0.4 million (2006 – $1.2 million) and increased income tax expense of $1.8 million (2006 – $2.0 million).

7. SHARE CAPITAL AND CONTRIBUTED SURPLUS

The Company is authorized to issue 500,000,000 common shares, 100,000,000 first preference shares and 100,000,000 second preference shares, all without par value.

	2007	2006
Common shares, 59,591,732 shares issued	**$ 594.0**	$ 594.0

7. SHARE CAPITAL (CONTINUED)

CONTRIBUTED SURPLUS

Income tax benefits in the amount of $8.0 million (2005 - $27.3 million) relating to transactions with entities under common control were recorded as a credit to contributed surplus in 2007.

DIVIDEND POLICY

As part of its approval of the acquisition of Terasen Inc. by Knight, Inc., and subsequently of Terasen Inc. by Fortis Inc. from Knight Inc., the BCUC imposed a number of conditions intended to ring-fence the Company from its parent companies. These restrictions included a prohibition on the payment of dividends unless the Company has in place at least as much common equity as that deemed by the BCUC for rate-making purposes. The Company must maintain a percentage of common equity to total capital that is at least as much as that determined by the BCUC from time to time for ratemaking purposes. Dividends from the Company will not be allowed by the regulator if the requisite equity is not in place. The Company's dividend policy is intended to ensure that it maintains at least as much common equity as that deemed by the BCUC for rate-making purposes.

8. EMPLOYEE BENEFIT PLANS

The Company is a sponsor of pension plans for eligible employees. The plans include registered defined benefit pension plans, supplemental unfunded arrangements, which provide pension benefits in excess of statutory limits, and defined contributory plans. The Company also provides post-employment benefits other than pensions for retired employees. The following is a summary of each type of plan:

DEFINED BENEFIT PLANS

Retirement benefits under the defined benefit plans are based on employees' years of credited service and remuneration. Company contributions to the plan are based upon independent actuarial valuations. The most recent actuarial valuations of the defined benefit pension plans for funding purposes were at December 31, 2004 and December 31, 2005 and the dates of the next required valuations are December 31, 2007 and December 31, 2008. The expected weighted average remaining service life of employees covered by the defined benefit pension plans is 10.1 years (2006 – 10.2 years).

Effective January 1, 2007 all employees became participants in a new defined benefit pension plan in which costs are split evenly between the employees and employer. All current employees were grandfathered in their respective defined contribution and defined benefit plans and those plans were closed to all new members, except for the TGVI plans which were closed to all new non-unionized members. The most recent actuarial valuation of the new defined benefit pension plan for funding purposes was May 17, 2007 and the date of the next required valuation is December 31, 2009.

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

DEFINED CONTRIBUTION PLAN

Effective in 2000, all new non-union employees became members of defined contribution pension plans. Company contributions to the plan are based upon employee age and pensionable earnings. Effective January 1, 2007, this plan was closed and all new employees became participants in the new defined benefit plan described above.

SUPPLEMENTAL PLANS

Certain employees are eligible to receive supplemental benefits under both the defined benefit and defined contribution plans. The supplemental plans provide pension benefits in excess of statutory limits. The supplemental plans are unfunded and are secured by letters of credit.

OTHER POST-EMPLOYMENT BENEFITS

The Company provides retired employees with other post-employment benefits that include, depending on circumstances, supplemental health, and life insurance coverage. Post-employment benefits are unfunded and annual expense is recorded on an accrual basis based on independent actuarial determinations, considering among other factors, health care cost escalation. The most recent actuarial valuations were completed as at December 31, 2005 and the date of the next required valuation is December 31, 2008. The expected weighted average remaining service life of employees covered by these benefit plans is 9.0 years (2006 - 9.0 years).

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

The Company measures its accrued benefit obligations and the fair value of plan assets for accounting purposes as at December 31 each year. The financial positions of the employee defined benefit pension plans and other benefit plans are presented in aggregate in the tables below:

	Defined benefit pension plans		Other benefit plans	
	2007	2006	**2007**	2006
Plan assets				
Fair value, beginning of year	**$ 228.9**	$ 202.4	**$ -**	$ -
Actual return on plan assets	**8.1**	28.6	**-**	-
Company contributions	**5.8**	5.3	**1.2**	1.2
Contributions by members	**4.1**	3.0	**-**	-
Benefits and settlements paid	**(9.5)**	(10.3)	**(1.1)**	(1.1)
Other	**-**	(0.1)	**(0.1)**	(0.1)
Fair value, end of year	**237.4**	228.9	**-**	-
Accrued benefit obligation				
Obligation, beginning of year	**227.3**	213.7	**68.2**	64.3
Current service cost	**6.6**	5.3	**1.3**	1.2
Interest cost	**11.5**	10.7	**3.4**	3.3
Contributions by members	**4.1**	3.0	**-**	-
Benefits and settlements paid	**(9.5)**	(10.3)	**(1.1)**	(1.1)
Actuarial losses (gains)	**(4.0)**	4.9	**(3.1)**	0.7
Change in discount rate	**-**	-	**-**	-
Past service cost and other	**-**	-	**-**	(0.2)
Balance, end of year	**236.0**	227.3	**68.7**	68.2
Funded status - plan surplus (deficiency)	**1.4**	1.6	**(68.7)**	(68.2)
Unamortized transitional (benefit) obligation	**(8.7)**	(10.5)	**1.5**	3.1
Unamortized actuarial loss	**16.2**	13.3	**22.3**	27.7
Unamortized past service costs	**2.7**	3.2	**(0.8)**	(0.9)
Accrued benefit asset (liability)	**$ 11.6**	$ 7.6	**$ (45.7)**	$ (38.3)
Represented by				
Pension assets	**$ 13.5**	$ 8.5	**$ -**	$ -
Accrued benefit liability	**(1.9)**	(0.9)	**(45.7)**	(38.3)
	$ 11.6	$ 7.6	**$ (45.7)**	$ (38.3)

The net accrued benefit liability is included in other long-term liabilities and deferred credits (Note 6) and the pension asset is included in other assets (Note 4).

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

Included in the accrued benefit obligation and fair value of the plan assets at year-end are the following amounts in respect of plans with accrued benefit obligations in excess of fair value of assets:

	Pension benefit plans		Other benefit plans	
	2007	2006	**2007**	2006
Accrued benefit obligations:				
Unfunded plans	**$ 12.8**	$ 10.2	**$ 68.7**	$ 68.2
Funded plans	**170.4**	162.2	**-**	-
	183.2	172.4	**68.7**	68.2
Fair value of plan assets	**183.1**	173.0	**-**	-
Funded status surplus (deficit)	**$ (0.1)**	$ 0.6	**$ (68.7)**	$ (68.2)

The accrued benefit obligations for unfunded pension benefit plans are secured by letters of credit.

The net benefit plan expense is as follows:

	Pension benefit plans		Other benefit plans	
	2007	2006	**2007**	2006
Current service cost	**$ 6.6**	$ 5.3	**$ 1.3**	$ 1.2
Interest cost on projected benefit obligations	**11.5**	10.7	**3.4**	3.3
Actual positive return on plan assets	**(8.1)**	(28.6)	**-**	-
Net actuarial losses (gains)	**(4.0)**	4.9	**(3.1)**	0.7
Past service costs	**-**	-	**-**	(0.2)
Other	**-**	0.1	**0.1**	0.1
Net benefit plan (income) expense before adjustments	**6.0**	(7.6)	**1.7**	5.1
Adjustments to recognize the long-term nature of employee future benefit costs:				
Difference between actual and expected return on plan assets	**(7.6)**	14.8	**-**	-
Difference between actual and recognized actuarial losses in year	**4.7**	(3.4)	**5.4**	1.8
Difference between actual and recognized past service costs in year	**0.5**	0.5	**(0.1)**	-
Amortization of transitional (benefit) obligation	**(1.8)**	(1.8)	**1.6**	1.6
Other	**-**	-	**-**	-
Net benefit plan expense	**$ 1.8**	$ 2.5	**$ 8.6**	$ 8.5
Defined contribution plan expense	**$ -**	$ 1.1		
	$ 1.8	$ 3.6		

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

BENEFIT PLAN ASSETS

The weighted-average asset allocation by asset category of the Company's defined benefit pension plans and other funded benefit plans is as follows:

	Defined Benefit Pension Plans	
	2007	2006
Equity securities	**56%**	58%
Fixed income securities	**35%**	34%
Other assets	**9%**	8%
Total assets	**100%**	100%

The investment policy for benefit plan assets is to optimize the risk-return using a portfolio of various asset classes. The Company's primary investment objectives are to secure registered pension plans, and maximize investment returns in a cost-effective manner while not compromising the security of the respective plans. The pension plans utilize external investment managers to manage the investment policy. Assets in the plan are held in trust by independent third parties.

The pension plans do not directly hold any shares of the Company's parent.

SIGNIFICANT ASSUMPTIONS

The discount rate assumption used in determining pension and post-retirement benefit obligations and net benefit expense reflects the market yields, as of the measurement date, on high-quality debt instruments. The expected rate of return on plan assets assumption is reviewed annually by management, in conjunction with actuaries. The assumption is based on the expected returns for the various asset classes, weighted by the portfolio allocation.

The weighted average significant actuarial assumptions used to determine the accrued benefit obligation and the benefit plan expense are as follows:

	Pension benefit plans		Other benefit plans	
	2007	2006	**2007**	2006
Accrued benefit obligation				
Discount rate at December 31, based on AA Corporate bonds	**5.25%**	5.00%	**5.25%**	5.00%
Rate of compensation increase for five years and 3.36% thereafter	**3.63%**	3.64%	**-**	-
Net benefit plan expense				
Discount rate at January 1, based on AA Corporate bonds	**5.00%**	5.00%	**5.00%**	5.00%
Expected rate of return on plan assets	**7.25%**	7.25%	**-**	-

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

The assumed health-care cost trend rates for other post-employment benefit plans are as follows:

	2007	2006
Extended health benefits		
Initial health care cost trend rate	**8.0%**	10.0%
Annual rate of decline in trend rate	**1.0%**	1.0%
Ultimate health care cost trend rate	**5.0%**	5.0%
Year that the rate reaches the ultimate trend rate	**2011**	2011
Medical Services Plan Benefits Premium trend rate	**4.0%**	4.0%

A one percentage-point change in assumed health-care cost trend rates would have the following effects:

2007	One percentage-point increase	One percentage-point decrease
Effect on the total of the service costs and interest cost components of the benefit plan expense	**$ 0.6**	**$ (0.5)**
Effect on accrued benefit obligation	**8.2**	**(7.8)**

CASH FLOWS

Total cash contributions for employee benefit plans consist of:

	Employee benefit plans	
	2007	2006
Funded plans	**$ 5.0**	$ 4.5
Beneficiaries of unfunded plans	**2.0**	2.0
Defined contribution plans	**-**	1.1
Total	**$ 7.0**	$ 7.6

The contributions for 2008 are anticipated to be approximately the same as 2007 for defined pension benefit plans and other benefit plans.

IMPACT OF RATE REGULATION

As required by the regulator, the Company is required under its approved cost of service model to defer the amounts of pension benefit expense that exceed or are less than the amounts approved by the regulator to be recovered in rates each year. During the year ended December 31, 2007 the Company has deferred pension expense of $1.5 million (2006 - $2.3 million) that was less than the amount approved by the regulator to be refunded in rates in 2008.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

9. FINANCING COSTS

	2007	2006
Interest and expense on long-term debt	**$ 101.1**	$ 98.8
Interest on short-term debt	**6.5**	7.1
Interest capitalized (note 2)	**(0.8)**	(0.7)
	$ 106.8	$ 105.2

As allowed by the regulator, during the year ended December 31, 2007, the Company capitalized interest for borrowing requirements for construction of assets that have not been included in rate base of $0.8 million (2006 - $0.7 million).

10. INCOME TAXES

VARIATION IN EFFECTIVE INCOME TAX RATE

Consolidated income taxes vary from the amount that would be computed by applying the federal and provincial combined statutory income tax rate of 34.12% (2006 – 34.12%) to earnings before income taxes as shown in the following table:

	2007	2006
Earnings before income taxes	**$ 115.7**	$ 112.0
Combined statutory income tax rate	**34.12%**	34.12%
Combined income taxes at statutory rate	**$ 39.4**	$ 38.2
Decrease in income taxes resulting from capital cost allowance and other deductions claimed for income tax purposes over amounts recorded for accounting purposes	**(4.5)**	(7.5)
Large Corporation Tax in excess of (surtax credit) surtax	**-**	(1.1)
Large Corporation Tax deferred for regulatory purposes	**-**	3.1
Non-deductible expenses and non-taxable income	**(2.5)**	2.5
Provincial income tax applicable to prior years	**1.4**	11.6
Other	**3.7**	(3.2)
Actual consolidated income taxes	**$ 37.5**	$ 43.6
Effective Income Tax Rate	**32.41%**	38.93%

10. INCOME TAXES (CONTINUED)

FUTURE INCOME TAXES

As a result of the Company accounting for income taxes following the taxes payable method for its regulated operations, the Company has not recognized net future income tax liabilities amounting to $196.5 million at December 31, 2007 (2006 – $217.5 million) and has not recognized a future income tax recovery of $21.0 million for the year ended December 31, 2007 (2006 – $13.4 million), all of which were calculated using the asset and liability method.

11. FINANCIAL INSTRUMENTS

FAIR VALUE ESTIMATES

	December 31, 2007		December 31, 2006	
(in millions)	**Carrying Value**	**Estimated Fair Value**	Carrying Value	Estimated Fair Value
Held for trading				
Cash and short-term investments [1]	**$ 5.6**	**$ 5.6**	$ 6.5	$ 6.5
Loans and receivables				
Accounts receivable [2]	**310.1**	**310.1**	290.3	290.3
Other financial liabilities				
Short-term notes [2]	**305.0**	**305.0**	217.0	217.0
Accounts payable and accrued liabilities [2]	**331.2**	**331.2**	407.7	407.7
Long-term debt, including current portion [3,4,5]	**1,340.6**	**1,550.3**	1,342.2	1,547.2

[1] Due to the nature and/or short-term maturity of these financial instruments, carrying value approximates fair value.
[2] Carrying value approximates amortized cost
[3] Carrying value is measured at amortized cost using the effective interest rate method
[4] Carrying value at December 31, 2007 is net of unamortized deferred financing costs of $10.8 million. On January 1, 2007, deferred financing costs were reclassified from other assets in accordance with the transitional provisions of Section 3855. The majority of the Company's long-term debt relates to regulated operations which enables the Company to recover the existing financing charges through rates or tolls.
[5] Fair value is calculated by discounting the future cash flow of each debt issue at the estimated yield to maturity for the same or similar issues at December 31, 2007, or by using available quoted market prices.

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates cannot be determined with precision as they are subjective in nature and involve uncertainties and matters of judgment.

Effective interest expense associated with the Company's short-term borrowings and long-term debt is disclosed in Note 9 to these consolidated financial statements.

11. FINANCIAL INSTRUMENTS (CONTINUED)

DERIVATIVE INSTRUMENTS

The Company uses derivative instruments to hedge its exposures to fluctuations in natural gas prices and interest rates.

Asset (Liability)			**2007**		2006	
December 31 *(in millions)*	Number of swaps and options	Term to maturity (years)	Carrying Value	Fair Value	Carrying Value	Fair Value
Natural Gas						
Commodity Swaps and Options	202	Up to 3	**$ (77.3)**	**$ (77.3)**	$ (133.0)	$ (133.6)
Interest Swaps	-	-	-	**-**	-	(0.9)

The natural gas derivatives fair value reflects only the value of the natural gas derivatives and not the offsetting change in value of the underlying future purchases of natural gas. These fair values reflect the estimated amounts the Company would receive or pay to terminate the contracts at the stated dates.

The derivatives entered into by the Company relate to regulated operations and any resulting gains or losses are recorded in rate stabilization accounts, subject to regulatory approval, and passed through to customers in future rates.

RISK MANAGEMENT

As approved by the regulator, derivatives are used to manage natural gas price risk in the natural gas transmission and distribution operations. The majority of the natural gas supply contracts have floating, rather than fixed prices. The Company uses natural gas price swap contracts to fix the effective purchase price. Any differences between the effective cost of natural gas purchased and the price of natural gas included in rates are recorded in deferral accounts (CCRA and MCRA), and subject to regulatory approval, are passed through in future rates to customers.

Foreign currency risk in natural gas transmission and distribution operations relates mainly to purchases and sales of natural gas denominated in U.S. dollars, and is thereby managed through regulatory deferral accounts.

The Company's short-term borrowings and variable rate long-term debt are exposed to interest rate risk. The Company manages interest rate risk through the use of interest rate derivatives with payments and receipts under interest rate swap contracts being recognized as adjustments to financing costs.

The Company is exposed to credit risk in the event of non-performance by counterparties to its derivative financial instruments. Because it deals with high credit quality institutions in accordance with established credit approval practices, the Company does not expect any counterparties to fail to meet their obligations.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

12. RELATED PARTY TRANSACTIONS

(a) The Company received $4.1 million in 2007 (2006 – $4.1 million) from Terasen Gas (Vancouver Island) Inc. ("TGVI"), a subsidiary company of Terasen Inc., for transporting gas through the Company's pipeline system.

(b) The Company paid approximately $45.2 million during the year ended December 31, 2007 (2006 – $44.6 million) for customer care and billing services to a limited partnership. The Company's parent, Terasen Inc., holds a 30% interest in the limited partnership and jointly controls it. The Company is committed to pay approximately $43.0 million as base contract fees for 2008.

(c) The Company paid $8.5 million in 2007 (2006 – $8.5 million) to Terasen Inc. for management services.

(d) The Company charged affiliated companies $6.1 million in 2007 (2006 – $6.6 million) for management services.

Related party transactions are recorded at the exchange amount.

13. COMMITMENTS AND CONTINGENCIES

The Company has entered into operating leases for certain building space and natural gas transmission and distribution assets. In addition, the Company enters into gas purchase contracts. The following table sets forth the Company's operating lease and gas purchase obligations due in the years indicated:

	Operating leases	Purchase obligations	Total
2008	$ 15.7	$ 471.7	$ 487.4
2009	15.2	22.2	37.4
2010	14.9	-	14.9
2011	14.6	-	14.6
2012	14.3	-	14.3
2013 and later	93.3	-	93.3
	$ 168.0	$ 493.9	$ 661.9

Gas purchase contract commitments are based on market prices that vary with gas commodity indices. The amounts disclosed reflect index prices that were in effect at December 31, 2007.

The Company received a Notice of Assessment dated July 31, 2006 from the British Columbia Social Service Tax authority for $37.1 million of additional provincial sales tax and interest on the Southern Crossing Pipeline, which was completed in 2000. The Company appealed this assessment and on March 26, 2007, the Minister of Small Business and Revenue and Minister Responsible for Regulatory Reform issued a decision in respect of the Company's appeal. The Minister reduced the assessment to $7.0 million including interest which has already been paid in full to avoid accruing further interest on the amount and has been included in other assets. The Minister's decision is currently under appeal by the Company to the Supreme Court of British Columbia.

13. COMMITMENTS AND CONTINGENCIES (CONTINUED)

A number of claims and lawsuits seeking damages and other relief are pending against the Company. Management is of the opinion, based upon information presently available, that it is unlikely that any liability, to the extent not provided for through insurance or otherwise, would be material in relation to the Company's consolidated financial statements.

CONSOLIDATED FINANCIAL STATEMENTS OF

TERASEN GAS INC.

YEARS ENDED DECEMBER 31, 2008 AND 2007

MANAGEMENT'S REPORT

Financial Reporting

Management is responsible for the accompanying consolidated financial statements. These financial statements have been prepared in conformity with Canadian generally accepted accounting principles and, where appropriate, include amounts that are based on management's best estimates and judgments.

The Board of Directors, through its Audit Committee, oversees Management's responsibilities for financial reporting and internal control. The Audit Committee meets with the internal auditors, the independent auditors and management to discuss auditing and financial matters and to review the consolidated financial statements and the independent auditors' report. The Audit Committee reports its findings to the Board for consideration in approving the consolidated financial statements for issuance to the shareholders.

Internal Control over Financial Reporting

Management is also responsible for establishing and maintaining adequate internal control over the Company's financial reporting. The internal control system was designed to provide reasonable assurance to the Company's Management regarding the preparation and presentation of the consolidated financial statements.

The Company's independent auditors, Ernst and Young, LLP, conducted their audit in accordance with Canadian generally accepted auditing standards. Their report outlines the scope of their audit and gives their opinion on the consolidated financial statements.

AUDITORS' REPORT

To the Shareholders' of

Terasen Gas Inc.

We have audited the consolidated balance sheets of **Terasen Gas Inc.** as at December 31, 2008 and 2007 and the consolidated statements of earnings and comprehensive earnings, retained earnings and cash flows for the years then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2008 and 2007 and the results of its operations and its cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

Cash is defined as cash and short-term investments.

The accompanying notes are an integral part of these consolidated financial statements.

1. SIGNIFICANT ACCOUNTING POLICIES

The preparation of these consolidated financial statements in conformity with Canadian generally accepted accounting principles ("GAAP") requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses in the financial statements, as well as the disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

In the opinion of management, these consolidated financial statements have been properly prepared within reasonable limits of materiality and reflect the following summary of significant accounting policies.

On February 26, 2007, Knight Inc. (formerly known as Kinder Morgan Inc.), Terasen Inc.'s former parent announced that it had entered into a definitive agreement with Fortis Inc. to sell Terasen Inc. and its principal natural gas transmission and distribution assets, including its subsidiaries Terasen Gas Inc. and Terasen Gas (Vancouver Island) Inc. as well as other activities including Terasen Energy Services. The sale did not include the petroleum transportation subsidiaries nor investments under the Kinder Morgan Canada name. The transaction closed on May 17, 2007.

BASIS OF PRESENTATION

The consolidated financial statements include the accounts of Terasen Gas Inc. ("Terasen Gas" or "the Company") and its subsidiaries, including Terasen Gas (Squamish) Inc. ("Squamish"). On January 1, 2007, the Company and its subsidiary, Squamish, were amalgamated.

Certain comparative figures have been reclassified to conform with the current year's presentation.

CHANGES IN ACCOUNTING POLICIES

Effective January 1, 2008, the Company adopted the following new accounting standards issued by the Canadian Institute of Chartered Accountants ("CICA").

a) Section 3862, *Financial Instruments – Disclosures*, and Section 3863, *Financial Instruments – Presentation*, require disclosures of both qualitative and quantitative information that enables users of financial statements to evaluate the nature and extent of risks from financial instruments to which the Company is exposed. The new disclosures are included in Note 11.

b) Section 1535, *Capital Disclosures,* requires the Company to disclose additional information about its capital and the manner in which it is managed. This additional disclosure includes quantitative and qualitative information regarding the Company's objectives, policies and processes for managing capital. The new disclosures are in Note 11.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

c) Section 3031, *Inventories,* requires inventories to be measured at the lower of cost or net realizable value, disallows the use of a last-in first-out inventory costing methodology, and requires that, when circumstances which previously caused inventories to be written down below cost no longer exist, the amount of the write-down is to be reversed. This standard is to be applied retrospectively. As at January 1, 2008, supplies and other inventories of $6.6 million ($5.8 million as at January 1, 2007) were reclassified to property, plant and equipment from inventory on the balance sheet as they are held for the development, construction, maintenance and repair of other property, plant and equipment. During the year ended December 31, 2008, gas in storage inventories of $1,152.1 million (2007 - $1,017.3 million) were expensed and reported in cost of natural gas on the consolidated statement of earnings and comprehensive earnings.

FINANCIAL INSTRUMENTS

The Company utilizes derivatives and other financial instruments to manage its exposure to changes in foreign currency exchange rates, interest rates and energy commodity prices.

a) Section 3855, *Financial Instruments – Recognition and Measurement*, prescribes the criteria for recognition and presentation of financial instruments on the balance sheet and the measurement of financial instruments according to prescribed classifications. This section also addresses how financial instruments are measured subsequent to initial recognition and how the gains and losses are recognized.

   The Company is required to designate its financial instruments into one of the following five categories: held for trading; available for sale; held to maturity; loans and receivables; and other financial liabilities. All financial instruments are to be initially measured at fair value. Financial instruments classified as held for trading or available for sale are subsequently measured at fair value with any change in fair value recorded in net earnings and other comprehensive income, respectively. All other financial instruments are subsequently measured at amortized cost.

   All derivative financial instruments are recorded on the balance sheet at fair value. Mark-to-market adjustments on these instruments are included in net earnings, unless the instruments are designated as part of a cash flow hedge relationship, and then the effective portion of changes in fair value are recorded in other comprehensive income. Any change in fair value relating to the ineffective portion is recorded immediately in net earnings. For regulated financial instruments, any difference between the amount recognized upon a change in the fair value of a derivative financial instrument, whether or not in a qualifying hedging relationship, and the amount recovered from customers in current rates, is subject to regulatory deferral treatment to be recovered from or refunded to customers in future rates.

   In accordance with the standard's transitional provisions, the Company recognizes as separate assets and liabilities only embedded derivatives acquired or substantively modified on or after January 1, 2003.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

The Company has designated its financial instruments as follows:

- Cash and short-term investments are classified as "*Held for Trading*" and are recorded at fair value. Due to the relatively short period to maturity of these financial instruments the carrying values approximate their fair values.
- Accounts receivable and long-term receivables are classified as *"Loans and Receivables"*. These financial assets are recorded at values that approximate their amortized cost using the effective interest method.
- Short-term notes, accounts payable and accrued liabilities, long-term debt, and related issue costs are classified as "*Other Financial Liabilities*". These financial liabilities are recorded at values that approximate their amortized cost using the effective interest method.

  Deferred financing costs will be taken into earnings using the effective interest method over the life of the related debt. Prior to January 1, 2007, deferred financing costs were amortized using the straight-line method of amortization. As allowed by the standard a one-time adjustment of $1.5 million has been made to retained earnings to reflect the difference between the straight-line method and the effective interest method of amortization prior to January 1, 2007.

  The Company recognizes transaction costs associated with financial assets and liabilities, that are classified as other than held for trading, as an adjustment to the cost of those financial assets and liabilities recorded on the balance sheet. These transaction costs are amortized into earnings using the effective interest rate method over the life of the related financial instrument.

b) Section 1530, *Comprehensive Income*, requires the presentation of a statement of comprehensive income and provides guidance for the reporting and display of other comprehensive income. Comprehensive income represents the change in equity of an enterprise during a period from transactions and other events arising from non-owner sources including gains and losses arising on translation of self-sustaining foreign operations, gains and losses from changes in fair value of available for sale financial assets and changes in fair value of the effective portion of cash flow hedging instruments. The Company has not recognized any adjustments through other comprehensive income for the years ended December 31, 2008 and 2007.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

c) Section 3865, *Hedges,* specifies the criteria under which hedge accounting may be applied, how hedge accounting should be performed under permitted hedging strategies and the required disclosures. The majority of the Company's cash flow hedges are for the purchase of natural gas. Given that the Company is subject to rate regulation, the ineffective portion of changes in the fair value of these hedges is deferred as an asset or liability until it is settled, offset by an asset or liability on behalf of customers. Upon settlement, the recognized gain or loss is recorded as a regulatory asset or liability and is collected from or refunded to ratepayers in subsequent periods. The Company recognized an additional liability of $1.1 million to counterparties for unrealized losses related to gas purchase hedges at January 1, 2007 and an amount recoverable from ratepayers of $1.1 million. Amounts recoverable from ratepayers are recorded in rate stabilization accounts.

   The Company utilizes cash flow hedges to hedge the variability in interest payments on the underlying debt instruments. Cash flow hedges for rate regulated businesses are recorded in Other assets with the offset to Other long- term liabilities and deferred credits. The adoption of this new standard on January 1, 2007 increased Other assets by $0.8 million and increased Other long-term liabilities and deferred credits by $0.8 million.

REGULATION

The Company is subject to the regulation of the British Columbia Utilities Commission ("the BCUC"), an independent regulatory authority. The Company has a multi-year agreement that expires at the end of 2009. This multi-year agreement is a cost-of-service based agreement with allowed rates of return on approved rate base set by the BCUC. For 2008, the allowed ROE was set at 8.62% (2007 – 8.37%). The allowed rate of return is based on a notional debt-equity ratio of 64.99% debt and 35.01% equity. The Company has an annual review process for rate approvals and allowed rates of return are reset annually, unless directed differently by the BCUC. For 2009, the allowed ROE has been set at 8.47%.

The BCUC exercises statutory authority over such matters as rates of return, construction and operation of facilities, accounting practices, rates, and contractual agreements with customers. Rates are bundled to include transmission and distribution services, where applicable.

In order to recognize the economic effects of regulation, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under GAAP for non-regulated businesses.

Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates. Long-term regulatory assets are recorded in other assets whereas current regulatory assets are rate stabilization accounts which are recorded as current portion of rate stabilization accounts. Regulatory liabilities are recorded in other long-term liabilities and deferred credits.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

The impacts of rate regulation on the Company's operations for the twelve months ending December 31, 2008 and 2007 and as at December 31, 2008 and 2007 are described in the Significant Accounting Policies, and in Note 2 "Property, Plant and Equipment", Note 3 "Rate Stabilization Accounts", Note 4 "Other Assets", Note 6 "Other Long-Term Liabilities and Deferred Credits", Note 8 "Employee Benefit Plans", Note 9 "Financing Costs", and Note 10 "Income Taxes".

INVENTORIES

Inventories of gas in storage are valued at weighted-average cost. The cost of gas in storage is recovered from customers in future rates.

PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment are stated at cost less accumulated depreciation and unamortized contributions in aid of construction. Cost includes all direct expenditures for system expansions, betterments and replacements, an allocation of overhead costs and an allowance for funds used during construction. When allowed by the BCUC, regulated operations capitalize an allowance for equity funds used during construction at approved rates.

Depreciation of regulated assets is recorded on a straight-line basis over their useful lives. Depreciation rates for regulated assets are approved by the respective regulator.

The cost of regulated depreciable property retired, together with removal costs less salvage, is charged to accumulated depreciation, as is any gain or loss incurred on disposal.

IMPAIRMENT OF LONG-LIVED ASSETS

Long-lived assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets is measured by a comparison of the carrying amount of an asset to estimated undiscounted future cash flows expected to be generated by the asset. If the carrying amount of an asset exceeds its estimated future cash flows, an impairment charge is recognized by the amount by which the carrying amount of the asset exceeds the fair value of the asset. There was no impairment of long-lived assets for the years ended December 31, 2008 and 2007.

ASSET RETIREMENT OBLIGATIONS

The Company will recognize the fair value of a future asset retirement obligation as a liability in the period in which it incurs a legal obligation associated with the retirement of tangible long-lived assets that results from the acquisition, construction, development, and/or normal use of the assets. The Company will concurrently recognize a corresponding increase in the carrying amount of the related long-lived asset that is depreciated over the remaining life of the asset. The fair value of the asset retirement obligation is to be estimated using the expected cash flow approach that reflects a range of possible outcomes discounted at a credit-adjusted risk-free interest rate. Subsequent to the initial measurement, the asset retirement obligation will be adjusted at the end of each period to reflect the passage of time and changes in the estimated future cash flows underlying the obligation.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Changes in the obligation due to the passage of time are to be recognized in income as an operating expense using the interest method. Changes in the obligation due to changes in estimated cash flows are to be recognized as an adjustment of the carrying amount of the related long-lived asset that is depreciated over the remaining life of the asset.

As the fair value of future removal and site restoration costs for the Company's natural gas transmission and distribution systems are not currently determinable, the Company has not recognized an asset retirement obligation at December 31, 2008 and 2007. For regulated operations there is a reasonable expectation that asset retirement costs would be recoverable through future rates.

RATE STABILIZATION ACCOUNTS

The Company is authorized by the BCUC to maintain rate stabilization accounts to mitigate the effect on its earnings of unpredictable and uncontrollable factors, namely volume volatility caused principally by weather and natural gas cost volatility. The Revenue Stabilization Adjustment Mechanism ("RSAM") accumulates the margin impact of variations in the actual versus forecast use for residential and commercial customers.

The Commodity Cost Reconciliation Account ("CCRA") and the Midstream Cost Reconciliation Account ("MCRA") accumulate differences between actual natural gas costs and forecast natural gas costs as recovered in rates. The two accounts segregate costs that are allocable to all sales customers (MCRA) and all residential customers and certain commercial and industrial customers for whom Terasen Gas acquires gas supply (CCRA).

All rate stabilization account balances are recovered through rates as approved by the BCUC.

DEFERRED CHARGES

The Company defers certain charges which the regulatory authorities or contractual arrangements require or permit to be recovered through future rates. Deferred charges are amortized over various periods as approved by the BCUC and depending on the nature of the charges.

Deferred charges not subject to regulation relate to projects which are expected to benefit future periods and will be capitalized on completion, expensed on project abandonment, or amortized over their useful lives.

REVENUE RECOGNITION

The Company recognizes revenues when products have been delivered or services have been performed.

Revenues from natural gas sales are recorded on the basis of regular meter readings and estimates of customer usage since the last meter reading date to the end of the year and are adjusted for the RSAM and other BCUC approved orders.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

POST-EMPLOYMENT BENEFIT PLANS

The Company sponsors a number of employee benefits plans. These plans include both defined benefit and defined contribution pension plans, and various other post-retirement benefit plans.

The cost of pensions and other post-retirement benefits earned by employees is actuarially determined as the employee provides service. The Company uses the projected benefit method based on years of service and estimates of expected returns on plan assets, salary escalation, retirement age of employees, mortality and expected future health-care costs. The discount rate used to value liabilities is based on AA Corporate bond yields. The Company accrues the cost of defined benefit pensions and post-employment benefits as the employee provides services, except when the BCUC requires costs to be expensed as paid.

The expected return on plan assets is based on management's estimate of the long-term expected rate of return on plan assets and a market-related value of plan assets. The market-related value of assets as of December 31, 2008 is calculated as the average of the market value of invested assets at December 31, 2008 and two actuarially determined extrapolated market values of invested assets at December 31, 2008. The two extrapolated market values are calculated by using the market value of invested assets at December 31, 2006 rolled forward to December 31, 2008 using 2007 and 2008 net contributions and assumed investment returns, and the market value of invested assets at December 31, 2007 rolled forward to December 31, 2008 using 2008 net contributions and assumed investment returns. These three amounts are then averaged and reported as the market-related value of plan assets used in calculating net benefit expense. Additionally, the Company compares the average market-related value to the underlying market value at the end of the period. If the difference between the average market-related value and the actual market value is greater or less than 20% of the actual market value, then any difference is amortized over the expected average remaining service life of the employee group covered by the plan.

Adjustments, in excess of 10% of the greater of the accrued benefit obligation and plan asset value, that result from plan amendments, changes in assumptions and experience gains and losses, are amortized over the expected average remaining service life of the employee group covered by the plan. Experience will often deviate from the actuarial assumptions resulting in actuarial gains and losses.

Defined contribution plan costs are expensed by the Company as contributions are payable.

INCOME TAXES

The Company accounts for and recover income tax expense in rates as prescribed by the BCUC for ratemaking purposes. This includes accounting for income taxes by the taxes payable method and accounting for certain deferral and rate stabilization accounts on a net of realized tax basis, as approved by the BCUC. Therefore, future income taxes related to temporary differences are not recorded. The taxes payable method is followed as there is reasonable expectation that all future income taxes will be recovered in rates when they become payable.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Under the asset and liability method of accounting for income taxes, future income tax assets and liabilities are determined based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Future income tax assets and liabilities are measured at the tax rate that is expected to apply when the temporary differences reverse.

VARIABLE INTEREST ENTITIES

The Company has performed a review of the entities with whom it conducts business and has concluded that there are no entities that are required to be consolidated or variable interests that are required to be disclosed under the requirements of the Guideline.

FUTURE ACCOUNTING PRONOUNCEMENTS

a) *International Financial Reporting Standards ("IFRS"):* In February 2008, the Accounting Standards Board ("AcSB") confirmed that the use of IFRS will be required in 2011 for publicly accountable enterprises in Canada. In April 2008, the AcSB issued an Omnibus Exposure Draft proposing that publicly accountable enterprises be required to apply IFRS, in full and without modification, on January 1, 2011.

   The adoption date of January 1, 2011 will require the restatement, for comparative purposes, of amounts reported by the Company for its year ended December 31, 2010, and of the opening balance sheet as at January 1, 2010. The AcSB proposes that CICA Handbook Section - *Accounting Changes*, paragraph 1506.30, which would require an entity to disclose information relating to a new primary source of GAAP that has been issued but is not yet effective and that the entity has not applied, not be applied with respect to Exposure Draft.

   Terasen Gas, along with Fortis, is continuing to assess the financial reporting impacts of the adoption of IFRS and, at this time, the impact on future financial position and results of operations is not reasonably determinable or estimable. Terasen Gas does anticipate a significant increase in disclosure resulting from the adoption of IFRS and is continuing to assess the level of disclosure required as well as systems changes that may be necessary to gather and process the information.

b) *Rate-Regulated Operations:* In March 2007, the AcSB issued an Exposure Draft on rate-regulated operations that proposed: (i) the temporary exemption in Section 1100, *Generally Accepted Accounting Principles*, of the CICA Handbook providing relief to entities subject to rate regulation from the requirement to apply the Section to the recognition and measurement of assets and liabilities arising from rate regulation be removed; (ii) the explicit guidance for rate-regulated operations provided in Section 1600, *Consolidated Financial Statements*, Section 3061, *Property, Plant and Equipment*, Section 3465, *Income Taxes*, and Section 3475, *Disposal of Long-Lived Assets and Discontinued Operations*, be removed; and (iii) Accounting Guideline 19, *Disclosures by Entities Subject to Rate Regulation*, be retained as is. The AcSB has also observed that relying on US Statement of Financial Accounting Standards No. 71, *Accounting for the Effects of Certain Types of Regulation* ("FAS 71"), as another source of Canadian GAAP in the absence of CICA Handbook guidance addressing the specific circumstances of entities subject to rate regulation, is consistent with Section 1100 when the qualifying criteria of FAS 71 are met.

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

In August 2007, the AcSB issued a Decision Summary on the Exposure Draft that supported the removal of the temporary exemption in Section 1100, *Generally Accepted Accounting Principles*, and the amendment to Section 3465, *Income Taxes,* to recognize future income tax liabilities and assets as well as an offsetting regulatory asset or liabilities for entities subject to rate regulation. Both changes will apply prospectively for fiscal years beginning on or after January 1, 2009. It was also decided that the current guidance pertaining to property, plant and equipment and disposal of long-lived assets and discontinued operations, consolidated financial statements be maintained and that the existing AcG-19 will not be withdrawn from the Handbook but that the guidance will be updated as a result of the other changes.

The AcSB also decided that the final Background Information and Basis for Conclusions associated with its rate regulation project would not express any views of the AcSB regarding the status of US Statement of Financial Accounting Standards No. 71, *Accounting for the Effects of Certain Types of Regulation*, as an "other source of GAAP" within the Canadian GAAP hierarchy.

Effective January 1, 2009, the impact on the Company of the amendment to Section 3465, *Income Taxes,* will be the recognition of future income tax assets and liabilities and related regulatory liabilities and assets for the amount of future income taxes expected to be refunded to or recovered from customers in future gas rates. Currently, the Company uses the taxes payable method of accounting for income taxes on regulated earnings. The estimated effect on the Company's consolidated financial statements, if it had adopted amended Section 3465, *Income Taxes*, as at December 31, 2008, would have been an increase in future tax liabilities of $261.8 million, including those associated with income taxes that will become payable on future revenues as they are collected from customers when the tax timing differences reverse. There would also be a corresponding increase in regulatory assets. Terasen Gas is continuing to assess and monitor any additional implications on its financial reporting related to accounting for rate regulated operations.

Effective January 1, 2009, with the removal of the temporary exemption in Section 1100, the Company must now apply Section 1100 to the recognition of assets and liabilities arising from rate regulation. Certain assets and liabilities arising from rate regulation continue to have specific guidance under a primary source of Canadian GAAP that applies only to the particular circumstances described therein, including those arising under Section 1600, 3061, 3465, and 3475. All assets and liabilities arising from rate regulation do not have specific guidance under a primary source of Canadian GAAP. Therefore, Section 1100 directs the Company to adopt accounting policies that are developed through the exercise of professional judgment and the application of concepts described in Section 1000, *Financial Statement Concepts*. These assets and liabilities qualify for recognition as assets and liabilities under Section 1000. Therefore, there would be no effect on the Company's consolidated financial statements if it had adopted the removal of the temporary exemption in Section 1100, for the year ended December 31, 2008. Terasen Gas is continuing to assess and monitor any additional implications on its financial reporting related to accounting for rate-regulated operations.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

c) Effective January 1, 2009, the Company will be adopting the new CICA Handbook Section 3064 – *Goodwill and Intangible Assets* which converges GAAP for goodwill and intangible assets with IFRS. The new standard provides for more comprehensive guidance on intangible assets, in particular for internally developed intangible assets. The Company is still assessing the financial reporting impact of adopting this standard.

2. PROPERTY, PLANT AND EQUIPMENT

2008	Weighted average depreciation rate	Cost	Accumulated depreciation	Net book Value
Natural gas transmission and distribution systems	**2.35%**	**$ 2,833.7**	**$ 657.7**	**$ 2,176.0**
Plant, buildings and equipment	**6.25%**	**247.7**	**101.4**	**146.3**
Land and land rights	**0.00%**	**83.2**	**1.4**	**81.8**
Assets under construction	**-**	**28.2**	**-**	**28.2**
		$ 3,192.8	**$ 760.5**	**$ 2,432.3**

2007	Weighted average depreciation rate	Cost	Accumulated depreciation	Net book Value
Natural gas transmission and distribution systems	2.34%	$ 2,759.5	$ 634.3	$ 2,125.2
Plant, buildings and equipment	7.41%	251.7	92.6	159.1
Land and land rights	0.00%	82.3	1.4	80.9
Assets under construction	-	21.3	-	21.3
		$ 3,114.8	$ 728.3	$ 2,386.5

As allowed by the regulators, during the year ended December 31, 2008 the Company capitalized an allowance for equity funds during construction at approved rates of $1.0 million (2007 - $0.8 million) and approved capitalized overhead of $27.7 million (2007 - $27.5 million), with offsetting inclusions in earnings.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

3. RATE STABILIZATION ACCOUNTS

	2008	2007
Current Assets		
RSAM	**$ -**	$ 5.9
CCRA	**53.9**	34.8
MCRA	**-**	20.4
	53.9	61.1
Long-Term Assets		
RSAM	**-**	11.8
Current Liabilities		
MCRA	**(23.7)**	-
Long-Term Liabilities		
RSAM	**(7.7)**	-
Net rate stabilization accounts	**$ 22.5**	$ 72.9

The current portion of the rate stabilization accounts represents the amounts expected to be recovered or refunded in rates over the next year. Actual recoveries (refunds) will vary depending on natural gas consumption and recovery amounts approved by the BCUC. Rate stabilization accounts are presented net of tax, where applicable.

The RSAM account is anticipated to be refunded in rates over three years. Refund of the RSAM balance is dependent upon annually approved rates and actual gas consumption volumes. The MCRA and CCRA accounts are anticipated to be fully recovered or paid within the next fiscal year.

In the absence of rate regulation, the costs in the rate stabilization accounts above would have been expensed as incurred which would have resulted in increased natural gas transmission and distribution revenues of $631.4 million (2007 – $568.6 million), increased cost of natural gas of $551.7 million (2007 - $555.8 million), increased income tax expense of $24.8 million (2007 – $4.1 million) and decreased other comprehensive income of $4.4 million (2007 – increased $61.2 million) related to the gas derivatives.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

4. OTHER ASSETS

	2008	2007
Deferred charges		
Subject to rate regulation and approved for recovery in rates		
Income taxes recoverable on post-employment benefits	**$ 17.7**	$ 15.5
Residential unbundling costs	**6.5**	8.6
Replacement transportation agreement	**0.7**	1.3
Commercial commodity unbundling costs	**-**	1.2
Other items approved for recovery in rates	**7.8**	6.1
Subject to rate regulation but not yet approved for recovery in rates		
Southern Crossing Pipeline PST Reassessment	**7.3**	7.2
	40.0	39.9
Long-term receivables	**9.1**	9.2
Pension assets (Note 8)	**19.5**	13.5
	$ 68.6	$ 62.6

Amortization of these deferred charges in rates for the year ended December 31, 2008 totalled $2.1 million (2007 - $2.6 million).

The deferral account for income taxes on post-employment benefits relates to income tax amounts on post employment benefit expense. The BCUC allows post-employment benefits to be collected from customers through rates calculated on the accrual basis, rather than a cash paid basis, which produces a timing difference for income tax purposes. Since the Company accounts for income taxes using the taxes payable basis of accounting, the tax effect of this timing difference is included in other assets, and will be reduced as cash payments for post-employment benefits exceed required accruals and amounts collected from customers in rates.

The residential and commercial commodity unbundling costs deferred are costs incurred to develop a third-party marketer alternative for residential and commercial customers to purchase natural gas from suppliers other than the Company. The BCUC has approved the recovery of these costs in rates over a three-year period.

The deferral account for the replacement transportation agreement relates to amounts that the Company is allowed to recover from customers in rates in order to cover any shortfall in revenues relative to a minimum amount approved by the BCUC on the Company's Southern Crossing Pipeline ("SCP"). The deferral account is being amortized and recovered in rates over a five-year period, of which one year remains at December 31, 2008.

The deferral account for the SCP PST reassessment relates to a payment made in regards to a possible reassessment of additional provincial sales tax on the SCP. See Note 13. In 2006, the Company made a payment of $10 million pending resolution of the appeal as a good faith payment in order to forestall an order from the Province of British Columbia (the "Province") to provide full payment or security. During 2007, the assessment was reduced to $7.0 million and the overpayment was refunded to the Company. Incremental costs associated with the appeal are being deferred. Depending on the success of the appeal, the Company will either be refunded this payment from the Province or alternatively expects to recover the costs from customers in future rates.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

4. OTHER ASSETS (CONTINUED)

Deferred charges and deferred credits for rate regulated entities that have been aggregated in the table above and in Note 6 relate to more than 37 deferral accounts, none of which exceed $1.6 million individually. All of these accounts have been approved by regulators in prior annual rate approvals or orders and are being amortized over various periods depending on the nature of the costs.

In the absence of rate regulation, the deferred charges in the above table would have been recorded in income, except for the costs related to the pension asset and the SCP PST Reassessment. This would have resulted in increased natural gas transmission and distribution revenues of $8.6 million (2007 - $2.1 million), increased operation and maintenance costs $3.1 million (2007 - $12.9 million), decreased depreciation and amortization of $2.1 million (2007 - $2.6 million), increased financing costs of $0.2 million (2007 - $0.6 million), and increased income tax expense of $5.3 million (2007 – decreased $1.3 million).

5. LONG-TERM DEBT

	2008	2007
(a) Purchase Money Mortgages:		
11.80% Series A, due September 30, 2015	**$ 74.9**	$ 74.9
10.30% Series B, due September 30, 2016	**200.0**	200.0
(b) Debentures and Medium Term Note Debentures:		
10.75% Series E, due June 8, 2009	**59.9**	59.9
6.20% Series 9, due June 2, 2008	**-**	188.0
6.95% Series 11, due September 21, 2029	**150.0**	150.0
6.50% Series 18, due May 1, 2034	**150.0**	150.0
5.90% Series 19, due February 26, 2035	**150.0**	150.0
5.55% Series 21, due September 25, 2036	**120.0**	120.0
6.00% Series 22, due October 2, 2037	**250.0**	250.0
5.80% Series 23, due May 13, 2038	**250.0**	-
Obligations under capital leases, at 4.54% (2007 – 5.61%)	**9.7**	8.6
Total long-term debt	**1,414.5**	1,351.4
Less: current portion of long-term debt	**61.8**	189.7
Less: long term debt issue costs	**12.8**	10.8
	$ 1,339.9	$ 1,150.9

(a) PURCHASE MONEY MORTGAGES:

The Series A and Series B Purchase Money Mortgages are secured equally and rateably by a first fixed and specific mortgage and charge on the Company's Coastal Division assets, and are subject to the restrictions of the Trust Indenture dated December 3, 1990. The aggregate principal amount of Purchase Money Mortgages that may be issued under the Trust Indenture is limited to $425 million.

(b) DEBENTURES AND MEDIUM TERM NOTE DEBENTURES:

The Company's debentures are unsecured obligations but are subject to the restrictions of the Trust Indenture dated November 1, 1977, as amended and supplemented.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

5. LONG-TERM DEBT (CONTINUED)

On May 13, 2008, Terasen Gas issued $250.0 million of Medium Term Note Debentures at a coupon interest rate of 5.80%. The debentures mature on May 13, 2038 and are unsecured and subject to the restrictions of the Trust Indenture. The proceeds were used to repay Terasen Gas' Series 9 Medium Term Debentures which matured on June 2, 2008 and the remainder of the proceeds were used to pay down Terasen Gas' operating line.

On October 2, 2007, Terasen Gas issued $250.0 million of Medium Term Note Debentures at a coupon interest rate of 6.00%. The debentures mature on October 2, 2037 and are unsecured and subject to restrictions of the Trust Indenture. The proceeds were used to repay Terasen Gas' Series 13 and Series 20 Medium Term Debentures which matured in 2007.

On August 24, 2007, Terasen Gas renegotiated and extended its credit facility for five years with similar terms to the original facility and common for such term credit facilities. The $500 million unsecured committed revolving credit facility is with a syndicate of banks and matures in August 2012. In 2008, under the terms of the agreement, the facility was extended to mature in August 2013.

Long-term debt issue costs are amortized using the effective interest rate method as discussed in Note 1. The Company's Series B Purchase Money Mortgages, Series E Debentures, and Series 11, Series 18, Series 19, Series 21, Series 22 and Series 23 Medium Term Note Debentures are redeemable in whole or in part at the option of the Company at a price equal to the greater of the Canada Yield Price, as defined in the applicable Trust Indenture, and the principal amount of the debt to be redeemed, plus accrued and unpaid interest to the date specified for redemption. The Canada Yield Price is calculated as an amount that provides a yield slightly above the yield on an equivalent maturity Government of Canada bond.

Required principal repayments over the next five years and thereafter are as follows:

2009	$ 61.8
2010	1.9
2011	1.9
2012	1.9
2013	1.9
Thereafter	1,345.1

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

6. OTHER LONG-TERM LIABILITIES AND DEFERRED CREDITS

	2008	2007
Pension and other post-employment benefit liabilities (Note 8)	**$ 55.3**	$ 47.6
Deferred gains on sale of natural gas transmission and distribution assets	**46.3**	50.5
Deferred credits		
Subject to rate regulation and approved for recovery in rates		
Earnings Sharing Mechanism	**10.7**	12.5
SCP Net Mitigation Revenue	**6.6**	4.4
SCP West to East Transmission Revenues	**2.5**	0.9
Deferred Interest on MCRA	**1.8**	1.7
Deferred Interest Mechanism	**1.4**	0.1
Customer Benefit from Land Sale	**0.5**	1.7
Large Corporation Tax Elimination	**-**	2.1
Pension Cost Variance	**-**	2.3
Other items approved for recovery in rates	**5.3**	4.5
	$ 130.4	$ 128.3

The deferred gains on sale of natural gas transmission and distribution assets occurred upon the sale of pipeline assets to certain municipalities in 2001, 2002, 2004 and 2005. The pre-tax gains of $70.5 million on combined cash proceeds of $141.1 million are being amortized over the 17-year terms of the operating leases that commenced at the time of the sale transactions. These operating lease commitments are included in the table in Note 13.

Amortization of these deferred credits in rates for the year ended December 31, 2008 totalled $5.1 million (2007 - $5.4 million).

The Earnings Sharing Mechanism is a mechanism agreed to in the Company's multi-year agreement to share, on a 50/50 basis, amounts earned by the Company on its regulated activities that exceed or are less than amounts allowed by the BCUC in the cost-of-service allowed return calculations. These amounts are shared on an after-tax basis, and are returned to customers in rates.

The SCP net mitigation revenue is revenue that is received from third parties for the use of the SCP transportation capacity that has not been utilized by the firm transportation agreement customers. This account is used to record differences between actual revenues from SCP mitigation and what has been approved in the current revenue requirement. Amounts are being amortized to income over 5 years.

The SCP west to east transmission revenue is revenue that is received from third parties for the use of the SCP west to east transmission system. This account is used to record differences between actual revenues from SCP west to east transmission system and what has been approved in the current revenue requirement. Amounts are being amortized to income over 5 years.

The deferred interest on MCRA is the interest calculated on the difference between the actual and forecasted average balance of the MCRA account multiplied by the composite interest rate.

The Company has a deferred interest mechanism which has been approved by the BCUC which requires that variances due to differences in long-term borrowings and long-term and short-term interest rates from those that have been approved in rates be returned to customers in future rates. The impact of this mechanism was to increase financing costs for the year ended December 31, 2008 by $2.4 million (2007 – nil). The balance of the account is being amortized on a straight-line basis over three years.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

6. OTHER LONG-TERM LIABILITIES AND DEFERRED CREDITS (CONTINUED)

The customer benefit from land sale represents the customers' portion of the net of tax gain on the sale of surplus land that will be refunded to customers by the first quarter of 2009.

The large corporation tax elimination costs resulted from the federal government eliminating the tax on large corporations in 2006. The BCUC allows large corporation tax to be recovered from customers through rates. These costs were collected from customers through rates in 2006 and now are owed back to customers in future rates upon the elimination of the large corporation tax.

The pension cost variance account accumulates differences between pension expense that is approved for recovery in rates and actuarial pension expense. Amounts are recovered in rates in the following year.

In the absence of rate regulation, the other long-term liabilities and deferred credits in the above table would have been recorded in income, aside for the pension and other post-employment benefit liabilities and the deferred gains on sale of natural gas transmission and distribution assets. This would have resulted in increased natural gas transmission and distribution revenues of $3.9 million (2007 - $6.2 million), decreased cost of natural gas of $0.7 million (2007 – increased $0.4 million), decreased operation and maintenance costs of nil (2007 – $2.3 million), decreased property and other taxes of nil (2007 - $1.1 million), increased depreciation and amortization of $5.1 million (2007 - $5.4 million), decreased financing costs of $2.4 million (2007 – $0.4 million) and increased income tax expense of $3.3 million (2007 – $1.8 million).

7. SHARE CAPITAL AND CONTRIBUTED SURPLUS

AUTHORIZED SHARE CAPITAL

The Company is authorized to issue 500,000,000 common shares, 100,000,000 first preference shares and 100,000,000 second preference shares, all without par value.

	2008	2007
Common shares, 59,591,732 shares issued	**$ 594.0**	$ 594.0

CONTRIBUTED SURPLUS

Income tax benefits in the amount of $5.3 million (2007 - $8.0 million) relating to transactions with entities under common control were recorded as a credit to contributed surplus in 2008.

DIVIDEND POLICY

As part of its approval of the acquisition of Terasen Inc. by Knight, Inc., and subsequently of Terasen Inc. by Fortis Inc. from Knight Inc., the BCUC imposed a number of conditions intended to ring-fence the Company from its parent companies. These restrictions included a prohibition on the payment of dividends unless the Company has in place at least as much common equity as that deemed by the BCUC for rate-making purposes. The Company must maintain a percentage of common equity to total capital that is at least as much as that determined by the BCUC from time to time for ratemaking purposes. Dividends from the Company will not be allowed by the regulator if the requisite equity is not in place. The Company's dividend policy is intended to ensure that it maintains at least as much common equity as that deemed by the BCUC for rate-making purposes.

8. EMPLOYEE BENEFIT PLANS

The Company is a sponsor of pension plans for eligible employees. The plans include registered defined benefit pension plans, supplemental unfunded arrangements, which provide pension benefits in excess of statutory limits, and defined contributory plans. The Company also provides post-employment benefits other than pensions for retired employees. The following is a summary of each type of plan:

DEFINED BENEFIT PLANS

Retirement benefits under the defined benefit plans are based on employees' years of credited service and remuneration. Company contributions to the plan are based upon independent actuarial valuations. The most recent actuarial valuations of the defined benefit pension plans for funding purposes were at December 31, 2005 and December 31, 2007 and the dates of the next required valuations are December 31, 2008 and December 31, 2010. The expected weighted average remaining service life of employees covered by the defined benefit pension plans is 10.2 years (2007 – 10.3 years).

Effective January 1, 2007 all employees became participants in a new defined benefit pension plan in which costs are split evenly between the employees and employer. All current employees were grandfathered in their respective defined contribution and defined benefit plans and those plans were closed to all new members. The most recent actuarial valuation of the new defined benefit pension plan for funding purposes was May 17, 2007 and the date of the next required valuation is December 31, 2009.

DEFINED CONTRIBUTION PLAN

Effective in 2000, all new non-union employees became members of defined contribution pension plans. Company contributions to the plan are based upon employee age and pensionable earnings. Effective January 1, 2007, all new employees of the Company became members of the new defined benefit plan described above. Company contributions to the plan are based upon employee age and pensionable earnings for employees.

SUPPLEMENTAL PLANS

Certain employees are eligible to receive supplemental benefits under both the defined benefit and defined contribution plans. The supplemental plans provide pension benefits in excess of statutory limits. The supplemental plans are unfunded and are secured by letters of credit.

OTHER POST-EMPLOYMENT BENEFITS

The Company provides retired employees with other post-employment benefits that include, depending on circumstances, supplemental health, and life insurance coverage. Post-employment benefits are unfunded and annual expense is recorded on an accrual basis based on independent actuarial determinations, considering among other factors, health care cost escalation. The most recent actuarial valuations were completed as at December 31, 2005 and the date of the next required valuation is December 31, 2008. The expected weighted average remaining service life of employees covered by these benefit plans is 9.0 years (2007 - 9.0 years).

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

The Company measures its accrued benefit obligations and the fair value of plan assets for accounting purposes as at December 31 each year. The financial positions of the employee defined benefit pension plans and other benefit plans are presented in aggregate in the tables below:

	Defined benefit pension plans		Other benefit plans	
	2008	2007	**2008**	2007
Plan assets				
Fair value, beginning of year	**$ 237.4**	$ 228.9	**$ -**	$ -
Actual return on plan assets	**(30.5)**	8.1	**-**	-
Company contributions	**6.2**	5.8	**1.6**	1.2
Contributions by members	**4.7**	4.1	**-**	-
Benefit payments	**(9.6)**	(9.5)	**(1.4)**	(1.1)
Other	**(0.3)**	-	**(0.2)**	(0.1)
Fair value, end of year	**207.9**	237.4	**-**	-
Accrued benefit obligation				
Obligation, beginning of year	**236.0**	227.3	**68.7**	68.2
Current service cost	**6.2**	6.6	**1.2**	1.3
Interest cost	**12.5**	11.5	**3.6**	3.4
Contributions by members	**4.7**	4.1	**-**	-
Benefit payments	**(9.6)**	(9.5)	**(1.4)**	(1.1)
Actuarial gains	**(13.7)**	(4.0)	**(10.2)**	(3.1)
Balance, end of year	**236.1**	236.0	**61.9**	68.7
Funded status - (deficiency) plan surplus	**(28.2)**	1.4	**(61.9)**	(68.7)
Unamortized transitional (benefit) obligation	**(6.9)**	(8.7)	**-**	1.5
Unamortized actuarial loss	**49.3**	16.2	**10.3**	22.3
Unamortized past service costs	**2.2**	2.7	**(0.6)**	(0.8)
Accrued benefit asset (liability)	**$ 16.4**	$ 11.6	**$(52.2)**	$ (45.7)
Represented by				
Pension assets	**$ 19.5**	$ 13.5	**$-**	$ -
Accrued benefit liability	**(3.1)**	(1.9)	**(52.2)**	(45.7)
	$ 16.4	$ 11.6	**$(52.2)**	$ (45.7)

The net accrued benefit liability is included in other long-term liabilities and deferred credits (Note 6) and the pension asset is included in other assets (Note 4).

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

Included in the accrued benefit obligation and fair value of the plan assets at year-end are the following amounts in respect of plans with accrued benefit obligations in excess of fair value of assets:

	Pension benefit plans		Other benefit plans	
	2008	2007	**2008**	2007
Accrued benefit obligations:				
Unfunded plans	**$ 8.9**	$ 9.8	**$ 61.9**	$ 68.7
Funded plans	**227.2**	226.2	**-**	-
	236.1	236.0	**$ 61.9**	68.7
Fair value of plan assets	**207.9**	237.4	**-**	-
Funded status (deficit) surplus	**$ (28.2)**	$ 1.4	**$ (61.9)**	$ (68.7)

The accrued benefit obligations for certain unfunded pension benefit plans are secured by letters of credit.

The net benefit plan expense is as follows:

	Pension benefit plans		Other benefit plans	
	2008	2007	**2008**	2007
Current service cost	**$ 6.2**	$ 6.6	**$ 1.2**	$ 1.3
Interest cost on projected benefit obligations	**12.5**	11.5	**3.6**	3.4
Actual loss (return) on plan assets	**30.5**	(8.1)	**-**	-
Net actuarial losses (gains)	**(13.7)**	(4.0)	**(10.2)**	(3.1)
Other	**0.3**	-	**0.1**	0.1
Net benefit plan (income) expense before adjustments	**35.8**	6.0	**(5.3)**	1.7
Adjustments to recognize the long-term nature of employee future benefit costs:				
Difference between actual and expected return on plan assets	**(47.5)**	(7.6)	**-**	-
Difference between actual and recognized actuarial losses in year	**14.4**	4.7	**11.9**	5.4
Difference between actual and recognized past service costs in year	**0.5**	0.5	**(0.1)**	(0.1)
Amortization of transitional (benefit) obligation	**(1.8)**	(1.8)	**1.6**	1.6
Net benefit plan expense	**$ 1.4**	**$ 1.8**	**$ 8.1**	$ 8.6

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

BENEFIT PLAN ASSETS

The weighted-average asset allocation by asset category of the Company's defined benefit pension plans and other funded benefit plans is as follows:

	Defined Benefit Pension Plans	
	2008	2007
Equity securities	**48%**	56%
Fixed income securities	**40%**	35%
Other assets	**12%**	9%
Total assets	**100%**	100%

The investment policy for benefit plan assets is to optimize the risk-return using a portfolio of various asset classes. The Company's primary investment objectives are to secure registered pension plans, and maximize investment returns in a cost-effective manner while not compromising the security of the respective plans. The pension plans utilize external investment managers to manage the investment policy. Assets in the plan are held in trust by independent third parties.

The pension plans do not directly hold any shares of the Company's parent.

SIGNIFICANT ASSUMPTIONS

The discount rate assumption used in determining pension and post-retirement benefit obligations and net benefit expense reflects the market yields, as of the measurement date, on high-quality debt instruments. The expected rate of return on plan assets assumption is reviewed annually by management, in conjunction with actuaries. The assumption is based on the expected returns for the various asset classes, weighted by the portfolio allocation.

The weighted average significant actuarial assumptions used to determine the accrued benefit obligation and the benefit plan expense are as follows:

	Pension benefit plans		Other benefit plans	
	2008	2007	**2008**	2007
Accrued benefit obligation				
Discount rate at December 31, based on AA Corporate bonds	**6.25%**	5.25%	**6.25%**	5.25%
Rate of compensation increase	**3.13%**	3.63%	**-**	-
Net benefit plan expense				
Discount rate at January 1, based on AA Corporate bonds	**5.25%**	5.00%	**5.25%**	5.00%
Expected rate of return on plan assets	**7.25%**	7.25%	**-**	-

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

8. EMPLOYEE BENEFIT PLANS (CONTINUED)

The assumed health-care cost trend rates for other post-employment benefit plans are as follows:

	2008	2007
Extended health benefits		
Initial health care cost trend rate	**8.0%**	8.0%
Annual rate of decline in trend rate	**1.0%**	1.0%
Ultimate health care cost trend rate	**5.0%**	5.0%
Year that the rate reaches the ultimate trend rate	**2012**	2011
Medical Services Plan Benefits Premium trend rate	**4.0%**	4.0%

A one percentage-point change in assumed health-care cost trend rates would have the following effects:

2008	One percentage-point increase	One percentage-point decrease
Effect on the total of the service costs and interest cost components of the benefit plan expense	**$ 0.7**	**$ (0.6)**
Effect on accrued benefit obligation	**8.5**	**(7.5)**

CASH FLOWS

Total cash contributions for employee benefit plans consist of:

	Employee benefit plans	
	2008	2007
Funded plans	**$ 5.6**	$ 5.0
Beneficiaries of unfunded plans	**2.2**	2.0
Total	**$ 7.8**	$ 7.0

The contributions for 2009 are anticipated to be approximately the same as 2008 for defined pension benefit plans and other benefit plans (Note 13).

IMPACT OF RATE REGULATION

As required by the regulator, the Company is required under its approved cost of service model to defer the amounts of pension benefit expense that exceed or are less than the amounts approved by the regulator to be recovered in rates each year. During the year ended December 31, 2008 the Company has deferred pension expense of $0.4 million (2007 – less than amount approved $1.5 million) that exceeded the amount approved by the regulator to be recovered in rates in 2009.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

9. FINANCING COSTS

	2008	2007
Interest and expense on long-term debt	**$ 99.1**	$ 101.1
Interest on short-term debt	**12.3**	6.5
Interest capitalized	**(1.0)**	(0.8)
	$ 110.4	$ 106.8

As allowed by the regulator, during the year ended December 31, 2008, the Company capitalized interest for borrowing requirements for construction of assets that have not been included in rate base of $1.0 million (2007 - $0.8 million).

10. INCOME TAXES

VARIATION IN EFFECTIVE INCOME TAX RATE

Consolidated income taxes vary from the amount that would be computed by applying the federal and provincial combined statutory income tax rate of 31.0% (2007 – 34.12%) to earnings before income taxes as shown in the following table:

	2008	2007
Earnings before income taxes	**$ 103.2**	$ 115.7
Combined statutory income tax rate	**31.0%**	34.12%
Combined income taxes at statutory rate	**$ 32.0**	$ 39.4
Decrease in income taxes resulting from capital cost allowance and other deductions claimed for income tax purposes over amounts recorded for accounting purposes	**(5.3)**	(4.5)
Quebec settlement (Note 13)	**(5.6)**	-
Impact of reassessments related to prior years	**(7.6)**	-
Non-deductible expenses and non-taxable income	**(0.7)**	(2.5)
Provincial income tax applicable to prior years	**-**	1.4
Other	**(1.1)**	3.7
Actual consolidated income taxes	**$ 11.7**	$ 37.5
Effective Income Tax Rate	**11.34%**	32.41%

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

10. INCOME TAXES (CONTINUED)

FUTURE INCOME TAXES

Currently, the Company uses the taxes payable method of accounting for income taxes on regulated earnings. The estimated effect on the Company's consolidated financial statements, if it had adopted amended Section 3465, *Income Taxes*, as at December 31, 2008, would have been an increase in future tax liabilities of $261.8 million, including those associated with income taxes that will become payable on future revenues as they are collected from customers when the tax timing differences reverse. There would also be a corresponding increase in regulatory assets.

11. FINANCIAL INSTRUMENTS

FAIR VALUE ESTIMATES

	December 31, 2008		December 31, 2007	
	Carrying Value	**Estimated Fair Value**	Carrying Value	Estimated Fair Value
Held for trading				
Cash and short-term investments [1]	**$ 13.1**	**$ 13.1**	$ 5.6	$ 5.6
Loans and receivables				
Accounts receivable [1,2]	**345.9**	**345.9**	310.1	310.1
Long-term receivables [1,2]	**9.1**	**9.1**	9.2	9.2
Other financial liabilities				
Short-term notes [1,2]	**238.5**	**238.5**	305.0	305.0
Accounts payable and accrued liabilities [1,2]	**365.9**	**365.9**	331.2	331.2
Long-term debt, including current portion [3,4,5]	**1,401.7**	**1,454.2**	1,340.6	1,550.3

1 Due to the nature and/or short-term maturity of these financial instruments, carrying value approximates fair value.
2 Carrying value approximates amortized cost.
3 Carrying value is measured at amortized cost using the effective interest rate method.
4 Carrying value at December 31, 2008 is net of unamortized deferred financing costs of $12.8 million (2007 - $10.8 million). On January 1, 2007, deferred financing costs were reclassified from other assets in accordance with the transitional provisions of CICA Section 3855. The majority of the Company's long-term debt relates to regulated operations which enables the Company to recover the existing financing charges through rates or tolls.
5 Fair value is calculated by discounting the future cash flow of each debt issue at the estimated yield to maturity for the same or similar issues at December 31, 2008, or by using available quoted market prices.

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates cannot be determined with precision as they are subjective in nature and involve uncertainties and matters of judgment.

Interest expense associated with the Company's short-term borrowings and long-term debt is disclosed in Note 9 to these consolidated financial statements.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

11. FINANCIAL INSTRUMENTS (CONTINUED)

DERIVATIVE INSTRUMENTS

The Company hedges its exposure to fluctuations in natural gas prices through the use of derivative instruments. The table below indicates the valuation of the derivative instruments as at December 31, 2008.

Asset (Liability)			**December 31, 2008**		December 31, 2007	
	Number of swaps and options	Term to maturity (years)	Carrying Value	Fair Value	Carrying Value	Fair Value
Natural Gas Commodity Swaps and Options	180	Up to 3	**$ (70.7)**	**$ (70.7)**	$ (77.3)	$ (77.3)
Gas purchase contract premiums	66	Less than 3	**(6.2)**	**(6.2)**	4.8	4.8

The natural gas derivatives fair value reflects only the value of the natural gas derivatives and not the offsetting change in value of the underlying future purchases of natural gas. These fair values reflect the estimated amounts the Company would receive or pay to terminate the contracts at the stated dates. The natural gas derivatives fair values have been determined using published market prices for natural gas commodities.

The derivatives entered into by the Company relate to regulated operations and any resulting gains or losses are recorded in rate stabilization accounts, subject to regulatory approval, and passed through to customers in future rates.

RISK MANAGEMENT

Exposure to credit risk, liquidity risk, market risk, and natural gas commodity price risk arises in the normal course of the Company's business. The Company enters into financial instruments to finance its operations in the normal course of business.

CREDIT RISK

Credit risk is the risk that a third party to a financial instrument might fail to meet its obligations under the terms of the financial instrument. For cash and short term investments, derivative assets, accounts receivable, and other receivables due from customers, the Company's credit risk is limited to the carrying value on the balance sheet. The Company generally has a large and diversified customer base, which minimizes the concentration of credit risk.

The Company is exposed to credit risk in the event of non-performance by counterparties to derivative financial instruments, including natural gas commodity swaps and options. The Company is also exposed to credit risk on physical off-system sales. Because the Company deals with high credit-quality institutions, in accordance with established credit-approval practices, the Company does not expect any counterparties to fail to meet their obligations. Counter-party credit exposures are monitored by individual counterparty and by category of credit rating, and are subject to approved limits. The counter-parties with which the Company has significant transactions are A-rated entities or better. The Company uses netting arrangements to reduce credit risk and net settles payments with counter-parties where net settlement provisions exist.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

11. FINANCIAL INSTRUMENTS (CONTINUED)

In the case of commercial and industrial customers credit risk is managed by checking a company's creditworthiness and financial strength both before commencing and during the business relationship. For residential customers, creditworthiness is ascertained normally before commencing commodity delivery by an appropriate mix of internal and external information to determine the payment mechanism required to reduce credit risk to an acceptable level. Certain customers will only be accepted on a prepayment basis. The Company manages its exposure to credit risk associated with all customers by monitoring an aging of receivables and by monitoring groupings of customers according to method of payment or profile.

Receivables from customers are generally considered to be fully performing until such time as the payment that is due remains outstanding past the contractual due date. The contractual due date is generally 22 days

The ageing analysis of the Company's consolidated accounts receivable is as follows:

	December 31, 2008
Not past due	$ 333.8
Past due 0-30 days	12.5
Past due 31-60 days	2.0
Past due 61-90 days	0.8
Past due over 91 days	3.4
Subtotal accounts receivable	352.5
Less: allowance for doubtful accounts	(6.6)
	$ 345.9

LIQUIDITY RISK

Liquidity risk is the risk that an entity will encounter difficulty in raising funds to meet commitments associated with financial instruments. The Company's financial position could be adversely affected if it fails to arrange sufficient and cost-effective financing to fund, among other things, capital expenditures and the repayment of maturing debt. The ability to arrange sufficient and cost-effective financing is subject to numerous factors, including the results of operations and financial position of the Company, conditions in the capital and bank credit markets, ratings assigned by rating agencies and general economic conditions.

To mitigate this risk, the Company had consolidated authorized lines of credit of $500.0 million (2007 - $500.0 million), as at December 31, 2008, of which $218.0 million (2007 - $152.0 million) was unused. The Company targets to have, on average, sufficient liquidity to allow it not to access the capital markets for a period of twelve months.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

11. FINANCIAL INSTRUMENTS (CONTINUED)

The following summary outlines the Company's credit facility.

Credit Facilities	**December 31, 2008**	December 31, 2007
Total credit facility	**$ 500.0**	$ 500.0
Credit facility utilized		
Short-term borrowings	**(238.5)**	(305.0)
Letters of credit outstanding	**(43.5)**	(43.0)
Credit facility available	**$ 218.0**	$ 152.0

Furthermore, the Company targets a strong investment-grade credit rating to maintain capital market access at reasonable interest rates. As at December 31, 2008, the Company's credit ratings were as follows:

Credit Ratings	**DBRS**	**Moody's**
Terasen Gas Inc.		
Commercial paper	R-1 (Low)	-
Secured long-term debt	A	A2
Unsecured long-term debt	A	A3

A downward change in the credit ratings of the Company by one level on January 1, 2008 would have decreased earnings for the year ended December 31, 2008 by $0.3 million.

The following is an analysis of the contractual maturities of the Company's financial liabilities as at December 31, 2008.

Financial Liabilities	≤ 1 year	>1-3 years	4-5 years	>5 years	Total
Short-term notes	$ 238.5	$ -	$ -	$ -	$ 238.5
Accounts payable and accrued liabilities	365.9	-	-	-	365.9
Long-term debt, including current portion	61.8	3.8	3.8	1,345.1	1,414.5
	$ 666.2	$ 3.8	$ 3.8	$1,345.1	$2,018.9
Derivative Financial Liabilities					
Commodity contracts	$ 58.2	$ 18.7	$ -	$ -	$ 76.9

11. FINANCIAL INSTRUMENTS (CONTINUED)

MARKET RISK

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in foreign exchange rates or market interest rates.

The Company's earnings are not exposed to changes in the US dollar to Canadian dollar exchange rate.

The Company's natural gas derivatives are exposed to fluctuations in the US dollar-to-Canadian dollar exchange rate. The following sensitivity analysis estimates the impact on the fair value of natural gas commodity swaps and options of a 5 percent appreciation and depreciation of the US dollar-to-Canadian dollar exchange rate, with all other variables remaining constant, for the year ended December 31, 2008. A 5 percent appreciation of the US dollar-to-Canadian dollar exchange rate would change the fair value of natural gas commodity swaps and options by moving the fair value further out of the money by $0.3 million. This would result in an increase in "Accounts payable and accrued liabilities" and "Current Assets: Current portion of rate stabilization accounts". A 5 percent depreciation of the US dollar-to-Canadian dollar exchange rate would change the fair value of natural gas commodity swaps and options by reducing the Company's out of the money position by $0.3 million. This would result in a decrease in "Accounts payable and accrued liabilities" and "Current Assets: Current portion of rate stabilization accounts".

The Company is exposed to interest rate risk associated with short-term borrowings and floating rate debt. The Company may enter into interest rate swaps to help reduce this risk. Approximately 100 per cent of the Company's operating facility is subject to interest rate risk while none of its long term debt is subject to interest rate risk. In aggregate, the Company attempts to maintain an exposure of not more than 20% of its debt portfolio in floating rate debt. A 50 basis point increase in interest rates would decrease earnings for the year ended December 31, 2008 by $1.1 million. Additionally, the Company has existing regulatory deferrals which would absorb the impact of interest rate changes.

COMMODITY PRICE RISK

The Company is exposed to risks associated with changes in the market price of natural gas as a result of the natural gas derivatives. The Company's price risk management strategy covers a term of 36 months and aims to (i) improve the likelihood that natural gas prices remain competitive with electricity rates, (ii) dampen price volatility on customer rates and (iii) reduce the risk of regional price disconnects. Any differences between the effective cost of natural gas purchased and the price of natural gas included in rates are recorded in deferral accounts, and subject to regulatory approval, are passed through in future rates to customers. The accompanying Balance Sheet at December 31, 2008 includes a net deferral of $76.9 million included in the caption "Current Assets: Current Portion of Rate Stabilization Accounts" representing net unrealized losses on these hedges that are recoverable from customers through rates.

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

11. FINANCIAL INSTRUMENTS (CONTINUED)

The Company's exposure to market risk includes forward-looking statements and represents an estimate of possible changes in fair value that would occur assuming hypothetical future movements in commodity prices. The Company's views on market risk are not necessarily indicative of actual results that may occur and do not represent the maximum possible gains and losses that may occur, since actual gains and losses will differ from those estimated, based on actual fluctuations in interest rates or commodity prices and the timing of transactions.

The following sensitivity analysis estimates the impact on the fair value of natural gas commodity swaps and options of an one dollar change in the value of the underlying price of natural gas, with all other variables remaining constant, for the year ended December 31, 2008. This analysis is for illustrative purposes only, as in practice market rates rarely change in isolation. If the price of natural gas decreased by one dollar per Gigajoule, the change in the fair value of natural gas commodity swaps and options would be to move further out of the money by $45.4 million. This would result in an increase in "Accounts payable and accrued liabilities" and "Current Assets: Current portion of rate stabilization accounts". If the price of natural gas increased by one dollar per Gigajoule, the change in the fair value of natural gas commodity swaps and options would be to reduce the Company's out of the money position by $47.8 million. This would result in a decrease in "Accounts payable and accrued liabilities" and "Current Assets: Current portion of rate stabilization accounts".

CAPITAL MANAGEMENT

The Company's principal business of regulated gas distribution utilities requires ongoing access to capital in order to allow it to fund the maintenance and expansion of infrastructure. In order to ensure access to capital is maintained, the Company targets a long-term consolidated capital structure of 35 percent equity, 65 percent debt and strong investment-grade credit ratings. As well, the Company has secured a multi-year committed credit facility to support short-term financing of capital expenditures and seasonal working capital requirements. The committed credit facility is available for general corporate purposes.

The Company maintains a capital structure in line with the deemed capital structure approved by the BCUC of 35 percent equity.

The consolidated capital structure of the Company is presented in the following table.

	December 31, 2008		December 31, 2007	
		(%)		*(%)*
Total debt and capital lease obligations (net of cash and short-term investments) [1]	**$ 1,627.1**	**65.0**	$ 1,640.0	65.0
Shareholder's equity	**875.0**	**35.0**	878.2	35.0
Total	**$ 2,502.1**	**100.0**	$ 2,518.2	100.0

[1] Includes long-term debt, including current portion, and short-term borrowings, net of cash and short-term investments

11. FINANCIAL INSTRUMENTS (CONTINUED)

Certain of the Company's long-term debt obligations have covenants restricting the issuance of additional debt such that consolidated debt cannot exceed 75 percent of the Company's capital structure, as defined by the long-term debt agreements. The restrictions on the issuance of additional debt are generally based on an interest coverage being at least two times available net earnings. In addition, certain of the Company's credit agreements require maintenance of certain financial covenants such as a maximum percentage of debt to equity. As at December 31, 2008 and 2007, the Company was in compliance with these covenants.

The Company's credit ratings and credit facilities are disclosed under "Liquidity Risk" in Note 11.

12. RELATED PARTY TRANSACTIONS

a) The Company received $3.3 million in 2008 (2007 – $4.1 million) from Terasen Gas (Vancouver Island) Inc. ("TGVI"), a company under common control, for transporting gas through the Company's pipeline system.

b) The Company paid approximately $47.0 million during the year ended December 31, 2008 (2007 – $45.2 million) for customer care and billing services to a limited partnership. The Company's parent, Terasen Inc., holds a 30% interest in the limited partnership and jointly controls it. The Company is committed to pay approximately $43.6 million as base contract fees for 2009.

c) The Company paid $8.5 million in 2008 (2007 – $8.5 million) to Terasen Inc., the Company's parent, for management services.

d) The Company charged companies under common control $6.6 million in 2008 (2007 – $6.1 million) for management services.

e) The Company's indirect parent, Fortis Inc., grants stock options to certain employees of the Company under its stock option plans. For the year ended December 31, 2008, , the Company was charged, and recorded an expense of $0.3 million (2007 $0.1 million) for the fair value of the stock compensation granted by Fortis Inc

Related party transactions are recorded at the exchange amount.

13. COMMITMENTS AND CONTINGENCIES

The Company has entered into operating leases for certain building space and natural gas transmission and distribution assets. In addition, the Company enters into gas purchase contracts. The following table sets forth the Company's operating leases, gas purchase obligations and employee benefit plan contributions due in the years indicated:

(Tabular amounts in millions of Canadian dollars, except where stated otherwise)

13. COMMITMENTS AND CONTINGENCIES (CONTINUED)

	Operating leases	Purchase obligations	Employee benefit plans	Total
2009	$ 15.4	$ 360.4	$ 7.9	$ 383.7
2010	15.0	26.9	5.9	47.8
2011	14.7	22.8	-	37.5
2012	14.4	-	-	14.4
2013	13.5	-	-	13.5
Thereafter	85.5	-	-	85.5
	$ 158.5	$ 410.1	$ 13.8	$ 582.4

Gas purchase contract commitments are based on market prices that vary with gas commodity indices. The amounts disclosed reflect index prices that were in effect at December 31, 2008. The employee benefit plan contributions have been estimated up to the date of the next actuarial valuation for each plan unless the valuation falls in the next twelve months then the Company has provided for an estimate of the contributions. Employee benefit plan contributions beyond the date of the next actuarial valuation cannot be accurately estimated.

The Company is disputing a $7.0 million assessment of B.C. Social Service Tax representing additional provincial sales tax and interest on the Southern Crossing Pipeline, which was completed in 2000. The amount was paid in full in 2006 to avoid the accrual of further interest and has been included in other assets. The matter is currently under appeal to the Supreme Court of British Columbia.

During the year the Company reached a settlement with Revenu Québec and Canada Revenue Agency related to amounts owing as a result of retroactive amending Quebec tax legislation. In August 2008, the Company made payments of approximately $12.7 million to settle the tax liability. As a result of the tax settlement, an earnings benefit of $5.6 million was recorded during 2008.

A number of claims and lawsuits seeking damages and other relief are pending against the Company. Management is of the opinion, based upon information presently available; that it is unlikely that any liability, to the extent not provided for through insurance or otherwise, would be material in relation to the Company's consolidated financial statements.

Service Quality Indicators (SQIs)

Terasen Gas

	Performance Indicator	2009 YTD Actual	2009 Target
1	**Emergency Response Time** - Time Dispatched to Site - Emergency - Blowing Gas	22:00 minutes	**< 21:06 minutes**
2	**Speed of Answer – Emergency** (% of calls answered within 30 sec.)	98.5%	**> 95%**
3	**Speed of Answer – Non-Emergency** (% of calls answered within 30 sec.)	76.8%	**> 75%**
4	**Transmission Reportable Incidents**	0	**< 2**
5(a)	**Index of Customer Bills Not Meeting Criteria**	6.90	**< 5**
5(b)	**Percent of Transportation Customer Bills Accurate**	88.6%	**> 99.5%**
6	**Meter Exchange Appointment Activity**	87.2%	**> 92.2%**
7	**Accuracy of Transportation Meter Measurement First Report**	98.4%	**> 90.0%**
8	**Independent Customer Satisfaction Survey**	79.9%	**N/A**
9	**Number of Customer Complaints to BCUC**	21	**N/A**
10	**Number of Prior Period Adjustments**	11	**< 25**

	Directional Indicators	
1	Leaks per Kilometer of Distribution	0.0009
	Mains	17
2	Number of Third Party Distribution System Incidents	299

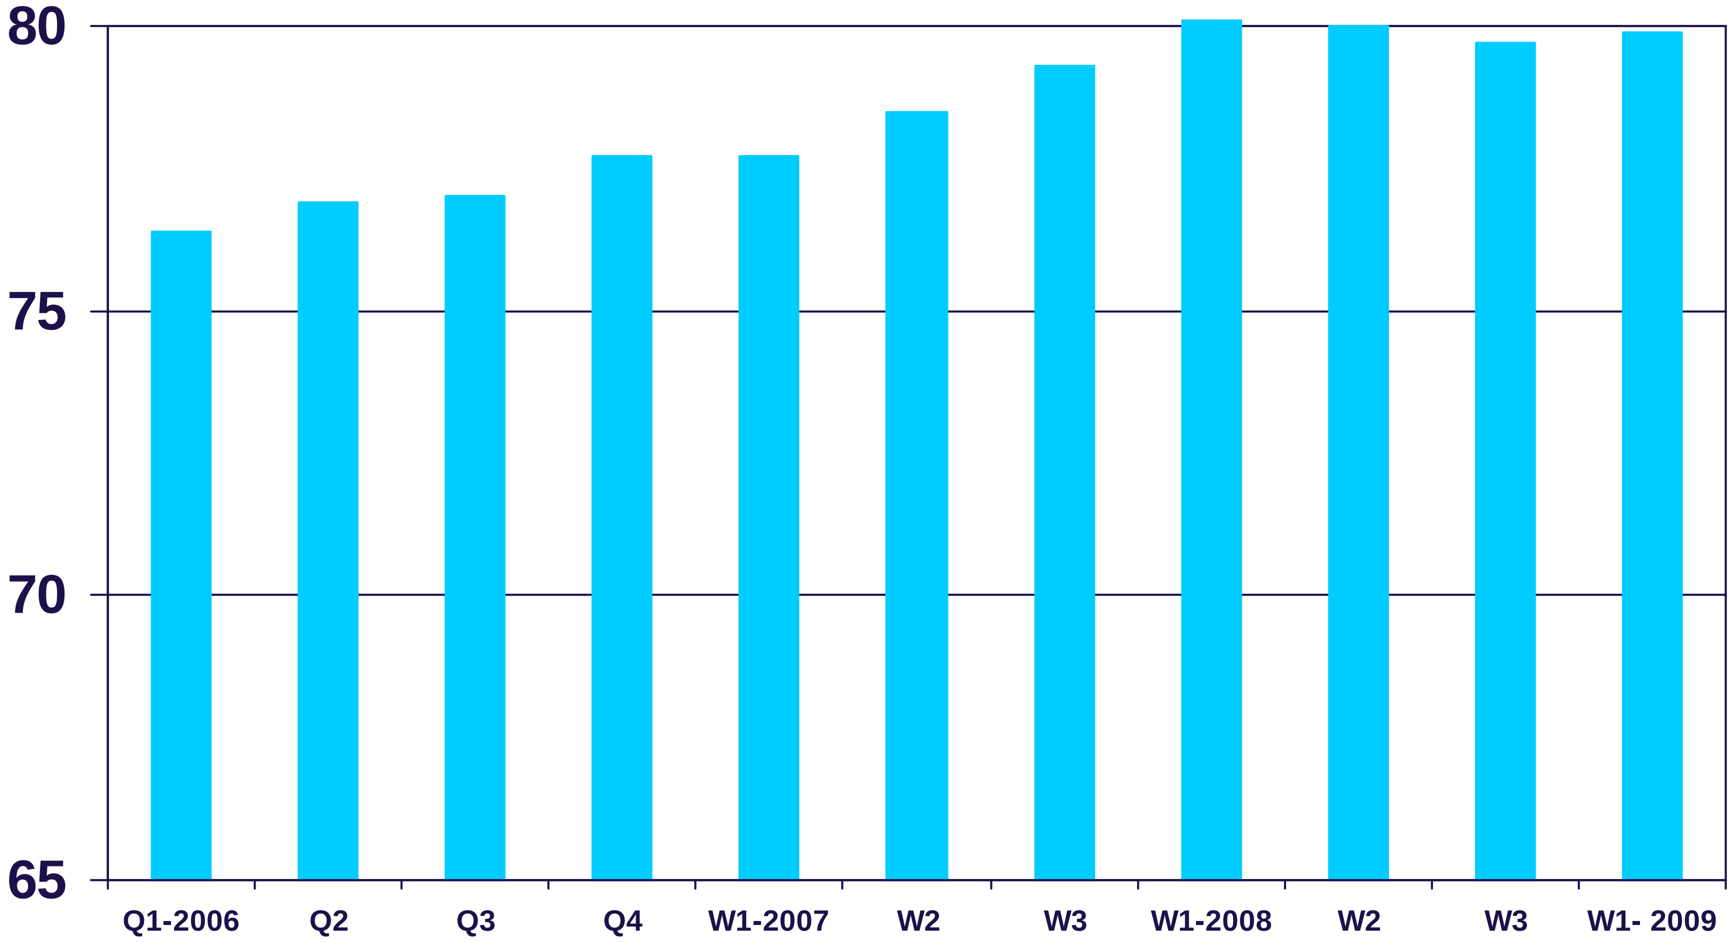
Distribution Measures

- Emergency Response Time
  - *Interior location events driving average response time slightly above target*
    - Outlying communities
    - After hours responses
  - *Construction crews assigned to more complex activities*
    - Can take longer to respond when assigned as first responder
- Meter Exchange Appointment Activity
  - *Activity currently below target due to overbooking of technicians resulting in missed appointments*
    - Fine-tuning appointment scheduling and system capacity within new mobile scheduling system for fieldwork

Billing Measures

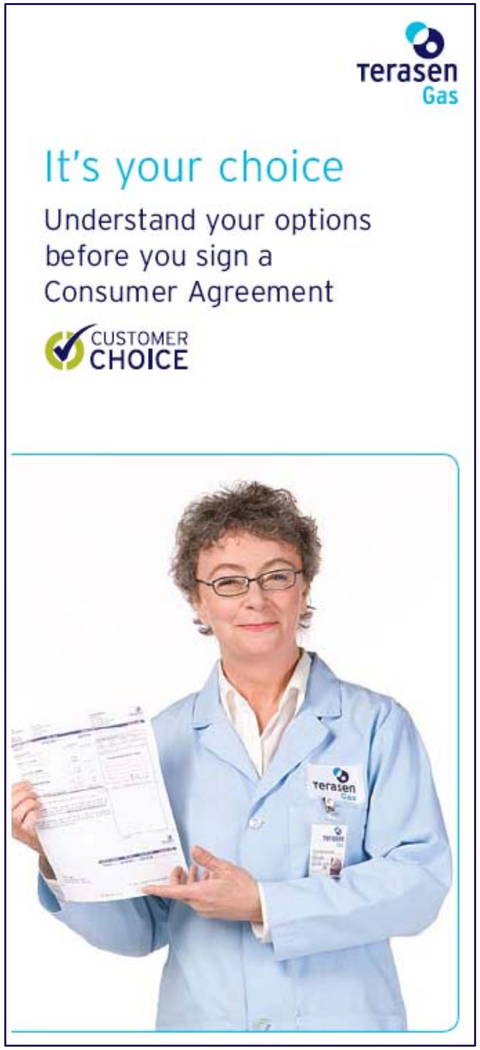
- Mass Market Billing Index & Transportation Billing Accuracy
  - *Year to date results driven primarily by late payment charge calculation error*
    - Result of CIS system technical upgrade late last year
    - Identified in January
    - System fix implemented in February
  - *Secondary impact was a PST / ICE Levy error*
    - Incorrectly charging above to first nations exempt customers
    - Identified and corrected in March

Customer Satisfaction Tracking



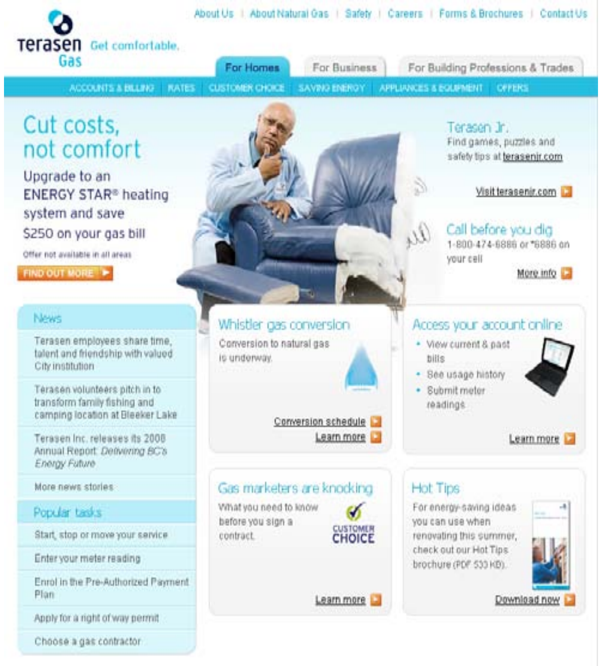
Recent Activities & Events

- Commodity rate adjustment
  - *Jan 1 – Fort Nelson, Revelstoke*
  - *Apr 1 – TGI, Fort Nelson, Revelstoke*
- Customer Choice education
  - *Spring newspaper advertising in 39 community papers*
  - *May bill inserts*
  - *Web advertising*
  - *Bill messages*



Recent Activities & Events

- Radio Campaign
  - *Promoted Energy Efficiency options for renovators*
    - Specific mention of the Furnace Upgrade program
  - *May 4 – May 15*
- Customer Research
  - *Service Channel Expectations & Preferences*
  - *Residential End Use Survey*
  - *Residential Customer Satisfaction Tracking – Wave 2, 2009*



Customer Care Enhancement Project

Danielle Wensink

Customer Care & Services

Project Overview

- Customer Care service delivery in-sourcing
  - *Establish internal call center and billing organization*
  - *Hire, train and house over 350 new employees*
  - *Operational “go live” beginning of 2012*
- In-source technology platforms and business processes
  - *Acquire and implement new CIS solution*

Key Drivers

- Market change
  - *Energy and environment policy changes*
  - *Expanded and more complex customer service offerings*
  - *Customer service expectations increasing*
- Ability to respond limited by existing solution
  - *Existing arrangement limits rapid and cost effective change*
  - *Current technology platform lagging the evolution of alternatives*
  - *Model does not facilitate close "customer touch"*
- Customer expectations and requirements continually change
  - *We need to ensure we can respond to change effectively*

Benefits

Terasen Gas

Customers Receive

- ***Greater scope of services***
  - **Improved communication channels**
  - **Enhanced self service options**
- ***Improved service levels***
  - **Regional knowledge**
  - **End to end business understanding**

Terasen Gas Receives

- ***Ownership of critical customer touch points***
- ***Improved capability to respond to increasing service expectations and market change***
- ***Greater control over pace, nature and cost of future change***
- ***Organizational flexibility***

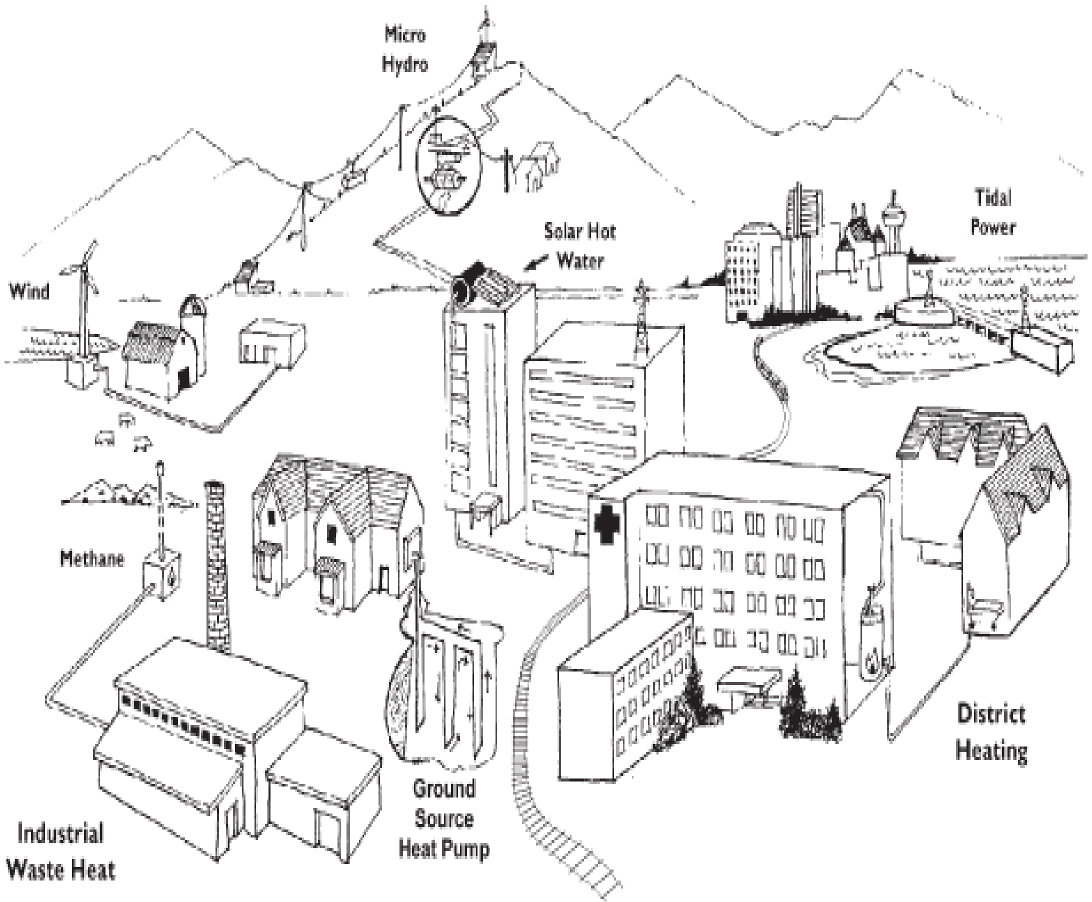
BC Situation Summary & Response

- *BC Situation Summary:*
  - Very significant GHG reductions legislated
  - Equal use of electricity & natural gas today
  - Most of BC electricity is clean low-cost Hydro
  - Desire to preserve low cost electricity rates
- *Response:*
  - Transformation of thermal energy delivery
  - harness alternatives
  - reduce energy use
  - QUEST as an enabler
- *Why Terasen:*
  - Established energy provider in British Columbia

QUEST



Source: Green Municipalities - A Guide to Green Infrastructure for Canadian Municipalities; prepared for the FCM by the Sheltair Group, May 2001

- Cascading of energy use between customer types
- Smaller scale systems closer to & within buildings
- Integrated with elements of buildings & other infrastructure systems
- Multiple local energy sources
- Augmented by gas & electricity grids
- Over 50% reduction in grid energy use.
- QUEST website:

Yard Trucks

Waste Haulers

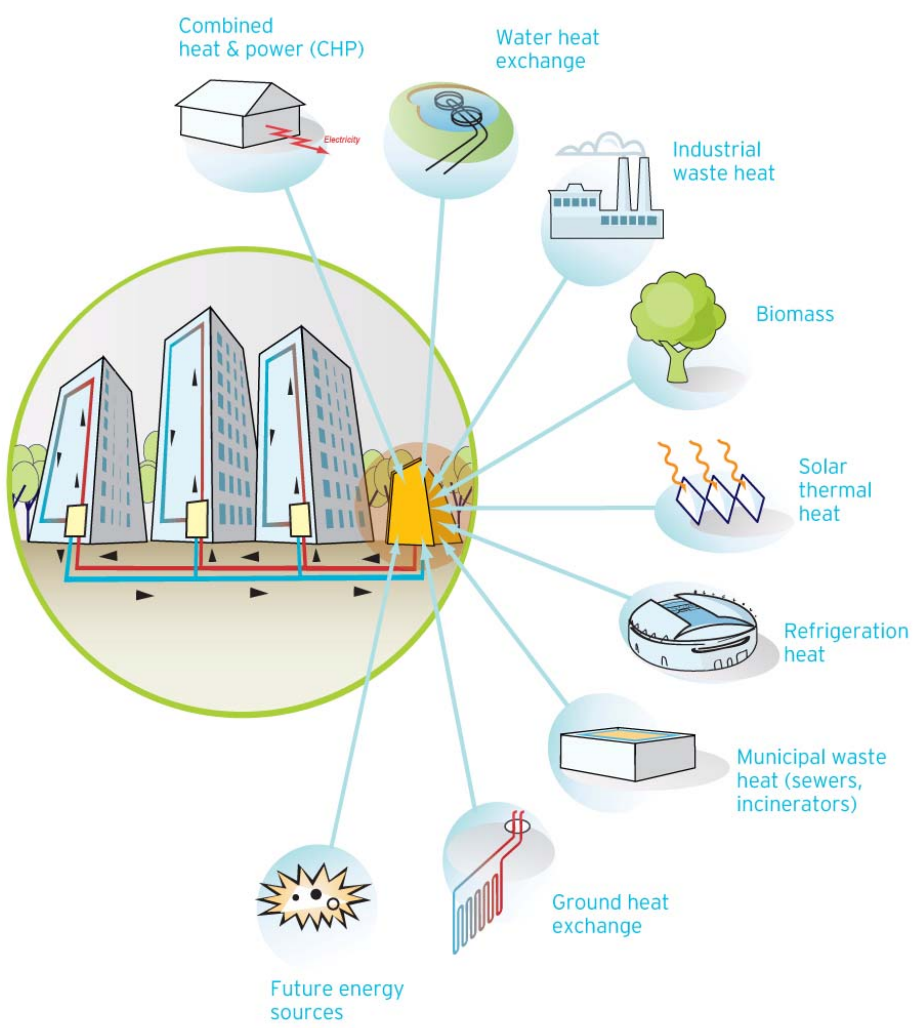
Transit Buses

Class 6/7 Trucks

Class 8 Trucks

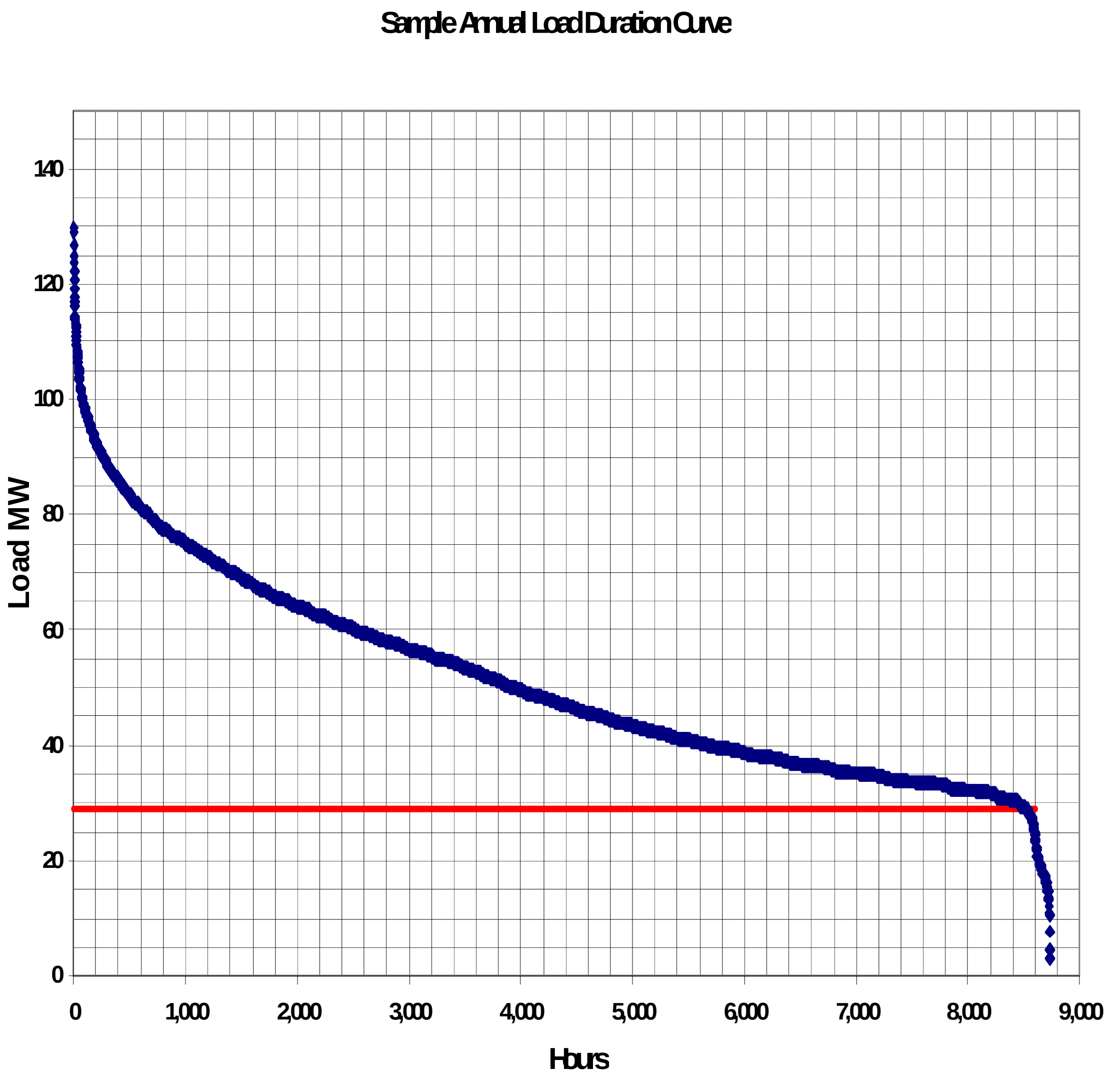
Pilot Project to use Tilbury LNG for Transportation Applications

Harnessing Alternative Energy



- **Thermal Energy Systems:**
  - ***Multiple energy sources***
  - ***Energy Centre generates usable thermal energy***
  - ***Thermal energy delivered via piped water:***
    - **Hot for high-grade heat sources; no cooling**
    - **Ambient for combined heating & cooling**
    - **Chilled for high-grade cooling sources & no heating**
  - ***Scale – one building to complete communities***

Alternative Energy - Cost Implications



Harnessing Alternatives:

- *High capital cost for Energy Centre*
- *"Free" energy?*
- *May not be firm supply*

Outcomes:

- *Size for base-load only*
- *Use conventional energy for peaking &/or 100% back-up*
- *Future flexibility essential for Energy Centre Capital cost barrier*
    - Terasen can solve

Terasen Large Scale Alternative Energy System Examples

terasen Gas

District Energy for Brownfield Re-development

- Location: Coquitlam, BC
- Type of Development:
  - *89 acre brownfield re-development*
    - **3,700** residential units,
    - 275,000 sq. ft of commercial/retail
    - 600,000 sq. ft. of business park/ light industrial
    - 16 acres of open space, parks and trails.
- Energy System:
  - *District Energy System to incorporate alternative energy sources integrated with natural gas:*
    - Local waste heat (industrial recycling plant)
    - Geothermal from groundwater or earth
    - Possibilities for biomass

Fraser Mills Site Plan

- Environmental Benefits
  - Reduced demand on BC's electricity grid
  - Savings of >8,200 tonnes of GHGs per year (equivalent to removing >2,500 cars from the road)

Terasen Large Scale Alternative Energy System Examples

Individual Geothermal Systems for Residential Development

- Location: Colwood, BC
- Type of Development:
  - *563 unit residential development*
  - *24 buildings*

Aquattro Site

Geothermal drilling

- Energy System:
  - Individual geothermal systems
    - Ground heat extraction integrated with natural gas
    - Progressive installation as community develops
- Environmental Benefits
  - Reduced demand on BC’s electricity grid
  - Savings of 2 tonnes of GHGs a year for each 2,000 square foot residential unit

Terasen Large Scale Alternative Energy System Examples

Expandable Energy System for Urban Infill

- Location: Victoria, BC
- Type of Development:
    - *New & existing buildings*
        - 631 new residential units,
        - 175,000 sq. ft of new commercial/retail
        - Multiple existing buildings adjacent to new development.
- Energy System:
    - *Geothermal system for first two new buildings integrated with natural gas*
    - *Capability to expand to complete District Energy System incorporating waste heat from ice rink for both new & existing buildings.*

Hudson Building

- Environmental Benefits
    - Reduced demand on BC's electricity grid
    - Energy Usage in new buildings is reduced by up to 59% & GHGs by up to 73%

Summary

- **Our approach will maximize our growth opportunities and will be a model for thermal utilities of the 21st century**

1. ***Model works for Terasen & British Columbia***
   - **Spurred by aggressive climate change targets & expectations**
   - **Can meet challenge of low cost clean electricity**
   - **Terasen alternative energy segment is established & growing**
   - **Investment opportunity much higher than traditional gas**

2. ***Utility model applied to integrated gas & alternative thermal energy delivery provides numerous benefits***
   - **Recognizes renewable energy future with flexible platform**
   - **Relieves governments of need to fund alternative energy infrastructure**
   - **Enables governments to meet climate change objectives**
   - **Ensures fair & competitive energy costs for end use customers**
   - **Allows transparent & open regulatory process**

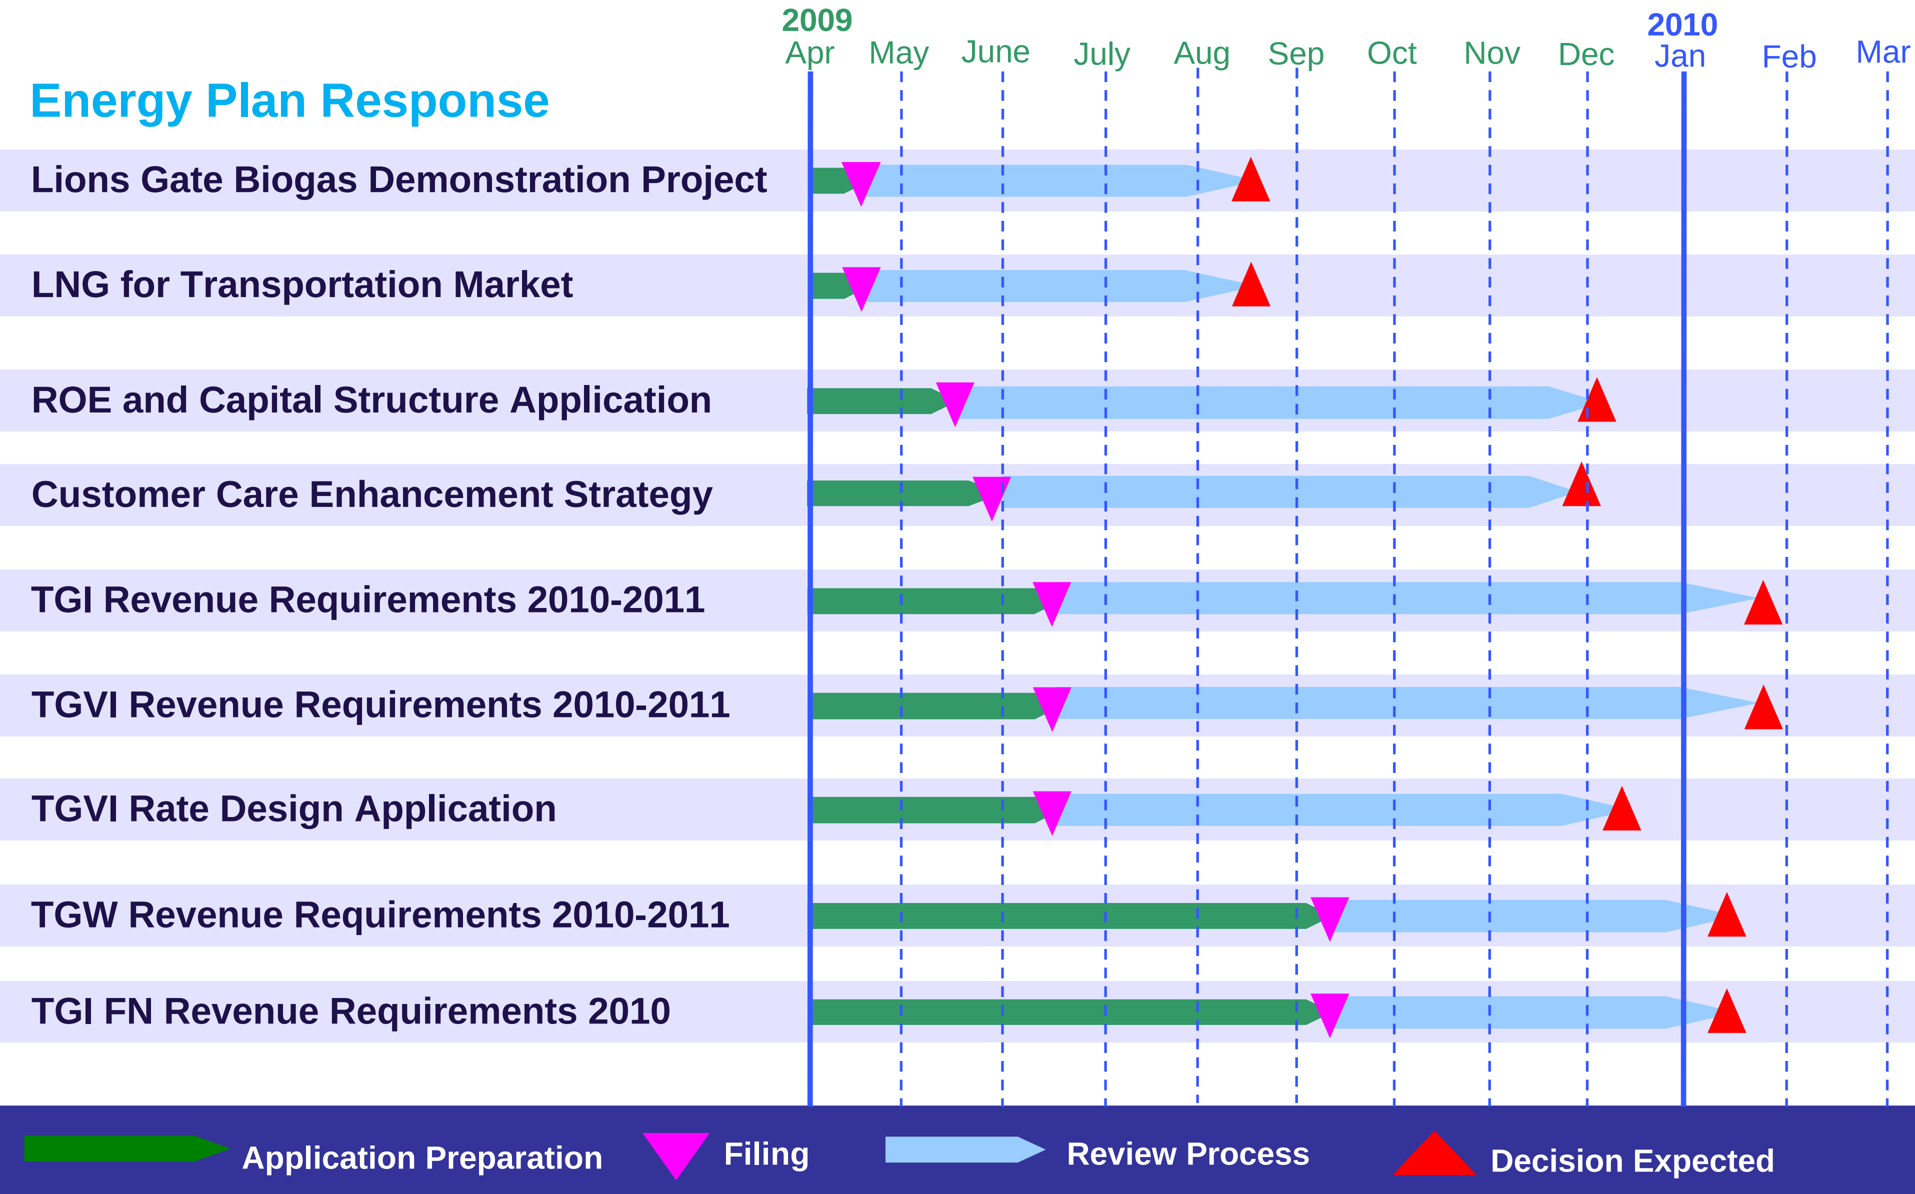
Terasen Gas



Status Update of Major Projects

Cynthia Des Brisay, Vice President, Gas Supply & Transmission

Whistler Pipeline and Conversion

- 50 km pipeline extension from Squamish completed and put in service in April 2009
- Conversion commenced on April 29
- Propane System to be decommissioned this fall

Whistler Conversion

- 2,150 Residential & 325 Commercial customers
- 14,500 appliances to be converted
- Conversion team 80+ employees and contractors from across the province

Whistler Conversion

- Service area split in 84 sections and conversion of each section completed once work begins
  - Approximately 20 sections completed to date

Whistler Conversion

Westin Hotel

- Example of large commercial customer
- Boilers, Kitchens, and 367 Fireplaces!
- High degree of co-operation & coordination
- Conversion completed in two days

Mount Hayes Storage Facility

Description

- 1.5 bcf storage facility
- 7.5mmcf/d liquefaction
- 150 mmcf/d send-out
- Capital cost $200M
- Serves both Vancouver Island and the Lower Mainland

Mt Hayes Storage Facility

- Groundbreaking in May 2008
- Liquefaction begins April 2011
- Full Commissioning complete Nov 2011
- Currently on budget and on schedule

Mt Hayes Storage Facility

Mt Hayes Storage Facility

- 80 – 120 workers on site
- 20 HCBI workers, remaining workforce 75% local, 25% rest of BC
- First Nation involvement
- To date $27 million in local subcontracts, employment & services

- First Nation involvement in construction, site and pipeline work and other services

Fraser River South Arm Upgrade

- Replacement of twin pipeline crossings using Horizontal drilling
- Cost estimate $27.3M
- Mitigates seismic, river erosion, and dike improvement concerns
- Improves reliability and security of supply for up to 220,000 customers
- Completion by end of 2010

Fraser River South Arm Upgrade

Attachment 84.6

This short form prospectus has been filed under legislation in all provinces of Canada that permits certain information about these securities to be determined after this prospectus has become final and that permits the omission from this prospectus of that information. The legislation requires the delivery to purchasers of a prospectus supplement containing the omitted information within a specified period of time after agreeing to purchase any of these securities.

No securities regulatory authority has expressed an opinion about these securities and it is an offence to claim otherwise. The securities offered hereby have not been and will not be registered under the U.S. Securities Act of 1933 and may not be offered or sold within the United States. ***Information has been incorporated by reference in this short form prospectus from documents filed with securities commissions or similar authorities in Canada.*** *Copies of the documents incorporated herein by reference may be obtained on request without charge from the Secretary of Terasen Gas Inc. at Suite 1000, 1111 West Georgia Street, Vancouver, British Columbia, V6E 4M3 (Telephone (604) 443-6526), and are also available at www.sedar.com.*

New Issue **SHORT FORM BASE SHELF PROSPECTUS** **April 24, 2008**

Terasen Gas

TERASEN GAS INC.
$600,000,000
MEDIUM TERM NOTE DEBENTURES
(Unsecured)

Medium Term Note Debentures (the "MTN Debentures") offered hereunder will have maturities of not less than one year and will be either interest bearing MTN Debentures or non-interest bearing MTN Debentures issued at par, at a discount or at a premium. The MTN Debentures may be issued as registered debentures or in the form of fully registered global debentures. The MTN Debentures will be issued at rates of interest or at prices determined by Terasen Gas Inc. ("Terasen Gas" or the "Company") from time to time based on a number of factors, including advice from the Dealers. All references to currency in this short form prospectus are references to Canadian dollars. See "Details of the Offering".

The specific terms of any offering of MTN Debentures (including the aggregate principal amount of MTN Debentures being offered, the currency, the issue and delivery date, the maturity date, the interest rate (either fixed or floating and, if floating, the manner of calculation thereof), the interest payment date(s), any redemption or repurchase provisions, the names of the Dealers, the Dealers' commission, the method of distribution and the actual proceeds to the Company) will be set forth in a pricing supplement which will accompany this short form prospectus or any amendments to this short form prospectus. The Company reserves the right to set forth in a pricing supplement specific variable terms of MTN Debentures which are not within the options and parameters set forth in this short form prospectus.

The MTN Debentures will be issued from time to time as and when funds are required by the Company in an aggregate principal amount of up to $600 million (or the equivalent thereof in foreign currencies or currency units) during the 25 month period from the date of this short form prospectus. The MTN Debentures will rank equal in priority to all other unsecured and unsubordinated indebtedness of the Company and will be issued under a trust indenture. As of March 31, 2008 a total of $1,068 million aggregate principal amount of MTN Debentures were issued and outstanding.

There is no market through which these securities may be sold and purchasers may not be able to resell securities purchased under this short form prospectus. This may affect the pricing of the securities in the secondary market, the transparency and availability of trading prices, the liquidity of the securities, and the extent of issuer regulation. See "Risk Factors".

Rates on Application

The MTN Debentures may be offered by one or more of BMO Nesbitt Burns Inc., CIBC World Markets Inc., National Bank Financial Inc., RBC Dominion Securities Inc., Scotia Capital Inc. and TD Securities Inc. pursuant to the dealer agreement referred to under the heading "Plan of Distribution", or such other investment dealers as may be selected from time to time by the Company (the "Dealers"). The rate of commission payable in connection with sales by the Dealers of MTN Debentures shall be as determined from time to time by mutual agreement and will be set forth in a pricing supplement which will accompany this short form prospectus. The MTN Debentures may be purchased from time to time by any of the Dealers, as principal, at such prices and with such commissions as may be agreed between the Company and any such Dealers for resale to the public at prices to be negotiated with each purchaser. Such resale prices may vary during the distribution period and as between purchasers. Each Dealer's compensation will be increased or decreased by the amount which the aggregate price paid for MTN Debentures by purchasers exceeds or is less than the gross proceeds paid by the Dealer, acting as principal, to the Company. The MTN Debentures may also be offered directly by the Company from time to time to purchasers pursuant to applicable statutory exemptions.

The MTN Debentures offered hereby have not been and will not be registered under the United States Securities Act of 1933. Accordingly, the MTN Debentures offered hereby may not be offered or sold in the United States of America, and this short form prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of the MTN Debentures offered hereby within the United States. See "Plan of Distribution".

Under applicable securities legislation in Canada, the Company may be considered to be a connected issuer of each of the Dealers, as each is directly or indirectly a wholly-owned or majority-owned subsidiary of a Canadian chartered bank which has extended credit facilities to the Company upon which the Company may draw from time to time. See "Plan of Distribution".

The offering is subject to approval of all legal matters on behalf of the Company by Farris, Vaughan, Wills & Murphy LLP and on behalf of the Dealers by Lawson Lundell LLP.

TABLE OF CONTENTS

FORWARD-LOOKING STATEMENTS

Certain statements contained in this short form prospectus and the documents incorporated herein by reference contain forward-looking information within the meaning of applicable securities laws in Canada ("Forward-looking Information"). The words "anticipates", "believes", "budgets", "could", "estimates", "expects", "forecasts", "intends", "may", "might", "plans", "projects", "schedule", "should", "will", "would" and similar expressions are often intended to identify Forward-looking Information, although not all Forward-looking Information contains these identifying words.

The Forward-looking Information in this short form prospectus, and the documents incorporated herein by reference, includes, but is not limited to, statements regarding: the Company's expectation to generate sufficient cash from operations to meet its working capital needs and to maintain its financial capacity and flexibility; the Company's expected capital expenditures, including estimated construction costs, and the expectation to finance those expenditures with a combination of proceeds from shareholder advances, short and long term borrowings and internally generated funds; the Company's belief that changes in consumption levels and changes in the commodity cost of natural gas do not materially impact earnings as a result of regulatory deferral accounts; the Company's expectation that delivery margins will not be impacted by migration of residential customers to alternative commodity suppliers; and the Company's expectation that compliance with environmental laws and regulations will not have a material effect on the Company's capital expenditures, earnings or competitive position.

The forecasts and projections that make up the Forward-looking Information are based on assumptions, which include but are not limited to receipt of applicable regulatory approvals and requested rate orders; no significant operational disruptions or environmental liability as a result of a catastrophic event or environmental upset; the competitiveness of natural gas pricing when compared with alternate sources of energy; continued population growth and new housing starts; the availability of natural gas supply; access to capital; interest rates and the ability to hedge certain risks.

The Forward-looking Information is subject to risks, uncertainties and other factors that could cause actual results to differ materially from historical results or results anticipated by the Forward-looking Information. The factors which could cause results or events to differ from current expectations include, but are not limited to: regulatory approval and rate orders risk; operational disruptions and environmental risk; price competitiveness risk; changes in economic conditions; natural gas supply risks; capital and credit ratings risk; interest rate risk; counterparty credit risk and changes in tax legislation. For additional information with respect to these risk factors, reference should be made to the sections entitled "Risk Factors" in the annual information form of the Company and "Commitments, Events, Risks and Uncertainties" in the management's discussion and analysis relating to the audited annual financial statements of the Company incorporated by reference herein.

All Forward-looking Information in this short form prospectus and the documents incorporated herein by reference relates only to events or information as of the date on which the statements are made and is qualified in its entirety by this cautionary statement. Except as required by law, the Company undertakes no obligation to revise or update any Forward-looking Information as a result of new information, future events or otherwise after the date hereof.

This short form prospectus and the documents incorporated herein by reference should be read completely and with the understanding that the Company's future results may be materially different from what the Company expects.

DOCUMENTS INCORPORATED BY REFERENCE

The following documents filed with the securities commissions or similar authorities in each of the provinces of Canada are specifically incorporated by reference into and form an integral part of this short form prospectus:

(a) the annual information form of the Company dated April 17, 2008; and

(b) the audited consolidated financial statements of the Company for the year ended December 31, 2007, together with the auditors' report thereon and the management's discussion and analysis filed in connection with such audited financial statements and the audited consolidated financial statements of the Company for the year ended December 31, 2006, together with the auditors' report thereon.

Any document of the type referred to in the preceding paragraph, any interim financial statements together with management's discussion and analysis filed in connection with such interim financial statements, any business acquisition reports, information circulars, and any material change reports (excluding confidential reports) as well as any prospectus supplements disclosing additional or updated information filed with a provincial securities commission or any similar authority in Canada, after the date of this short form prospectus and prior to the termination of the offering, shall be deemed to be incorporated by reference into this short form prospectus.

A pricing supplement or other prospectus supplement containing the specific variable terms of an offering of MTN Debentures will be delivered to purchasers of such MTN Debentures together with this short form prospectus and will be deemed to be incorporated by reference into this short form prospectus as of the date of such supplement and only for the purposes of the offering of the MTN Debentures covered by that supplement.

Upon a new annual information form and the related audited consolidated financial statements being filed by the Company with and, where required, accepted by the applicable securities regulatory authorities during the currency of this short form prospectus, the previous annual information form, the previous audited consolidated financial statements, all interim unaudited consolidated financial statements, business acquisition reports, material change reports and information circulars filed prior to the commencement of the Company's financial year in which the new annual information form was filed shall be deemed no longer to be incorporated into this short form prospectus for purposes of future offers and sales of securities hereunder.

Any statement contained herein or in a document incorporated or deemed to be incorporated by reference herein shall be deemed to be modified or superseded for purposes of this short form prospectus to the extent that a statement contained herein or in any other subsequently filed document which also is or is deemed to be incorporated by reference herein modifies or supersedes such statement. Any statement so modified or superseded shall not be deemed, except as so modified or superseded, to constitute a part of this short form prospectus. The making of a modifying or superseding statement shall not be deemed an admission for any purposes that the modified or superseded statement, when made, constituted a misrepresentation, an untrue statement of material fact or an omission to state a material fact that is required to be stated or that is necessary to make a statement not misleading in light of the circumstances in which it was made. Any statement so modified or superseded shall not constitute a part of this short form prospectus, except as so modified or superseded.

THE COMPANY

The Company was formed by the amalgamation on July 1, 1989 under the *Company Act* (British Columbia), a predecessor to the *Business Corporations Act* (British Columbia), of Inland Natural Gas Co. Ltd., B.C. Gas Inc., Columbia Natural Gas Limited and Fort Nelson Gas Ltd. On July 1, 1993 pursuant to an arrangement between the Company and a subsidiary, the Company changed its name to "BC Gas Utility Ltd.". Effective April 25, 2003, the Company changed its name to "Terasen Gas Inc.". The Company amalgamated with its subsidiary Terasen Gas (Squamish) Inc. on January 1, 2007. The head office and registered office of the Company is located at Suite 1000, 1111 West Georgia Street, Vancouver, British Columbia, V6E 4M3. The "Company" or "Terasen Gas" includes its subsidiary companies, as the context so requires. The Company is a wholly-owned subsidiary of Terasen Inc. ("Terasen"). Terasen is a wholly-owned subsidiary of Fortis Inc.

The Company transmits and distributes natural gas to residential, commercial and industrial customers in the interior and in the Greater Vancouver and Fraser Valley areas of British Columbia.

The Company owns 100% of the shares of Inland Energy Corp., which holds purchase money mortgages of the Company pending their securitization.

USE OF PROCEEDS

The MTN Debentures will be issued from time to time at the discretion of the Company in an aggregate principal amount of up to \$600 million during the 25 month period from the date of this short form prospectus. The net proceeds to be derived from the issue of the MTN Debentures offered hereunder will be the issue price thereof less any commission paid in connection therewith. Such net proceeds cannot be estimated as the amount thereof will depend on the extent to which MTN Debentures are issued hereunder. Unless otherwise specified in the pricing supplement which accompanies this short form prospectus, such net proceeds will be added to the general funds of the Company and may be used to refinance existing indebtedness or to reduce short term indebtedness which may be outstanding from time to time. Although no proceeds have been specifically allocated for such purpose, at a future point in time proceeds may be used to reduce indebtedness under the Company's credit facilities with its bankers. The expenses of this offering and commissions will be paid out of the Company's general funds.

EARNINGS COVERAGE

The earnings coverage set forth below is based on consolidated financial information as at and for the year ended December 31, 2007. It does not give effect to the issue of MTN Debentures pursuant to this short form prospectus, since the aggregate principal amount of MTN Debentures that will be issued hereunder and the terms of issue are not presently known.

The Company's interest requirements on consolidated long term debt amounted to \$99.7 million for the year ended December 31, 2007 adjusted to reflect the issuance and repayment of long term debt after such date. The Company's consolidated earnings before interest on long term debt and income taxes were \$216.0 million for the year ended December 31, 2007, which is 2.17 times the Company's interest requirements on consolidated long term debt for the year then ended.

Earnings coverage on long term debt...	2.17 times

CREDIT RATINGS

The Company has received an A3 rating from Moody's Investors Service ("Moody's") and an A rating from DBRS Limited ("DBRS") in respect of its outstanding MTN Debentures including the MTN Debentures which may be issued pursuant to this prospectus. Credit ratings are intended to provide investors with an independent measure of credit quality of an issue of securities. DBRS rates debt instruments by rating categories ranging from AAA which represents the highest quality of securities, to D, which represents the lowest quality of securities rated. Moody's rates debt instruments by rating categories ranging from Aaa which represents the highest quality of securities, to C, which represents the lowest quality of securities.

According to the Moody's rating system, debt securities rated A are considered to be upper medium grade obligations and are subject to very low credit risk. Moody's applies numerical modifiers (1, 2 and 3) in each rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its rating category, the modifier 2 indicates a mid-range ranking and the modifier 3 indicates a ranking in the lower end of its rating category.

According to the DBRS rating system, debt securities rated A are of satisfactory credit quality. Protection of interest and principal is still substantial, but the degree of strength is less than that of AA related entities. While a respectable rating, entities in the A category are considered to be more susceptible to adverse economic conditions and have greater cyclical tendencies than higher rated companies. "High" or "low" are used to indicate the relative standing of a credit within a particular rating category. The lack of one of these designations indicates a rating which is essentially in the middle of the category.

After reassessing its relationship with Standard and Poor's Rating Services, a division of the McGraw-Hill Companies ("S&P"), the Company discontinued the engagement of S&P to provide credit ratings in respect of the MTN Debentures. S&P continues to rate the Company's medium term note debenture program on the basis of publicly-available information. S&P has assigned a rating of A to the Company's medium term note program.

S&P rates debt instruments by rating categories ranging from AAA which represents the highest quality of securities, to D which represents the lowest quality of securities rated. According to the S&P rating system, debt securities rated A are somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong. A plus (+) or minus (-) description after a rating shows the relative standing within the major rating categories (AA to CCC). The lack of one of these designations indicates a rating which is essentially in the middle of the category.

The credit ratings accorded to the MTN Debentures are not recommendations to buy, sell or hold the MTN Debentures inasmuch as those ratings do not comment as to market price or suitability for a particular investor. There is no assurance that these ratings will remain in effect for any given period of time. These ratings may be subject to revision or withdrawal at any time by the rating agencies.

DETAILS OF THE OFFERING

MTN Debentures issued hereunder will have maturities of not less than one year and will either be interest bearing MTN Debentures or non-interest bearing MTN Debentures issued at par, at a discount or at a premium. The MTN Debentures may be issued in Canadian dollars, or any other currency as determined at the time of issue. The MTN Debentures are issuable in minimum denominations of $5,000 and multiples of $1,000 thereafter, and if issued in any other currency in such denominations in such other currency as may be determined from time to time. The MTN Debentures will be issued as and when funds are required by the Company. The aggregate principal amount of MTN Debentures to be offered hereunder will not exceed $600 million. As at March 31, 2008 a total of $1,068 million aggregate principal amount of MTN Debentures were issued and outstanding.

All references to currency in this short form prospectus are references to Canadian dollars. For MTN Debentures issued in other than Canadian currency, potential purchasers should be aware that foreign exchange fluctuations will occur from time to time and that neither the Company nor the Dealers make any representation with respect to currency values from time to time.

MTN Debentures may be issued as registered debentures or in the form of fully registered global debentures (“Global Debentures”) held by CDS Clearing and Depository Services Inc. or a successor (the “Depositary”) for its participants. CIBC Mellon Trust Company or a successor will act as the transfer agent and registrar of the MTN Debentures. The Depositary establishes and maintains book entry accounts for its participants having interests in Global Debentures. The interests of participants of the Depositary in Global Debentures, and transfers of interests in the Global Debentures between participants, will be effected by entries made in the records maintained by the Depositary. The interests of customers of participants in the MTN Debentures will be effected by entries made in the records maintained by the participants. Purchasers of MTN Debentures in respect of which Global Debentures are issued will not be entitled to receive MTN Debentures in definitive form except in certain stated events, including upon the request of holders of not less than 10% of the principal amount of outstanding MTN Debentures upon the happening of any event of default. The issuance of MTN Debentures as Global Debentures will, if applicable, be referred to in the relevant pricing supplement delivered with this short form prospectus.

The specific variable terms of any offering of MTN Debentures, including the aggregate principal amount of MTN Debentures being offered, the currency, the issue and delivery date, the maturity date, the interest rate (either fixed or floating and, if floating, the manner of calculation thereof), the interest payment date(s), any redemption or repurchase provisions, the names of the Dealers, the Dealers’ commission, the method of distribution and the actual proceeds to the Company, will be set forth in a pricing supplement which will accompany this short form prospectus or any amendments to this short form prospectus. The Company reserves the right to set forth in a pricing supplement specific variable terms of the MTN Debentures which are not within the options and parameters set forth in this short form prospectus.

The registered holder of a MTN Debenture may transfer such MTN Debenture upon payment of taxes incidental thereto, if any, by executing and delivering a form of transfer together with the MTN Debenture to the Trustee at its principal corporate trust office in any of the cities of Vancouver, Toronto or Montreal upon which one or more new MTN Debentures will be issued in authorized denominations in the same aggregate principal amount as the MTN Debenture so transferred, registered in the name or names of the transferee or transferees. No transfer of a MTN Debenture will be registered during the seven business days (a business day for this purpose being a business day in the city of Vancouver) immediately preceding any date fixed for payment of interest on such MTN Debenture.

The following summary of certain provisions of the Indenture (as defined below) and the MTN Debentures does not purport to be complete and is subject to the detailed provisions of the Indenture to which reference is hereby made for a full description of such provisions, including the definition of certain terms used herein, and for other information regarding the MTN Debentures.

General

The MTN Debentures will be issued under a trust indenture dated as of November 1, 1977 made between the Company (as successor to Inland Natural Gas Co. Ltd.) and CIBC Mellon Trust Company (formerly called The R-M Trust Company, as successor to National Trust Company, Limited), as trustee (the “Trustee”), as supplemented and amended by a first supplemental indenture dated as of November 17, 1981, a second supplemental indenture dated as of July 11, 1984, a third supplemental indenture dated as of December 17, 1986, a fourth supplemental indenture dated as of June 1, 1989, a fifth supplemental indenture dated as of July 1, 1989, a sixth supplemental indenture dated as of June 14, 1990, a seventh supplemental indenture dated as of October 26, 1990, an eighth supplemental indenture dated as of August 1, 1992, a ninth supplemental indenture dated as of July 28, 1993, a tenth supplemental indenture dated as of November 15, 1993 (the "MTN Supplemental Indenture") and an eleventh supplemental indenture dated as of January 1, 2007 (the trust indenture, as so supplemented and amended from time to time, being herein called the "Indenture"). The Indenture will be available for review during normal business hours during the period of distribution of the MTN Debentures at the head office of the Company at Suite 1000, 1111 West Georgia Street, Vancouver, British Columbia.

The aggregate principal amount of debentures authorized under the Indenture (the "Debentures") is unlimited. Debentures may be issued thereunder in one or more series. The MTN Debentures are a series of Debentures authorized by the MTN Supplemental Indenture in an unlimited amount, and may be issued on such terms and at such times as may be determined by the Company, subject to the Company meeting certain tests with respect to the issue thereof, as set forth in the Indenture.

The MTN Debentures will rank in equal priority with all other unsecured and unsubordinated indebtedness of the Company. As at March 31, 2008, there was approximately $59.9 million aggregate principal amount of Debentures outstanding under the Indenture, other than MTN Debentures. The MTN Debentures will rank junior to any outstanding First Mortgage Bonds issued under a trust deed and secured by substantially all of the Company's assets and the Purchase Money Mortgages which are secured under a trust deed over the assets of the Company acquired as part of its acquisition of the coastal gas distribution assets of British Columbia Hydro and Power Authority (the "Coastal Division") in 1988. Currently there are no First Mortgage Bonds outstanding. There are $274.9 million principal amount of Purchase Money Mortgages presently held by the public and $150 million presently held by a subsidiary of the Company pending securitization. The Purchase Money Mortgages were issued to finance the Company's acquisition of the Coastal Division.

Payments of interest on each interest-bearing MTN Debenture will be made by electronic funds transfer, if agreed to by the purchasers, or by cheque dated the interest payment date and mailed to the address of the holder appearing on the registers maintained by the Trustee at the close of business on the seventh business day (a business day for this purpose being a business day in the city of Vancouver) prior to the due date for the payment of interest. Payment of principal at maturity will be made at the principal corporate trust office of the Trustee in the cities of Vancouver, Toronto or Montreal against surrender of the MTN Debenture. If the due date for payment of any amount of principal or interest on any MTN Debenture is not, at the place of payment, a business day (being a day other than Saturday, Sunday, or a day on which financial institutions at the place of payment are authorized or obligated by law or regulation to close) such payment will be made on the next business day and the holder of such MTN Debenture shall not be entitled to any further interest or other payment in respect of such delay.

The payment of principal and interest on a MTN Debenture in accordance with the indenture shall absolutely satisfy and discharge the liability of the Company with respect to such payment under the MTN Debenture, unless in the case of payment by cheque it is not paid upon presentation.

Events of Default

Except as otherwise noted below, the Indenture provides that the following constitute events of default (each an "Event of Default") thereunder:

(a) default in payment of principal of any Debenture when due;

(b) default in payment of any interest due on any Debenture and such default has continued for 30 days;

(c) an order is made or an effective resolution passed for the winding-up or liquidation of the Company (other than pursuant to and in compliance with provisions in the Indenture relating to successor companies);

(d) the Company or any Designated Subsidiary (as defined below) makes a general assignment for the benefit of its creditors, is declared bankrupt, a sequestrator or a receiver or any other officer with similar powers is appointed of, or an encumbrancer takes possession of, the property of the Company or of the property of a Designated Subsidiary, or any substantial part thereof;

(e) any process of execution is enforced or levied upon any property of the Company or a Designated Subsidiary and remains unsatisfied for a period of 30 days, as to moveable or personal property, or 45 days, as to immovable or real property, provided that such process is not in good faith disputed by the Company or such Designated Subsidiary or the Company or such Designated Subsidiary has given adequate security;

(f) default under the mortgage with respect to the First Mortgage Bonds which causes the principal amount of the First Mortgage Bonds to be declared immediately due and payable, provided that if the default is cured and such declaration is rescinded the Event of Default will also be cured; and

(g) the Company neglects to carry out or observe any covenant or condition contained in the Indenture and, after notice has been given by the Trustee to the Company, the Company fails to make good such default within 60 days or such shorter period as would at any time, if continued, render any property of the Company or any of its subsidiaries liable to forfeiture, unless the Trustee has agreed to a longer period, and in such an event, within the period agreed to by the Trustee.

Acceleration on and Waiver of Default

If an Event of Default has occurred under the Indenture, the Trustee may in its discretion and will upon the requisition in writing of the holders of at least 25% of the principal amount of the Debentures issued and outstanding under the Indenture, subject to any waiver of default under the Indenture, by notice in writing to the Company declare the principal and interest on all Debentures then outstanding under the Indenture and other money payable thereunder to be due and payable.

If an Event of Default has occurred under the Indenture (otherwise than by default in payment of principal moneys at maturity) the holders of the Debentures have the power by extraordinary resolution to instruct the Trustee to waive the default (provided that if the Event of Default relates to a covenant applicable to a particular series of Debentures only, then the holders of outstanding Debentures of that series only have the power by extraordinary resolution to instruct the Trustee to waive the default). In addition, the Trustee, so long as it has not become bound to institute any proceedings under the Indenture, has power to waive the default if, in the Trustee's opinion, the same shall have been cured or adequate satisfaction made therefor.

In the Indenture, "extraordinary resolution" is a resolution passed at a meeting of debentureholders by the favourable votes of the holders of not less than 66⅔% of the principal amount of Debentures represented at the meeting.

Right of Trustee to Enforce Payment

If the Company fails to pay to the Trustee, on demand, and when due, the principal and interest on all Debentures then outstanding under the Indenture, the Trustee may, in its discretion, and shall upon the request in writing of the holders of not less than 25% of the principal amount of the Debentures issued and outstanding under the Indenture, and upon being indemnified to its reasonable satisfaction against all costs, expenses and liabilities to be incurred, proceed in its name as Trustee to obtain or enforce payment of the principal and interest on all outstanding Debentures together with other amounts due under the Indenture by any remedy or proceeding authorized by the Indenture.

Holders of Debentures issued under the Indenture may not institute any action or proceeding or exercise any other remedy authorized by the Indenture, including an action to enforce the Indenture or the Debentures, except as provided in the Indenture.

Covenants

The Indenture contains, among others, covenants substantially to the following effect:

(a) The Company will not mortgage, pledge, charge or otherwise encumber any of its assets to secure any obligations unless at the same time it shall, in the opinion of counsel, secure or cause to be secured equally and rateably with such obligations all the Debentures then outstanding under the Indenture by the same instrument or by other instrument in form and substance satisfactory to such counsel; provided that this covenant shall not apply to (a) First Mortgage Bonds, (b) Purchase Money Mortgages, (c) permitted encumbrances as defined in the Indenture, or (d) security given (other than on fixed assets) in the ordinary course of business and for the purpose of carrying on the same, to any bank or banks or others to secure any indebtedness other than Funded Obligations.

(b) The Company will not permit any Designated Subsidiary to create, incur or guarantee any indebtedness, except indebtedness to or of the Company or to a trustee in support of a guarantee of indebtedness of the Company, provided that this shall not apply to (a) Purchase Money Mortgages, or (b) indebtedness incurred in the ordinary course of business and for the purpose of carrying on the same, to any bank or banks or others, repayable on demand or maturing, including any right of extension or renewal, within 18 months of the date when such indebtedness is incurred, provided such indebtedness is not secured on fixed assets.

(c) The Company or a Designated Subsidiary will not dispose of any indebtedness of a Designated Subsidiary unless all the shares and indebtedness of such Designated Subsidiary are sold to a party dealing with the seller at arm's length, resulting in neither the Company nor any other Designated Subsidiary owning any of such Designated Subsidiary.

(d) The Company will not permit any Designated Subsidiary to issue any shares if, as a result of such issue, such Designated Subsidiary ceases to qualify as such.

(e) The Company will not create or issue any Additional Obligations unless Consolidated Available Net Earnings for any period of 12 consecutive calendar months of the 23 calendar months next preceding the date of issue of such Additional Obligations, which period shall have been selected by the Company, shall have been at least two times the annual interest requirements of all Funded Obligations to be outstanding after the issue of such Additional Obligations and after any retirements of Funded Obligations to be made out of the proceeds thereof or retirement thereof has been otherwise provided for and in respect of which proof has been afforded to the Trustee satisfactory to it that adequate provision has been made assuring that such Funded Obligations will be retired within 45 days after the issue of such Additional Obligations; provided the provisions of this covenant shall not apply to the creation and issue of Additional Obligations for the purpose of refunding the whole of any series of Debentures previously issued under the Indenture provided that (except in the case of refunding all of the MTN Debentures) the aggregate principal amount of the Additional Obligations does not exceed the aggregate principal amount of the Debentures to be refunded.

(f) The Company will, directly or through Designated Subsidiaries, from time to time obtain and at all times maintain facilities for supplies of gas adequate to enable the carrying on of its business.

Modification

The rights of the holders of the MTN Debentures under the Indenture may be modified. For that purpose, among others, the Indenture will contain provisions making binding upon all holders of Debentures outstanding under the Indenture and indentures supplemental thereto, resolutions passed at meetings of debentureholders by the favourable votes of the holders of not less than 66⅔% of the principal amount of Debentures voted on the resolution or instruments in writing signed by the holders of not less than 66⅔% of the principal amount of all the outstanding Debentures. In certain cases, modification will require separate assent by the holders of the required percentages of debentures of each series outstanding under the Indenture or any series of MTN Debentures outstanding under the Indenture as determined by the Trustee.

Definitions

The Indenture contains definitions substantially to the following effect:

"*Additional Obligations*" means bonds, debentures, notes or other debt instruments issued by the Company, the due date of payment of which, including any right of extension or renewal, is 18 months or more after the date of issue but does not include First Mortgage Bonds and Purchase Money Mortgages.

"*Consolidated Available Net Earnings*" for any specified period of 12 months means the net earnings of the Company and its Designated Subsidiaries on a consolidated basis for such period (excluding gains or losses on the disposal of investments or fixed assets in each case in excess of $50,000 in the aggregate and other non-recurring items in excess of $50,000 in the aggregate) before deductions for income taxes, interest on Funded Obligations and on any other indebtedness that since the end of the specified period has been or is about to be refunded by the issue of Funded Obligations and amortization of debt premium, discount and expense, all as determined in accordance with generally accepted accounting principles and reported on by the Company's auditors without, in their opinion, material adverse qualification. In determining Consolidated Available Net Earnings for any period there shall be taken into account the earnings or losses, as the case may be, for the whole of such period of any company or corporation which, prior to or concurrently with the proposed action in respect of which such determination is being made, becomes a Designated Subsidiary. In addition, if the Company or any Designated Subsidiary shall, prior to or concurrently with the proposed action in respect of which such determination is being made, have acquired any business by way of acquisition of assets, the earnings or losses, as the case may be, of such business to the extent that such earnings or losses related to the assets acquired, shall be taken into account for the whole of such period.

"*Designated Subsidiary*" means any company or corporation the majority of the outstanding shares of each class of the capital stock of which having attached to them voting rights under all circumstances are owned by the Company and/or one or more Designated Subsidiaries, provided that the Company shall have, by resolution of its directors, designated such other company or corporation as a Designated Subsidiary; provided that any Designated Subsidiary shall cease to be a Designated Subsidiary upon sale of all its shares and indebtedness owned by the Company and any other Designated Subsidiary, resulting in neither the Company nor any other Designated Subsidiary owning any of such Designated Subsidiary.

"*First Mortgage Bonds*" means all first mortgage bonds or other first mortgage obligations of the Company, whether heretofore or hereafter issued, secured by a first fixed and specific charge on substantially all the fixed assets of the Company (whether or not also secured by a floating charge or by other security).

"*Funded Obligations*" means any indebtedness, whether secured or unsecured, incurred by any one or more of the Company and the Designated Subsidiaries by way of creation, guarantee, assumption or otherwise which is not repayable on demand and the due date of payment of which, including any right of extension or renewal, is 18 months or more after the date on which it was incurred, but does not include (i) indebtedness secured by Purchase Money Mortgages and (ii) any liability in respect of any guarantee by any one or more of the Company and the Designated Subsidiaries of the indebtedness of the Company and/or any Designated Subsidiaries secured by Purchase Money Mortgages.

"*Purchase Money Mortgages*" means any mortgages, liens or other encumbrances upon property acquired by one or more of the Company and the Designated Subsidiaries which were, at the time of such acquisition or concurrently therewith, assumed, created or given to secure all or part of the cost of such property and extensions and renewals thereof upon the same property if the principal amount of the indebtedness secured thereby is not increased.

RISK FACTORS

Prospective investors in a particular offering of MTN Debentures should consider, in addition to the matters described under the heading "Risk Factors" in the annual information form of the Company and the matters described under the heading "Commitments, Events, Risks and Uncertainties" in the management's discussion and analysis relating to the annual audited financial statements that are incorporated by reference herein, the following risk factors.

Credit Ratings

Credit ratings are intended to provide investors with an independent measure of credit quality of an issue of securities. The credit ratings accorded to the MTN Debentures are not a recommendation to buy, sell or hold the MTN Debentures, because ratings do not comment as to market price or suitability for a particular investor. There is no assurance that these ratings will remain in effect for any given period of time. These ratings may be subject to revision or withdrawal at any time by the relevant rating agency. Real or anticipated changes in credit ratings on the MTN Debentures may affect the market value of the MTN Debentures. In addition, real or anticipated changes in credit ratings can affect the cost at which the Company can access the debt market.

Lack of Public Market for MTN Debentures

This short form prospectus qualifies new issues of debt securities for which there is no existing trading market. The Company does not intend to list the MTN Debentures on any securities exchange or to arrange for any quotation system to quote them and consequently the Company will not be subject to regulation by any securities exchange or quotation system. There can be no assurance as to the liquidity of any trading market for the MTN Debentures or that a trading market for any of the MTN Debentures will develop. Even if a trading market develops in the MTN Debentures, the MTN Debentures could trade at prices that may be higher or lower than their initial offering prices and there may be limited transparency of trading prices. The market price for the MTN Debentures may be affected by prevailing interest rates, the Company's results of operations and financial position, the ratings assigned to the MTN Debentures or the Company, changes in general market conditions, fluctuations in the market for equity or debt securities and numerous other factors beyond the control of the Company.

PLAN OF DISTRIBUTION

The MTN Debentures may be offered for sale by any one or more of BMO Nesbitt Burns Inc., CIBC World Markets Inc., National Bank Financial Inc., RBC Dominion Securities Inc., Scotia Capital Inc. and TD Securities Inc. pursuant to a dealer agreement dated April 24, 2008 among such investment dealers and the Company (the "Dealer Agreement"), or by other investment dealers selected from time to time by the Company (the "Investment Dealers"). The rate of commission payable in connection with sales by the Investment Dealers of MTN Debentures shall be as determined from time to time by mutual agreement. The MTN Debentures may be purchased from time to time by any of the Investment Dealers, as principal, at such prices and with such commissions as may be agreed between the Company and any such Investment Dealers for resale to the public at prices to be negotiated with each purchaser. Such resale prices may vary during the distribution period and as between purchasers. Each Investment Dealer's compensation will be increased or decreased by the amount by which the aggregate price paid for MTN Debentures by purchasers exceeds or is less than the gross proceeds paid by that Investment Dealer, acting as principal, to the Company. The Dealer Agreement also provides that in the event an Investment Dealer is purchasing MTN Debentures as principal, the obligation of that Investment Dealer to purchase as principal may be terminated in certain stated events. The MTN Debentures may also be offered directly by the Company at market rates prevailing from time to time to purchasers pursuant to applicable statutory exemptions and may from time to time be offered at a discount or a premium.

The MTN Debentures have not been and will not be registered under the United States Securities Act of 1933, as amended (the "U.S. Securities Act"). The MTN Debentures may not be offered, sold or delivered within the United States, except in certain transactions exempt from the registration requirements of the U.S. Securities Act. Each Dealer has agreed that it will not offer, sell or deliver any MTN Debentures within the United States. In addition, until 40 days after the commencement of the offering, an offer or sale of any MTN Debentures within the United States by any dealer (whether or not participating in the offering) may violate the registration requirements of the U.S. Securities Act.

Under applicable securities legislation in Canada, the Company may be considered to be a connected issuer of each of the Dealers, as each is directly or indirectly a wholly-owned or majority-owned subsidiary of a Canadian chartered bank (collectively, the "Banks") which has extended credit facilities to the Company upon which the Company may draw from time to time. The Company's credit facilities with the Banks consist of a $500 million syndicated 5-year revolving credit facility. As at March 31, 2008, $43.9 million of the available credit under this facility has been utilized. This credit facility is unsecured and the Company is, and has been since the establishment of the credit facility, in compliance with the terms of the agreement governing the credit facility. The Company's financial position has not changed substantially since the credit facility was put in place. The credit facility is available for general corporate purposes, including acquisitions and capital expenditures and to act as a back-up for the Company's commercial paper program. Net proceeds received pursuant to offerings of MTN Debentures may be used, directly or indirectly, to reduce indebtedness of the Company under the credit facility. None of the Banks was involved in the decision to offer the MTN Debentures and none will be involved in the determination of the terms of the distribution of the MTN Debentures. As a consequence of the sale of the MTN Debentures through any Dealer from time to time under this short form prospectus, the Company will pay a commission to each Dealer through which an MTN Debenture is sold.

TRANSFER AGENT AND REGISTRAR

Registers for the registration and transfer of the MTN Debentures will be kept at the principal corporate trust offices of CIBC Mellon Trust Company in the cities of Vancouver, Toronto and Montreal.

ELIGIBILITY FOR INVESTMENT

In the opinion of Farris, Vaughan, Wills & Murphy LLP, counsel to the Company, and Lawson Lundell LLP, counsel to the Dealers, the MTN Debentures offered hereby, if issued on the date hereof, would be qualified investments under the *Income Tax Act* (Canada) and the regulations thereunder for trusts governed by registered retirement savings plans, registered retirement income funds, registered education savings plans and deferred profit sharing plans (other than a trust governed by a deferred profit sharing plan in respect of which any employer is the Company or is a person that does not deal at arm's length with the Company within the meaning of the *Income Tax Act* (Canada)).

INTERESTS OF EXPERTS

The matters referred to under "Eligibility for Investment" and certain other legal matters will be passed upon on the Company's behalf by Farris, Vaughan, Wills & Murphy LLP and on behalf of the Dealers by Lawson Lundell LLP. As of the date hereof, the partners and associates of each of Farris, Vaughan, Wills & Murphy LLP and Lawson Lundell LLP beneficially own, directly or indirectly, less than 1% of any securities of the Company.

STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus and any amendment. In several of the provinces, the securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, revisions of the price or damages if the prospectus and any amendment contains a misrepresentation or is not delivered to the purchaser, provided that such remedies for rescission, revision of the price or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province for the particulars of these rights or consult with a legal adviser.

AUDITORS' CONSENT

The Board of Directors of Terasen Gas Inc.

We have read the short form base shelf prospectus of Terasen Gas Inc. (the "Company") dated April 24, 2008 relating to the offering of $600,000,000 Medium Term Note Debentures (Unsecured) of the Company. We have complied with Canadian generally accepted standards for an auditors' involvement with offering documents.

We consent to the incorporation by reference in the above mentioned prospectus of our report to the shareholders of the Company on the consolidated statements of financial position of the Company as at December 31, 2007 and the consolidated statements of earnings and comprehensive earnings, retained earnings and cash flows for the year then ended. Our report is dated February 1, 2008.

Terasen Gas Inc.

Medium Term Note Debentures, Series 24
(Unsecured)

Amount and Currency of Issue:	C$100,000,000
Issue and Delivery Date:	February 24, 2009
Issue Price:	$99.635 per $100 principal amount
Commission:	0.50%
Net Proceeds to the Company:	C$99,135,000
Maturity Date:	February 24, 2039
Type of Note:	Global Debenture
Interest Rate:	6.55% per annum, payable semi-annually in arrears
Interest Payment Date(s):	February 24 and August 24
Initial Interest Payment Date:	August 24, 2009
Initial Interest Payment Amount:	$3.275 per $100 principal amount
Redemption Provisions:	The Medium Term Note Debentures, Series 24 issued hereunder will be redeemable, at the Company's option, in whole at any time or in part from time to time on not more than 60 and not less than 30 days' prior notice, at the higher of the Canada Yield Price (as defined below) and par, together with accrued and unpaid interest to the date fixed for redemption.

Documents Incorporated by Reference

The following documents (which are not specifically listed in the Prospectus or any amendment or supplement delivered herewith) which have been filed by the Company with the various securities commissions in each of the provinces of Canada are specifically incorporated by reference in and form an integral part of the Prospectus as amended or supplemented:

(a) the audited consolidated financial statements of the Company for the year ended December 31, 2008 which include comparative financial statements for the corresponding period in 2007, together with the auditors' report thereon and the management's discussion and analysis filed in connection with such audited consolidated financial statements; and

(b) the annual information form of the Company dated February 18, 2009.

Definitions

"Canada Yield Price" shall mean a price calculated to provide a yield over the remaining term to maturity of the Medium Term Note Debentures, Series 24 issued hereunder, compounded semi-annually and calculated in accordance with generally accepted financial practice, equal to the Government of Canada Yield plus 0.71% on the business day preceding the date of the resolution authorizing the redemption.

"Government of Canada Yield" on any date shall mean the yield to maturity on such date, compounded semi-annually and calculated in accordance with generally accepted financial practice, which a non-callable Government of Canada Bond would carry if issued in Canadian dollars in Canada, at 100% of its principal amount on such date with a term to maturity equal to the remaining term to maturity of the Medium Term Note Debentures, Series 24 issued hereunder. The Government of Canada Yield, in the case of a redemption of the Medium Term Note Debentures, Series 24 issued hereunder, will be the average of the yields provided by two Canadian investment dealers selected by the Company and approved by the Trustee.

Terasen Gas Inc.

Earnings Coverage Ratio
as at March 31, 2009
and December 31, 2008

Pursuant to Section 8.4 of National Instrument 44-102, this updated calculation of the earnings coverage ratio is filed as an exhibit to the unaudited financial statements of Terasen Gas Inc. for the twelve months ended March 31, 2009, in conjunction with a base shelf prospectus dated April 24, 2008.

Earnings Coverage Ratio

The Company's interest requirements on consolidated long term debt amounted to $108.4 million for the twelve months ended December 31, 2008 and $108.3 million for the same period ended March 31, 2009, in each case adjusted to reflect the issuance and repayment of long term debt after the respective date. The Company's consolidated earnings before interest on long-term debt and income taxes were $201.3 million for the twelve months ended December 31, 2008, which is 1.86 times the Company's interest requirements on consolidated long term debt for the period then ended, and $199.4 million for the twelve months ended March 31, 2009, which is 1.84 times the Company's interest requirements on consolidated long term debt for the period then ended.

	December 31, 2008	March 31, 2009
Earnings coverage on long term debt	1.86 times	1.84 times

Attachment 84.7

Terasen Gas Inc.

A subsidiary of Fortis Inc.

2008 Management's Discussion and Analysis

For the Year Ended December 31, 2008

February 6, 2009

This discussion should be read in conjunction with the consolidated financial statements of the Company and related notes for the years ended December 31, 2008 and 2007. In this MD&A, we, us, our, the Company and Terasen Gas mean Terasen Gas Inc., Terasen refers to Terasen Inc., KMI refers to Knight Inc. (formerly known as Kinder Morgan, Inc.) and Fortis refers to Fortis Inc.

The financial data included in this discussion has been prepared in accordance with Canadian generally accepted accounting principles (GAAP), and all dollar amounts are in Canadian dollars unless otherwise stated.

FORWARD LOOKING STATEMENT

Certain statements contained in this Management Discussion & Analysis contain forward-looking information within the meaning of applicable securities laws in Canada ("forward-looking information"). The words "anticipates", "believes", "budgets", "could", "estimates", "expects", "forecasts", "intends", "may", "might", "plans", "projects", "schedule", "should", "will", "would" and similar expressions are often intended to identify forward-looking information, although not all forward-looking information contains these identifying words.

The forward-looking information in this Management Discussion & Analysis includes, but is not limited to, statements regarding: the Company's expectation to generate sufficient cash from operations to meet its working capital needs; the Corporation's expected capital expenditures for 2009, including estimated construction costs, the expectation to finance those expenditures with a combination of proceeds from shareholder equity injections, short and long term borrowings and internally generated funds and the expectations that capital spending will not significantly decline in 2009; the Company's belief that changes in consumption levels and changes in the commodity cost of natural gas do not materially impact earnings as a result of regulatory deferral accounts; the Company's expectation that delivery margins will not be impacted by migration of residential customers to alternative commodity suppliers; and the Company's expectation that it will not experience difficulty in servicing its debt obligations and paying common dividends.

The forecasts and projections that make up the forward-looking information are based on assumptions, which include but are not limited to receipt of applicable regulatory approvals and requested rate orders; no significant operational disruptions or environmental liability as a result of a catastrophic event or environmental upset, the competitiveness of natural gas pricing when compared with alternate sources of energy, continued population growth and new housing starts, the availability of natural gas supply, access to capital including no material adverse ratings actions by credit ratings agencies; interest rates; the ability to hedge certain risks including no counterparties to derivative instruments failing to meet obligations; and no material change in pension expense or funding requirements.

The forward-looking information is subject to risks, uncertainties and other factors that could cause actual results to differ materially from historical results or results anticipated by the forward-looking information. The factors which could cause results or events to differ from current expectations include, but are not limited to: regulatory approval and rate orders risk; operational disruptions and environmental risk; price competitiveness risk including the impact of carbon taxes or other environmental policies of government; changes in economic conditions including population changes and declining housing starts; natural gas supply risks; capital and credit ratings risk including material adverse ratings actions by credit ratings agencies, interest rate risk; counterparty credit risk including counterparties to derivative instruments failing to meet obligations; and pension expense and funding risk., For additional information with respect to these risk factors, reference should be made to the section entitled "Commitments, Events, Risks and Uncertainties" in this Management Discussion & Analysis.

All forward-looking information in this Management Discussion & Analysis is qualified in its entirety by this cautionary statement and, except as required by law, the Company undertakes no obligation to revise or update any forward-looking information as a result of new information, future events or otherwise after the date hereof.

ABOUT TERASEN GAS

On February 26, 2007, KMI, the Company's former parent, announced that it had entered into a definitive agreement with Fortis Inc. to sell Terasen and its principal natural gas transmission and distribution assets, including its subsidiaries Terasen Gas and Terasen Gas (Vancouver Island) Inc. as well as other activities including Terasen Energy Services. The sale did not include the petroleum transportation subsidiaries nor investments under the Kinder Morgan Canada name. The purchase price of approximately $3.7 billion included the assumption of approximately $2.4 billion of debt. The transaction closed on May 17, 2007.

Terasen Gas is the largest distributor of natural gas in British Columbia, serving approximately 834,000 customers in more than 100 communities. Major areas served by Terasen Gas are Greater Vancouver, the Fraser Valley and the Thompson, Okanagan, Kootenay and North Central Interior regions of the province. Terasen Gas provides transmission and distribution services to its customers, and obtains natural gas supplies on behalf of residential and commercial customers. Gas supplies are sourced primarily from northeastern British Columbia and, through the Company's Southern Crossing Pipeline, from Alberta.

RESULTS OF OPERATIONS

NET EARNINGS

Terasen Gas reported earnings of $43.3 million for the three months ended December 31, 2008 compared to earnings of $40.7 million in the corresponding quarter of 2007. For the twelve months ended December 31, 2008, net earnings were $91.5 million compared to earnings of $78.2 million in the twelve months of 2007. The higher earnings in the current quarter and on a year to date basis are primarily due to the settlement in 2008 of various tax matters including those with Revenu Québec and Canada Revenue Agency related to amounts owing as a result of retroactive amending Quebec tax legislation, the effect of recognition the benefit of tax re-assessments related to losses that expired on change of control in 2005 plus the effect of a higher allowed return on equity in 2008.

SELECTED ANNUAL INFORMATION

Years ended December 31 *(in millions of dollars)*	**2008**	**2007**	**2006**
Total revenues	$ 1,664.6	$ 1,524.6	$ 1,525.3
Net income[1]	91.5	78.2	68.4
Common dividends paid	100.0	110.9	40.0
Total assets	3,108.9	3,022.4	3,020.4
Long-term debt[2]	1,339.9	1,150.9	1,090.8
Current portion of long-term debt	61.8	189.7	251.4

1. Terasen Gas is a wholly-owned subsidiary of Fortis Inc. and accordingly earnings per share information is not disclosed.
2. Excluding current portion of long-term debt.

STATEMENT OF EARNINGS

For the three months ending December 31, 2008, revenues increased by $52.4 million while for the twelve months ending December 31, 2008, revenues increased by $140.0 million, compared to the corresponding periods in 2007. Cost of natural gas changed on a year-over-year basis, up $47.8 million in the fourth quarter and up $134.8 million for the twelve months ended December 31, 2008. Higher revenues and cost of natural gas for the three and twelve months ended December 31, 2008 reflect higher consumption in the current quarter and for the year due to cooler weather on a period over period basis. Changes in consumption levels and changes in the commodity cost of natural gas do not materially impact earnings as a result of regulatory deferral accounts.

For the three and twelve months ended December 31, 2008, operation and maintenance expenses increased by $5.3 and $6.0 million respectively, as compared with the corresponding periods of 2007. The increase in operating and maintenance expenses for the three months and twelve months is a result of higher labour costs in the current year partially offset by lower non-labour costs in the current year versus the comparative period. Non-labour costs are lower in the current year primarily due to the absence of incremental costs in 2007 associated with the Fortis transaction offset by higher bad debt and customer care costs in the current quarter and on a year-to-date basis.

For the three months and twelve months ended December 31, 2008, financing costs increased by $0.4 million and $3.6 million respectively. Higher borrowing costs in the current year are due to higher borrowing rates in the current period and incrementally greater short-term borrowings versus the same period in the prior year. Income taxes for the three and twelve months of 2008 were lower than in the comparable periods of 2007 due to lower earnings, a lower effective tax rate and the net impact of the settlement of various tax matters including the retroactive amending tax legislation. During the year, the Company reached a settlement with Revenu Quebec and Canada Revenue Agency related to amounts owing as a result of retroactive amending Quebec tax legislation. The legislation was passed in 2006 for the purpose of challenging certain inter-provincial Canadian tax structures. Additionally, the Company received re-assessments relating to amending prior years tax returns for losses that would have otherwise expired due to the change in control on acquisition of Terasen by Knight Inc. As a result of the tax settlement and re-assessments, an earnings benefit of approximately $11.6 million was recognized.

Terasen Gas net customer additions during 2008 were 9,256, down from 9,939 in 2007. The weakening housing and construction markets contributed to lower net customers additions in 2008 compared to 2007. In addition, the growth in multi-family housing impacted net additions as natural gas use is less prevalent in this type of dwelling. Terasen Gas industrial and transportation sales volumes decreased by 4,521.4 terajoules, mainly due to lower volumes for pulp and paper customers. Terasen Gas earns approximately the same margin regardless of whether a customer contracts for sales or transportation service.

REGULATION

Terasen Gas' rates are based on estimates of several items, such as natural gas sales volumes, cost of natural gas, and interest rates. In order to manage the risks of forecast error associated with some of these estimates, a number of regulatory deferral accounts are in place.

Two mechanisms to ameliorate unanticipated changes in forecast items have been implemented specifically for Terasen Gas. The first, originally called the Gas Cost Reconciliation Account (GCRA), relates to the recovery of all gas costs through a deferral account which captures variances (overages and shortfalls) from forecasts. Balances are either refunded to or recovered from customers via a quarterly review and application to the BCUC.

Creation of the GCRA was approved by the BCUC in October 1993. Effective April 2004, the GCRA was split into two new deferral accounts called the Commodity Cost Reconciliation Account (CCRA) and the Midstream Cost Reconciliation Account (MCRA). The CCRA and MCRA were created to support customer commodity choice (unbundling) and the refund / recovery mechanism works the same as that used for the GCRA. The second mechanism seeks to stabilize revenues from residential and commercial customers through a deferral account that captures variances in the forecast versus actual customer use throughout the year. This mechanism is called the Revenue Stabilization Adjustment Mechanism (RSAM).

The RSAM and CCRA/MCRA accounts reduce Terasen Gas' earnings exposure to earnings volatility by deferring any variances between projected and actual gas consumption and gas costs, and refunding or recovering those variances in rates in subsequent periods. Variances in usage by large volume, industrial transportation and sales customers are not covered by these deferral accounts as their usage is more predictable and less likely to be significantly affected by weather.

In 2008, the net balances of the RSAM and CCRA/MCRA accounts decreased to a receivable of $22.4 million from a receivable of $72.9 million in 2007. Mark to market adjustments on commodity cost hedges, which are out of the money at December 31, 2008 and 2007, account for $4.5 million of the change. In order to ensure that the balances in the CCRA/MCRA account are recovered on a timely basis, Terasen Gas prepares and files quarterly calculations with the BCUC to determine whether customer rate adjustments are needed to reflect prevailing market prices for natural gas costs. These rate adjustments ignore the temporal effect of derivative valuation adjustments on the balance sheet and instead reflect the forward forecast of gas costs over the recovery period.

Short-term and long-term interest rate deferral accounts are also in place to absorb interest rate fluctuations. The interest rate deferral accounts effectively fixed the interest rate on short-term funds attributable to Terasen Gas' regulated assets at 5.00% during 2008 and 4.75% for 2007. The effective fixed short-term interest rate for 2009 has been set at 4.25%. Any variations from this rate are deferred.

ALLOWED RETURN ON EQUITY (ROE) AND CAPITAL STRUCTURE

Terasen Gas' allowed ROE is determined annually based on a formula that resets annually off a forecast of 30 Year Canada Bonds plus a 3.90% risk premium when the forecast yield on 30 Year Canada Bond is 5.25%. The risk premium is adjusted annually by 75% of the difference between 5.25% and the forecast yield on 30 Year Canada Bonds. For 2008, the application of the ROE formula set Terasen Gas' allowed ROE at 8.62%, up from 8.37% in 2007. The deemed equity component for Terasen Gas is 35.01%, unchanged from 2007. For 2009, the allowed ROE has been set at 8.47% for Terasen Gas.

2008-2009 PERFORMANCE BASED RATE PLAN (PBR)

In July 2003, Terasen Gas received BCUC approval of a negotiated settlement for a 2004-2007 PBR. The PBR Settlement establishes a process for determining Terasen Gas' delivery charges and incentive mechanisms for improved operating efficiencies. The four-year agreement included incentives for Terasen Gas to operate more efficiently through the sharing of the benefits between Terasen Gas and its customers. The PBR Settlement includes ten service quality measures designed to ensure Terasen Gas maintained adequate service levels. It also sets out the requirements for an annual review process which will provide a forum for discussion between Terasen Gas and interested parties regarding its current performance and future activities.

Operation and maintenance costs and base capital expenditures were subject to an incentive formula reflecting increasing costs due to customer growth and inflation, less an adjustment factor based on 50 percent of inflation during the first two years of the PBR and 66 percent of inflation during the last two years. Base capital expenditure amounts are a function of customer numbers and projected customer additions. The PBR Settlement provides for a 50/50 sharing mechanism of earnings above or below the allowed return on equity beginning in 2004.

In 2007, Terasen Gas applied for an extension of the 2004-2007 PBR settlement agreement. The application requested approval to extend the existing settlement term for 2008-2009. On March 23, 2007, the BCUC approved the application as filed.

UNBUNDLING

Over the past several years, Terasen Gas, the BCUC and a number of interested parties have laid the groundwork for the introduction of natural gas commodity unbundling. On November 1, 2004, commercial customers of Terasen Gas became eligible to sign up to buy their natural gas commodity supply directly from third-party suppliers. Terasen Gas continues to provide delivery of the natural gas. Approximately 80,000 commercial customers are eligible to participate in commodity unbundling. By December 31, 2008, 19,800 customers elected to participate in this program.

During 2006, the BCUC approved offering commodity supply choice to residential customers. The BCUC agreed to open a portion of the Province's residential natural gas market to competition, allowing homeowners to sign long-term fixed price contracts for natural gas with companies other than Terasen Gas starting in May 2007. Consumers can choose to remain with Terasen Gas or sign with a marketer, in which case they began receiving gas at the marketer's rate starting in November 2007. Terasen Gas will continue to provide delivery service to unbundled customers and delivery margins are not expected to be impacted by migration of residential customers to alternative commodity suppliers. Approximately 748,000 residential customers are eligible to participate in commodity unbundling. By December 31, 2008, 115,500 customers elected to participate in this program.

MUNICIPAL LEASING TRANSACTIONS

The Company has developed a leasing arrangement that allows Terasen Gas to continue to operate the gas distribution assets by effectively selling the assets to the municipality and leasing them back for a 17 year period. After 17 years, Terasen Gas has an option to repurchase the assets at depreciated value. At December 31, 2008, Terasen Gas had entered into transactions involving a total value of $153.0 million. In addition, the municipalities participating in the leasing transactions have the right each year to acquire any new asset additions within their boundaries at cost, subject to the same repurchase option at the end of the initial 17 year lease term.

COMMITMENTS, EVENT, RISK AND UNCERTAINTIES

The Company is subject to commitments, events, risks or uncertainties that may affect the Company's future performance including revenue and income or loss. The Company's key risk factors include, but are not limited to the following:

REGULATION

Through the regulatory process, the BCUC approves the return on equity which Terasen Gas is allowed to earn, in addition to various other aspects of utility operations. In addition, the recovery of costs incurred in constructing and operating the gas utility is subject to the approval of the BCUC. Fair regulatory treatment that allows Terasen Gas to earn a fair risk adjusted rate of return comparable to that available on alternative, similar risk investments is essential for maintaining service quality as well as ongoing capital attraction and growth. Since 1994, subject to minor modifications, the allowed ROE has been set based on a formula linked directly to forecast 30 year Canada Bond yields which have steadily declined in recent years. It is essential that the Company maintain good relationships with its various regulators and customer representatives. Terasen Gas will be seeking changes to the current generic ROE adjustment mechanism and increases to deemed equity thickness to more fair and appropriate levels. The Company intends to file an application with the BCUC in the second quarter of 2009.

Terasen Gas' 2004-2007 PBR settlement agreement, which has been extended through 2009, includes incentive mechanisms that provide Terasen Gas with an opportunity to earn returns in excess of the allowed return on equity determined by the BCUC. Upon expiry of the settlement agreement, there is no certainty as to whether new negotiated settlements will be entered into, or what the terms of the new settlements might be.

Terasen Gas is currently preparing a rate application with anticipated filing with the BCUC in the second quarter of 2009. BCUC approval of rates for 2010, and for future years, will be required. There can be no assurance that the rate orders issued will permit the Company to recover all costs actually incurred and to earn the expected rate of return. A failure to obtain acceptable rate orders may adversely affect the business carried on by the Company, the undertaking or timing of proposed upgrades or expansion projects, the issue and sale of securities, ratings assigned by rating agencies, and other matters which may, in turn, negatively impact the Company's results of operations or financial position.

OPERATIONS AND THE ENVIRONMENT

The Company is subject to numerous laws, regulations and guidelines governing the management, transportation and disposal of hazardous substances and other waste materials and otherwise relating to the protection of the environment and health and safety. The costs arising from compliance with such laws, regulations and guidelines may be material to the Company. The process of obtaining environmental permits and approvals, including any necessary environmental assessment, can be lengthy, contentious and expensive. Potential environmental damage and costs could arise due to a variety of events and could be material if an event happened. However, there can be no assurance that such costs will be recoverable through rates and, if substantial, unrecovered costs may have a material effect on the business, results of operations, financial condition and prospects of the Company.

The Company is exposed to environmental risks that owners and operators of properties in British Columbia generally face. These risks include the responsibility of any current or previous owner or operator of a contaminated site for remediation of the site, whether or not such person actually caused the contamination. In addition, environmental and safety laws make owners, operators and persons in charge of management and control of facilities subject to prosecution or administrative action for breaches of environmental and safety laws, including the failure to obtain certificates of approval. The Company has not been notified of any such regulatory action in regard to the operation or occupation of its facilities. However, it is not possible to predict with absolute certainty the position that a regulatory authority will take regarding matters of non-compliance with environmental and safety laws. Changes in environmental, health and safety laws could also lead to significant increases in costs to the Company.

The Company is exposed to various operational risks, such as pipeline leaks; accidental damage to, or fatigue cracks in mains and service lines; corrosion in pipes; pipeline or equipment failure; other issues that can lead to outages and/or leaks; and any other accidents involving natural gas, which could result in significant operational disruptions and/or environmental liability. The Company believes it has taken all reasonable and prudent steps to minimize its exposure in the case of a catastrophic event or environmental upset. The Company conducts its operations utilizing an Environmental Management System which specifies impacts, control measures and audit protocols. The Company maintains comprehensive facility risk assessment, pipeline integrity management and damage prevention programs and pipeline security systems as preventive measures to mitigate the risk of a pipeline failure or other loss of system integrity. These programs are intended to reduce both the likelihood and severity of the business interruption and/or environmental liability that could result from a pipeline failure or loss of integrity.

A major natural disaster, such as an earthquake affecting the Greater Vancouver region or Vancouver Island, could severely damage Terasen Gas' natural gas transmission and distribution systems. The Company has detailed emergency preparedness plans in place to respond to natural disasters, accidents and emergencies, and regularly tests these plans in simulations involving employees and other emergency response organizations. The Company also has an insurance program which provides coverage for business interruption, liability and property damage, although the coverage offered by this program is limited. In the event of a large uninsured loss caused by a natural disaster, the Company would apply to the BCUC for recovery of these costs through higher rates. However, there is no assurance that the BCUC will approve any such application.

The actions necessary to abandon pipeline systems at the eventual end of their useful lives have not been defined and the costs of these actions may not be fully recovered in rates or tolls. Until such time as the specified requirements of abandonment and the funding mechanism for the eventual recovery of negative salvage is determined, the Company, like other Canadian pipeline systems, makes no provision for these amounts.

Terasen Gas' natural gas transmission and distribution systems require ongoing maintenance, improvement and replacement. Accordingly, to ensure the continued performance of the physical assets, the Company determines expenditures that must be made to maintain and replace the assets. If the systems are not able to be maintained, service disruptions and increased costs may be experienced. The inability to obtain regulatory approval to reflect in rates the expenditures which the Company believes are necessary to maintain, improve and replace their assets; the failure by the Company to properly implement or complete approved capital expenditure programs; or the occurrence of significant unforeseen equipment failures despite maintenance programs could have a material effect on the Company.

The Company continually develops capital expenditure programs and assesses current and future operating and maintenance expenses that will be incurred in the ongoing operation. Management's analysis is based on assumptions as to costs of services and equipment, regulatory requirements, revenue requirement approvals, and other matters, which involve some degree of uncertainty. If actual costs exceed regulatory-approved capital expenditures, it is uncertain as to whether such additional costs will receive regulatory approval for recovery in future customer rates. The inability to recover these additional costs could have a material effect on the financial condition and results of operations of the Company. See "Regulation" for further discussion on regulatory risk.

COMPETITIVENESS

Prior to 2000, natural gas consistently enjoyed a substantial competitive advantage when compared with alternative sources of energy in British Columbia. However, because electricity prices in British Columbia continue to be set based on the historical average cost (primarily hydro-electric dams) of production, rather than based on market forces, they have remained artificially low compared to market priced electricity. As a result, the price of electricity for residential customers in British Columbia is now only marginally higher than for natural gas. There is no assurance that natural gas will continue to maintain a competitive price advantage in the future.

The Company employs a number of tools to reduce its exposure to natural gas price volatility. These include purchasing gas for storage and adopting hedging strategies, which include a combination of both physical and financial transactions, to reduce price volatility and ensure, to the extent possible, that natural gas commodity costs remain competitive against electric rates. Activities related to the hedging of gas prices are approved by the BCUC and gains or losses accrue entirely to customers.

If natural gas pricing becomes uncompetitive with electricity prices or the price of other forms of energy, the Company's ability to add new customers could be impaired, and existing customers could reduce their consumption of natural gas or eliminate its usage altogether as furnaces, water heaters and other appliances are replaced. This may result in higher rates and, in an extreme case, could ultimately lead to an inability to fully recover the Company's cost of service in rates charged to customers.

In 2008 the Government of British Columbia introduced changes to energy policy including greenhouse gas emission reduction targets and a consumption tax on carbon based fuels that impact the competitiveness of natural gas versus non-carbon based energy sources or alternate energy sources. It did not, however, introduce carbon tax on imported electricity generated through the combustion of carbon based fuels. The future impact of these changes in energy policy may have a material impact on the competitiveness of natural gas relative to other energy sources.

There can be no assurance that the current regulatory-approved flow through mechanisms in place allowing for the flow through of the cost of natural gas will continue to exist in the future. An inability of the Company to flow through the full cost of natural gas could materially affect the Company's results of operations, financial position and cash flows.

LABOUR RELATIONS

Approximately 75% of the employees of the Company are members of labour unions that have entered into collective bargaining agreements with the Company. The provisions of such collective bargaining agreements affect the flexibility and efficiency of the business carried on by the Company. The Company considers its relationships with its labour unions to be positive but there can be no assurance that current relations will continue in future negotiations or that the terms under the present collective bargaining agreements will be renewed. The inability to maintain, or to renew, the collective bargaining agreements on acceptable terms could result in increased labour costs or service interruptions arising from labour disputes, that are not provided for in approved rates and that could have an adverse effect on the results of operations, cash flow and net income of the Company.

IMPACT OF CHANGES IN ECONOMIC CONDITIONS

Typical of utilities, economic conditions in the Company's service territories influence energy sales. Energy sales are influenced by economic factors such as changes in employment levels, personal disposable income, energy prices and housing starts. New customer additions at the Company are typically a result of population growth and new housing starts, which are affected by the state of the provincial economy. The Company is also affected by changes in trends in housing starts from single family dwellings to multi-family dwellings, for which natural gas has a lower penetration rate. Housing starts in 2008 were more moderate compared to the previous number of years, and the growth of new multi-family housing starts continues to significantly outpace that of new single-family housing starts. Higher energy prices can dampen economic activity and reduce consumption by customers. Natural gas and crude oil prices are closely correlated with natural gas and crude oil exploration and production activity in certain of the Company's service territories. The level of these activities can influence energy demand.

An extended decline in economic conditions would be expected to have the effect of reducing demand for energy over time. The regulated nature of Terasen Gas, including various mitigating measures approved by regulators, helps to reduce the impact that lower energy demand, associated with poor economic conditions, may have on the Company's earnings. However, a severe and prolonged downturn in economic conditions could materially affect the Company despite regulatory measures available for compensating for reduced demand. For instance significantly reduced energy demand in the Company's service territories could reduce capital spending which would in turn impact rate base and earnings growth. Despite current depressed economic conditions and natural gas prices, which are expected to continue during 2009, the Company does not anticipate any significant decrease in capital spending in 2009.

NATURAL GAS SUPPLY

The Company is dependent on a limited selection of pipeline and storage providers, particularly in the Vancouver and Fraser Valley areas where the majority of the Company's natural gas distribution customers are located. Regional market prices have been higher from time to time than prices elsewhere in North America as a result of insufficient seasonal and peak storage and pipeline capacity to serve the increasing demand for natural gas in B.C. and the U.S. Pacific Northwest.

In addition, the Company is critically dependent on a single source transmission pipeline. In the event of a prolonged service disruption on the Spectra transmission system, the Company's residential customers could experience outages, thereby affecting revenues and incurring costs to safely relight customers.

CAPITAL RESOURCES AND LIQUIDITY

The Company's financial position could be adversely affected if it fails to arrange sufficient and cost-effective financing to fund, among other things, capital expenditures and the repayment of maturing debt. The ability to arrange sufficient and cost-effective financing is subject to numerous factors, including the results of operations and financial position of the Company, conditions in the capital and bank credit markets, ratings assigned by rating agencies, adequate allowed rates of return on equity granted by the BCUC and general economic conditions. Funds generated from operations after payment of expected expenses (including interest payments on any outstanding debt) will not be sufficient to fund the repayment of all outstanding liabilities when due as well as all anticipated capital expenditures. There can be no assurance that sufficient capital will continue to be available on acceptable terms to fund capital expenditures and to repay existing debt.

Generally, the Company is subject to financial risk associated with changes in the credit ratings assigned to them by credit rating agencies. Credit ratings impact the level of credit risk spreads on new long-term debt issues and on the Company's credit facilities. A change in the credit ratings could potentially affect access to various sources of capital and increase or decrease the Corporation's and operating subsidiaries' finance charges. Also, a significant downgrade in the Terasen Gas's credit ratings could trigger margin calls and other cash requirements under Terasen Gas's natural gas purchase and natural gas derivative contracts. The Company's corporate investment-grade credit ratings were confirmed and maintained during the year and the Company does not anticipate any material adverse rating actions by the credit rating agencies in the near term. However, the current global financial crisis has placed increased scrutiny on rating agencies and rating agency criteria which may result in changes to credit rating practices and policies.

The recent and expected continued volatility in the global financial and capital markets will likely increase the cost of and affect the timing of issuance of long-term capital by the Company in 2009. The cost of borrowing is expected to increase as new long-term debt is expected to be issued at higher rates due to an increase in credit spreads. Due to the regulated nature of the Company's operations, the expected higher cost of borrowing of the utilities is eligible to be recovered in future customer rates.

To help mitigate liquidity risk, Terasen Gas has secured multi-year committed credit facilities to support short-term financing of capital expenditures and seasonal working capital requirements.

TRANSITION TO INTERNATIONAL FINANCIAL REPORTING STANDARDS

The Accounting Standards Board of the Canadian Institute of Chartered Accountants has announced that Canadian publicly accountable enterprises are required to adopt International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board, effective January 1, 2011. IFRS will require increased financial statement disclosure as compared to Canadian GAAP and accounting policy differences between Canadian GAAP and IFRS will need to be addressed by the Company. The Company is currently considering the impact a conversion to IFRS would have on its future financial reporting. Additional information on the Company's transition to IFRS is provided in the "Future Accounting Pronouncements" section of this MD&A.

INTEREST RATES

The allowed returns on equity for the Company are determined by formulae that result in lower allowed ROEs if forecast long-term Canada bond yields decline. The Company's exposure to short-term interest rates are covered by regulatory deferral accounts, however it is exposed to changes in short-term interest rates through debt on non-regulated operations.

EMPLOYEE FUTURE BENEFITS

The Company maintains defined benefit pension plans and there is no certainty that the pension plan assets will be able to earn the assumed rate of returns. Market driven changes impacting the performance of the pension plan assets may result in material variations in actual return on pension plan assets from the assumed return on the assets causing material changes in the pension expense and funding requirements. The regulated operation of the Company currently has a deferral mechanism which allows for deferral of the pension expense that is approved for recovery in rates and the actuarial pension expense. Net pension expense is impacted by, among other things, the amortization of experience and actuarial gains or losses and expected and actual return on plan assets.

Market driven changes impacting other pension assumptions, including the assumed discount rate, may also result in future contributions to pension plans that differ significantly from current estimates as well as causing material changes in pension expense. There is also measurement uncertainty associated with pension expense, future funding requirements, the accrued benefit asset, accrued benefit liability and benefit obligation due to measurement uncertainty inherent in the actuarial valuation process.

COUNTERPARTY CREDIT RISK

The Company is exposed to credit risk in the event of non-performance by counterparties to derivative instruments. The Company is also exposed to significant credit risk on physical off-system sales. Terasen deals with high credit quality institutions in accordance with established credit approval practices. Due to recent events in the financial markets including significant international government intervention in the banking systems and financial markets the Company has further limited the financial counterparties that it transacts with and reduced available credit to, or taken additional security from, the physical off-system sales counterparties it deals with. To date the Company has not experienced any counterparty defaults and does not expect any counterparties to fail to meet their obligations however, the credit quality of counterparties, as recent events have indicated, can change rapidly.

FIRST NATIONS LANDS

The Company provides service to customers on First Nations lands and maintain gas distribution facilities on lands that are subject to land claims by various First Nations. A treaty negotiation process involving various First Nations and the Government of British Columbia is underway, but the basis upon which settlements might be reached in the service areas of the Company is not clear. Furthermore, not all First Nations are participating in the process. To date, the policy of the Government of British Columbia has been to endeavour to structure settlements without prejudicing existing rights held by third parties such as the Company. However, there can be no certainty that the settlement process will not adversely affect the business of the Company.

CRITICAL ACCOUNTING ESTIMATES

The preparation of the Company's consolidated financial statements in accordance with Canadian GAAP requires management to make estimates and judgments that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the reporting periods. Estimates and judgments are based on historical experience, current conditions and various other assumptions believed to be reasonable under the circumstances.

Due to changes in facts and circumstances and the inherent uncertainty involved in making estimates, actual results may differ significantly from current estimates. Estimates and judgments are reviewed periodically and, as adjustments become necessary, are reported in earnings in the period they become known. The Company's critical accounting estimates are discussed below.

REGULATION

Generally, the accounting policies of the Company are subject to examination and approval by the BCUC. These accounting policies may differ from those used by entities not subject to rate regulation. The timing of the recognition of certain assets, liabilities, revenues and expenses, as a result of regulation, may differ from that otherwise expected using GAAP for entities not subject to rate regulation. Regulatory assets and regulatory liabilities arise as a result of the rate-setting process and have been recorded based on previous, existing or expected regulatory orders or decisions.

Certain estimates are necessary since the regulatory environment in which the Company operates often requires amounts to be recorded at estimated values until these amounts are finalized pursuant to regulatory decisions or other regulatory proceedings. The final amounts approved by the BCUC for deferral as regulatory assets and regulatory liabilities and the approved recovery or settlement periods may differ from those originally expected. Any resulting adjustments to original estimates are reported in earnings in the period in which they become known. As at December 31, 2008, the Company recorded $93.4 million in current and long-term regulatory assets (December 31, 2007 - $112.3 million) and $59.5 million in current and long-term regulatory liabilities (December 31, 2007 - $29.2 million).

CAPITAL ASSET AMORTIZATION

Amortization, by its nature, is an estimate based primarily on the useful life of assets. Estimated useful lives are based on current facts and historical information and take into consideration the anticipated physical life of the assets. As at December 31, 2008, the Company's consolidated utility capital assets were $2.4 billion, or approximately 78 per cent of total consolidated assets, compared to consolidated utility assets of $2.4 billion, or approximately 79 per cent of total consolidated assets, as at December 31, 2007. Changes in amortization rates can have a significant impact on the Company's amortization expense.

As part of the customer-rate setting process, appropriate amortization rates are approved by the BCUC.

The amortization periods used and the associated rates are reviewed on an ongoing basis to ensure they continue to be appropriate. From time to time, third-party depreciation studies are performed. Based on the results of these depreciation studies, the impact of any over or under amortization as a result of actual experience differing from that expected and provided for in previous amortization rates is generally reflected in future amortization rates and amortization expense, as such differences are reflected in future customer rates.

CAPITALIZED OVERHEADS

As required by the BCUC, Terasen Gas capitalize overhead costs which are not directly attributable to specific capital assets, but which relate to the overall capital expenditure program. These general expenses capitalized ("GEC") are allocated over constructed capital assets and amortized over their estimated service lives. The methodology for calculating and allocating these general expenses to utility capital assets is established by the BCUC. In 2008, GEC totaled $27.7 million (2007 - $25.5 million). Any change in the methodology of calculating and allocating general overhead costs to utility capital assets could have a significant impact on the amount recorded as operating expenses and utility capital assets.

GOODWILL IMPAIRMENT ASSESSMENTS

Goodwill represents the excess, at the dates of acquisition, of the purchase price over the fair value of the net amounts assigned to individual assets acquired and liabilities assumed relating to business acquisitions. Goodwill is carried at initial cost less any write-down for impairment. The Company is required to perform an annual impairment test and at such time any event occurs or if circumstances change that would indicate that the fair value of a reporting unit was below its carrying value. In July of each year, the Company reviews for impairment of goodwill, which is based on current information and fair market value assessments of the reporting units being reviewed. Fair market value is determined using net present value financial models and management's assumption of future profitability of the reporting units. There was no impairment provision required on $0.5 million in goodwill recorded on the Company's balance sheet as at December 31, 2008.

EMPLOYEE FUTURE BENEFITS

The Company defined benefit pension plans and OPEB plans are subject to judgments utilized in the actuarial determination of the expense and related obligation. The main assumptions utilized by management in determining pension expense and obligations are the discount rate for the accrued benefit obligation and the expected long-term rate of return on plan assets.

The assumed long-term rates of return on the defined benefit pension plan assets, for the purpose of estimating pension expense for 2009, is 7.25%, consistent with the assumes long-term rate of return used for 2008.

The assumed discount rates, used to measure the Company's accrued pension benefit obligations on the applicable measurement date in 2008, and to determine pension expense for 2009, was 6.25%, up from 5.25% used in 2007. The discount rates increased as a result of the impact of increased credit risk spreads on investment grade corporate bonds due to volatility in the capital markets.

The long term rate of return is based on based on the expected average return of the assets over a long period given the relative asset mix. The discount rate is determine with referred to the current market rate of interest on high quality debt instruments with cash flows which match the time and amount of expected benefit payments.

Terasen Gas expects consolidated pension expense for 2009 related to its defined benefit pension plans to be approximately $0.6 million lower than in 2008. The lower expense is due to the effect of the change in discount rate partially offset by lower returns on the assets in 2008.

The following table provides the sensitivities associated with a 100 basis point increase move in the expected long-term rate of return on plan assets and discount rate on 2008 net benefit expense and the accrued benefit pension asset and liability recorded in the Company's consolidated financial statements, as well as the impact on the accrued pension benefit obligation.

Increase (decrease) *(in millions of dollars)*	Accrued Benefit Asset	Accrued Benefit Liability	Net Benefit Expense	Benefit Obligation
1% increase in the expected rate of return	$ 2.3	$ (0.1)	$ (2.3)	$ -
1% decrease in the expected rate of return	(2.3)	0.1	2.3	-
1% increase in the discount rate	(1.1)	(0.6)	0.5	(13.3)
1% decrease in the discount rate	(2.4)	0.9	3.3	15.2

The above table reflects the changes before the effect of the regulatory deferral account which would defer most of the effect on the expense.

Other assumptions applied in measuring defined benefit pension expense and/or the accrued pension benefit obligation were the average rate of compensation increase, average remaining service life of the active employee group, and employee and retiree mortality rates.

The Company's OPEB plans are also subject to judgments utilized in the actuarial determination of the expense and related obligation. Except for the assumptions of the expected long-term rate of return on plan assets and average rate of compensation increase, the above assumptions, along with health care cost trends, were also utilized by management in determining OPEB plan expense and obligations.

As disclosed under the "Commitments, Event, Risk and Uncertainties" section of this MD&A, the Terasen Gas has regulatory-approved mechanisms to defer variations in pension expense from forecast pension expense, used to set customer rates, as a regulatory asset or a regulatory liability.

As at December 31, 2008, the Company had a consolidated accrued benefit asset of $207.9 million (December 31, 2007 - $237.4 million) and a consolidated accrued benefit liability of $298.0 million (December 31, 2007 - $304.7 million). During 2008, the Company recorded consolidated net benefit expense of $9.5 million (2007 - $10.4 million).

ASSET RETIREMENT OBLIGATIONS (``ARO'S")

In measuring the fair value of AROs, the Company is required to make reasonable estimates concerning the method of settlement and settlement dates associated with the legally obligated asset-retirement costs. The Company does not currently have any identified ARO's and as such no amounts have been recorded as at December 31, 2008 and 2007. The nature, amount and timing of costs associated with land and environmental remediation and/or removal of assets cannot be reasonably estimated at this time as the transmission and distribution systems are reasonably expected to operate in perpetuity due to the nature of their operation; applicable licenses, permits and laws are reasonably expected to be renewed or extended indefinitely to maintain the integrity of the related assets and to ensure the continued provision of service to customers. In the event that environmental issues are identified, or the applicable licenses, permits, laws or agreements are terminated, AROs will be recorded at that time provided the costs can be reasonably estimated.

REVENUE RECOGNITION

The Company recognizes revenue on an accrual basis. Recording revenue on an accrual basis requires use of estimates and assumptions. Customer bills are issued throughout the month based on meter readings that establish gas consumption by customers since the last meter reading. The unbilled revenue accrual for the period is based on estimated gas and electricity sales to customers for the period since the last meter reading at the approved rates. The development of the sales estimates requires analysis of consumption on a historical basis in relation to key inputs such as the current price of gas, population growth, economic activity, weather conditions and system losses. The estimation process for accrued unbilled gas and electricity consumption will result in adjustments of gas and electricity revenue in the periods they become known when actual results differ from the estimates. As at December 31, 2008, the amount of accrued unbilled revenue recorded in accounts receivable was approximately $222.8 million (December 31, 2007 - $153.9 million) on annual consolidated operating revenues of $1.64 billion (2007 - $1.52 billion).

CONTINGENCIES

The Company is subject to various legal proceedings and claims that arise in the ordinary course of business operations. Management believes that the amount of liability, if any, from these actions would not have a material effect on the Corporation's financial position or results of operations. Contingencies are described in note 13 to the Company's annual financial statements.

QUARTERLY FINANCIAL INFORMATION

($ millions)	For the three months ended				
2008	**Mar-31**	**Jun-30**	**Sep-30**	**Dec-31**	**Total**
Revenues	**$ 563.8**	**$ 336.1**	**$ 227.7**	**$ 537.0**	**$1,664.6**
Net income (loss)	**50.6**	**3.9**	**(6.3)**	**43.3**	**91.5**
2007					
Revenues	$ 559.3	$ 293.3	$ 187.4	$ 484.6	$1,524.6
Net income (loss)	46.8	2.8	(12.1)	40.7	78.2

Because of natural gas consumption patterns, the natural gas transmission and distribution operations of Terasen Gas normally generate higher net earnings in the first and fourth quarters and lower net earnings in the second quarter, which are partially offset by net losses in the third quarter. As a result, interim earnings statements are not indicative of earnings on an annual basis.

LIQUIDITY AND CAPITAL RESOURCES

CONSOLIDATED CASH FLOW

Years ended December 31 *(in millions of dollars)*	**2008**	2007
Cash flow provided by (used for):		
Operating activities	**$ 198.5**	$ 117.9
Investing activities	**(85.6)**	(97.3)
Financing activities	**(105.4)**	(21.5)
Net increase (decrease) in cash	**$ 7.5**	$ (0.9)

CASH FLOW FROM OPERATING ACTIVITIES

Cash flow from operating activities increased from $117.9 million in 2007 to $198.5 million in 2008 due to a number of factors. Cash from operations refers to cash generated before the impact of working capital. Cash from operations for the three months ended December 31, 2008 was $59.7 million compared to $51.2 million in the corresponding period of 2007. Cash from operations for the twelve months ended December 31, 2008 was $165.2 million, compared to $146.2 million in the corresponding period of 2007. The increase in cash from operations for the three and twelve months ended December 31, 2008 is mainly a result of higher net earnings in the comparable periods of 2008 versus 2007.

Between December 31, 2007 and December 31, 2008, accounts receivable, inventories of gas in storage and supplies, accounts payable and accrued liabilities, excluding the mark to market on gas derivatives have increased while the current portion of rate stabilization accounts decreased as a result of the cooler weather and higher commodity cost of gas charged to customers Due to the greater impact of these changes in 2008 as compared to 2007, cash flow generated from operating activities has increased.

INVESTING ACTIVITIES

Capital expenditures totaled $122.1 million in 2008 which are comparable with $108.4 million in 2007.

FINANCING ACTIVITIES

On May 13, 2008, Terasen Gas issued $250.0 million of Medium Term Note Debentures at a coupon interest rate of 5.80%. The proceeds were used to repay current debt maturities of $188.0 million which matured on June 2, 2008 and the remainder of the proceeds were used to pay down Terasen Gas' operating line.

On October 2, 2007, the Company issued $250.0 million of Medium Term Note Debentures at a coupon interest rate of 6.00%. The proceeds were used to repay the current debt maturities which matured during October 2007.

On August 24, 2007, the Company renegotiated and extended its credit facility for five years with similar terms to the original facility and common for such term credit facilities. The $500 million unsecured committed revolving credit facility is with a syndicate of banks and matures in August 2012. In 2008, under the terms of the agreement, the facility was extended to mature in August 2013.

As at December 31, 2008, the Company had lines of credit in place totaling $500.0 million to finance cash requirements. These lines enable the respective companies to borrow directly from their bankers, issue bankers' acceptances and support commercial paper issuance. Bank lines of $218.0 million were unutilized at the end of 2008. Virtually all short-term cash needs are funded through commercial paper and bankers' acceptances in the Canadian market at rates generally below bank prime. Terasen does not have, nor does it expect to have, any defaults or arrears.

Dividends on common shares totaled $100.0 million in 2008 compared to $110.9 million paid in 2007.

CONTRACTUAL OBLIGATIONS

The Company has entered into operating leases for certain building space and natural gas transmission and distribution assets. In addition, the Company enters into gas purchase contracts. The following table sets forth the Company's operating leases, gas purchase obligations and employee benefit plan contributions due in the years indicated:

	Operating leases	Purchase obligations	Employee benefit plans	Total
2009	$ 15.4	$ 360.4	$ 7.9	$ 383.7
2010	15.0	26.9	5.9	47.8
2011	14.7	22.8	-	37.5
2012	14.4	-	-	14.4
2013	13.5	-	-	13.5
Thereafter	85.5	-	-	85.5
	$ 158.5	$ 410.1	$ 13.8	$ 582.4

Gas purchase contract commitments are based on market prices that vary with gas commodity indices. The amounts disclosed reflect index prices that were in effect at December 31, 2008. The employee benefit plan contributions have been estimated up to the date of the next actuarial valuation for each plan unless the valuation falls in the next twelve months then the Company has provided for an estimate of the contributions. Employee benefit plan contributions beyond the date of the next actuarial valuation cannot be accurately estimated.

FINANCIAL POSITION

The following table outlines the significant changes in the consolidated balance sheets as at December 31, 2008 compared to December 31, 2007.

Balance Sheet Item	Increase(Decrease) ($ millions)	Explanation
Long-term debt (including current portion)	61.1	The increase is mainly a result of the Company issuing more long-term debt than that maturing in the year with the excess used to pay down short-term notes.
Short-term notes	(66.5)	The decrease in short-term notes is mainly due to the Company's long term debt issuance noted above with the excess proceeds used to pay down short-term notes.
Rate stabilization accounts (including current and long term)	(50.4)	The decrease in the net asset position is mainly due to the fair value mark to market for the gas derivatives being lower at December 31, 2008 versus December 31, 2007. Additionally, the company has been collecting higher amounts from customers while gas prices have declined.
Accounts receivable	35.8	The increase in accounts receivable is due to cooler weather and an increase in the commodity cost of gas charged to customers in 2008 compared to 2007.
Accounts payable and accrued liabilities	34.7	The increase is mainly due to higher gas cost payable due to cooler weather in the current year compared to the prior year.

WORKING CAPITAL

The Company's working capital requirements fluctuate seasonally based on natural gas consumption. Given the relatively low-risk, regulated nature of its business, Terasen Gas is able to maintain negative working capital balances. Terasen Gas maintains adequate committed credit facilities to meet its working capital requirements. On an annual basis, Terasen Gas generates sufficient cash flow to meet its working capital requirements.

CASH FLOW

It is expected that operating expenses and interest costs will generally be paid out of operating cash flows, with varying levels of residual cash flow available for capital expenditures and/or for dividend payments. Cash required to complete capital expenditure programs is also expected to be financed from a combination of borrowings under credit facilities, equity injections from Terasen and long-term debt issues.

The Company's ability to service its debt obligations and pay dividends on its common shares is dependent on the financial results of the Company. Cash required to support capital expenditure programs is expected to be derived with borrowings from short term borrowings. Depending on the timing of cash payments, borrowings under the Company's credit facility may be required from time to time to support the servicing of debt and payment of dividends.

The Company does not expect any significant decrease in operating cash flows in 2009, in light of the expected continued downturn in the global economy and, therefore, does not anticipate any difficulty in servicing its debt obligations and paying common dividends. Also, the Company do not anticipate any difficulty in sourcing the cash required to fund their 2009 capital expenditure programs.

DIVIDEND RESTRICTIONS

As part of its approval of the acquisition of Terasen by KMI, as well as the subsequent sale from KMI to Fortis, the BCUC imposed a number of conditions intended to ring-fence Terasen Gas from Terasen. These restrictions included a prohibition on the payment of dividends unless Terasen Gas has in place at least as much common equity as that deemed by the BCUC for rate-making purposes. As a result of this and the decision issued by the BCUC on March 2, 2006 Terasen Gas must currently maintain a percentage of common equity to total rate base that is at least 35.01%.

In 2008, none of these restrictions constrained the distribution of earnings not otherwise needed for reinvestment.

CREDIT RATINGS

Securities issued by Terasen Gas are rated by DBRS Inc. (DBRS) and Moody's Investors Service Inc. (Moody's). The ratings assigned to securities issued by Terasen Gas are reviewed by these agencies on an ongoing basis.

The table below summarizes the ratings assigned to the Company's various securities. The DBRS rating is as of May 20, 2008 and the Moody's rating is as of July 17, 2008.

CREDIT RATINGS	DBRS	Moody's
Commercial paper	R-1 (Low)	-
Secured long-term debt	A	A2
Unsecured long-term debt	A	A3

After reassessing its relationship with Standard & Poor's Ratings Services, a division of the McGraw-Hill Companies (Canada) Corporation (S&P), Terasen Gas decided early in 2004 to discontinue the engagement of S&P to provide credit ratings on the debt of Terasen Gas. The Company believes the credit ratings issued by Moody's and DBRS will be sufficient to service the requirements of creditors and maintain the Company's access to capital. S&P continues to provide an unsolicited rating on the Company's outstanding debt based on publicly available information. As of December 17, 2008 the Company's unsecured long-term debt was rated A by S&P.

A downgrade of Terasen Gas below investment grade by any of the major credit rating agencies could trigger margin calls and other cash requirements under Terasen Gas' gas purchase and commodity derivative contracts.

PROJECTED CAPITAL EXPENDITURES

Terasen Gas has estimated total 2009 consolidated capital expenditures, before customer contributions, of $152.7 million. Major capital expenditures in 2009 include the Gateway Infrastructure Project ($15.5 million) Fraser River South Bank South Arm Rehabilitation project ($25.4 million), and Customer Information System ($12.5 million) and an upgrade of SAP Core applications ($2.5 million). The Company expects to finance capital expenditures in 2009 with a combination of long-term debt issuance, short-term borrowings and internally generated funds.

OFF-BALANCE SHEET ARRANGEMENTS

There are no material off-balance sheet arrangements.

TRANSACTIONS WITH RELATED PARTIES

The Company received $3.3 million in 2008 (2007 – $4.1 million) from Terasen Gas (Vancouver Island) Inc. ("TGVI"), a company under common control, for transporting gas through the Company's pipeline system.

The Company paid approximately $47.0 million during the year ended December 31, 2008 (2007 – $45.2 million) for customer care and billing services to a limited partnership. The Company's parent, Terasen, holds a 30% interest in the limited partnership and jointly controls it. The Company is committed to pay approximately $43.6 million as base contract fees for 2009.

The Company paid $8.5 million in 2008 (2007 – $8.5 million) to Terasen, the Company's parent, for management services.

The Company charged companies under common control $6.6 million in 2008 (2007 – $6.1 million) for management services.

The Company's indirect parent, Fortis Inc., grants stock options to certain employees of the Company under its stock option plans. For the year ended December 31, 2008, the Company was charged, and recorded an expense of $0.3 million (2007 $0.1 million) for the fair value of the stock compensation granted by Fortis Inc.

Related party transactions are recorded at the exchange amount.

CHANGES IN ACCOUNTING POLICIES

Effective January 1, 2008, the Company adopted the following new accounting standards issued by the Canadian Institute of Chartered Accountants ("CICA").

a) Section 3862, *Financial Instruments – Disclosures*, and Section 3863, *Financial Instruments – Presentation*, require disclosures of both qualitative and quantitative information that enables users of financial statements to evaluate the nature and extent of risks from financial instruments to which the Company is exposed.

b) Section 1535, *Capital Disclosures,* requires the Company to disclose additional information about its capital and the manner in which it is managed. This additional disclosure includes quantitative and qualitative information regarding the Corporation's objectives, policies and processes for managing capital.

c) Section 3031, *Inventories,* requires inventories to be measured at the lower of cost or net realizable value, disallows the use of a last-in first-out inventory costing methodology, and requires that, when circumstances which previously caused inventories to be written down below cost no longer exist, the amount of the write-down is to be reversed. This standard is to be applied retrospectively. As at January 1, 2008, supplies and other inventories of $6.6 million ($5.8 million as at January 1, 2007) were reclassified to property, plant and equipment from inventory on the balance sheet as they are held for the development, construction, maintenance and repair of other property, plant and equipment. During the year ended December 31, 2008, gas in storage inventories of $1,152.1 million (2007 - $1,017.3 million) were expensed and reported in cost of natural gas on the consolidated statement of earnings and comprehensive earnings.

FUTURE ACCOUNTING PRONOUNCEMENTS

International Financial Reporting Standards ("IFRS"): In February 2008, the Accounting Standards Board ("AcSB") confirmed that the use of IFRS will be required in 2011 for publicly accountable enterprises in Canada. In April 2008, the AcSB issued an IFRS Omnibus Exposure Draft proposing that publicly accountable enterprises be required to apply IFRS, in full and without modification, on January 1, 2011.

On June 27, 2008 the Canadian Securities Administrators ("CSA") issued Staff Notice 52-321, *Early Adoption of IFRS* which indicated that the CSA would be prepared to grant an exemption to allow Canadian financial statement issuers to adopt IFRS early on a case-by-case basis, provided that they could demonstrate that they met certain conditions. Terasen Gas is not planning to adopt IFRS early.

The adoption date of January 1, 2011 will require the restatement, for comparative purposes, of amounts reported by the Company for its year ended December 31, 2010, and of the opening balance sheet as at January 1, 2010. The AcSB proposes that CICA Handbook Section - *Accounting Changes*, paragraph 1506.30, which would require an entity to disclose information relating to a new primary source of GAAP that has been issued but is not yet effective and that the entity has not applied, not be applied with respect to the IFRS Omnibus Exposure Draft.

Terasen Gas is continuing to assess the financial reporting impacts of the adoption of IFRS and, at this time, the impact on future financial position and results of operations is not reasonably determinable or estimable. Terasen Gas does anticipate a significant increase in disclosure resulting from the adoption of IFRS and is continuing to assess the level of disclosure required as well as systems changes that may be necessary to gather and process the required information.

Terasen Gas commenced its IFRS conversion project in 2007 and has established a formal project governance structure which includes the audit committees, senior management and a project team. Overall project governance, management and support is coordinated by Fortis. Regular reporting occurs to the Audit Committee of the Board of Directors. An external expert advisor has been engaged to assist in the IFRS conversion project.

The Terasen Gas IFRS conversion project consists of three phases: Scoping and Diagnostics, Analysis and Development, and Implementation and Review.

Phase One: Scoping and Diagnostics, which involved project planning and staffing and identification of differences between current Canadian GAAP and IFRS, has been completed. The resulting identified areas of accounting difference of highest potential impact to the Company, based on existing IFRS, are rate-regulated accounting, property plant and equipment, provisions and contingent liabilities, employee benefits, impairment of assets, income taxes, and initial adoption of IFRS under the provisions of IFRS 1 *First-Time Adoption of IFRS*.

Phase Two: Analysis and Development is nearing completion, and involves detailed diagnostics and evaluation of the financial impacts of various options and alternative methodologies provided for under IFRS; identification and design of operational and financial business processes; initial staff and audit committee training; analysis of IFRS 1 optional exemptions and mandatory exceptions to the general requirement for full retrospective application upon transition to IFRS; summarization of 2011 IFRS disclosure requirements; and development of required solutions to address identified issues.

It is anticipated that the adoption of IFRS will have an impact on information systems requirements. The Company is assessing the need for system upgrades or modifications to ensure an efficient conversion to IFRS. As part of Phase Two, information systems plans are being prepared for implementation in Phase Three. The extent of the impact on the Company's information systems is not reasonably determinable at this time.

Phase Three: Implementation and Review, expected to commence mid-year 2009, will involve the execution of changes to information systems and business processes; completion of formal authorization processes to approve recommended accounting policy changes; and further training programs across the Company's finance and other affected areas, as necessary. It will culminate in the collection of financial information necessary to compile IFRS-compliant financial statements and reconciliations; embedding of IFRS in business processes; and, audit committee approval of IFRS-compliant financial statements.

Terasen Gas will continue to review all proposed and continuing projects of the IASB, particularly the project on rate-regulated activities that was recently added to the IASB's technical agenda, and proposed amendments to IFRS 1 for entities with operations subject to rate regulation, and will participate in any related processes as appropriate.

Rate-Regulated Operations: In March 2007, the AcSB issued an Exposure Draft on rate-regulated operations that proposed: (i) the temporary exemption in Section 1100, *Generally Accepted Accounting Principles*, of the CICA Handbook providing relief to entities subject to rate regulation from the requirement to apply the Section to the recognition and measurement of assets and liabilities arising from rate regulation be removed; (ii) the explicit guidance for rate-regulated operations provided in Section 1600, *Consolidated Financial Statements*, Section 3061, *Property, Plant and Equipment*, Section 3465, *Income Taxe*s, and Section 3475, *Disposal of Long-Lived Assets and Discontinued Operations*, be removed; and (iii) Accounting Guideline 19, *Disclosures by Entities Subject to Rate Regulation*, be retained as is. The AcSB has also observed that relying on US Statement of Financial Accounting Standards No. 71, *Accounting for the Effects of Certain Types of Regulation* ("FAS 71"), as another source of Canadian GAAP in the absence of CICA Handbook guidance addressing the specific circumstances of entities subject to rate regulation, is consistent with Section 1100 when the qualifying criteria of FAS 71 are met.

In August 2007, the AcSB issued a Decision Summary on the Exposure Draft that supported the removal of the temporary exemption in Section 1100, *Generally Accepted Accounting Principles*, and the amendment to Section 3465, *Income Taxes,* to recognize future income tax liabilities and assets as well as an offsetting regulatory asset or liabilities for entities subject to rate regulation. Both changes will apply prospectively for fiscal years beginning on or after January 1, 2009. It was also decided that the current guidance pertaining to property, plant and equipment, disposal of long-lived assets and discontinued operations, and consolidated financial statements be maintained and that the existing AcG-19 will not be withdrawn from the Handbook but that the guidance will be updated as a result of the other changes. The AcSB also decided that the final Background Information and Basis for Conclusions associated with its rate regulation project would not express any views of the AcSB regarding the status of US Statement of Financial Accounting Standards No. 71, *Accounting for the Effects of Certain Types of Regulation*, as an "other source of GAAP" within the Canadian GAAP hierarchy.

Effective January 1, 2009, the impact on the Company of the amendment to Section 3465, *Income Taxes,* will be the recognition of future income tax assets and liabilities and related regulatory liabilities and assets for the amount of future income taxes expected to be refunded to or recovered from customers in future gas rates. Currently, the Company uses the taxes payable method of accounting for income taxes on regulated earnings. The estimated effect on the Company's consolidated financial statements, if it had adopted amended Section 3465, *Income Taxes*, as at December 31, 2008, would have been an increase in future tax liabilities of $261.8 million, including those associated with income taxes that will become payable on future revenues as they are collected from customers when the tax timing differences reverse. There would also be a corresponding increase in regulatory assets. Terasen Gas is continuing to assess and monitor any additional implications on its financial reporting related to accounting for rate regulated operations.

Effective January 1, 2009, with the removal of the temporary exemption in Section 1100, the Company must now apply Section 1100 to the recognition of assets and liabilities arising from rate regulation. Certain assets and liabilities arising from rate regulation continue to have specific guidance under a primary source of Canadian GAAP that applies only to the particular circumstances described therein, including those arising under Section 1600, 3061, 3465, and 3475. All assets and liabilities arising from rate regulation do not have specific guidance under a primary source of Canadian GAAP. Therefore, Section 1100 directs the Company to adopt accounting policies that are developed through the exercise of professional judgment and the application of concepts described in Section 1000, *Financial Statement Concepts*. These assets and liabilities qualify for recognition as assets and liabilities under Section 1000. Therefore, there would be no effect on the Company's consolidated financial statements if it had adopted the removal of the temporary exemption in Section 1100, for the year ended December 31, 2008. Terasen Gas is continuing to assess and monitor any additional implications on its financial reporting related to accounting for rate-regulated operations.

Effective January 1, 2009, the Company will be adopting the new CICA Handbook Section 3064 – *Goodwill and Intangible Assets* which converges Canadian GAAP for goodwill and intangible assets with IFRS. The new standard provides for more comprehensive guidance on intangible assets, in particular for internally developed intangible assets. The Company is still assessing the financial reporting impact of adopting this standard.

FINANCIAL AND OTHER INSTRUMENTS

FAIR VALUE ESTIMATES

	December 31, 2008		December 31, 2007	
(in millions)	**Carrying Value**	**Estimated Fair Value**	Carrying Value	Estimated Fair Value
Held for trading				
Cash and short-term investments [1]	**$ 13.1**	**$ 13.1**	$ 5.6	$ 5.6
Loans and receivables				
Accounts receivable [1,2]	**345.9**	**345.9**	310.1	310.1
Long term receivables [1,2]	**9.1**	**9.1**	9.2	9.2
Other financial liabilities				
Short-term notes [1,2]	**238.5**	**238.5**	305.0	305.0
Accounts payable and accrued liabilities [1,2]	**365.9**	**365.9**	331.2	331.2
Long-term debt, including current portion [3,4,5]	**1,401.7**	**1,454.2**	1,340.6	1,550.3

1 Due to the nature and/or short-term maturity of these financial instruments, carrying value approximates fair value.
2 Carrying value approximates amortized cost.
3 Carrying value is measured at amortized cost using the effective interest rate method.
4 Carrying value at December 31, 2008 is net of unamortized deferred financing costs of $12.8 million (2007 - $10.8 million). On January 1, 2007, deferred financing costs were reclassified from other assets in accordance with the transitional provisions of CICA Section 3855. The majority of the Company's long-term debt relates to regulated operations which enables the Company to recover the existing financing charges through rates or tolls.
5 Fair value is calculated by discounting the future cash flow of each debt issue at the estimated yield to maturity for the same or similar issues at December 31, 2008, or by using available quoted market prices.

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates cannot be determined with precision as they are subjective in nature and involve uncertainties and matters of judgment.

DERIVATIVE INSTRUMENTS

The Company hedges its exposure to fluctuations in natural gas prices and through the use of derivative instruments. The table below indicates the valuation of the derivative instruments as at December 31, 2008.

Asset (Liability)	**December 31, 2008**		December 31, 2007	
(in millions)	**Carrying Value**	**Fair Value**	Carrying Value	Fair Value
Natural Gas Commodity Swaps and Options[1,2]	**$ (70.7)**	**$ (70.7)**	$ (77.3)	$ (77.3)
Gas purchase contract premiums[1,2]	**(6.2)**	**(6.2)**	4.8	4.8

[1] The natural gas derivatives fair value reflects only the value of the natural gas derivatives and not the offsetting change in value of the underlying future purchases of natural gas. These fair values reflect the estimated amounts the Company would receive or pay to terminate the contracts at the stated dates. The natural gas derivatives fair values have been determined using published market prices for natural gas commodities.

[2] The derivatives entered into by Terasen Gas relate to regulated operations and any resulting gains or losses are, subject to regulatory approval, passed through to customers in future rates.

OUTSTANDING SHARE DATA

As at February 4, 2009, Terasen Gas had issued and outstanding 59,591,732 common shares.

Terasen Gas is an indirect wholly-owned subsidiary of Fortis.

ADDITIONAL INFORMATION

Additional information relating to Terasen Gas Inc., including its Annual Information Form, is available on SEDAR at www.sedar.com.

Annual Information Form

For the Year Ended December 31, 2008
dated
February 18, 2009

TABLE OF CONTENTS

Forward Looking Statements

Certain statements contained in this Annual Information Form contain forward-looking information within the meaning of applicable securities laws in Canada ("forward-looking information"). The words "anticipates", "believes", "budgets", "could", "estimates", "expects", "forecasts", "intends", "may", "might", "plans", "projects", "schedule", "should", "will", "would" and similar expressions are often intended to identify forward-looking information, although not all forward-looking information contains these identifying words.

The forecasts and projections that make up the forward-looking information are based on assumptions, which include but are not limited to receipt of applicable regulatory approvals and requested rate orders; no significant operational disruptions or environmental liability as a result of a catastrophic event or environmental upset, the competitiveness of natural gas pricing when compared with alternate sources of energy, continued population growth and new housing starts, the availability of natural gas supply, access to capital including no material adverse ratings actions by credit ratings agencies; interest rates and the ability to hedge certain risks including no counterparties to derivative instruments failing to meet obligations; no material change in pension expenses or funding requirements and no prejudice to the Company's rights under first nations land settlements.

The forward-looking information is subject to risks, uncertainties and other factors that could cause actual results to differ materially from historical results or results anticipated by the forward-looking information. The factors which could cause results or events to differ from current expectations include, but are not limited to: regulatory approval and rate orders risk; operational disruptions and environmental risk; price competitiveness risk including the impact of carbon taxes or other environmental policies of government; changes in economic conditions including population changes and declining housing starts; natural gas supply risks; capital and credit ratings risk including material adverse ratings actions by credit ratings agencies, interest rate risk; counterparty credit risk including counterparties to derivative instruments failing to meet obligations; pension expense and funding risk; and first nations land settlement risk. For additional information with respect to these risk factors, reference should be made to the section entitled "Risk Factors" in this Annual Information Form.

The forward-looking information in this Annual Information Form includes, but is not limited to, statements regarding: the Company's expectation that earnings and delivery margins will not be impacted by industrial customers choosing to arrange their own supply of natural gas or by the migration of residential suppliers to alternative commodity suppliers; the Company's expectation that unanticipated changes in sales volume can be ameliorated as a result of regulatory deferral accounts; the Company's belief that interest rate deferral accounts will absorb the impact of interest rate fluctuations; the Company's expectation that the value of future arrangements with municipalities to transfer the economic risks and rewards of ownership of distribution assets will not be material; the expectations that capital spending will not significantly decline in 2009 and the Company's expectation that compliance with environmental laws and regulations will not have a material effect on the Company's capital expenditures, earnings or competitive position.

All forward-looking information in this Annual Information Form is qualified in its entirety by this cautionary statement and, except as required by law, the Company undertakes no obligation to revise or update any forward-looking information as a result of new information, future events or otherwise after the date hereof.

CORPORATE STRUCTURE

Terasen Gas Inc. ("Terasen Gas" or the "Company") was formed by the amalgamation on July 1, 1989 under the *Company Act* (British Columbia) a predecessor to the *Business Corporations Act* (British Columbia), of Inland Natural Gas Co. Ltd. ("Inland"), B.C. Gas Inc., Columbia Natural Gas

Limited and Fort Nelson Gas Ltd. On July 1, 1993 pursuant to an arrangement between Terasen Gas and a subsidiary, Terasen Gas changed its name to "BC Gas Utility Ltd.". Effective April 25, 2003, the Company changed its name to “Terasen Gas Inc.” The head office and registered office of Terasen Gas is located at #1000 - 1111 West Georgia Street, Vancouver, British Columbia, V6E 4M3. Terasen Gas means Terasen Gas Inc. together with its subsidiary companies. Terasen Gas is a wholly-owned subsidiary of Terasen Inc. ("Terasen"), which is in turn a wholly-owned indirect subsidiary of Fortis Inc.

On January 1st, 2007, the Company and one of its subsidiaries, Terasen Gas (Squamish) Inc., were amalgamated.

In this annual information form, references to “Terasen Gas” or the “Company” are to Terasen Gas Inc., “Terasen” refers to “Terasen Inc.”, and “TGVI” refers to Terasen Gas (Vancouver Island) Inc.

DESCRIPTION OF THE BUSINESS

Terasen Gas provides natural gas transmission and distribution service to over 100 communities in British Columbia with a service territory that has an estimated population of approximately four million. The Company is one of the largest natural gas distribution companies in Canada. As at December 31, 2008 Terasen Gas and its subsidiaries transported and distributed natural gas to approximately 834,000 residential, commercial and industrial customers, representing approximately 86 per cent of the natural gas users in British Columbia. Terasen Gas' service area extends from Vancouver to the Fraser Valley and the interior of British Columbia. The transmission and distribution business is carried on under statutes and franchises or operating agreements granting the right to operate in the municipalities or areas served. Terasen Gas is rate regulated by the British Columbia Utilities Commission (BCUC).

On February 26, 2007, Knight Inc. (formerly known as Kinder Morgan, Inc.), Terasen’s former parent, announced that it had entered into a definitive agreement with Fortis Inc. to sell Terasen and its principal natural gas transmission and distribution assets, including its subsidiaries Terasen Gas and Terasen Gas (Vancouver Island) Inc. as well as other activities including Terasen Energy Services. The sale did not include the petroleum transportation subsidiaries nor investments under the Kinder Morgan Canada name. The transaction closed on May 17, 2007.

DISTRIBUTION SERVICES

Natural gas distribution services are the primary source of revenue for Terasen Gas. Distribution services delivered to residential, small commercial and industrial customers are predominantly on a non-contractual basis, whereby the customers are charged based on general services provided. Larger commercial and industrial customers are normally provided with services on a contractual basis.

Terasen Gas has approximately 2,375 commercial and industrial customers that arrange for some or all of their own gas supply and use Terasen Gas' transportation services for delivery. Notwithstanding shifts over time between utility supply and direct purchases, Terasen Gas' earnings remain unaffected since Terasen Gas' margins remain substantially the same whether or not customers choose to buy natural gas from Terasen Gas or arrange their own supply. Industrial transportation customers arranging for their own supply in fact reduce the credit risk to Terasen Gas.

Of Terasen Gas' industrial customers, approximately 146 are on interruptible service. The majority of these customers are capable of switching to alternate fuels. Forecast variances in industrial consumption can have an impact on the Company's earnings, however forecasts are updated annually based largely on an annual survey of industrial customers.

Of the various industries that comprise Terasen Gas’ industrial market, the pulp and paper and wood products industries combined comprise approximately 36 percent of total throughput. All other industries individually represent less than 10 percent of total throughput.

Terasen Gas also owns and operates a propane distribution system in Revelstoke, B.C.

GAS PURCHASE AGREEMENTS

In order to acquire supply resources that ensure reliable natural gas deliveries to its customers, Terasen Gas purchases supply from a select list of producers, aggregators, and marketers by adhering to strict standards of counterparty creditworthiness, and contract execution/management procedures. Terasen Gas contracts for approximately 113 petajoules (PJ) of baseload and seasonal supply, of which 81 PJ is delivered off the Spectra Energy Gas Transmission ("Spectra") system and 14 PJ is comprised primarily of Alberta sourced supply transported into British Columbia via TransCanada Pipelines Limited ("TransCanada") Alberta and B.C. systems. The remaining 18 PJ of baseload and seasonal supply is sourced at Sumas. The majority of supply contracts in the current portfolio are seasonal for either the summer (April to October) period or winter (November to March) period with a few contracts one year or longer in length.

The Spectra and TransCanada transportation tolls are regulated by the National Energy Board ("NEB"). Terasen Gas pays both fixed and variable charges for use of the pipelines, which are recovered through rates paid by Terasen Gas' customers.

PEAK SHAVING ARRANGEMENTS

Terasen Gas incorporates peak shaving and gas storage facilities into its portfolio to:

1. Manage the load factor of baseload supply contracts throughout the year.
2. Eliminate the risk of supply shortages during a peak throughput day.
3. Reduce the cost of gas during winter months.
4. Balance daily supply and demand on the distribution system.

Terasen Gas' peak shaving and storage assets and contracts for 2009 include up to 30 PJ in storage capacity at various locations throughout British Columbia, Alberta and the Pacific Northwest of the United States. These facilities can deliver a maximum daily rate of 574 terajoules ("TJ") on a combined basis.

OFF SYSTEM SALES

Terasen Gas contracts pipeline capacity to ensure the Company's ability to meet its obligation to supply customers under all reasonable demand scenarios. The Company is in its thirteenth year of its off-system sales activities which allow for the recovery or mitigation of costs on unutilized supply and/or pipeline capacity. In 2007/2008, Terasen Gas marketed approximately 23.5 PJ of surplus gas and 43.7 PJ of excess pipeline capacity for a net pre-tax recovery of approximately $181.5 million. Through the Gas Supply Mitigation Incentive Plan (GSMIP) established with the BCUC, $1.1 million (pre-tax) of these benefits accrued to shareholders with the remainder flowing to customers in the form of reduced natural gas costs.

TRANSMISSION SERVICES

Terasen Gas serves Greater Vancouver and the Fraser Valley through a transmission and distribution system which connects to the Spectra and Northwest pipeline systems near Huntingdon, British Columbia. These connections provide access to gas supplies in Northeastern BC and Alberta and to storage facilities in the Pacific Northwest.

In the interior of British Columbia, Terasen Gas serves municipalities with several connections to the Spectra pipeline system. Communities in the East Kootenay region of B.C. are served through connections with TransCanada's B.C. system. The Terasen Gas Southern Crossing Pipeline between Yahk and Oliver is also connected to TransCanada's system and provides access to Alberta gas supplies.

In addition, Terasen Gas provides high-pressure transmission service to customers, such as TGVI and BC Hydro, who move natural gas from the Spectra or TransCanada systems across the Company's system to their own facilities or systems and to Northwest Natural Gas who moves gas from TransCanada across the Southern Crossing Pipeline for re-delivery to Northwest Pipeline at Huntingdon.

PROPERTIES

As of December 31, 2008, Terasen Gas had 2,800 kilometres of natural gas transmission pipeline and 37,000 kilometres of natural gas distribution pipeline in service. In addition to the pipelines, Terasen Gas owns properties and equipment utilized for service shops, warehouses, metering, compressors and regulating stations, as well as its main operations centre and head office in Surrey, B.C.

TITLE TO PROPERTIES

Terasen Gas' pipelines are constructed for the most part under highways and streets pursuant to permits or orders from the appropriate authorities, franchise or operating agreements entered into with municipalities and rights-of-way held directly or jointly with British Columbia Hydro and Power Authority ("B.C. Hydro"). Compressor stations and major regulator stations are generally located on freehold land, rights-of-way owned by Terasen Gas or properties shared with B.C. Hydro.

REGULATION

British Columbia Utilities Commission

Gas utilities in B.C. are subject to the regulatory jurisdiction of the BCUC which derives its powers from the Utilities Commission Act (British Columbia) (the "Act"). In addition to approving the rate base and new financings of Terasen Gas, the BCUC also approves the rates charged to customers. These rates are designed to recover the utilities' costs of providing service and to meet financial commitments of the Utility and are intended to allow the Utility an opportunity to earn a fair return on common equity. The BCUC has jurisdiction to regulate and approve the terms and conditions under which gas utilities provide service.

As part of the establishment of the rates which a gas utility charges its customers, the BCUC establishes a rate base, approves a capital structure with which to finance such rate base, and is responsible for setting a fair return on the debt and equity in the approved capital structure. Rate base is the aggregate of the depreciated cost of property, plant and equipment that is used or useful in serving the public, certain deferral accounts and a reasonable allowance for working capital. The fair return is established by determining the cost of individual components of the capital structure, including return on common equity, and weighting such costs to determine an aggregate return on rate base which is currently set at 35 percent. The rates that are established and the terms and conditions of service are contained in a schedule of tariffs. Before any tariff can be put into effect, it must be filed with the BCUC. The BCUC has jurisdiction to approve or refuse any amendment submitted for filing and to determine the rates which should be charged by a utility for its services. The BCUC is required to have due regard, among other things, to fixing rates that are not unjust or unreasonable. In fixing rates the BCUC must determine that such rates reflect a fair and reasonable charge for service of the nature and quality furnished by Terasen Gas to its customers and that such rates are sufficient to yield Terasen Gas a fair and reasonable compensation for its services and a fair return on its rate base.

The BCUC uses a future test year in the establishment of rates for a utility. Pursuant to this method, the Company forecasts the volume of gas that will be sold and transported, together with all of the costs of Terasen Gas (including the rate of return) that Terasen Gas will incur in the test year. Rates are fixed to permit Terasen Gas to collect all of its costs (including the rate of return) if the forecast sales and transportation volumes are achieved. The forecast sales volumes assume normal weather. Certain costs are fixed and will be incurred regardless of the actual volume of gas sold. Accordingly, if the actual volumes of gas sales are less than those forecast in the test year, Terasen Gas might not recover all of the fixed costs. Interest expense, taxes other than income taxes, depreciation and amortization, certain operations and maintenance costs, the portion of the cost of gas that is fixed such as demand charges or reservation fees, and the fixed portion of transportation costs have the effect of being virtually fixed costs.

Two mechanisms to ameliorate unanticipated changes in sales volumes, such as changes caused by weather, have been implemented specifically for Terasen Gas. The first relates to the recovery of all gas costs through deferral accounts which capture all variances (overages and shortfalls) from forecasts. Balances are either refunded to or recovered from customers via an application with the BCUC. The deferral accounts are called the Commodity Cost Reconciliation Account ("CCRA") and the Midstream Cost Reconciliation Account ("MCRA"). The second mechanism seeks to stabilize delivery revenues from the residential and commercial classes through a deferral account that captures variances in the forecast versus actual customer use throughout the year. This mechanism is called the Revenue Stabilization Adjustment Mechanism ("RSAM"). In February 2001, the BCUC issued guidelines for quarterly calculations to be prepared to determine whether customer rate adjustments are needed to reflect prevailing market prices for natural gas and to ensure that rate stabilization account balances are recovered on a timely basis.

Terasen Gas also has in place short-term and long-term interest rate deferral accounts to absorb interest rate fluctuations. The interest rate deferral accounts which were in place during 2008 effectively fixed the interest expense on short-term funds attributable to Terasen Gas' regulated assets at 5.00 percent during 2008. The effective fixed short-term interest rate for 2009 has been set at 4.25 percent.

In addition to an application for approval of interim and annual rate changes, the Company may apply from time to time to the BCUC for rate changes to give effect to the changes in costs beyond the control of the utility.

Important regulatory information, pertaining to decisions made by the BCUC with respect to Terasen Gas, is summarized in the following table.

Dollar amounts in millions *Years ended December 31*	2009	2008	2007	2006	2005
Approved rate base	$2,547	$2,510	$ 2,484	$ 2,516	$ 2,406
Deemed common equity component of total capital structure	35.01%	35.01%	35.01%	35.01%	33%
Allowed rate of return on common equity	8.47%	8.62%	8.37%	8.80%	9.03%

Terasen Gas' allowed ROE is determined annually based on a formula that resets annually off a forecast of 30 Year Canada Bonds plus a 3.90% risk premium when the forecast yield on 30 Year Canada Bond is 5.25%. The risk premium is adjusted annually by 75% of the difference between 5.25% and the forecast yield on 30 Year Canada Bonds. For 2008, the application of the ROE formula set Terasen Gas' allowed ROE at 8.62%, up from 8.37% in 2007. For 2009, the allowed ROE has been set at 8.47% for Terasen Gas

2008-2009 Performance-Based Rate Plan (PBR)

In July 2003, Terasen Gas received BCUC approval of a negotiated settlement for a 2004-2007 PBR. The PBR Settlement established a process for determining Terasen Gas' delivery charges and incentive mechanisms for improved operating efficiencies. The four-year agreement included incentives for Terasen Gas to operate more efficiently through the sharing of the benefits between Terasen Gas and its customers. The PBR Settlement included ten service quality measures designed to ensure Terasen Gas maintains adequate service levels. It also set out the requirements for an annual review process which will provide a forum for discussion between Terasen Gas and interested parties regarding its current performance and future activities.

Operation and maintenance costs and base capital expenditures were subject to an incentive formula reflecting increasing costs due to customer growth and inflation, less an adjustment factor based on 50 percent of inflation during the first two years of the PBR and 66 percent of inflation during the last two years. Base capital expenditure amounts are a function of customer numbers and projected customer additions. The PBR Settlement provides for a 50/50 sharing mechanism of earnings above or below the allowed return on equity beginning in 2004.

In 2007, Terasen Gas applied for an extension of the 2004-2007 PBR settlement agreement. The application requested approval to extend the existing settlement term for 2008-2009. On March 23, 2007, the BCUC approved the application as filed.

UNBUNDLING

Over the past several years, Terasen Gas, the BCUC and a number of interested parties have laid the groundwork for the introduction of natural gas commodity unbundling. On November 1, 2004, commercial customers of Terasen Gas became eligible to sign up to buy their natural gas commodity supply directly from third party suppliers. Terasen Gas continues to provide delivery of the natural gas. Approximately 80,000 commercial customers are eligible to participate in commodity unbundling. By December 31, 2008, 19,800 customers elected to participate in this program.

During 2006, the BCUC approved offering commodity supply choice to residential customers. The BCUC agreed to open a portion of the Province's residential natural gas market to competition, allowing homeowners to sign long-term fixed price contracts for natural gas with companies other than Terasen Gas starting in May 2007. Since November 2007 residential customers have had the option of remaining with Terasen Gas or signing with a marketer and receiving gas at the marketer's rate. Terasen Gas continues to provide delivery service to unbundled customers and delivery margins are not impacted by the migration of residential customers to alternative commodity suppliers. Approximately 748,000 residential customers are eligible to participate in commodity unbundling. At December 31, 2008, 115,500 customers had elected to participate in this program. Neither commercial nor residential unbundling has had a material effect on the delivery margins of Terasen Gas.

FRANCHISE AND OPERATING AGREEMENTS

Terasen Gas currently holds operating agreements with most of the incorporated municipalities in which it distributes gas in the Greater Vancouver and Fraser Valley service areas. The operating agreements are in force so long as the distribution lines of Terasen Gas are operative and do not contain any provision entitling the municipality to purchase the distribution system. No fees are payable by Terasen Gas under these operating agreements.

Terasen Gas currently holds franchise or operating agreements with most of the incorporated municipalities in which it distributes gas in the interior of British Columbia. The terms of these franchise agreements ranges from 10 to 21 years. While such franchise or operating agreements are in effect, the municipalities receive franchise fees of three per cent of the gross revenue from customers in the municipality. Historically, approximately one-quarter of these franchise agreements contained a provision to the effect that at the end of the term the municipality could purchase the distribution system within the municipality as a going concern and at a price equal to the fair value of the business undertaking. If the municipality did not exercise the right to purchase or grant a new franchise or operating agreement, gas utilities would be required under the Act to continue to provide service in the municipality unless the BCUC ordered otherwise. Terasen Gas no longer has any franchise agreements that contain right to purchase provisions. Some of those franchise agreements have expired and in some other cases, an arrangement was developed to enable the transfer of economic risks and rewards of ownership to the municipality, while allowing Terasen Gas to continue to operate within the municipality.

These arrangements have been entered into with five municipalities to date. In each of the transactions, Terasen Gas entered into an arrangement whereby the municipality leased Terasen Gas' gas distribution assets within the municipality's boundaries for a term of 35 years for an initial cash payment. Terasen Gas in turn entered into a 17 year operating lease with the municipality whereby Terasen Gas will operate the gas distribution assets. Terasen Gas has the option to terminate the lease of the assets to the municipality at the end of 17 years in exchange for a payment to the municipality equal to the depreciated value of the leased assets. As at December, 2008, Terasen Gas had entered into such arrangements involving a total value of $153 million, and the value of future transactions is not expected to be material.

OPERATING SUMMARY FOR TERASEN GAS

Dollar amounts in millions *Years ended December 31*	**2008**	2007	2006
Revenues			
Residential	**$ 1,014.1**	$ 922.0	$ 922.4
Commercial	**525.0**	475.9	463.6
Small industrial	**33.0**	34.1	41.7

Coastal – Actual	**3,043**	2,889	2,714
– Normal	**2,758**	2,726	2,765
Interior – Actual	**4,205**	3,904	3,753
– Normal	**3,842**	3,921	3,901

[1] *Volume statistics are stated in SI (metric) units*
[2] *A degree-day is approximately equal to 18 deg C minus the daily average temperature in the corresponding region. The normal period is based on a 20-year basis..*

SAFETY AND ENVIRONMENTAL PROTECTION

Although the operations of the Company regulated by the BCUC, Canadian federal, provincial and municipal governments share jurisdiction over matters affecting safety and the environment. As a result, the Company is subject to extensive federal, provincial and municipal regulations relating to the protection of the environment including, but not limited to, wildlife, water and land protection and the proper storage, transportation, disposal and release of hazardous and non-hazardous substances. In addition, both the provincial and federal governments have environmental assessment legislation, which is designed to foster better land-use planning through the identification and mitigation of potential environmental impacts of projects or undertakings prior to and after commencement.

These environmental considerations are best addressed within the context of a formal environmental management system ("EMS"). Terasen Gas has developed an EMS designed to manage the impact of its activities on the environment consistent with the guidelines of ISO 14001, an internationally recognized standard for environmental management systems. As part of its EMS, Terasen Gas is continuously establishing and implementing programs and procedures to identify potential environmental impacts, mitigate those impacts and monitor environmental performance. The EMS system also includes environmental training requirements for our employees, environmental guidelines to minimize the impacts of our operations, as well as environmental compliance. Terasen Gas has external audits of its EMS conducted on five year cycle to ensure continued compliance with ISO 14001 standards.

The Company's senior executives are committed to ensuring Terasen Gas is an industry leader with respect to environmental protection and compliance with environmental policies. Health, safety and environmental issues and initiatives are reported regularly to Terasen Gas' senior executives.

Terasen Gas meets or exceeds legislative standards and environmental protection requirements with respect to its operations. Terasen Gas could be exposed to significant operational disruptions and environmental liability in the event of an accident involving natural gas. Terasen Gas has taken all reasonable and prudent steps to minimize its exposure in the case of a catastrophic event or environmental upset. The focus of its safety and environmental practices is to ensure reliable, cost effective, quality service with full regard for the safety of employees and the public while operating in an environmentally responsible manner. For Terasen Gas, air emissions management is the main environmental concern primarily due to the uncertainties relating to emerging federal and provincial greenhouse gas regulations. While governmental policy direction is starting to unfold, it remains to be determined to what extent a greenhouse gas emissions cap will impact Terasen Gas. To mitigate this uncertainty, Terasen Gas participates in sectoral and industry groups to help develop the emerging regulation. In addition, Terasen Gas was an active participant in Canada's Voluntary Climate Change Challenge and Registry (VCR) and its successor, the Canadian Greenhouse Gas Challenge Registry.

British Columbia's recent updates to its energy plan and greenhouse gas reduction targets present risks and opportunities for Terasen. The recent Greenhouse Gas Reduction Targets Act (GGRTA) mandates province-wide reductions in greenhouse gases of 33% over 2007 levels. This is coupled with mandates for all new electricity generation to be net carbon neutral, and for British Columbia to be electrically self-sufficient by 2016.

These requirements place significant pressure on natural gas distribution, as its direct use in space and water-heating contributes to greenhouse gas emissions. Further, electricity that generally is produced from hydro sources has been given increased emphasis over natural gas for thermal applications. However, Terasen Gas continues to work with the provincial government to emphasize that efficient use of natural gas for thermal applications reduces strain on electrical grids, allowing for more efficient electricity use domestically, plus increased opportunity to export less emissions-intensive electricity to other jurisdictions.

Energy and emissions policy in British Columbia also presents a number of risks and opportunities. The policies have created incentives to expand deployment of renewable energy (such as biogas), and to expand our Energy Efficiency and Conservation program. Additionally, the introduction of the Carbon Tax Act improves the position of natural gas relative to other fossil energy, as the tax is based on the amount of carbon dioxide equivalent emitted per unit energy. Natural gas therefore has a lower tax rate than oil or coal products.

British Columbia is a participant in the Western Climate Initiative. This group, consisting of several states and provinces, plans to implement a cap-and-trade program to reduce greenhouse gas emissions. The program begins on January 1, 2012. At that time, Terasen Inc. expects to have one facility covered under this program: the Terasen Gas (Vancouver Island) Inc. transmission system. This facility will be required to reduce emissions to meet a declining cap on emissions, or to purchase emissions allowances to cover emissions over the capped amount. While allowance costs are based on market prices that have very little clarity at present, it appears likely that this facility will be a net purchaser of allowances over the near and medium term. Allowances will likely be issued to mirror the emission reduction mandate of the province, such that emissions will need to be reduced by 33% over 2007 amounts by 2020. Currently, Terasen Gas is not covered under this program.

The Company has asset retirement obligations as disclosed in the Notes to the 2008 Consolidated Financial Statements. However, liabilities with respect to these asset retirements obligations have not been recorded in the 2008 Consolidated Financial Statements as they could not be reasonably estimated.

Terasen Gas has detailed emergency preparedness plans in place to respond to natural disasters, accidents and emergencies, and regularly tests these plans in simulations involving employees and other emergency response organizations. The Company is also committed to monitor and assess its safety and environmental performance regularly. Terasen Gas incorporates safety performance measures into its employee compensation system, sets challenge levels and objectives for environmental performance, and conducts safety and environmental audits.

Compliance with environmental laws and regulations did not have a material effect on the capital expenditures, earnings or competitive position of Terasen Gas in 2008 and, based on current laws, facts and circumstances, is not expected to have a material effect in the future. Prudently incurred operating and capital costs, associated with complying with environmental laws and regulations, are generally recoverable in customer rates. Terasen Gas believes that it is materially compliant with environmental laws and regulations which are applicable to its operations.

Specialized Skills and Knowledge

The skills and knowledge needed to operate and maintain natural gas distribution systems are key to the Company's success. These skills are currently available, and Terasen Gas has placed considerable focus in succession planning on ensuring that these skills are preserved as the Company's workforce ages and retires.

Employees

Terasen Gas and its subsidiaries employed approximately 1,100 people as at December 31, 2008. The organized employees of Terasen Gas are represented by the International Brotherhood of Electrical Workers and the Canadian Office and Professional Employees Union under collective agreements which expire on March 31, 2011 and March 31, 2012, respectively.

Seasonality

Because of natural gas consumption patterns, the natural gas transmission and distribution operations of Terasen Gas normally generate higher net earnings in the first and fourth quarters and lower net earnings in the second quarter, which are offset by net losses in the third quarter

RISK FACTORS

Prospective investors in a particular offering of Securities by Terasen Gas should consider, in addition to information contained in the prospectus relating to that offering or in other documents incorporated by reference therein, the risks described below. Terasen Gas' key risk factors include, but are not limited to the following:

Regulation

Through the regulatory process, the BCUC approves the return on equity which Terasen Gas is allowed to earn, in addition to various other aspects of utility operations. In addition, the recovery of costs incurred in constructing and operating the gas utility is subject to the approval of the BCUC. Regulatory treatment that allows Terasen Gas to earn a fair risk adjusted rate of return comparable to that available on alternative, similar risk investments is essential for maintaining service quality as well as ongoing capital attraction and growth. Since 1994, subject to minor modifications, the allowed ROE has been set based on a formula linked directly to forecast 30 year Canada Bond yields which have steadily declined in recent years. Terasen Gas will be seeking changes to the current generic ROE adjustment mechanism and increases to deemed equity thickness to more fair and appropriate levels. The Company intends to file an application with the BCUC in the second quarter of 2009.

Terasen Gas' 2004-2007 PBR settlement agreement, which has been extended through 2009, includes incentive mechanisms that provide Terasen Gas with an opportunity to earn returns in excess of the allowed return on equity determined by the BCUC. Upon expiry of the settlement agreement, there is no certainty as to whether new negotiated settlements will be entered into, or what the terms of the new settlements might be.

Terasen Gas is currently preparing a rate application with anticipated filing with the BCUC in the second quarter of 2009. BCUC approval of rates for 2010, and for future years, will be required. There can be no assurance that the rate orders issued will permit the Company to recover all costs actually incurred and to earn the expected rate of return. A failure to obtain acceptable rate orders may adversely affect the business carried on by the Company, the undertaking or timing of proposed upgrades or expansion projects, the issue and sale of securities, ratings assigned by rating agencies, and other matters which may, in turn, negatively impact the Company's results of operations or financial position.

It is essential that the Company maintain good relationships with its various regulators and customer representatives.

Operations and the Environment

The Company is subject to numerous laws, regulations and guidelines governing the management, transportation and disposal of hazardous substances and other waste materials and otherwise relating to the protection of the environment and health and safety. The costs arising from compliance with such laws, regulations and guidelines may be material to the Company. The process of obtaining environmental permits and approvals, including any necessary environmental assessment, can be lengthy, contentious and expensive. Potential environmental damage and costs could arise due to a variety of events and could be material if an event happened. However, there can be no assurance that such costs will be recoverable through rates and, if substantial, unrecovered costs may have a material effect on the business, results of operations, financial condition and prospects of the Company.

The Company is exposed to environmental risks that owners and operators of properties in British Columbia generally face. These risks include the responsibility of any current or previous owner or operator of a contaminated site for remediation of the site, whether or not such person actually caused the contamination. In addition, environmental and safety laws make owners, operators and persons in charge of management and control of facilities subject to prosecution or administrative action for breaches of environmental and safety laws, including the failure to obtain certificates of approval. The Company has not been notified of any such regulatory action in regard to the operation or occupation of its facilities. However, it is not possible to predict with absolute certainty the position that a regulatory authority will take regarding matters of non-compliance with environmental and safety laws. Changes in environmental, health and safety laws could also lead to significant increases in costs to the Company.

The Company is exposed to various operational risks, such as pipeline leaks; accidental damage to, or fatigue cracks in mains and service lines; corrosion in pipes; pipeline or equipment failure; other issues that can lead to outages and/or leaks; and any other accidents involving natural gas, which could result in significant operational disruptions and/or environmental liability. The Company believes it has taken all reasonable and prudent steps to minimize its exposure in the case of a catastrophic event or environmental upset. The Company conducts its operations utilizing an Environmental Management System which specifies impacts, control measures and audit protocols. The Company maintains comprehensive facility risk assessment, pipeline integrity management and damage prevention programs and pipeline security systems as preventive measures to mitigate the risk of a pipeline failure or other loss of system integrity. These programs are intended to reduce both the likelihood and severity of the business interruption and/or environmental liability that could result from a pipeline failure or loss of integrity.

A major natural disaster, such as an earthquake affecting the Company's service area could severely damage Terasen Gas' natural gas transmission and distribution systems. The Company has detailed emergency preparedness plans in place to respond to natural disasters, accidents and emergencies, and regularly tests these plans in simulations involving employees and other emergency response organizations. The Company also has an insurance program which provides coverage for business interruption, liability and property damage, although the coverage offered by this program is limited. In the event of a large uninsured loss caused by a natural disaster, the Company would apply to the BCUC for recovery of these costs through higher rates. However, there is no assurance that the BCUC will approve any such application.

The actions necessary to abandon pipeline systems at the eventual end of their useful lives have not been defined and the costs of these actions may not be fully recovered in rates or tolls. Until such time as the specified requirements of abandonment and the funding mechanism for the eventual recovery of negative salvage is determined, the Company, like other Canadian pipeline systems, makes no provision for these amounts.

Terasen Gas' natural gas transmission and distribution systems require ongoing maintenance, improvement and replacement. Accordingly, to ensure the continued performance of the physical assets, the Company determines expenditures that must be made to maintain and replace the assets. If the systems are not able to be maintained, service disruptions and increased costs may be experienced. The inability to obtain regulatory approval to reflect in rates the expenditures which the Company believes are necessary to maintain, improve and replace their assets; the failure by the Company to properly implement or complete approved capital expenditure programs; or the occurrence of significant unforeseen equipment failures despite maintenance programs could have a material effect on the Company.

The Company continually develops capital expenditure programs and assesses current and future operating and maintenance expenses that will be incurred in the ongoing operation. Management's analysis is based on assumptions as to costs of services and equipment, regulatory requirements, revenue requirement approvals, and other matters, which involve some degree of uncertainty. If actual costs exceed regulatory-approved capital expenditures, it is uncertain as to whether such additional costs will receive regulatory approval for recovery in future customer rates. The inability to recover these additional costs could have a material effect on the financial condition and results of operations of the Company. See "Regulation" for further discussion on regulatory risk.

COMPETITIVENESS

Prior to 2000, natural gas consistently enjoyed a substantial competitive advantage when compared with alternative sources of energy in British Columbia. However, because electricity prices in British Columbia continue to be set based on the historical average cost (primarily hydro-electric dams) of production, rather than based on market forces, they have remained low compared to market priced electricity. As a result, the price of electricity for residential customers in British Columbia is now only marginally higher than for natural gas. There is no assurance that natural gas will continue to maintain a competitive price advantage in the future.

The Company employs a number of tools to reduce its exposure to natural gas price volatility. These include purchasing gas for storage and adopting hedging strategies, which include a combination of both physical and financial transactions, to reduce price volatility and ensure, to the extent possible, that natural gas commodity costs remain competitive against electric rates. Activities related to the hedging of gas prices are approved by the BCUC and gains or losses accrue entirely to customers.

If natural gas pricing becomes uncompetitive with electricity prices or the price of other forms of energy, the Company's ability to add new customers could be impaired, and existing customers could reduce their consumption of natural gas or eliminate its usage altogether as furnaces, water heaters and other appliances are replaced. This may result in higher rates and, in an extreme case, could ultimately lead to an inability to fully recover the Company's cost of service in rates charged to customers.

In 2008 the Government of British Columbia introduced changes to energy policy including greenhouse gas emission reduction targets and a consumption tax on carbon based fuels that impact the competitiveness of natural gas versus non-carbon based energy sources or alternate energy sources. It did not, however, introduce carbon tax on imported electricity generated through the combustion of carbon based fuels. The future impact of these changes in energy policy may have a material impact on the competitiveness of natural gas relative to other energy sources.

There can be no assurance that the current regulatory-approved flow through mechanisms in place allowing for the flow through of the cost of natural gas will continue to exist in the future. An inability of the Company to flow through the full cost of natural gas could materially affect the Company's results of operations, financial position and cash flows.

LABOUR RELATIONS

Approximately 75% of the employees of the Company are members of labour unions that have entered into collective bargaining agreements with the Company. The provisions of such collective bargaining agreements affect the flexibility and efficiency of the business carried on by the Company. The Company considers its relationships with its labour unions to be positive but there can be no assurance that current relations will continue in future negotiations or that the terms under the present collective bargaining agreements will be renewed. The inability to maintain, or to renew, the collective bargaining agreements on acceptable terms could result in increased labour costs or service interruptions arising from labour disputes, that are not provided for in approved rates and that could have an adverse effect on the results of operations, cash flow and net income of the Company.

IMPACT OF CHANGES IN ECONOMIC CONDITIONS

Typical of utilities, economic conditions in the Company's service territories influence energy sales. Energy sales are influenced by economic factors such as changes in employment levels, personal disposable income, energy prices and housing starts. New customer additions at the Company are typically a result of population growth and new housing starts, which are affected by the state of the provincial economy. The Company is also affected by changes in trends in housing starts from single family dwellings to multi-family dwellings, for which natural gas has a lower penetration rate. Housing starts in 2008 were more moderate compared to the previous number of years, and the growth of new multi-family housing starts continues to significantly outpace that of new single-family housing starts. Higher energy prices can dampen economic activity and reduce consumption by customers. Natural gas and crude oil prices are closely correlated with natural gas and crude oil exploration and production activity in certain of the Company's service territories. The level of these activities can influence energy demand.

An extended decline in economic conditions would be expected to have the effect of reducing demand for energy over time. The regulated nature of Terasen Gas, including various mitigating measures approved by regulators, helps to reduce the impact that lower energy demand, associated with poor economic conditions, may have on the Company's earnings. However, a severe and prolonged downturn in economic conditions could materially affect the Company despite regulatory measures available for compensating for reduced demand. For instance significantly reduced energy demand in the Company's service territories could reduce capital spending which would in turn impact rate base and earnings growth. Despite current depressed economic conditions, which are expected to continue during 2009, the Company does not anticipate any significant decrease in capital spending in 2009.

NATURAL GAS SUPPLY

The Company is dependent on a limited selection of pipeline and storage providers, particularly in the Vancouver and Fraser Valley areas where the majority of the Company's natural gas distribution customers are located. Regional market prices have been higher from time to time than prices elsewhere in North America as a result of insufficient seasonal and peak storage and pipeline capacity to serve the increasing demand for natural gas in B.C. and the U.S. Pacific Northwest.

In addition, the Company is critically dependent on a single source transmission pipeline. In the event of a prolonged service disruption on the Spectra transmission system, the Company's residential customers could experience outages, thereby affecting revenues and incurring costs to safely relight customers.

CAPITAL RESOURCES AND LIQUIDITY

The Company's financial position could be adversely affected if it fails to arrange sufficient and cost-effective financing to fund, among other things, capital expenditures and the repayment of maturing debt. The ability to arrange sufficient and cost-effective financing is subject to numerous factors, including the results of operations and financial position of the Company, conditions in the capital and bank credit markets, ratings assigned by rating agencies, adequate allowed rates of return on equity granted by the BCUC and general economic conditions. Funds generated from operations after payment of expected expenses (including interest payments on any outstanding debt) will not be sufficient to fund the repayment of all outstanding liabilities when due as well as all anticipated capital expenditures. There can be no assurance that sufficient capital will continue to be available on acceptable terms to fund capital expenditures and to repay existing debt.

Generally, the Company is subject to financial risk associated with changes in the credit ratings assigned to them by credit rating agencies. Credit ratings impact the level of credit risk spreads on new long-term debt issues and on the Company's credit facilities. A change in the credit ratings could potentially affect access to various sources of capital and increase or decrease the Company's finance charges. Also, a significant downgrade in the Terasen Gas' credit ratings could trigger margin calls and other cash requirements under Terasen Gas' natural gas purchase and natural gas derivative contracts. The Company's corporate investment-grade credit ratings were confirmed and maintained during the year and the Company does not anticipate any material adverse rating actions by the credit rating agencies in the near term. However, the current global financial crisis has placed increased scrutiny on rating agencies and rating agency criteria which may result in changes to credit rating practices and policies.

The recent and expected continued volatility in the global financial and capital markets will likely increase the cost of and affect the timing of issuance of long-term capital by the Company in 2009. The cost of borrowing is expected to increase as new long-term debt is expected to be issued at higher rates due to an increase in credit spreads. Due to the regulated nature of the Company's operations, the expected higher cost of borrowing is eligible to be recovered in future customer rates.

To help mitigate liquidity risk, Terasen Gas has secured multi-year committed credit facilities to support short-term financing of capital expenditures and seasonal working capital requirements.

Transition to International Financial Reporting Standards

The Accounting Standards Board of the Canadian Institute of Chartered Accountants has announced that Canadian publicly accountable enterprises are required to adopt International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board, effective January 1, 2011. IFRS will require increased financial statement disclosure as compared to Canadian GAAP and accounting policy differences between Canadian GAAP and IFRS will need to be addressed by the Company. The Company is currently considering the impact a conversion to IFRS would have on its future financial reporting. Additional information on the Company's transition to IFRS is provided in the "Future Accounting Pronouncements" section of Terasen Gas' December 31, 2008 MD&A.

Interest Rates

The allowed returns on equity for the Company are determined by formulae that result in lower allowed ROEs if forecast long-term Canada bond yields decline. The Company's exposure to short-term interest rates are covered by regulatory deferral accounts, however it is exposed to changes in short-term interest rates through debt on non-regulated operations.

Employee Future Benefits

The Company maintains defined benefit pension plans and there is no certainty that the pension plan assets will be able to earn the assumed rate of returns. Market driven changes impacting the performance of the pension plan assets may result in material variations in actual return on pension plan assets from the assumed return on the assets causing material changes in the pension expense and funding requirements. The regulated operation of the Company currently has a deferral mechanism which allows for deferral of the pension expense that is approved for recovery in rates and the actuarial pension expense. Net pension expense is impacted by, among other things, the amortization of experience and actuarial gains or losses and expected and actual return on plan assets.

Market driven changes impacting other pension assumptions, including the assumed discount rate, may also result in future contributions to pension plans that differ significantly from current estimates as well as causing material changes in pension expense. There is also measurement uncertainty associated with pension expense, future funding requirements, the accrued benefit asset, accrued benefit liability and benefit obligation due to measurement uncertainty inherent in the actuarial valuation process.

COUNTERPARTY CREDIT RISK

The Company is exposed to credit risk in the event of non-performance by counterparties to derivative instruments. The Company is also exposed to significant credit risk on physical off-system sales. Terasen Gas deals with high credit quality institutions in accordance with established credit approval practices. Due to recent events in the financial markets including significant international government intervention in the banking systems and financial markets the Company has further limited the financial counterparties that it transacts with and reduced available credit to, or taken additional security from, the physical off-system sales counterparties it deals with. To date the Company has not experienced any counterparty defaults and does not expect any counterparties to fail to meet their obligations however, the credit quality of counterparties, as recent events have indicated, can change rapidly.

FIRST NATIONS LAND

The Company provides service to customers on First Nations lands and maintains gas transmission and distribution facilities on lands that are subject to land claims by various First Nations. A treaty negotiation process involving various First Nations and the Government of British Columbia is underway, but the basis upon which settlements might be reached in the service areas of the Company is not clear. Furthermore, not all First Nations are participating in the process. To date, the policy of the Government of British Columbia has been to endeavour to structure settlements without prejudicing existing rights held by third parties such as the Company. However, there can be no certainty that the settlement process will not adversely affect the business of the Company.

DIVIDENDS

In 2008, Terasen Gas paid $100.0 million in dividends to its parent Terasen Inc., compared with $110.9 million in 2007.

As part of its approval of the acquisition of Terasen by Fortis, the BCUC imposed a number of conditions intended to ring-fence Terasen Gas from its parent company. These restrictions include a prohibition on the payment of dividends unless Terasen Gas has in place at least as much common equity as that deemed by the BCUC for rate-making purposes. Terasen Gas' dividend policy is intended to ensure that Terasen Gas maintains at least as much common equity as that deemed by the BCUC for rate-making purposes.

DESCRIPTION OF CAPITAL STRUCTURE

The Company is authorized to issue 500,000,000 common shares, 100,000,000 first preference shares and 100,000,000 second preference shares, all without par value. As at December 31, 2008, 59,591,732 common shares were issued and outstanding. Terasen Gas is a wholly-owned indirect subsidiary of Fortis Inc.

CREDIT RATINGS

Securities issued by Terasen Gas are rated by Dominion Bond Rating Service Limited ("DBRS") and Moody's Investors Service Inc. ("Moody's"). The ratings assigned to securities issued by Terasen Gas are reviewed by these agencies on an ongoing basis. Credit ratings are intended to provide investors with an independent measure of credit quality of an issue of securities. DBRS rates debt instruments by rating categories ranging from AAA which represents the highest quality of securities, to D which represents the lowest quality of securities rated. Moody's rates debt instruments by rating categories ranging from Aaa which represents the highest quality of securities to C which represents the lowest quality of securities.

According to the Moody's rating system, debt securities rated A are considered to possess many favourable investment attributes and are to be considered as upper medium grade obligations. Factors giving security to principal and interest are considered adequate but elements may be present which suggest a susceptibility to impairment some time in the future. Moody's applies numerical modifiers (1, 2 and 3) in each rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its rating category, the modifier 2 indicates a mid-range ranking and the modifier 3 indicates a ranking in the lower end of its rating category.

According to the DBRS rating system, debt securities rated A are of satisfactory credit quality. Protection of interest and principal is still substantial, but the degree of strength is less than with AA related entities. While a respectable rating, entities in the A category are considered to be more susceptible to economic conditions and have greater cyclical tendencies than higher rated companies. For short term debt a rating of R-1 is of prime credit quality. Any qualifying negative factors which exist are considered manageable, and the entity is normally of sufficient size to have some influence in its industry. "High" or "Low" are used to indicate the relative standing of a credit within a particular rating category. The lack of one of these designations indicates a rating which is essentially in the middle of the category.

The credit ratings accorded to the rated securities are not recommendations to purchase, hold or sell the rated securities inasmuch as those ratings do not comment as to market price or suitability for a particular investor. There is no assurance that those ratings will remain in effect for any given period of time or that those ratings will not be revised or withdrawn entirely by those rating agencies in the future if, in their judgment, circumstances so warrant.

The table below summarizes the ratings assigned to the Company's various securities. The DBRS rating is as of May 20, 2008 and the Moody's rating is as of July 17, 2008.

Credit Ratings	DBRS	Moody's
Commercial paper	R-1 (Low)	
Unsecured long-term debt	A	A3
Secured long-term debt	A	A2

After reassessing its relationship with Standard & Poor's Ratings Services, a division of the McGraw-Hill Companies (Canada) Corporation (S&P), Terasen Gas decided early in 2004 to discontinue the engagement of S&P to provide credit ratings on the debt of Terasen Gas. Terasen Gas believes the credit ratings issued by Moody's and DBRS will be sufficient to service the requirements of creditors and maintain the Company's access to capital. S&P continues to provide an unsolicited rating on Terasen Gas' outstanding debt based on publicly available information. As of December 17, 2008, Terasen Gas' unsecured long-term debt was rated A by S&P.

S&P rates debt instruments by rating categories ranging from AAA which represents the highest quality of securities, to D which represents the lowest quality of securities rated.

According to the S&P rating system, debt securities rated A exhibit adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation. The addition of a plus (+) or minus (-) after a rating indicates the relative standing within the particular rating category.

MARKET FOR SECURITIES

Terasen Gas' shares are not listed for trading. Terasen Gas is a wholly-owned indirect subsidiary of Fortis Inc.

In May 2008, Terasen Gas issued $250.0 million of 30-year medium term note debentures at an interest rate of 5.80%.

In October 2007, Terasen Gas issued $250 million of 30-year medium term note debentures at an interest rate of 6.00%.

Scott A. Thomson Vice President, Regulatory Affairs and Chief Financial Officer British Columbia, Canada	Vice President, Regulatory Affairs and Chief Financial Officer of the Company since May 2007; prior thereto, Vice President and Chief Financial Officer of the Company since December 2005; prior thereto, Vice President, Finance and Regulatory Affairs since February 2003.
Debra G. Nelson Assistant Corporate Secretary British Columbia, Canada	Assistant Corporate Secretary of the Company since November 1994 and additionally Manager, Corporate Compliance and Secretariat, Terasen Inc. since January, 2005.

LEGAL PROCEEDINGS

The Company is disputing a $7.0 million assessment of B.C. Social Service Tax representing additional provincial sales tax and interest on the Southern Crossing Pipeline, which was completed in 2000. The amount was paid in full in 2006 to avoid the accrual of further interest and has been included in other assets. The matter is currently under appeal to the Supreme Court of British Columbia.

During the year the Company reached a settlement with Revenu Québec and Canada Revenue Agency related to amounts owing as a result of retroactive amending Quebec tax legislation. In August 2008, the Company made payments of approximately $12.7 million to settle the tax liability. As a result of the tax settlement, an earnings benefit of $5.6 million was recorded during 2008.

A number of claims and lawsuits seeking damages and other relief are pending against the Company. Management is of the opinion, based upon information presently available, that it is unlikely that any liability, to the extent not provided for through insurance or otherwise, would be material in relation to the Company's December 31, 2008 consolidated financial statements.

REGISTRAR, TRANSFER AGENT AND TRUSTEE

CIBC Mellon Trust Company is the registrar and transfer agent and trustee for the Company's unsecured debentures and purchase money mortgages. Transfers of these securities may be effected at CIBC Mellon Trust Company's offices in the cities of Vancouver, Toronto or Montreal.

MATERIAL CONTRACTS

The Company has not entered into any material contracts subsequent to January 1, 2002 that are outside the ordinary course of business.

INTERESTS OF INSIDERS IN MATERIAL TRANSACTIONS

In the past three years or current financial year, no insiders of Terasen Gas have been involved in any material transactions with the Company, nor do they have any existing or potential material conflicts of interest with the Company or any of its subsidiaries.

The Company paid $8.5 million in 2008 (2007 – $8.5 million) to Terasen for management services.

The Company received $3.3 million in 2008 (2007 – $4.1 million) from TGVI, a company under common control, for transporting gas through the Company's pipeline system.

The Company paid approximately $47.0 million during the year ended December 31, 2008 (2007 – $45.2 million) for customer care and billing services to a limited partnership. The Company's parent, Terasen, holds a 30% interest in the limited partnership and jointly controls it. The Company is committed to pay approximately $43.6 million as base contract fees for 2009.

The Company charged companies under common control $6.6 million in 2008 (2007 – $6.1 million) for management services.

INTERESTS OF EXPERTS

Terasen Gas' consolidated statements of financial position have been audited by Ernst & Young LLP, Chartered Accountants, of Vancouver, British Columbia. Ernst & Young LLP were appointed the auditors of Terasen Gas on July 26, 2007. The auditors, appointed by the shareholder, examined the consolidated financial statements in accordance with Canadian generally accepted auditing standards to enable them to express an independent opinion on the consolidated financial statements. The Company is not aware of any direct or indirect interests of Ernst & Young LLP, or any of the individuals involved in preparing the independent opinion, in Terasen Gas or any of its subsidiaries.

EXECUTIVE COMPENSATION

The Company's Statement of Executive Compensation is attached as Schedule "A".

INDEBTEDNESS OF EXECUTIVE OFFICERS, DIRECTORS, AND EMPLOYEES

The following table sets forth details of the aggregate indebtedness of all executive officers, directors, and employees and former executive officers, directors and employees outstanding at February 17, 2009 to the Company, other than routine indebtedness.

Aggregate Indebtedness		
Purpose	**To the Corporation or its Subsidiaries**	**To Another Entity**
Employee Share Purchase Plan	$162,650.90	Nil

The following table sets forth details of the indebtedness of the Directors and Executive Officers of the Company under the Employee Share Purchase Plan ("ESPP"). ESPP loans are interest free and are repayable within one year through regular payroll deductions. There is no indebtedness to the Company by executive officers, directors, employees for purposes other than indebtedness under the Employee Share Purchase Plan.

ADDITIONAL INFORMATION

Additional financial information is provided in Terasen Gas' Consolidated Financial Statements for the year ended December 31, 2008 and Management's Discussion and Analysis dated February 6, 2009 for the year ended December 31, 2008.

Additional information relating to Terasen Gas Inc. can also be found on SEDAR at www.sedar.com.

SCHEDULE A - EXECUTIVE COMPENSATION

A. COMPENSATION DISCUSSION & ANALYSIS

The Company's executive compensation program is designed to provide competitive levels of compensation, a significant portion of which is dependent upon individual and corporate performance and contribution to increasing shareholder value. The Committee recognizes the need to provide a total compensation package that will attract and retain qualified and experienced executives as well as align the compensation level of each executive to that executive's level of responsibility. The objectives of base salary are to recognize market pay, and acknowledge competencies and skills of individuals. The objectives of the annual incentive plan are to reward achievement of short-term financial and operating performance and focus on key activities and achievements critical to the ongoing success of Terasen Gas. Long-term incentive plans focus executives on sustained shareholder value creation.

The objectives of executive compensation practices at Terasen Gas are specifically designed to:

1. attract and gain sustainable commitment from senior management;
2. motivate performance by tying incentive compensation to the achievement of specific measures of financial and operating performance;
3. foster identification with shareholder interest through equity-based compensation; and
4. recognize other multiple stakeholder interests including those of customers and employees

Competitive Positioning

As a general policy, Terasen Gas establishes base and incentive compensation targets so as to compensate executives and in particular, each person who served as the Chief Executive Officer or Chief Financial Officer during the most recently completed financial year and the three most highly compensated executive officers of the Company during the most recently completed financial year (the "Named Executive Officers" or "NEOs") at a level generally equivalent to the median of practice among a broad reference group of approximately 200 Canadian commercial industrial companies. For clarity, this reference group does not include organizations in the financial service and broader public sectors. It does include organizations from the energy, mining and manufacturing sectors. This reference group is formally reviewed as part of the triennial review of executive compensation policy.

Base salaries for the NEOs are reviewed by the Governance and Human Resource Committee (the "Committee") and established annually in the context of total compensation from this reference group as a comparative measure.

Actual compensation will vary based on the performance of the executive relative to the achievement of goals and objectives. The NEOs are rewarded for performance through the following elements of compensation:

Compensation Element *(Eligibility)*	Description	Compensation Objectives
Annual Base Salary and Annual Incentive		
Annual Base Salary *(all NEOs)*	Salary is a market-competitive, fixed level of compensation.	Retain and attract highly qualified leaders ; Motivate strong business performance
Annual Incentive *(all NEOs)*	Combined with salary, the target level of annual incentive provides market-competitive total cash opportunity. Annual incentive payout depends on individual and corporate performance. Lower performers receive smaller incentive payouts, while higher performers receive larger incentive payouts.	Retain and attract highly qualified leaders by incenting and rewarding performance
Long-term equity based incentive		
Stock Options *(all NEOs)*	Equity grants are made in the form of stock options for Common Shares of Fortis. The amount of annual grant will be dependent on the level of the executive and their current share ownership levels. Planned grant value is converted to the number of shares granted by dividing the planned value by the pre-determined, formulaic planning price. Options vest over a 4 year period. Full eligibility for the stock option award is dependent upon the executive meeting share ownership levels of 300% of salary for the President and CEO and 150% of base salary for all other NEOs.	Retain and attract highly qualified leaders ; Motivate strong business performance; Align executive and investor interests; Balance compensation for short and long-term strategic results
Pension and Savings Plan		
Defined Benefit Pension Plan *(certain NEOs)*	Payout upon retirement based on the number of years of credited service and actual pensionable earnings.	Retain highly qualified leaders
RRSP *(certain NEOs)*	Contribution to a registered retirement savings plan equal to 6.5% of a member's base salary which is matched by the member up to the maximum contribution limit allowed by the Canada Revenue Agency.	Retain highly qualified leaders
Defined Contribution SERP *(certain NEOs)*	Accrual of 13% of base salary and annual incentive in excess of the Canada Revenue Agency limit. At time of retirement, paid in one lump sum or in equal payments over 15 years.	Retain highly qualified leaders
Employee Savings Plan *(all employees and NEOs)*	Contributions of 3% of base salary directed to a registered or non registered savings plan.	Retain highly qualified leaders

Annual Base Salary

Base salaries paid to the Company's NEOs are determined by the Board upon recommendation by the Committee and are established annually in the context of total compensation and by reference to the range of salaries paid at approximately the median of the salaries paid to executives of comparable Canadian commercial industrial companies.

Annual Incentive

NEOs participate in an annual incentive plan which provides for annual cash bonuses which are determined by way of an annual assessment of corporate and individual performance in relation to targets approved by the Board of Directors upon recommendation by the Committee. The Company's annual earnings must reach a minimum threshold level before any payments are made.

The objectives of the annual incentive plan are to reward achievement of short-term financial and operating performance and focus on key activities and achievements critical to the ongoing success of the Company.

Corporate performance is determined with reference to the performance of the Company relative to weighted targets in respect of financial performance, customer, key processes, employee, and public safety. Individual measures weightings range from 5 to 30% and results can be objectively measured. The measures are quite similar to recent years with the target/challenge levels incenting improvement over our own historical performance as well as against our peers where appropriate.

The net earnings target for the gas segment is the "Gate" which must be met or exceeded in order for any incentive payments to be made. The measurable key performance targets for 2008 included the following:(i) projected gas segment earnings (ii) O&M per customer; (iii) base capital; (iv)customer satisfaction measured by quarterly customer surveys; (v) credit and collections is to have our bad debt experience at a set target of billed revenues; (vi) customer additions; (vii) employee injuries and vehicle accidents are set based on performance with our peer companies in the Canadian Gas Association and with Terasen Gas' three year historical average;(viii) wellness targets for the employee is set lower than the previous 3-year historical average; and (ix) public safety is based on those public safety service quality indicators included Terasen Gas' performance based rate settlement. It is the Company's belief that the above noted targets have been reached in 2008.

A target incentive award, based on each participant's level of responsibility is set and communicated to each participant annually. Scores for company performance measures are contained in a scorecard and an overall annual result is determined. The executive compensation program places a significant portion of compensation at risk through the annual incentive plan.

Individual performance is determined with reference to individual contribution to corporate objectives, elements of which are subjective. For the President and Chief Executive Officer, 70% of the annual cash bonus is based on corporate targets and 30% is based upon personal targets. For each of the other NEOs, 50% of the annual cash bonus is based upon corporate targets and 50% is based upon personal targets. At the discretion of the Board of Directors, executives may be awarded up to an additional 50% of target incentive pay in recognition of exceptional performance contributions.

Long term incentives are granted to align executives' interests with shareholders interests in increasing shareholder value. The program currently used by Terasen is the Fortis Inc. 2006 Stock Option Plan.

Description of this plan is set out below:

2006 Stock Option Plan

The 2006 Stock Option Plan was approved by the shareholders of Fortis Inc. on 2 May 2006 for purposes of granting options in the common shares of Fortis (the "Common Shares') to certain eligible persons, which includes the Company's NEOs (the "Eligible Persons") in order to encourage increased share ownership by key employees as an incentive to maximize shareholder value. The directors of Terasen Gas are not eligible to participate in the Fortis Inc. 2006 Stock Option Plan (the "2006 Stock Option Plan"). No options are granted under the 2006 Stock Option Plan if, together with any other security based compensation arrangement established or maintained by Fortis, such granting of options could result, at any time, in (a) the number of Common Shares issuable to insiders of Fortis, at any time, exceeding 10% of the issued and outstanding Common Shares and, (b) the number of Common Shares issued to insiders of Fortis, within any one (1) year period, exceeding 10% of the issued and outstanding Common Shares.

The 2006 Stock Option Plan is administered by the Human Resources Committee of Fortis Inc. Pursuant to the 2006 Stock Option Plan, the determination of the exercise price of options is made by the Human Resources Committee at a price not less than the volume weighted average trading price of the Common Shares of Fortis determined by dividing the total value of the Common Shares traded on the TSX during the last five (5) trading days immediately preceding the date by the total volume of the Common Shares traded on the TSX during such five (5) trading days. Options may not be amended to reduce the option price. The Human Resources Committee determines: (i) which Eligible Persons are granted options; (ii) the number of Common Shares covered by each Option grant; (iii) the price per share at which Common Shares may be purchased; (iv) the time when the Options will be granted; (v) the time when the options will vest; and (vi) the time at which the options will be exercisable (up to seven (7) years from the date of grant).

Options granted under the 2006 Stock Option Plan are personal to the Eligible Person and not assignable, other than by testate succession or the laws of decent and distribution. In the event that a person ceases to be an Eligible Person, the 2006 Stock Option Plan will no longer be available to such person. The grant of options does not confer any right upon an Eligible Person to continue employment or to continue to provide services to Terasen Gas.

If the term of an option granted pursuant to the 2006 Stock Option Plan, held by an Eligible Person, expires during a blackout period (being a period during which the Eligible Person is prohibited from trading in the securities of Fortis pursuant to securities regulatory requirements or Fortis's written policies then applicable), then the term of such option or unexercised portion thereof shall be extended and shall expire ten (10) business days after the end of the blackout period.

Options granted pursuant to the 2006 Stock Option Plan have a maximum term of seven (7) years from the date of grant and the options will vest over a period of not less than four (4) years from the date of grant, provided that no option will vest immediately upon being granted. Options granted pursuant to the 2006 Stock Option Plan will expire no later than three (3) years after the termination, death or retirement of an Eligible Person.

Eligible Persons are granted options based on salary levels. In 2008, the President and Chief Executive Officer of the Company was granted an option entitling him to purchase that number of Common Shares of Fortis Inc. having a market value at the time of grant equal to 300% of his base salary. Each of the other NEO's were granted an option entitling each NEO to purchase that number common shares having a market value at the time of grant equal to 150% of such NEO's annual base salary.

The 2006 Stock Option Plan provides that not withstanding provisions in the plan to the contrary, no option maybe amended to reduce the option price below the option price as of the date the option is granted.

Pension Plans

See "Executive Compensation – Pension Plan Benefits".

Employee Savings Plan

Terasen Gas contributes an amount equal to 3% of monthly base salary. These contributions may be directed to an RRSP, spousal RRSP, a non-registered savings plan or any combination. This plan is provided to all eligible employees of Terasen Gas including NEOs.

B. SUMMARY COMPENSATION TABLE

The following table sets forth the compensation information for the financial years indicated below for the NEOs:

Name and principal position	Year	Salary ($)	Option-based awards ($)[1]	Annual incentive plans[2]	Pension value ($) [3]	All other compensation ($)[4]	Total compensation ($)
R.L. (Randy) Jespersen President, and CEO Terasen Gas Inc.	2008	440,000	222,273	300,000	688,000	27,075	1,677,348
S.A. Thomson Vice President, Finance and Regulatory and CFO Terasen Gas Inc.	2008	275,000	69,458	175,000	44,000	15,764	579,222
D.L. Stout Vice President, Marketing and Business Development Terasen Gas Inc.	2008	254,000	64,165	145,000	39,000	16,570	518,735
J.A. Marston Vice President, Human Resources and Operations Governance Terasen Gas Inc.	2008	249,000	62,889	138,000	38,000	23,914	511,803
R.M. Samels Vice President, Business Services and CIO Terasen Gas Inc.	2008	218,000	55,064	115,000	169,000	21,536	578,600

Compensation and Benefits

The following outlines the terms of the compensation and benefits as outlined in the employment agreements for Messrs. Jespersen, Thomson, Stout, Samels and Ms. Marston.

The Annual Base Salary paid to the NEO shall, for the purpose of establishing appropriate increases, be reviewed annually by the Board or a committee thereof as part of the annual review of executive officers' remuneration. The decision on whether to grant an increase to the executive's base salary and the amount of any such increase shall be in the sole discretion of the Board or committee thereof.

NEOs are eligible to participate in such short-term incentive plans as may be implemented by the Company from time to time. The terms and conditions of all such incentive plans are subject to modification from time to time by the Board or committee thereof, in its sole discretion.

NEOs are eligible to participate in such long-term incentive plans as may be implemented by the Company from time to time. The terms and conditions of all such incentive plans are subject to modification from time to time by the Board or committee thereof, in its sole discretion.

---

(1) The value of the long-term incentive components is determined using the Black-Scholes pricing model at the date of grant.

(2) Represents amounts earned in 2008 under the Company's annual non-equity incentive program in the form of annual cash bonus paid in 2009.

(3) Represents all compensation accrued relating to defined benefit and/or defined contribution pension plans.

(4) All other Compensation means the aggregate of amounts paid by Terasen Gas for the employee savings plan, payment in lieu of vacation and flexible benefit plan taxable cash.

NEOs participate in the Company's group insurance, benefit and retirement plans as may be in effect from time to time. The terms of all such group insurance benefit and retirement plans are subject to modification from time to time by the Board or committee thereof, in its sole discretion.

NEOs are entitled to vacation and to additional days off, all to be taken in accordance with the Company's policies and procedures, and as amended from time to time by the Company, in its sole discretion and the NEO agrees that such amendments shall not constitute a breach of the employment agreement.

During the NEO's employment, the Company reimburses the NEO for all traveling and other expenses actually, properly and necessarily incurred by the NEO in connection with the performance of the NEO's duties hereunder in accordance with the policies set from time to time by the Company, in its sole discretion. The NEO is required to furnish such receipts, vouchers or other evidence as are required by the Company to substantiate such expenses.

In addition, Mr. Jespersen's employment agreement provides for him to accrue one (1) additional year of credited service for each year between July 1, 1999 and June 30, 2009. In addition, Mr. Jespersen's employment agreement stipulates that his pension benefit on retirement will not be less than it would have been had he continued to accrue service under the M&E Plan and the M&E SRP after December 31, 2006.

C. INCENTIVE PLAN AWARDS

The following table sets forth the total number of options granted in Fortis Common Shares to the NEOs. The aggregate value is based on the difference between the Fortis Common Share price at December 31, 2008 of $24.59 and the exercise price of the options.

Option-based awards				
Name	**Number of securities underlying unexercised options (#)**	**Option exercise price ($)**	**Option expiration date**	**Value of unexercised in-the-money options ($) [(1)]**
R.L. (Randy) Jespersen	50,304	25.760	August 16, 2014	_
	46,696	28.270	February 26, 2015	_
	97,000			
S.A. Thomson	15,780	25.760	August 16, 2014	_
	14,592	28.270	February 26, 2015	_
	30,372			
D.L. Stout	14,556	25.760	August 16, 2014	_
	13,480	28.270	February 26, 2015	_
	28,036			
J.A. Marston	14,264	25.760	August 16, 2014	_
	13,212	28.270	February 26, 2015	_
	27,476			
R.M. Samels	12,288	25.760	August 16, 2014	_
	11,568	28.270	February 26, 2015	_
	23,856			

(1) No value was attributed to unexercised options that were out of the money on December 31, 2008.

The following table sets forth the value of option based awards and non-equity incentive compensation earned by the Named Executive Officers during the most recently completed financial year. The aggregate value of the option based awards vested during the year is based on the difference between the Fortis share price on the vesting date of any options that vested during 2008 and the exercise price of the options.

Name	Option-based awards – Value vested during the year ($) (1)	Non-equity incentive plan compensation – Value earned during the year ($)
R.L. (Randy) Jespersen	–	300,000
S.A. Thomson	–	175,000
D.L. Stout	–	145,000
J.A. Marston	–	138,000
R.M. Samels	–	115,000

D. PENSION PLAN BENEFITS

The following table sets forth the details of the defined benefit pension plan for the respective Named Executive Officers.

Name	Number of years credited service (#)(2)	Annual benefits payable ($)		Accrued obligation at start of year ($)	Compensatory Change ($)	Non-Compensatory Change ($)	Accrued obligation At year end ($)
		At year end 2008	At age 65				
R.L. (Randy) Jespersen	21.75	275,000	424,000	2,578,000	688,000	(296,000)	2,970,000
S.A. Thomson	0.42	2,000	2,000	22,000	-	(3,000)	19,000
D.L. Stout	0.42	2,000	2,000	38,000	-	(3,000)	35,000
J.A. Marston	0.42	2,000	2,000	31,000	-	(3,000)	28,000
R.M. Samels	15.50	66,000	66,000	984,000	140,000	(71,000)	1,053,000

The information shown in the defined benefit pension plan table above has been calculated using the valuation method and actuarial assumptions described in the pension note in the Company's annual financial statements for 2008.

The following table sets forth the details of the defined contribution pension plans for the respective Named Executive Officers.

Name	Accumulated value at start of year ($)	Compensatory ($)	Non-compensatory ($)	Accumulated value at year end ($)
S.A. Thomson	230,000	44,000	(45,000)	229,000
D.L. Stout	256,000	39,000	(50,000)	245,000
J.A. Marston	469,000	38,000	(114,000)	393,000
R.M. Samels	19,000	29,000	6,000	54,000

(1) No value was attributed to options that were out of the money on the vesting date.

(2) Mr. Jespersen has an employment agreement under which he accrues one additional year of credited service each year between July 1, 1999 and June 30, 2009. Pursuant to this agreement Mr. Jespersen has received an additional 9 years to his 12.75 years of service.

Prior to January 1, 2007, the executive officers of the Company were members of the Terasen Gas Inc. Retirement Plan for Management and Exempt Employees (the "M&E Plan"), a non-contributory pension plan. The M&E Plan has both a defined contribution (DC) provision and a defined benefit (DB) provision. The pension benefit under the DB provision for executive officers equals 2% of best 3-year average earnings for each year of credited service under the M&E Plan. Normal retirement is the first day of the month coincident with or next following attainment of age 65. Executive officers who are members of the M&E Plan are eligible to retire at age 55 or age 50 if age plus continuous service equals 65 years. If an executive officer is less than age 55, or age plus service is less than 80 years, the accrued pension to date of retirement is reduced 3% per year before age 60, otherwise no reduction applies.

On January 1, 2000, Terasen Gas implemented the defined contribution component of the M&E Plan and related Supplemental Retirement Plan (“SRP”). All executive officers were given a one-time option to remain in the defined benefit component or convert to the defined contribution component of the plans. The defined contribution component of the M&E Plan and SRP was frozen effective December 31, 2006.

Messrs. Jespersen and Samels participate in the DB provisions of the M&E Plan. The other executive officers participate in the DC provision of the M&E Plan.

The M&E Plan’s corresponding non-registered supplemental plan is the Terasen Gas Inc. Supplemental Retirement Plan (the “M&E SRP”). The M&E SRP is designed to provide the executive officers of the Company with the portion of the Company's pension promise that cannot be paid from the M&E Plan because of limits imposed by the Income Tax Act. As the executive officers are members of the M&E Plan, they are automatically members of the M&E SRP.

All members of the M&E Plan, including the executive officers, ceased to accrue further service under the M&E Plan and the M&E SRP effective December 31, 2006.

Effective January 1, 2007, all salaried employees of the Company, including the executive officers, joined the Pension Plan for Employees of Terasen Inc. (the "Terasen Plan"), a contributory defined benefit pension plan. The Terasen Plan provides a pension benefit equal to 2% of final average earnings (limited to $250,000 per year), integrated with the Canada Pension Plan (CPP). Members can retire with an unreduced pension at age 60 or when age plus continuous service equal 90 years. Pension benefits are otherwise reduced by 3% per year. Members are required to contribute 50% of the total required contributions to the Terasen Plan.

The Terasen Plan’s corresponding non-registered supplemental plan is the Supplemental Pension Plan for Employees of Terasen Inc. (the “Terasen SRP”). The Terasen SRP is designed to provide the executive officers of the Company with the portion of the Company's pension promise which cannot be paid from the Terasen Plan because of limits imposed by the Income Tax Act. As the executive officers are members of the Terasen Plan, they are automatically members of the Terasen SRP.

Effective May 31, 2007, all the executive officers, with the exception of Mr. Jespersen, ceased to accrue service under the Terasen Plan and the Terasen SRP. Mr. Jespersen continues to accrue service under the Terasen Plan at December 31, 2008.

In addition, Mr. Jespersen’s employment agreement stipulates that his pension benefit on retirement will not be less than it would have been had he continued to accrue service under the M&E Plan and the M&E SRP after December 31, 2006.

As at June 1, 2007, the executive officers of the Company, excluding Mr. Jespersen, joined the Terasen Inc. Group RRSP (the “Group RRSP”) and it’s corresponding supplemental plan, the Supplemental Executive Retirement Plan of Terasen Inc. (the “Executive SRP”) sponsored by the

Company. The Group RRSP directs a total contribution of 13% of earnings to an RRSP (6.5% each from employer and employee). The Executive SRP directs notional employer contributions equal to 13% of a member's earnings in excess of the Income Tax Act RRSP limit to a notional account.

Pensionable earnings under each of the M&E Plan, M&E SRP, Terasen Plan and Terasen SRP include base pay plus bonus paid under a predetermined incentive plan. Pensionable earnings under the Terasen Plan and Terasen SRP are limited to $250,000.

E. TERMINATION AND CHANGE OF CONTROL BENEFITS

The discussion below sets out the terms of the employment contracts that trigger benefits arising from termination and/or change of control as of December 31, 2008.

President and CEO Terasen Gas Inc. Employment Contract

Please note that Mr. Jespersen's contract terms are different than the NEOs' and as such are listed separately.

1. Termination by Mr. Jespersen

If in the event Mr. Jespersen terminates his employment with the Company any time after July 31, 2008 then Mr. Jespersen shall be entitled to be paid the following payments:

(a) an amount in lieu of any entitlement to annual incentive plan payment for the calendar year in which he terminates equivalent to the average amount of annual incentive plan payment paid or payable to Mr. Jespersen respecting the previous two (2) calendar years pro-rated from the beginning of the calendar year in which he terminates to the date of written notice of termination - **$300,000**;

(b) an amount equal to twelve (12) months' Annual Base Salary - **$440,000** and twelve (12) months' annual incentive plan payment under the terms of the annual incentive plan in place at the time of termination, which annual incentive plan payment will be based on the average annual incentive plan payment paid or payable for the previous two (2) calendar years - **$300,000**;

(c) an amount equivalent to all registered pension plan, supplemental pension plan contributions and all other benefit contributions and premiums ordinarily paid by the employer for insured benefits for Mr. Jespersen, which would, but for the termination, have been paid by the Company for the benefit of Mr. Jespersen during the twelve (12) months immediately following the date of termination at Mr. Jespersen's option rather than payment of an amount equivalent to pension contributions, the Company shall add an additional twelve (12) months to his age and an additional twelve (12) months to his service for the purpose of calculating the value of the Executive's pension benefit upon termination- **Pension $136,551 and Benefits - $40,819**; and

(d) an amount in respect of outplacement counselling equal to ten (10) percent of his Annual Base Salary - **$44,000**.

2. Termination Without Cause

In the event the Company terminates Mr. Jespersen without cause as of December 31, 2008 the Company would pay the amounts listed below in accordance with the employment agreement in lieu of notice of termination:

(a) an amount in lieu of any entitlement to short term incentive plan payment for the calendar year in which Mr. Jespersen is terminated equivalent to the average amount of short term incentive plan payment paid to Mr. Jespersen respecting the previous two (2) calendar years pro-rated from the beginning of the calendar year in which Mr. Jespersen is terminated to the date of written notice of termination - **$300,000**;

(b) an amount equivalent to twenty four (24) months Annual Base Salary - **$880,000** and twenty four (24) months short term incentive plan payment under the terms of the short term incentive plan in place at the time of termination, which short term incentive plan payment will be based on the average short term incentive plan payment paid or payable for the previous two (2) calendar years - **$600,000**;

(c) an amount equivalent to the sum of all registered pension plan, supplemental pension plan contributions and all other benefit contributions and premiums ordinarily paid by the Company for insured benefits for Mr. Jespersen, which would, but for the termination, have been paid by the Company for the benefit of the executive during the twenty four (24) months immediately following the date of termination of the employment agreement. At Mr. Jespersen's option, rather than payment of an amount equivalent to pension contributions, the Company shall add an additional twenty four (24) months to Mr. Jespersen's age and an additional twenty four (24) months to Mr. Jespersen's service for the purpose of calculating the value of Mr. Jespersen's pension benefit upon termination – **Pension – $273,102 and Benefits - $81,638**; and

(d) an amount in respect of outplacement counselling up to ten (10) percent of Mr. Jespersen's Annual Base Salary to be paid directly to an outplacement counselling agency as chosen by the Company - **$44,000**.

The executive's entitlement to any long-term incentive compensation at the date of termination shall be solely determined in accordance with the terms of any long-term incentive plan and any long-term incentive agreement in force as at the date of termination of the employment agreement.

3. Termination by Executive for Good Reason

In the event Mr. Jespersen terminates the employment agreement and resigns as an executive for "good reason", Mr. Jespersen shall be entitled to payments equal to the payments for termination without cause, set out above, provided that Mr. Jespersen must invoke his right to resign for good reason within ninety (90) days of the occurrence of any events which cause there to be good reason.

Good reason is defined as one or more of the following events, occurring without Mr. Jespersen's written consent:

(a) a material diminution or adverse change to the executive's position, nature of responsibilities, or authority within the Terasen Inc. companies that is not contemplated by the employment agreement

(b) a decrease in Mr. Jespersen's Annual Base Salary as provided in the Agreement (or as such amounts may be increased from time to time) excluding any amounts accrued by or paid to Mr. Jespersen relating to incentive compensation amounts and any decrease that may occur in the value of Mr. Jespersen's benefits under the Company's benefit plans resulting from a restructuring of any or all benefit plans at the discretion of the Company;

© any other failure by the Company to perform any material obligation under, or breach by the Company of any material provision of the agreement;

(d) a relocation of Mr. Jespersen's current primary work location to a location greater than eighty-three (83) kilometres from its current location; or

(e) any failure to secure the agreement of any successor entity to the Company to fully assume the Company's obligations under the employment agreement;

but does not include any financial transaction that may occur between Fortis Inc., Terasen Inc., the Company or, as applicable, any company related to Fortis Inc., Terasen

Inc. or the Company.

4. Change of Control

If the employment of Mr. Jespersen is terminated by the Company within three (3) months of a Change of Control, the Company will pay a severance payment, together with all legal and professional fees incurred by Mr. Jespersen, of:

(a) an amount in lieu of any entitlement to short term incentive plan payment for the calendar year in which Mr. Jespersen is terminated equivalent to the average amount of short term incentive plan payment paid to Mr. Jespersen respecting the previous two (2) calendar years pro-rated from the beginning of the calendar year in which Mr. Jespersen is terminated to the date of written notice of termination - **$300,000**; and,

(b) an amount equivalent to twenty four (24) months Annual Base Salary - $880,000 and twenty four (24) months short term incentive plan payment under the terms of the short term incentive plan in place at the time of termination, which short term incentive plan payment will be based on the average short term incentive plan payment paid or payable for the previous two (2) calendar years - **$600,000**;

(c) an amount equivalent to the sum of all registered pension plan, supplemental pension plan contributions and all other benefit contributions and premiums ordinarily paid by the Company for insured benefits for the executive, which would, but for the termination, have been paid by the Company for the benefit of Mr. Jespersen during the twenty four (24) months immediately following the date of termination of the employment agreement. At Mr. Jespersen's option, rather than payment of an amount equivalent to pension contributions, the Company shall add an additional twenty four (24) months to the executive's age and an additional twenty four (24) months to Mr. Jespersen's service for the purpose of calculating the value of the executive's pension benefit upon termination – **Pension – $273,102 and Benefits - $81,638**; and

(e) an amount in respect of outplacement counselling up to ten (10) percent of Mr. Jespersen's Annual Base Salary to be paid directly to an outplacement counselling agency as chosen by the Company - **$44,000.**

In addition, pursuant to the Fortis 2006 Stock Option Plan all options outstanding shall be immediately exercisable. As at December 31, 2008 had a Change of Control termination occurred, the obligation would have resulted in a payment of the unexercised Stock Options based on the difference between the strike price as the date of the grant and the market price as of December 31, 2008.

Executive Employment Contracts - NEOs

1. Termination Without Cause

In the event the Company terminates the executive without cause the Company will pay all amounts owed by the Company under the specific employment agreement as of the date of termination, the following payments in lieu of notice of termination:

(a) an amount in lieu of any entitlement to short term incentive plan payment for the calendar year in which the executive is terminated equivalent to the average amount of short term incentive plan payment paid to the executive respecting the previous two (2) calendar years pro-rated from the beginning of the calendar year in which the executive is terminated to the date of written notice of termination;

Executive	Amount
S.A. Thomson	$131,000
D.L. Stout	$127,000
J.A. Marston	$125,000
R.M. Samels	$ 86,500

(b) an amount in lieu of any entitlement to Annual Base Salary and short term incentive plan payments equivalent to two (2) times the executive's Annual Base Salary at the date of termination plus two (2) times the average amount of short term incentive plan payment paid or payable to the executive under the employment agreement respecting the previous two (2) full calendar years prior to the calendar year in which the executive is terminated;

Executive	Salary	Incentive
S.A. Thomson	$550,000	$262,000
D.L. Stout	$508,000	$255,000
J.A. Marston	$498,000	$250,000
R.M. Samels	$436,000	$173,000

(c) an amount in lieu of all registered pension plan, supplemental pension plan contributions and all other benefit contributions ordinarily paid by the Company for insured benefits equivalent to a percent of the total amount paid to the executive by the Company; and

Executive	Pension & Benefits	Percent (%)
S.A. Thomson	$243,600	30
D.L. Stout	$228,900	30
J.A. Marston	$224,400	30
R.M. Samels	$304,500	50

(d) an amount in respect of outplacement counselling up to ten (10) percent of the executive's Annual Base Salary to be paid directly to an outplacement counselling agency as chosen by the Company.

Executive	Amount
S.A. Thomson	$27,500
D.L. Stout	$25,400
J.A. Marston	$24,900
R.M. Samels	$21,800

The executive's entitlement to any long-term incentive compensation at the date of termination shall be solely determined in accordance with the terms of any long-term incentive plan and any long-term incentive agreement in force as at the date of termination of the employment Agreement.

2. Termination by Executive for Good Reason

In the event the executive terminates the employment agreement and resigns as an executive for "good reason", the executive shall be entitled to payments equal to the payments for termination without cause, set out above, provided that the executive must invoke his/her right to resign for good reason within ninety (90) days of the occurrence of any events which cause there to be good reason.

Good reason is defined as one or more of the following events, occurring without the executive's written consent:

(a) a material diminution or adverse change to the executive's position, nature of responsibilities, or authority within the Terasen Inc. companies that is not contemplated by the employment agreement

(b) a decrease in the executive's Annual Base Salary as provided in the Agreement (or as such amounts may be increased from time to time) excluding any amounts accrued by or paid to the executive relating to incentive compensation amounts and any decrease that may occur in the value of the executive's benefits under the Company's benefit plans resulting from a restructuring of any or all benefit plans at the discretion of the Company;

(c) any other failure by the Company to perform any material obligation under, or breach by the Company of any material provision of the agreement;

(d) a relocation of the executive's current primary work location to a location greater than eighty-three (83) kilometers from its current location; or

(e) any failure to secure the agreement of any successor entity to the Company to fully assume the Company's obligations under the employment agreement;

but does not include any financial transaction that may occur between Fortis Inc., Terasen Inc., the Company or, as applicable, any company related to Fortis Inc., Terasen Inc. or the Company.

F. DIRECTOR COMPENSATION

Directors of Terasen Gas also serve on the Board of Terasen Inc. Compensation which is paid directly by Terasen to each of Terasen directors, other than directors who are also officers or employees of Terasen or Terasen Gas, during the most recently completed financial year is as follows:

An annual retainer of $27,000 and Board meeting fees of $1250 and Committee meeting fees of $1000 for each meeting attended. In lieu of a director's retainer, the Chairman of the Board is paid an annual retainer of $67,500. The Chairs of the Audit and Risk Committee and the Governance and Human Resources Committee are paid additional retainers of $4,000 and $2,000 respectively. The directors are also reimbursed for direct expenses incurred in carrying out their duties as directors as well as $1000 for travel time for each group of meetings attended in person outside of the director's general district of residency. A portion of director compensation paid by Terasen, where appropriate, is recovered from Terasen Gas through an approved corporate services agreement.

Name	Fees earned ($)	All other compensation ($) [1]	Total ($)
Harold Calla	43,000	1,000	44,000
Ida J. Goodreau	40,000	1,000	41,000
R.L. (Randy) Jespersen			
Harry McWatters	43,250	5,000	48,250
H. Stanley Marshall	81,750	4,000	85,750
Barry Perry	42,250	4,000	46,250
Linda S. Petch	43,250	5,000	48,250
David R. Podmore	39,250	1,000	40,250
John C. Walker	42,250	4,000	46,250

[1] Represents travel fees time compensation paid to the Directors when attending out of town meetings.

Corporate Debt – Pipelines & Utilities

Q1/05 Results – Increased Leverage Is a Credit Concern

Sue McNamara, CFA
(416)-359-4584
sue.mcnamara@bmonb.com

Event

Terasen reported Q1/05 EPS of $0.63 (basic). After adjusting for the positive effect of a mark-to-market gain on Clean Energy's (45% - Terasen) price risk management activities recorded during the quarter, reported basic EPS were $0.60, moderately lower than our equity expectation of $0.64. For additional views, please refer to the equity research comment on Terasen Inc. by BMO Nesbitt Burns' equity analyst Karen Taylor.

Impact

Slightly negative.

Key Points

In Q1/05, Terasen Inc.'s total debt to capitalization ratio increased to 67.3% versus 64.4% at December 31, 2004 (including preferred securities as long-term debt). Our 2005 and 2006 debt to capitalization estimates are 64.74% and 64.72%, respectively, considerably higher than the averages for the pipeline and utility universe of 47.85% and 47.77%, respectively (Table 1).

Recommendation

In 2005, Terasen Inc.'s 5-year and 10-year generic credit spreads tightened by 5 and 9 basis points, respectively, and the 30-year spreads have widened by 1 basis point. We believe that the company's spreads will likely widen over the next 12 months. We believe any significant spending by the company either through development projects or acquisitions (depending on how it is financed) could be a credit event, as the company is relatively thinly capitalized. We believe that a further credit risk is the expiry of the Trans Mountain system's negotiated toll settlement at the end of 2005. The company is currently in negotiations with shippers to extend or renew the toll agreement. The company's earnings and cash flow in 2006 could be negatively affected by the outcome of the negotiation.

Company Risk Disclosure

In addition to the risks involved in investing in corporate debt securities generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

Corporate Debt – Pipelines & Utilities

Q2/05 Results – Leverage Concern Remains

Sue McNamara, CFA
(416)-359-4584
sue.mcnamara@bmonb.com

Event

Terasen reported Q2/05 EPS of $0.23 (after one-time adjustments), in line with our equity expectation.

Impact

Neutral.

Key Points

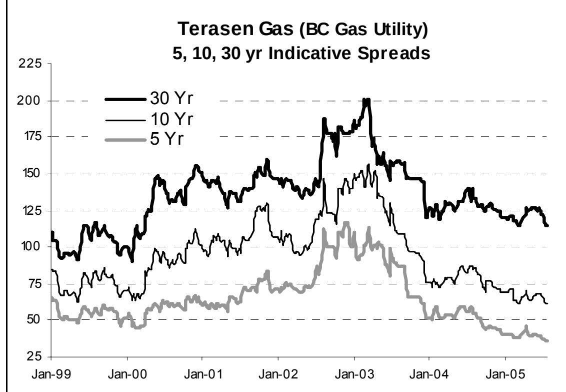
At June 30, 2005, the company's debt to total capital ratio was 64.6% versus 61.7% at year-end. If we assume that the company's available cash will be used to repay a portion of short-term debt, the company's ratio at quarter-end would decrease to 63.9%. We continue to believe that Terasen's leverage is higher than its peer group of comparable utilities. Although somewhat supported by the company's regulatory framework, we believe that the relatively high leverage could be a credit negative as the company pursues its robust list of development projects or undertakes a large scale acquisition.

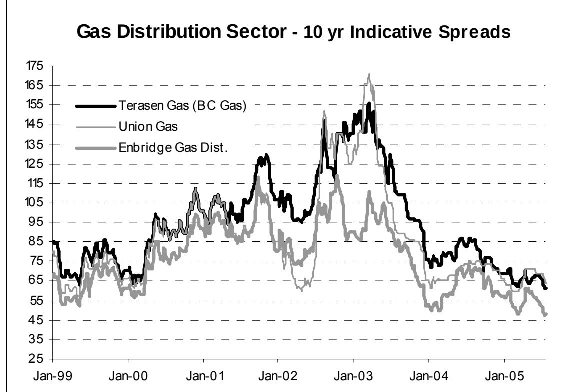
Recommendation

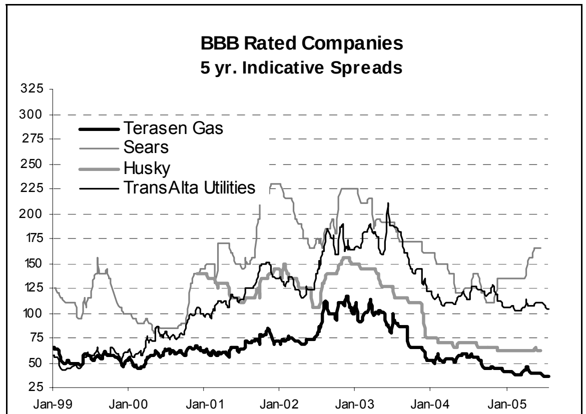
In 2005, Terasen Inc.'s 5-year, 10-year and 30-year generic credit spreads tightened by 8, 12 and 10 basis points, respectively. We believe that the company's spreads will likely widen over the next 12 months. We believe any significant spending by the company either through development projects or acquisitions (depending on how it is financed) could be a credit event, as the company is relatively thinly capitalized. We believe that a further credit risk is the expiry of the Trans Mountain system's negotiated toll settlement at the end of 2005. The company is currently in negotiations with shippers to extend or renew the toll agreement. The company's earnings and cash flow in 2006 could be negatively affected by the outcome of the negotiation. We also believe that regulatory risk at Terasen Gas is likely rising.

Senior Unsecured Debt Ratings

DBRS	S&P	Moody's
A (Low)	BBB-	A3
Stable	Stable	Stable







*S&P Rating

Q2/05 Results

Terasen reported Q2/05 EPS of $0.28. Q2/05 EPS were $0.23, directly in line with our equity expectation, after adjusting for: (i) a $3.9 million after-tax mark-to-market gain relating to Clean Energy's (40.4% - Terasen) price risk management activities; and (ii) approximately $1.15 million of tax benefits associated with the Express Pipeline attributable to Q1/05. For additional views, please refer to the equity research comment on Terasen Inc. by BMO Nesbitt Burns' equity analyst Karen Taylor.

Cash Flow

Terasen reported free cash of -$2.8 million during the quarter versus $25.4 million in Q2/04. The variance is largely attributable to an increase in capital expenditures ($43.1 million in Q2/05 versus $31.8 million in Q2/04) and a change in the working capital requirements contribution to operating cash flow ($9.8 million in Q2/05 versus $32.8 million in Q2/04). The free cash flow deficiency was funded with a draw on available cash.

Capital Resources

During the quarter, the company repaid $43 million and $6.4 million of short-term and long-term debt, respectively, from available cash. At quarter end, Terasen had $91.6 million of available cash remaining. Terasen Inc. has no debt maturities in 2005 and 2006, whereas Terasen Gas (100% - Terasen Inc.) has debt maturities of $350 million in 2005 and $220 million in 2006. We believe that the maturities will likely be refinanced or repaid with short-term debt issuance. At quarter-end, the company and its subsidiaries had $743 million available under its total lines of credit of $1.4 billion. At June 30, 2005, the company's debt to total capital ratio was 64.6% versus 61.7% at year-end. If we assume that the company's available cash will be used to repay a portion of short-term debt, the company's ratio at quarter-end would decrease to 63.9%. We continue to believe that Terasen's leverage is higher than its peer group of comparable utilities. Although somewhat supported by the company's regulatory framework, we believe that the relatively high leverage could be a credit negative as the company pursues its robust list of development projects or undertakes a large scale acquisition.

Source: Company Reports

Credit Ratings

Terasen Inc.'s senior unsecured debt is rated A(Low), BBB- and A3 by DBRS, S&P and Moody's, respectively. The outlook from all three rating agencies is Stable. S&P provides ratings coverage of the Terasen companies, based on publicly available information.

In its latest summary report on Terasen Inc., (June 3, 2005) S&P stated that the company's below average financial risk profile reflects the company's existing gas regulatory framework and is somewhat offset by the pipelines' negotiated shipper contracts. S&P expects that any acquisition or major development project will have risk profiles consistent with the regulated, energy infrastructure-type assets and will be financed in line with the company's current capital structure.

DBRS believes that the medium-term outlook for Terasen remains relatively stable given the increased asset diversification providing to earnings and operating cash flows. DBRS notes that the key risks to Terasen's credit ratings are related to the outcome of the large-scale projects currently under development. DBRS states that as the importance of Terasen's pipelines and non-regulated businesses continues to grow, the company will require a higher equity base to maintain its current ratings.

Moody's rates Terasen Inc. one notch below that senior unsecured rating of Terasen Gas, at A2. The one-notch differential reflects the structural subordination of Terasen's debt to operating subsidiary debt at Terasen Gas, Terasen Gas Vancouver Island, Corridor, Trans Mountain and Express as well as the lack of ring fencing or other restrictions that could limit Terasen Gas' ability to make dividend payments to Terasen Inc. Moody's expects that Terasen will take a prudent approach to the scale and financing of investments in the petroleum pipeline segment.

Recommendation

In 2005, Terasen Inc.’s 5-year, 10-year and 30-year generic credit spreads tightened by 8, 12 and 10 basis points, respectively. We note that Terasen Inc.’s credit spreads likely reflect a scarcity premium, as the holding company has only two maturities outstanding totalling $300 million. We believe that the company’s spreads will likely widen over the next 12 months. We believe any significant spending by the company either through development projects or acquisitions (depending on how it is financed) could be a credit event, as the company is relatively thinly capitalized. We believe that a further credit risk is the expiry of the Trans Mountain system’s negotiated toll settlement at the end of 2005. The company is currently in negotiations with shippers to extend or renew the toll agreement. The company’s earnings and cash flow in 2006 could be negatively affected by the outcome of the negotiation. We also believe that regulatory risk at Terasen Gas is likely rising. On July 11, the British Columbia Utilities Commission (BCUC) issued an Order and Notice of Procedural Conference regarding an application by Terasen Gas Inc. and Terasen Gas (Vancouver Island) Inc. to determine the appropriate return on equity and capital structure, and to review and revise the automatic adjustment mechanism used by the BCUC to establish the allowed return on equity annually (please see Karen Taylor’s equity comment on Terasen Inc. dated July 15, 2005 for more details).

Kinder Morgan Acquisition Appears Credit Negative for Bondholders

Sue McNamara, CFA
(416)-359-4584
sue.mcnamara@bmonb.com

Event

On August 1, 2005, Kinder Morgan Inc. announced a definitive agreement to acquire all of the outstanding shares of Terasen Inc.

Impact

Negative.

Key Points

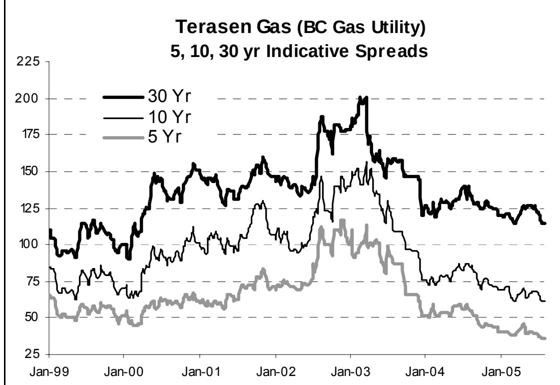
Kinder Morgan Inc. has stated that it intends to finance the acquisition with a combination of cash and equity up to a maximum proration of 65% cash and 35% equity. The company also stated on its conference call that it plans to fund the cash portion of the acquisition with debt financing provided by a Canadian subsidiary of Kinder Morgan Inc. After the closing of the transaction, Kinder Morgan expects that its debt to total capital ratio will likely increase to 56% versus 36.8% at June 30, 2005.

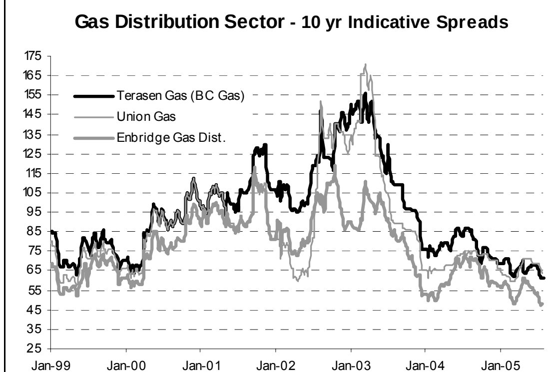
Recommendation

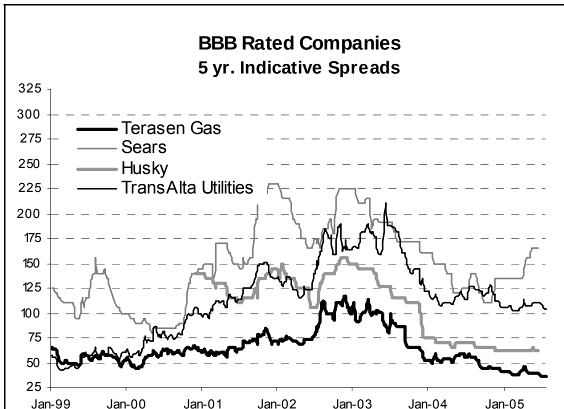
In 2005, Terasen Inc.'s 5-year, 10-year and 30-year generic credit spreads tightened by 8, 12 and 10 basis points, respectively. We note that Terasen Inc.'s credit spreads likely reflect a scarcity premium, as the holding company only has two maturities outstanding totalling $300 million. We believe that the acquisition is a credit negative and that the company's spreads will likely widen over the next 12 months. We believe that there is a risk that the credit ratings of the company could be negatively affected by the acquisition. As highlighted in detail within, Moody's, DBRS and S&P have placed Terasen Inc.'s credit Under Review with Negative Implications. S&P and DBRS have also placed KMI's credit ratings Under Review with Negative Implications. We note that the acquisition does address some of our previous credit concerns on Terasen Inc., namely the risk that any significant spending by Terasen Inc. either through development projects or acquisitions (depending on how it is financed) would be a credit event, as the company is relatively thinly capitalized.

Senior Unsecured Debt Ratings

DBRS	S&P	Moody's
A (Low)	BBB-	A3
UR - Negative	CW - Negative	UR - Negative







*S&P Rating

Acquisition

On August 1, 2005, Kinder Morgan Inc. announced a definitive agreement to acquire all of the outstanding shares of Terasen Inc. As part of the acquisition, Kinder Morgan will assume all of Terasen Inc's debt. The company had long- and short-term debt outstanding totalling $2.6 billion and $360.5 million, respectively, at June 30, 2005, of which $300 million was issued at the Terasen Inc. holding company level. Terasen Inc. has no debt maturities in the remainder of 2005, whereas Terasen Gas (100% - Terasen Inc.) has debt maturities of $350 million in 2005. We believe that the maturities will likely be refinanced or repaid with short-term debt issuance. The debt will likely mature prior to the expected close of the transaction (year-end 2005).

Kinder Morgan Inc. has stated that it intends to finance the acquisition with a combination of cash and equity up to a maximum proration of 65% cash and 35% equity. The company also stated on its conference call that it plans to fund the cash portion of the acquisition with debt financing provided by a Canadian subsidiary of Kinder Morgan Inc. After the closing of the transaction, Kinder Morgan expects that its debt to total capital ratio will likely increase to 56% versus 36.8% at June 30, 2005. For additional views on the acquisition, please refer to the equity research comment on Terasen Inc. by BMO Nesbitt Burns' equity analyst Karen Taylor, dated August 2, 2005.

Credit Ratings

Terasen Inc. Ratings

Terasen Inc.'s senior unsecured debt is rated A(Low), BBB- and A3 by DBRS, S&P and Moody's, respectively. The outlook is CreditWatch Negative by S&P and Under Review – Negative by DBRS and Moody's.

S&P has placed the credit ratings of Terasen Inc. and Terasen Gas on CreditWatch with Negative Implications. The outlook change reflects S&P's preliminary assessment that upon the closing of the transaction, the companies' credit quality will be assessed on a consolidated basis and will likely be equalized with the ratings on KMI, reflecting the same level of default risk. S&P states that the addition of significant amounts of debt will weaken KMI's balance sheet and debt protection measures. S&P must determine whether the effects of increased leverage eclipse the benefits of the addition of Terasen's asset base. Terasen's current credit quality reflects the average business profiles of the company's natural gas distribution business and liquids pipeline systems, offset by a weak financial profile. S&P further states that the company's below average deemed equity levels and allowed ROEs currently constrain the ratings on Terasen. We note that S&P provides ratings coverage of the Terasen companies, based on publicly available information.

DBRS has placed the ratings of Terasen Inc. Under Review with Negative Implications. DBRS states that the proposed transaction creates uncertainties with respect to the potential financing policies of Terasen, which could potentially have negative implications for its future financial profile. DBRS believes that ownership by a lower rated entity, KMI, could expose Terasen to increased dividend payments to support KMI's higher debt load. In its review, DBRS will also focus on the impact on the business and financial risk profile of the combined entity as well as tax, legal and regulatory issues of the cross-border transaction. We note that DBRS has maintained its Stable outlook on the A rated credit of Terasen Gas.

Moody's has placed the ratings of Terasen Inc. and Terasen Gas under review for possible downgrade. The change in outlook reflects the lower credit rating of KMI (Baa3) and its weak standalone financial profile relative to its peers. Moody's intends to assess what financial strategies KMI might employ for Terasen and what their implications might be for both Terasen and Terasen Gas. Moody's also states that Terasen Gas' ratings are being reviewed due to the lack of ringfencing or other restrictions that could limit its ability to make dividend payments to Terasen Inc. Moody's rates Terasen Inc. one notch below that senior unsecured rating of Terasen Gas at A2. The one-notch differential reflects the structural subordination of Terasen's debt to operating subsidiary debt at Terasen Gas, Terasen Gas Vancouver Island, Corridor, Trans Mountain and Express.

Kinder Morgan Inc. Ratings

DBRS rates Kinder Morgan Inc.'s senior unsecured debt BBB. The outlook is Under Review with Negative Implications. Based on its preliminary review, DBRS states that it expects the proposed transaction to have a positive effect on KMI's business risk as a result of the increased scope and scale of the company's regulated pipeline and gas distribution operations and growth potential. Conversely, DBRS states that the acquisition will likely increase KMI's balance sheet leverage to pre-2001 levels, which is relatively high and is expected to remain so for a few years.

S&P's credit rating on KMI is BBB. The outlook was changed to CreditWatch with Negative Implications from Stable following the announcement of the Terasen acquisition. The change in outlook reflects KMI's plan to increase financial leverage to fund the acquisition. S&P states that KMI's credit quality could be preserved if the potential improvement in KMI's business profile is capable of fully offsetting the higher financial risk. S&P stated in its latest summary on KMI (dated July 1, 2005) that the company's ratings are anchored by the company's regulated interstate natural gas pipeline and retail distribution assets, as well as the historically steady distributions that KMI receives from KMP.

Moody's rates the KMI's debt securities Baa2 with a Stable outlook. The company's credit rating and Stable outlook were affirmed following the acquisition announcement. Moody's believes that KMI will likely have sufficient free cash flow to cover the incremental interest expense and dividends from the acquisition financing. Moody's states that maintaining KMI's rating and outlook will entail achievement of the incremental earnings and cost savings that the company forecasts from Terasen as well as discipline in its dividend payouts. Moody's states that significant deviation from these expectations will cause the ratings agency to reassess KMI's ratings and outlook.

Recommendation

In 2005, Terasen Inc.'s 5-year, 10-year and 30-year generic credit spreads tightened by 8, 12 and 10 basis points, respectively. We note that Terasen Inc.'s credit spreads likely reflect a scarcity premium as the holding company has only two maturities outstanding, totalling $300 million. We believe that the acquisition is a credit negative and that the company's spreads will likely widen over the next 12 months. We believe that there is a risk that the credit ratings of the company could be negatively affected by the acquisition. As highlighted in detail above, Moody's, DBRS and S&P have placed Terasen Inc.'s credit Under Review with Negative Implications. S&P and DBRS have also placed KMI's credit ratings Under Review with Negative Implications. We note, however, that the acquisition does address some of our previous credit concerns on Terasen Inc., namely the risk that any significant spending by Terasen Inc., either through development projects or acquisitions (depending on how it is financed), would be a credit event, as the company is relatively thinly capitalized. We also believe that the following credit risks still remain:

1. The expiry of the Trans Mountain system's negotiated toll settlement at the end of 2005: the company is currently in negotiations with shippers to extend or renew the toll agreement. The company's earnings and cash flow in 2006 could be negatively affected by the outcome of the negotiation.
2. Regulatory risk at Terasen Gas: On July 11, the British Columbia Utilities Commission (BCUC) issued an Order and Notice of Procedural Conference regarding an application by Terasen Gas Inc. and Terasen Gas (Vancouver Island) Inc. to determine the appropriate return on equity and capital structure and to review and revise the automatic adjustment mechanism used by the BCUC to establish the allowed return on equity, annually (please see Karen Taylor's equity comment on Terasen Inc. dated July 15, 2005 for more details).

Company Risk Disclosure

In addition to the risks involved in investing in corporate debt securities generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Terasen Inc: 4Q04 results.

Mark Litowitz, 416-956-3858 on behalf of Joanna Zapior.

CREDIT IMPACT: Neutral. Fourth quarter credit metrics were better, both year-over-year and sequentially, with leverage improving by roughly 2% and 1.6% from last quarter and a year ago, respectively. Solid operating cash flows and debt reduction were the primary drivers for the improvements in credit metrics. Strong growth in annual earnings from the pipelines business more than offset weaker annual earnings from the gas distribution segment. We continue to rate this company Market Perform.

Terasen: 4Q04	Debt to CF	EBITDA to Interest	Debt to Cap at book	Debt to Cap at Mkt	Realized ROE	LTM CF	YTD FCF	Adjusted debt
4Q04	10.0	3.0	68.3%	46.1%	11.7%	296	89	2,936
4Q03	10.5	2.7	69.9%	50.4%	11.0%	289	-229	3,030
3Q04	10.4	3.0	70.3%	50.6%	12.0%	304	-23	3,053

	4Q04	4Q03	YTD 04	YTD 03
Earnings contribution:				
GAS DISTRIBUTION				
Terasen Gas	36.2	37.5	69.7	72.6
Terasen Gas VC Island	6.4	7.3	26.2	26.2
PETROLEUM TRANSP.				
TransMountain	11.2	10.0	39.4	35.8
Corridor	3.8	4.0	15.6	10.7
Express	4.9	3.9	15.9	9.7
WATER & UTILITY	0.7	0.4	6.6	4.1
OTHER	(9.3)	(8.8)	(23.6)	(23.0)
Number of gas customers	NA	NA	875,166	859,183
Gas transportation volume (in petajoules)	19.6	20.2	72	72.2
Trans Mountain Canadian Mainline (bbl/d)	239,100	218,500	236,100	216,100
Trans Mountain US Mainline, included in Canadian Mainline (bbl/d)	89,300	57,700	91,700	54,600
Express System (bbl/d)	175,400	174,000	175,300	171,200

- Earnings from Terasen Gas were weaker in 2004 compared to 2003. Lower 2004 earnings were primarily due to lower allowed ROE, which offset efficiency gains from the integration of Vancouver Island and BC mainland operations. Gas customers grew by 1.86%, with about 16,000 new customers signed up during the year.
- Strong demand for oil in both Canada and south of the border helped to increase 2004 throughput volumes on TransMountain and Express pipelines compared to 2003. The increased year-over-year throughput was the main reason for stronger earnings contribution from Petroleum Transportation in 2004 compared with 2003 pipeline earnings. A full year of earnings contribution from Corridor, which commenced operation in May 2003, also contributed to year-over-year growth in pipeline earnings.
- Water and utility services segment earnings improved by $2.5 million in 2004. Most of this growth in earnings was due to organic growth from existing water and utility services business. Another source of earnings growth in this segment came from the acquisition of Fairbanks Sewer and Water.

	Analyst	Senior unsecured DBRS	Senior unsecured Moody's	Senior unsecured S&P	Credit fundamentals (1-3 years)	Rating change probab. (1 year)	Valuation	YTD total return: Shorter bond – Bond	Shorter bond – Return	Longer bond – Bond	Longer bond – Return	YTD change in spread: Shorter bond – Curr Sprd	Shorter bond – YTD Chng	Longer bond – Curr Sprd	Longer bond – YTD Chng
Pipelines: *Solid, largely regulated fundamentals, though regulatory environment disadvantages those companies that have North American growth plans as Cdn leverage is higher and returns lower. Our investment thesis rests on two pillars: 1) operating excellence and cost management will be key in light of 2) regulators pressuring for cost control, including returns. Holding company risk has been increasing with expansion in non-regulated areas, equity market push for growth, and still elevated leveragex*															
Gas distribution: *Stable sector, with strong operating franchises and good fundamentals. However, no standalone credits left (exceptand credit quality is affected by parent activities. See also our comment on the pipeline sector.*															
Enbridge Inc	**JZ**	A	A3	A-	May weaken (M&A, projects)	Medium	C	5.8% 2008	0.63%	8.2% 2024	2.58%	38	▲ 2	98	▼ 3
Enbridge Pipelines	**JZ**	A(high)	NR	A-	Stable	Medium	R	5.621% 2007	0.48%	7.2% 2032	3.52%	33	▲ 3	121	▼ 4
Enbridge Gas Dist.	**JZ**	A	NR	A-	Stable	Medium	R	11.15% 2009	0.81%	6.1% 2028	2.75%	53	▲ NA	101	⇔ 0
Alliance Pipe	**JZ**	A(low)	A3	BBB+	Strong	Very low	F	7.23% 2015	1.81%	7.217% 2025	2.04%	48	▼ 15	94	▼ 5
There is continued M&A and large project risk - lots of noise in the news as juggling for positions continues. The market now prices its uncertainty about committment to "A" ratings. Pipe acquisition in the GoM has eroded current balance sheet to the levels conti permissible under the S&P rating. Over time, we see balance sheet quality potentially weakening as more risky assets may be added while mature, stable assets end up in income trust. That it has historically been a defensive credit (low spread volatility) sible us a pause but history may not repeat itself. We view **opcos** as better credits in line with DBRS logic but not necessarily better value. Note **EGD** has a 2005 rate case. Regulatory stability has improved after a recent spate of decisions & PBR is possible. Mainline is renegotiating its settlement this fall. For **Alliance,** we like the "structuring premium" of an amortizer and the simplicity of this credit; not affected by how the ownership is structured; valuation reflects the defensive nature of this credit. It continues to perform as expected. Mgt turnover has been signficant (CFO earlier and now CEO) but this has no credit impact either for this contractually structured credit															
TransCanada	**JZ**	A	A2	A- Neg	Stable but event risk	Medium	R	6.05% 2007	0.60%	6.5% 2030	3.64%	31	▼ 5	110	▼ 5
Neg outlook will take a long time to hatch, if at all - unless an acquisition forces S&P's hand (the most recent big one of a U.S. pipeline appears to have crystallized the agency thinking in a constructive way, subject to how conservative mgt will remainik will tak financing side) . Expansion in generation (including a now more likely restart of two more Bruce units), another potential large opportunistic acquisition & large projects in the longer term are credit risks. Regulatory environment continues to be unsate) . Expansi mgt's eyes which raises questions about whether the company will want to trustify some of the lower return regulated assets - a potential negative for bondholders.															
Duke (Westcoast)	**JZ**	A(low)	NR	BBB Pos	Improving	Low	R	5.7% 2008	0.66%	7.15% 2031	2.92%	48	▲ 2	123	⇔ 0
Duke (Union Gas)	**JZ**	A	NR	BBB Pos	Standalone stbl + DUK effect	Low	R	5.7% 2008	0.64%	8.65% 2025	2.51%	43	▲ 2	114	⇔ 0
MNEP	**JZ**	A	A1	A	Strong	Very low	F	NA	NA	6.9% 2019	1.45%	NA	NA	81	▲ 1
Duke took steps to turn the corner and the balance sheet repair actions have finally shown. Exit from non-core businesses continues & core regulated operations are stable. We think DENA will continue to be a source of grief for a while until markets improvtook until the new idea of contributing it to a joint venture hatches (lowering of risk). Resumed talk of opportunistic growth means that the golden age for bondholders is almost over (some upside remains from DENA cleanup & possible upgrade). We believe, in l th long run, **Union Gas's** distribution portion, as a non-core asset, is more separable from Duke than Westcoast. Its storage is a strategic asset to Duke. In the short term, Union provides solid cash flow to Duke and supports its credit quality. Spreads have performed reasonably well & are now in the middle of the utiltiy pack, leaving little further room for outperformance. For **MNEP**, we like structural protection and simplicity; valuation reflects the defensive nature of this credit.															
Terasen	**JZ**	A(low)	A3	BBB-	Stable but some event risk	Low	C	6.3% 2008	0.89%	NA	NA	55	▼ 3	NA	NA
Terasen Gas	**JZ**	A	A2	BBB	Stable	Low	C	NA	NA	6.95% 2029	2.87%	NA	NA	129	⇔ 0
Business fundamentals are a strong combination of a regulated gas distribution and pipelines, with aggressive financial profile determining the rating. Market pricing suggests that the market does not give full credence to the S&P rating (but still incorpoundamenta despite its now unsolicited status). Project CAPEX could be high. For **Terasen Gas**, we like the fundamentals of gas distribution at current spread, compared to historical spreads, but don't think that holdco spread can tighten much in the near term.

Terasen: 1Q05 results weaker as expected but no impact on bonds

Kevin Yong (416) 956-6273 kevin.yong@cibc.ca
Joanna Zapior (416) 594-8498 joanna.zapior@cibc.ca

CREDIT IMPACT: Neutral. We maintain our Market Perform rating on Terasen Inc. and Terasen Gas bonds. As expected, Terasen reported weaker year-over-year earnings and cash flow. Since the main driver (lower pipeline throughput) for weaker cash flow was a temporary event, there should be no impact on bond spreads or credit ratings from 1Q05 results. Credit protection measures showed slight improvement on a year-over-year comparison despite the weaker cash flow. [Terasen Inc.: A(low)/Stable; A3/Stable] and [Terasen Gas: A/Stable; A2/Stable]

- Terasen's weaker cash flow was due to weaker earnings contribution from the Petroleum Transportation segment. Weaker earnings from this segment were a result of lower throughput at Trans Mountain and Express – both throughputs were negatively impacted by oil sands production outages and refinery maintenance. **Given that the lower throughputs were caused by temporary short-term production and refinery outages, the weaker cash flow reported in 1Q05 has no material impact on credit.**
- Although net borrowings increased in the quarter, the increase in leverage was offset by an increase in cash balance. As a result, net debt was essentially flat compared to net debt at the end of 2004 and increased by 1% compared to 1Q04 net debt level. This was the primary reason why credit metrics showed a slight improvement despite softer year-over-year cash flow generation.

CREDIT METRICS

Terasen: 1Q05	Debt to CF	Debt to Cap at book	EBITDA to Interest	FFO to Interest	LTM Realized ROE	LTM CF	LTM FCF
1Q05	10.6	67.3%	3.0	1.6	9.6%	276	-18
1Q04	10.0	67.9%	2.7	1.5	9.9%	289	28
4Q04	9.9	68.2%	3.0	1.7	11.7%	296	95

CONSOLIDATED QUARTERLY RESULTS SUMMARY

	Revenue	EBITDA	Net Interest Expense	Earnings	FFO	Free Cash Flow	Net borrowings (repayment) of debt	Share Issuance (repurchase)	Net Debt
year-over-year change	3%	-3%	0%	-2%	-6%	-96%	220%	-47%	1%
quarter-over-quarter change	8%	10%	-3%	19%	13%	-91%	159%	5%	0%
1Q05	$667	$172	$45	$66	$99	$5	$115	$4	$2,926
1Q04	$649	$177	$45	$68	$105	$117	-$96	$8	$2,904
4Q04	$616	$156	$47	$56	$87	$56	-$194	$4	$2,936

SELECTED OPERATING STATISTICS

	1Q05	1Q04	4Q04	YTD 03
Operating Statistics:				
Number of gas customers	878,560	862,631	875,166	875,166
Gas transportation volume (in petajoules)	21.6	21.9	19.6	72
Trans Mountain Canadian Mainline (bbl/d)	170,000	240,400	239,100	236,100
Trans Mountain US Mainline (bbl/d)	44,500	93,300	89,300	91,700
Express System (bbl/d)	166,900	171,300	175,400	175,300

- Despite lower reported earnings and cash flow from 1Q05, management is maintaining its full-year 2005 earnings guidance.
- The lower earnings contribution from the pipelines was partially offset by a small improvement in gas distribution earnings, earnings from water utilities, and lower corporate expenses.
- Terasen Gas earnings improved by $1 million in 1Q05 compared 1Q04. Operating efficiencies and customer growth more than offset lower allowed ROE in 2005.

Terasen Gas	KY	A	A2	BBB	Stable	Low	C	NA	NA	6.95% 2029	5.57%	NA	NA	126	▼ 3
Business fundamentals are a strong combination of a regulated gas distribution and pipelines, with aggressive financial profile determining the rating. Market pricing suggests that the market does not give full credence to the S&P rating (but still incorpoundamental despite its now unsolicited status). Project CAPEX could be high. For **Terasen Gas**, we like the fundamentals of gas distribution at current spread, compared to historical spreads, but don't think that holdco spread can tighten much in the near term.															
Electric T&D: *Regulated; should have reasonably stable credit protection. Dark cloud of S&P and DBRS negative outlook on Ontario reflects political risk rather than material risk of deterioration in credit quality, and has by now almost dissipated though stability in the sector has not entirely returned. Our investment thesis is that given a general regulatory/rating agency/issuer stand-off, operating excellence and low cost structure will be key differentiating factors, given the aging assets and broad grid restructuot entirely retu North America.*															
Hydro One	KY	A Pos	A2	A	Stable	Low	R	7.15% 2010	2.21%	6.93% 2032	4.68%	34	▼ 1	85	▲ 4
Quasi-provincial credit nature still somewhat offset by political noise although the most recent policy changes appear to bypass Hydro One (with one exception being taking away from it the responsibility for long-term planning of the network); fairly valueovincial "provincially-supported" credit, otherwise expensive. Liberal government appears to be more constructive for the electricity sector than the Conservatives have been in terms of power market functionality, while the risk of divestiture remains very low.															
Toronto Hydro	KY	A	NR	A-	Stable	Low	R	6.11% 2013	2.42%	NA	NA	63	▲ 6	NA	NA
Some political and regulatory uncertainties remain. Scarcity value supports valuation. Recent political developments increase our confidence in a positive restructuring of the industry, including regulatory environment. Volatile non-regulated business ccal and reg impact earnings - mitigating factor is that TH said it will exit retail electricity by end 2006. We think that in the medium term performance-based regulation will introduce marginally higher operating risk.															

Our ratings:

Market Perform. The issuer's bonds are expected to perform in line with our universe of bonds over the next 12 months.
Outperfrom. The issuer's bonds are expected to outperform our universe of bonds over the next 12 months.
Underperform. The Issuer's bonds are expected to underperform our universe of bonds over the next 12 months.

Terasen Inc.

Better 2Q05 financial results from all segments

CREDIT IMPACT: Neutral. Quarterly financial and operating results were neutral for credit and do not change our view on the credit of Terasen Inc. or Terasen Gas. Leverage ratios remain high, relative to peers such as Enbridge, but are stable to slightly improved on a year-over-year and quarter-over-quarter basis. As expected, year-over-year increases in quarterly earnings and cash flow were mostly attributed to improved earnings from the petroleum transportation segment, which was a result of increased throughput at Trans Mountain and Express expansion. Terasen Gas earnings also exhibited solid growth due to customer growth and lower operating expenses. We remain **Market Perform** on both Terasen Inc. and Terasen Gas.

Figure 1: Credit metrics are stable to slightly improved

Terasen Inc.	Net Debt to CF	Net Debt to Cap at book	EBITDA to Interest	FFO to Interest	LTM Realized ROE	LTM CF	LTM FCF
2Q05	9.9	67.2%	3.0	1.7	11.9%	297	-48
2Q04	10.0	67.9%	2.8	1.5	10.6%	287	78
1Q05	10.1	67.3%	2.9	1.6	11.1%	290	-18

Sources: Company reports, CIBC World Markets

- **Credit metrics slightly improved** – as shown in Figure 1, credit metrics are stable to slightly improved on a year-over-year and quarter-over-quarter comparison. Net debt to capitalization has been fairly stable over the last six quarters in and around the 68% level for five of the last six quarters; exception was 4Q04 when this ratio ticked up to 69.6%. Coverage ratios remain solid on a year-over-year and quarter-over-quarter comparison.
- **Cash flow improved but free cash flow was negative** – growth in cash flow before working capital (FFO) was mostly a result of higher quarterly earnings. Free cash flow was slightly negative due to lower cash from working capital and higher CAPEX.
- **Trans Mountain's new incentive tolling settlement (ITS)** – management said on the conference call that discussions with the shippers were going well and that it expects a new agreement by the end of 2005. Strong support from shippers for the first phase of TMX 1 is positive for ITS negotiation.
- **Corridor expansion** – this is estimated to cost about $800 million. The proposed expansion is two-fold. The first would be increasing pumping capacity on the existing line, with a second phase involving the construction of a new 42-inch pipeline. Current capacity of 258 mbbl/d should increase to 278 mbbl/d by April 2006. Addition of new pipeline is expected to increase capacity to about 480 mbbl/d by 2009. Terasen expects to have some third-party shippers on the expanded capacity.

2Q04	$365	$100	$43	$18	$54	$28	-$42	$1	$2,877
1Q05	$667	$172	$45	$66	$99	$5	$115	$4	$2,926

Sources: Company reports, CIBC World Markets

- **Year-over-year increase in earnings came from all segments.** Natural gas earnings improved by $2.6 million in 2Q05 compared to 2Q04. Petroleum transportation earnings improved by $4.7 million in 2Q05 relative to 2Q04. Water and utility services earnings grew by $1.2 million year-over-year in the quarter.

- **Terasen Gas grows steadily** – improvement in earnings was due to strong customer growth, which is a result of a healthy economic environment in B.C., and better operating efficiencies. Both of these positives more than offset the lower allowed ROE in 2005 versus 2004; therefore, 2Q05 earnings increased by $2.6 million over 2Q04 earnings. Improved efficiencies resulted in a year-over-year decline in quarterly operating and maintenance expense of $1.8 million in 2Q05.

- **Petroleum transportation earnings strengthened due to a rebound in volume on Trans Mountain and higher than expected earnings from Express expansion** – Trans Mountain earnings improved by $0.8 million in 2Q05 over 2Q04 earnings. The big lift in earnings came from the Express expansion, which surprised to the upside with earnings of $7.6 million in 2Q05 compared to $3.2 million in 2Q04. Realization of additional tax benefits helped to boost the earnings in the quarter.

- **Water and utility services continue to grow slowly and steadily** – 2Q05 earnings from this segment improved to $3.8 million in 2Q05 compared to $2.6 million in 2Q04. Improved earnings were a result of growth in the Waterworks business from Alberta and B.C. and contribution from Fairbanks Sewer and Water. Management indicated on the conference call that it will continue to grow this business through small projects that provide good steady growth opportunities.

Figure 3: Growing liquids pipeline throughput and natural gas customers

There are continued M&A and large project risks - lots of noise in the news as jockeying for positions continues. The market now prices its uncertainty about committment to "A" ratings. Pipe acquisition in the GoM has eroded current balance sheet to the lecontinued permissible under the S&P rating. Over time, we see balance sheet quality potentially weakening as more risky assets may be added while mature, stable assets end up in income trust. That it has historically been a defensive credit (low spread volatility) under the pause but history may not repeat itself. We view opcos as better credits in line with DBRS logic but not necessarily better value. Note EGD has a 2006 rate case. Regulatory stability has improved after a recent spate of decisions & PBR is possible. Mainline negotiated ITS is complete and is neutral to slightly positive from a credit perspective. For Alliance, we like the "structuring premium" of an amortizer and the simplicity of this credit; not affected by how the ownership is structured; valuation reflects the defensive nature of this credit. It continues to perform as expected. Mgt turnover has been signficant (CFO earlier and now CEO) but this has no credit impact either for this contractually structured credit

TransCanada	KY	A	A2	A- Neg	Stable but event risk	Medium	F	6.05% 2007	1.94%	6.5% 2030	9.36%	30	▼ 6	115	↔ 0

Negative outlook will take a long time to hatch, if at all - unless an acquisition forces S&P's hand. We think that short-term acquisition risk is reduced with the announced sale of TransCanada Power LP interests to EPCOR, which should improve TRP's cash outlook w and balance sheet capacity when the transaction closes. Management's commitment to maintain TRP's "A" rating also mitigates short-term risks associated with acquisitions. We read this to mean that TRP will likely make acquisitions in a conservative way (ce sheet not be a detriment to bondholders). The improved balance sheet and renewed commitment to its "A" rating gives us more comfort that TRP's credit quality may not deteriorate if it were to make a large acquisition in the near-term.

Duke (Westcoast)	KY	A(low) UR-Dev	NR	BBB CW-Neg	Improving	Low	R	5.7% 2008	2.74%	7.15% 2031	8.29%	38	▼ 8	131	▲ 8
Duke (Union Gas)	KY	A UR-Dev	NR	BBB CW-Neg	Standalone stbl + DUK effect	Low	R	5.7% 2008	2.67%	8.65% 2025	7.85%	36	▼ 5	118	▲ 4
MNEP	KY	A	A1 UR-PD	A	Strong	Very low	F	NA	NA	6.9% 2019	6.57%	NA	NA	63	▼ 17

The announced merger with Cinergy should take some of the growth pressures off management, which is good for bondholders. Also good for bondholders in that this is an all stock deal and Cinergy's merchant assets (which is mostly coal) should diversify thenounce risks. Although S&P agrees with us that the transaction in itself is not a detriment to credit, it nevertheless put Duke on credit watch negative because of the uncertainty with regards to what Duke mgmt may do post merger - namely possibility of separatiS&P agrees with and unregulated utilities. We believe the separation of the regulated and unregulated businesses may actually be good for credit ratings of Westcoast and Union Gas. However, in the event that nothing happens post merger and Duke remains whole, as it is nunre ratings of Westcoast and Union Gas should remain unchanged. Of greater concern should be the talk of spinning out the Westcoast assets into an income trust, which we believe could be a mild negative (depending on how the trust is structured) for Westcoasta bondholders. Union Gas for now is not expected to be put into an income trust. For MNEP, we like structural protection and simplicity; valuation reflects the defensive nature of this credit.

Terasen	KY	A(low)	A3	BBB-	Stable but some event risk	Low	F	6.3% 2008	3.13%	NA	NA	46	▼ 12	NA	NA
Terasen Gas	KY	A	A2	BBB	Stable	Low	F	NA	NA	6.95% 2029	10.74%	NA	NA	118	▼ 11

Business fundamentals are a strong combination of a regulated gas distribution and pipelines, with aggressive financial profile. Although to be fair, we note that most of TER's consolidated debt resides at INL, which is a regulated utility that is restricts are a strong combi equity it can have in its capital structure by the BCUC. BCUC's allowed equity cushion for gas utilities is among the lowest in Canada. We also like the relatively conservative near-term growth of TER, with most of the growth focused on adding to regulatn have in it With ENB getting a new ITS, attention now is on Trans Mountain's ITS. We think that Trans Mountain's ROE will fall but not back to the allowed ROE. Producers will likely give Trans Mountain chances to make up most of the rebased earnings with incentives.B getti new ITS will have greater impact on TER's consolidated cash flow and credit metrics because all of Trans Mountain is under the current ITS.

Integrated electric: *A mixed bag of companies, ranging from trasnmission dominated, through fully integrated but in a regulated setting, to a mix of regulated T&D and non-regualated generation, and even E&P. Hence risk profiles vary and the companies in this group are not direct comparables.*

Emera	KY	BBB(high)	Baa2	BBB+ Neg	May weaken	Medium	R	NA	NA	NA	NA	NA	NA	NA	NA
Nova Scotia Power	KY	A(low)	Baa1	BBB+ Neg	May weaken	Medium	R	5.55% 2009	3.46%	8.85% 2025	8.78%	43	▼ 5	130	▲ 1

The negative regulatory decision for NSP that disallowed fuel adjustment clause and granted lower allowed ROE than anticipated is a negative for credit and may lead to increase rating risk. The potential negative cash flow impact of this decision means th regulatory increased risk that Emera will not be able to hit the credit metric targets that S&P has set for the company. Furthermore, the negative decision underscores the fact that NSP's relationship with its regulator has taken a step backwards rather than our expthat Emera will this relationship would improve. NSP recently filed 2006 rate case seeking 15% increase in rates in order to recover significant increase in fuel expense. We don't think that they will get the full amount, which puts NSP's cash flow and credit metrics atuld improve. NSP issuer here is really NSP, but even it has scarcity value.

EPCOR	KY	A(low)	NR	BBB+	Stable	Low	R	6.2% 2008	2.96%	6.8% 2029	11.11%	37	▼ 10	118	▼ 9

Credit fundamentals (i.e. credit metrics and tighter management) and lack of liquidity in the bond are positive for spreads. EPCOR's strong credit fundamentals is founded on its relatively low-risk business profile and a very strong balance sheet (end of 1s (i.e. credit met these positives are continued soft electricity market in Alberta, increased merchant exposure, and event risk related to renewed focus on growth. We see EPCOR's recent acquisiton of TransCanada's interest in TransCanada Power LP as neutral for bondholderse po these assets are bondholder-friendly and this acquisition was small enough to not have a material negative impact on EPCOR's balance sheet in 2005. The risk here is that management may not be done with growth yet.

Terasen Inc.

Kinder Morgan to acquire Terasen Inc.

CREDIT IMPACT: Neutral. **From a credit perspective we continue to think that this transaction should be neutral for Terasen bondholders** since most of the Terasen operating company (opco) bonds will likely remain at the opcos and the opcos will likely retain the current operating autonomy that they now enjoy. So in effect other than a change of parent ownership, there should be no fundamental changes to the bonds of Terasen opcos. **There may be some rating volatility due to the transaction and given the difference between Terasen opco ratings and Kinder Morgan Inc. (BBB rated with one positive outlook) ratings. We think that it is reasonable to assume that Terasen Inc. and Terasen opco ratings in the "A" category may be at risk.** As we go to print, Moody's placed Terasen Inc and Terasen Gas senior unsecured ratings under review for possible downgrade. If Terasen Inc and Terasen Gas ratings were to get downgraded (Moody's and DBRS), then we should expect to see some softness in spreads. At this point though, **given the scarcity value of Terasen bonds, strong demand for utility bonds, and the fact that nothing fundamentally has changed, we will maintain our Market Perform rating on Terasen Inc. and Terasen Gas bonds.** Terasen Inc. and Terasen Gas bond spreads have been resilient today with spreads unchanged to a touch wider this morning.

Conference call highlights:

- **All current opco level debt will remain at the opco level** – this means that all bonds of Terasen Gas, Terasen Gas Vancouver Island, Terasen Pipelines (Trans Mountain), and Terasen Pipelines (Corridor) will remain at the opco level. See previous comment for Terasen corporate structure and capital structure.
- **Opcos will retain current operating autonomy according to Kinder Morgan Inc. (KMI) management on the conference call** – KMI management specifically mentioned that Terasen Gas is a stand-alone operating company and will continue to operate that way post acquisition.
- **Current Terasen holdco may be replaced with a new wholly owned Canadian subsidiary of KMI** – management said on the conference call that KMI will establish a wholly owned Canadian subsidiary to hold all of Terasen's opcos. On a follow-up call to KMI, we confirmed that current plan is for this new Canadian subsidiary of KMI to replace the existing Terasen Inc. holdco. **What is uncertain is whether or not the three bond issues currently at Terasen Inc. (i.e. 6.3% 2008, 4.85% 2006, and 5.56% 2014) will be held by the new subsidiary or will be consolidated as KMI bonds.** At the time of our telephone conversation, KMI's investor relations were not able to give us a definitive answer to this question.

Dina Giacomelli –Editor **(416) 956-6056**

CIBC World Markets Inc. PO Box 500, 161 Bay Street, BCE Place, Toronto, Canada M5J 2S8 Bloomberg@wgec1 **(416) 594-7000**
CIBC World Markets Corp. 300 Madison Avenue, New York, NY 10017 **(212) 856-4000, (800) 999-6726**

- **KMI will have to finance this acquisition with about US$2 billion in debt –** which KMI expects to financed with a bridge facility and then terming this facility out with a long-term bond issue. Management said that the **current plan calls for the new Canadian subsidiary to issue public bonds to repay the bridge facility upon closing of the transaction.** The uncertainty (again KMI investor relations could not shed any light on this on the phone) is in what market KMI will issue the new bonds. It may be a C$ bond issue, or a US$ bond issue, or it may be a combination of both. Additionally, future debt financing for growth projects of the Canadian assets will be issued from this new subsidiary. If the entire amount is issued in Canada at once, then we may see spread weakness.

- **Ratings may be at risk –** both KMI and Terasen have talked to the rating agencies about the transaction. Terasen said that the rating agencies have all the details of the transaction, including the plan to maintain debt at the opco level and operating autonomy of the opcos. Given the big difference in ratings between KMI and Terasen, it would not be a surprise to see a rating agency like Moody's downgrading the ratings of Terasen opco bonds in order to close the ratings gap between KMI and Terasen.

- **KMI likes gas LDC business and cannot roll these assets down to its MLP –** KMI management said that it likes Terasen's gas LDCs (Terasen Gas and Terasen Gas Vancouver Island) and expects to keep these natural gas LDCs rather than selling them. KMI is also legally not able to roll these assets down into its MLP (Kinder Morgan Energy Partners, which BBB+ rated, is a publicly traded master limited partnership), as gas distribution businesses are excluded from MLP qualified business activities.

- **Canadian pipeline assets not tax efficient for MLP roll-down –** management said that it would not be tax efficient for KMI to roll-down Terasen's Canadian pipeline assets into its MLP. The reason is that these Canadian assets still have to pay Canadian taxes even if they were in a U.S. MLP. That said though, management did not rule out putting the U.S. portion of Express and Platte into KMI's MLP. Also, management said that income trust for the Canadian pipeline assets is another option but that it was too early to say definitively what their plans will be for the Canadian pipeline assets.

- **Future growth plans in Canada –** KMI's growth plans in Canada will likely be focused on pipeline expansions, terminal expansions in Alberta, and potential growth of a CO_2 pipeline in Alberta. Management said that outside of steady organic growth, it does not have big growth plans for Terasen's gas distribution businesses.

Pipelines & Utilities

Terasen Inc.

Kinder Morgan to acquire Terasen Inc.

OUR INITIAL TAKE: Negative from a ratings perspective but neutral from a credit perspective. Kinder Morgan (KMI) is rated BBB/stable by S&P, Moody's, and DBRS, and Fitch rates KMI BBB/Positive. From a credit perspective, KMI has lower leverage and higher coverage ratios than Terasen. Although, KMI has a better financial profile than Terasen, its business risk profile is higher risk than Terasen's. As such, we think that the better financial risk profile is offset by the higher risk profile of KMI and this transaction should be credit neutral.

- **KMI has a better financial profile than Terasen** – KMI ended 2004 with a debt to capital of about 43%, total debt to cash flow of 5x, and EBIT coverage of about 5.6x. By comparison, Terasen ended 2004 with a debt to capital of 68%, total debt to cash flow of almost 10x, and EBIT coverage of 2.4x.
- **KMI has a higher risk business profile than Terasen** – KMI operates predominantly regulated and fee-based energy infrastructure businesses in the U.S. Rocky Mountains and mid-continent regions of the U.S. KMI's assets consists of Natural Gas Pipeline Company of America (which is the largest transporter of natural gas in the Chicago area), small retail natural gas distribution, power assets, and ownership in Kinder Morgan Energy Partners, L.P. (a publicly traded master limited partnership that owns and operates a diverse portfolio of largely fee-based pipelines and midstream energy assets.
- **KMI has high management ownership** – KMI is 23% owned by management.

Details of the transaction:

- KMI proposes to acquire all common shares and assume all debt of Terasen Inc.
- Annual dividend of KMI is expected to rise US$3.50 in 2006 from a current dividend of US$3.00. This is significant as KMI's high payout ratio is a credit concern.
- Upon closing of the transaction the total debt to capital ratio of KMI is expected by management to increase to about 56%. Management expects that KMI will be able to retain its BBB rating upon closing of the transaction.
- Transaction will require the approval of 75% of Terasen shareholders, who will vote at a special meeting to be held on or before October 31, 2005.
- KMI is offering to acquire Terasen for C$35.91 per share, which represents a 14% premium on Friday's closing price. The offer is for a combination of shares and cash (65% cash and 35% shares).
- Terasen has an agreed to a break-fee of C$75 million.
- Terasen conference call at 10 AM at 1-877-375-5688. KMI has a conference call at 8 AM (web cast at www.kindermorgan.com).

We view **opcos** as better credits in line with DBRS logic but not necessarily better value. Note **EGD** has a 2006 rate case. Regulatory stability has improved after a recent spate of decisions & PBR is possible. Mainline negotiated ITS is complete and is neutral to slightly positive from a credit perspective. For **Alliance,** we like the "structuring premium" of an amortizer and the simplicity of this credit; not affected by how the ownership is structured; valuation reflects the defensive nature of this credit. It continues to perform as expected. Mgt turnover has been signficant (CFO earlier and now CEO) but this has no credit impact either for this contractually structured credit															
TransCanada	KY	A	A2	A- Neg	Stable but event risk	Medium	F	6.05% 2007	1.94%	6.5% 2030	9.36%	30	▼ 6	115	↔ 0
Negative outlook will take a long time to hatch, if at all - unless an acquisition forces S&P's hand. We think that short-term acquisition risk is reduced with the announced sale of TransCanada Power LP interests to EPCOR, which should improve TRP's cash outlook w and balance sheet capacity when the transaction closes. Management's commitment to maintain TRP's "A" rating also mitigates short-term risks associated with acquisitions. We read this to mean that TRP will likely make acquisitions in a conservative way (ce sheet not be a detriment to bondholders). The improved balance sheet and renewed commitment to its "A" rating gives us more comfort that TRP's credit quality may not deteriorate if it were to make a large acquisition in the near-term.															
Duke (Westcoast)	KY	A(low) UR-Dev	NR	BBB CW-Neg	Improving	Low	R	5.7% 2008	2.74%	7.15% 2031	8.29%	38	▼ 8	131	▲ 8
Duke (Union Gas)	KY	A UR-Dev	NR	BBB CW-Neg	Standalone stbl + DUK effect	Low	R	5.7% 2008	2.67%	8.65% 2025	7.85%	36	▼ 5	118	▲ 4
MNEP	KY	A	A1 UR-PD	A	Strong	Very low	F	NA	NA	6.9% 2019	6.57%	NA	NA	63	▼ 17
The announced merger with Cinergy should take some of the growth pressures off management, which is good for bondholders. Also good for bondholders in that this is an all stock deal and Cinergy's merchant assets (which is mostly coal) should diversify thenounce risks. Although S&P agrees with us that the transaction in itself is not a detriment to credit, it nevertheless put Duke on credit watch negative because of the uncertainty with regards to what Duke mgmt may do post merger - namely possibility of separatiS&P agrees with and unregulated utilities. We believe the separation of the regulated and unregulated businesses may actually be good for credit ratings of Westcoast and Union Gas. However, in the event that nothing happens post merger and Duke remains whole, as it is nunre ratings of Westcoast and Union Gas should remain unchanged. Of greater concern should be the talk of spinning out the Westcoast assets into an income trust, which we believe could be a mild negative (depending on how the trust is structured) for Westcoasta bondholders. Union Gas for now is not expected to be put into an income trust. For **MNEP**, we like structural protection and simplicity; valuation reflects the defensive nature of this credit.															
Terasen	KY	A(low)	A3	BBB-	Stable but some event risk	Low	F	6.3% 2008	3.13%	NA	NA	46	▼ 12	NA	NA
Terasen Gas	KY	A	A2	BBB	Stable	Low	F	NA	NA	6.95% 2029	10.74%	NA	NA	118	▼ 11
Business fundamentals are a strong combination of a regulated gas distribution and pipelines, with aggressive financial profile. Although to be fair, we note that most of TER's consolidated debt resides at INL, which is a regulated utility that is restricts are a strong combi equity it can have in its capital structure by the BCUC. BCUC's allowed equity cushion for gas utilities is among the lowest in Canada. We also like the relatively conservative near-term growth of TER, with most of the growth focused on adding to regulatn have in it With ENB getting a new ITS, attention now is on Trans Mountain's ITS. We think that Trans Mountain's ROE will fall but not back to the allowed ROE. Producers will likely give Trans Mountain chances to make up most of the rebased earnings with incentives.B getti new ITS will have greater impact on TER's consolidated cash flow and credit metrics because all of Trans Mountain is under the current ITS.															
Integrated electric: *A mixed bag of companies, ranging from trasnmission dominated, through fully integrated but in a regulated setting, to a mix of regulated T&D and non-regualated generation, and even E&P. Hence risk profiles vary and the companies in this group are not direct comparables.*															
Emera	KY	BBB(high)	Baa2	BBB+ Neg	May weaken	Medium	R	NA	NA	NA	NA	NA	NA	NA	NA
Nova Scotia Power	KY	A(low)	Baa1	BBB+ Neg	May weaken	Medium	R	5.55% 2009	3.46%	8.85% 2025	8.78%	43	▼ 5	130	▲ 1
The negative regulatory decision for NSP that disallowed fuel adjustment clause and granted lower allowed ROE than anticipated is a negative for credit and may lead to increase rating risk. The potential negative cash flow impact of this decision means th regulatory increased risk that Emera will not be able to hit the credit metric targets that S&P has set for the company. Furthermore, the negative decision underscores the fact that NSP's relationship with its regulator has taken a step backwards rather than our expthat Emera will this relationship would improve. NSP recently filed 2006 rate case seeking 15% increase in rates in order to recover significant increase in fuel expense. We don't think that they will get the full amount, which puts NSP's cash flow and credit metrics atuld improve. NSP issuer here is really NSP, but even it has scarcity value.															
EPCOR	KY	A(low)	NR	BBB+	Stable	Low	R	6.2% 2008	2.96%	6.8% 2029	11.11%	37	▼ 10	118	▼ 9
Credit fundamentals (i.e. credit metrics and tighter management) and lack of liquidity in the bond are positive for spreads. EPCOR's strong credit fundamentals is founded on its relatively low-risk business profile and a very strong balance sheet (end of 1s (i.e. credit met these positives are continued soft electricity market in Alberta, increased merchant exposure, and event risk related to renewed focus on growth. We see EPCOR's recent acquisiton of TransCanada's interest in TransCanada Power LP as neutral for bondholderse po these assets are bondholder-friendly and this acquisition was small enough to not have a material negative impact on EPCOR's balance sheet in 2005. The risk here is that management may not be done with growth yet.

Buy. Debt levels remain the principal knock in the credit markets against **Terasen Inc. (A(low)/ BBB-(pi)/ A3)** and its operating subsidiaries. The very thin deemed equity capitalization of its regulated gas distribution operations is the main driver of consolidated leverage. This leverage translates into weak credit ratios, with FFO interest coverage of just 2.8x in 2004, and only moderate prospects for improvement. Leverage appears to be the principal reason for the lowly "public information only" rating from S&P, which we think is far too conservative, but which we also acknowledge is unlikely to change. Apart from leverage, however, we see much to like in Terasen's businesses. All of its operating units exhibit very good stability of earnings, which is crucial to managing with leverage. Diversification is increasingly broad, with 2004 earnings split 56% from gas distribution, 40% from petroleum transportation, and 5% from water utility services. Compared to peers Enbridge and TransCanada PipeLines, we think Terasen's event risk is slightly lower, as we see Terasen management as less aggressive with acquisitions, and Terasen has a much lower likelihood of major participation in the big-ticket Alaska or Mackenzie Valley gas pipeline construction projects. Even if the big TMX project proceeds, it has distinct stages, and thus in our view less risk, than a one-shot line from Alberta to the West Coast of B.C. We see Terasen management's 6% earnings growth target as achievable with low-risk, incremental growth. In our judgement, these credit-positive features of Terasen compensate for most of its leverage handicap, and the roughly 10 bps of spread pickup over its peers make it, in our view, good value, in the context of today's expensive corporate market.

Gas Distribution

Terasen's current thrust in the gas distribution business is towards achieving operational efficiency gains. In particular, the company has already declared progress on "…improved operating efficiencies … through the ongoing integration of Terasen Gas and Terasen Gas Vancouver Island." This initiative brings to our mind a Toronto operations centre facilities tour staged in 2003 by sectoral peer Enbridge Gas Distribution, which left us very favourably impressed. The tour demonstrated what we see as solid, practical potential for operational efficiency gains in the gas distribution sector, opened up by the innovative application of modern information and communications technology, as well as other technical innovations. We believe similar applications are available to Terasen Gas Inc. and Terasen Gas Vancouver Island Inc. (TGVI), beyond the more direct synergies available on operational amalgamation of the two organizations. We note that an increasing amount of the efficiency gains must be shared with consumers under the multi-year performance based regulation settlement approved for 2004-2008 by the BCUC. The risk that efficiency gains could fail to meet targets, thereby lowering ROEs and interest coverage ratios, is a risk we take seriously, and it has been mentioned most recently by DBRS in its report on Terasen Gas this week. However, we think this risk is tempered by the ability to use technology to drive productivity in the sector.

TGVI has for some time pursued a project to increase natural gas capacity on Vancouver Island. TGVI's current proposal is for a compression facility with an adjacent LNG storage facility, with up to 1 billion cubic feet storage capacity. This would allow storage of gas shipped to the island during the off-peak season, and allow more efficient use of existing pipeline transmission capacity to the island. In February, the British Columbia Utilities Commission gave conditional approval to the LNG facility. The conditions included signing a long-term transportation service agreement with BC Hydro. BC Hydro, in turn, was to be the offtaker of the proposed Duke Point gas-fired power plant on Vancouver Island. Last week, BC Hydro abandoned the Duke Point project, as legal impediments achieved by the opposition of environmental activist groups had introduced delays that jeopardized the project's targeted 2007-2008 availability date. At present, it appears that the cancellation of Duke Point will delay TGVI's proposed LNG facility, perhaps by one to three years. TGVI will thus have a scaled-back capex program over the next few years, though some amounts (we believe less than $50 million) will probably be spent to allow the island's existing natural gas-fired electricity generation plant to shift towards base load operation (from peaking operation), to help meet electricity demand prior to BC Hydro's installation of a new electric transmission cable, probably in 2008. Part of BC Hydro's back-up plan to ensure electric system reliability on the Island until the new transmission cable is operative may include curtailment of industrial loads, though we understand that this curtailment will probably not stimulate near-term natural gas demand. Terasen believes that the LNG facility remains desirable to meet medium-term demand for natural gas on Vancouver Island, and we think the company will approach the regulator with a similar storage facility proposal at some future date.

Petroleum Transportation

Terasen has a one-third share in the Express pipeline, and is the operating partner. The Express expansion was completed on time, and a little under budget, in April, representing a capacity increase (on Express) of over

60%. The capital cost was about US$100 million, and was entirely debt financed through the $110 million US market debt issue last July. The earnings impact should be evident in Q2 results, and should annualize to about $5 million, or a 3% increase in Terasen's consolidated earnings. Express earnings are sensitive to changes in throughput, subject to a floor provided by ship-or-pay contracts for most of its capacity. Q1 throughputs on Express were weak, affected by temporary interruptions in Albertan oil sands production, notably at Suncor, though Q2 should show improvement.

The Trans-Mountain pipeline also saw lower volumes in Q1 due to Alberta production outages, but should also rebound in Q2. The Corridor pipeline is contracted (primarily to Shell Canada) on a ship-or-pay basis, and its earnings are not sensitive to throughput. Terasen continues to work with Shell towards a capacity expansion of Corridor from the current 155,000 bpd, which would occur in stages. The first of these, already approved by shippers, is a simple pumping capacity upgrade, good for an incremental 35,000 bpd for only $6.5 million. The second is a much larger expansion, for roughly $800 to $900 million. It is as yet unapproved, but could be available for service as soon as 2009.

Terasen management continues development work on the TMX proposal. Should Enbridge's Gateway proposal prevail, we would not view the "loss" as negative for Terasen credit quality. Nonetheless, we continue to think the staged nature of TMX probably makes it a less risky project from a credit perspective than a single-stage Edmonton to West Coast B.C. alternative (subject, of course, to financing, contracting, and other details).

Water

Terasen's water segment's second and third quarters (the strongest quarters seasonally) should see materially higher earnings this year, reflecting the inclusion of the Fairbanks, Alaska water utility's results. The Fairbanks acquisition, for US$30 million, closed on August 1, 2004. Management expects about one-third of Terasen's targeted average 6% future earnings growth will come from water utilities. We continue to think that the acquisition of assets in the sector is at present politically contentious among some interest groups in Canada, and even in the U.S. Nonetheless, we also think that Terasen should be able to appeal to some municipal councils by offering efficient, effective, consistently high-quality facility management, and thus expand its business gradually, with fairly small, low-risk capital or operating contracts, or acquisitions. Terasen has allocated up to $50 million of its capital plan for 2005 to the sector, though the availability and attractiveness of opportunities will always be hard to predict, and we anticipate "lumpy" growth for the segment. We note EPCOR's valuable water utility business (which contributed 27% of 2004 earnings), and we continue to view the water business line as a very attractive, diversifying complement to Terasen's gas distribution and petroleum transportation core business lines.

Preliminary Interest in TMX - Phase I; Underperform Rating Unchanged

Event

Terasen Pipelines (100% - Terasen Inc.) has announced that it has received favourable preliminary interest from potential shippers on the planned, phased expansion of the Trans Mountain Pipeline. The first phase of expansion, TMx1, would increase the capacity by 75,000 bbls/d to 300,000 bbls/d at a total cost of $570 million; 35,000 bbls/d of incremental capacity would be added by late 2006 at a planned cost of $205 million and involve the installation of additional pump stations; and a further 40,000 bbls/d would be added by late 2008, at a cost of $365 million and involve the construction of a pipeline loop. Terasen has received sufficient shipper interest to continue with its development effort on the TMx expansion, and we expect a further open-season process to obtain term, unconditional shipping agreements by mid-2005.

Impact

Potentially positive.

Forecasts

No change. We have incorporated the first portion of TMx1 into our financial model, however: (1) definitive transportation agreements and regulatory approvals have not yet been obtained; and (2) terms of the new incentive agreement governing the Trans Mountain pipeline commencing January 1, 2006 are not yet known, and the potential contribution from the expansion is unknown.

Valuation

Our target price reflects a weighted average valuation approach: 15x diluted 2006 EPS of $1.53 (12.5%), 1.75x 2006E book value of $14.29 (12.5%), and a target yield of 3.25% (75%), assuming 2005 dividends per share of $0.91.

Recommendation

We believe that the shares are fully valued and we rate them Underperform.

Company Risk Disclosure

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

* Reflects rating distribution of all companies where BMO NB has received compensation for Investment Banking services.
** Reflects rating distribution of all North American equity research analysts.

Ratings Key

BMO Nesbitt Burns uses the following ratings system definitions. **OP = Outperform** - Forecast to outperform the market; **Mkt = Market Perform** - Forecast to perform roughly in line with the market; **Und = Underperform** - Forecast to underperform the market; **(S) = speculative investment**; **NR = No rating at this time** - usually due to a company being in registration or coverage being initiated.

^ Market performance as measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company.

Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

Dissemination of Research

BMO Nesbitt Burns Research publications are available via our web site http://bmonesbittburns.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Multex. All of our research is made widely available at the same time to all BMO Nesbitt Burns client groups entitled to our research. Please contact your investment advisor or institutional salesperson for more information.

Q1/05 EPS Moderately Lower Than Expected; Underperform Rating Maintained

Event

Terasen reported Q1/05 EPS of $0.63 (basic) per share. After adjusting for the positive affect of a mark-to-market gain on Clean Energy's (45% - Terasen Inc.) price risk management activities recorded during the quarter, reported basic EPS were $0.60, moderately lower than our expectation of $0.64 per share. The variance between expected and actual performance is largely attributable to a $0.05 per share reduction in the contribution from the Trans Mountain Liquids Pipeline System, due to production outages in Q1/05 at Syncrude and Suncor and refinery turnarounds at facilities connected to the system in British Columbia and Washington State.

Impact

Slightly negative.

Forecasts

Our 2005 and 2006 diluted EPS estimates of $1.47 and $1.55 are unchanged. We note that despite lower Q1/05 performance, management indicated that it remains comfortable with its established EPS growth rate of 6% per annum.

Valuation

Our target price of $27.75 reflects a weighted average valuation approach: 15x diluted 2006E EPS of $1.55 (12.5%), 1.75x 2006E book value of $14.34 (12.5%) and a target yield of 3.25% (75%), assuming 2006E dividends per share of $0.94.

Recommendation

We believe that the shares are fully valued at present levels and we rate them Underperform.

Details & Analysis

Terasen reported Q1/05 EPS of $0.63 (basic) per share. After adjusting for the positive affect of a mark-to-market gain on Clean Energy's (45% - Terasen Inc.) price risk management activities recorded during the quarter, reported basic EPS were $0.60, moderately lower than our expectation of $0.64 per share. The variance between expected and actual performance is largely attributable to a $0.05 per share reduction in the contribution from the Trans Mountain Liquids Pipeline System, due to production outages in Q1/05 at Syncrude and Suncor and refinery turnarounds at facilities connected to the system in British Columbia and Washington State.

Q1/05 financial performance is set out in Table 1.

Source: Company Reports

We believe that the following remarks are relevant about Q1/05 performance:

- Average transportation volumes on the Trans Mountain and Express Pipeline systems were adversely affected by oil sands production issues: throughput on the Express System declined by 2.6% to 166,900 bbls/d and throughput on the Trans Mountain System declined by a more substantive 29.3% to average 170,00 bbls/d during the quarter. The two systems have a certain amount of volume-related income variability, due to the nature of the tolling arrangements in place:

  Trans Mountain – shipping tariffs are determined pursuant to an Incentive Tolling Agreement that expires at the end of 2005. Under this agreement, base tolls are calculated on an agreed throughput level of 189,000 bbls/d for each year of the settlement. Trans Mountain accepts the risk and benefit associated with variations in actual throughput within a defined band of 179,000 bbls/d to 201,000 bbls/d. For volumes greater than 201,000 bbls/d, Trans Mountain and its shippers share the associated benefits 50/50. If average throughput is below 179,000 bbls/d, then shippers bear 100% of the risk. Average volumes shipped on the system in Q1/05 were lower than the minimum threshold and revenues were based on a minimum ship-or-pay level of 179,000 bbls/d in the quarter.

Express – approximately 126,000 bbls/d of the initial 172,000 bbls/d of capacity is subject ship-or-pay transportation service agreements with terms through 2014 and 2015. Approximately 84% of the incremental 108,000 bbls/d of new capacity placed in-service in April 2005 is also subject to long-term ship-or-pay transportation service agreements. Approximately 77% of the 280,000 bbls/d capacity of the pipeline is now subject to ship-or-pay agreements with terms through 2012 to 2015. We note that the tariffs under the transportation service agreements are payable only if the pipeline is available to transport crude to Casper, Wyoming from Hardisty, Alberta.

- Our estimates are exclusive of mark-to-market gains and losses. We note that the company has deconsolidated Clean Energy and is now equity accounting for the entity, as a result of changes due to restructuring and amendments to voting arrangements of Clean Energy's Board of Directors. New financing expected to support the growth of the entity is expected to dilute Terasen's interest in Clean Energy, from the current level of 45% to just less than 30%. We do not assume a material contribution from Clean Energy in our estimates and we normalized for periodic mark-to-market gains and losses associated with Clean Energy's fuel risk management activities.
- Performance in the natural gas distribution segment was largely in line with expectations, as was the contribution from the Corridor Pipeline and Express Pipeline.

Estimates

Our target price of $27.75 reflects a weighted average valuation approach: 15x diluted 2006E EPS of $1.55 (12.5%), 1.75x 2006E book value of $14.34 (12.5%) and a target yield of 3.25% (75%), assuming 2006E dividends per share of $0.94. We note the following:

- The company has a robust "pipeline" of projects, as set out below in Table 2. Our estimates include the following projects: Phase I expansion of the Trans Mountain System (completed in 2004 at a cost of approximately $16 million); Express/Platte System Expansion – Phases I and II (108,000 bbls/d of incremental capacity, completed and in-service April 1 at a cost of US$100 million); Corridor Pipeline debottlenecking (in-service date of Fall 2005 and $6.5 million cost); Part 1 of the TMX1 to add pump stations to increase the capacity of the Trans Mountain System by 35,000 bbls/d by late 2006 at a cost of $205 million; and LNG storage facility at Terasen Gas Vancouver Island at a cost of $100 million by 2007/08. We do not yet assume that the Anchor TMX 1 expansion proceeds (adds 40,000 bbls/d by late 2008 at a cost of $370 million).
- We do not yet assume a contribution from the more ambitious Southern or Northern capacity increases on the Trans Mountain mainline. We expect further open seasons in the future to more definitively establish shipper need and wiliness to enter into long-term

transportation services agreement. An open season is expected in Q3/05 to determine shipper interest in the Anchor TMX 1 looping project, highlighted previously.

Table 2. Projects Under Development

Name	Expansion Volume	Cost (Millions)	In-Service Date	Estimated Contribution (Per Share)	Comments
Trans Mountain - Phase I	27,000 bbls/d	C$16	Mid-2004	$0.005	Increase Capacity to 225,000 from 200,000 bbls/d

Heartland Terminal	NA	C$30-$120	2006/10	NA	5-7 million bbls of tank and cavern storage

Source: BMO Nesbitt Burns, Company Reports

- Our working assumption is that Terasen will negotiate on an exclusive basis with Shell as it relates to the planned development of that company's oil sands reserves near Fort McMurray. We note Shell's April 29, 2005 announcement that it plans to develop additional mining areas on the west side of Lease 13 and on Lease 90, adding another bitumen extraction train to the existing plant and a number of debottlenecking projects. These plans would increase the capacity of the existing Muskeg River Mine from 155,000 bbls/d to about 300,000 bbls/d, assuming regulatory approval is in place by mid-2006. Combined with planned volumes from the Jackpine Mine (approved in 2004), Shell could have approvals for up to 500,000 bbls/d of bitumen. Shell's development plan would add blocks of production of approximately 100,000 bbls/d, beginning on Lease 13 in 2006, concurrent with a similar-sized expansion of the Scotfold Upgrader and debottlenecking projects. Synthetic crude production would increase by about 300,000 bbls/d by 2010.

- The final outcome of the negotiation with Terasen regarding the required pipeline facilities is likely to change the project list highlighted above, combining projects and/or eliminating certain projects.

- The tolling arrangements on the Trans Mountain facilities are unclear at present, due to the present status of the Incentive Agreement on the system. As highlighted above, the agreement expires December 31, 2005, and negotiations to implement a new agreement are not well advanced. We do not expect material discussions to begin until Enbridge's Incentive Tolling Agreement for its Mainline System is substantially in-place. We also believe that shippers may also be inclined to reflect the change in the risk profile of the liquids transportation business versus the natural gas pipeline business into new agreements. We believe that there is a material risk that 2006E EPS may be adversely affected by the outcome of this negotiation.

- The company also disclosed that it too is in discussions with Chinese companies about potential investment in a new oils sands pipeline and have letter agreements that could be construed as Memorandums of Understanding.
- We have not priced an equity issue into our financial model over the forecast period. As highlighted in the attached consolidated summary sheet, Terasen is relatively thinly capitalized and a major pipeline project may require the issuance of equity to maintain balance sheet strength.

Valuation

Our target price of $27.75 reflects a weighted average valuation approach: 15x diluted 2006E EPS of $1.55 (12.5%), 1.75x 2006E book value of $14.34 (12.5%) and a target yield of 3.25% (75%), assuming 2006E dividends per share of $0.94.

Recommendation

We believe that the shares are fully valued at present levels and we rate them Underperform.

Company Risk Disclosure

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

I, Karen Taylor, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that I have not, am not, and will not receive, directly or indirectly, compensation in exchange for expressing the specific recommendations or views in this report.

General Disclosure

The information and opinions in this report were prepared by BMO Nesbitt Burns Research, the research department of BMO Nesbitt Burns Inc., and BMO Nesbitt Burns Ltee./Ltd. (“BMO Nesbitt Burns”). Harris Nesbitt Corp. (“HNC”) is an affiliate of BMO Nesbitt Burns. BMO Nesbitt Burns and HNC are subsidiaries of Bank of Montreal. The reader should assume that BMO Nesbitt Burns, HNC or their affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

The opinions, estimates and projections contained in this report are those of BMO Nesbitt Burns Research as of the date of this report and are subject to change without notice. BMO Nesbitt Burns Research endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Nesbitt Burns makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Nesbitt Burns or its affiliates that is not reflected in this report. This report is not to be construed as an offer or solicitation to buy or sell any security.

The research analyst and/or associates who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Nesbitt Burns, HNC and their affiliates, which includes the overall profitability of investment banking services. BMO Nesbitt Burns, HNC or their affiliates expect to receive or will seek compensation for investment banking services within the next 3 months from all issuers covered by BMO Nesbitt Burns Research.

BMO Nesbitt Burns, HNC or their affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Nesbitt Burns, HNC, their affiliates, officers, directors or employees may have a long or short position in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. BMO Nesbitt Burns, HNC or their affiliates may act as financial advisor and/or underwriter for the issuers mentioned herein and may receive remuneration for same. Bank of Montreal or its affiliates (“BMO Financial Group”) has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Nesbitt Burns Research. A significant lending relationship may exist between BMO Financial Group and certain of the issuers mentioned herein.

Company Specific Disclosure

Disclosure 2: BMO Nesbitt Burns has undertaken an underwriting liability with respect to this issuer within the past 12 months.

Disclosure 3: BMO Nesbitt Burns has provided investment banking services with respect to this issuer within the past 12 months.

Disclosure 10: This issuer is a client (or was a client) of BMO Nesbitt Burns, HNC or an affiliate within the past 12 months: Investment Banking Services.

Distribution of Ratings

Rating Category	BMO NB Rating	BMO NB Universe	BMO NB I.B. Clients*	First Call Universe**
Buy	Outperform	37%	43%	45%
Hold	Market Perform	47%	44%	47%
Sell	Underperform	16%	13%	8%

* Reflects rating distribution of all companies where BMO NB has received compensation for Investment Banking services.

** Reflects rating distribution of all North American equity research analysts.

Ratings Key

BMO Nesbitt Burns uses the following ratings system definitions. **OP = Outperform** - Forecast to outperform the market; **Mkt = Market Perform** - Forecast to perform roughly in line with the market; **Und = Underperform** - Forecast to underperform the market; **(S) = speculative investment**; **NR = No rating at this time** - usually due to a company being in registration or coverage being initiated.

^ Market performance as measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company.

Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

Dissemination of Research

BMO Nesbitt Burns Research publications are available via our web site http://bmonesbittburns.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Multex. All of our research is made widely available at the same time to all BMO Nesbitt Burns client groups entitled to our research. Please contact your investment advisor or institutional salesperson for more information.

Additional Matters

TO U.S. RESIDENTS: HNC and/or BMO Nesbitt Burns Securities Ltd., affiliates of BMO Nesbitt Burns, furnish this report to U.S. residents and accept responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through HNC and/or BMO Nesbitt Burns Securities Ltd.

TO U.K. RESIDENTS: The contents hereof are intended solely for the use of, and may only be issued or passed onto, persons described in part VI of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2001.

BMO Nesbitt Burns is a Member of CIPF. HNC is a Member of SIPC.

Corporate Debt – Pipelines & Utilities

Q1/05 Results – Increased Leverage Is a Credit Concern

Sue McNamara, CFA
(416)-359-4584
sue.mcnamara@bmonb.com

Event

Terasen reported Q1/05 EPS of $0.63 (basic). After adjusting for the positive effect of a mark-to-market gain on Clean Energy's (45% - Terasen) price risk management activities recorded during the quarter, reported basic EPS were $0.60, moderately lower than our equity expectation of $0.64. For additional views, please refer to the equity research comment on Terasen Inc. by BMO Nesbitt Burns' equity analyst Karen Taylor.

Impact

Slightly negative.

Key Points

In Q1/05, Terasen Inc.'s total debt to capitalization ratio increased to 67.3% versus 64.4% at December 31, 2004 (including preferred securities as long-term debt). Our 2005 and 2006 debt to capitalization estimates are 64.74% and 64.72%, respectively, considerably higher than the averages for the pipeline and utility universe of 47.85% and 47.77%, respectively (Table 1).

Recommendation

In 2005, Terasen Inc.'s 5-year and 10-year generic credit spreads tightened by 5 and 9 basis points, respectively, and the 30-year spreads have widened by 1 basis point. We believe that the company's spreads will likely widen over the next 12 months. We believe any significant spending by the company either through development projects or acquisitions (depending on how it is financed) could be a credit event, as the company is relatively thinly capitalized. We believe that a further credit risk is the expiry of the Trans Mountain system's negotiated toll settlement at the end of 2005. The company is currently in negotiations with shippers to extend or renew the toll agreement. The company's earnings and cash flow in 2006 could be negatively affected by the outcome of the negotiation.

BMO Nesbitt Burns

Company Risk Disclosure

In addition to the risks involved in investing in corporate debt securities generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

I, Sue McNamara, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that I have not, am not, and will not receive, directly or indirectly, compensation in exchange for expressing the specific recommendations or views in this report.

General Disclosure

The information and opinions in this report were prepared by BMO Nesbitt Burns Inc., and BMO Nesbitt Burns Ltee/Ltd. ("BMO Nesbitt Burns"). Harris Nesbitt Corp. ("HNC") is an affiliate of BMO Nesbitt Burns. BMO Nesbitt Burns and HNC are subsidiaries of Bank of Montreal. The reader should assume that BMO Nesbitt Burns, HNC or their affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

The opinions, estimates and projections contained in this report are those of BMO Nesbitt Burns as of the date of this report and are subject to change without notice. Investor Meetings with Management; No Change in View - Underperform

Event

On May 19 and May 20, we hosted a series of investor meetings and luncheon with Terasen Inc.'s senior management, including Randy Jesperson, President, Terasen Gas Inc., Gordon Barefoot, SVP and Chief Financial Officer, Terasen Inc. and David Bryson, Treasurer, Terasen Inc.

Impact

Neutral.

Forecasts

No change.

Valuation

Our target price of $27.75 reflects a weighted average valuation approach: 15x diluted 2006E EPS of $1.55 (12.5%), 1.75x 2006E book value per share of $14.34 (12.5%), and a target yield of 3.25% (75%), assuming 2006 dividends per share of $0.94.

Recommendation

We rate the shares of Terasen Underperform.

Details & Analysis

On May 19 and May 20, we hosted a series of investor meetings and luncheon with Terasen Inc.'s senior management, including Randy Jesperson, President, Terasen Gas Inc., Gordon Barefoot, SVP and Chief Financial Officer, Terasen Inc. and David Bryson, Treasurer, Terasen Inc. We believe that the presentation by management had the following key points:

- There has been no material change to the company's value proposition and vision since its investor day in late 2004. The company continues to target being a leading provider of energy transportation and utility infrastructure management services, characterized by operational excellence, consistent financial performance and sustained growth.
- We continue to expect that the company will remain focused on its core natural gas utility and oil pipeline operations, strive to produce reliable and consistent financial results from low risk businesses and continue to grow.
- Targeted EPS growth continues to be approximately 6% per annum, and dividend growth is expected to be sufficient to maintain an average payout ratio of approximately 60% (plus or minus 1%).
- The company continues to pursue the development of a robust list of natural gas and liquids pipeline opportunities, as set out in Table 1.

Table 1. Projects Under Development

Name	Expansion Volume	Cost (Millions)	In-Service Date	Estimated Contribution (Per Share)	Comments

Source: Company Reports, BMO Nesbitt Burns

- Management updated the major projects under development, with a particular focus on natural gas distribution opportunities in Terasen Gas and Terasen Gas Vancouver Island, and liquids pipeline opportunities. The company plans to hold an Open Season process beginning in the last week of June or the first week of July to ascertain definitive shipper interest in the Pump Station & Anchor facilities of TMx1. We note that the company intends to seek expressions of interest for the current capacity of the Trans Mountain Pipe Line (approximately 225,000–250,000 bbls/d of capacity) plus the 75,000 bbls/d of capacity from the two-staged expansion (35,000 bbls/d of incremental capacity by 2006 at a cost of $205 million and a further 40,000 bbls/d at a cost of $365 million by late 2008, as highlighted above in Table 1). Open season results are likely near the end of Q3 or early Q4 2005.

- No further updates were available regarding the status of the negotiation to implement a new incentive tolling agreement on the existing Trans Mountain Pipe Line. The current ITA expires on December 31, 2005. Management indicated that discussions have not yet advanced materially, largely due to the ongoing nature of a similar negotiation for Enbridge Pipelines (100% - Enbridge Inc.). The lack of clarity with respect to this agreement is a significant concern; we do not know how the existing facility will be tolled subsequent to year-end 2005 and we are equally uncertain of the commercial arrangements regarding the planned expansion of the Trans Mountain Pipe Line. We believe that there is a material risk that 2006 EPS may be adversely affected by the outcome of this negotiation.
- We do not expect the company to issue common share equity over the forecast period. Our financial model presently reflects an assumption that equity will be required in late 2007 or early 2008, subject to the number and magnitude of projects that proceed and whether the company develops these opportunities alone or with joint venture partners.

Estimates

Our diluted 2005 and 2006 EPS estimates of $1.47 and $1.55 are unchanged. We have reviewed and updated our financial model to reflect incremental information from management's presentation. Our estimates reflect a number of projects:

- $100 million LNG storage terminal on Vancouver Island, with a proposed in-service date of late 2007.
- $50 million of compression on the Terasen Gas Vancouver Island pipeline system, with a proposed in-service date of late 2006. We note that the company does not yet have a certificate of public convenience and necessity for this project.
- Construction of $35 million of natural gas distribution facilities in Whistler, with a proposed in-service date of late 2006, and $15 million for a ground pump heating system, also for Whistler, with a proposed in-service date of mid-2007.
- Construction of the Pump Station & Anchor facilities of TMx1, as highlighted above in Table 1. We have assumed that the facilities are tolled on a conventional cost of service methodology, with a return on equity that is closer to that allowed by the National Energy Board than the return currently earned on the existing Trans Mountain oil pipeline system.
- The contribution from the water business is expected to contribute approximately 2% of the company's targeted 6% EPS growth rate over the forecast period.

- No equity issues are assumed over the forecast period (2005 and 2006).

Valuation

Our target price of $27.75 reflects a weighted average valuation approach: 15x diluted 2006E EPS of $1.55 (12.5%), 1.75x 2006E book value per share of $14.34 (12.5%), and a target yield of 3.25% (75%), assuming 2006 dividends per share of $0.94.

Recommendation

We believe that the shares are fully valued and we rate the shares Underperform.

Company Risk Disclosure

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

Disclosure 3: BMO Nesbitt Burns has provided investment banking services with respect to this issuer within the past 12 months.

Disclosure 10: This issuer is a client (or was a client) of BMO Nesbitt Burns, HNC or an affiliate within the past 12 months: Investment Banking Services.

Distribution of Ratings

Rating Category	**BMO NB Rating**	**BMO NB Universe**	**BMO NB I.B. Clients***	**First Call Universe****
Buy	Outperform	37%	43%	45%
Hold	Market Perform	47%	44%	47%
Sell	Underperform	16%	13%	8%

* Reflects rating distribution of all companies where BMO NB has received compensation for Investment Banking services.

** Reflects rating distribution of all North American equity research analysts.

Ratings Key

BMO Nesbitt Burns uses the following ratings system definitions. **OP = Outperform** - Forecast to outperform the market; **Mkt = Market Perform** - Forecast to perform roughly in line with the market; **Und = Underperform** - Forecast to underperform the market; **(S) = speculative investment**; **NR = No rating at this time** - usually due to a company being in registration or coverage being initiated.

^ Market performance as measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company.

Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

Dissemination of Research

BMO Nesbitt Burns Research publications are available via our web site http://bmonesbittburns.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Multex. All of our research is made widely available at the same time to all BMO Nesbitt Burns client groups entitled to our research. Please contact your investment advisor or institutional salesperson for more information.

BC Hydro Abandons Duke Point Power Project; Underperform Rating Maintained

Event

On June 17, British Columbia Hydro and Power Authority (BC Hydro) announced that it is abandoning the proposed 252 MW Duke Point Power Project, pursuant to a decision on June 14 by the British Columbia Court of Appeal to hear an appeal of the project by a number of intervenors. BC Hydro indicated that the continuing appeal process involving this project (majority owned by Macquarie Essential Assets Partnership, together with Pristine Power Inc., and a group of private investors) increases the risk that the plant will not be built in time to meet peak load requirements on Vancouver Island in the winter of 2007/2008.

Impact

Slightly negative.

Forecasts

We have revised our financial model to reflect the consequence of this decision by BC Hydro on Terasen Gas Vancouver Island's plan to construct a $100 million LNG storage facility and add approximately $50 million of pipeline compression. Our diluted 2005 and 2006 EPS estimates decline slightly to $1.46 and $1.52, respectively, from $1.47 and $1.55 per share previously.

Valuation

Our target price reflects a weighted average valuation approach: 15x diluted 2006E EPS of $1.52 (12.5%), 1.75x 2006E book value of $14.31 (12.5%), and a target yield of 3.25% (75%), assuming 2006 dividends per share of $0.94.

Recommendation

We believe that the shares are fully valued at present levels and we rate them Underperform.

Details & Analysis

On June 17, British Columbia Hydro and Power Authority (BC Hydro) announced that it is abandoning the proposed 252 MW Duke Point Power Project, pursuant to a decision on June 14 by the British Columbia Court of Appeal to hear an appeal of the project by a number of intervenors. BC Hydro indicated that the continuing appeal process involving this project (majority owned by Macquarie Essential Assets Partnership, together with Pristine Power Inc., and a group of private investors) increases the risk that the plant will not be built in time to meet peak load requirements on Vancouver Island in the winter of 2007/2008.

The decision to abandon the Duke Point Power Project is expected to result in the following for Terasen:

- The Certificate of Public Convenience and Necessity (CPCN) issued by the British Columbia Utilities Commission (BCUC) on February 15 relating to the $100 million liquefied natural gas storage project at Mount Hayes, Vancouver Island is likely to expire, as the CPCN was conditional on a number of requirements (as set out in our comment dated February 18, 2005) that are not likely to be fulfilled. In order for the facilities to be constructed, Terasen Gas Vancouver Island (TGVI) may have to refile a facilities application with the BCUC, with a revised analysis pertaining to the economic need for the project. We believe that such an application may be filed in the fall of 2005.
- The planned in-service date of the LNG storage facility is now likely deferred at least one year. We have assumed a new in-service date of 2008 for modelling purposes versus 2007 previously.
- The planned construction of approximately $50 million of pipeline compression is now likely deferred and may not be required over the near to medium term. We have assumed for modelling purposes that the facilities are in service in 2008 versus 2007 previously.

Table 1 highlights Terasen's prospective projects under development.

Table 1. Projects Under Development

Heartland Terminal	NA	C$30-$120	2007/10	NA	5-7 million bbls of tank and cavern storage

Source: BMO Nesbitt Burns, Company Reports

Estimates

We have revised our financial model to reflect the consequence of this decision by BC Hydro on Terasen Gas Vancouver Island's plan to construct a $100 million LNG storage facility and add approximately $50 million of pipeline compression. Our diluted 2005 and 2006 EPS estimates decline slightly to $1.46 and $1.52, respectively, from $1.47 and $1.55 per share previously.

We assume that:

- Capital expenditures relating to the LNG storage facility are $23 million in 2006 and $38.5 million in each of 2007 and 2008, such that the in-service date of the facility is late 2008.
- Capital expenditures relating to the pipeline compression are $25 million in each of 2007 and 2008, such that the in-service date of the facilities is late 2008.

Valuation

Our target price reflects a weighted average valuation approach: 15x diluted 2006E EPS of $1.52 (12.5%), 1.75x 2006E book value of $14.31 (12.5%), and a target yield of 3.25% (75%), assuming 2006 dividends per share of $0.94.

Recommendation

We believe that the shares are fully valued at present levels and we rate them Underperform.

Company Risk Disclosure

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

I, Karen Taylor, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that I have not, am not, and will not receive, directly or indirectly, compensation in exchange for expressing the specific recommendations or views in this report.

General Disclosure

The information and opinions in this report were prepared by BMO Nesbitt Burns Research, the research department of BMO Nesbitt Burns Inc., and BMO Nesbitt Burns Ltee./Ltd. ("BMO Nesbitt Burns"). Harris Nesbitt Corp. ("HNC") is an affiliate of BMO Nesbitt Burns. BMO Nesbitt Burns and HNC are subsidiaries of Bank of Montreal. The reader should assume that BMO Nesbitt Burns, HNC or their affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

The opinions, estimates and projections contained in this report are those of BMO Nesbitt Burns Research as of the date of this report and are subject to change without notice. BMO Nesbitt Burns Research endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Nesbitt Burns makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Nesbitt Burns or its affiliates that is not reflected in this report. This report is not to be construed as an offer or solicitation to buy or sell any security.

The research analyst and/or associates who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Nesbitt Burns, HNC and their affiliates, which includes the overall profitability of investment banking services. BMO Nesbitt Burns, HNC or their affiliates expect to receive or will seek compensation for investment banking services within the next 3 months from all issuers covered by BMO Nesbitt Burns Research.

BMO Nesbitt Burns, HNC or their affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Nesbitt Burns, HNC, their affiliates, officers, directors or employees may have a long or short position in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. BMO Nesbitt Burns, HNC or their affiliates may act as financial advisor and/or underwriter for the issuers mentioned herein and may receive remuneration for same. Bank of Montreal or its affiliates ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Nesbitt Burns Research. A significant lending relationship may exist between BMO Financial Group and certain of the issuers mentioned herein.

Company Specific Disclosure

Disclosure 2: BMO Nesbitt Burns has undertaken an underwriting liability with respect to this issuer within the past 12 months.

Disclosure 3: BMO Nesbitt Burns has provided investment banking services with respect to this issuer within the past 12 months.

Disclosure 10: This issuer is a client (or was a client) of BMO Nesbitt Burns, HNC or an affiliate within the past 12 months: Investment Banking Services.

BMO Nesbitt Burns

Ratings Key
BMO Nesbitt Burns uses the following ratings system definitions. **OP = Outperform** - Forecast to outperform the market; **Mkt = Market Perform** - Forecast to perform roughly in line with the market; **Und = Underperform** - Forecast to underperform the market; **(S) = speculative investment**; **NR = No rating at this time** - usually due to a company being in registration or coverage being initiated.

^ Market performance as measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company.

Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

Dissemination of Research
BMO Nesbitt Burns Research publications are available via our web site http://bmonesbittburns.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Multex. All of our research is made widely available at the same time to all BMO Nesbitt Burns client groups entitled to our research. Please contact your investment advisor or institutional salesperson for more information.

Trans Mountain Expansion Filed with NEB

Impact

Neutral

Details & Analysis

Terasen has announced that it has filed an application with the National Energy Board (NEB) to increase the capacity of the Trans Mountain pipeline system to 260,000 bbls/d from 225,000 bbls/d. The $210 million expansion includes building new and upgrading existing pump stations between Edmonton, Alberta and Burnaby, BC to meet increased demand for petroleum products in West Coast markets. The proposed expansion is projected to be available in the first quarter of 2007, subject to regulatory approval. The Trans Mountain project is fully reflected in our model. The additional facilities will now be integrated with the renegotiation of the Incentive Tolling Arrangement. Our estimates for earnings per share are unchanged. We continue to review the application.

Please refer to pages 2 to 4 for Disclosure Statements, including the Analyst's Certification.

BCUC Sets Process in Motion to Review Capital Structure and ROE – Underperform Maintained

Event

On July 11, the British Columbia Utilities Commission (BCUC) issued an Order and Notice of Procedural Conference regarding an application by Terasen Gas Inc. (100% - Terasen Inc.) and Terasen Gas (Vancouver Island) Inc. (100% - Terasen Inc.) to determine the appropriate return on equity and capital structure and to review and revise the automatic adjustment mechanism used by the BCUC to establish the allowed return on equity, annually. On July 12, Terasen Pipelines (Trans Mountain) Inc. filed an application with the National Energy Board requesting approval for the construction and operation of facilities that will comprise the Trans Mountain Pump Station Expansion Project – 35,000 bbl/d expansion of the pipeline to 260,000 bbl/d at a cost of $210 million. The planned in-service date of the project is early 2007.

Impact

Neutral.

Forecasts

Our 2005 and 2006 diluted EPS estimates are unchanged and we note: (1) we typically do not price in requested ROE and deemed equity benchmarks, due to the lack of certainty that they will be approved as filed; and (2) the Trans Mountain Pump Station Expansion Project is currently reflected in our financial model.

Valuation

Our target price reflects a weighted average: 17x 2006E diluted EPS of $1.52 (12.5%), 1.8x 2006E BV per share of $14.31 (12.5%) and a target yield of 3.25%, assuming 2006 dividends per share of $0.94.

Recommendation

We believe the shares are fully valued and we rate them Underperform.

Details & Analysis

On July 11, the British Columbia Utilities Commission (BCUC) issued an Order and Notice of Procedural Conference regarding an application by Terasen Gas Inc. (100% - Terasen Inc.) and Terasen Gas (Vancouver Island) Inc. (100% - Terasen Inc.) to determine the appropriate return on equity and capital structure and to review and revise the automatic adjustment mechanism used by the BCUC to establish the allowed return on equity, annually.

Terasen Gas and Terasen Gas Vancouver Island filed an application with the BCUC on June 30 asserting that:

- Pursuant to the existing automatic adjustment mechanism and the prevailing long-term government of Canada bond yields, the 2006 benchmark ROE would be 7.71%. Under this scenario, Terasen is significantly discouraged from, and potentially challenged to be able to continue to invest capital in the province beyond that which is required to meet its basic obligation to serve in existing service areas.
- The need for change is established with the following six themes:

  1. The mechanism produces the lowest allowed return on equity of any regulated gas or electric utility in Canada and is out of step with other utility regulation in Canada.
  2. Good Intentions – Unintended Outcomes: when Government of Canada bond yields are below 6.00%, the sliding scale equal to 80% increases to 100% and reductions in forecast yield reduces the allowed return on equity on a one-for-one basis, fixing the equity risk premium to long-term yields at 350 basis points. This sliding scale results in a return penalty, making the formula the most punitive of those used by Canadian regulators.
  3. The Financial Times and Circumstances Have Changed: since the formula was constructed and first implemented there have been a number of changes, including the implementation of the North American Free Trade Agreement, a change in the yields of long-term Canada bonds versus the yields on long-term U.S. treasuries, and the evolution of the income trust market.
  4. A Single Test Does not Ensure the Best Outcome: regulators have all but abandoned the discounted cash flow and comparable earnings test and are relying almost exclusively on the equity risk premium test. Sole reliance on this latter test has resulted in unfairly low returns on equity for investors and may impair the financial integrity of the utilities and limit their ability to attract incremental capital on reasonable terms and conditions.
  5. Financial Flexibility to Compete: the bond rating agencies that rate the utilities' outstanding debt capital have expressed concern regarding the low allowed ROE and equity components in Canada versus those in the United States and that a credit

favourable regulatory environment is not so favourable as to justify the low returns and thin common equity capital structures typically seen in historically in Canada.

6. Risks of Terasen Gas and Terasen Gas Vancouver Island are Growing: key risks include: (i) erosion of natural gas' operating cost advantage over electricity; (ii) lower customer capture rates, resulting in substantially lower customer additions at similar housing start levels; (iii) greater penetration of multi-family dwellings in new housing starts due to lower new home affordability. Electricity has a dominant market share in the multi-family segment; (iv) a greater number of alternative energy sources are available now to prospective customers; (v) high natural gas prices have resulted in fuel switching and behavioural changes resulting in lower throughput.

7. Terasen Gas Vancouver Island: there are a number of issues specific to this utility: (i) low market penetration rate; (ii) recovery of a deficit of that reached $88 million in 2002; (iii) elimination of the Provincial royalty revenues in 2012, equal to $35 million per annum and covering 20% of the current cost of service; (iv) highly dependent on industrial load totalling more than 65% of throughput, for which approximately 2/3 is contracted on a year-to-year basis; (v) security of supply risk due to dependency on a single undersea high pressure transmission facility; and (vi) $75 million non-interest-bearing senior government debt, currently a credit to rate base.

- Terasen Gas Inc.: has requested an allowed return on equity of 10.5% for rate making purposes and deemed equity for rate purposes of 38%, versus 33% currently.

- Terasen Gas Vancouver Island: has requested an allowed return on equity of 11.25%, a 75 basis point premium to that of Terasen Gas (versus 50 basis points currently) and deemed equity of 40%, versus 35% currently.

We believe the following points are relevant regarding this application:

- The potential effective date of a revised automatic adjustment mechanism and higher deemed equity is January 1, 2006. We note that Terasen Gas' current multi-year incentive agreement expires on December 31, 2007 and the agreement governing Terasen Gas Vancouver Island expires December 31, 2005. Due to the proliferation of deferral accounts in Terasen Gas' incentive arrangements, it is unclear whether the implementation of a new return on equity and deemed equity would require a reopening of this incentive arrangement.

- If approved, the higher deemed equity would increase the utility requirement for equity by approximately $103 million at Terasen Gas and Terasen Gas Vancouver Island by approximately $24 million, for a total of $127 million. If we assume that Terasen Inc. must have, on a weighted basis, sufficient equity to fund the equity investment in its utility operations with equity, i.e., no double leverage, then Terasen Inc.'s net equity requirement is likely to increase by this amount, in addition to the equity requirement already assumed in our financial model of $125 million in 2008 to fund other growth initiatives.

- If approved, and prior to the dilution associated with an equity issue in 2006 and/or the cost of debt that would no longer be recoverable in rate base, we estimate that the contribution from Terasen Gas Inc. would increase by $0.19 per share (approximately $0.06 per share for each 100 basis point change in ROE and approximately $0.02 per share for every 100 basis point change in deemed equity), and the estimated contribution from Terasen Gas Vancouver Island would increase by approximately $0.05 per share (approximately $0.004 per share of every 100 basis point change in deemed equity and approximately $0.02 per share of every change in return on equity).

On July 12, Terasen Pipelines (Trans Mountain) Inc. filed an application with the National Energy Board requesting approval for the construction and operation of facilities that will comprise the Trans Mountain Pump Station Expansion Project – 35,000 bbl/d expansion of the pipeline to 260,000 bbl/d at a cost of $210 million. The planned in-service date of the project is early 2007. This project is fully reflected in our financial model; however,

- there is no tolling information in the application, making the estimated earnings contribution difficult to estimate; and
- the project is now anticipated to be wrapped into the renegotiation of the incentive arrangement governing the Trans Mountain Pipeline broadly. We believe the agreement may be subject to a material rebasing, due to a change in the perception of the risk profile of liquids pipeline systems since late 1999 and the likelihood that quality, reliability and system availability metrics similar to those implemented in the recently announced Enbridge liquids pipeline incentive agreement will also apply to the Trans Mountain Pipeline.

Estimates

Our 2005 and 2006 diluted EPS estimates are unchanged and we note: (1) we typically do not price in requested ROE and deemed equity benchmarks, due to the lack of certainty that they will be approved as filed; and (2) the Trans Mountain Pump Station Expansion Project is currently reflected in our financial model.

Valuation

Our target price reflects a weighted average: 17x 2006E diluted EPS of $1.52 (12.5%), 1.8x 2006E BV per share of $14.31 (12.5%) and a target yield of 3.25%, assuming 2006 dividends per share of $0.94.

Recommendation

We believe the shares of Terasen Inc. are fully valued at present levels. We rate them Underperform.

BMO Nesbitt Burns

Company Risk Disclosure
In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

* Reflects rating distribution of all companies where BMO NB has received compensation for Investment Banking services.
** Reflects rating distribution of all North American equity research analysts.

Ratings Key

BMO Nesbitt Burns uses the following ratings system definitions. **OP = Outperform** - Forecast to outperform the market; **Mkt = Market Perform** - Forecast to perform roughly in line with the market; **Und = Underperform** - Forecast to underperform the market; **(S) = speculative investment**; **NR = No rating at this time** - usually due to a company being in registration or coverage being initiated.

^ Market performance as measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company.

Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

Dissemination of Research

BMO Nesbitt Burns Research publications are available via our web site http://bmonesbittburns.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Multex. All of our research is made widely available at the same time to all BMO Nesbitt Burns client groups entitled to our research. Please contact your investment advisor or institutional salesperson for more information.

Q2/05 EPS in Line with Expectations; Underperform Rating Maintained

Event

Terasen reported Q2/05 EPS of $0.28. After adjusting for: (i) $3.9 million after-tax mark-to-market gain relating to Clean Energy's (40.4% - Terasen Inc.) price risk management activities; and (ii) approximately $1.15 million of tax benefits associated with the Express Pipeline attributable to Q1/05 performance, Q2/05 EPS were $0.23, directly in line with expectations.

Impact

Neutral.

Forecasts

Our 2005 and 2006 diluted EPS estimates of $1.46 and $1.52 are unchanged. We have restated Q1/05 results, increasing the contribution to $0.62 per share from $0.60 previously, reflecting the taxation benefits reported in Q2/05 associated with Q1/05.

Valuation

Our target price of $28.00 reflects a weighted average valuation approach: 17x 2006E diluted EPS of $1.52 (12.5%), 1.8x 2006E book value per share of $14.31 (12.5%) and a target yield of 3.25% (75%), assuming 2006 dividends per share of $0.94.

Recommendation

We believe the shares are fully valued at present levels and we rate them Underperform.

Details & Analysis

Terasen reported Q2/05 EPS of $0.28. After adjusting for: (i) $3.9 million after-tax mark-to-market gain relating to Clean Energy's (40.4% - Terasen Inc.) price risk management activities; and (ii) approximately $1.15 million of tax benefits associated with the Express Pipeline attributable to Q1/05 performance, Q2/05 EPS were $0.23, directly in line with expectations. Quarterly performance by segment and estimated segment performance in 2005 and 2006 is set out in Table 1.

Table 1. Quarterly and Annual Performance by Segment

Contribution by Segment ($ millions)	Q1/05	Q2/05	2005E	2006E
Terasen Gas	49.0	1.6	71.8	72.2
Terasen Gas (Vancouver Island)	6.7	6.1	24.7	25.4

Net Earnings to Common (Diluted)			$1.46	$1.52

Source: Company Reports, BMO Nesbitt Burns

We believe the following points are relevant about Q2/05 performance:

- The contribution from Terasen Gas Inc. (TGI) and Terasen Gas (Vancouver Island) was largely in line with expectations. We continue to assume that each utility earns in excess of its allowed return on equity over the forecast period. We have not yet priced in the potential reduction in allowed return resulting from the application of the current return on equity methodology and a lower interest rate outlook as per Consensus Economics. Similarly, we have not yet priced in a potential increase in allowed ROE and deemed equity as requested by both utilities in an application filed with the British Columbia Utilities Commission (BCUC) on June 30, due to the lack of certainty that the Commission will approve the application as filed.

- The contribution from the Trans Mountain Pipe Line increased in Q2/05 versus Q1/05, reflecting the resumption of full capacity utilization in Q2/05, following throughput curtailments associated with oil sands production outages and downstream refinery turnarounds. Management indicated on the conference call that there might be some throughput volatility in Q3/05, again related to oil sands production issues.

- The equity contribution from the Express Pipeline were largely in line with expectations; however, the reported tax benefits of approximately $2.3 million in Q2/05, about 50% of which were related to Q1/05, were not expected. We have fine-tuned our estimated 2005 and 2006 contribution from this pipeline to reflect taxation benefits that are expected to be recurring during the forecast period.

- The contribution from the Corridor Pipeline was lower than expected, due to a larger than expected reduction in the allowed return on equity on the pipeline pursuant to the pipeline's tolling agreement. Although our estimates reflect a National Energy Board-style reduction in allowed return, the actual decline appears to be higher than anticipated, reducing the segment contribution. We continue to believe the allowed return on this asset is lower than the company's equity cost of capital.
- The Water segment reported strong segment growth quarter over quarter and sequentially; Q2/05 performance of $3.8 million was slightly better than expected. We note that the company indicated it was actively pursuing acquisition growth opportunities in Alberta and British Columbia that could mature in the latter half of 2005 and that these acquisition opportunities are presently factored into the company's 6% per annum EPS growth target.
- Corporate expenses were generally in line with expectations and may be slightly higher in the second half of 2005. We note that the segment contribution set out in Table 1 above excludes the benefit associated with periodic mark-to-market gains recorded on Clean Power's price risk management activities. These gains are non-cash and our estimates are exclusive of these gains/losses.

Estimates

Our 2005 and 2006 diluted EPS estimates of $1.46 and $1.52 are unchanged. We have restated Q1/05 results, increasing the contribution to $0.62 per share from $0.60 previously, reflecting the taxation benefits reported in Q2/05 associated with Q1/05. As set out in Table 2, Terasen continues to have a significant number of projects under development. As we have noted previously, we have fully reflected the anticipated contribution from the following projects in our financial model (even if they extend beyond our current 2005 and 2006 forecast period):

- Pump station expansion of the Trans Mountain Pipeline that is expected to increase throughput by 35,000 bbls/d by late 2006 at a cost of $205 million.
- Anchor TMX1 expansion of the Trans Mountain Pipeline that is expected to increase throughput by 40,000 bbls/d and be in-service by late 2008 at a cost of $365 million.
- Corridor Pipeline looping and expansion project that is expected to increase capacity by approximately 1 million bbls/d and be in-service by mid-2009 at a cost of $800 million.
- $35 million Whistler Gas Pipeline project that is expected to be in-service in late 2006 and $15 million for the Whistler Ground Source Heat Pump that has a proposed in-service date of late 2007.

Table 2. Projects Under Development

Name	Expansion Volume	Cost (Millions)	In-Service Date	Estimated Contribution (Per Share)	Comments
Trans Mountain - Phase I	27,000 bbls/d	C$16	Mid-2004	$0.005	Increase Capacity to 225,000 from 200,000 bbls/d
Trans Mountain - Phase II	17,000 bbls/d	C$20	Early 2005	-	Dropped December 8/03
Express/Platte - Phase I & II	108,000 bbls/d	US$100	Apr-05	$0.10	Increase Capacity to 280,000 from 172,000 bbls/d

Source: Company Reports, BMO Nesbitt Burns

- Our estimates also reflect the July 20, 2005 application by TGVI for 2006 and 2007 rates filed with the BCUC.

We have two primary concerns relating to this stock:

- The sustainability of the contribution from the Trans Mountain Pipeline in 2006 versus 2005 given that the Incentive Tolling Agreement governing this asset expires at the end of 2005 (December 31, 2005) and must be renegotiated. While we believe that management is highly capable in this regard, we note that there has been a change in the perceived risk of the oil pipelines by shippers, interest rates have declined and quality, reliability and availability metrics are likely to be introduced to this new ITA, making above-average performance potentially more difficult.

- How much equity and when? As highlighted in the Consolidated Summary Sheet in Table 3, the company is relatively thinly capitalized. A material increase in the allowed deemed equity at TGI and TGVI and the successful execution of the company's organic greenfield and acquisition growth strategies could create the need for additional equity capital. When and how much remain to be determined.

Valuation

Our target price of $28.00 reflects a weighted average valuation approach: 17x 2006E diluted EPS of $1.52 (12.5%), 1.8x 2006E book value per share of $14.31 (12.5%) and a target yield of 3.25% (75%), assuming 2006 dividends per share of $0.94.

Recommendation

We believe the shares are fully valued at present levels and we them Underperform.

Company Risk Disclosure
In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

** Reflects rating distribution of all North American equity research analysts.

Ratings Key

BMO Nesbitt Burns uses the following ratings system definitions. **OP = Outperform** - Forecast to outperform the market; **Mkt = Market Perform** - Forecast to perform roughly in line with the market; **Und = Underperform** - Forecast to underperform the market; **(S) = speculative investment**; **NR = No rating at this time** - usually due to a company being in registration or coverage being initiated.

^ Market performance as measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company.

Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

Dissemination of Research

BMO Nesbitt Burns Research publications are available via our web site http://bmonesbittburns.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Multex. All of our research is made widely available at the same time to all BMO Nesbitt Burns client groups entitled to our research. Terasen Inc.

Q2/05 Results – Leverage Concern Remains

July 29, 2005
Research Comment
Corporate Debt – Pipelines & Utilities

Sue McNamara, CFA
(416)-359-4584
sue.mcnamara@bmonb.com

Event

Terasen reported Q2/05 EPS of $0.23 (after one-time adjustments), in line with our equity expectation.

Impact

Neutral.

Key Points

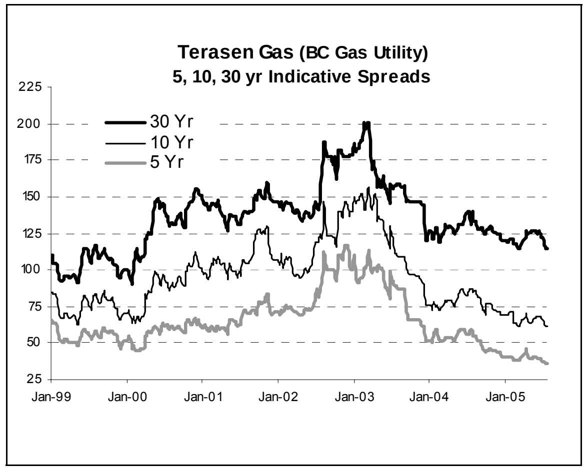
At June 30, 2005, the company's debt to total capital ratio was 64.6% versus 61.7% at year-end. If we assume that the company's available cash will be used to repay a portion of short-term debt, the company's ratio at quarter-end would decrease to 63.9%. We continue to believe that Terasen's leverage is higher than its peer group of comparable utilities. Although somewhat supported by the company's regulatory framework, we believe that the relatively high leverage could be a credit negative as the company pursues its robust list of development projects or undertakes a large scale acquisition.

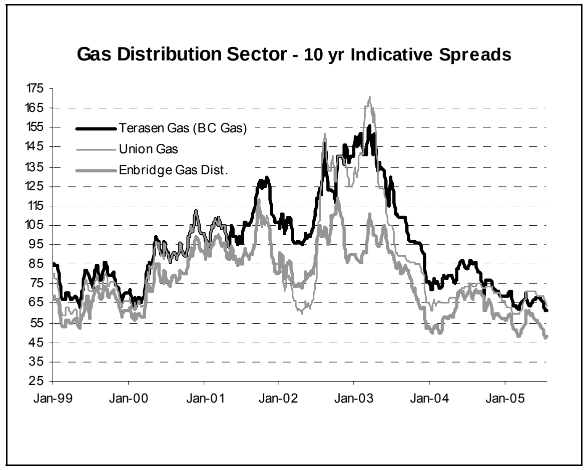
Recommendation

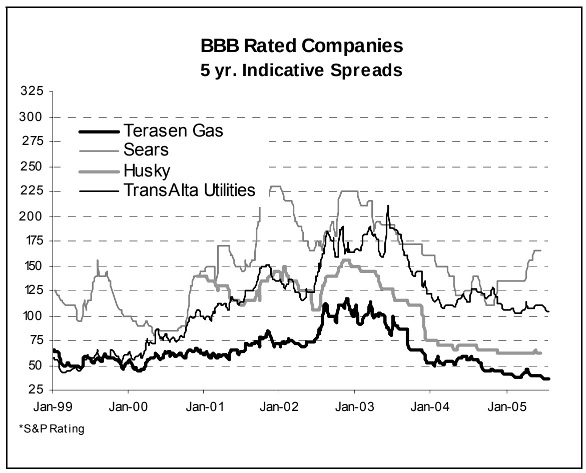
In 2005, Terasen Inc.'s 5-year, 10-year and 30-year generic credit spreads tightened by 8, 12 and 10 basis points, respectively. We believe that the company's spreads will likely widen over the next 12 months. We believe any significant spending by the company either through development projects or acquisitions (depending on how it is financed) could be a credit event, as the company is relatively thinly capitalized. We believe that a further credit risk is the expiry of the Trans Mountain system's negotiated toll settlement at the end of 2005. The company is currently in negotiations with shippers to extend or renew the toll agreement. The company's earnings and cash flow in 2006 could be negatively affected by the outcome of the negotiation. We also believe that regulatory risk at Terasen Gas is likely rising.

Senior Unsecured Debt Ratings

DBRS	S&P	Moody's
A (Low)	BBB-	A3
Stable	Stable	Stable







Q2/05 Results

Terasen reported Q2/05 EPS of $0.28. Q2/05 EPS were $0.23, directly in line with our equity expectation, after adjusting for: (i) a $3.9 million after-tax mark-to-market gain relating to Clean Energy's (40.4% - Terasen) price risk management activities; and (ii) approximately $1.15 million of tax benefits associated with the Express Pipeline attributable to Q1/05. For additional views, please refer to the equity research comment on Terasen Inc. by BMO Nesbitt Burns' equity analyst Karen Taylor.

Cash Flow

Terasen reported free cash of -$2.8 million during the quarter versus $25.4 million in Q2/04. The variance is largely attributable to an increase in capital expenditures ($43.1 million in Q2/05 versus $31.8 million in Q2/04) and a change in the working capital requirements contribution to operating cash flow ($9.8 million in Q2/05 versus $32.8 million in Q2/04). The free cash flow deficiency was funded with a draw on available cash.

Capital Resources

During the quarter, the company repaid $43 million and $6.4 million of short-term and long-term debt, respectively, from available cash. At quarter end, Terasen had $91.6 million of available cash remaining. Terasen Inc. has no debt maturities in 2005 and 2006, whereas Terasen Gas (100% - Terasen Inc.) has debt maturities of $350 million in 2005 and $220 million in 2006. We believe that the maturities will likely be refinanced or repaid with short-term debt issuance. At quarter-end, the company and its subsidiaries had $743 million available under its total lines of credit of $1.4 billion. At June 30, 2005, the company's debt to total capital ratio was 64.6% versus 61.7% at year-end. If we assume that the company's available cash will be used to repay a portion of short-term debt, the company's ratio at quarter-end would decrease to 63.9%. We continue to believe that Terasen's leverage is higher than its peer group of comparable utilities. Although somewhat supported by the company's regulatory framework, we believe that the relatively high leverage could be a credit negative as the company pursues its robust list of development projects or undertakes a large scale acquisition.

Source: Company Reports

Credit Ratings

Terasen Inc.'s senior unsecured debt is rated A(Low), BBB- and A3 by DBRS, S&P and Moody's, respectively. The outlook from all three rating agencies is Stable. S&P provides ratings coverage of the Terasen companies, based on publicly available information.

In its latest summary report on Terasen Inc., (June 3, 2005) S&P stated that the company's below average financial risk profile reflects the company's existing gas regulatory framework and is somewhat offset by the pipelines' negotiated shipper contracts. S&P expects that any acquisition or major development project will have risk profiles consistent with the regulated, energy infrastructure-type assets and will be financed in line with the company's current capital structure.

DBRS believes that the medium-term outlook for Terasen remains relatively stable given the increased asset diversification providing to earnings and operating cash flows. DBRS notes that the key risks to Terasen's credit ratings are related to the outcome of the large-scale projects currently under development. DBRS states that as the importance of Terasen's pipelines and non-regulated businesses continues to grow, the company will require a higher equity base to maintain its current ratings.

Moody's rates Terasen Inc. one notch below that senior unsecured rating of Terasen Gas, at A2. The one-notch differential reflects the structural subordination of Terasen's debt to operating subsidiary debt at Terasen Gas, Terasen Gas Vancouver Island, Corridor, Trans Mountain and Express as well as the lack of ring fencing or other restrictions that could limit Terasen Gas' ability to make dividend payments to Terasen Inc. Moody's expects that Terasen will take a prudent approach to the scale and financing of investments in the petroleum pipeline segment.

Recommendation

In 2005, Terasen Inc.'s 5-year, 10-year and 30-year generic credit spreads tightened by 8, 12 and 10 basis points, respectively. We note that Terasen Inc.'s credit spreads likely reflect a scarcity premium, as the holding company has only two maturities outstanding totalling $300 million. We believe that the company's spreads will likely widen over the next 12 months. We believe any significant spending by the company either through development projects or acquisitions (depending on how it is financed) could be a credit event, as the company is relatively thinly capitalized. We believe that a further credit risk is the expiry of the Trans Mountain system's negotiated toll settlement at the end of 2005. The company is currently in negotiations with shippers to extend or renew the toll agreement. The company's earnings and cash flow in 2006 could be negatively affected by the outcome of the negotiation. We also believe that regulatory risk at Terasen Gas is likely rising. On July 11, the British Columbia Utilities Commission (BCUC) issued an Order and Notice of Procedural Conference regarding an application by Terasen Gas Inc. and Terasen Gas (Vancouver Island) Inc. to determine the appropriate return on equity and capital structure, and to review and revise the automatic adjustment mechanism used by the BCUC to establish the allowed return on equity annually (please see Karen Taylor's equity comment on Terasen Inc. dated July 15, 2005 for more details).

Company Risk Disclosure

In addition to the risks involved in investing in corporate debt securities generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

I, Sue McNamara, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that I have not, am not, and will not receive, directly or indirectly, compensation in exchange for expressing the specific recommendations or views in this report.

General Disclosure

The information and opinions in this report were prepared by BMO Nesbitt Burns Inc., and BMO Nesbitt Burns Ltee/Ltd. ("BMO Nesbitt Burns"). Harris Nesbitt Corp. ("HNC") is an affiliate of BMO Nesbitt Burns. BMO Nesbitt Burns and HNC are subsidiaries of Bank of Montreal. The reader should assume that BMO Nesbitt Burns, HNC or their affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

The opinions, estimates and projections contained in this report are those of BMO Nesbitt Burns as of the date of this report and are subject to change without notice. Kinder Morgan Agrees to Acquire Company; Rating Raised to Market Perform

Event

Terasen and Kinder Morgan have jointly announced that Kinder Morgan has agreed to acquire all of the outstanding shares of Terasen Inc. for $35.91 per share. The total enterprise value of the transaction is approximately C$6.9 billion. The key details of the transaction are set out herein. We estimate that the transaction is priced at 24.6x estimated diluted 2005 EPS of $1.46, 2.62 x estimated 2005 book value per share of $13.66 and 11x EV/EBITDA. We believe the transaction is priced at the upper end of the relevant range.

Impact

Positive. We have increased our target price to $35.95 from $28.00 to reflect the proposed transaction. The proposed transaction effectively mitigates our concerns relating to this stock: (1) the potential adverse effect on EPS relating to the expiry of the Trans Mountain Incentive Tolling Agreement on December 31, 2005; (2) and the likelihood that the company would require significant equity financing in order to fund its development program and potentially higher deemed equity in its natural gas distribution segment.

Forecasts

Unchanged.

Valuation

Our revised target price of $35.95 is 23.6x 2006E diluted EPS of $1.52 (12.5%), 2.51 x estimated 2006 book value per share of $14.31 (12.5%) and a yield of 2.62% (75%), assuming 2006 dividends per share of $0.94. We believe the offer price is reasonable and we recommend that shareholders endorse it.

Recommendation

We believe the shares are reasonably valued and we rate them Market Perform.

Details & Analysis

Terasen and Kinder Morgan have jointly announced that Kinder Morgan has agreed to acquire all of the outstanding shares of Terasen Inc. for $35.91 per share. The total enterprise value of the transaction is approximately C$6.9 billion. The key details of the transaction are set out herein. We estimate that the transaction is priced at 24.6x estimated diluted 2005 EPS of $1.46, 2.62 x estimated 2005 book value per share of $13.66 and 11x EV/EBITDA. We believe the transaction is priced at the upper end of the relevant range. Subject to the approvals highlighted below, the transaction is expected to close by December 31, 2005.

Key Transaction Details: the key terms of the proposed transaction include the following:

- Prorated value of the offer is $35.91 per Terasen share is based on Kinder Morgan's share price and the C$/US$ exchange rates on July 29, of US$88.86 and $1.2233, respectively.
- 20% premium to the 20-day average closing price of Terasen common shares for the period ending July 29.
- Terasen holders will be able to elect:

    a. C$35.91 in cash;

    b. 0.3331 shares of Kinder Morgan common stock; or

    c. C$23.25 in cash plus 0.1165 shares of Kinder Morgan common stock.

    All elections will be subject to a proration such that cash elections are 65% of the total and stock elections are 35% of the total consideration paid.
- The requisite approval for the Arrangement Resolution is 75% of the votes cast on the Arrangement Resolution by Terasen Securityholders (other than Trans Mountain Pipe Line, which owns approximately 9.2 million common shares of Terasen Inc.) present in person or by proxy at the Terasen Meeting.
- The Terasen meeting will be held on or before October 31, 2005.
- There is a termination fee of $75 million (it appears as a U.S. dollar amount in Kinder Morgan's Form 8-K filing dated August 1, 2005 and a Canadian dollar amount in the Terasen presentation documents and in the press release disclosing the proposed Plan of Arrangement).
- The initial election date is December 20, 2005. If the effective date of the transaction is not reasonably likely to occur by the tenth business day after the initial election date, then this initial date will be extended.
- The transaction is subject to a number of regulatory approvals, including:
    - British Columbia Utilities Commission;

- Supreme Court of British Columbia (Plan of Arrangement was filed pursuant to Section 288 of the British Columbia Business Corporations Act);
- Hart-Scott-Rodino Antitrust Improvements Act.

It is not clear whether a ruling is required pursuant to the Competition Act (Canada).

Kinder Morgan is hosting a webcast at 8:30 a.m. EDT at www.kindermorgan.com and Terasen is hosting a conference call to discuss the transaction at 10:00 a.m. EDT at 1-877-375-5688.

We believe the following points are relevant about this proposed transaction:

- We believe the proposed transaction alleviates our two primary concerns with this stock: (1) the potential adverse effect on earnings per share associated with the expiry of the incentive tolling agreement relating to the Trans Mountain Pipe Line; and (2) the potential issuance of a significant amount of common equity to fund the company's robust project development profile and to increase the common equity capital at its regulated utility operations subject to a favourable decision in this regard by the British Columbia Utilities Commission by year-end 2005 or early 2006.
- We expected the company to act by acquiring companies in the natural gas distribution/transmission business in the Pacific Northwestern United States or combine with a Canadian-based pipeline company.
- As highlighted in Figure 1, the footprint of the combined company will be large and should have an enhanced competitive position.
- The transaction is priced at the upper end of the range of similar transactions and we do not expect a competing bid.

Valuation

Our revised target price of $35.95 is 23.6x 2006E diluted EPS of $1.52 (12.5%), 2.51 x estimated 2006 book value per share of $14.31 (12.5%) and a yield of 2.62% (75%), assuming 2006 dividends per share of $0.94. We believe the offer price is reasonable and we recommend that shareholders endorse it.

Recommendation

We believe the shares are reasonably valued and we rate them Market Perform.

BMO Nesbitt Burns

Company Risk Disclosure

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

I, Karen Taylor, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that I have not, am not, and will not receive, directly or indirectly, compensation in exchange for expressing the specific recommendations or views in this report.

General Disclosure

The information and opinions in this report were prepared by BMO Nesbitt Burns Research, the research department of BMO Nesbitt Burns Inc., and BMO Nesbitt Burns Ltee./Ltd. ("BMO Nesbitt Burns"). Harris Nesbitt Corp. ("HNC") is an affiliate of BMO Nesbitt Burns. BMO Nesbitt Burns and HNC are subsidiaries of Bank of Montreal. The reader should assume that BMO Nesbitt Burns, HNC or their affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

The opinions, estimates and projections contained in this report are those of BMO Nesbitt Burns Research as of the date of this report and are subject to change without notice. BMO Nesbitt Burns Research endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Nesbitt Burns makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Nesbitt Burns or its affiliates that is not reflected in this report. This report is not to be construed as an offer or solicitation to buy or sell any security.

The research analyst and/or associates who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Nesbitt Burns, HNC and their affiliates, which includes the overall profitability of investment banking services. BMO Nesbitt Burns, HNC or their affiliates expect to receive or will seek compensation for investment banking services within the next 3 months from all issuers covered by BMO Nesbitt Burns Research.

BMO Nesbitt Burns, HNC or their affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Nesbitt Burns, HNC, their affiliates, officers, directors or employees may have a long or short position in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. BMO Nesbitt Burns, HNC or their affiliates may act as financial advisor and/or underwriter for the issuers mentioned herein and may receive remuneration for same. Bank of Montreal or its affiliates ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Nesbitt Burns Research. A significant lending relationship may exist between BMO Financial Group and certain of the issuers mentioned herein.

Company Specific Disclosure

Disclosure 2: BMO Nesbitt Burns has undertaken an underwriting liability with respect to this issuer within the past 12 months.

Disclosure 3: BMO Nesbitt Burns has provided investment banking services with respect to this issuer within the past 12 months.

Disclosure 10: This issuer is a client (or was a client) of BMO Nesbitt Burns, HNC or an affiliate within the past 12 months: Investment Banking Services.

Distribution of Ratings

Rating Category	**BMO NB Rating**	**BMO NB Universe**	**BMO NB I.B. Clients***	**First Call Universe****
Buy	Outperform	43%	48%	47%
Hold	Market Perform	45%	39%	46%
Sell	Underperform	12%	13%	7%

* Reflects rating distribution of all companies where BMO NB has received compensation for Investment Banking services.
** Reflects rating distribution of all North American equity research analysts.

Ratings Key

BMO Nesbitt Burns uses the following ratings system definitions. **OP = Outperform** - Forecast to outperform the market; **Mkt = Market Perform** - Forecast to perform roughly in line with the market; **Und = Underperform** - Forecast to underperform the market; **(S) = speculative investment**; **NR = No rating at this time** - usually due to a company being in registration or coverage being initiated.

^ Market performance as measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company.

Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

Dissemination of Research

BMO Nesbitt Burns Research publications are available via our web site http://bmonesbittburns.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Multex. All of our research is made widely available at the same time to all BMO Nesbitt Burns client groups entitled to our research. Please contact your investment advisor or institutional salesperson for more information.

Conference Call Highlights; Market Perform Rating Maintained

Event

Terasen Inc. and Kinder Morgan each held a conference call to discuss the merits of the proposed transaction with buy and sell side analysts. The key highlights of each conference call are set out herein.

Impact

Neutral. We believe the proposed acquisition price of $35.91 per share is reasonable and recommend that shareholders endorse the proposed Plan of Arrangement.

Forecasts

Unchanged.

Valuation

Our target price of $35.95 is 23.6x 2006E diluted EPS of $1.52 (12.5%), 2.51x estimated 2006 book value per share of $14.31 (12.5%) and a yield of 2.62% (75%), assuming 2006 dividends per share of $0.94.

Recommendation

We believe the shares are reasonably valued and we rate them Market Perform.

Details & Analysis

Terasen Inc. and Kinder Morgan each held a conference call to discuss the merits of the proposed transaction with buy and sell side analysts. The key highlights of each conference call are set out herein.

Kinder Morgan Conference Call

Management of Kinder Morgan reviewed and reiterated the financial consequences of the proposed plan of arrangement:

- The transaction would be immediately accretive and permit the company to maintain a targeted EPS and dividend growth rate of 10%.
- The acquisition is consistent with Kinder Morgan's strategy of identifying the next "energy tsunami" and riding it; Kinder Morgan has acquired an infrastructure footprint in the oil sands development area. Kinder Morgan views the potential 1 million barrel per day increase in production to be the "next Permian Basin forming before your eyes" and it is, quite simply, a place that it wanted to be.
- The transaction is expected to be financed by approximately 20% equity and 80% debt; the total enterprise value of the transaction is estimated to be approximately US$5.6 billion. Kinder Morgan only plans to issue approximately US$1.06 billion in stock (approximately 12 million Kinder Morgan shares) and plans to assume debt and debt finance the US$4.54 billion. Assumed debt is approximately US$2.5 billion and debt to be issued by a Canadian-domiciled, wholly owned subsidiary of Kinder Morgan, is approximately US$2 billion. The company expects the transaction will be accretive by using a well-established structuring arrangement with an after-tax cost to Kinder Morgan of approximately 2% to 3%,.
- Kinder Morgan has not assumed that Terasen's oil pipelines are sold into a Canadian income trust in order to justify the transaction multiple.
- The company expects that an above average portion of its free cash flow will be used to reinvest in the project development opportunities in the oil sands production areas.
- Kinder Morgan's management indicated that Terasen's natural gas distribution business is a core asset; however, we believe there may be significant interest in Terasen Gas Vancouver Island and Terasen Gas Inc. by other Canadian utility players and due to the thin capitalization and low return characteristics of these businesses, that Kinder Morgan could potentially sell these assets post-closing. Terasen's water business is also not likely to be viewed as "core" and could be sold once the transaction closes.
- Kinder Morgan does not plan to offer Canadian shareholders of Terasen an exchangeable share.

- There was considerable confusion and uncertainty demonstrated by participants on the conference call about the regulatory process, the return characteristics, and risk profiles of Terasen's core strategic business units. As this information is disseminated in the market, some of the initial price enthusiasm for the transaction may be tempered.

Terasen Conference Call

The Terasen conference call had a number of highlights and we believe the following points are relevant:

- The sale represents reasonable value and we believe shareholders should endorse it.
- The sale mitigates the likely leadership, earnings dilution and EPS risks that we believe were likely to have emerged over the next 18 to 24 months.
- Approvals are required pursuant to the Competition Act Canada and the Investment Canada Act.
- No regulatory or political impediments are expected and the transaction is targeted to close by year-end 2005.
- Synergies from the transaction are expected to be limited—this is a transaction that is about "growth"—enhancing Terasen's ability to execute with lower cost capital, improved liquidity through Kinder Morgan and a more formidable footprint.
- The merger between Kinder Morgan and Terasen likely increases the intensity of the competition for intra-Alberta pipelines and take-away capacity out of Alberta. A number of scenarios are possible: (i) returns could decline further due to an increase in the intensity of competition between Enbridge, Terasen/Kinder Morgan, TransCanada Corporation, Pembina Pipeline Income Fund, and Inter Pipe Line Fund and Terasen/Kinder Morgan's lower cost of capital; and (ii) realized returns increase along with the risks that oil sands producers expect the pipeline transportation companies to bear. It is not clear that shippers/producers actually want the pipeline providers to take more risk, particularly if it means that the pipeline must be paid a higher return. We believe Kinder Morgan may have a higher tolerance for risk than Terasen on a stand-alone basis.

Valuation

Our target price of $35.95 is 23.6x 2006E diluted EPS of $1.52 (12.5%), 2.51x estimated 2006 book value per share of $14.31 (12.5%) and a yield of 2.62% (75%), assuming 2006 dividends per share of $0.94.

Recommendation

We believe the shares are reasonably valued and we rate them Market Perform.

BMO Nesbitt Burns

Company Risk Disclosure

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker. Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

I, Karen Taylor, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that I have not, am not, and will not receive, directly or indirectly, compensation in exchange for expressing the specific recommendations or views in this report.

General Disclosure

The information and opinions in this report were prepared by BMO Nesbitt Burns Research, the research department of BMO Nesbitt Burns Inc., and BMO Nesbitt Burns Ltee./Ltd. ("BMO Nesbitt Burns"). Harris Nesbitt Corp. ("HNC") is an affiliate of BMO Nesbitt Burns. BMO Nesbitt Burns and HNC are subsidiaries of Bank of Montreal. The reader should assume that BMO Nesbitt Burns, HNC or their affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

The opinions, estimates and projections contained in this report are those of BMO Nesbitt Burns Research as of the date of this report and are subject to change without notice. BMO Nesbitt Burns Research endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Nesbitt Burns makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Nesbitt Burns or its affiliates that is not reflected in this report. This report is not to be construed as an offer or solicitation to buy or sell any security.

The research analyst and/or associates who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Nesbitt Burns, HNC and their affiliates, which includes the overall profitability of investment banking services. BMO Nesbitt Burns, HNC or their affiliates expect to receive or will seek compensation for investment banking services within the next 3 months from all issuers covered by BMO Nesbitt Burns Research.

BMO Nesbitt Burns, HNC or their affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Nesbitt Burns, HNC, their affiliates, officers, directors or employees may have a long or short position in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. BMO Nesbitt Burns, HNC or their affiliates may act as financial advisor and/or underwriter for the issuers mentioned herein and may receive remuneration for same. Bank of Montreal or its affiliates ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Nesbitt Burns Research. A significant lending relationship may exist between BMO Financial Group and certain of the issuers mentioned herein.

Company Specific Disclosure

Disclosure 2: BMO Nesbitt Burns has undertaken an underwriting liability with respect to this issuer within the past 12 months.

Disclosure 3: BMO Nesbitt Burns has provided investment banking services with respect to this issuer within the past 12 months.

Disclosure 10: This issuer is a client (or was a client) of BMO Nesbitt Burns, HNC or an affiliate within the past 12 months: Investment Banking Services.

Distribution of Ratings

Rating Category	**BMO NB Rating**	**BMO NB Universe**	**BMO NB I.B. Clients***	**First Call Universe****
Buy	Outperform	43%	48%	47%
Hold	Market Perform	45%	39%	46%
Sell	Underperform	12%	13%	7%

* Reflects rating distribution of all companies where BMO NB has received compensation for Investment Banking services.
** Reflects rating distribution of all North American equity research analysts.

Ratings Key

BMO Nesbitt Burns uses the following ratings system definitions. **OP = Outperform** - Forecast to outperform the market; **Mkt = Market Perform** - Forecast to perform roughly in line with the market; **Und = Underperform** - Forecast to underperform the market; **(S) = speculative investment**; **NR = No rating at this time** - usually due to a company being in registration or coverage being initiated.

^ Market performance as measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company.

Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

Kinder Morgan Acquisition Appears Credit Negative for Bondholders

Sue McNamara, CFA
(416)-359-4584
sue.mcnamara@bmonb.com

Event

On August 1, 2005, Kinder Morgan Inc. announced a definitive agreement to acquire all of the outstanding shares of Terasen Inc.

Impact

Negative.

Key Points

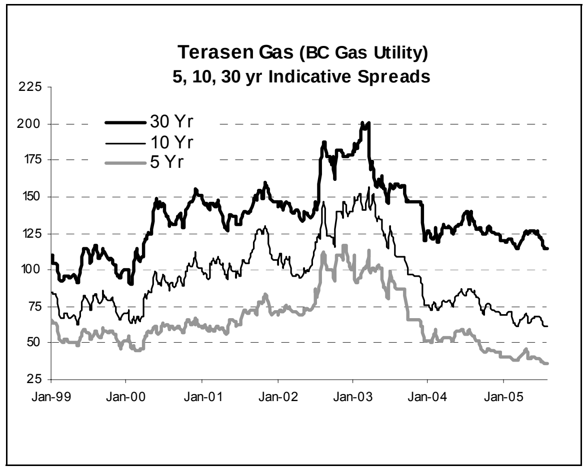
Kinder Morgan Inc. has stated that it intends to finance the acquisition with a combination of cash and equity up to a maximum proration of 65% cash and 35% equity. The company also stated on its conference call that it plans to fund the cash portion of the acquisition with debt financing provided by a Canadian subsidiary of Kinder Morgan Inc. After the closing of the transaction, Kinder Morgan expects that its debt to total capital ratio will likely increase to 56% versus 36.8% at June 30, 2005.

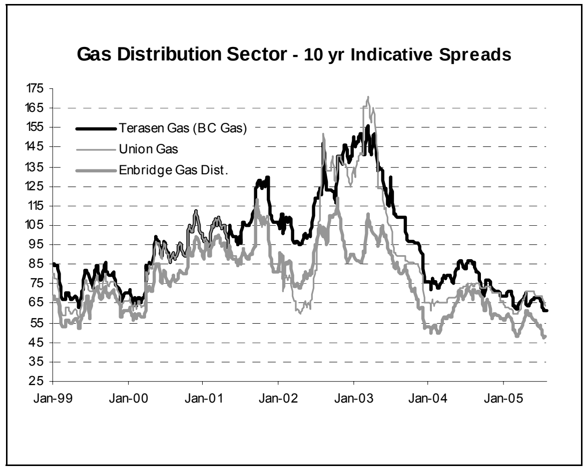
Recommendation

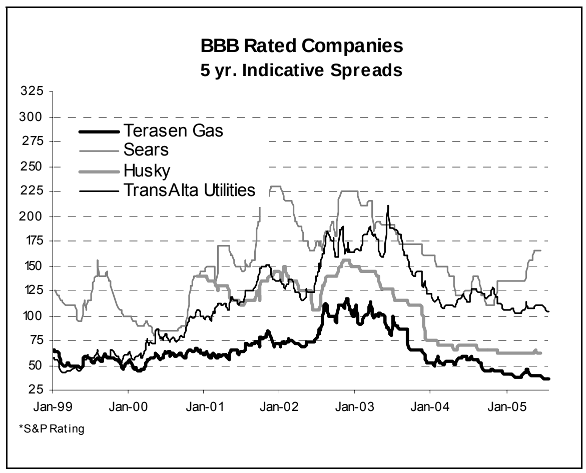
In 2005, Terasen Inc.'s 5-year, 10-year and 30-year generic credit spreads tightened by 8, 12 and 10 basis points, respectively. We note that Terasen Inc.'s credit spreads likely reflect a scarcity premium, as the holding company only has two maturities outstanding totalling $300 million. We believe that the acquisition is a credit negative and that the company's spreads will likely widen over the next 12 months. We believe that there is a risk that the credit ratings of the company could be negatively affected by the acquisition. As highlighted in detail within, Moody's, DBRS and S&P have placed Terasen Inc.'s credit Under Review with Negative Implications. S&P and DBRS have also placed KMI's credit ratings Under Review with Negative Implications. We note that the acquisition does address some of our previous credit concerns on Terasen Inc., namely the risk that any significant spending by Terasen Inc. either through development projects or acquisitions (depending on how it is financed) would be a credit event, as the company is relatively thinly capitalized.

Senior Unsecured Debt Ratings

DBRS	S&P	Moody's
A (Low)	BBB-	A3
UR - Negative	CW - Negative	UR - Negative







Please refer to pages 6 to 7 for Disclosure Statements, including the Analyst's Certification.

Acquisition

On August 1, 2005, Kinder Morgan Inc. announced a definitive agreement to acquire all of the outstanding shares of Terasen Inc. As part of the acquisition, Kinder Morgan will assume all of Terasen Inc's debt. The company had long- and short-term debt outstanding totalling $2.6 billion and $360.5 million, respectively, at June 30, 2005, of which $300 million was issued at the Terasen Inc. holding company level. Terasen Inc. has no debt maturities in the remainder of 2005, whereas Terasen Gas (100% - Terasen Inc.) has debt maturities of $350 million in 2005. We believe that the maturities will likely be refinanced or repaid with short-term debt issuance. The debt will likely mature prior to the expected close of the transaction (year-end 2005).

Kinder Morgan Inc. has stated that it intends to finance the acquisition with a combination of cash and equity up to a maximum proration of 65% cash and 35% equity. The company also stated on its conference call that it plans to fund the cash portion of the acquisition with debt financing provided by a Canadian subsidiary of Kinder Morgan Inc. After the closing of the transaction, Kinder Morgan expects that its debt to total capital ratio will likely increase to 56% versus 36.8% at June 30, 2005. For additional views on the acquisition, please refer to the equity research comment on Terasen Inc. by BMO Nesbitt Burns' equity analyst Karen Taylor, dated August 2, 2005.

Credit Ratings

Terasen Inc. Ratings

Terasen Inc.'s senior unsecured debt is rated A(Low), BBB- and A3 by DBRS, S&P and Moody's, respectively. The outlook is CreditWatch Negative by S&P and Under Review – Negative by DBRS and Moody's.

S&P has placed the credit ratings of Terasen Inc. and Terasen Gas on CreditWatch with Negative Implications. The outlook change reflects S&P's preliminary assessment that upon the closing of the transaction, the companies' credit quality will be assessed on a consolidated basis and will likely be equalized with the ratings on KMI, reflecting the same level of default risk. S&P states that the addition of significant amounts of debt will weaken KMI's balance sheet and debt protection measures. S&P must determine whether the effects of increased leverage eclipse the benefits of the addition of Terasen's asset base. Terasen's current credit quality reflects the average business profiles of the company's natural gas distribution business and liquids pipeline systems, offset by a weak financial profile. S&P further states that the company's below average deemed equity levels and allowed ROEs currently constrain the ratings on Terasen. We note that S&P provides ratings coverage of the Terasen companies, based on publicly available information.

DBRS has placed the ratings of Terasen Inc. Under Review with Negative Implications. DBRS states that the proposed transaction creates uncertainties with respect to the potential financing policies of Terasen, which could potentially have negative implications for its future financial profile. DBRS believes that ownership by a lower rated entity, KMI, could expose Terasen to increased dividend payments to support KMI's higher debt load. In its review, DBRS will also focus on the impact on the business and financial risk profile of the combined entity as well as tax, legal and regulatory issues of the cross-border transaction. We note that DBRS has maintained its Stable outlook on the A rated credit of Terasen Gas.

Moody's has placed the ratings of Terasen Inc. and Terasen Gas under review for possible downgrade. The change in outlook reflects the lower credit rating of KMI (Baa3) and its weak standalone financial profile relative to its peers. Moody's intends to assess what financial strategies KMI might employ for Terasen and what their implications might be for both Terasen and Terasen Gas. Moody's also states that Terasen Gas' ratings are being reviewed due to the lack of ringfencing or other restrictions that could limit its ability to make dividend payments to Terasen Inc. Moody's rates Terasen Inc. one notch below that senior unsecured rating of Terasen Gas at A2. The one-notch differential reflects the structural subordination of Terasen's debt to operating subsidiary debt at Terasen Gas, Terasen Gas Vancouver Island, Corridor, Trans Mountain and Express.

Kinder Morgan Inc. Ratings

DBRS rates Kinder Morgan Inc.'s senior unsecured debt BBB. The outlook is Under Review with Negative Implications. Based on its preliminary review, DBRS states that it expects the proposed transaction to have a positive effect on KMI's business risk as a result of the increased scope and scale of the company's regulated pipeline and gas distribution operations and growth potential. Conversely, DBRS states that the acquisition will likely increase KMI's balance sheet leverage to pre-2001 levels, which is relatively high and is expected to remain so for a few years.

S&P's credit rating on KMI is BBB. The outlook was changed to CreditWatch with Negative Implications from Stable following the announcement of the Terasen acquisition. The change in outlook reflects KMI's plan to increase financial leverage to fund the acquisition. S&P states that KMI's credit quality could be preserved if the potential improvement in KMI's business profile is capable of fully offsetting the higher financial risk. S&P stated in its latest summary on KMI (dated July 1, 2005) that the company's ratings are anchored by the company's regulated interstate natural gas pipeline and retail distribution assets, as well as the historically steady distributions that KMI receives from KMP.

Moody's rates the KMI's debt securities Baa2 with a Stable outlook. The company's credit rating and Stable outlook were affirmed following the acquisition announcement. Moody's believes that KMI will likely have sufficient free cash flow to cover the incremental interest expense and dividends from the acquisition financing. Moody's states that maintaining KMI's rating and outlook will entail achievement of the incremental earnings and cost savings that the company forecasts from Terasen as well as discipline in its dividend payouts. Moody's states that significant deviation from these expectations will cause the ratings agency to reassess KMI's ratings and outlook.

Recommendation

In 2005, Terasen Inc.'s 5-year, 10-year and 30-year generic credit spreads tightened by 8, 12 and 10 basis points, respectively. We note that Terasen Inc.'s credit spreads likely reflect a scarcity premium as the holding company has only two maturities outstanding, totalling $300 million. We believe that the acquisition is a credit negative and that the company's spreads will likely widen over the next 12 months. We believe that there is a risk that the credit ratings of the company could be negatively affected by the acquisition. As highlighted in detail above, Moody's, DBRS and S&P have placed Terasen Inc.'s credit Under Review with Negative Implications. S&P and DBRS have also placed KMI's credit ratings Under Review with Negative Implications. We note, however, that the acquisition does address some of our previous credit concerns on Terasen Inc., namely the risk that any significant spending by Terasen Inc., either through development projects or acquisitions (depending on how it is financed), would be a credit event, as the company is relatively thinly capitalized. We also believe that the following credit risks still remain:

1. The expiry of the Trans Mountain system's negotiated toll settlement at the end of 2005: the company is currently in negotiations with shippers to extend or renew the toll agreement. The company's earnings and cash flow in 2006 could be negatively affected by the outcome of the negotiation.
2. Regulatory risk at Terasen Gas: On July 11, the British Columbia Utilities Commission (BCUC) issued an Order and Notice of Procedural Conference regarding an application by Terasen Gas Inc. and Terasen Gas (Vancouver Island) Inc. to determine the appropriate return on equity and capital structure and to review and revise the automatic adjustment mechanism used by the BCUC to establish the allowed return on equity, annually (please see Karen Taylor's equity comment on Terasen Inc. dated July 15, 2005 for more details).

Tax Status of Kinder Morgan Plan of Arrangement

Impact

Neutral

Details & Analysis

We have had a number of questions relating to the tax status of the planned acquisition of Terasen Inc. by Kinder Morgan Inc (KMI-NYSE). We have confirmed our understanding with Terasen that regardless of whether an investor elects cash, Kinder Morgan shares or a combination thereof, the transaction will be a fully taxable event for shareholders. We believe that the shares of Terasen are reasonably valued and we rate them Market Perform.

Please refer to pages 2 to 4 for Disclosure Statements, including the Analyst's Certification.

Company Risk Disclosure

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to this company. Terasen could be exposed to significant operational disruptions and environmental liability in event of product spill or accident. Through the regulatory process, the BCUC approves the return on equity for Terasen Gas and Terasen Gas Vancouver Island. Changes in regulation may adversely affect performance. The company's hydrocarbon pipelines are dependent upon the continued availability of crude oil and bitumen. Transportation volumes on the TransMountain Pipeline are sensitive to demand from Washington state refineries, and overseas demand for transportation of Canadian crude oil via tanker.

Albian Sands is the sole shipper on the Corridor Pipeline. The company's natural gas distribution operations are dependent upon the continued availability of natural gas and the relative attractiveness of natural gas versus electricity.

Analyst's Certification

I, Karen Taylor, CFA, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that I have not, am not, and will not receive, directly or indirectly, compensation in exchange for expressing the specific recommendations or views in this report.

General Disclosure

The information and opinions in this report were prepared by BMO Nesbitt Burns Inc., and BMO Nesbitt Burns Ltee/Ltd. (“BMO Nesbitt Burns”). Harris Nesbitt Corp. (“HNC”) is an affiliate of BMO Nesbitt Burns. BMO Nesbitt Burns and HNC are subsidiaries of Bank of Montreal. The reader should assume that BMO Nesbitt Burns, HNC or their affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

The opinions, estimates and projections contained in this report are those of BMO Nesbitt Burns as of the date of this report and are subject to change without notice. BMO Nesbitt Burns endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Nesbitt Burns makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Nesbitt Burns or its affiliates that is not reflected in this report. This report is not to be construed as an offer or solicitation to buy or sell any security.

The research analyst and/or associates who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Nesbitt Burns, HNC and their affiliates, which includes the overall profitability of investment banking services. BMO Nesbitt Burns, HNC or their affiliates expect to receive or will seek compensation for investment banking services within the next 3 months from all issuers covered by BMO Nesbitt Burns’ Equity Research. BMO Nesbitt Burns HNC or their affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis.

BMO Nesbitt Burns, HNC, their affiliates, officers, directors or employees may have a long or short position in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. BMO Nesbitt Burns, HNC or their affiliates may act as financial advisor and/or underwriter for the issuers mentioned herein and may receive remuneration for same. Bank of Montreal or its affiliates (“BMO Financial Group”) has lending arrangements with, or provides other remunerated services to, many issuers covered by BMO Nesbitt Burns’ Equity Research. A significant lending relationship may exist between BMO Financial Group and certain of the issuers mentioned herein.

Company Specific Disclosure

Disclosure 2: BMO Nesbitt Burns has undertaken an underwriting liability with respect to this issuer within the past 12 months.

Disclosure 3: BMO Nesbitt Burns has provided investment banking services with respect to this issuer within the past 12 months.

Disclosure 10: This issuer is a client (or was a client) of BMO Nesbitt Burns, HNC or an affiliate within the past 12 months: Investment Banking Services.

Distribution of Ratings

Rating Category	BMO NB Rating	BMO NB Universe	BMO NB I.B. Clients*	First Call Universe**
Buy	Outperform	43%	48%	47%
Hold	Market Perform	45%	39%	46%

* Reflects rating distribution of all companies where BMO NB has received compensation for Investment Banking services.

** Reflects rating distribution of all North American equity research analysts.

Ratings Key

BMO Nesbitt Burns uses the following ratings system definitions. **OP = Outperform** - Forecast to outperform the market; **Mkt = Market Perform** - Forecast to perform roughly in line with the market; **Und = Underperform** - Forecast to underperform the market; **(S) = speculative investment**; **NR = No rating at this time** - usually due to a company being in registration or coverage being initiated.

Market performance as measured by a benchmark index such as the S&P/TSX Composite Index, S&P 500, Nasdaq Composite, as appropriate for each company.

Prior to September 1, 2003, a fourth rating tier—Top Pick—was used to designate those stocks we felt would be the best performers relative to the market. Our six Top 15 lists which guide investors to our best ideas according to six different objectives (large, small, growth, value, income and quantitative) have replaced the Top Pick rating.

Dissemination of Research

BMO Nesbitt Burns Equity Research is available via our web site http://bmonesbittburns.com. Institutional clients may also receive our research via FIRST CALL Research Direct and Multex. All of our research is made widely available at the same time to all BMO Nesbitt Burns client groups entitled to our research. Please contact your investment advisor or institutional salesperson for more information.

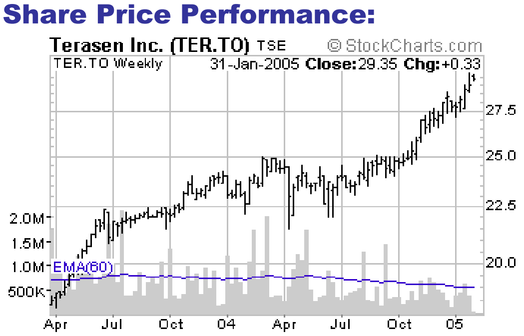
Share Price Performance:



Company Description:

Terasen provides energy and utility services in western Canada and the US Pacific Northwest, through two regulated business segments. The Natural Gas Distribution business includes transmission and distribution of natural gas to customers in BC and provides transportation services through the pipeline. The Petroleum Transportation business transports oil and refined products from Alberta to BC and delivers crude oil to refineries in the US.

All amounts in CAD unless otherwise noted.

SHIPPERS WANT MORE PIPELINE CAPACITY

Event: Terasen received solid expressions of interest from shippers, proving out a need for new pipeline facilities to the west coast. Now the more difficult part has to be decided: where are the most attractive markets (Asia or California); the preferred pipeline proposal (Terasen or Enbridge); the economics of the project; the signing of long term commitments with shippers, and; gaining regulatory approval (including environmental and native acceptance).

Impact: Little impact until it becomes clear how much support Terasen has from producers. It is the producers who will pay for the tolls, and they have to decide which route and which project(s) they will financially support. This should be better known in the late spring.

Valuation: We are maintaining our HOLD rating and $28.00 target price on the shares of Terasen Inc. Our target price is derived from a combination of valuation metrics which include earnings and dividend yields relative to long term interest rates, dividend discount models, and earnings and cash flow multiples relative both to historical valuation and its utility and pipeline peers.

Summary

Terasen received expressions of interest from 17 different parties to proceed to the next phase of the Trans Mountain system expansion project (TMX) to carry growing oil sands production to the west coast and offshore markets. The Expression of Interest process took place over the past two months and indicated the need for additional capacity out of Alberta by 2008. It is of course no surprise that shippers see a need for more capacity, but it is the timing, the size, the eventual route and the company that will build it that are more difficult questions. We view the announcement as positive since it confirms that there is definitely interest, but would not award much value to either Terasen or Enbridge until it becomes clearer which project(s) will be supported by the producers. Certainly, both are likely to be involved in expansion opportunities, but the size and timing are still speculative.

Producers love a good competition, particularly when they can challenge two pipeline companies to compete to offer the best and most economical project for producers. That process spurs more creative solutions and lower costs for the shippers (lower returns for the pipelines?). At this point, both Terasen and Enbridge have spent considerable time and effort attracting interest from producers and we suspect that both will have their supporters. We fear this competition, however, has the potential to cause significant delays during the required regulatory approval process, particularly if any rolled-in toll methodology is employed (likely to some extent).

Details of TMX

TMX Phase One is designed to increase the Trans Mountain's capacity 75,000 bpd to 300,000 bpd by the end of 2008. It will add 35,000 bpd by the end of 2006 through the addition of pump stations (about $205 million), and another 40,000 bpd by the end of 2008 by the looping of 178 kilometres of its system (about $365 million).

Terasen will proceed to the next phase if shipper interest warrants, and undertake additional looping system to existing facilities in Burnaby British Columbia and/or extend the Trans Mountain pipeline to a new terminal on BC's north coast in Kitimat or Prince Rupert. This could increase system capacity up to 850,000 bpd in 2010 at an incremental cost of around $1.6-2.4 billion, depending whether a southern or northern route is chosen.

The staged expansion of TMX is designed by Terasen to align incremental oil sands production from Alberta with market demands on the West Coast of Canada, the United States and Asia. Both phases appear to total $2.2-2.9 billion to ship an extra 625,000 bpd. This compares to the approximate $2.5 billion cost for Enbridge's Gateway project to ship 400,000 b/d a year earlier by 2009. Experience tells us that the numbers are likely not all that comparable, expressions of interest do not always materialize into contracts and the approval process may be long.

Investment risks

Some of the specific risk factors that pertain to the projected six to 12 month stock price target for Terasen are as follows: a) Terasen could be exposed to significant operational disruptions and environmental liability in the event of a petroleum product spill or an accident involving natural gas; b) The unprecedented increase in the market price of natural gas in 2000 significantly eroded the competitive advantage of natural gas relative to alternative sources of energy, notably electricity, in British Columbia; c) Terasen's earnings are sensitive to interest rates in several ways. Some outstanding debt has net exposure to short-term interest rates, and is not subject to regulatory interest deferral accounts. In addition, the allowed returns on equity for BC Gas Utility, Centra Gas and Corridor are determined by formulae that result in lower allowed ROEs if long-term Canada bond yields decline; d) A component of BC Gas' earnings, principally earnings from Trans Mountain 's US pipeline and the Express System, are denominated in US dollars. As a result, an annual decline of $0.10 in the price of a US dollar in Canadian dollars would be expected to result in a decrease in annual consolidated net earnings of approximately C$1 million; e) Challenging economic condition which may impact demand for products and services, peer-group valuation, access to capital and share trading liquidity.

Company Description:

Terasen provides energy and utility services in western Canada and the US Pacific Northwest through two regulated business segments. The Natural Gas Distribution business includes transmission and distribution of natural gas to customers in BC and provides transportation services through the pipeline. The Petroleum Transportation business transports oil and refined products from Alberta to BC and delivers crude oil to refineries in the US.

All amounts in CAD unless otherwise noted.

7.1% DIVIDEND INCREASE

Event: Terasen reported fourth quarter and full year results that were in line with expectations. The company also raised its annual dividend by 7.1% to $0.90/share.

Impact: Mildly positive.

Valuation: We are maintaining our HOLD rating and $28.00 target price on the shares of Terasen Inc. Our target price is derived from a combination of valuation metrics that include earnings and dividend yields relative to long term interest rates, dividend discount models, and earnings and cash flow multiples relative both to historical valuation and its utility and pipeline peers.

Summary

Terasen reported fourth quarter recurring income of $0.51 per share versus $0.54 last year. The company reported full year recurring EPS of $1.40 versus $1.32, in line with our $1.40 estimate. In the fourth quarter, the company instituted an accounting change to the way it records utility income tax expense, making the comparison to expected fourth quarter EPS difficult. However, the accounting change does not impact full year earnings, implying fourth quarter earnings were in-line with our estimate. The accounting change does, however, have the effect of reducing more dramatic swings from seasonality, with lower first and fourth quarter earnings and reduced losses in the second and third quarters. The company also announced a 7.1% increase to its annual dividend to $0.90 from $0.84 per share and moved its traditional increase from Q2 to Q1, effectively boosting the year over year cash dividend by 9.1%. For details on the fourth quarter and the full year, please refer to Figures 1 and 2.

Outlook

The company reiterated its 2005 EPS growth target of 6%, suggesting earnings consistent with our $1.50 estimate. Earnings will benefit from a full year of incremental 27,000 barrels/day of capacity at Trans Mountain mainline (in-service October 1, 2004), a 108,000 barrels/day capacity expansion at Express Pipeline (expected in service April 1, 2005) and continued customer growth at its natural gas distribution service areas. The company is not without its challenges however, given a 12 basis point reduction in Terasen Gas' allowed ROE to 9.03% in 2005 and lower first quarter 2005 volumes on Trans Mountain due to refinery customer turnarounds and the recent fire at Suncor's oilsands plant. We are leaving our 2005 and 2006 EPS estimates unchanged at $1.50 and $1.60, respectively.

Issues

- BC Utilities Commission approve Terasen Gas Vancouver Island's proposal of a $106 million LNG storage facility near Nanaimo.
    - The approval is subject to:
        - A long-term transportation agreement with BC Hydro
        - Engineering, procurement & construction below 110% of $75.9 million estimate
        - Construction to begin by December 31, 2005
    - Planned in-service for 2007/2008 winter period
- Mark to market gain of $3.3 million or $0.02 per share for the year in Clean Energy and recorded in "other"
- Pipeline expansions
    - 27,000 barrels/day Trans Mountain expansion in service October 1, 2004
    - 108,000 barrels/day, $110 million Express expansion by April 01, 2005 (on-time & under budget)
    - TMX (potential doubling of Trans Mountain capacity line in three phases)
        - Open season for first phase could be mid-2005
- 2005 capex of $350 million versus $154 million in 2004
    - $240 million in Natural Gas Distribution
        - $50 million to unwind leases at Coastal facilities and bring into rate base
        - $23 million on LNG storage facility

- $50 million in Petroleum Transportation
  - $12 million on TMX project development
  - $7 million Corridor de-bottlenecking
- $50 million in Water and Utility Services
  - $10-20 million potential acquisitions
- $10 million in Other

Integration of Terasen Gas & TGVI achieves operating efficiencies. Partly offset by lower allowed ROE and absence of sharing mechanism.

BCUC approves construction of $100 mln LNG storage facility subject to transportation agreement with BC Hydro.

Increased throughput.

Contribution for full year; expansion expected to be completed in April/05.

Driven by organic and acquisition growth.

Includes $3.3 mln mark to market hedging gain in Clean Energy.

6% EPS growth target.

Increases dividend 7.1% to $0.90/share.

Source: Canaccord Research

Investment risks

Some of the specific risk factors that pertain to the projected six to 12 month stock price target for Terasen are as follows: a) Terasen could be exposed to significant operational disruptions and environmental liability in the event of a petroleum product spill or an accident involving natural gas; b) The unprecedented increase in the market price of natural gas in 2000 significantly eroded the competitive advantage of natural gas relative to alternative sources of energy, notably electricity, in British Columbia; c) Terasen's earnings are sensitive to interest rates in several ways. Some outstanding debt has net exposure to short-term interest rates, and is not subject to regulatory interest deferral accounts. In addition, the allowed returns on equity for BC Gas Utility, Centra Gas and Corridor are determined by formulae that result in lower allowed ROEs if long-term Canada bond yields decline; d) A component of BC Gas' earnings, principally earnings from Trans Mountain 's U.S. pipeline and the Express System, are denominated in U.S. dollars. As a result, an annual decline of $0.10 in the price of a U.S. dollar in Canadian dollars would be expected to result in a decrease in annual consolidated net earnings of approximately C$1 million; e) Challenging economic condition which may impact demand for products and services, peer-group valuation, access to capital and share trading liquidity.

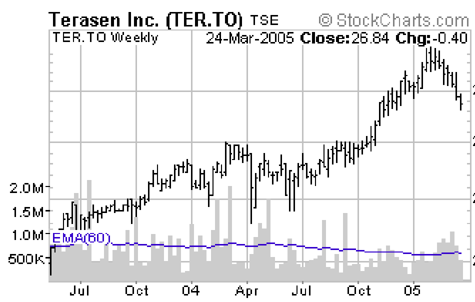
Share Price Performance:



Company Description:

Terasen provides energy and utility services in western Canada and the U.S. Pacific Northwest through two regulated business segments. The Natural Gas Distribution business includes transmission and distribution of natural gas to customers in BC and provides transportation services through the pipeline. The Petroleum Transportation business transports oil and refined products from Alberta to BC and delivers crude oil to refineries in the U.S.

All amounts in CAD unless otherwise noted.

OIL THROUGHPUT FORECAST

Event: Terasen filed an updated oil throughput forecast for Trans Mountain Pipe with the National Energy Board (NEB) last week. The company continues to see high demand supporting expansion, with a poor first quarter in 2005 due to refinery downtime. Regardless, the company has a need for new pipeline facilities to the west coast as it has received solid expressions of interest from shippers.

Impact: The negative earnings impact from the lower first quarter volumes might be around $0.10 in the first quarter. However, there should be little impact on the stock as the company had announced in its fourth quarter conference call that first quarter volumes would be low and that it still expected to achieve its 6% targeted earnings growth. In addition, the demand for long-term throughput is increasing and a new round of expansion is coming.

Valuation: We are maintaining our HOLD rating and $28.00 target price on the shares of Terasen. Our target price is derived from a combination of valuation metrics which include earnings and dividend yields relative to long term interest rates, dividend discount models, and earnings and cash flow multiples relative both to historical valuation and its utility and pipeline peers.

Summary

In its Priority Access Application filed with the NEB, Terasen gave an update on its first quarter oil throughput volumes. In the application, it appears first quarter volumes might be just over 150,000 barrels/day versus 239,100 barrels/day in the fourth quarter and 240,400 barrels/day in the first quarter last year.

The volumes are low due to refinery issues in the first quarter that are temporary in nature. Consequently, there should be no continuing impact on volumes or on Terasen's earnings longer term. The impact in the first quarter could be around $0.10 per share, at the high end of our expectations.

While this may modestly impact our earnings estimate for the year, we will not be revising our earnings until we see how well Terasen's other operations are performing, as it appears that the company is having good performance generally. Given this is a temporary situation beyond the company's control and that producers have expressed an interest for further expansion that should continue to see solid long-term earnings growth for the company, we do not expect the lower volumes to impact the stock.

Of greater importance to the stock are both the direction of long-term interest rates and the general stock market. We have assumed somewhat higher interest rates in our target price forecast, with the risk being that interest rates jump more than 50 basis points on the long end. As for the direction of the stock market, utilities normally are viewed as being somewhat defensive in a declining market, declining by less than the overall market. However, they do decline. We remain firm on our $28.00 target price and will watch for any significant price weakness for a buying opportunity.

Investment risks

Some of the specific risk factors that pertain to the projected six to 12 month stock price target for Terasen are as follows: a) Terasen could be exposed to significant operational disruptions and environmental liability in the event of a petroleum product spill or an accident involving natural gas; b) The unprecedented increase in the market price of natural gas in 2000 significantly eroded the competitive advantage of natural gas relative to alternative sources of energy, notably electricity, in British Columbia; c) Terasen's earnings are sensitive to interest rates in several ways. Some outstanding debt has net exposure to short-term interest rates, and is not subject to regulatory interest deferral accounts. In addition, the allowed returns on equity for BC Gas Utility, Centra Gas and Corridor are determined by formulae that result in lower allowed ROEs if long-term Canada bond yields decline; d) A component of BC Gas' earnings, principally earnings from Trans Mountain 's US pipeline and the Express System, are denominated in US dollars. As a result, an annual decline of $0.10 in the price of a US dollar in Canadian dollars would be expected to result in a decrease in annual consolidated net earnings of approximately C$1 million; e) Challenging economic condition which may impact demand for products and services, peer-group valuation, access to capital and share trading liquidity.

Company Description:

Terasen provides energy and utility services in western Canada and the U.S. Pacific Northwest through two regulated business segments. The Natural Gas Distribution business includes transmission and distribution of natural gas to customers in BC and provides transportation services through the pipeline. The Petroleum Transportation business transports oil and refined products from Alberta to BC and delivers crude oil to refineries in the U.S.

All amounts in C$ unless otherwise noted.

STEADY AS SHE GOES

Event: Terasen reported first quarter results that were in line with expectations.

Impact: None

Valuation: We are maintaining our HOLD rating and $28.00 target price on the shares of Terasen Inc. Our target price is derived from a combination of valuation metrics that include earnings and dividend yields relative to long term interest rates, dividend discount models, and earnings and cash flow multiples relative both to historical valuation and its utility and pipeline peers.

Summary

Terasen reported first quarter recurring income of $0.63 per share versus $0.65 last year and in line with the $0.64 consensus estimate. As expected, volume throughput on the Trans Mountain pipeline declined in the first quarter due to refinery turnarounds and oil production outages at the Alberta oil sands. Volumes on the Express System were also lower due to refinery outages. Income from natural gas distribution increased slightly as operating efficiencies, lower interest and effective tax rates offset the impact of a lower allowed return on equity. For additional details on the first quarter results, please see Figures 1 and 2.

Outlook

The company is nothing if not consistent. During its quarterly conference call, Terasen once again reiterated its 2005 EPS growth target of 6%, which implies earnings consistent with our $1.50 estimate. Earnings growth will stem from 27,000 barrels/day of incremental capacity at Trans Mountain (October 1, 2004), 108,000 barrels/day of capacity expansion at Express Pipeline (April 19, 2005), and customer growth in its natural gas distribution franchise area (about 1.8% annual growth). This growth will help offset the challenge of a 12 basis point reduction in ROE at Terasen Gas this year. We are making no changes to our 2005 and 2006 EPS estimates of $1.50 and $1.60, respectively.

Issues

- Company maintains guidance of 6% EPS growth in 2005
- Change in accounting for Clean Energy
    - Moved to an equity basis from a proportional consolidation basis
- Mark to market gain of $2.6 million or $0.02 per share for Clean Energy and recorded in "other"
- Business Development
    - Express expansion completed April 19, 2005
        - US $100 million, 10% under budget
        - Added 108,000 bbls/day of throughput capacity
    - Vancouver Island LNG storage facility - $100 million
        - Currently working with BC Hydro to obtain a Transportation Service Agreement to serve the Duke Power Point project
    - Corridor Expansion - Costs Escalating
        - Phase I increases capacity by 35,000 bbls/day
            - $8.4 million, was $6.5 million
            - In-service in the fall of 2005
        - Phase II currently under review
            - Potential expansion of 110,000 bbls/day
            - Expected in-service date of 2009
            - Estimated cost of $700-800 million, was $500-600 million in annual report, a 33-40% increase
    - TMX Expansion (potential doubling of Trans Mountain capacity line in three phases)
        - Have received support from customers through a non-binding expression of interest process
- Paid $49.4 million in January 2005 to BCG Coastal Facilities Trust to unwind synthetic lease and bring Coastal Facilities assets into rate base beginning 2005

Investment risks

Some of the specific risk factors that pertain to the projected 6-12 month stock price target for Terasen are as follows: 1) Terasen could be exposed to significant operational disruptions and environmental liability in the event of a petroleum product spill, an accident involving natural gas or problems with their water and sewer distribution systems; 2) The unprecedented increase in the market price of natural gas in 2000 significantly eroded the competitive advantage of natural gas relative to alternative sources of energy, notably electricity, in British Columbia; 3) Terasen's earnings are sensitive to interest rates in several ways; Some outstanding debt has net exposure to short-term interest rates, and is not subject to regulatory interest deferral accounts; In addition, the allowed returns on equity for Terasen Gas, Terasen Gas Vancouver Island and Corridor are determined by formulae that result in lower allowed ROEs if long-term Canada bond yields decline; 4) A component of Terasen's earnings, principally earnings from Trans Mountain's U.S. pipeline and the Express System, are denominated in US dollars. As a result, an annual decline of $0.10 in the price of a US dollar in Canadian dollars would be expected to result in a decrease in annual consolidated net earnings of approximately C$1.1 million; 5) Challenging economic condition which may impact demand for products and services, peer-group valuation, access to capital and share trading liquidity.

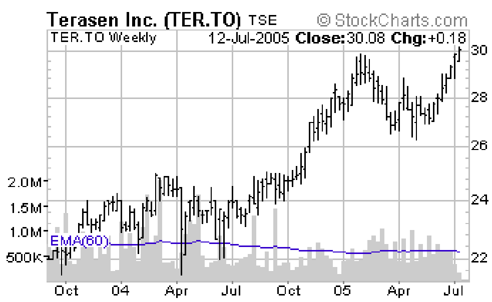
Share Price Performance:



Company Description:

Terasen provides energy and utility services in western Canada and the U.S. Pacific Northwest through two regulated business segments. The Natural Gas Distribution business includes transmission and distribution of natural gas to customers in BC and provides transportation services through the pipeline. The Petroleum Transportation business transports oil and refined products from Alberta to BC and delivers crude oil to refineries in the U.S.

All amounts in C$ unless otherwise noted.

FILES TMX EXPANSION APPLICATION WITH NEB

Event: Terasen announced that it has filed with the National Energy Board (NEB) an application to expand the capacity of the Trans Mountain pipeline system.

Impact: Mildly positive.

Valuation: We are maintaining our HOLD rating and $29.00 target price on the shares of Terasen Inc. Our target price is derived from a combination of valuation metrics which include earnings and dividend yields relative to long term interest rates, dividend discount models, and earnings and cash flow multiples relative both to historical valuation and its utility and pipeline peers.

Summary

Terasen announced that it has filed an application with the NEB to increase the capacity of its Trans Mountain crude oil pipeline system by 35,000 barrels per day to 260,000 barrels per day. The filing was expected as the company had announced shipper support earlier this year. Earnings potential from this expansion, if approved, could be around a nickel per share annually of which a portion may potentially be realized in 2006 if Terasen and shippers agree on toll stability. We view this news as a longer-term positive for Terasen. The project is expected to cost $210 million dollars and be in-service in the first quarter of 2007 pending regulatory approval. The expansion will involve building new and upgrading existing pump stations along the pipeline between Edmonton, Alberta and Burnaby, BC. This is the first phase of expansion for the Trans Mountain pipeline system and sets the stage for future pipeline expansion including the construction of a 30" pipeline loop between Hinton, Alberta and Valemount, BC, which Terasen plans to pursue later this summer.

Investment risks

Some of the specific risk factors that pertain to the projected six to 12 month stock price target for Terasen are as follows: a) Terasen could be exposed to significant operational disruptions and environmental liability in the event of a petroleum product spill or an accident involving natural gas; b) The unprecedented increase in the market price of natural gas in 2000 significantly eroded the competitive advantage of natural gas relative to alternative sources of energy, notably electricity, in British Columbia; c) Terasen's earnings are sensitive to interest rates in several ways. Some outstanding debt has net exposure to short-term interest rates, and is not subject to regulatory interest deferral accounts. In addition, the allowed returns on equity for BC Gas Utility, Centra Gas and Corridor are determined by formulae that result in lower allowed ROEs if long-term Canada bond yields decline; d) A component of BC Gas' earnings, principally earnings from Trans Mountain 's US pipeline and the Express System, are denominated in US dollars. As a result, an annual decline of $0.10 in the price of a US dollar in Canadian dollars would be expected to result in a decrease in annual consolidated net earnings of approximately C$1 million; e) Challenging economic condition which may impact demand for products and services, peer-group valuation, access to capital and share trading liquidity.

ATTRACTIVE OFFER, TENDER

Event: Terasen and Kinder Morgan each held conference calls to discuss the announced C$6.7 billion acquisition of Terasen Inc. by Kinder Morgan Inc.

Impact: The shares of both Terasen and Kinder Morgan rose significantly on the news of the acquisition. We expect the shares of Terasen to trade at a slight discount to the implied value of the acquisition.

Valuation: We are changing our rating on the shares of Terasen Inc. from Under Review to SELL. Investors can realize about 98% of the transaction value now and avoid any regulatory approval risk and reinvest in stocks with more attractive valuations. Note that even taking the Kinder Morgan shares results in a full capital gain for tax purposes.

Summary

Terasen and Kinder Morgan Inc. held conference calls Tuesday morning to discuss the acquisition of Terasen. No material new information was provided. The prices of both company's shares gained significantly on the first day of trading since the offer was announced. We believe the offer price represents excellent value and advise investors to realize the gain immediately and reinvest in other stocks with lower valuations such as TransAlta Corporation (TA : TSX) or Emera Inc. (EMA : TSX). Quite often, investors have the opportunity to take the acquiring company's shares on a tax-free rollover basis, but this option is not available in this transaction. Consequently, investors are not materially disadvantaged by selling earlier (we assume the capital gain will be realized in the 2005 tax year, as the deal is to be approved by shareholders in October and is slated to close by year end). By selling now, investors will realize about 98% of the acquisition value and avoid any currency and non-completion risk (likely small). Note that we do not follow Kinder Morgan Inc. from an

investment perspective and shareholders may wish to seek their own tax advice.

Clearly, some Terasen shares will be sold and the proceeds reinvested into other utility stocks, which may have helped drive up other utility stocks yesterday. In addition, there will be some speculation that other Canadian Energy Utility stocks may be acquired at a premium to the current market price. We prefer not to speculate on this outside event occurring, but doubt the likelihood of another takeover is high. The primary rationale for Kinder Morgan acquiring Terasen was to gain access to potential future expansions in Canadian oil sands production. There are limited opportunities for exposure to oil sands opportunities on the pipeline side, but include Enbridge Inc, Pembina Pipeline and Inter Pipeline Fund. Enbridge is significantly larger in size (3-4 times the enterprise value of Terasen) and all three are already trading with enterprise value multiples greater than the Terasen purchase price. Finally, while TransCanada has its eye on the oil sands with its Keystone Project, its $30 billion enterprise value ($16 billion market cap) is a bit rich for just one potential project.

Investment risks

Some of the specific risk factors that pertain to the projected six to 12 month stock price target for Terasen are as follows: 1) Terasen could be exposed to significant operational disruptions and environmental liability in the event of a petroleum product spill, an accident involving natural gas or problems with their water and sewer distribution systems; 2) The unprecedented increase in the market price of natural gas in 2000 significantly eroded the competitive advantage of natural gas relative to alternative sources of energy, notably electricity, in British Columbia; 3) Terasen's earnings are sensitive to interest rates in several ways; Some outstanding debt has net exposure to short-term interest rates, and is not subject to regulatory interest deferral accounts; In addition, the allowed returns on equity for Terasen Gas, Terasen Gas Vancouver Island and Corridor are determined by formulae that result in lower allowed ROEs if long-term Canada bond yields decline; 4) A component of Terasen's earnings, principally earnings from Trans Mountain's US pipeline and the Express System, are denominated in US dollars. As a result, an annual decline of $0.10 in the price of a US dollar in Canadian dollars would be expected to result in a decrease in annual consolidated net earnings of approximately C$1.1 million; 5) Challenging economic condition which may impact demand for products and services, peer-group valuation, access to capital and share trading liquidity; 6) Current valuation may depend on the success of the announced acquisition of Terasen Inc. by Kinder Morgan Inc.

Company Description
Terasen is a gas distribution and oil pipeline company. Its subsidiary, Terasen Gas, distributes natural gas to B.C., including Vancouver and the interior.

www.terasen.com

Terasen Inc.

Support for Pipeline Expansion Improves Medium-Term Growth

- Terasen announced it has received strong support for the first phase of the Trans Mountain Pipeline expansion. The so-called "TMX1" is not the big prize but can contribute significantly to earnings. We are raising our target price by $1 to $29.

- Terasen has support from 17 different parties for the expansion. The support was in response to a request for expressions of interest. A formal open season will now proceed, probably this spring or early summer.

- The cost of TMX1 is about $570 million for an additional 75,000 barrels-per-day of capacity on Trans Mountain. Despite the high cost, the project is likely economic and additive to earnings on its own. It should add to earnings in 2007 and again in 2009.

- We are raising our target price because of the positive announcement and because of the lower interest rate environment boosting most utility stocks. Our rating balances the positive longer-term growth outlook against risk of renewing a major tolling agreement this year.

Investment Conclusions

Terasen announced it has received strong support for the first phase of the Trans Mountain Pipeline expansion. The so-called "TMX1" is not the big prize but can contribute significantly to earnings. We are raising our target price by $1.

The company's proposal is to expand the 225,000 barrel-per-day Trans Mountain pipeline in three phases:

- TMX1 would expand the pipeline to 300,000 barrels-per-day by 2008 at a cost of $570 million (35,000 barrels-per-day for $205 million by early 2007 and another 40,000 barrels-per-day for $365 million by early 2009).
- TMX2 would expand the pipeline to 400,000 barrels-per-day by 2009 for an additional $900 million.
- TMX3 would expand the pipeline to 850,000 barrels-per-day by 2010 for an additional $800 million.

Terasen sought initial expressions of interest for the entire project and found support from 17 different parties. However, there was no consensus on whether TMX2 and TMX3 would head North to Prince Rupert or South to Vancouver. This uncertainty leaves open the debate of whether shippers would continue with the TMX expansion after phase 1 is complete, or whether they would instead approve Enbridge's (ENB-TSX, Sector Performer) proposed Gateway project.

But regardless, it looks like TMX1 may move forward with or without TMX2 and TMX3. A formal open season will now proceed, probably this spring or early summer. Despite the high cost, the project is likely economic and additive to earnings on its own. With a US$1.40/barrel Trans Mountain toll from Edmonton to Vancouver, the expansion could add over C$40 million revenues and sufficient earnings to generate a reasonable ROE on the $570 million investment. It should add to EPS in 2007 and again in 2009.

The positive shipper response does not necessarily mean TMX2 and TMX3 will be constructed. Enbridge recently announced plans to expand its pipeline to Chicago (the Superior to Chicago portion) by over 200,000 barrels-per day by 2008. Gateway would add another 400,000 barrels-per-day of capacity to the West Coast. So we do not think the TMX2 and TMX3 can be constructed if shippers choose Gateway instead.

While shippers weigh their options, the tolling agreement on Trans Mountain expires at the end of this year. We estimate Terasen is earning a mid 20% ROE on the pipeline vs. a National Energy Board allowed return of about 9.5%. We do not think the ROE will drop all the way to 9.5%. But we estimate that every 100 basis point reduction in that ROE is worth $0.01 - $0.02 in EPS for Terasen.

Extending the current tolling agreement and having shippers approve TMX2 and TMX3 would be a best-case scenario for Terasen. In that case, the company would be able to offset the (potentially) lower ROE on existing pipeline rate base with earnings from the expansion.

We are raising our target price by $1 because of the positive announcement and because of the lower interest rate environment boosting most utility stocks. Our target on Terasen is now based on an 18.7x multiple of forecast 2006 earnings (in line with the multiple we apply to Enbridge).

The stock has already been trading around the $29 level lately, but most of the Canadian pipelines and utilities are at or near our targets. Our Sector Performer rating balances the positive longer-term growth outlook against near-term risks surrounding the Trans Mountain tolling agreement.

Price Target Calculation

Our $29 target price is based on an 18.7x multiple of our 2006 EPS forecast of $1.55. It also implies a 3.6% dividend yield. Given Terasen's superior growth prospects and low risk profile, we are using a target P/E multiple at the higher end of the group average, but within the stock's historical trading range of 8x-20x forward earnings.

Key Risks to Price Target

Terasen could fall short of our 2005 and 2006 earnings forecasts (and fail to meet our target price) for various reasons, including (but not limited to) the lower achieved ROEs and lower-than-expected growth in oil sands volumes. Increased competition for pipeline and utility assets by financial players also raises risk to returns on possible acquisitions. In addition, the stocks are sensitive to changes in Canadian bond yields. If broader market risk dissipates and bond yields rise significantly, valuation in the sector could fall.

Our EPS estimates are shown below:

	1 Qtr.	2 Qtr.	3 Qtr.	4 Qtr.	Yearly
2003 Actual	$0.71A	$0.08A	($0.07A)	$0.61A	$1.33A
2004 Current	$0.75A	$0.10A	($0.03A)	$0.61E	$1.42E
2005 Current	--	--	--	--	$1.55E

IMPORTANT DISCLOSURES:

Analyst Certification: Each CIBC World Markets research analyst named on the front page of this research report, or at the beginning of any subsection hereof, hereby certifies that (i) the recommendations and opinions expressed herein accurately reflect such research analyst's personal views about the company and securities that are the subject of this report and all other companies and securities mentioned in this report that are covered by such research analyst and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by such research analyst in this report.

Potential Conflicts of Interest: Equity research analysts employed by CIBC World Markets are compensated from revenues generated by various CIBC World Markets businesses, including the CIBC World Markets Investment Banking Department within the Corporate and Leveraged Finance Division. Research analysts do not receive compensation based upon revenues from specific investment banking transactions. CIBC World Markets generally prohibits any research analyst and any member of his or her household from executing trades in the securities of a company that such research analyst covers. Additionally, CIBC World Markets generally prohibits any research analyst from serving as an officer, director or advisory board member of a company that such analyst covers.

In addition to 1% ownership positions in covered companies that are required to be specifically disclosed in this report, CIBC World Markets may have a long position of less than 1% or a short position or deal as principal in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon.

Recipients of this report are advised that any or all of the foregoing arrangements, as well as more specific disclosures set forth below, may at times give rise to potential conflicts of interest.

Important Disclosure Footnotes for Terasen Inc. (TER)

2a Terasen Inc. is a client for which a CIBC World Markets company has performed investment banking services in the past 12 months.

Company Description
Terasen is a gas distribution and oil pipeline company. Its subsidiary, Terasen Gas, distributes natural gas to B.C., including Vancouver and the interior.

www.terasen.com

- Terasen reported normalized 2004 EPS of $1.40 vs. our estimate of $1.42 and $1.33 in 2003. A dividend increase of 7% was in line with expectations. We are reducing our estimates by $0.05, but maintaining our $29 target price.
- Gas Distribution earnings are falling due to lower allowed ROEs that move in lockstep with forecast long bond yields. A regulatory hearing in Q3 of this year could help offset this impact going forward, if the BCUC allows for a change in the ROE formula or increase in equity ratio.
- Oil Pipeline earnings remain strong, and offset the decline in Gas Distribution. We see visible growth of 6% in 2005 due to ongoing growth in the segment. However, near-term oil sands production and refinery issues cause us to slightly reduce EPS estimates.
- We are not raising our $29 target price even though the stock is already trading at that level. The TMX project is well developed and makes sense but faces stiff competition. In that context, we believe Terasen shares are fully valued.

Investment Summary

Terasen reported normalized 2004 EPS of $1.40 vs. our estimate of $1.42 and $1.33 in 2003, and raised its dividend by 7%. Earnings from Gas Distribution were slightly weaker-than-expected. We are reducing our estimates by $0.05, but maintaining our $29 target price.

For a detailed breakdown and analysis of earnings by segment, please see the appendix to this comment.

Oil Pipeline Growth Offsets Gas Distribution Decline

Oil pipeline earnings drove solid growth again for Terasen in 2004. Volume flows on the Trans Mountain Pipeline improved by over 9% on the Canadian portion, and almost doubled on the U.S. portion. We see continued growth in 2005 as an expansion on the Express Pipeline comes into service by April.

Unfortunately, declining earnings in Gas Distribution are taking some of the upside potential out of Terasen's earnings per share. Gas Distribution earnings are falling due to lower allowed ROEs that now move in lockstep with forecast long bond yields. We estimate that every 50 basis point reduction in bond yields results in a $0.05 EPS impact.

Absent any change in the regulatory framework, Terasen Gas Distribution could experience a further drop in its earnings in 2006. The company has initiated a hearing, likely beginning in Q3, to achieve a new ROE formula and/or thicker equity ratio. However, the outcome of this hearing is uncertain, as the BC regulator has not, to date, signaled an intention to change the current formula.

In addition, management indicated volumes on the Trans Mountain pipeline would be negatively impacted in Q1'05 by refinery outages and oil sands production delays. The combined effect of the Gas Distribution ROE drop, and oil volume issues cause us to reduce our estimates by $0.05 in 2005 and 2006. Our estimate for 2005 is in line with management guidance for 6% growth off of a $1.40 EPS base.

Future Growth Depends on TMX Project

Terasen has plans for $350 million of capital spending in 2005 (internally and debt financed), and has several modest but attractive growth initiatives in the works:

- $100 million LNG plant on Vancouver Island
- Expansion of Corridor Pipeline in Alberta (2007 timeframe)
- Organic growth in the Water & Utility Services business

These initiatives provide some organic growth, but we believe the stock is trading at a premium to the group because the market anticipates a major expansion on the Trans Mountain Pipeline (TMX 1, 2 and 3). The company plans to hold an open season for TMX1 in the summer of this year.

We think the TMX expansion is a logical and viable project. Terasen has done thoughtful and detailed work on the route and on expansion of docking facilities in Vancouver. Our analysis suggests the company could move a lot more oil out of Vancouver and into the California market.

However, competition in the form of Enbridge's (ENB-TSX, Sector Performer) Gateway Project is stiff. Our view is that Enbridge's project is also viable and reflects a sound long-term vision that shippers may choose to follow. Large Chinese companies may support Enbridge, resulting in the cancellation of the TMX project. In this sense, the outcome is highly unpredictable and to some extent, out of Terasen's hands despite its good work.

Still Deserves Premium, But No Higher Than Current One

We believe Terasen shares will continue to trade at some premium to the Canadian pipeline and utility group. The company is very well managed and has some visible growth projects.

But the stock is already trading at 19.5x forward earnings estimates and the company's own guidance on the conference call. Despite the 7% dividend increase, the yield is only 3.1%, at the low end of the utility group.

Unless and until Terasen achieves further clarity on approval of the TMX expansion, we do not see the stock moving up from current levels. The stock is already trading at our $29 target but other stocks in the group are also at or through our price targets. Therefore, we are maintaining our Sector Performer rating.

Appendix: Summary of Q4 and Full Year 2004 Results

We normalized Terasen's reported Q4'04 EPS to $0.52 per share by excluding a $1.0 million (after-tax) mark-to-market loss related to natural gas hedges at Clean Energy. For the full year 2004, normalized EPS came in at $1.40 compared to $1.33 in 2003.

Exhibit 1. Segmented Earnings for Terasen

(data in C$ millions, unless otherwise stated)

	Q4/04A	Q4/03A	2004A	2003A
Terasen Gas	$36.2	$37.5	$69.7	$72.6
Terasen Gas (Vancouver Island)	$6.4	$7.3	$26.2	$26.2
Trans Mountain Pipeline	$11.2	$10.0	$39.4	$35.8
Express Pipeline System	$4.9	$3.9	$15.9	$9.7
Corridor Pipeline	$3.8	$4.0	$15.6	$10.7
Water and Utility Services	$0.7	$0.4	$6.6	$4.1
Other Activities	($6.7)	($5.5)	($20.3)	($14.6)
Capital Securities Distributions (net of tax)	($1.6)	($1.7)	($6.6)	($6.6)
Operating Earnings for Common	**$54.9**	**$55.9**	**$146.5**	**$137.9**
Unusual Items	($1.0)	($5.2)	$3.3	($5.2)
Reported Earnings	$53.9	$50.7	$149.8	$132.7
Average Shares Outstanding (mln)	104.8	104.0	104.7	103.6
Operating Earnings per Share	**$0.52**	**$0.54**	**$1.40**	**$1.33**
Reported Earnings per Share	$0.51	$0.49	$1.43	$1.28

Notes:

1. Unusual item in 2004 relates to $3.3 million gains from mark-to-market accounting on Terasen's share of Clean Energy's natural gas positions.
2. Unusual items in 2003 relate to gas utility restructuring charge ($3.4 mln after-tax) and write-down of Westport Innovations investment ($1.8 mln after-tax).

Source: Company reports and CIBC World Markets Inc.

Natural Gas Distribution

Q4 earnings from the gas distribution utilities came in lower-than-expected, mainly as a result of a change in the method of accounting for quarterly income taxes at Terasen Gas. Going forward, Terasen Gas' income taxes will be determined using an effective tax rate instead of allocating annual taxes based on budgeted quarterly sales revenues. Quarterly earnings from Terasen Gas have been restated in 2003-4 to reflect this accounting change.

For the full year, cost savings from the integration of the utility operations (+$4.1 million earnings impact) helped to mitigate some of the negative impacts from a lower allowed ROE (-$2.4 million earnings impact) and introduction of earnings sharing in 2004 (-$4.7 million impact).

Petroleum Transportation

Trans Mountain Pipeline's earnings showed solid growth in 2004, driven by strong demand from U.S. refiners for oil sands production. Volume throughput on the Canadian mainline was up 9.25% year-over-year while the U.S. portion showed very strong y/y growth (up 68%). The higher volume flows also helped to offset lower Canadian tolls.

Management cautioned that Trans Mountain volumes will be depressed in the first few months of this year due to planned refinery turnarounds and delayed oil sands production from Suncor (SU-TSX, Sector Performer) and other producers. But these refinery and oil volume issues should dissipate by Q3 at the latest and we should see resumed throughput and earnings growth from Trans Mountain.

Earnings from **Express Pipeline System** came in slightly higher-than-expected, at $15.9 million in 2004 vs. $9.7 million in 2003 and our $15 million estimate. The increase was mainly attributable to higher throughput, averaging 175,300 Bbls/d in 2004 (up 2% year-over-year) and the reversal of foreign exchange losses. The 108 MBbls/day capacity expansion on Express is on schedule to come into service by April this year, which should drive solid organic growth from Express in 2005.

A full year of operations (in service May 2003) contributed to the improved earnings from **Corridor Pipeline** in 2004 (reported $15.6 million compared to $10.7 million in 2003).

Terasen announced plans to add 35 MBbls/day of capacity on Corridor with additional pumping facilities this year. This $6.5 million expansion could be the first stage of a larger phased expansion to add 110-200 MBbls/d of incremental capacity by 2009/10.

Water and Utility Services

The $2.5 million increase in full year earnings from the Water and Utility Services segment was attributable to organic growth ($1.3 million in earnings growth) and acquisitions ($1.2 million in growth).

The company intends to grow these businesses (organically and through acquisitions) in 2005 with a capital spending plan of $50 million.

Other Activities

Excluding a $3.3 million mark-to-market gain from Clean Energy and capital securities distributions, we estimate that Other Activities contributed a loss of $20.3 million in 2004, up from $14.6 million last year. An increase in financing costs and lower income tax recovery were the main contributing factors for the higher operating losses from Other Activities.

Price Target Calculation

Our $29 target price is based on a 19.3x multiple of our 2006 EPS forecast of $1.50. It also implies a 3.3% dividend yield. Given Terasen's superior long-term growth prospects and low risk profile, we are using a target P/E multiple at the higher end of the group average, but within the stock's historical trading range of 8x-20x earnings.

Key Risks to Price Target

Terasen could fall short of our 2005 and 2006 earnings forecasts (and fail to meet our target price) for various reasons, including (but not limited to) the lower achieved ROEs and lower-than-expected growth in oil sands volumes. Increased competition for pipeline and utility assets by financial players also raises risk to returns on possible acquisitions. In addition, the stocks are sensitive to changes in Canadian long bond yields. If broader market risk dissipates and bond yields rise significantly, valuation in the sector could fall.

Our EPS estimates are shown below:

	1 Qtr.	2 Qtr.	3 Qtr.	4 Qtr.	Yearly
2004 Actual	$0.63A	$0.17A	$0.08A	$0.52A	$1.40A
2005 Prior	--	--	--	--	$1.55E
2005 Current	--	--	--	--	$1.50E
2006 Prior	--	--	--	--	$1.55E
2006 Current	--	--	--	--	$1.50E

IMPORTANT DISCLOSURES:

Analyst Certification: Each CIBC World Markets research analyst named on the front page of this research report, or at the beginning of any subsection hereof, hereby certifies that (i) the recommendations and opinions expressed herein accurately reflect such research analyst's personal views about the company and securities that are the subject of this report and all other companies and securities mentioned in this report that are covered by such research analyst and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by such research analyst in this report.

Potential Conflicts of Interest: Equity research analysts employed by CIBC World Markets are compensated from revenues generated by various CIBC World Markets businesses, including the CIBC World Markets Investment Banking Department within the Corporate and Leveraged Finance Division. Research analysts do not receive compensation based upon revenues from specific investment banking transactions. CIBC World Markets generally prohibits any research analyst and any member of his or her household from executing trades in the securities of a company that such research analyst covers. Additionally, CIBC World Markets generally prohibits any research analyst from serving as an officer, director or advisory board member of a company that such analyst covers.

In addition to 1% ownership positions in covered companies that are required to be specifically disclosed in this report, CIBC World Markets may have a long position of less than 1% or a short position or deal as principal in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon.

Recipients of this report are advised that any or all of the foregoing arrangements, as well as more specific disclosures set forth below, may at times give rise to potential conflicts of interest.

CIBC World Markets' Stock Rating System

Abbreviation	Rating	Description
Stock Ratings		
SO	Sector Outperformer	Stock is expected to outperform the sector during the next 12-18 months.
SP	Sector Performer	Stock is expected to perform in line with the sector during the next 12-18 months.
SU	Sector Underperformer	Stock is expected to underperform the sector during the next 12-18 months.
NR	Not Rated	CIBC does not maintain an investment recommendation on the stock.
R	Restricted	CIBC World Markets is restricted*** from rating the stock.
Stock Ratings Prior To August 26, 2002		
SB	Strong Buy	Expected total return over 12 months of at least 25%.
B	Buy	Expected total return over 12 months of at least 15%.
H	Hold	Expected total return over 12 months of at least 0%-15%.
UP	Underperform	Expected negative total return over 12 months.
S	Suspended	Stock coverage is temporarily halted.
DR	Dropped	Stock coverage is discontinued.
R	Restricted	Restricted
UR	Under Review	Under Review
Sector Weightings**		
O	Overweight	Sector is expected to outperform the broader market averages.
M	Market Weight	Sector is expected to equal the performance of the broader market averages.
U	Underweight	Sector is expected to underperform the broader market averages.
NA	None	Sector rating is not applicable.

**Broader market averages refer to the S&P 500 in the U.S. and the S&P/TSX Composite in Canada.
"Speculative" indicates that an investment in this security involves a high amount of risk due to volatility and/or liquidity issues.
***Restricted due to a potential conflict of interest.
"CC" indicates Commencement of Coverage. The analyst named started covering the security on the date specified.

Ratings Distribution*: CIBC World Markets' Coverage Universe

(as of 17 Feb 2005)	Count	Percent	Inv. Banking Relationships	Count	Percent

Terasen Inc: 4Q04 results.

Mark Litowitz, 416-956-3858 on behalf of Joanna Zapior.

CREDIT IMPACT: Neutral. Fourth quarter credit metrics were better, both year-over-year and sequentially, with leverage improving by roughly 2% and 1.6% from last quarter and a year ago, respectively. Solid operating cash flows and debt reduction were the primary drivers for the improvements in credit metrics. Strong growth in annual earnings from the pipelines business more than offset weaker annual earnings from the gas distribution segment. We continue to rate this company Market Perform.

Terasen: 4Q04	Debt to CF	EBITDA to Interest	Debt to Cap at book	Debt to Cap at Mkt	Realized ROE	LTM CF	YTD FCF	Adjusted debt
4Q04	10.0	3.0	68.3%	46.1%	11.7%	296	89	2,936
4Q03	10.5	2.7	69.9%	50.4%	11.0%	289	-229	3,030
3Q04	10.4	3.0	70.3%	50.6%	12.0%	304	-23	3,053

	4Q04	4Q03	YTD 04	YTD 03
Earnings contribution:				
GAS DISTRIBUTION				
Terasen Gas	36.2	37.5	69.7	72.6
Terasen Gas VC Island	6.4	7.3	26.2	26.2
PETROLEUM TRANSP.				
TransMountain	11.2	10.0	39.4	35.8
Corridor	3.8	4.0	15.6	10.7
Express	4.9	3.9	15.9	9.7
WATER & UTILITY	0.7	0.4	6.6	4.1
OTHER	(9.3)	(8.8)	(23.6)	(23.0)
Number of gas customers	NA	NA	875,166	859,183
Gas transportation volume (in petajoules)	19.6	20.2	72	72.2
Trans Mountain Canadian Mainline (bbl/d)	239,100	218,500	236,100	216,100
Trans Mountain US Mainline, included in Canadian Mainline (bbl/d)	89,300	57,700	91,700	54,600
Express System (bbl/d)	175,400	174,000	175,300	171,200

- Earnings from Terasen Gas were weaker in 2004 compared to 2003. Lower 2004 earnings were primarily due to lower allowed ROE, which offset efficiency gains from the integration of Vancouver Island and BC mainland operations. Gas customers grew by 1.86%, with about 16,000 new customers signed up during the year.
- Strong demand for oil in both Canada and south of the border helped to increase 2004 throughput volumes on TransMountain and Express pipelines compared to 2003. The increased year-over-year throughput was the main reason for stronger earnings contribution from Petroleum Transportation in 2004 compared with 2003 pipeline earnings. A full year of earnings contribution from Corridor, which commenced operation in May 2003, also contributed to year-over-year growth in pipeline earnings.
- Water and utility services segment earnings improved by $2.5 million in 2004. Most of this growth in earnings was due to organic growth from existing water and utility services business. Another source of earnings growth in this segment came from the acquisition of Fairbanks Sewer and Water.

	Analyst	Senior unsecured DBRS	Senior unsecured Moody's	Senior unsecured S&P	Credit fundamentals (1-3 years)	Rating change probab. (1 year)	Valuation	YTD total return: Shorter bond Bond	YTD total return: Shorter bond Return	YTD total return: Longer bond Bond	YTD total return: Longer bond Return	YTD change in spread: Shorter bond Curr Sprd	YTD change in spread: Shorter bond YTD Chng	YTD change in spread: Longer bond Curr Sprd	YTD change in spread: Longer bond YTD Chng

Pipelines: *Solid, largely regulated fundamentals, though regulatory environment disadvantages those companies that have North American growth plans as Cdn leverage is higher and returns lower. Our investment thesis rests on two pillars: 1) operating excellence and cost management will be key in light of 2) regulators pressuring for cost control, including returns. Holding company risk has been increasing with expansion in non-regulated areas, equity market push for growth, and still elevated leveragex*

Gas distribution: *Stable sector, with strong operating franchises and good fundamentals. However, no standalone credits left (exceptand credit quality is affected by parent activities. See also our comment on the pipeline sector.*

Enbridge Inc	JZ	A	A3	A-	May weaken (M&A, projects)	Medium	C	5.8% 2008	0.63%	8.2% 2024	2.58%	38	▲ 2	98	▼ 3
Enbridge Pipelines	JZ	A(high)	NR	A-	Stable	Medium	R	5.621% 2007	0.48%	7.2% 2032	3.52%	33	▲ 3	121	▼ 4
Enbridge Gas Dist.	JZ	A	NR	A-	Stable	Medium	R	11.15% 2009	0.81%	6.1% 2028	2.75%	53	▲ NA	101	↔ 0
Alliance Pipe	JZ	A(low)	A3	BBB+	Strong	Very low	F	7.23% 2015	1.81%	7.217% 2025	2.04%	48	▼ 15	94	▼ 5

There is continued M&A and large project risk - lots of noise in the news as juggling for positions continues. The market now prices its uncertainty about committment to "A" ratings. Pipe acquisition in the GoM has eroded current balance sheet to the levels conti permissible under the S&P rating. Over time, we see balance sheet quality potentially weakening as more risky assets may be added while mature, stable assets end up in income trust. That it has historically been a defensive credit (low spread volatility) sible us a pause but history may not repeat itself. We view **opcos** as better credits in line with DBRS logic but not necessarily better value. Note **EGD** has a 2005 rate case. Regulatory stability has improved after a recent spate of decisions & PBR is possible. Mainline is renegotiating its settlement this fall. For **Alliance,** we like the "structuring premium" of an amortizer and the simplicity of this credit; not affected by how the ownership is structured; valuation reflects the defensive nature of this credit. It continues to perform as expected. Mgt turnover has been signficant (CFO earlier and now CEO) but this has no credit impact either for this contractually structured credit

TransCanada	JZ	A	A2	A- Neg	Stable but event risk	Medium	R	6.05% 2007	0.60%	6.5% 2030	3.64%	31	▼ 5	110	▼ 5

Neg outlook will take a long time to hatch, if at all - unless an acquisition forces S&P's hand (the most recent big one of a U.S. pipeline appears to have crystallized the agency thinking in a constructive way, subject to how conservative mgt will remainik will tak financing side) . Expansion in generation (including a now more likely restart of two more Bruce units), another potential large opportunistic acquisition & large projects in the longer term are credit risks. Regulatory environment continues to be unsate) . Expansi mgt's eyes which raises questions about whether the company will want to trustify some of the lower return regulated assets - a potential negative for bondholders.

Duke (Westcoast)	JZ	A(low)	NR	BBB Pos	Improving	Low	R	5.7% 2008	0.66%	7.15% 2031	2.92%	48	▲ 2	123	↔ 0
Duke (Union Gas)	JZ	A	NR	BBB Pos	Standalone stbl + DUK effect	Low	R	5.7% 2008	0.64%	8.65% 2025	2.51%	43	▲ 2	114	↔ 0
MNEP	JZ	A	A1	A	Strong	Very low	F	NA	NA	6.9% 2019	1.45%	NA	NA	81	▲ 1

Duke took steps to turn the corner and the balance sheet repair actions have finally shown. Exit from non-core businesses continues & core regulated operations are stable. We think DENA will continue to be a source of grief for a while until markets improvtook until the new idea of contributing it to a joint venture hatches (lowering of risk). Resumed talk of opportunistic growth means that the golden age for bondholders is almost over (some upside remains from DENA cleanup & possible upgrade). We believe, in l th long run, **Union Gas's** distribution portion, as a non-core asset, is more separable from Duke than Westcoast. Its storage is a strategic asset to Duke. In the short term, Union provides solid cash flow to Duke and supports its credit quality. Spreads have performed reasonably well & are now in the middle of the utiltiy pack, leaving little further room for outperformance. For **MNEP**, we like structural protection and simplicity; valuation reflects the defensive nature of this credit.

Terasen	JZ	A(low)	A3	BBB-	Stable but some event risk	Low	C	6.3% 2008	0.89%	NA	NA	55	▼ 3	NA	NA
Terasen Gas	JZ	A	A2	BBB	Stable	Low	C	NA	NA	6.95% 2029	2.87%	NA	NA	129	↔ 0

Business fundamentals are a strong combination of a regulated gas distribution and pipelines, with aggressive financial profile determining the rating. Market pricing suggests that the market does not give full credence to the S&P rating (but still incorpoundamenta despite its now unsolicited status). Project CAPEX could be high. For **Terasen Gas**, we like the fundamentals of gas distribution at current spread, compared to historical spreads, but don't think that holdco spread can tighten much in the near term.

Legal Disclaimers and Important Disclosure Footnotes

Pipelines, Utilities, & Power

Sector Weighting:

Market Weight

Oil Pipelines

Enbridge And Terasen Battle For Producer Support

- On February 14 and 16, we toured Enbridge's and Terasen's competing proposals for a new $2.5 billion oil pipeline from Alberta's oil sands to the West Coast. We were impressed with the viability of both projects but concerned about the competitive dynamics behind them.
- Enbridge's Gateway Project is further advanced than we thought. Detailed route selection and community consultation are well under way. The advantage of a deep water port is likely to sway Chinese oil companies seeking long-term and reliable supply.
- But Terasen's TMX expansion into Vancouver Harbour appears doable despite tanker traffic and urban surroundings. Some domestic oil companies seeking a practical near-term and medium-term alternative to Midwest markets are sure to sign on.
- The tours left us with the impression there is no clear winner and that the companies may wind up in parallel regulatory processes. In the long term, pipeline investors should benefit from new capital investments. But patience may be tested while the process plays out.

All figures in Canadian dollars, unless otherwise stated.

Investment Summary

Some of the best energy infrastructure investments have been spoiled by too much competition. Undersupplied electricity markets seemed ripe for big returns until too many power plants were built. Some interstate gas pipelines to the Northeast suffered for years until gas demand caught up with excess pipeline capacity. Are Western Canadian oil pipelines another overcapacity situation waiting to happen?

On February 14 and 16, we toured Enbridge's (ENB–TSX, Sector Performer) and Terasen's (TER–TSX, Sector Performer) competing proposals for a new $2.5 billion oil pipeline from Alberta's oil sands to the West Coast. Enbridge's Gateway project to a northern port is further advanced than we realized. And Terasen's TMX project to Vancouver is more viable than we thought. But while these projects represent some of the best organic growth opportunities the sector has to offer, we were concerned about the competitive dynamics shaping up between their proponents.

It is clearer to us now than before how oil producers stand to benefit from new oil pipelines to the West but less clear how pipeline investors will benefit. Investor excitement over new oil pipelines to the West Coast is palpable. Shares in Enbridge and Terasen have both achieved premium valuations that, in part, reflect expectations for big new investments. Yet, we see no near-term resolution of the situation. In fact, we see the potential for a drawn-out battle in front of the National Energy Board (NEB).

Enbridge's Gateway Project has, in our view, been wrongly criticized for being impractical. Construction through the Rocky Mountains has been viewed as too challenging and carrying large volumes at the outset viewed as too imprudent. We flew the proposed Gateway route by helicopter and were impressed by natural valleys and ready road access that would facilitate Enbridge's construction plans. The wide-open, deep-water port at Kitimat would accommodate growth well into the future.

At the same time, we think Terasen's project in the Vancouver Harbour has been wrongly characterized as a "Not-In-My-Backyard" protest waiting to happen. We traveled the tanker route by boat through the harbour and reviewed the Westridge Dock and oil storage facilities. Terasen has carefully worked through logistical issues that would permit a large increase in oil volumes to move by ship from Vancouver to the oil-hungry California market.

The viability of both projects and tenacity of their proponents begs the question how this competition will be resolved. Normally one of the two projects would achieve shipper support and proceed, while the other project would not achieve support and wither. But in this instance, we are not convinced that will happen.

Terasen's phased approach may allow shippers to support the first phase of Trans Mountain's expansion and Enbridge's Gateway at the same time. In a worst-case scenario, both projects may wind up at the NEB in parallel review processes with no certainty on the final outcome for another two years.

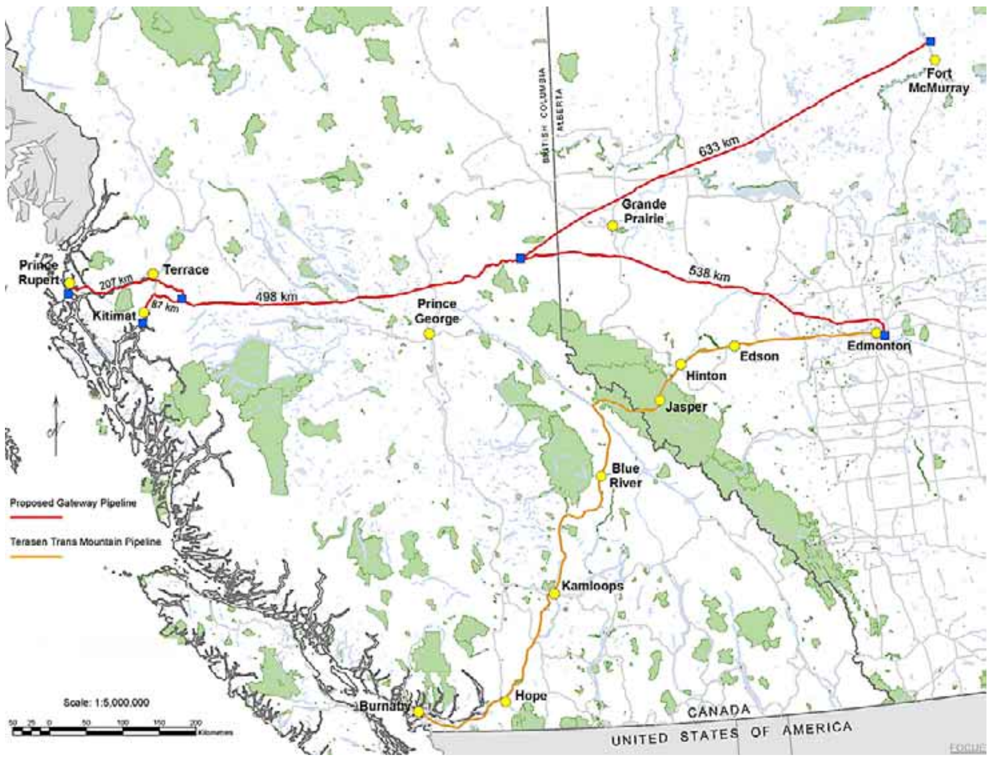
Pipeline investors should hope instead that one of the companies throws up its hands and politely admits defeat. Or even better, that the two companies build one pipeline together. But big new pipelines opening new markets for Canadian oil are the stuff that legacies are made of. Enbridge and Terasen are both deserving of the prize and we expect both will pursue it side by side with passion and vigor.

Enbridge's Gateway Well Advanced – Kitimat The Likely Destination

Enbridge has been studying a new 400,000 barrel-per-day (Bbls/d) pipeline from Edmonton to the West Coast for several years. The Gateway Project now goes well beyond grand visions and lines on a map. Our tour of the proposed project suggests Enbridge is well advanced in the areas of route selection, aboriginal and community consultation and shipper support.

With all the talk of a new dock at Prince Rupert, we were surprised to learn that Kitimat is a significantly more likely final destination for the pipeline. The Gateway Project probably originates in Edmonton and moves to the Coast toward Terrace, British Columbia. It then either splits off to Prince Rupert or to Kitimat. Both towns have deep-water ports shipping natural resources to global markets.

Exhibit 1. Map Of Proposed Gateway Project



Source: Enbridge reports and CIBC World Markets Inc.

We first flew by helicopter from Terrace to Prince Rupert via the potential pipeline route and found it somewhat hostile and environmentally problematic from a construction perspective. The route would at first follow a major hydro right-of-way and the Pacific Northern Gas pipeline route heading west from Terrace. In this initial stage, pipelining would be relatively straightforward.

CIBC World Markets

Exhibit 2. Existing Right-of-ways Initially Provide An Easy Route Toward Prince Rupert

Source: CIBC World Markets Inc.

The challenges grow as the pipeline route moves further west to the coast. Steep mountains jutting straight up from the Skeena River present construction problems. With no clear right-of-way in these sections, Enbridge would be forced to blast long tunnels above and along the riverbed.

Exhibit 3. There Simply Isn’t Anywhere To Put A Pipeline Along Parts Of The Route To Prince Rupert

Source: CIBC World Markets Inc.

In our view, the biggest challenge for Prince Rupert is the idea of placing an oil pipeline along the pristine Skeena River. The waterway is a major spawning area for salmon and other fish. It may be impossible to avoid silt from moving into the river during construction. Any significant pipeline leak could be seriously hazardous for the environment and fish stocks. We note these challenges are not unique to the Prince Rupert option (Trans Mountain moves through sensitive areas as well), but they may tilt the balance toward Kitimat.

Exhibit 4. Any Oil Leak Along The Pristine Skeena River Could Be Hazardous To Spawning Fish

Source: CIBC World Markets Inc.

Moving oil to Kitimat is no easy feat either, but seems a lot more practical than moving it to Prince Rupert. We flew the potential pipeline route to Kitimat and then well into the harbour and Douglas Channel that the largest tankers would float with up to two million barrels (Bbls) of oil destined for Asia. The route is much less hostile than the route to Prince Rupert. Enbridge has identified wide-open valleys as its potential pipeline route.

Exhibit 5. Rail Lines And Roads In Existing Valleys Make Up The Route To Kitimat

Source: CIBC World Markets Inc.

We did not fully appreciate, prior to our tour, how existing logging roads provide access to the potential pipeline route. Machinery and equipment could be moved in and out of the right-of-way without major environmental disruption and cost. The Kitimat route presents some challenges and may require tunnels in certain bottlenecks, but could cost up to $500 million less than the Prince Rupert route. That cost difference is a meaningful number on a project originally slated for a $2.5 billion total budget.

The port at Kitimat was perhaps the most impressive component of the Gateway tour. There are wide-open spaces for a new dock and Enbridge has already identified and begun engineering work on a relatively flat landmass for new storage tanks.

Exhibit 6. A New Dock Would Go On Shore (Left) With Oil Storage Tanks Just Above (Right)

Source: CIBC World Markets Inc.

The Douglas Channel waterway leading out from Kitimat is deep and largely underutilized. In fact, on our flight we did not see a single watercraft on the inlet. Yet, there were no major bottlenecks and the water was calm.

Exhibit 7. Douglas Channel: No Bottlenecks Or Congestion For The Foreseeable Future

Source: CIBC World Markets Inc.

Enbridge has made progress on community consultation as well as on engineering and route selection. There are about 130 aboriginal communities along the proposed pipeline route. The company has a team with an active outreach and consultation program. We believe Enbridge has also been working directly with key stakeholder groups on environmental and other issues that may affect precise route selection.

Perhaps most important, Enbridge appears to have made progress with Asian shippers. Chief executive Pat Daniel stated at the CIBC Whistler Institutional Investor Conference last week that a memorandum of understanding (MOU) would likely be signed during the current quarter. We think this MOU could involve several Chinese shippers and one or more independent Canadian oil producers.

In summary, we see the Gateway Project as a compelling way to meet shipper needs for a Western alternative well into the future. The Kitimat route appears doable and could accommodate long-term growth for Enbridge and the oil producers.

Terasen Ready To Roll Out Westridge Marine Terminal Expansion

Terasen's proposed TMX expansion involves a doubling of the Trans Mountain Pipeline system and an ultimate increase in capacity from 225,000 Bbls/d to 850,000 Bbls/d. Terasen's project has been criticized for relying on the busy Burrard Inlet (Port of Vancouver) for increased oil shipments. Our tour of the Port and Westridge Dock facilities suggests the company is well on its way to resolving logistical matters that could have otherwise stood in the way.

The logistics of loading more and larger tankers at Westridge did not seem overly problematic. The dock is located at the end of the Harbour with no obvious obstructions in the area.

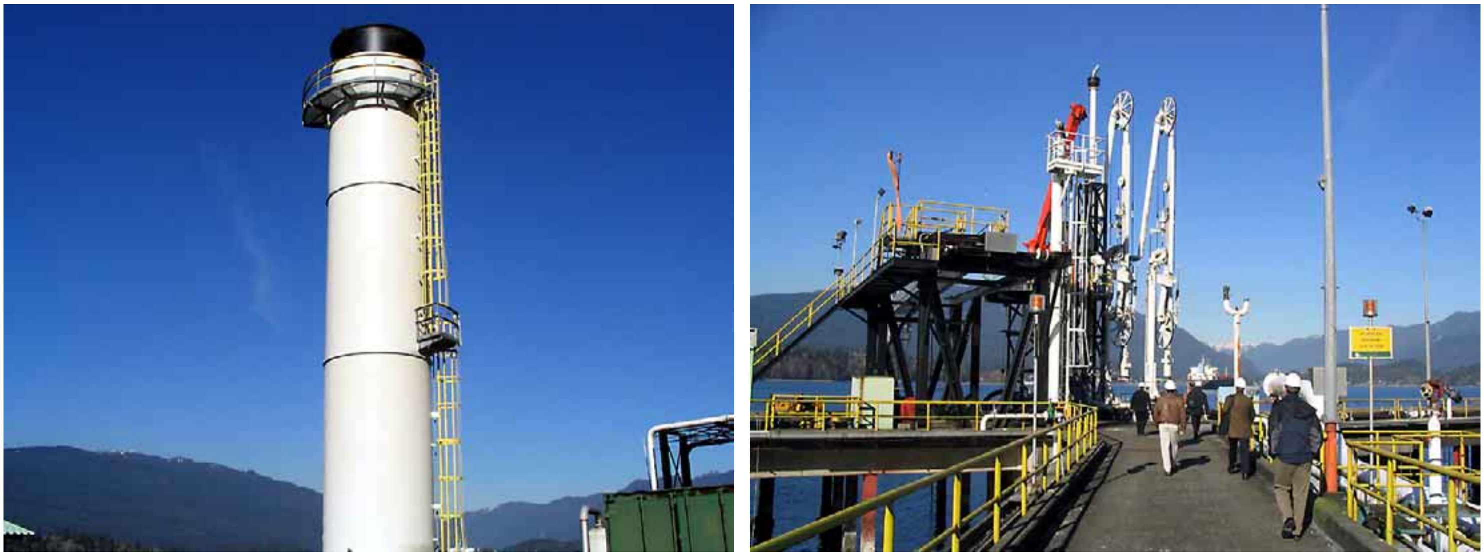
Exhibit 8. The Westridge Dock Is Located In Probably The Least Busy Section Of The Harbour

Source: CIBC World Markets Inc.

Little work would have to be done on the dock or its infrastructure to increase shipments at the outset. The dock is equipped with scrubbers to minimize air emissions. The 24-inch pipeline now terminates on the dock and attaches to large arms that fill tankers in less than a day.

CIBC World Markets

Exhibit 9. The Dock Is Equipped With H_2S Scrubbers (Left) And Oil Loading Arms (Right)



Source: CIBC World Markets Inc.

Key challenges include dredging water off the edge of the dock and then expanding the facility in the longer term. Dredging is necessary to increase the effective cargo capacity of each ship by 100,000 Bbls. Terasen indicated its permit application for dredging is now under consideration by the Port Authority, Department of Fisheries and Department of Environment.

Exhibit 10. Dredging Would Be Permitted Pending Tests On Sediment Off The Dock Berth Face

Source: CIBC World Markets Inc.

We toured the Burnaby oil tank farm that Terasen would expand in conjunction with the TMX project. The company has about 12 large tanks with total capacity of two million Bbls at present. The last tanks were constructed in 1989 but Terasen would add up to six new tanks on site in conjunction with the TMX Project.

Exhibit 11. Burnaby Oil Tanks Work Well Into The Landscape With Room For Expansion

Source: CIBC World Markets Inc.

Terasen has also made good progress on the logistics of navigating the Burrard Inlet with larger ships and more of them. The company has proposed using 80,000 dead-weight-ton Aframax tankers (0.5 million Bbls) as opposed to 50,000 dead-weight-ton Panamax tankers (0.3 million Bbls). It has also proposed sending as many as 10–15 tankers off the dock each month compared to the total of 14 tankers it sent in all of 2004.

The Second Narrows Bridge in the Burrard Inlet poses the most challenging navigation bottleneck. There is a railway bridge that lifts and a highway bridge that does not. Concerns have been raised about the ability to move larger tankers below and between parts of the bridge.

Exhibit 12. The Second Narrows Bridge Is A Logistical Challenge

Source: CIBC World Markets Inc.

CIBC World Markets

It appears Terasen has done sufficient work to prove Aframax tankers can navigate the Second Narrows Bridge passage. The company has conducted detailed simulations under various conditions. Simulations suggest tankers could consistently navigate through the waterway and out to sea.

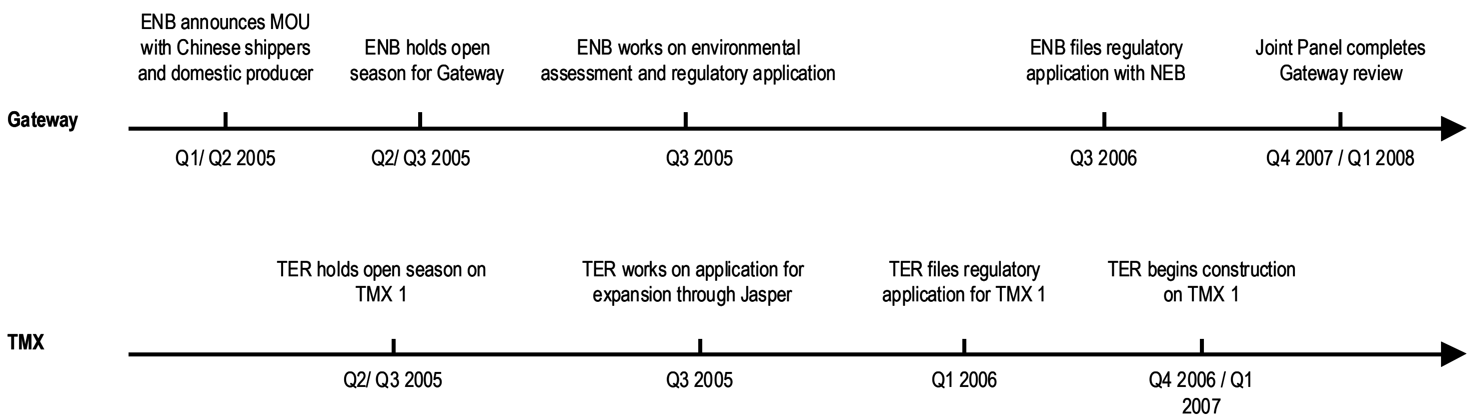
Terasen has already received expressions of interest from parties for the first phase of the Trans Mountain expansion. Last week, Chief Executive John Reid stated at the CIBC World Markets Whistler Institutional Investor Conference that the company plans to proceed with an open season this summer.

In summary, the tour reinforced our view that the Terasen project offers a practical solution to sending more Canadian oil to the Pacific Northwest and California. While shipments out of the Vancouver Harbour may be limited in the very long term, the project likely offers an attractive potential solution for the foreseeable future.

Parallel Processes Could Continue

The viability and soundness of both companies' oil pipeline proposals suggests to us that they will both proceed down parallel tracks for the time being. Enbridge will likely announce a MOU near term and Terasen will commence what is bound to be a successful open season on TMX1. Both companies may wind up pursuing projects in separate regulatory processes at the same time.

Exhibit 13. Enbridge And Terasen's Parallel Processes For New Western Oil Pipelines



Source: Company reports and CIBC World Markets Inc.

One could argue that Terasen has an inside track in the near term because it only needs an incremental 75,000 Bbls/d of support for TMX1, while Enbridge needs more like 350,000 Bbls/d for Gateway. We doubt Enbridge can achieve that level of firm capacity commitment upfront but the company may proceed anyway:

- The toll difference for 300,000 Bbls/d vs. 400,000 Bbls/d is only about $0.45 per Bbl.
- Enbridge has a history of building pipelines that achieve sub-optimal returns initially when there is strong potential for growth in the future (Athabasca, SEP II, Spearhead).

At the same time, Terasen is unlikely to back down even if it appears Gateway has strong support:

- TMX is critical to the company's future growth plans.
- Terasen has a history of building pipelines at sub-optimal returns initially when there is strong potential for growth in the future (Corridor).

Our suggestion that the companies may continue to proceed down a parallel path does not mean their management teams are irrational. Taking slightly sub-optimal returns near term to enhance growth in the future makes sense especially in a climate where asset acquisitions are too expensive. But we are suggesting that the oil pipeline expansions may add a lot more to shareholder value (EPS) in the long term than in the short and medium term.

Conclusions And Potential Resolutions

Last year, we published reports quantifying supply and pipeline capacity. We concluded that there is not room for both pipeline projects. Enbridge and Terasen both corroborate that finding. In that context, there must be some resolution — albeit probably not any time soon — to the competing proposals. We see several possible outcomes:

- ***Gateway wins scenario –*** A pipeline to Kitimat makes more sense to us in the long term than a pipeline to Vancouver. There is little doubt that Terasen can accommodate more volumes in the short and medium term from the Vancouver Port. But in the longer-term, we doubt Vancouver can handle the ultimate volumes that may be destined for Asia. Chinese shippers may well recognize this fact, having observed both the Kitimat and Vancouver ports. Terasen has a proposal for Kitimat that could beat out Gateway, but Enbridge has aligned itself more tightly with a northern route. If Chinese shippers are driving the process, Enbridge and Gateway could win out.

- ***TMX wins as planned scenario –*** The Vancouver Harbour is a practical solution for increasing shipments of oil to California. Chinese shippers may not have sufficient volumes to commit on a 400,000-Bbl pipeline to Kitimat. In this scenario, domestic shippers could select Terasen's staged proposal, slowly sending more oil to California over time.

- ***Terasen surprises with early filing for TMX2 –*** Terasen has the advantage of being slightly ahead of Enbridge in its expansion process. Terasen's open season planned for this summer could attract sufficient interest to justify building phase 2 as well as phase 1. In this instance, the project may default to TMX before Gateway is fully developed or sufficiently subscribed to move forward. This scenario may sound far-fetched, but Terasen management has never been entirely clear on whether TMX1 could be completed independent of TMX2 and TMX3. It may be possible for Terasen to move toward Vancouver with TMX1 and TMX2 at the same time.

- ***Enbridge and Terasen work together on a pipeline to Kitimat –*** If the battle for new Western pipelines carries on for too long, the companies may eventually decide to work together. In this scenario, we could see them using the Trans Mountain right-of-way through Jasper, then head north to Kitimat. At this time, we do not believe the companies are prepared to work on a joint project. But they might be in a year or so if they are still locked in a competitive battle.

In many ways, the battle for a big new pipeline to the West Coast may be just beginning, not nearing an end. Hopefully shippers and oil pipeline companies will converge on the solution before the NEB takes a central role. Commercial interests are generally better arbiters of oil pipelines than government regulators.

Notes: The CIBC World Markets analyst who covers Enbridge visited the company's proposed pipeline route from Terrace, B.C. to Prince Rupert and Kitimat on February 14. CIBC World Markets was responsible for all costs, including those associated with air transportation and accommodations.

The CIBC World Markets analyst who covers Terasen visited the company's Westridge dock facilities on February 16. Terasen was responsible for the cost of transportation to and from the operations. CIBC World Markets was responsible for all other costs involved.

Price Target Calculations

Our price targets for the pipeline and utility companies are derived from P/E multiples and dividend yields (relative to bond yields) based on our 2006 earnings and dividend forecasts. Our target dividend yields range from 2.8%–5.3%. Our target P/E multiples range from 12.0x–19x (in line with historical ranges). In the past 15 years, the stocks have tended to peak at no more than 16x–17x earnings. The differences in target multiples reflect different organic growth rates, potential acquisition activity, and current regulatory environment.

Key Risks To Price Targets

Many of our pipeline and utility stocks could fall short of our 2005 and 2006 earnings forecasts (and fail to meet our price targets) for various fundamental reasons, including (but not limited to) lower-than-expected achieved ROEs, low acquisition activity, and weak power prices/spark spreads. Our estimates on Enbridge and Terasen assume that they continue to earn high incentive returns (above NEB-allowed ROE) on their oil pipelines. The pipeline and utility stocks are sensitive to changes in long-term bond yields. If bond yields rise significantly, valuation in the sector could fall.

Terasen Inc.

Q1 Earnings Slightly Soft As Expected

- Terasen reported normalized Q1'05 EPS of $0.60 vs. our estimate of $0.58 and $0.63 in Q1'04. A temporary reduction in oil pipeline volumes caused the weakness and was factored into our numbers. We are maintaining our estimates and target price.

- Management maintained full-year EPS guidance of $1.45 - $1.50, excluding Q1 mark-to-market gains of $0.02 - $0.03. Our earnings estimate of $1.50 is now slightly vulnerable. However, oil volumes have rebounded as of April, and should support earnings in Q2 - Q4.

- Several attractive investment opportunities at Terasen remain on track. The ones we find most promising for the 2006 - 2008 period are an expansion of the Corridor Oil Pipeline, TMX Phase 1, and construction of LNG storage facilities on Vancouver Island.

- We remain concerned about the December 31, 2005, expiry of a lucrative tolling agreement on the Trans Mountain Pipeline. Our Sector Performer rating balances attractive expansion opportunities against the risk of a 2006 reduction in the Trans Mountain toll.

CIBC World Markets does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report.

Investors should consider this report as only a single factor in making their investment decision.

See "Important Disclosures" section at the end of this report for important required disclosures, including potential conflicts of interest.

See "Price Target Calculation" and "Key Risks to Price Target" sections at the end of this report, where applicable.

Investment Summary

Terasen reported normalized Q1'05 EPS of $0.60 vs. our estimate of $0.58 and $0.63 in Q1'04. A temporary reduction in oil pipeline volumes caused the weakness and was factored into our numbers. We are maintaining our estimates and target price.

Please see the appendix to this comment for a full breakdown and analysis of normalizing items and earnings by segment.

Slow Start to 2005 – Earnings Should Improve in Q2 – Q4

The first quarter earnings demonstrate Terasen's earnings sensitivity to volume throughput on its oil pipelines. Volume flows on Trans Mountain were 170,000 b/d in Q1'05 vs. 240,000 b/d in Q1'04. As a result, despite capital expansions last year, earnings were lower in Q1'05 than Q1'04.

Our earnings estimate is slightly vulnerable in the context of a slow start to 2005. However, improvements in the oil pipeline division should boost earnings in Q2 - Q4:

- The Trans Mountain expansion that went into service in September of 2004 allows for increased volumes that should show up starting in Q2. Trans Mountain was 35% over-subscribed in May.
- The Express expansion came into service in April and should be immediately additive to earnings (84% of total expanded capacity is long-term contracted).

Management maintained full-year EPS guidance of $1.45 - $1.50 excluding $0.02 - $0.03 in Q1 mark-to-market gains. We are maintaining our EPS estimates perhaps with a slight downward bias due to a slightly weak first quarter.

Investment Opportunities Intact

Several attractive investment opportunities at Terasen remain on track. The ones we find most promising for the 2006 - 2008 period are an expansion of the Corridor Oil Pipeline, TMX1, and construction of LNG storage facilities on Vancouver Island:

- ***Corridor Pipeline expanding with Shell oil sands output –*** Shell (SHC-TSX, Sector Performer) will likely require a 110,000 b/d expansion on the Corridor Pipeline by 2009. The capital cost is estimated at $700 - $800 million.
- ***Vancouver Island LNG still moving forward –*** The BC Utilities Commission has approved a $100 million LNG storage facility that should be added to Vancouver Island gas distribution rate base by 2007.
- ***TMX stage 1 open season for this summer –*** Terasen plans to hold an open season for the first stage of its TMX project. The $570 million project could be in service by 2008.

The rest of the TMX project is still in direct competition against the Enbridge (ENB – TSX, Sector Performer) Gateway proposal. We continue to maintain the view (confirmed by management on the conference call) that Terasen may proceed with Phase 1 of the Trans Mountain expansion even if it does not have firm commitments for all phases of the TMX project. We do not anticipate any final decision on TMX2 and TMX3 vs. Gateway until 2006.

Tolling Renewal Risk Overhangs Stock

We remain concerned about the December 31, 2005, expiry of a lucrative tolling agreement on the Trans Mountain Pipeline. Our calculations suggest the company is earnings an ROE of around 20% (vs. allowed of 9.5%). Every 100

CIBC World Markets

basis point reduction in the ROE is worth $0.01 - $0.02 in EPS. Therefore we see material downside earnings risk on Trans Mountain starting in 2006. Indications from parallel negotiations at Enbridge are that shippers will request a significant reduction in the ROE. Based on recent negotiations with shippers, Enbridge has publicly stated that the ROE on its Mainline will probably drop. Enbridge expects its embedded low-teens ROE will fall to the National Energy Board allowed level of about 9.5%.

Some mitigating factors are working in Terasen's favour. Shippers may be slightly more charitable to Terasen because of the volume throughput risk on Trans Mountain. Enbridge has no material volume risk on the Canadian portion of its pipeline. In addition, Terasen may be able to offer expansion capacity in exchange for an ROE that exceeds the NEB allowed 9.5%.

These mitigating factors allow us to forecast an attractive mid-teens ROE on Trans Mountain in 2006. However, based on the Enbridge situation, we doubt Terasen can fully avoid a reduction in the ROE and toll. Therefore our earnings forecast for 2006 is flat to 2005.

By 2007 or 2008, Terasen should return to a growth trajectory similar to its 6%+ average in recent years. Our Sector Performer rating on Terasen balances the near-term earnings risk for 2006 against attractive expansion opportunities that should contribute to renewed growth later in the decade.

Appendix: Summary of Q1'05 Results

We normalized Terasen's reported Q1'05 EPS to $0.60 per share by excluding a $2.6 million (after-tax) mark-to-market gain related to natural gas hedges at Clean Energy.

Exhibit 1. Segmented Earnings for Terasen

(data in C$ millions, unless otherwise stated)

	Q105A	Q1/04A	2005E	2004A
Terasen Gas	$49.0	$48.0	$70.2	$69.7
Terasen Gas (Vancouver Island)	$6.7	$6.7	$26.2	$26.2

Notes:

1. Unusual item in Q1/05 relates to $2.6 million after-tax gain from mark-to-market accounting on Terasen's share of Clean Energy's natural gas positions.
1. Unusual item in 2004 relates to $3.3 million gains from mark-to-market accounting on Terasen's share of Clean Energy's natural gas positions.

Source: Company reports and CIBC World Markets Inc.

Natural Gas Distribution

Earnings from the B.C. gas utilities improved by $1 million as a result of lower financing costs (low interest rates) and operational efficiencies.

Petroleum Transportation

As expected, **Trans Mountain Pipeline**'s earnings were down y/y due to lower volumes on both the Canadian (down almost 30%) and US mainlines (down over 50%). Production slowdown from oil sands operations and planned U.S. refinery turnarounds caused Trans Mountain volumes to drop. But the company has indicated that the oil pipeline has returned to full capacity in Q2.

Earnings from **Express Pipeline System** came in slightly lower than expected, at $3.7 million in Q1'05 vs. $4.0 million in Q1'04 and our $4 million estimate. Volume throughput on Express was also negatively impacted by delayed oil sands production from Syncrude. But volumes should improve materially starting in Q2 due to higher contracted capacity post 108 MBbl/day expansion.

A lower allowed ROE contributed to the $0.3 million decrease in **Corridor's** Q1 earnings.

Water and Utility Services

The $0.8 million earnings contribution from the Water and Utility Services segment reflects growth in the waterworks business and a small Fairbanks contribution (seasonally weaker Q1/Q4).

Other Activities

Excluding a $2.6 million mark-to-market gain from Clean Energy, Other Activities contributed a loss of $5.5 million in Q1'04, down from $6.8 million loss last year. A focus on costs and operating efficiencies offset higher interest costs in the quarter.

Price Target Calculation

Our $29 target price is based on a 19.3x multiple of our 2006 EPS forecast of $1.50. It also implies a 3.3% dividend yield. Given Terasen's superior long-term growth prospects and low risk profile, we are using a target P/E multiple at the higher end of the group average, but within the stock's historical trading range of 8x-20x earnings.

Key Risks to Price Target

Terasen could fall short of our 2005 and 2006 earnings forecasts (and fail to meet our target price) for various reasons, including (but not limited to) the lower allowed ROEs on its regulated gas distribution business and a reduction of the toll on its Trans Mountain pipeline. In addition, the stocks are sensitive to changes in Canadian long bond yields. If broader market risk dissipates and bond yields rise significantly, valuation in the sector could fall.

Our EPS estimates are shown below:

	1 Qtr.	2 Qtr.	3 Qtr.	4 Qtr.	Yearly
2004 Current	$0.63A	$0.17A	$0.08A	$0.52A	$1.40A
2005 Current	$0.60A	$0.22E	$0.12E	$0.56E	$1.50E
2006 Current	--	--	--	--	$1.50E

Terasen: 1Q05 results weaker as expected but no impact on bonds

Kevin Yong (416) 956-6273 kevin.yong@cibc.ca
Joanna Zapior (416) 594-8498 joanna.zapior@cibc.ca

CREDIT IMPACT: Neutral. We maintain our Market Perform rating on Terasen Inc. and Terasen Gas bonds. As expected, Terasen reported weaker year-over-year earnings and cash flow. Since the main driver (lower pipeline throughput) for weaker cash flow was a temporary event, there should be no impact on bond spreads or credit ratings from 1Q05 results. Credit protection measures showed slight improvement on a year-over-year comparison despite the weaker cash flow. [Terasen Inc.: A(low)/Stable; A3/Stable] and [Terasen Gas: A/Stable; A2/Stable]

- Terasen's weaker cash flow was due to weaker earnings contribution from the Petroleum Transportation segment. Weaker earnings from this segment were a result of lower throughput at Trans Mountain and Express – both throughputs were negatively impacted by oil sands production outages and refinery maintenance. **Given that the lower throughputs were caused by temporary short-term production and refinery outages, the weaker cash flow reported in 1Q05 has no material impact on credit.**
- Although net borrowings increased in the quarter, the increase in leverage was offset by an increase in cash balance. As a result, net debt was essentially flat compared to net debt at the end of 2004 and increased by 1% compared to 1Q04 net debt level. This was the primary reason why credit metrics showed a slight improvement despite softer year-over-year cash flow generation.

CREDIT METRICS

Terasen: 1Q05	Debt to CF	Debt to Cap at book	EBITDA to Interest	FFO to Interest	LTM Realized ROE	LTM CF	LTM FCF
1Q05	10.6	67.3%	3.0	1.6	9.6%	276	-18
1Q04	10.0	67.9%	2.7	1.5	9.9%	289	28
4Q04	9.9	68.2%	3.0	1.7	11.7%	296	95

CONSOLIDATED QUARTERLY RESULTS SUMMARY

	Revenue	EBITDA	Net Interest Expense	Earnings	FFO	Free Cash Flow	Net borrowings (repayment) of debt	Share Issuance (repurchase)	Net Debt
year-over-year change	3%	-3%	0%	-2%	-6%	-96%	220%	-47%	1%
quarter-over-quarter change	8%	10%	-3%	19%	13%	-91%	159%	5%	0%
1Q05	$667	$172	$45	$66	$99	$5	$115	$4	$2,926
1Q04	$649	$177	$45	$68	$105	$117	-$96	$8	$2,904
4Q04	$616	$156	$47	$56	$87	$56	-$194	$4	$2,936

SELECTED OPERATING STATISTICS

	1Q05	1Q04	4Q04	YTD 03
Operating Statistics:				
Number of gas customers	878,560	862,631	875,166	875,166
Gas transportation volume (in petajoules)	21.6	21.9	19.6	72
Trans Mountain Canadian Mainline (bbl/d)	170,000	240,400	239,100	236,100
Trans Mountain US Mainline (bbl/d)	44,500	93,300	89,300	91,700
Express System (bbl/d)	166,900	171,300	175,400	175,300

- Despite lower reported earnings and cash flow from 1Q05, management is maintaining its full-year 2005 earnings guidance.
- The lower earnings contribution from the pipelines was partially offset by a small improvement in gas distribution earnings, earnings from water utilities, and lower corporate expenses.
- Terasen Gas earnings improved by $1 million in 1Q05 compared 1Q04. Operating efficiencies and customer growth more than offset lower allowed ROE in 2005.

Please refer to Our Opinions table (below) to place this credit in its sector-relative-value context

	Analyst	Senior unsecured DBRS	Senior unsecured Moody's	Senior unsecured S&P	Credit fundamentals (1-3 years)	Rating change probab. (1 year)	Valuation	YTD total return Shorter bond Bond	YTD total return Shorter bond Return	YTD total return Longer bond Bond	YTD total return Longer bond Return	YTD change in spread Shorter bond Curr Sprd		YTD change in spread Shorter bond YTD Chng	YTD change in spread Longer bond Curr Sprd		YTD change in spread Longer bond YTD Chng
Pipelines: *Solid, largely regulated fundamentals, though regulatory environment disadvantages those companies that have North American growth plans as Cdn leverage is higher and returns lower. Our investment thesis rests on two pillars: 1) operating excellence and cost management will be key in light of 2) regulators pressuring for cost control, including returns. Holding company risk has been increasing with expansion in non-regulated areas, equity market push for growth, and still elevated leveragex*																	
Gas distribution: *Stable sector, with strong operating franchises and good fundamentals. However, no standalone credits left (exceptand credit quality is affected by parent activities. See also our comment on the pipeline sector.*																	
Enbridge Inc	**KY**	A	A3	A-	May weaken (M&A, projects)	Medium	C	5.8% 2008	1.52%	8.2% 2024	3.93%	37	▲	1	103	▲	2
Enbridge Pipelines	**KY**	A(high)	NR	A-	Stable	Medium	R	5.621% 2007	1.07%	7.2% 2032	4.59%	37	▲	7	130	▲	5
Enbridge Gas Dist.	**KY**	A	NR	A-	Stable	Medium	R	11.15% 2009	1.74%	6.1% 2028	4.48%	57	▲	6	104	▲	3
Alliance Pipe	**KY**	A(low)	A3	BBB+	Strong	Very low	F	7.23% 2015	3.44%	7.217% 2025	3.42%	39	▼	24	98	▼	1
There are continued M&A and large project risks - lots of noise in the news as juggling for positions continues. The market now prices its uncertainty about committment to "A" ratings. Pipe acquisition in the GoM has eroded current balance sheet to the lev continue permissible under the S&P rating. Over time, we see balance sheet quality potentially weakening as more risky assets may be added while mature, stable assets end up in income trust. That it has historically been a defensive credit (low spread volatility) under the pause but history may not repeat itself. We view **opcos** as better credits in line with DBRS logic but not necessarily better value. Note **EGD** has a 2005 rate case. Regulatory stability has improved after a recent spate of decisions & PBR is possible. Mainline is renegotiating its settlement this fall. For **Alliance,** we like the "structuring premium" of an amortizer and the simplicity of this credit; not affected by how the ownership is structured; valuation reflects the defensive nature of this credit. It continues to perform as expected. Mgt turnover has been signficant (CFO earlier and now CEO) but this has no credit impact either for this contractually structured credit																	
TransCanada	**KY**	A	A2	A- Neg	Stable but event risk	Medium	R	6.05% 2007	1.27%	6.5% 2030	3.90%	31	▼	5	125	▲	10
Neg outlook will take a long time to hatch, if at all - unless an acquisition forces S&P's hand (the most recent big one of a U.S. pipeline appears to have crystallized the agency thinking in a constructive way, subject to how conservative mgt will remainik will tak financing side) . Expansion in generation and another potential large opportunistic acquisition & large projects in the longer term are credit risks. Regulatory environment continues to be unsatisfactory in mgt's eyes which raises questions about whetheing si company will want to trustify some of the lower return regulated assets - a potential negative for bondholders.																	
Duke (Westcoast)	**KY**	A(low)	NR	BBB	Improving	Low	R	5.7% 2008	1.74%	7.15% 2031	3.02%	40	▼	6	140	▲	17
Duke (Union Gas)	**KY**	A	NR	BBB	Standalone stbl + DUK effect	Low	R	5.7% 2008	1.71%	8.65% 2025	3.19%	36	▼	5	126	▲	12
MNEP	**KY**	A	A1 UR-PD	A	Strong	Very low	F	NA	NA	6.9% 2019	2.86%	NA		NA	84	▲	4
Duke took steps to turn the corner and the balance sheet repair actions have finally shown. Exit from non-core businesses continue & core regulated operations are stable. We think DENA will continue to be a source of grief for a while until markets improvesteps to t the new idea of contributing it to a joint venture hatches (lowering of risk). Resumed talk of opportunistic growth means that the golden age for bondholders is almost over (some upside remains from DENA cleanup & possible upgrade). We believe, in the loidea of **Union Gas's** distribution portion, as a non-core asset, is more separable from Duke than Westcoast. Its storage is a strategic asset to Duke. In the short term, Union provides solid cash flow to Duke and supports its credit quality. Spreads have performed reasonably well & are now in the middle of the utiltiy pack, leaving little further room for outperformance. For **MNEP**, we like structural protection and simplicity; valuation reflects the defensive nature of this credit.																	
Terasen	**KY**	A(low)	A3	BBB-	Stable but some event risk	Low	C	6.3% 2008	1.92%	NA	NA	52	▼	6	NA		NA
Terasen Gas	**KY**	A	A2	BBB	Stable	Low	C	NA	NA	6.95% 2029	5.57%	NA		NA	126	▼	3
Business fundamentals are a strong combination of a regulated gas distribution and pipelines, with aggressive financial profile determining the rating. Market pricing suggests that the market does not give full credence to the S&P rating (but still incorpoundamental despite its now unsolicited status). Project CAPEX could be high. For **Terasen Gas**, we like the fundamentals of gas distribution at current spread, compared to historical spreads, but don't think that holdco spread can tighten much in the near term.																	
Electric T&D: *Regulated; should have reasonably stable credit protection. Dark cloud of S&P and DBRS negative outlook on Ontario reflects political risk rather than material risk of deterioration in credit quality, and has by now almost dissipated though stability in the sector has not entirely returned. Our investment thesis is that given a general regulatory/rating agency/issuer stand-off, operating excellence and low cost structure will be key differentiating factors, given the aging assets and broad grid restructuot entirely retu North America.*																	
Hydro One	**KY**	A Pos	A2	A	Stable	Low	R	7.15% 2010	2.21%	6.93% 2032	4.68%	34	▼	1	85	▲	4
Quasi-provincial credit nature still somewhat offset by political noise although the most recent policy changes appear to bypass Hydro One (with one exception being taking away from it the responsibility for long-term planning of the network); fairly valueovincial "provincially-supported" credit, otherwise expensive. Liberal government appears to be more constructive for the electricity sector than the Conservatives have been in terms of power market functionality, while the risk of divestiture remains very low.																	
Toronto Hydro	**KY**	A	NR	A-	Stable	Low	R	6.11% 2013	2.42%	NA	NA	63	▲	6	NA		NA
Some political and regulatory uncertainties remain. Scarcity value supports valuation. Recent political developments increase our confidence in a positive restructuring of the industry, including regulatory environment. Volatile non-regulated business ccal and reg impact earnings - mitigating factor is that TH said it will exit retail electricity by end 2006. We think that in the medium term performance-based regulation will introduce marginally higher operating risk.																	

Our ratings:

Market Perform. The issuer's bonds are expected to perform in line with our universe of bonds over the next 12 months.
Outperfrom. The issuer's bonds are expected to outperform our universe of bonds over the next 12 months.
Underperform. The Issuer's bonds are expected to underperform our universe of bonds over the next 12 months.

Company Description

Terasen is a gas distribution and oil pipeline company. Its subsidiary, Terasen Gas, distributes natural gas to B.C., including Vancouver and the interior.

www.terasen.com

- Terasen reported normalized Q2'05 EPS of $0.23 vs. our estimate of $0.22 and $0.16 in Q2'04. Earnings from the Express Pipeline surprised on the upside. We are raising our 2006 EPS estimate to $1.55 (from $1.50) and our target price to $31 (from $30).
- The Express Pipeline expansion went into service in April of this year. Management had previously guided to a $0.05 EPS contribution but is now disclosing a contribution of more like $0.10. The change in guidance causes us to raise our 2006 EPS estimate by $0.05.
- News on longer-term growth initiatives was mixed. On the one hand, the company now anticipates a delay of up to two years on the Vancouver Island LNG storage facility. On the other hand, a major expansion on the Corridor oil pipeline appears on track.
- The upside surprise on Express likely allows Terasen to continue growing earnings in 2006 despite a pending expiry of the lucrative Trans Mountain tolling agreement. We are raising our target price to $31 and maintaining our Sector Performer rating.

Investment Summary

Terasen reported normalized Q2'05 EPS of $0.23 vs. our estimate of $0.22 and $0.16 in Q2'04. Earnings from the Express Pipeline surprised on the upside. We are raising our 2006 EPS estimate by $0.05 and our target price by $1.

For a breakdown and analysis of earnings by segment and normalizing items, please see the appendix to this comment.

Express Pipeline Surprises on the Upside

The Express Pipeline expansion went into service in April of this year. Management had previously guided to a $0.05 EPS contribution but is now disclosing a contribution of more like $0.10.

The change in outlook is likely related to tax planning rather than improved project economics. Our best guess would have been that project economics were running in line with expectations. Volume flows are strong but electricity costs have moved up since the expansion was announced. Therefore, the upside is likely attributable to the unique Express structure. In fact, management disclosed that tax benefits will deliver about $4 million in annual net income ($0.04 in EPS).

Whether from tax planning or other factors, the change in outlook on Express causes a $0.05 increase in our 2006 EPS estimate. On its own it would also have caused us to raise estimates by about $0.03 in 2005 but weakness in Trans Mountain offsets the upside this year. Management disclosed Trans Mountain volume flows weakened temporarily in the third quarter. We assume these disruptions are temporary and will not recur in 2006.

Oil Pipeline Growth Initiatives Still on Track

News on longer-term growth initiatives was mixed. On the one hand, the company now anticipates a delay of up to two years on the Vancouver Island LNG storage facility and has deferred the Inland Pacific Connector (IPC). On the other hand, we have never been optimistic about the IPC project and the company's major oil pipeline expansion activities remain on track:

- ***Expansion on Corridor by 2009 –*** Shell (SHC-TSX, Sector Performer) will likely require an expansion of at least 110,000 b/d on the Corridor Pipeline by 2009. Terasen is planning a 200,000 b/d expansion for an estimated cost of $700 - $800 million. The company is seeking third party shippers but expansion is not dependent on success in adding to the list of shippers.
- ***Trans Mountain phase 1 moving forward –*** Terasen has already applied to the National Energy Board for a 35,000 b/d expansion that will be achieved by investing $210 million in additional pumping. We think an open season this summer should solidify support for an additional $365 million investment in looping that would add another 40,000 b/d to Trans Mountain capacity by 2009.

Whether Terasen can achieve full support for the second and third phases of Trans Mountain expansion remains to be seen. We anticipate shippers will first focus on major expansion to the core Midwest market. Given market uncertainties and the tight competition between Enbridge (ENB – TSX, Sector Performer) and Terasen, it is conceivable shippers will not finally decide on any large expansion to the West Coast until the 2006/7 timeframe.

Most But Not All of the ROE Reduction Can Be Offset

Terasen is facing potentially significant reductions in the ROEs on its existing gas distribution and oil pipeline assets. We think some, but not all, of the impacts can be offset:

CIBC World Markets

- ***Trans Mountain tolling renewal suggests small hit only –*** We believe management will succeed in avoiding a large reduction in the ROE on Trans Mountain. Enbridge has recently established a tolling precedent suggesting limited downside for Terasen. Having said that, we believe shippers will require some reduction in returns and seek relatively low returns on the initial Trans Mountain expansion proposals.
- ***Gas Distribution ROE hearing begins soon* –** Terasen may offset some or all of the formula ROE reduction for its gas utility business through a hearing commencing next month. The company has requested a 500 basis point increase in its equity ratio and a 175 basis point increase in its allowed ROE. We anticipate Terasen will receive sufficient benefit to offset an anticipated 50 basis point reduction that would normally have resulted from its formula ROE.

Conclusions: Outlook Improving But Stock Already Up

Prior to the Q2 result we had modeled no EPS increase in 2006 relative to 2005. We had seen a modest decrease in pipeline and gas distribution ROEs offset by growth in Express earnings. Our view is largely unchanged except the Express earnings may be enough to more than offset the ROE reductions. Therefore, we are raising our target price by $1.

In recent weeks Terasen shares have already reflected the improved outlook. After lagging other utility stocks in the first half of the year the stock has caught up in a short period. As a result, it is again trading at a premium P/E multiple (20.3x 2006 vs. group at 18x). Our Sector Performer rating balances the improved outlook against recent share price appreciation.

Appendix: Summary of Q2'05 Results

We normalized Terasen's reported Q2'05 EPS to $0.23 by excluding a $3.9 million (after-tax) mark-to-market gain related to natural gas hedges at Clean Energy and tax benefits provided by the Express expansion attributable to Q1 (about $1 million impact).

Exhibit 1. Segmented Earnings for Terasen

(data in C$ millions, unless otherwise stated)

	Q2/05A	Q2/04A	2005E	2004A
Terasen Gas	$1.6	($1.2)	$71.0	$69.7
Terasen Gas (Vancouver Island)	$6.1	$6.3	$26.2	$26.2
Trans Mountain Pipeline	$9.8	$9.0	$40.1	$39.4
Express Pipeline System	$6.6	$3.2	$22.0	$15.9
Corridor Pipeline	$3.5	$4.0	$14.2	$15.6
Water and Utility Services	$3.8	$2.6	$10.0	$6.6
Other Activities	($6.8)	($6.6)	($25.4)	($26.9)
Operating Earnings for Common	**$24.6**	**$17.3**	**$158.1**	**$146.5**
Unusual Items	$3.9	$0.6	$6.6	$3.3
Reported Earnings	$28.5	$17.9	$164.7	$149.8
Average Shares Outstanding (mln)	105.5	104.7	105.5	104.7
Operating Earnings per Share	**$0.23**	**$0.17**	**$1.50**	**$1.40**
Reported Earnings per Share	$0.27	$0.17	$1.56	$1.43

Notes:

1. Unusual item in Q2/05 relates to $3.9 million after-tax gain from mark-to-market accounting on Terasen's share of Clean Energy's natural gas positions.
2. Unusual item in 2004 relates to $3.3 million gains from mark-to-market accounting on Terasen's share of Clean Energy's natural gas positions.

Source: Company reports and CIBC World Markets Inc.

Natural Gas Distribution

Earnings from the B.C. gas utilities improved by $1.6 million due in part to timing issues on capital maintenance spend and operational efficiencies.

Terasen filed two regulatory applications with the BCUC in Q2. The first requests an extension of the Terasen Gas Vancouver Island's PBR arrangement by another 2 years. The second application requests a review of the automatic ROE formula and allowed equity ratios. TER is seeking a 175 basis point improvement in allowed ROE and 5% increase in equity thickness. A procedural review of the application has been set for August 3.

Petroleum Transportation

Trans Mountain Pipeline's earnings rebounded from a weak Q1 as a result of strong throughput. Volume growth on the Canadian mainline was up a solid 8.3% y/y.

The normalized $3.4 million increase in **Express'** Q2 earnings contribution was driven by the 108,000 Bbls/d capacity expansion (about $2 million impact) completed in April and realization of additional tax benefits (estimated $1.3 million attributable to Q2).

A lower allowed formula ROE contributed to the $0.5 million decrease in **Corridor's** Q2 earnings.

Water and Utility Services

The $1.2 million increase in Water Utility earnings was attributable to solid organic growth and acquisitions. Management indicated on the call that growth opportunities in this sector are plentiful right now, particularly in Alberta and Alaska.

Other Activities

Excluding a $3.9 million mark-to-market gain from Clean Energy, Other Activities contributed a loss of $5.8 million in Q2'05, up from a $6.6 million loss last year. Effective Q2'05, Terasen changed its accounting for Clean Energy (from proportionate consolidation to equity) due to a less joint control (40.4%, down from 45% in 2004).

Price Target Calculation

Our $31 target price is based on a 20x multiple of our 2006 EPS forecast of $1.55. It also implies a 3% dividend yield. Given Terasen's superior long-term growth prospects and low risk profile, we are using a target P/E multiple at the higher end of the group average, but within the stock's historical trading range of 8x-20x earnings.

Key Risks to Price Target

Terasen could fall short of our 2006 earnings forecasts (and fail to meet our target price) for various reasons, including (but not limited to) the lower allowed ROEs on its regulated gas distribution business and a lower than forecast throughout on its oil pipelines. In addition, the stocks are sensitive to changes in Canadian long bond yields. If broader market risk dissipates and bond yields rise significantly, valuation in the sector could fall.

Our EPS estimates are shown below:

	1 Qtr.	2 Qtr.	3 Qtr.	4 Qtr.	Yearly
2004 Current	$0.63A	$0.16A	$0.08A	$0.52A	$1.40A
2005 Prior	$0.60A	$0.22E	$0.12E	$0.56E	$1.50E
2005 Current	$0.61A	$0.23A	$0.11E	$0.55E	$1.50E
2006 Prior	--	--	--	--	$1.50E
2006 Current	--	--	--	--	$1.55E

IMPORTANT DISCLOSURES:

Analyst Certification: Each CIBC World Markets research analyst named on the front page of this research report, or at the beginning of any subsection hereof, hereby certifies that (i) the recommendations and opinions expressed herein accurately reflect such research analyst's personal views about the company and securities that are the subject of this report and all other companies and securities mentioned in this report that are covered by such research analyst and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by such research analyst in this report.

Potential Conflicts of Interest: Equity research analysts employed by CIBC World Markets are compensated from revenues generated by various CIBC World Markets businesses, including the CIBC World Markets Investment Banking Department within the Corporate and Leveraged Finance Division. Research analysts do not receive compensation based upon revenues from specific investment banking transactions. CIBC World Markets generally prohibits any research analyst and any member of his or her household from executing trades in the securities of a company that such research analyst covers. Additionally, CIBC World Markets generally prohibits any research analyst from serving as an officer, director or advisory board member of a company that such analyst covers.

In addition to 1% ownership positions in covered companies that are required to be specifically disclosed in this report, CIBC World Markets may have a long position of less than 1% or a short position or deal as principal in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon.

Recipients of this report are advised that any or all of the foregoing arrangements, as well as more specific disclosures set forth below, may at times give rise to potential conflicts of interest.

Pipelines & Utilities

Terasen Inc.

Better 2Q05 financial results from all segments

CREDIT IMPACT: Neutral. Quarterly financial and operating results were neutral for credit and do not change our view on the credit of Terasen Inc. or Terasen Gas. Leverage ratios remain high, relative to peers such as Enbridge, but are stable to slightly improved on a year-over-year and quarter-over-quarter basis. As expected, year-over-year increases in quarterly earnings and cash flow were mostly attributed to improved earnings from the petroleum transportation segment, which was a result of increased throughput at Trans Mountain and Express expansion. Terasen Gas earnings also exhibited solid growth due to customer growth and lower operating expenses. We remain **Market Perform** on both Terasen Inc. and Terasen Gas.

Figure 1: Credit metrics are stable to slightly improved

Terasen Inc.	Net Debt to CF	Net Debt to Cap at book	EBITDA to Interest	FFO to Interest	LTM Realized ROE	LTM CF	LTM FCF
2Q05	9.9	67.2%	3.0	1.7	11.9%	297	-48
2Q04	10.0	67.9%	2.8	1.5	10.6%	287	78
1Q05	10.1	67.3%	2.9	1.6	11.1%	290	-18

Sources: Company reports, CIBC World Markets

- **Credit metrics slightly improved** – as shown in Figure 1, credit metrics are stable to slightly improved on a year-over-year and quarter-over-quarter comparison. Net debt to capitalization has been fairly stable over the last six quarters in and around the 68% level for five of the last six quarters; exception was 4Q04 when this ratio ticked up to 69.6%. Coverage ratios remain solid on a year-over-year and quarter-over-quarter comparison.
- **Cash flow improved but free cash flow was negative** – growth in cash flow before working capital (FFO) was mostly a result of higher quarterly earnings. Free cash flow was slightly negative due to lower cash from working capital and higher CAPEX.
- **Trans Mountain's new incentive tolling settlement (ITS)** – management said on the conference call that discussions with the shippers were going well and that it expects a new agreement by the end of 2005. Strong support from shippers for the first phase of TMX 1 is positive for ITS negotiation.
- **Corridor expansion** – this is estimated to cost about $800 million. The proposed expansion is two-fold. The first would be increasing pumping capacity on the existing line, with a second phase involving the construction of a new 42-inch pipeline. Current capacity of 258 mbbl/d should increase to 278 mbbl/d by April 2006. Addition of new pipeline is expected to increase capacity to about 480 mbbl/d by 2009. Terasen expects to have some third-party shippers on the expanded capacity.

Sources: Company reports, CIBC World Markets

- **Year-over-year increase in earnings came from all segments.** Natural gas earnings improved by $2.6 million in 2Q05 compared to 2Q04. Petroleum transportation earnings improved by $4.7 million in 2Q05 relative to 2Q04. Water and utility services earnings grew by $1.2 million year-over-year in the quarter.

- **Terasen Gas grows steadily** – improvement in earnings was due to strong customer growth, which is a result of a healthy economic environment in B.C., and better operating efficiencies. Both of these positives more than offset the lower allowed ROE in 2005 versus 2004; therefore, 2Q05 earnings increased by $2.6 million over 2Q04 earnings. Improved efficiencies resulted in a year-over-year decline in quarterly operating and maintenance expense of $1.8 million in 2Q05.

- **Petroleum transportation earnings strengthened due to a rebound in volume on Trans Mountain and higher than expected earnings from Express expansion** – Trans Mountain earnings improved by $0.8 million in 2Q05 over 2Q04 earnings. The big lift in earnings came from the Express expansion, which surprised to the upside with earnings of $7.6 million in 2Q05 compared to $3.2 million in 2Q04. Realization of additional tax benefits helped to boost the earnings in the quarter.

- **Water and utility services continue to grow slowly and steadily** – 2Q05 earnings from this segment improved to $3.8 million in 2Q05 compared to $2.6 million in 2Q04. Improved earnings were a result of growth in the Waterworks business from Alberta and B.C. and contribution from Fairbanks Sewer and Water. Management indicated on the conference call that it will continue to grow this business through small projects that provide good steady growth opportunities.

Figure 3: Growing liquids pipeline throughput and natural gas customers

Operating Statistics:	2Q05	2Q04	1Q05	2004

There are continued M&A and large project risks - lots of noise in the news as jockeying for positions continues. The market now prices its uncertainty about committment to "A" ratings. Pipe acquisition in the GoM has eroded current balance sheet to the lecontinued permissible under the S&P rating. Over time, we see balance sheet quality potentially weakening as more risky assets may be added while mature, stable assets end up in income trust. That it has historically been a defensive credit (low spread volatility) under the pause but history may not repeat itself. We view opcos as better credits in line with DBRS logic but not necessarily better value. Note EGD has a 2006 rate case. Regulatory stability has improved after a recent spate of decisions & PBR is possible. Mainline negotiated ITS is complete and is neutral to slightly positive from a credit perspective. For **Alliance**, we like the "structuring premium" of an amortizer and the simplicity of this credit; not affected by how the ownership is structured; valuation reflects the defensive nature of this credit. It continues to perform as expected. Mgt turnover has been signficant (CFO earlier and now CEO) but this has no credit impact either for this contractually structured credit															
TransCanada	KY	A	A2	A- Neg	Stable but event risk	Medium	F	6.05% 2007	1.94%	6.5% 2030	9.36%	30	▼ 6	115	↔ 0
Negative outlook will take a long time to hatch, if at all - unless an acquisition forces S&P's hand. We think that short-term acquisition risk is reduced with the announced sale of TransCanada Power LP interests to EPCOR, which should improve TRP's cash outlook w and balance sheet capacity when the transaction closes. Management's commitment to maintain TRP's "A" rating also mitigates short-term risks associated with acquisitions. We read this to mean that TRP will likely make acquisitions in a conservative way (ce sheet not be a detriment to bondholders). The improved balance sheet and renewed commitment to its "A" rating gives us more comfort that TRP's credit quality may not deteriorate if it were to make a large acquisition in the near-term.															
Duke (Westcoast)	KY	A(low) UR-Dev	NR	BBB CW-Neg	Improving	Low	R	5.7% 2008	2.74%	7.15% 2031	8.29%	38	▼ 8	131	▲ 8
Duke (Union Gas)	KY	A UR-Dev	NR	BBB CW-Neg	Standalone stbl + DUK effect	Low	R	5.7% 2008	2.67%	8.65% 2025	7.85%	36	▼ 5	118	▲ 4
MNEP	KY	A	A1 UR-PD	A	Strong	Very low	F	NA	NA	6.9% 2019	6.57%	NA	NA	63	▼ 17
The announced merger with Cinergy should take some of the growth pressures off management, which is good for bondholders. Also good for bondholders in that this is an all stock deal and Cinergy's merchant assets (which is mostly coal) should diversify thenounce risks. Although S&P agrees with us that the transaction in itself is not a detriment to credit, it nevertheless put Duke on credit watch negative because of the uncertainty with regards to what Duke mgmt may do post merger - namely possibility of separatiS&P agrees with and unregulated utilities. We believe the separation of the regulated and unregulated businesses may actually be good for credit ratings of Westcoast and Union Gas. However, in the event that nothing happens post merger and Duke remains whole, as it is nunre ratings of Westcoast and Union Gas should remain unchanged. Of greater concern should be the talk of spinning out the Westcoast assets into an income trust, which we believe could be a mild negative (depending on how the trust is structured) for Westcoasta bondholders. Union Gas for now is not expected to be put into an income trust. For MNEP, we like structural protection and simplicity; valuation reflects the defensive nature of this credit.															
Terasen	KY	A(low)	A3	BBB-	Stable but some event risk	Low	F	6.3% 2008	3.13%	NA	NA	46	▼ 12	NA	NA
Terasen Gas	KY	A	A2	BBB	Stable	Low	F	NA	NA	6.95% 2029	10.74%	NA	NA	118	▼ 11
Business fundamentals are a strong combination of a regulated gas distribution and pipelines, with aggressive financial profile. Although to be fair, we note that most of TER's consolidated debt resides at INL, which is a regulated utility that is restricts are a strong combi equity it can have in its capital structure by the BCUC. BCUC's allowed equity cushion for gas utilities is among the lowest in Canada. We also like the relatively conservative near-term growth of TER, with most of the growth focused on adding to regulatn have in it With ENB getting a new ITS, attention now is on Trans Mountain's ITS. We think that Trans Mountain's ROE will fall but not back to the allowed ROE. Producers will likely give Trans Mountain chances to make up most of the rebased earnings with incentives.B getti new ITS will have greater impact on TER's consolidated cash flow and credit metrics because all of Trans Mountain is under the current ITS.															
Integrated electric: *A mixed bag of companies, ranging from trasnmission dominated, through fully integrated but in a regulated setting, to a mix of regulated T&D and non-regualated generation, and even E&P. Hence risk profiles vary and the companies in this group are not direct comparables.*															
Emera	KY	BBB(high)	Baa2	BBB+ Neg	May weaken	Medium	R	NA	NA	NA	NA	NA	NA	NA	NA
Nova Scotia Power	KY	A(low)	Baa1	BBB+ Neg	May weaken	Medium	R	5.55% 2009	3.46%	8.85% 2025	8.78%	43	▼ 5	130	▲ 1
The negative regulatory decision for NSP that disallowed fuel adjustment clause and granted lower allowed ROE than anticipated is a negative for credit and may lead to increase rating risk. The potential negative cash flow impact of this decision means th regulatory increased risk that Emera will not be able to hit the credit metric targets that S&P has set for the company. Furthermore, the negative decision underscores the fact that NSP's relationship with its regulator has taken a step backwards rather than our expthat Emera will this relationship would improve. NSP recently filed 2006 rate case seeking 15% increase in rates in order to recover significant increase in fuel expense. We don't think that they will get the full amount, which puts NSP's cash flow and credit metrics atuld improve. NSP issuer here is really NSP, but even it has scarcity value.															
EPCOR	KY	A(low)	NR	BBB+	Stable	Low	R	6.2% 2008	2.96%	6.8% 2029	11.11%	37	▼ 10	118	▼ 9
Credit fundamentals (i.e. credit metrics and tighter management) and lack of liquidity in the bond are positive for spreads. EPCOR's strong credit fundamentals is founded on its relatively low-risk business profile and a very strong balance sheet (end of 1s (i.e. credit met these positives are continued soft electricity market in Alberta, increased merchant exposure, and event risk related to renewed focus on growth. We see EPCOR's recent acquisiton of TransCanada's interest in TransCanada Power LP as neutral for bondholderse po these assets are bondholder-friendly and this acquisition was small enough to not have a material negative impact on EPCOR's balance sheet in 2005. The risk here is that management may not be done with growth yet.

Pipelines & Utilities

Terasen Inc.

Kinder Morgan to acquire Terasen Inc.

CREDIT IMPACT: Neutral. **From a credit perspective we continue to think that this transaction should be neutral for Terasen bondholders** since most of the Terasen operating company (opco) bonds will likely remain at the opcos and the opcos will likely retain the current operating autonomy that they now enjoy. So in effect other than a change of parent ownership, there should be no fundamental changes to the bonds of Terasen opcos. **There may be some rating volatility due to the transaction and given the difference between Terasen opco ratings and Kinder Morgan Inc. (BBB rated with one positive outlook) ratings. We think that it is reasonable to assume that Terasen Inc. and Terasen opco ratings in the "A" category may be at risk.** As we go to print, Moody's placed Terasen Inc and Terasen Gas senior unsecured ratings under review for possible downgrade. If Terasen Inc and Terasen Gas ratings were to get downgraded (Moody's and DBRS), then we should expect to see some softness in spreads. At this point though, **given the scarcity value of Terasen bonds, strong demand for utility bonds, and the fact that nothing fundamentally has changed, we will maintain our Market Perform rating on Terasen Inc. and Terasen Gas bonds.** Terasen Inc. and Terasen Gas bond spreads have been resilient today with spreads unchanged to a touch wider this morning.

Conference call highlights:

- **All current opco level debt will remain at the opco level** – this means that all bonds of Terasen Gas, Terasen Gas Vancouver Island, Terasen Pipelines (Trans Mountain), and Terasen Pipelines (Corridor) will remain at the opco level. See previous comment for Terasen corporate structure and capital structure.
- **Opcos will retain current operating autonomy according to Kinder Morgan Inc. (KMI) management on the conference call** – KMI management specifically mentioned that Terasen Gas is a stand-alone operating company and will continue to operate that way post acquisition.
- **Current Terasen holdco may be replaced with a new wholly owned Canadian subsidiary of KMI** – management said on the conference call that KMI will establish a wholly owned Canadian subsidiary to hold all of Terasen's opcos. On a follow-up call to KMI, we confirmed that current plan is for this new Canadian subsidiary of KMI to replace the existing Terasen Inc. holdco. **What is uncertain is whether or not the three bond issues currently at Terasen Inc. (i.e. 6.3% 2008, 4.85% 2006, and 5.56% 2014) will be held by the new subsidiary or will be consolidated as KMI bonds.** At the time of our telephone conversation, KMI's investor relations were not able to give us a definitive answer to this question.

- **KMI will have to finance this acquisition with about US$2 billion in debt –** which KMI expects to financed with a bridge facility and then terming this facility out with a long-term bond issue. Management said that the **current plan calls for the new Canadian subsidiary to issue public bonds to repay the bridge facility upon closing of the transaction.** The uncertainty (again KMI investor relations could not shed any light on this on the phone) is in what market KMI will issue the new bonds. It may be a C$ bond issue, or a US$ bond issue, or it may be a combination of both. Additionally, future debt financing for growth projects of the Canadian assets will be issued from this new subsidiary. If the entire amount is issued in Canada at once, then we may see spread weakness.

- **Ratings may be at risk –** both KMI and Terasen have talked to the rating agencies about the transaction. Terasen said that the rating agencies have all the details of the transaction, including the plan to maintain debt at the opco level and operating autonomy of the opcos. Given the big difference in ratings between KMI and Terasen, it would not be a surprise to see a rating agency like Moody's downgrading the ratings of Terasen opco bonds in order to close the ratings gap between KMI and Terasen.

- **KMI likes gas LDC business and cannot roll these assets down to its MLP –** KMI management said that it likes Terasen's gas LDCs (Terasen Gas and Terasen Gas Vancouver Island) and expects to keep these natural gas LDCs rather than selling them. KMI is also legally not able to roll these assets down into its MLP (Kinder Morgan Energy Partners, which BBB+ rated, is a publicly traded master limited partnership), as gas distribution businesses are excluded from MLP qualified business activities.

- **Canadian pipeline assets not tax efficient for MLP roll-down –** management said that it would not be tax efficient for KMI to roll-down Terasen's Canadian pipeline assets into its MLP. The reason is that these Canadian assets still have to pay Canadian taxes even if they were in a U.S. MLP. That said though, management did not rule out putting the U.S. portion of Express and Platte into KMI's MLP. Also, management said that income trust for the Canadian pipeline assets is another option but that it was too early to say definitively what their plans will be for the Canadian pipeline assets.

- **Future growth plans in Canada –** KMI's growth plans in Canada will likely be focused on pipeline expansions, terminal expansions in Alberta, and potential growth of a CO_2 pipeline in Alberta. Management said that outside of steady organic growth, it does not have big growth plans for Terasen's gas distribution businesses.

Nova Scotia Power	KY	A(low)	Baa1	BBB+ Neg	May weaken	Medium	R	5.55% 2009	3.46%	8.85% 2025	8.78%	43	▼ 5	130	▲ 1

The negative regulatory decision for NSP that disallowed fuel adjustment clause and granted lower allowed ROE than anticipated is a negative for credit and may lead to increase rating risk. The potential negative cash flow impact of this decision means th regulatory increased risk that Emera will not be able to hit the credit metric targets that S&P has set for the company. Furthermore, the negative decision underscores the fact that NSP's relationship with its regulator has taken a step backwards rather than our expthat Emera will this relationship would improve. NSP recently filed 2006 rate case seeking 15% increase in rates in order to recover significant increase in fuel expense. We don't think that they will get the full amount, which puts NSP's cash flow and credit metrics atuld improve. NSP issuer here is really NSP, but even it has scarcity value.

Issuer	Analyst	DBRS	Moody's	S&P	Credit fundamentals	Rating change probab.	Valuation	Bond	Return	Bond	Return	Curr Sprd	YTD Chng	Curr Sprd	YTD Chng
EPCOR	KY	A(low)	NR	BBB+	Stable	Low	R	6.2% 2008	2.96%	6.8% 2029	11.11%	37	▼ 10	118	▼ 9

Credit fundamentals (i.e. credit metrics and tighter management) and lack of liquidity in the bond are positive for spreads. EPCOR's strong credit fundamentals is founded on its relatively low-risk business profile and a very strong balance sheet (end of 1s (i.e. credit met these positives are continued soft electricity market in Alberta, increased merchant exposure, and event risk related to renewed focus on growth. We see EPCOR's recent acquisiton of TransCanada's interest in TransCanada Power LP as neutral for bondholderse po these assets are bondholder-friendly and this acquisition was small enough to not have a material negative impact on EPCOR's balance sheet in 2005. The risk here is that management may not be done with growth yet.

Pipelines & Utilities

Terasen Inc.

Kinder Morgan to acquire Terasen Inc.

OUR INITIAL TAKE: Negative from a ratings perspective but neutral from a credit perspective. Kinder Morgan (KMI) is rated BBB/stable by S&P, Moody's, and DBRS, and Fitch rates KMI BBB/Positive. From a credit perspective, KMI has lower leverage and higher coverage ratios than Terasen. Although, KMI has a better financial profile than Terasen, its business risk profile is higher risk than Terasen's. As such, we think that the better financial risk profile is offset by the higher risk profile of KMI and this transaction should be credit neutral.

- **KMI has a better financial profile than Terasen** – KMI ended 2004 with a debt to capital of about 43%, total debt to cash flow of 5x, and EBIT coverage of about 5.6x. By comparison, Terasen ended 2004 with a debt to capital of 68%, total debt to cash flow of almost 10x, and EBIT coverage of 2.4x.
- **KMI has a higher risk business profile than Terasen** – KMI operates predominantly regulated and fee-based energy infrastructure businesses in the U.S. Rocky Mountains and mid-continent regions of the U.S. KMI's assets consists of Natural Gas Pipeline Company of America (which is the largest transporter of natural gas in the Chicago area), small retail natural gas distribution, power assets, and ownership in Kinder Morgan Energy Partners, L.P. (a publicly traded master limited partnership that owns and operates a diverse portfolio of largely fee-based pipelines and midstream energy assets.
- **KMI has high management ownership** – KMI is 23% owned by management.

Details of the transaction:

- KMI proposes to acquire all common shares and assume all debt of Terasen Inc.
- Annual dividend of KMI is expected to rise US$3.50 in 2006 from a current dividend of US$3.00. This is significant as KMI's high payout ratio is a credit concern.
- Upon closing of the transaction the total debt to capital ratio of KMI is expected by management to increase to about 56%. Management expects that KMI will be able to retain its BBB rating upon closing of the transaction.
- Transaction will require the approval of 75% of Terasen shareholders, who will vote at a special meeting to be held on or before October 31, 2005.
- KMI is offering to acquire Terasen for C$35.91 per share, which represents a 14% premium on Friday's closing price. The offer is for a combination of shares and cash (65% cash and 35% shares).
- Terasen has an agreed to a break-fee of C$75 million.
- Terasen conference call at 10 AM at 1-877-375-5688. KMI has a conference call at 8 AM (web cast at www.kindermorgan.com).

***Pipelines:** Solid, largely regulated fundamentals, though regulatory environment disadvantages those companies that have North American growth plans as Cdn leverage is higher and returns lower. Our investment thesis rests on two pillars: 1) operating excellence and cost management will be key in light of 2) regulators pressuring for cost control, including returns. Holding company risk has been increasing with expansion in non-regulated areas, equity market push for growth, and still elevated leverage.*															
Gas distribution: *Stable sector, with strong operating franchises and good fundamentals. However, no standalone credits left (exceptand credit quality is affected by parent activities. See also our comment on the pipeline sector.*															
Enbridge Inc	KY	A	A3	A-	May weaken (M&A, projects)	Medium	C	5.8% 2008	2.59%	8.2% 2024	8.73%	32	▼ 4	90	▼ 11
Enbridge Pipelines	KY	A(high)	NR	A-	Stable	Medium	R	5.621% 2007	1.86%	7.2% 2032	10.70%	29	▼ 1	116	▼ 9
Enbridge Gas Dist.	KY	A	NR	A-	Stable	Medium	R	11.15% 2009	2.96%	6.1% 2028	9.77%	55	▲ 4	95	▼ 6
Alliance Pipe	KY	A(low)	A3	BBB+	Strong	Very low	F	7.23% 2015	4.76%	7.217% 2025	5.82%	36	▼ 27	91	▼ 8
There are continued M&A and large project risks - lots of noise in the news as jockeying for positions continues. The market now prices its uncertainty about committment to "A" ratings. Pipe acquisition in the GoM has eroded current balance sheet to the lecontinued permissible under the S&P rating. Over time, we see balance sheet quality potentially weakening as more risky assets may be added while mature, stable assets end up in income trust. That it has historically been a defensive credit (low spread volatility) under the pause but history may not repeat itself. We view **opcos** as better credits in line with DBRS logic but not necessarily better value. Note **EGD** has a 2006 rate case. Regulatory stability has improved after a recent spate of decisions & PBR is possible. Mainline negotiated ITS is complete and is neutral to slightly positive from a credit perspective. For **Alliance,** we like the "structuring premium" of an amortizer and the simplicity of this credit; not affected by how the ownership is structured; valuation reflects the defensive nature of this credit. It continues to perform as expected. Mgt turnover has been signficant (CFO earlier and now CEO) but this has no credit impact either for this contractually structured credit															
TransCanada	KY	A	A2	A- Neg	Stable but event risk	Medium	F	6.05% 2007	1.94%	6.5% 2030	9.36%	30	▼ 6	115	⇔ 0
Negative outlook will take a long time to hatch, if at all - unless an acquisition forces S&P's hand. We think that short-term acquisition risk is reduced with the announced sale of TransCanada Power LP interests to EPCOR, which should improve TRP's cash outlook w and balance sheet capacity when the transaction closes. Management's commitment to maintain TRP's "A" rating also mitigates short-term risks associated with acquisitions. We read this to mean that TRP will likely make acquisitions in a conservative way (ce sheet not be a detriment to bondholders). The improved balance sheet and renewed commitment to its "A" rating gives us more comfort that TRP's credit quality may not deteriorate if it were to make a large acquisition in the near-term.															
Duke (Westcoast)	KY	A(low) UR-Dev	NR	BBB CW-Neg	Improving	Low	R	5.7% 2008	2.74%	7.15% 2031	8.29%	38	▼ 8	131	▲ 8
Duke (Union Gas)	KY	A UR-Dev	NR	BBB CW-Neg	Standalone stbl + DUK effect	Low	R	5.7% 2008	2.67%	8.65% 2025	7.85%	36	▼ 5	118	▲ 4
MNEP	KY	A	A1 UR-PD	A	Strong	Very low	F	NA	NA	6.9% 2019	6.57%	NA	NA	63	▼ 17
The announced merger with Cinergy should take some of the growth pressures off management, which is good for bondholders. Also good for bondholders in that this is an all stock deal and Cinergy's merchant assets (which is mostly coal) should diversify thenounce risks. Although S&P agrees with us that the transaction in itself is not a detriment to credit, it nevertheless put Duke on credit watch negative because of the uncertainty with regards to what Duke mgmt may do post merger - namely possibility of separatiS&P agrees with and unregulated utilities. We believe the separation of the regulated and unregulated businesses may actually be good for credit ratings of Westcoast and Union Gas. However, in the event that nothing happens post merger and Duke remains whole, as it is nunre ratings of Westcoast and Union Gas should remain unchanged. Of greater concern should be the talk of spinning out the Westcoast assets into an income trust, which we believe could be a mild negative (depending on how the trust is structured) for Westcoasta bondholders. Union Gas for now is not expected to be put into an income trust. For **MNEP**, we like structural protection and simplicity; valuation reflects the defensive nature of this credit.															
Terasen	KY	A(low)	A3	BBB-	Stable but some event risk	Low	F	6.3% 2008	3.13%	NA	NA	46	▼ 12	NA	NA
Terasen Gas	KY	A	A2	BBB	Stable	Low	F	NA	NA	6.95% 2029	10.74%	NA	NA	118	▼ 11
Business fundamentals are a strong combination of a regulated gas distribution and pipelines, with aggressive financial profile. Although to be fair, we note that most of TER's consolidated debt resides at INL, which is a regulated utility that is restricts are a strong combi equity it can have in its capital structure by the BCUC. BCUC's allowed equity cushion for gas utilities is among the lowest in Canada. We also like the relatively conservative near-term growth of TER, with most of the growth focused on adding to regulatn have in it With ENB getting a new ITS, attention now is on Trans Mountain's ITS. We think that Trans Mountain's ROE will fall but not back to the allowed ROE. Producers will likely give Trans Mountain chances to make up most of the rebased earnings with incentives.B getti new ITS will have greater impact on TER's consolidated cash flow and credit metrics because all of Trans Mountain is under the current ITS.															
Integrated electric: *A mixed bag of companies, ranging from trasnmission dominated, through fully integrated but in a regulated setting, to a mix of regulated T&D and non-regualated generation, and even E&P. Hence risk profiles vary and the companies in this group are not direct comparables.*

Sector Weighting:

Market Weight

TER Takeout Valuation Would Boost Other Pipes & Utes

Biggest Potential Upside in TRP, FTS, TA

- Kinder Morgan's acquisition of Terasen establishes utility valuation metrics that are higher than we have seen in the past. Most other Canadian pipelines and utilities are still trading at significant discounts to the Terasen acquisition multiple.
- We have analyzed potential share price appreciation in several of the Canadian stocks based on the 24x P/E and 11.5x EBITDA multiple KMI is paying for TER.
- We find the most upside potential in TransCanada, Fortis and TransAlta. Emera and Canadian Utilities would have some upside but we see ownership restrictions in both that would likely prevent a takeover.
- Canadian pipeline and utility companies could just as easily be buyers as sellers. In the current investing environment both buyers and sellers are moving up on deal announcements. Either way, we believe shareholders are winning as consolidation takes hold.

All figures in Canadian dollars, unless otherwise stated.

Investment Summary

Kinder Morgan's (KMI-NYSE, Not Rated) acquisition of Terasen (TER-TSX, Sector Performer) establishes utility valuation metrics that are higher than we have seen in the past. In yesterday's research note we compared the valuation to other recent utility transactions. Most other Canadian pipelines and utilities are still trading at significant discounts to the Terasen acquisition multiple. We have quantified the gap between current valuations and potential takeout valuations for several of the stocks in our coverage universe.

We have analyzed potential share price appreciation in several of the Canadian stocks based on the 24x P/E and 11.5x EBITDA multiple KMI is paying for TER. Currently, the Canadian pipelines and utilities are trading at the much lower metrics of about 19x earnings and 9x EBITDA.

Exhibit 1. Comparative Valuation of Canadian Pipeline, Power and Utility Companies

			Share Price		Earnings per Share		P/E (x)		Cash Flow per Share		P/CF (x)		Book	EV/

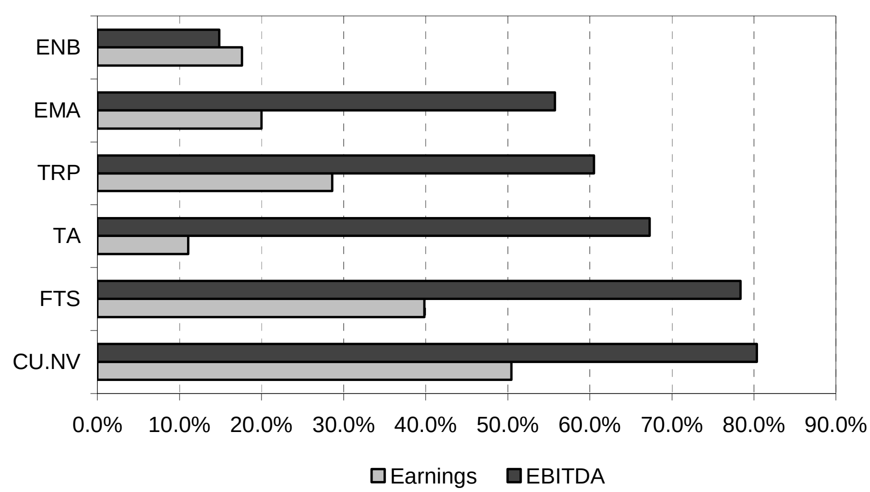
Source: Company reports and CIBC World Markets Inc.

Valuation expansion to the Terasen takeout multiples would drive significant share price appreciation for the Canadian pipelines and utilities. Moving up to the 24x P/E multiple would require anywhere from a 18% to 50% increase in share prices. Moving up to the 11.5x EBITDA multiple would require anywhere from about 15% to 80% increase in share prices.

Exhibit 2. Hypothetical Upside Potential to Current Share Prices



Note: We applied Terasen's takeout earnings and EBITDA multiples to our 2006 estimates.

Source: Company reports and CIBC World Markets Inc.

CIBC World Markets

Several general and specific observations flow from our calculations:

- Most of the stocks show more upside to the acquisition EBITDA multiple than the acquisition P/E multiple. The ability to pay 11.5x EBITDA for a utility stock was unique and probably relates to the stability of cash flows from Terasen's 100% regulated pipeline and utility business.

- Enbridge (ENB-TSX, Sector Performer) shows the least upside to the Terasen acquisition multiple because it trades at a premium to the group. The market has appropriately already recognized much of the strategic value in the Enbridge asset base.

- TransAlta (TA-TSX, Sector Performer) has little upside to the 24x earnings multiple because its earnings are currently depressed while it operates under legacy contracts to sell power below market prices. We see upside to earnings in the 2007–2009 timeframe that would tend to reduce the stock's P/E multiple.

In summary, TransCanada (TRP-TSX, Sector Outperformer), Fortis (FTS-TSX, Sector Outperformer) and TransAlta show the biggest gaps between current valuation metrics and the Terasen takeout multiple. Emera (EMA-TSX, Sector Underperformer) and Canadian Utilities (CU.NV-TSX, Sector Performer) would have some upside but we see ownership restrictions in both that would likely prevent a takeover. Canadian Utilities is family controlled. Emera still has provisions that prevent concentration in voting shares of more than 15% and concentration of foreign holding of more than 25%.

Predicting M&A activity is difficult and the Terasen deal may be a one off. In fact, Canadian pipeline and utility companies could just as easily be buyers as sellers. However, in the current investing environment, the shares of both buyers and sellers are moving up on deal announcements. Either way, we believe shareholders are winning as consolidation takes hold.

Price Target Calculations

Our price targets for the pipeline and utility companies are derived from P/E multiples and dividend yields (relative to bond yields) primarily based on our 2006 earnings and dividend forecasts. We also consider our outlooks for the stocks beyond 2006. Our target dividend yields range from 3.1%–6.2% (based on a forecast 10-year Canada bond yield of about 4%).

Our target P/E multiples range from 16.4x–23x. This range is at the high end of the historical norm due to historically low bond yields. In the past 15 years, the stocks have tended to peak at no more than 17x–18x earnings, but have traded through those levels recently. The differences in target multiples between stocks under our coverage reflect different organic growth rates, potential acquisition activity, and current regulatory environment.

Key Risks To Price Targets

The main risk to our target prices is unanticipated changes in long bond yields. The correlation between bond yields and utility valuations has been high in recent years. If bond yields rise significantly, valuations across the group are likely to compress. Our target prices are based on 10-Year Canada Bond yield of about 4.0%.

For individual companies, risks to target prices relate primarily to negative regulatory decisions that reduce returns on regulated assets, low acquisition activity, and unanticipated weakness in power prices.

IMPORTANT DISCLOSURES:

Analyst Certification: Each CIBC World Markets research analyst named on the front page of this research report, or at the beginning of any subsection hereof, hereby certifies that (i) the recommendations and opinions expressed herein accurately reflect such research analyst's personal views about the company and securities that are the subject of this report and all other companies and securities mentioned in this report that are covered by such research analyst and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by such research analyst in this report.

Potential Conflicts of Interest: Equity research analysts employed by CIBC World Markets are compensated from revenues generated by various CIBC World Markets businesses, including the CIBC World Markets Investment Banking Department within the Corporate and Leveraged Finance Division. Research analysts do not receive compensation based upon revenues from specific investment banking transactions. CIBC World Markets generally prohibits any research analyst and any member of his or her household from executing trades in the securities of a company that such research analyst covers. Additionally, CIBC World Markets generally prohibits any research analyst from serving as an officer, director or advisory board member of a company that such analyst covers.

In addition to 1% ownership positions in covered companies that are required to be specifically disclosed in this report, CIBC World Markets may have a long position of less than 1% or a short position or deal as principal in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon.

Recipients of this report are advised that any or all of the foregoing arrangements, as well as more specific disclosures set forth below, may at times give rise to potential conflicts of interest.

Kinder Just "Trusted" Terasen: Who's Next?

- Kinder Morgan is using an income trust type structure and paying an income trust premium for Terasen. The other Canadian pipeline and utility corporations must now seek similar valuations if they are available.

- If Kinder Morgan can pay over 11x EBITDA for Terasen, then other industry players or financial buyers may be willing to pay similar multiples for other Canadian companies.

- The Terasen acquisition involves the issuance of debt that significantly reduces income tax liability in both Canada and the U.S. As a result, Canadian regulators will be hard-pressed to block or inhibit the conversion of utility assets into income trust structures.

- In this context, Canadian pipeline and utility companies must explore mergers or further trust conversion to create shareholder value. Given upside to the Terasen takeout multiple, it would be almost irresponsible not to.

All figures in Canadian dollars, unless otherwise stated.

Investment Summary

On August 1, Kinder Morgan (KMI–NYSE, Not Rated) announced the acquisition of Terasen (TER–TSX, Sector Performer) for approximately $35.90 per share. The acquisition price implies an approximately 20% premium and valuation multiples that are much higher than in other recent pipeline and utility transactions. Canadian pipeline and utility share prices have not moved significantly since the acquisition was announced. Yet, the Terasen deal highlights opportunities to unlock value in several of the other Canadian pipeline and utility companies.

How Kinder Morgan, a normally disciplined pipeline company, is going to create shareholder value by paying 23x earnings and 11.8x EBITDA for Terasen is the question most investors and industry observers are now asking. Our take is that Kinder Morgan is effectively turning Terasen into an income trust and realizing the value escalation that normally goes along with a trust conversion. Whether it is through interest deductions or asset transfer into a Master Limited Partnership (MLP), Terasen will pay less income tax and the resulting value will be transferred to shareholders.

Special interest deductions will go a long way to reducing taxable income. Kinder Morgan announced it would issue new debt on the order of US$2.0 billion, funding 53% of the acquired equity value. Interest on this debt will be deductible in Canada and the U.S., reducing the effective cost of debt to about 2% after tax. Kinder Morgan may also transfer some of the Terasen assets into its U.S. MLP — a company that attracts no income tax by design.

Other U.S. companies seeking growth opportunities in Canada have taken notice of Kinder Morgan's methodology and may follow suit. It is always difficult predicting mergers and acquisitions, but large U.S. pipeline and utility companies have often looked toward Canada for growth. The abundance of fossil fuel resources in Alberta and the Arctic will underpin Canadian energy infrastructure growth rates that will likely far exceed growth in the U.S.

If cross-border mergers are not used for reducing tax liability and unlocking value, income trust conversions might be. In the past, regulators have inhibited the conversion of pipeline and utility companies into income trusts. Regulators threatened to offset the benefit of conversion by reducing utility rates when income taxes fell. We now see that threat potentially diminishing.

In the context of the Terasen deal that reduced tax liability via a cross-border structure, Canadian regulators will be hard-pressed to block or inhibit the conversion of utility assets into income trust structures. The Kinder Morgan deal accomplishes the tax arbitrate that a trust would, and leaves the assets in the hands of a U.S. corporation. A Canadian regulatory policy with a bias toward foreign ownership of domestic infrastructure makes no sense. Yet, in preventing trust conversion, Canadian regulators may be unintentionally promoting this exact bias.

Terasen achieved maximum value for its Canadian shareholders. Now the other Canadian pipeline and utility corporations are obligated to seek similar valuations if they are available. Maximizing shareholder value may call for mergers or income trust conversions. The potential valuation upside is significant and has not yet been reflected in the stocks. We count especially TransCanada (TRP–TSX, Sector Outperformer) and Fortis (FTS–TSX, Sector Outperformer) as undervalued on trust/merger multiples. To a lesser extent, we also see upside in Enbridge (ENB–TSX, Sector Performer) and TransAlta (TA–TSX, Sector Performer).

Kinder Is Paying "Trust" Valuation For Terasen

We viewed the takeout valuations on Terasen as expensive based on either trailing or forward financial parameters. When the acquisition was announced, Terasen calculated its takeout valuation metrics of 23.8x earnings and 11.5x EBITDA based on 2005 financial forecasts. Our view is that Terasen has excellent long-term growth prospects but few prospects in 2006. Therefore, our estimated valuation metrics on 2006 financial parameters are similar to the ones Terasen presented based on 2005 parameters.

Terasen's earnings and cash flows will likely not improve much in 2006 because its regulated returns are falling in both the oil pipeline and gas utility business. The lucrative Trans Mountain tolling agreement comes due at the end of this year and the ROE on the gas utilities is reviewed annually. Our 2006 EPS estimate is $1.55, up only $0.05 from our $1.50 forecast in 2005. Similarly, our 2006 EBITDA forecast for Terasen is $585 million, up only $15 million from our $570 million forecast in 2005. Based on these forecasts, we calculate the acquisition multiples as 23x 2006 earnings and 11.8x 2006 EBITDA.

Exhibit 1. TER Takeout Multiples

Deal Parameters			CIBC Forecasts For TER 2005E	2006E
Pro-rata Share Offer Price (C$)	**$35.91**	EPS	$1.50	$1.55
(Based On US$88.86 KMI Share Price)		**Takeout P/E (x)**	**23.9**	**23.2**
Equity Value (C$ mlns.)	$3,790			
Assumption Of Debt And Capital Securities	$3,144	EBITDA (C$ mlns.)	$570	$585
Purchase Price (C$ mlns.)	$6,934	**Takeout EV/EBITDA (x)**	**12.2**	**11.8**

Source: Company reports and CIBC World Markets Inc.

The valuation parameters of the Terasen deal far exceed valuations on the other Canadian pipeline and utility corporations. They are in line or even higher than multiples ascribed to comparable Canadian income trusts. Most of the corporations trade at 8x–9x EBITDA, although some of the pipeline trusts, namely Pembina (PIF.UN–TSX, Sector Performer) and IPL (IPL.UN–TSX, Sector Performer), already attract 11x–12x EBITDA multiples.

Source: Company reports, IBES and CIBC World Markets Inc.

The Terasen takeout valuation also far exceeds valuations on other recent pipeline and utility transactions. Most of the companies have been acquired at EBITDA multiples of 8x–9x and earnings multiples of 15x–18x.

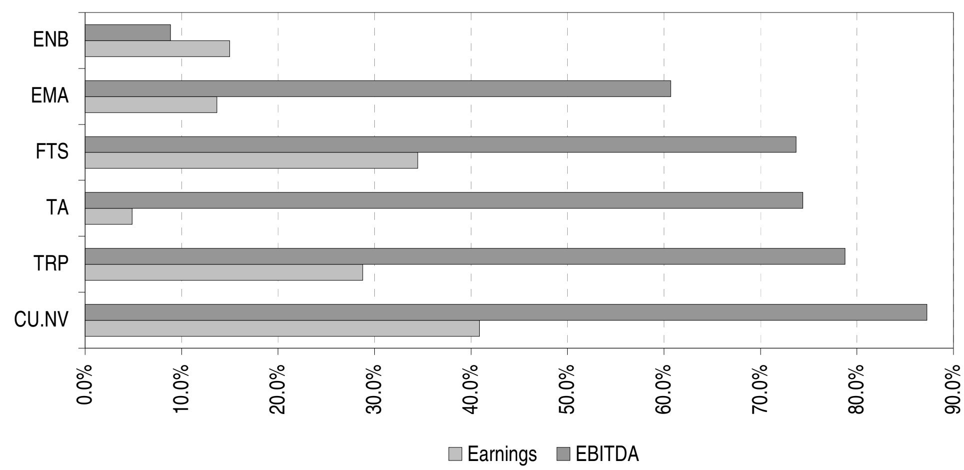
Exhibit 3. Valuation Parameters On Canadian And U.S. Utility Acquisitions

Date Announced	Buyer	Acquired Company	Purchase Price	Transaction Multiples: Earnings (x)	Book Value (x)	EBITDA (x)
21-Sep-01	Duke Energy	Westcoast Energy	US$8 billion	15.6	1.9	8.2
15-Aug-03	Fortis	Aquila's Western Canadian utilities	C$1.36 billion	18.3	1.8	8.3
20-Dec-04	Exelon Corp.	Public Service Enterprise Group	US$13.3 billion	16.2	2.3	NA
9-May-05	Duke Energy	Cinergy	US$9.0 billion	15.0	2.0	7.5
24-May-05	MidAmerican Energy	PacifiCorp	US$9.4 billion	19.4	1.5	8.6
1-Aug-05	**Kinder Morgan**	**Terasen**	**C$6.9 billion**	**23.2**	**2.7**	**11.8**

Source: Company reports and CIBC World Markets Inc.

We have analyzed potential share price appreciation in several of the Canadian stocks based on the 23x P/E and 11.8x EBITDA multiple Kinder Morgan is paying for Terasen. Valuation expansion to the Terasen takeout multiples would drive significant share price appreciation for the Canadian pipelines and utilities. Moving up to the 23x P/E multiple would require anywhere from a 10% to 40% increase in share prices. Moving up to the 11.8x EBITDA multiple would require anywhere from about 10% to 85% increase in share prices.

Exhibit 4. Potential Upside To Share Prices



Note: We applied Terasen's takeout earnings and EBITDA multiples to our 2006 estimates, with upside derived from closing prices on August 17.

Source: Company reports and CIBC World Markets Inc.

Several general and specific observations flow from our calculations:

- Most of the stocks show more upside to the acquisition EBITDA multiple than the acquisition P/E multiple. The ability to pay 11.8x EBITDA for a utility stock was unique and probably relates to the stability of cash flows from Terasen's 100% regulated pipeline and utility business. But achieving 10x–11x multiples is not at all out of the question.

- Enbridge shows the least upside to the Terasen acquisition multiple because it trades at a premium to the group. The market has appropriately already recognized much of the strategic value in the Enbridge asset base.

- TransAlta has little upside to the 23x earnings multiple because its earnings are currently depressed while it operates under legacy contracts to sell power below market prices. We see upside to earnings in the 2007–2009 timeframe that would tend to reduce the stock's P/E multiple.

In summary, TransCanada, Fortis and TransAlta show the biggest gaps between current valuation metrics and the Terasen takeout multiple. Emera (EMA–TSX, Sector Underperformer) and Canadian Utilities (CU.NV–TSX, Sector Performer) would have some upside but we see ownership restrictions in both that would likely prevent a takeover. Canadian Utilities is family controlled. Emera still has provisions that prevent concentration in voting shares of more than 15% and concentration of foreign holding of more than 25%.

Kinder Structure Accomplishes Much Of What An Income Trust Does

We believe that using a beneficial financing structure was key to supporting the abnormally high valuation Kinder Morgan is paying for Terasen. The structure involves issuing new debt and deducting interest expense for income tax purposes in both Canada and the U.S. In this sense, the structure is similar to an income trust that eliminates taxable income by creating inter-company loans and tax-deductible interest.

In the Kinder Morgan example, we estimate Canadian income tax liability could be significantly reduced with the double-dip interest structure. Kinder Morgan has stated it intends to issue about US$2.0 billion in new debt. Kinder's 10-year paper is trading at a premium to U.S. Treasuries of around 105 basis points. Assuming Kinder Morgan's credit rating is unchanged, and based on current 10-Year Treasury yields of 4.4%, Kinder could probably issue the new debt at around 5.45%. The pre-tax interest expense would then amount to about US$109 million.

The table below shows Terasen's taxable income and income tax paid in 2004 and then our estimates for 2005 and 2006. The 2006 numbers include the new interest expense from the Kinder Morgan acquisition. In 2004, Terasen paid about $78 million in cash income tax. We estimate that by 2006, despite achieving significant growth off of the 2004 base, the Terasen companies will only pay about $30 million in income tax.

Exhibit 5. Terasen's Income Tax Expense

	2004	2005E	2006E
Gas Distribution EBIT	$272.4	$279.9	$267.0
Petroleum Transportation EBIT	$99.3	$102.1	$104.3
Water Services EBIT	$11.4	$21.3	$24.6
Other EBIT	($11.7)	($15.2)	($12.5)
Express Pipeline Contribution	$15.0	$19.0	$22.0
Total EBIT	$386.4	$407.0	$405.4
Financing Expense (TER)	($166.6)	($180.0)	($190.0)
Financing Expense (KMI)	$0.0	$0.0	($130.8)
Pre-tax Income	$219.8	$227.0	$84.6
Tax Rate	35.5%	35.0%	35.0%
Income Tax	**$78.1**	**$79.5**	**$29.6**

1. Petroleum Transportation reflects expiry of Trans Mountain tolling agreement at the end of 2005.

2. Gas Distribution reflects lower allowed ROE resulting from drop in bond yields.

3. Express EBIT reflects expansion in service April 2005.

4. Taxes reflect cash taxes paid in 2004 and forecast cash taxes in 2005/6.

Source: Company reports and CIBC World Markets Inc.

Using the double-dip financing structure, we estimate Kinder will reduce the income taxes paid by about $50 million. This reduction equates to about 63% of Terasen's otherwise taxable income. And our models conservatively assume none of the Terasen assets are transferred to Kinder Morgan's MLP. The tax reduction would be even larger if that occurs. Income trust structures can eliminate up to 100% of taxable income, but we see the Kinder deal as a reasonable proxy for an income trust structure.

Canadian Regulators May Have To Liberalize Bias Against Utility Trust Conversions

Canadian regulators have recently expressed concerns about utility companies collecting taxes in rates but not paying them. Recent precedents suggest regulators may force a rate reduction if a utility converts to a trust structure. In the context of the Terasen deal, we think Canadian regulators may consider lifting some current restrictions and penalties involved in converting Canadian pipeline and utility assets into trust structures:

- If Canadian pipelines and utilities do not convert to income trusts, U.S. companies may eventually acquire them using a double-dip financing structure. This outcome raises several issues for Canadian governments and their regulatory agencies:
    - Canada could lose most of the corporate income tax revenue it collects from Canadian pipelines and utilities.
    - If Canadian companies are acquired, most of the future income from the assets will be taxed in the U.S. because the vast majority of shareholders will be American.
    - In the case of the U.S. company takeover, Canada also stands to lose head office jobs and some control over key energy infrastructure assets.
- Canadian companies can realize takeover valuations by instead converting all or a portion of their assets into Canadian income trusts.
    - If Canadian pipelines and utilities convert to income trusts in Canada, most of the income may eventually be taxed in Canada under personal income taxes.
    - In a trust conversion, Canadian utility customers are unharmed because utility bills remain unchanged and tax revenues remain in Canada.
- Therefore, Canadian regulators blocking income trust conversions in Canada may create the unintended consequences of delivering tax benefits to the U.S. at the expense of Canada and increasing foreign ownership of Canadian infrastructure assets.

We are not arguing against U.S. takeovers of Canadian companies, but we are suggesting it is illogical maintaining regulatory policies biased in their favour. Canadian regulators may have to reevaluate their stance to date against the creation of income trusts in the pipeline and utility sector. This stance has been founded on two issues: first, that taxes should not be collected in rates if they might not be paid; and second, that the debt within income trust structures may financially destabilize utilities and jeopardize their operations.

The National Energy Board has not tested the income trust conversion issue since it has not received an application for conversion of major pipeline assets. The Alliance Pipeline was converted to a trust but was governed by negotiated tolls, not cost of service rates with annual review.

However, provincial regulators have so far deterred the creation of income trusts. The Alberta Energy and Utilities Board (EUB) has placed the biggest obstacle in front of potential income trusts. In the AltaLink case, the EUB reduced the electric transmission company's rates because one of the owners, Ontario Teachers Pension Plan (OTPPB), was deemed a non-taxable entity. In its Review and Variance response from February 2005 the EUB stated:

> "…..the Board was not convinced that there was a reasonable expectation that OTPPB would incur and pay income taxes. In the Board's view, such a result would not be in keeping with the Board's belief that in a cost of service jurisdiction where revenue and costs are forecast on a prospective basis, a cost should only be recoverable in customer rates if there is a reasonable expectation that it will be incurred."

The EUB's position on AltaLink has negative implications for conversion of Alberta's utility assets into income trusts. In Alberta, if an income trust, like a pension fund, is viewed as having little probability of paying taxes, it may be forced to reduce regulated rates upon conversion.

AltaGas (ALA.UN–TSX, Not Rated) must have faced similar resistance to holding regulated Alberta utilities in a trust structure. Having converted from a corporation to a trust structure in 2004, AltaGas on May 25, 2005, announced the spin out of its regulated gas distribution business. On a recent conference call, AltaGas management stated the spin out would be "neutral to the company on an operating cash flow basis". What likely motivated AltaGas on the spin out, then, was not an improvement in the company's cash flow, but the threat the EUB would disallow the collection of taxes in gas distribution rates.

The British Columbia Utilities Commission (BCUC), like the EUB, has expressed tax and other concerns regarding income trust conversions. On July 29, 2004, the BCUC rejected the Pacific Northern Gas (PNG–TSX, Not Rated) request for trust conversion. Tax issues were central to the BCUC's concerns but so were capitalization issues. In an income trust structure, leverage tends to exceed regulated debt capitalization levels and actual equity ratios are thinner than regulated equity. These divergences were central to the BCUC decision:

> …the Commission panel concludes that deeming a capital structure at such wide variance with the underlying reality of the actual capital structure would be a material departure from the Commission's past regulatory practice…deeming a component of the cost of service equivalent to income taxes otherwise previously payable by a taxable corporation that had put in place a financial structure to minimize those taxes would establish a regulatory precedent with unknown implications…"

Though Canadian regulators have so far expressed a bias against trust conversions, they have not definitively rejected the concept. In British Columbia, the regulator seemed to indicate that it may approve the Pacific Northern Gas conversion if the company could show how such action would be in the public interest. In Alberta, the regulator seemed to indicate that it may allow for tax collection in rates as long as there was some potential for the utility owner to pay tax.

In the U.S., the Federal Energy Regulatory Commission (FERC) has taken a similar but perhaps more liberal and realistic approach to the tax issue. Until May of this year, the FERC maintained the so-called "Lakehead Policy" that held a limited partnership would be permitted to include an income tax allowance in its rates equal only to the proportion of its limited partnership interests owned by corporate partners. In a recent policy statement (dated May 4, 2005) FERC expanded the tax inclusion policy:

> "Under the [new] policy, all entities or individuals owning public utility assets would be permitted an income tax allowance on the income from those assets, provided that they have an actual <u>or potential</u> (emphasis added) income tax liability on that public utility income. Thus, a tax-paying

> corporation, partnership, limited liability corporation, or other pass-through entity would be permitted an income tax allowance on the income imputed to the corporation, or to the partners or the members of pass-through entities, provided that the corporation or the partners or the members have an actual or potential income tax liability on that income."

We believe the new FERC policy, applied to MLPs in the U.S., suggests the MLPs can collect taxes in rates even if the MLP itself does not pay income taxes. It would be collecting taxes on behalf of its members or partners that have a potential tax liability. Allowing utilities converting to income trusts to continue collecting taxes in rates on behalf of the individual income trust unit holders would be the analogous policy for a Canadian regulator.

Whether the Kinder Morgan acquisition of Terasen sparks a wave of Canadian pipeline and utility trust conversions remains to be seen. Two new regulatory precedents will likely be established in the coming months:

- Pacific Northern Gas is still applying to the BCUC for income trust conversion and may find success in its second attempt.
- Duke (DUK–NYSE, Sector Performer) has discussed the potential for creating a Canadian income trust that is bound to include gas-processing assets and may also include pipeline assets regulated by the NEB.

In light of the Kinder Morgan deal, there is an argument that regulators should be more lenient in these applications than they have with other income trust applications. A more positive outcome in the Pacific Northern Gas and Duke cases may bode well for the creation of more Canadian utility income trusts in the future.

Conclusion: More Value Creating Deals Likely On The Horizon

Canadian pipeline and utility companies must be considering strategic options to achieve the valuation Terasen did. Turning assets into income trusts is one way to surface value in the pipelines and utilities sector. Regulators should be more responsive to that alternative or U.S. companies may wind up owning more Canadian infrastructure with even fewer domestic tax benefits.

The future growth plans of the corporations should not deter them from turning assets into income trusts. The pipeline and utility companies could still maintain corporate parents as vehicles for growth. In fact, Kinder Morgan has already established this business model. It uses the MLP as its primary acquisition vehicle and pays cash bonuses for growth targets to the corporate parent.

TransCanada has perhaps the most to gain from turning assets into income trusts, yet has come less distance than Enbridge in using the trust vehicle. Enbridge already has an MLP and a Canadian income trust and trades at a relatively high EBITDA multiple. TransCanada hardly uses the structure and trades at a relatively low EBITDA multiple.

TransAlta may have upside to a trust structure in the medium term but not short term. The timing may not be right for conversion to a trust because the company is paying little in the way of cash taxes (about $5 million in 2004) and is making significant capital expenditures to improve the Alberta coal plants. Yet later this decade, cash taxes are bound to increase with profitability and spending will subside. At that time, upside from an income trust structure could materialize. In a report dated August 9, 2004, we calculated the shares were worth around $26.00 on a non-taxable basis.

The potential conversion of assets to income trusts is the focus of this report but is only one of the many strategic issues arising from the Kinder Morgan acquisition of Terasen. We believe Kinder Morgan has the size, expertise and relationships to undertake a much larger share of energy infrastructure growth opportunities than Terasen did on its own. Enbridge and TransCanada may have to seek more of their growth opportunities outside of Canada now. Apart from creating more trusts, potential strategic responses to the Kinder deal include acquiring more U.S. assets or acquiring U.S. corporations.

We see the acquisition of U.S. corporations more as potential upside than downside for Canadian companies. Lately, mergers have caused share price appreciation in both the buyer and target. Kinder Morgan was no exception. A similarly favourable response would likely greet Enbridge or TransCanada were they to acquire a solid U.S. company.

Terasen achieved valuations for its shareholders significantly beyond the current market valuation on most other Canadian pipeline and utility stocks. Now the other Canadian pipeline and utility corporations are obligated to seek similar valuations if they are available. TransCanada faces the biggest valuation gap, trading at a 6–7 point P/E discount and a 3-point EBITDA discount to the Terasen takeout valuation. Maximizing shareholder value may call for income trust conversions and/or mergers. Either way, given upside to the Terasen takeout multiple, it would be almost irresponsible not to seriously explore these options now.

Price Target Calculations

Our price targets for the pipeline and utility companies are derived from P/E multiples and dividend yields (relative to bond yields) primarily based on our 2006 earnings and dividend forecasts. We also consider our outlooks for the stocks beyond 2006. Our target dividend yields range from 2.8%–6.2% (based on a forecast 10-year Canada bond yield of about 4%).

Our target P/E multiples range from 16.4x–23x. This range is at the high end of the historical norm due to historically low bond yields. In the past 15 years, the stocks have tended to peak at no more than 17x–18x earnings, but have traded through those levels recently. The differences in target multiples between stocks under our coverage reflect different organic growth rates, potential acquisition activity, and current regulatory environment.

Key Risks To Price Targets

The main risk to our price targets is unanticipated changes in long bond yields. The correlation between bond yields and utility valuations has been high in recent years. If bond yields rise significantly, valuations across the group are likely to compress. Our price targets are based on 10-year Canada Bond yield of about 4.0%.

For individual companies, risks to price targets relate primarily to negative regulatory decisions that reduce returns on regulated assets, low acquisition activity, and unanticipated weakness in power prices.

IMPORTANT DISCLOSURES:

Analyst Certification: Each CIBC World Markets research analyst named on the front page of this research report, or at the beginning of any subsection hereof, hereby certifies that (i) the recommendations and opinions expressed herein accurately reflect such research analyst's personal views about the company and securities that are the subject of this report and all other companies and securities mentioned in this report that are covered by such research analyst and (ii) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by such research analyst in this report.

Potential Conflicts of Interest: Equity research analysts employed by CIBC World Markets are compensated from revenues generated by various CIBC World Markets businesses, including the CIBC World Markets Investment Banking Department within the Corporate and Leveraged Finance Division. Research analysts do not receive compensation based upon revenues from specific investment banking transactions. CIBC World Markets generally prohibits any research analyst and any member of his or her household from executing trades in the securities of a company that such research analyst covers. Additionally, CIBC World Markets generally prohibits any research analyst from serving as an officer, director or advisory board member of a company that such analyst covers.

In addition to 1% ownership positions in covered companies that are required to be specifically disclosed in this report, CIBC World Markets may have a long position of less than 1% or a short position or deal as principal in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon.

Recipients of this report are advised that any or all of the foregoing arrangements, as well as more specific disclosures set forth below, may at times give rise to potential conflicts of interest.

DOWNGRADE RATING

CREDIT SUISSE | FIRST BOSTON

Equity Research Canada

Terasen Inc.

TER.TO

Downgrade Based on Valuation

- **We are downgrading Terasen from Outperform to Neutral, based solely on valuation. We continue to like the fundamental story from a growth and risk perspective but find the stock expensive. For current investors in the stock, we recommend continuing to hold the shares.**

- **Terasen is up 28% in the past 12 months, handsomely outperforming peers. It currently trades at a premium multiple of 9.5x 05E EV/EBITDA, 10.9x 05E price to cash flow and 18.9x 05E price to earnings. We estimate earnings to grow 11% for 2005.**

- **We believe Terasen deserves to trade at a premium versus its peers. We judge the risks at Terasen to be the lowest in our coverage universe, with good prospects for growth from expansions and new pipelines in the oil sands area of Alberta.**

- **We believe Terasen's proposed TMX expansion is best positioned versus competitor Enbridge, owing to its staged development. A staged project can match new oil sands projects more closely versus the alternative mega-project proposal by Enbridge (400 kbpd in 2009). Terasen's proposal is a pipeline-twinning project, avoiding potential land claim issues we believe Enbridge could face in northern British Columbia. The $2.5 billion proposed pipeline would commence operations as early as 2007, with completion by 2009.**

- **If Terasen is successful, we estimate the TMX expansion could add approximately $2-4 to NAV. With our 12-month target of $26.50, we feel the shares are priced to perfection at this time.**

- **Our preferred name at present is TransCanada, based on valuation, news flow on Alaska pipeline, news flow on Mackenzie pipeline and Bruce Power in Ontario.**

Terasen is a diversified utility with oil pipelines, local gas distribution assets and water utilities.

IMPORTANT DISCLOSURES AND ANALYST CERTIFICATIONS ARE IN THE DISCLOSURE APPENDIX. U.S. Disclosure: CSFB does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Customers of CSFB in the United States can receive independent, third party research on the company or companies covered in this report, at no cost to them, where such research is available. Customers can access this independent research at www.csfb.com/ir or call 1 877 291 2683 or email equity.research@csfb.com to request a copy of this research.

Alternative Analysis of Valuations and Yields

We see from the following table that Terasen (TER.TO, C$29.50, NEUTRAL, TP C$26.50, MW) is trading at a premium valuation versus its historical average (the lower the %, the higher the valuation). As we discussed in our initiation (January 2004), we believe a premium valuation is deserved owing to growth prospects, lower risk, and relationship with financial players (OMERS and Ontario Teachers).

Exhibit 1: Historical Range of Dividend Yield, as a Percent of 10Y GOC

	TRP	ENB	TER	FTS	TA	EMA
TODAY – January 25	91%	73%	69%	75%	125%	107%
10-year average	**92%**	**70%**	**72%**	**83%**	**96%**	**94%**
5-year average	93%	68%	73%	83%	104%	100%
3-year average	89%	71%	73%	77%	114%	104%
1-year average	92%	76%	73%	77%	128%	106%
Ex-1999-2002 avg	**88%**	**74%**	**72%**	**80%**	**99%**	**93%**

Source: Factset

TransCanada (TRP.TO, C$30, OUTPERFORM, TP C$29.00, MW) is trading near its historical average, which we believe unfairly penalizes the company in its "post-dividend-cut" years. Excluding the rocky period 1999-2002, TransCanada traded at an average dividend yield of 88% of the Canada 10-year bond yield. We think it should trade at these levels at a minimum, and possibly lower (higher valuation), owing to good future prospects for the company.

Our preferred name at this time is TransCanada, based on valuation, news flow on Alaska pipeline, news flow on Mackenzie pipeline and Bruce Power in Ontario.

Using our estimates of 2005 dividends (expected to be announced when Q4 earnings are released), a 10-year Government of Canada bond yield of 4.75%, and the 10-year average of the historical yield as a % of 10Y GOC (per above table), we calculate the following valuations:

Exhibit 2: Using the 10-year historical average % of today's GOC (4.17%)

	TRP	ENB	TER
04 dividend	1.16	1.83	0.84
% Of GOC 10 Year	**92%**	**70%**	**72%**
Implied value	28.05	57.73	25.86
05E dividend	**1.24**	**1.96**	**0.93**
Implied value	**29.99**	**61.83**	**28.63**

Source: Factset, CSFB estimates

However, we argue that Enbridge (ENB.TO, C$59.29, NEUTRAL, TP C$55.00, MW) should be valued at a higher (lower value) rate than historical, owing to its limited growth opportunities and higher risk. We also believe Terasen is coming into the spotlight, and deserves a higher valuation, as discussed previously. Finally, we think using a 10-year average for TransCanada skews the value downward, because of the dividend cut in 1999. Using 88% for TRP and 74% for ENB (the 10-year average excluding 1999 to 2002), and using 70% for Terasen yields the following valuations:

Exhibit 3: Adjusting the % Of 10 Year, TRP is preferred name

	TRP	ENB	TER
Relative spread	**88%**	**74%**	**70%**
05E dividend	**1.24**	**1.96**	**0.93**
Implied value	**29.67**	**55.76**	**27.97**

Source: Company data, CSFB estimates

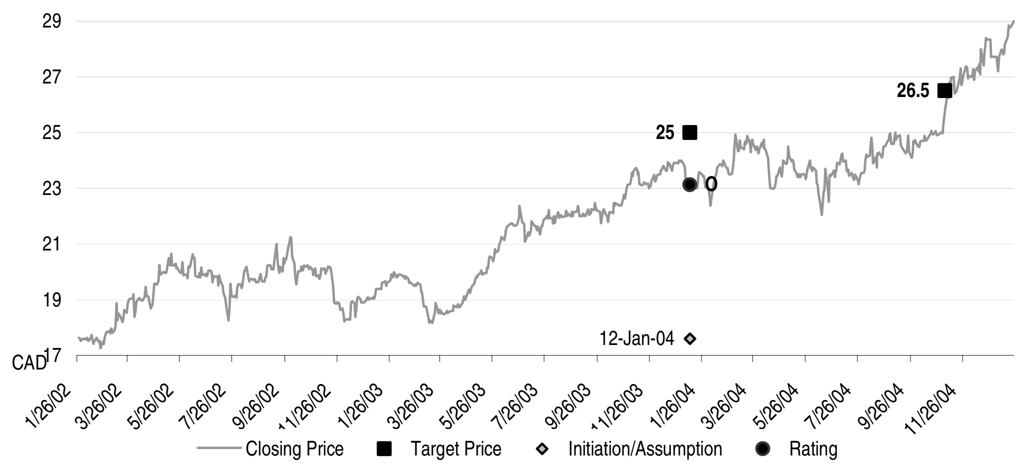
3-Year Price, Target Price and Rating Change History Chart for TER.TO



Current: O=Outperform; N=Neutral; U=Underperform; R=Restricted; NR=Not Rated
Prior to 9-Sep-02: SB=Strong Buy; B=Buy; H=Hold; S=Sell; R=Restricted; NR=Not Rated

TER.TO Date	Closing Price (CAD)	Target Price (CAD)	Rating	Initiation/ Assumption
1/12/04	23.13	25	OUTPERFORM	X
11/5/04	25.8	26.5		

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including CSFB's total revenues, a portion of which are generated by CSFB's investment banking activities.

Analysts' stock ratings are defined as follows*:**

Outperform: The stock's total return is expected to exceed the industry average* by at least 10-15% (or more, depending on perceived risk) over the next 12 months.

Neutral: The stock's total return is expected to be in line with the industry average* (range of ±10%) over the next 12 months.

Underperform:** The stock's total return is expected to underperform the industry average* by 10-15% or more over the next 12 months.

**The industry average refers to the average total return of the analyst's industry coverage universe (except with respect to Asia/Pacific, Latin America and Emerging Markets, where stock ratings are relative to the relevant country index, and CSFB HOLT Small and Mid-Cap Advisor stocks, where stock ratings are relative to the regional CSFB HOLT Small and Mid-Cap Advisor investment universe.*

***In an effort to achieve a more balanced distribution of stock ratings, the Firm has requested that analysts maintain at least 15% of their rated coverage universe as Underperform. This guideline is subject to change depending on several factors, including general market conditions.*

****For Australian and New Zealand stocks a 7.5% threshold replaces the 10% level in all three rating definitions.*

Restricted: In certain circumstances, CSFB policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of CSFB's engagement in an investment banking transaction and in certain other circumstances.

Volatility Indicator [V]: A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward. All CSFB HOLT Small and Mid-Cap Advisor stocks are automatically rated volatile. All IPO stocks are automatically rated volatile within the first 12 months of trading.

Analysts' coverage universe weightings* are distinct from analysts' stock ratings and are based on the expected performance of an analyst's coverage universe versus the relevant broad market benchmark***:**

Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.

Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.
CSFB HOLT Small and Mid-Cap Advisor stocks do not have coverage universe weightings.
***An analyst's coverage universe consists of all companies covered by the analyst within the relevant sector.*
****The broad market benchmark is based on the expected return of the local market index (e.g., the S&P 500 in the U.S.) over the next 12 months.*

CSFB's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Outperform/Buy*	37%	(56% banking clients)
Neutral/Hold*	43%	(58% banking clients)
Underperform/Sell*	17%	(45% banking clients)
Restricted	2%	

**For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

See the Companies Mentioned section for full company names.
Price Target: (12 months) for (TER.TO)
Method: Dividend yield versus the 10 year government of Canada forecast bond yield.
Risks: Rapid rise in the 10-year government of Canada bond yield.

See the Companies Mentioned section for full company names.
CSFB and/or its affiliates expect to receive or intend to seek investment banking related compensation from the subject company (TER.TO) within the next 3 months.

Important Australian and Canadian Disclosures

Restrictions on certain Canadian securities are indicated by the following abbreviations: NVS--Non-Voting shares; RVS--Restricted Voting Shares; SVS--Subordinate Voting Shares.
Individuals receiving this report from a Canadian investment dealer that is not affiliated with CSFB should be advised that this report may not contain regulatory disclosures the non-affiliated Canadian investment dealer would be required to make if this were its own report.
The analyst(s) involved in the preparation of this report have not visited the material operations of the subject company (TER.TO) within the past 12 months.

Disclaimers

This report is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse First Boston or its subsidiaries or affiliates (collectively "CSFB") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CSFB. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CSFB. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CSFB.

The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CSFB may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CSFB will not treat recipients as its customers by virtue of their receiving the report. The investments or services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice or a representation that any investment or strategy is suitable or appropriate to your individual circumstances or otherwise constitutes a personal recommendation to you. CSFB does not offer advice on the tax consequences of investment and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change.

CSFB believes the information and opinions in the Disclosure Appendix of this report are accurate and complete. Information and opinions presented in the other sections of the report were obtained or derived from sources CSFB believes are reliable, but CSFB makes no representations as to their accuracy or completeness. Additional information is available upon request. CSFB accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that liability arises under specific statutes or regulations applicable to CSFB. This report is not to be relied upon in substitution for the exercise of independent judgment. CSFB may have issued, and may in the future issue, a trading call regarding this security. Trading calls are short term trading opportunities based on market events and catalysts, while stock ratings reflect investment recommendations based on expected total return over a 12-month period relative to the relevant coverage universe. Because trading calls and stock ratings reflect different assumptions and analytical methods, trading calls may differ directionally from the stock rating. In addition, CSFB may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Those reports reflect the different assumptions, views and analytical methods of the analysts who prepared them and CSFB is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. CSFB and its affiliate companies are involved in many businesses that relate to companies mentioned in this report. These businesses include specialized trading, risk arbitrage, market making, and other proprietary trading. CSFB may, to the extent permitted by law, act upon or use the information or opinions presented herein, or the research or analysis on which they are based, before the material is published.

Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgement at its original date of publication by CSFB and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk.

Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase.

Some investments discussed in this report have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment, in such circumstances you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed.

This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to CSFB's own website material, CSFB has not reviewed the linked site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CSFB's own website material) is provided solely for your convenience and information and the content of the linked site does not in any way form part of this document. Accessing such website or following such link through this report or CSFB's website shall be at your own risk.

This report is issued and distributed in Europe (except Switzerland) by Credit Suisse First Boston (Europe) Limited, One Cabot Square, London E14 4QJ, England, which is regulated in the United Kingdom by The Financial Services Authority ("FSA"). This report is being distributed in the United States by Credit Suisse First Boston LLC; in Switzerland by Credit Suisse First Boston; in Canada by Credit Suisse First Boston Canada Inc.; in Brazil by Banco de Investimentos Credit Suisse Boston S.A.; in Japan by Credit Suisse First Boston Securities (Japan) Limited; elsewhere in Asia/Pacific by whichever of the following is the appropriately authorised entity in the relevant jurisdiction: Credit Suisse First Boston (Hong Kong) Limited, Credit Suisse First Boston Australia Equities Limited, Credit Suisse First Boston (Thailand) Limited, CSFB Research (Malaysia) Sdn Bhd, Credit Suisse First Boston Singapore Branch and elsewhere in the world by the relevant authorised affiliate of the above. Research on Taiwanese securities produced by Credit Suisse First Boston, Taipei Branch has been prepared by a registered Senior Business Person.

In jurisdictions where CSFB is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-U.S. customers wishing to effect a transaction should contact a CSFB entity in their local jurisdiction unless governing law permits otherwise. U.S. customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse First Boston LLC in the U.S.

Please note that this report was originally prepared and issued by CSFB for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CSFB should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not regulated by the FSA or in respect of which the protections of the FSA for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CREDIT SUISSE FIRST BOSTON

Equity Research Canada

Terasen Inc

TER.TO

Q4/04 In Line

- **Terasen reported Q4/04 EPS of $0.58, which is in line with consensus and our estimate of $0.59.**
- **We are lowering our 2005 EPS from $1.56 to $1.49 due to anticipated weaker volumes and throughput at Trans Mountain in Q1/05, driven by production outages in the Alberta oil sands and refinery turnarounds on the west coast.**
- **Projected 2005 capital expenditures of $350 million were higher than our estimate of $165 million. The capex will be financed with a combination of long-term debt, short-term debt and internally generated funds.**
- **With higher 2005 capex, we believe that leverage is getting high. We estimate that 2005 debt/cap will increase to 67% from current levels of 66%. While this is within the company's target range, it continues to be high relative to its peers.**
- **We continue to like the fundamental story from a growth perspective but find the stock expensive at these levels. We maintain our Neutral rating and 12-month target price of $26.50, which implies 17.8xP/E, 9.4xP/CF and 3.4% yield.**

Terasen is a diversified utility with oil pipelines, local gas distribution assets and water utilities.

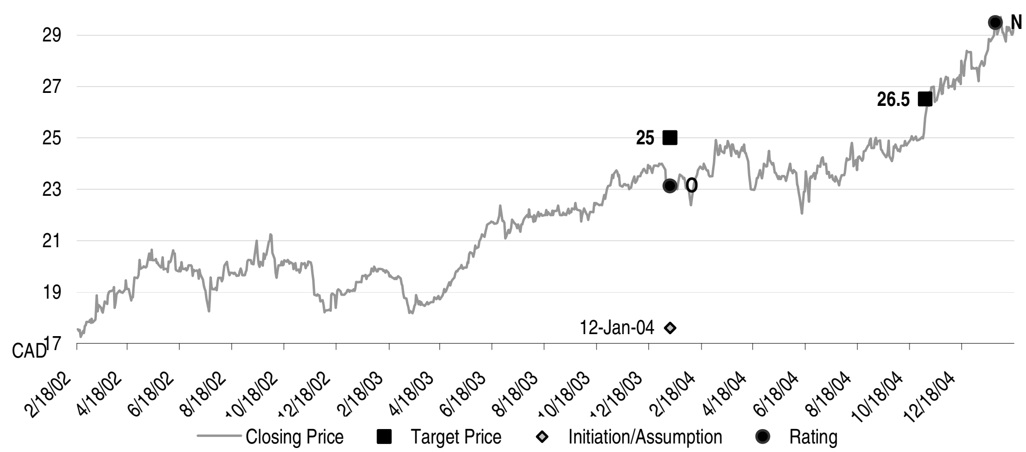
3-Year Price, Target Price and Rating Change History Chart for TER.TO



Current: O=Outperform; N=Neutral; U=Underperform; R=Restricted; NR=Not Rated
Prior to 9-Sep-02: SB=Strong Buy; B=Buy; H=Hold; S=Sell; R=Restricted; NR=Not Rated

TER.TO Date	Closing Price (CAD)	Target Price (CAD)	Rating	Initiation/ Assumption
1/12/04	23.13	25	OUTPERFORM	X
11/5/04	25.8	26.5		
1/26/05	29.48		NEUTRAL	

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including CSFB's total revenues, a portion of which are generated by CSFB's investment banking activities.

Analysts’ stock ratings are defined as follows***:

Outperform: The stock’s total return is expected to exceed the industry average* by at least 10-15% (or more, depending on perceived risk) over the next 12 months.

Neutral: The stock’s total return is expected to be in line with the industry average* (range of ±10%) over the next 12 months.

Underperform:** The stock’s total return is expected to underperform the industry average* by 10-15% or more over the next 12 months.

**The industry average refers to the average total return of the analyst's industry coverage universe (except with respect to Asia/Pacific, Latin America and Emerging Markets, where stock ratings are relative to the relevant country index, and CSFB HOLT Small and Mid-Cap Advisor stocks, where stock ratings are relative to the regional CSFB HOLT Small and Mid-Cap Advisor investment universe.*

***In an effort to achieve a more balanced distribution of stock ratings, the Firm has requested that analysts maintain at least 15% of their rated coverage universe as Underperform. This guideline is subject to change depending on several factors, including general market conditions.*

****For Australian and New Zealand stocks a 7.5% threshold replaces the 10% level in all three rating definitions.*

Restricted: In certain circumstances, CSFB policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of CSFB's engagement in an investment banking transaction and in certain other circumstances.

Volatility Indicator [V]: A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward. All CSFB HOLT Small and Mid-Cap Advisor stocks are automatically rated volatile. All IPO stocks are automatically rated volatile within the first 12 months of trading.

Analysts' coverage universe weightings* are distinct from analysts' stock ratings and are based on the expected performance of an analyst's coverage universe versus the relevant broad market benchmark***:**

Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.

Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

*****CSFB HOLT Small and Mid-Cap Advisor stocks do not have coverage universe weightings.

***An analyst's coverage universe consists of all companies covered by the analyst within the relevant sector.*

****The broad market benchmark is based on the expected return of the local market index (e.g., the S&P 500 in the U.S.) over the next 12 months.*

CSFB's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Outperform/Buy*	37%	(55% banking clients)
Neutral/Hold*	43%	(56% banking clients)
Underperform/Sell*	17%	(43% banking clients)
Restricted	2%	

**For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

See the Companies Mentioned section for full company names.

Price Target: (12 months) for (TER.TO)

Method: Dividend yield versus the 10 year government of Canada forecast bond yield.

Risks: Rapid rise in the 10-year government of Canada bond yield.

See the Companies Mentioned section for full company names.

CSFB and/or its affiliates expect to receive or intend to seek investment banking related compensation from the subject company (TER.TO) within the next 3 months.

Important Australian and Canadian Disclosures

Restrictions on certain Canadian securities are indicated by the following abbreviations: NVS--Non-Voting shares; RVS--Restricted Voting Shares; SVS--Subordinate Voting Shares.

Individuals receiving this report from a Canadian investment dealer that is not affiliated with CSFB should be advised that this report may not contain regulatory disclosures the non-affiliated Canadian investment dealer would be required to make if this were its own report.

The analyst(s) involved in the preparation of this report have not visited the material operations of the subject company (TER.TO) within the past 12 months.

For Credit Suisse First Boston Canada Inc.'s policies and procedures regarding the dissemination of equity research, please visit http://www.csfb.com/legal_terms/canada_research_policy.shtml.

Disclaimers

This report is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse First Boston or its subsidiaries or affiliates (collectively "CSFB") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CSFB. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CSFB. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CSFB.

The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CSFB may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CSFB will not treat recipients as its customers by virtue of their receiving the report. The investments or services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice or a representation that any investment or strategy is suitable or appropriate to your individual circumstances or otherwise constitutes a personal recommendation to you. CSFB does not offer advice on the tax consequences of investment and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change.

CSFB believes the information and opinions in the Disclosure Appendix of this report are accurate and complete. Information and opinions presented in the other sections of the report were obtained or derived from sources CSFB believes are reliable, but CSFB makes no representations as to their accuracy or completeness. Additional information is available upon request. CSFB accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that liability arises under specific statutes or regulations applicable to CSFB. This report is not to be relied upon in substitution for the exercise of independent judgment. CSFB may have issued, and may in the future issue, a trading call regarding this security. Trading calls are short term trading opportunities based on market events and catalysts, while stock ratings reflect investment recommendations based on expected total return over a 12-month period relative to the relevant coverage universe. Because trading calls and stock ratings reflect different assumptions and analytical methods, trading calls may differ directionally from the stock rating. In addition, CSFB may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Those reports reflect the different assumptions, views and analytical methods of the analysts who prepared them and CSFB is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. CSFB and its affiliate companies are involved in many businesses that relate to companies mentioned in this report. These businesses include specialized trading, risk arbitrage, market making, and other proprietary trading. CSFB may, to the extent permitted by law, act upon or use the information or opinions presented herein, or the research or analysis on which they are based, before the material is published.

Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgement at its original date of publication by CSFB and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk.

Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase.

Some investments discussed in this report have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment, in such circumstances you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed.

This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to CSFB's own website material, CSFB has not reviewed the linked site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CSFB's own website material) is provided solely for your convenience and information and the content of the linked site does not in any way form part of this document. Accessing such website or following such link through this report or CSFB's website shall be at your own risk.

This report is issued and distributed in Europe (except Switzerland) by Credit Suisse First Boston (Europe) Limited, One Cabot Square, London E14 4QJ, England, which is regulated in the United Kingdom by The Financial Services Authority ("FSA"). This report is being distributed in the United States by Credit Suisse First Boston LLC; in Switzerland by Credit Suisse First Boston; in Canada by Credit Suisse First Boston Canada Inc.; in Brazil by Banco de Investimentos Credit Suisse Boston S.A.; in Japan by Credit Suisse First Boston Securities (Japan) Limited; elsewhere in Asia/Pacific by whichever of the following is the appropriately authorised entity in the relevant jurisdiction: Credit Suisse First Boston (Hong Kong) Limited, Credit Suisse First Boston Australia Equities Limited, Credit Suisse First Boston (Thailand) Limited, CSFB Research (Malaysia) Sdn Bhd, Credit Suisse First Boston Singapore Branch and elsewhere in the world by the relevant authorised affiliate of the above. Research on Taiwanese securities produced by Credit Suisse First Boston, Taipei Branch has been prepared by a registered Senior Business Person.

In jurisdictions where CSFB is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-U.S. customers wishing to effect a transaction should contact a CSFB entity in their local jurisdiction unless governing law permits otherwise. U.S. customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse First Boston LLC in the U.S.

Please note that this report was originally prepared and issued by CSFB for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CSFB should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not regulated by the FSA or in respect of which the protections of the FSA for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

Disclosure Appendix

Important Global Disclosures

I, Dominique Barker, certify that (1) the views expressed in this report accurately reflect my personal views about all of the subject companies and securities and (2) no part of my compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

See the Companies Mentioned section for full company names.

3-Year Price, Target Price and Rating Change History Chart for TER.TO

Current: O=Outperform; N=Neutral; U=Underperform; R=Restricted; NR=Not Rated

Prior to 9-Sep-02: SB=Strong Buy; B=Buy; H=Hold; S=Sell; R=Restricted; NR=Not Rated

TER.TO Date	Closing Price (CAD)	Target Price (CAD)	Rating	Initiation/ Assumption
1/12/04	23.13	25	OUTPERFORM	X
11/5/04	25.8	26.5		
1/26/05	29.48		NEUTRAL	

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including CSFB's total revenues, a portion of which are generated by CSFB's investment banking activities.

Analysts' stock ratings are defined as follows***:

Outperform: The stock's total return is expected to exceed the industry average* by at least 10-15% (or more, depending on perceived risk) over the next 12 months.

Neutral: The stock's total return is expected to be in line with the industry average* (range of ±10%) over the next 12 months.

Underperform:** The stock's total return is expected to underperform the industry average* by 10-15% or more over the next 12 months.

**The industry average refers to the average total return of the analyst's industry coverage universe (except with respect to Asia/Pacific, Latin America and Emerging Markets, where stock ratings are relative to the relevant country index, and CSFB HOLT Small and Mid-Cap Advisor stocks, where stock ratings are relative to the regional CSFB HOLT Small and Mid-Cap Advisor investment universe.*

***In an effort to achieve a more balanced distribution of stock ratings, the Firm has requested that analysts maintain at least 15% of their rated coverage universe as Underperform. This guideline is subject to change depending on several factors, including general market conditions.*

****For Australian and New Zealand stocks a 7.5% threshold replaces the 10% level in all three rating definitions.*

Restricted: In certain circumstances, CSFB policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of CSFB's engagement in an investment banking transaction and in certain other circumstances.

Volatility Indicator [V]: A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward. All CSFB HOLT Small and Mid-Cap Advisor stocks are automatically rated volatile. All IPO stocks are automatically rated volatile within the first 12 months of trading.

Analysts' coverage universe weightings* are distinct from analysts' stock ratings and are based on the expected performance of an analyst's coverage universe versus the relevant broad market benchmark***:**

Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.

Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

******CSFB HOLT Small and Mid-Cap Advisor stocks do not have coverage universe weightings.*

***An analyst's coverage universe consists of all companies covered by the analyst within the relevant sector.*

****The broad market benchmark is based on the expected return of the local market index (e.g., the S&P 500 in the U.S.) over the next 12 months.*

CSFB's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Outperform/Buy*	37%	(56% banking clients)
Neutral/Hold*	44%	(56% banking clients)
Underperform/Sell*	17%	(43% banking clients)
Restricted	2%	

**For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

See the Companies Mentioned section for full company names.

Price Target: (12 months) for (TER.TO)

Method: Dividend yield versus the 10 year government of Canada forecast bond yield.

Risks: Rapid rise in the 10-year government of Canada bond yield.

See the Companies Mentioned section for full company names.

CSFB and/or its affiliates expect to receive or intend to seek investment banking related compensation from the subject company (TER.TO) within the next 3 months.

Important Australian and Canadian Disclosures

Restrictions on certain Canadian securities are indicated by the following abbreviations: NVS--Non-Voting shares; RVS--Restricted Voting Shares; SVS--Subordinate Voting Shares.

Individuals receiving this report from a Canadian investment dealer that is not affiliated with CSFB should be advised that this report may not contain regulatory disclosures the non-affiliated Canadian investment dealer would be required to make if this were its own report.

The analyst(s) involved in the preparation of this report have not visited the material operations of the subject company (TER.TO) within the past 12 months.

For Credit Suisse First Boston Canada Inc.'s policies and procedures regarding the dissemination of equity research, please visit http://www.csfb.com/legal_terms/canada_research_policy.shtml.

For disclosure information on other companies mentioned in this report, please visit the website at www.csfb.com/researchdisclosures or call +1 (877) 291-2683.

Disclaimers continue on next page.

Disclaimers

This report is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse First Boston or its subsidiaries or affiliates (collectively "CSFB") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CSFB. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CSFB. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CSFB.

The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CSFB may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CSFB will not treat recipients as its customers by virtue of their receiving the report. The investments or services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice or a representation that any investment or strategy is suitable or appropriate to your individual circumstances or otherwise constitutes a personal recommendation to you. CSFB does not offer advice on the tax consequences of investment and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change.

CSFB believes the information and opinions in the Disclosure Appendix of this report are accurate and complete. Information and opinions presented in the other sections of the report were obtained or derived from sources CSFB believes are reliable, but CSFB makes no representations as to their accuracy or completeness. Additional information is available upon request. CSFB accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that liability arises under specific statutes or regulations applicable to CSFB. This report is not to be relied upon in substitution for the exercise of independent judgment. CSFB may have issued, and may in the future issue, a trading call regarding this security. Trading calls are short term trading opportunities based on market events and catalysts, while stock ratings reflect investment recommendations based on expected total return over a 12-month period relative to the relevant coverage universe. Because trading calls and stock ratings reflect different assumptions and analytical methods, trading calls may differ directionally from the stock rating. In addition, CSFB may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Those reports reflect the different assumptions, views and analytical methods of the analysts who prepared them and CSFB is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. CSFB and its affiliate companies are involved in many businesses that relate to companies mentioned in this report. These businesses include specialized trading, risk arbitrage, market making, and other proprietary trading. CSFB may, to the extent permitted by law, act upon or use the information or opinions presented herein, or the research or analysis on which they are based, before the material is published.

Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgement at its original date of publication by CSFB and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk.

Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase.

Some investments discussed in this report have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment, in such circumstances you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed.

This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to CSFB's own website material, CSFB has not reviewed the linked site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CSFB's own website material) is provided solely for your convenience and information and the content of the linked site does not in any way form part of this document. Accessing such website or following such link through this report or CSFB's website shall be at your own risk.

This report is issued and distributed in Europe (except Switzerland) by Credit Suisse First Boston (Europe) Limited, One Cabot Square, London E14 4QJ, England, which is regulated in the United Kingdom by The Financial Services Authority ("FSA"). This report is being distributed in the United States by Credit Suisse First Boston LLC; in Switzerland by Credit Suisse First Boston; in Canada by Credit Suisse First Boston Canada Inc.; in Brazil by Banco de Investimentos Credit Suisse Boston S.A.; in Japan by Credit Suisse First Boston Securities (Japan) Limited; elsewhere in Asia/Pacific by whichever of the following is the appropriately authorised entity in the relevant jurisdiction: Credit Suisse First Boston (Hong Kong) Limited, Credit Suisse First Boston Australia Equities Limited, Credit Suisse First Boston (Thailand) Limited, CSFB Research (Malaysia) Sdn Bhd, Credit Suisse First Boston Singapore Branch and elsewhere in the world by the relevant authorised affiliate of the above. Research on Taiwanese securities produced by Credit Suisse First Boston, Taipei Branch has been prepared by a registered Senior Business Person.

In jurisdictions where CSFB is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-U.S. customers wishing to effect a transaction should contact a CSFB entity in their local jurisdiction unless governing law permits otherwise. U.S. customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse First Boston LLC in the U.S.

Please note that this report was originally prepared and issued by CSFB for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CSFB should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not regulated by the FSA or in respect of which the protections of the FSA for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

TER: Adjustment to Tax Timing, No Impact on Full Year EPS Estimates

- **We are revising our 2005E quarterly EPS estimates to reflect the change in the timing of quarterly accounting of Terasen Gas income tax. The change has *no impact on company fundamentals and annual earnings*, only on the timing of its recognition.**

  Q1/05E EPS – from $0.77 to $0.67

  Q2/05E EPS – from $0.10 to $0.18

  Q3/05E EPS – from -$0.04 to $0.10

  Q4/05E EPS – from $0.65 to $0.53

- **We are maintaining our annual 2005E and 2006E EPS estimates of $1.49 and $1.59.**

- **For comparability purposes, we are also restating our quarterly 2004A EPS to reflect the timing of tax expense recognition. Our annual 2004A EPS stays the same at $1.39.**

  Q1/04A EPS – from $0.76 to $0.63

  Q2/04A EPS – from $0.09 to $0.16

  Q3/04A EPS – from -$0.03 to $0.08

  Q4/04A EPS – from $0.58 to $0.52

- **We maintain our Neutral rating and $26.50 target price.**

Terasen is a diversified utility with oil pipelines, local gas distribution assets and water utilities.

Current: O=Outperform; N=Neutral; U=Underperform; R=Restricted; NR=Not Rated
Prior to 9-Sep-02: SB=Strong Buy; B=Buy; H=Hold; S=Sell; R=Restricted; NR=Not Rated

TER.TO Date	Closing Price (CAD)	Target Price (CAD)	Rating	Initiation/ Assumption
1/12/04	23.13	25	OUTPERFORM	X
11/5/04	25.8	26.5		
1/26/05	29.48		NEUTRAL	

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including CSFB's total revenues, a portion of which are generated by CSFB's investment banking activities.

Analysts' stock ratings are defined as follows***:

Outperform: The stock's total return is expected to exceed the industry average* by at least 10-15% (or more, depending on perceived risk) over the next 12 months.

Neutral: The stock's total return is expected to be in line with the industry average* (range of ±10%) over the next 12 months.

Underperform:** The stock's total return is expected to underperform the industry average* by 10-15% or more over the next 12 months.

**The industry average refers to the average total return of the analyst's industry coverage universe (except with respect to Asia/Pacific, Latin America and Emerging Markets, where stock ratings are relative to the relevant country index, and CSFB HOLT Small and Mid-Cap Advisor stocks, where stock ratings are relative to the regional CSFB HOLT Small and Mid-Cap Advisor investment universe.*

***In an effort to achieve a more balanced distribution of stock ratings, the Firm has requested that analysts maintain at least 15% of their rated coverage universe as Underperform. This guideline is subject to change depending on several factors, including general market conditions.*

****For Australian and New Zealand stocks a 7.5% threshold replaces the 10% level in all three rating definitions.*

Restricted: In certain circumstances, CSFB policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of CSFB's engagement in an investment banking transaction and in certain other circumstances.

Volatility Indicator [V]: A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward. All CSFB HOLT Small and Mid-Cap Advisor stocks are automatically rated volatile. All IPO stocks are automatically rated volatile within the first 12 months of trading.

Analysts' coverage universe weightings* are distinct from analysts' stock ratings and are based on the expected performance of an analyst's coverage universe versus the relevant broad market benchmark***:**

Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.

Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

******CSFB HOLT Small and Mid-Cap Advisor stocks do not have coverage universe weightings.*

***An analyst's coverage universe consists of all companies covered by the analyst within the relevant sector.*

****The broad market benchmark is based on the expected return of the local market index (e.g., the S&P 500 in the U.S.) over the next 12 months.*

CSFB's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Outperform/Buy*	37%	(57% banking clients)
Neutral/Hold*	44%	(56% banking clients)
Underperform/Sell*	16%	(43% banking clients)
Restricted	3%	

**For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

See the Companies Mentioned section for full company names.

Price Target: (12 months) for (TER.TO)

Method: Dividend yield versus the 10 year government of Canada forecast bond yield.

Risks: Rapid rise in the 10-year government of Canada bond yield.

See the Companies Mentioned section for full company names.

CSFB and/or its affiliates expect to receive or intend to seek investment banking related compensation from the subject company (TER.TO) within the next 3 months.

Important Australian and Canadian Disclosures

Restrictions on certain Canadian securities are indicated by the following abbreviations: NVS--Non-Voting shares; RVS--Restricted Voting Shares; SVS--Subordinate Voting Shares.

Individuals receiving this report from a Canadian investment dealer that is not affiliated with CSFB should be advised that this report may not contain regulatory disclosures the non-affiliated Canadian investment dealer would be required to make if this were its own report.

The analyst(s) involved in the preparation of this report have not visited the material operations of the subject company (TER.TO) within the past 12 months.

Disclaimers

This report is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse First Boston or its subsidiaries or affiliates (collectively "CSFB") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CSFB. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CSFB. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CSFB.

The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CSFB may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CSFB will not treat recipients as its customers by virtue of their receiving the report. The investments or services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice or a representation that any investment or strategy is suitable or appropriate to your individual circumstances or otherwise constitutes a personal recommendation to you. CSFB does not offer advice on the tax consequences of investment and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change.

CSFB believes the information and opinions in the Disclosure Appendix of this report are accurate and complete. Information and opinions presented in the other sections of the report were obtained or derived from sources CSFB believes are reliable, but CSFB makes no representations as to their accuracy or completeness. Additional information is available upon request. CSFB accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that liability arises under specific statutes or regulations applicable to CSFB. This report is not to be relied upon in substitution for the exercise of independent judgment. CSFB may have issued, and may in the future issue, a trading call regarding this security. Trading calls are short term trading opportunities based on market events and catalysts, while stock ratings reflect investment recommendations based on expected total return over a 12-month period relative to the relevant coverage universe. Because trading calls and stock ratings reflect different assumptions and analytical methods, trading calls may differ directionally from the stock rating. In addition, CSFB may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Those reports reflect the different assumptions, views and analytical methods of the analysts who prepared them and CSFB is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. CSFB and its affiliate companies are involved in many businesses that relate to companies mentioned in this report. These businesses include specialized trading, risk arbitrage, market making, and other proprietary trading. CSFB may, to the extent permitted by law, act upon or use the information or opinions presented herein, or the research or analysis on which they are based, before the material is published.

Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgement at its original date of publication by CSFB and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk.

Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase.

Some investments discussed in this report have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment, in such circumstances you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed.

This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to CSFB's own website material, CSFB has not reviewed the linked site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CSFB's own website material) is provided solely for your convenience and information and the content of the linked site does not in any way form part of this document. Accessing such website or following such link through this report or CSFB's website shall be at your own risk.

This report is issued and distributed in Europe (except Switzerland) by Credit Suisse First Boston (Europe) Limited, One Cabot Square, London E14 4QJ, England, which is regulated in the United Kingdom by The Financial Services Authority ("FSA"). This report is being distributed in the United States by Credit Suisse First Boston LLC; in Switzerland by Credit Suisse First Boston; in Canada by Credit Suisse First Boston Canada Inc.; in Brazil by Banco de Investimentos Credit Suisse Boston S.A.; in Japan by Credit Suisse First Boston Securities (Japan) Limited; elsewhere in Asia/Pacific by whichever of the following is the appropriately authorised entity in the relevant jurisdiction: Credit Suisse First Boston (Hong Kong) Limited, Credit Suisse First Boston Australia Equities Limited, Credit Suisse First Boston (Thailand) Limited, CSFB Research (Malaysia) Sdn Bhd, Credit Suisse First Boston Singapore Branch and elsewhere in the world by the relevant authorised affiliate of the above. Research on Taiwanese securities produced by Credit Suisse First Boston, Taipei Branch has been prepared by a registered Senior Business Person.

In jurisdictions where CSFB is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-U.S. customers wishing to effect a transaction should contact a CSFB entity in their local jurisdiction unless governing law permits otherwise. U.S. customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse First Boston LLC in the U.S.

Please note that this report was originally prepared and issued by CSFB for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CSFB should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not regulated by the FSA or in respect of which the protections of the FSA for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

Terasen Inc

TER.TO

Terasen EPS Update

- **We are revising our quarterly 2005E EPS estimates for Terasen, but maintaining our annual 2005E and 2006E EPS estimates of $1.49 and $1.59, respectively.**

- **We previously estimated that the lower throughput volumes from Trans Mountain resulting from Alberta oil sands production outages would affect all four quarters of 2005, rather than impacting only Q1/05. The company clarified in its quarterly release that shipments on the Trans Mountain mainline system have returned to apportionment in April.**

- **Following are the quarterly estimate changes:**

  Q1/05A EPS – from $0.67E to $0.60A

  Q2/05E EPS – from $0.18 to $0.21

  Q3/05E EPS – from $0.10 to $0.13

  Q4/05E EPS – from $0.53 to $0.55

- **We continue to like Terasen's fundamental story from a growth perspective but find the stock expensive at these levels. We maintain our Neutral rating and $26.50 target price, which implies 16.7x 2006 P/E and 9.7x 2006 P/CF.**

Terasen is a diversified utility with oil pipelines, local gas distribution assets and water utilities.

IMPORTANT DISCLOSURES AND ANALYST CERTIFICATIONS ARE IN THE DISCLOSURE APPENDIX. U.S. Disclosure: CSFB does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Companies Mentioned *(Price as of 13 May 05)*

Terasen Inc (TER.TO, C$27.33, NEUTRAL, TP C$26.50, MARKET WEIGHT)

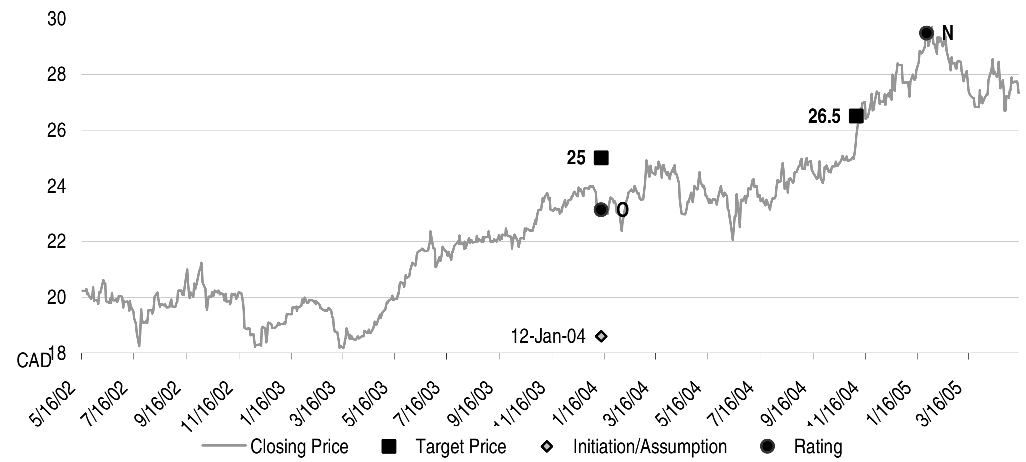
Disclosure Appendix

Important Global Disclosures

I, Dominique Barker, certify that (1) the views expressed in this report accurately reflect my personal views about all of the subject companies and securities and (2) no part of my compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

See the Companies Mentioned section for full company names.

3-Year Price, Target Price and Rating Change History Chart for TER.TO



Current: O=Outperform; N=Neutral; U=Underperform; R=Restricted; NR=Not Rated

Prior to 9-Sep-02: SB=Strong Buy; B=Buy; H=Hold; S=Sell; R=Restricted; NR=Not Rated

TER.TO Date	Closing Price (CAD)	Target Price (CAD)	Rating	Initiation/ Assumption
1/12/04	23.13	25	OUTPERFORM	X
11/5/04	25.8	26.5		
1/26/05	29.48		NEUTRAL	

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including CSFB's total revenues, a portion of which are generated by CSFB's investment banking activities.

Analysts' stock ratings are defined as follows***:

Outperform: The stock's total return is expected to exceed the industry average* by at least 10-15% (or more, depending on perceived risk) over the next 12 months.

Neutral: The stock's total return is expected to be in line with the industry average* (range of ±10%) over the next 12 months.

Underperform:** The stock's total return is expected to underperform the industry average* by 10-15% or more over the next 12 months.

**The industry average refers to the average total return of the analyst's industry coverage universe (except with respect to Asia/Pacific, Latin America and Emerging Markets, where stock ratings are relative to the relevant country index, and CSFB HOLT Small and Mid-Cap Advisor stocks, where stock ratings are relative to the regional CSFB HOLT Small and Mid-Cap Advisor investment universe.*

***In an effort to achieve a more balanced distribution of stock ratings, the Firm has requested that analysts maintain at least 15% of their rated coverage universe as Underperform. This guideline is subject to change depending on several factors, including general market conditions.*

****For Australian and New Zealand stocks a 7.5% threshold replaces the 10% level in all three rating definitions.*

Restricted: In certain circumstances, CSFB policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of CSFB's engagement in an investment banking transaction and in certain other circumstances.

Volatility Indicator [V]: A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward. All CSFB HOLT Small and Mid-Cap Advisor stocks are automatically rated volatile. All IPO stocks are automatically rated volatile within the first 12 months of trading.

Analysts' coverage universe weightings* are distinct from analysts' stock ratings and are based on the expected performance of an analyst's coverage universe versus the relevant broad market benchmark***:**

Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.

Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

*****_CSFB HOLT Small and Mid-Cap Advisor stocks do not have coverage universe weightings._

***An analyst's coverage universe consists of all companies covered by the analyst within the relevant sector.*

****The broad market benchmark is based on the expected return of the local market index (e.g., the S&P 500 in the U.S.) over the next 12 months.*

CSFB's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Outperform/Buy*	39%	(57% banking clients)
Neutral/Hold*	43%	(55% banking clients)
Underperform/Sell*	16%	(42% banking clients)
Restricted	3%	

**For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

See the Companies Mentioned section for full company names.

Price Target: (12 months) for (TER.TO)

Method: Dividend yield versus the 10 year government of Canada forecast bond yield.

Risks: Rapid rise in the 10-year government of Canada bond yield.

See the Companies Mentioned section for full company names.

CSFB and/or its affiliates expect to receive or intend to seek investment banking related compensation from the subject company (TER.TO) within the next 3 months.

Important Australian and Canadian Disclosures

Restrictions on certain Canadian securities are indicated by the following abbreviations: NVS--Non-Voting shares; RVS--Restricted Voting Shares; SVS--Subordinate Voting Shares.

Individuals receiving this report from a Canadian investment dealer that is not affiliated with CSFB should be advised that this report may not contain regulatory disclosures the non-affiliated Canadian investment dealer would be required to make if this were its own report.

The analyst(s) involved in the preparation of this report have not visited the material operations of the subject company (TER.TO) within the past 12 months.

For Credit Suisse First Boston Canada Inc.'s policies and procedures regarding the dissemination of equity research, please visit http://www.csfb.com/legal_terms/canada_research_policy.shtml.

Disclaimers continue on next page.

Disclaimers

This report is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse First Boston or its subsidiaries or affiliates (collectively "CSFB") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CSFB. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CSFB. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CSFB.

The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CSFB may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CSFB will not treat recipients as its customers by virtue of their receiving the report. The investments or services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice or a representation that any investment or strategy is suitable or appropriate to your individual circumstances or otherwise constitutes a personal recommendation to you. CSFB does not offer advice on the tax consequences of investment and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change.

CSFB believes the information and opinions in the Disclosure Appendix of this report are accurate and complete. Information and opinions presented in the other sections of the report were obtained or derived from sources CSFB believes are reliable, but CSFB makes no representations as to their accuracy or completeness. Additional information is available upon request. CSFB accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that liability arises under specific statutes or regulations applicable to CSFB. This report is not to be relied upon in substitution for the exercise of independent judgment. CSFB may have issued, and may in the future issue, a trading call regarding this security. Trading calls are short term trading opportunities based on market events and catalysts, while stock ratings reflect investment recommendations based on expected total return over a 12-month period relative to the relevant coverage universe. Because trading calls and stock ratings reflect different assumptions and analytical methods, trading calls may differ directionally from the stock rating. In addition, CSFB may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Those reports reflect the different assumptions, views and analytical methods of the analysts who prepared them and CSFB is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. CSFB and its affiliate companies are involved in many businesses that relate to companies mentioned in this report. These businesses include specialized trading, risk arbitrage, market making, and other proprietary trading.

Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgement at its original date of publication by CSFB and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk.

Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase.

Some investments discussed in this report have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment, in such circumstances you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed.

COMPANY UPDATE

Terasen Inc

TER.TO

Opportunities Abound

- **We have recently returned from a roadtrip with Terasen management. As a result, we have increased confidence that there are real opportunities for stable growth in the short- and long-term. Growth will be driven from oil sands infrastructure needs. Terasen has a pipeline of approximately $4 billion worth of proposed projects for the next five years.**

- **Among the growth projects, the most material are 1) Corridor expansion (1 million bpd, $7 to 900 million investment) and 2) TransMountain expansion (75 kbpd expansion for $570 million with confidence, and possibly an additional 550 kbpd expansion for $1.7 to 2.0 billion, depending on the route taken). There are additional growth projects, but these are the most material. Refer to page 2 for a complete list of projects.**

- **We are increasing the probability of the TMX expansion winning over Enbridge's Gateway proposal from 50% to 75% because 1) it is staged, so matches oil sands production growth more closely; 2) we believe the market for incremental crude demand is the U.S., not Asia; 3) the southern route already exists, so we believe there will be less aboriginal land claim issues than any northern route proposals; 4) there is an incremental addition of 550 kbpd versus Gateway's 400 kbpd; 5) with a looped system, there is the possibility of having two separate quality pipelines (one crude, one refined product), a valuable proposition for the shippers. We do not eliminate the chances of Gateway proceeding, as we cannot ignore China's love of mega-projects.**

- **How will the growth be financed? We estimate Terasen will have a debt/cap level of 69% at year-end. The target level is 67 to 70%. Therefore, if the Corridor expansion proceeds (likely), we estimate Terasen will raise $200 million in equity to maintain 70% debt/cap.**

- **Risks in the short-term: renegotiation of the incentive tolling agreement, expected before year-end.**

- **Valuation: our target of $26.50 implies 18x 05 EPS. We believe the stock will stay expensive, owing to its attractive risk/return and therefore advise long-term investors to buy on share price weakness.**

Terasen is a diversified utility with oil pipelines, local gas distribution assets and water utilities.

IMPORTANT DISCLOSURES AND ANALYST CERTIFICATIONS ARE IN THE DISCLOSURE APPENDIX. U.S. Disclosure: CSFB does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Growth Projects by Segment

We have summarized the list of projects in the following table, in order of our assessment of the probability of each proceeding.

Exhibit 1: Growth Project summary – total of approximately $4 billion in the pipeline

Segment	Project Description	Investment	Probability	Timing
Pipelines	Corridor expansion, 35 kbpd	$35 million	High	Fall 2005
Pipelines	Bison (42" pipeline), 1mm bpd	$700-900 million	High	In-service 2009
Pipelines	TransMountain expansion, 35 kbpd	$205 million	High	In-service 2006
Gas utility	LNG storage	$100 million	Medium/High	2005-6
Gas utility	Additional compression	$50 million	Medium/High	2005-7
Pipelines	TMX1, 40 kbpd	$365 million	Medium/High	In-service 2008

Pipelines	Express buildout	?	Low	Long-term
Water	M&A	?	Medium	Ongoing

Source: Company data, CSFB estimates

In addition to these short- and medium-term growth projects, Terasen is interested in growing its water utilities business in the long-term. Terasen is looking to Aqua America (WTR, US$29.36, not rated) and California Water (CWT, US$36.84, not rated) as models for this segment, both of which trade at very high multiples (in the 25-30 P/E range). Terasen currently has approximately $200 million of capital committed to water utilities, and operates over 90 systems in over 50 communities. While we are cautious of management's foray into this relatively new area, we think the water segment will provide long-term growth for the company once pipeline expansion opportunities decline (in 5-7 years).

M&A

Terasen indicated it is interested in acquiring financially accretive assets that are

1) In the same geographic area as the rest of Terasen's operations (Pacific NorthWest, which Terasen describes as British Columbia, Washington, Oregon, Alberta);
2) Regulated utilities, including natural gas distribution, electric distribution, electric transmission, and water distribution.

We expect continued small acquisitions (<$50 million) on the water utilities side.

How Will Terasen Finance the Growth?

We estimate that Terasen produces approximately $350 million of free cash flow, after dividend payment. The debt/cap for Terasen is currently 68%.

Exhibit 2: Terasen Free Cash – Approximately $350 million per year

	1999	2000	2001	2002	2003	2004	2005	2006	2007
EBIT	308	309	356	403	436	447	457	463	468
Depreciation	83	86	95	116	133	147	150	150	150

Total Free Cash Flow	176	321	136	331	286	371	386	359	363

Source: Company data, CSFB estimates

Assuming the Corridor and the TransMountain expansions proceed (including TMX1), Terasen will need approximately $1.4 billion. Assuming Terasen maintains a 70% debt/cap ratio, we estimate Terasen will need to raise approximately $2-300 million.

Why not use financial partners for Greenfield?

The reason Terasen would not bring in its financial partners, Ontario Teachers and OMERS, on a Greenfield project such as Corridor or TransMountain, is because it is financially advantageous to equity shareholders to invest in new projects at book value, assuming the value of the project translates to a multiple of book (Terasen currently trades at approximately 2.0x); we estimate a valuation bump of 1.3 – 1.4x book value for projects such as Corridor and TMX. Terasen would invite its financial partners to participate in M&A situations where the cost of capital of the group is reduced, due to the non-taxable status of the pension funds.

Income Trusting the Gas Utility?

There is currently a case before the British Columbia Utilities Commission (BCUC) that proposes to put Pacific Northern Gas (PNG-UN.TO, not rated) into an income trust. This is a regulated gas utility in northern BC that has had financial difficulty since its largest customer, Methanex, shut down its methanol plant at Kitimat for 12 months in 2000. PNG has been financially challenged ever since, and believes a recapitalization to an income trust structure would improve its financial flexibility and access to capital markets.

The BCUC initially refused the income trust idea for PNG, but PNG has redrawn a slightly different proposal (one where rates charged to customers are based on actual rather than deemed capital structure) that is currently being considered by the BCUC. A decision is expected this summer; if the BCUC accepts the new income trust structure, it opens the door for Terasen Gas and Terasen Gas Vancouver Island to be placed in an income trust structure. It is our belief that the tax savings that would result from such conversion would have to be shared by investors and customers to be acceptable to the BCUC.

Using 10x 05E EBITDA and 30% equity gives an equity value to the gas utilities of $1.25 billion.

Uncertainty in TransMountain Incentive Tolling Settlement

The five-year agreement with shippers on TransMountain expires December 31, 2005. At the time of the original negotiation, Terasen took volume risk and therefore the tolls were higher than they otherwise would have been under a take-or-pay agreement. The TransMountain System has done very well since the original agreement, and currently runs at full capacity. Therefore, the returns on the capital invested are quite high (estimated ROE in the mid to high teens).

We believe Terasen will negotiate a settlement with producers; Terasen would like to come to a final agreement prior to year-end, but can only commence negotiations in a meaningful way with the Canadian Association of Petroleum Producers (CAPP) after Enbridge completes its negotiations with the Association, which is expected imminently. Enbridge has been without a settlement since the end of 2004.

The likely outcome is that TransMountain tolls will be negotiated downward, but the earnings stream will be less risky as the entire pipeline moves to firm service. In addition, there will likely be an expansion on the System.

Other Regulatory

Terasen is going back to the regulator to re-examine the capital structure of Terasen Gas in British Columbia. Currently, Terasen Gas has an equity thickness of 33%, with allowed ROE of 9.0%. The ROE is calculated annually using forecasted 10-year Government of Canada bond yields. Last year, the forecasted bond yield was 5.65%; using a bond yield of 4.5% implies an allowed ROE of only 8.5%. Therefore, Terasen would like to offset the potential loss of earnings due to the declining bond yields with an increase in equity thickness. Terasen believes it is in a good position to do so, given recent regulatory decisions in Alberta and nationally that have bumped up the equity thickness. An increase in equity thickness to 35% would offset the impact of the decline in ROE.

Overall View

We like Terasen for its fundamental growth story, geographic focus, low risk (excellent relationship with BC regulator on gas utilities) and ability to access lower cost capital with financial partners Ontario Teachers and OMERS. The one important takeaway we had from spending time with management was the long-term view on the business; as pipeline growth opportunities dissipate, the company is preparing itself to replace that growth with the water utilities segment.

Companies Mentioned *(Price as of 13 Jun 05)*

Aqua America Inc (WTR, $29.35)
California Water Service (CWT, $36.79)
Enbridge Inc. (ENB.TO, C$33.61, NEUTRAL, TP C$29.50, MARKET WEIGHT)
Terasen Inc (TER.TO, C$28.11, NEUTRAL, TP C$26.50, MARKET WEIGHT)

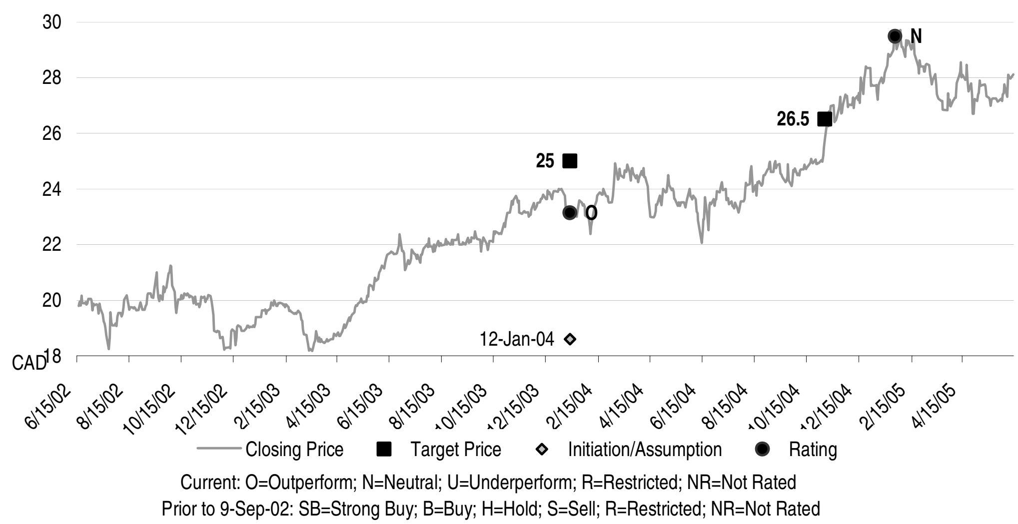
3-Year Price, Target Price and Rating Change History Chart for TER.TO



TER.TO Date	Closing Price (CAD)	Target Price (CAD)	Rating	Initiation/ Assumption
1/12/04	23.13	25	OUTPERFORM	X
11/5/04	25.8	26.5		
1/26/05	29.48		NEUTRAL	

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including CSFB's total revenues, a portion of which are generated by CSFB's investment banking activities.

Analysts' stock ratings are defined as follows***:

Outperform: The stock's total return is expected to exceed the industry average* by at least 10-15% (or more, depending on perceived risk) over the next 12 months.

Neutral: The stock's total return is expected to be in line with the industry average* (range of ±10%) over the next 12 months.

Underperform:** The stock's total return is expected to underperform the industry average* by 10-15% or more over the next 12 months.

**The industry average refers to the average total return of the analyst's industry coverage universe (except with respect to Asia/Pacific, Latin America and Emerging Markets, where stock ratings are relative to the relevant country index, and CSFB HOLT Small and Mid-Cap Advisor stocks, where stock ratings are relative to the regional CSFB HOLT Small and Mid-Cap Advisor investment universe.*

***In an effort to achieve a more balanced distribution of stock ratings, the Firm has requested that analysts maintain at least 15% of their rated coverage universe as Underperform. This guideline is subject to change depending on several factors, including general market conditions.*

****For Australian and New Zealand stocks a 7.5% threshold replaces the 10% level in all three rating definitions.*

Restricted: In certain circumstances, CSFB policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of CSFB's engagement in an investment banking transaction and in certain other circumstances.

Volatility Indicator [V]: A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward. All CSFB HOLT Small and Mid-Cap Advisor stocks are automatically rated volatile. All IPO stocks are automatically rated volatile within the first 12 months of trading.

Analysts' coverage universe weightings* are distinct from analysts' stock ratings and are based on the expected performance of an analyst's coverage universe versus the relevant broad market benchmark***:**

Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.

Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

*****_CSFB HOLT Small and Mid-Cap Advisor stocks do not have coverage universe weightings._

**An analyst's coverage universe consists of all companies covered by the analyst within the relevant sector.

***The broad market benchmark is based on the expected return of the local market index (e.g., the S&P 500 in the U.S.) over the next 12 months.

CSFB's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Outperform/Buy*	39%	(54% banking clients)
Neutral/Hold*	43%	(54% banking clients)
Underperform/Sell*	15%	(45% banking clients)
Restricted	3%	

*For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.

See the Companies Mentioned section for full company names.

Price Target: (12 months) for (TER.TO)

Method: Dividend yield versus the 10 year government of Canada forecast bond yield.

Risks: Rapid rise in the 10-year government of Canada bond yield.

See the Companies Mentioned section for full company names.

CSFB expects to receive or intends to seek investment banking related compensation from the subject company (TER.TO) within the next 3 months.

Important Regional Disclosures

This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, a trading call regarding this security. Trading calls are short term trading opportunities based on market events and catalysts, while stock ratings reflect investment recommendations based on expected total return over a 12-month period relative to the relevant coverage universe. Because trading calls and stock ratings reflect different assumptions and analytical methods, trading calls may differ directionally from the stock rating. In addition, CS may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Those reports reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. CS is involved in many businesses that relate to companies mentioned in this report. These businesses include specialized trading, risk arbitrage, market making, and other proprietary trading.
Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgement at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk.
Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase.
Some investments discussed in this report have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment, in such circumstances you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed.
This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CSG, CS has not reviewed the linked site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CSG's own website material) is provided solely for your convenience and information and the content of the linked site does not in any way form part of this document. Accessing such website or following such link through this report or CSG's website shall be at your own risk.
This report is issued and distributed in Europe (except Switzerland) by Credit Suisse First Boston (Europe) Limited, One Cabot Square, London E14 4QJ, England, which is regulated in the United Kingdom by The Financial Services Authority ("FSA"). This report is being distributed in the United States by Credit Suisse First Boston LLC; in Switzerland by Credit Suisse; in Canada by Credit Suisse First Boston Canada Inc.; in Brazil by Banco de Investimentos Credit Suisse First Boston S.A.; in Japan by Credit Suisse First Boston Securities (Japan) Limited; elsewhere in Asia/Pacific by whichever of the following is the appropriately authorised entity in the relevant jurisdiction: Credit Suisse First Boston (Hong Kong) Limited, Credit Suisse First Boston Australia Equities Limited, Credit Suisse First Boston (Thailand) Limited, CSFB Research (Malaysia) Sdn Bhd, Credit Suisse Singapore Branch and elsewhere in the world by the relevant authorised affiliate of the above. Research on Taiwanese securities produced by Credit Suisse Taipei Branch has been prepared by a registered Senior Business Person.
In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-U.S. customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. U.S. customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse First Boston LLC in the U.S.
Please note that this report was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not regulated by the FSA or in respect of which the protections of the FSA for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

Equity Research Canada

Terasen Inc

TER.TO

FORECAST INCREASE

Clean Q, Opportunities for Growth Abound

- **Terasen reported earnings of $0.24 (after adjusting for $1 million tax benefit to Express that relates to Q1 but was included in Q2, and mark-to-market pretax gain of $3.3 million). This compares to our estimate, and consensus, of $0.21.**

- **The main reason for the outperformance is lower operations and maintenance (O&M) expenses in gas distribution (down 4% year on year, and $2 million (or 4%) less than our expectation), as well as higher volumes and better results on the petroleum transportation side.**

- **We are raising our 2005 EPS estimates from $1.49 to $1.60 and our 2006 EPS estimates from $1.59 to $1.80.**

- **We see many growth opportunities for Terasen into the long-term. Please see our report dated June 14, 2005 entitled "Opportunities Abound" where we highlight current projects along with our assessment of its probability of proceeding.**

- **We are raising our target price from $26.50 to $30. Our new target implies a 06E P/E of 17x. The target implies a dividend yield of 3%, or 70% of a theoretical 10-year bond yield of 4.25%. We are maintaining our Neutral rating on the stock.**

Terasen is a diversified utility with oil pipelines, local gas distribution assets and water utilities.

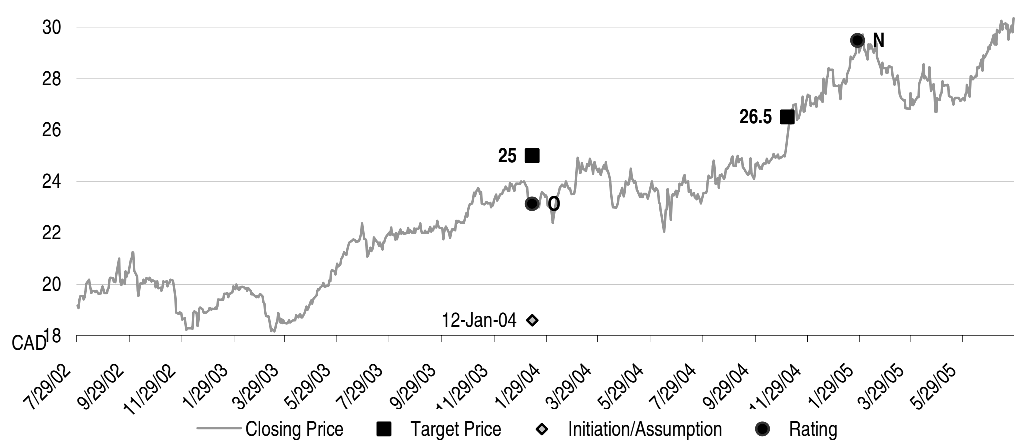
3-Year Price, Target Price and Rating Change History Chart for TER.TO



Current: O=Outperform; N=Neutral; U=Underperform; R=Restricted; NR=Not Rated
Prior to 9-Sep-02: SB=Strong Buy; B=Buy; H=Hold; S=Sell; R=Restricted; NR=Not Rated

TER.TO Date	Closing Price (CAD)	Target Price (CAD)	Rating	Initiation/ Assumption
1/12/04	23.13	25	OUTPERFORM	X
11/5/04	25.8	26.5		
1/26/05	29.48		NEUTRAL	

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including CSFB's total revenues, a portion of which are generated by CSFB's investment banking activities.

Analysts' stock ratings are defined as follows***:

Outperform: The stock's total return is expected to exceed the industry average* by at least 10-15% (or more, depending on perceived risk) over the next 12 months.

Neutral: The stock's total return is expected to be in line with the industry average* (range of ±10%) over the next 12 months.

Underperform:** The stock's total return is expected to underperform the industry average* by 10-15% or more over the next 12 months.

**The industry average refers to the average total return of the analyst's industry coverage universe (except with respect to Asia/Pacific, Latin America and Emerging Markets, where stock ratings are relative to the relevant country index, and CSFB HOLT Small and Mid-Cap Advisor stocks, where stock ratings are relative to the regional CSFB HOLT Small and Mid-Cap Advisor investment universe.*

***In an effort to achieve a more balanced distribution of stock ratings, the Firm has requested that analysts maintain at least 15% of their rated coverage universe as Underperform. This guideline is subject to change depending on several factors, including general market conditions.*

****For Australian and New Zealand stocks a 7.5% threshold replaces the 10% level in all three rating definitions.*

Restricted: In certain circumstances, CSFB policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of CSFB's engagement in an investment banking transaction and in certain other circumstances.

Volatility Indicator [V]: A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward. All CSFB HOLT Small and Mid-Cap Advisor stocks are automatically rated volatile. All IPO stocks are automatically rated volatile within the first 12 months of trading.

Analysts' coverage universe weightings* are distinct from analysts' stock ratings and are based on the expected performance of an analyst's coverage universe versus the relevant broad market benchmark***:**

Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.

Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

*****_CSFB HOLT Small and Mid-Cap Advisor stocks do not have coverage universe weightings._

***An analyst's coverage universe consists of all companies covered by the analyst within the relevant sector.*

****The broad market benchmark is based on the expected return of the local market index (e.g., the S&P 500 in the U.S.) over the next 12 months.*

CSFB's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Outperform/Buy*	39%	(54% banking clients)
Neutral/Hold*	43%	(54% banking clients)
Underperform/Sell*	15%	(46% banking clients)
Restricted	3%	

**For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

CSFB's policy is to update research reports as it deems appropriate, based on developments with the subject company, the sector or the market that may have a material impact on the research views or opinions stated herein.

CSFB's policy is only to publish investment research that is impartial, independent, clear, fair and not misleading. Disclaimers continue on next page.

Disclaimers

Credit Suisse First Boston is the trade name for the investment banking business of Credit Suisse, a Swiss bank, and references in this report to Credit Suisse First Boston or CSFB herein include all of the subsidiaries and affiliates of Credit Suisse operating under the Credit Suisse First Boston division of Credit Suisse Group ("CSG"). For more information on our structure, please follow the below link: http://www.creditsuisse.com/en/who_we_are/ourstructure.html.

This report is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse or its subsidiaries or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CSG or its affiliates.

The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients as its customers by virtue of their receiving the report. The investments or services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice or a representation that any investment or strategy is suitable or appropriate to your individual circumstances or otherwise constitutes a personal recommendation to you. CS does not offer advice on the tax consequences of investment and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change.

CS believes the information and opinions in the Disclosure Appendix of this report are accurate and complete. Information and opinions presented in the other sections of the report were obtained or derived from sources CS believes are reliable, but CS makes no representations as to their accuracy or completeness. Additional information is available upon request. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, a trading call regarding this security. Trading calls are short term trading opportunities based on market events and catalysts, while stock ratings reflect investment recommendations based on expected total return over a 12-month period relative to the relevant coverage universe. Because trading calls and stock ratings reflect different assumptions and analytical methods, trading calls may differ directionally from the stock rating. In addition, CS may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Those reports reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. CS is involved in many businesses that relate to companies mentioned in this report. These businesses include specialized trading, risk arbitrage, market making, and other proprietary trading.

Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgement at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk.

Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase.

Some investments discussed in this report have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment, in such circumstances you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed.

This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CSG, CS has not reviewed the linked site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CSG's own website material) is provided solely for your convenience and information and the content of the linked site does not in any way form part of this document. Accessing such website or following such link through this report or CSG's website shall be at your own risk.

This report is issued and distributed in Europe (except Switzerland) by Credit Suisse First Boston (Europe) Limited, One Cabot Square, London E14 4QJ, England, which is regulated in the United Kingdom by The Financial Services Authority ("FSA"). This report is being distributed in the United States by Credit Suisse First Boston LLC; in Switzerland by Credit Suisse; in Canada by Credit Suisse First Boston Canada Inc.; in Brazil by Banco de Investimentos Credit Suisse First Boston S.A.; in Japan by Credit Suisse First Boston Securities (Japan) Limited; elsewhere in Asia/Pacific by whichever of the following is the appropriately authorised entity in the relevant jurisdiction: Credit Suisse First Boston (Hong Kong) Limited, Credit Suisse First Boston Australia Equities Limited, Credit Suisse First Boston (Thailand) Limited, CSFB Research (Malaysia) Sdn Bhd, Credit Suisse Singapore Branch and elsewhere in the world by the relevant authorised affiliate of the above. Research on Taiwanese securities produced by Credit Suisse Taipei Branch has been prepared by a registered Senior Business Person.

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-U.S. customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. U.S. customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse First Boston LLC in the U.S.

Please note that this report was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not regulated by the FSA or in respect of which the protections of the FSA for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

M&A PROPOSAL

CREDIT SUISSE | FIRST BOSTON

Equity Research Canada

Terasen Inc

TER.TO

Good Marriage

- **Kinder Morgan is acquiring Terasen for approximately $35.75 (see details inside on three options for shareholders), representing a premium of approximately 20% over the 20 day average closing price, and a premium of approximately 14% to the prior day's close. We are increasing our target to $35.75 (from $30.00), reflecting the implied takeover value for Terasen shares.**

- **Financial metrics: this represents a multiple of 11.8x last twelve months (LTM) EBITDA, and 25x LTM P/E. This is a full price.**

- **Rival bidders? While the break fee is only C$75 million (= 2% of equity value or 1.1% of entity value), we do not believe a rival bid is in the offing. We think Enbridge and Terasen would be an excellent fit (both heavily exposed to oil sands region of Alberta, both have gas distribution), but we do not believe shippers would allow the deal to happen, as it would limit competition and choice for them – we measure the probability of a takeover by Enbridge as remote. The other possibility is financial buyers. Ontario Teachers and OMERS, two of the largest Canadian pension funds, are partners with Terasen on the Express pipeline. We would measure the probability of a bid by financial buyers as low based on full valuation and limited synergies.**

- **Good marriage: we think Kinder Morgan is looking to deploy capital (current debt/cap low 40% range, BBB rating); Terasen has a need for capital (debt/cap 68%, BBB rating) as we estimate Terasen needs approximately C$4 billion in capital over the next five years.**

- **Impact on rest of sector: this confirms our view that the market for incremental oil sands production is the U.S., not China. We do not believe Enbridge's Gateway project (400 kbpd) proceeds and believe approximately $2 in Enbridge's share price is attributed to Gateway.**

- **Timing: Terasen expects the deal to close by the end of 2005. Please see our summary table of hurdles to pass and risks.**

Terasen is a diversified utility with oil pipelines, local gas distribution assets and water utilities.

IMPORTANT DISCLOSURES AND ANALYST CERTIFICATIONS ARE IN THE DISCLOSURE APPENDIX. U.S. Disclosure: CSFB does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Customers of CSFB in the United States can receive independent, third party research on the company or companies covered in this report, at no cost to them, where such research is available. Customers can access this independent research at www.csfb.com/ir or call 1 877 291 2683 or email equity.research@csfb.com to request a copy of this research.

Investment Summary

Three Options for Shareholders

Kinder Morgan, Inc. (KMI, $88.86) is offering three choices for Terasen shareholders: 1) C$35.75 in cash; 2) 0.3331 shares of KMI common stock; 3) C$23.25 cash plus 0.1165 shares of KMI stock. See summary below, based on August 1 closing prices (KMI at US$88.86, CAD/USD at 1.2124), which value Terasen shares at approximately $35.75.

Exhibit 1: Based on August 1 closing prices

	Option 1 (cash)	Option 2 (shares)	Option 3 (cash and shares)
Exchange ratio	NA	0.3331	0.1165
Cash portion	$35.75	NA	$23.25
Stock portion	NA	$35.77	$12.66
Implied TER price	**$35.75**	**$35.77**	**$35.91**
Implied LTM P/E	24.9x	24.9x	25.0x
Implies LTM EV/EBITDA	11.8x	11.8x	11.8x

Source: Company data, CSFB estimates

Growth Opportunities Abound

Terasen has a pipeline of approximately C$4 billion worth of proposed projects for the next five years.

Exhibit 2: Summary of what is in the Pipeline

Segment	Project	Investment (millions)	Probability	Timing
Pipelines	Corridor expansion, 35 kbpd	$35	High	Fall 2005
Pipelines	Bison (42" pipeline), 1mm bpd	$700-$900	High	In-service 2009
Pipelines	TransMountain expansion, 35 kbpd	$210	High	In-service 2007
Gas utility	Additional compression	$50	Medium/High	2005-7
Pipelines	TMX1, 40 kbpd	$365	Medium/High	In-service 2008
Gas utility	Whistler gas distribution	$35	Medium	For 2010 Olympics
Gas utility	Whistler ground source heat pump	$10-$30	Medium	For 2010 Olympics
Pipelines	TMX2, 75 kbpd	$800-900	Medium	In-service 2009
Pipelines	TMX3, 475 kbpd	$900-$1100	Low	In-service 2009
Gas utility	Inland Pacific Connector	$300-500	Low	Long-term
Gas utility	LNG storage	$100	Low	2007-8
Pipelines	Express buildout	?	Low	Long-term
Water	M&A	?	Medium	On-going

Source: Company data, CSFB estimates

Therefore, Kinder Morgan will have substantial growth opportunities via Terasen for the short, medium and long-term. Terasen would have been unable to complete these projects without tapping the equity markets.

Timing of Approvals with Risk Assessment

Terasen expects the deal to close by December 2005. The only risks we see, and we would consider them moderate, is:

1) The US Federal Trade Commission (FTC), which is difficult for us to predict; and

2) The British Columbia regulator, where Terasen is the monopoly local gas distribution company. There is a modest risk this becomes a political issue in British Columbia.

Exhibit 3: Various Hurdles and Probability of Issue or Delay

	Jurisdiction	Probability of issue or delay	Comment
Canada Competition Bureau	Canada	low	Regulated, will likely be deferred to regulators
US competition (Hart-Scott-Rodino)	US	medium	Terasen only has two pipelines in the US; but FTC is unpredictable
Investment Canada	Canada	low	No cultural issues; Duke takeover of Westcoast Energy is a good precedent
British Columbia Utilities Commission	British Columbia	medium	Duke's purchase of Westcoast provides precedent (Centra and PNG); BCUC will be interested in Kinder Morgan's ability to serve customer base well. Could become a political issue.
Local water regulators	Various communities with water utilities managed by TER	low	May be issues in jurisdictions where KMI has local gas distribution, but not aware of any
National Energy Board	Canada	low	Duke takeover of Westcoast is precedent
FERC	US	low	Not expected to have any issues

Source: Company data, CSFB estimates

The boards of both Terasen and Kinder Morgan have unanimously approved the transaction. 75% of shareholders must vote in favour of the deal at a special meeting to be held in October 2005.

Map of Operations

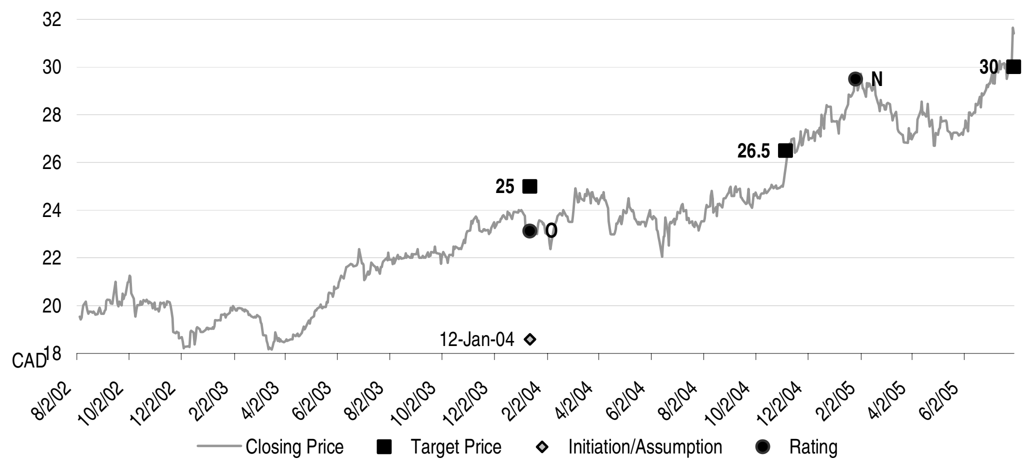
Disclosure Appendix

Important Global Disclosures

I, Dominique Barker, certify that (1) the views expressed in this report accurately reflect my personal views about all of the subject companies and securities and (2) no part of my compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

See the Companies Mentioned section for full company names.

3-Year Price, Target Price and Rating Change History Chart for TER.TO



Current: O=Outperform; N=Neutral; U=Underperform; R=Restricted; NR=Not Rated
Prior to 9-Sep-02: SB=Strong Buy; B=Buy; H=Hold; S=Sell; R=Restricted; NR=Not Rated

TER.TO Date	Closing Price (CAD)	Target Price (CAD)	Rating	Initiation/ Assumption
1/12/04	23.13	25	OUTPERFORM	X
11/5/04	25.8	26.5		
1/26/05	29.48		NEUTRAL	
7/29/05	31.4	30		

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including CSFB's total revenues, a portion of which are generated by CSFB's investment banking activities.

Analysts' stock ratings are defined as follows***:

Outperform: The stock's total return is expected to exceed the industry average* by at least 10-15% (or more, depending on perceived risk) over the next 12 months.

Neutral: The stock's total return is expected to be in line with the industry average* (range of ±10%) over the next 12 months.

Underperform:** The stock's total return is expected to underperform the industry average* by 10-15% or more over the next 12 months.

**The industry average refers to the average total return of the analyst's industry coverage universe (except with respect to Asia/Pacific, Latin America and Emerging Markets, where stock ratings are relative to the relevant country index, and CSFB HOLT Small and Mid-Cap Advisor stocks, where stock ratings are relative to the regional CSFB HOLT Small and Mid-Cap Advisor investment universe.*

***In an effort to achieve a more balanced distribution of stock ratings, the Firm has requested that analysts maintain at least 15% of their rated coverage universe as Underperform. This guideline is subject to change depending on several factors, including general market conditions.*

****For Australian and New Zealand stocks a 7.5% threshold replaces the 10% level in all three rating definitions.*

Restricted: In certain circumstances, CSFB policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of CSFB's engagement in an investment banking transaction and in certain other circumstances.

Volatility Indicator [V]: A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward. All CSFB HOLT Small and Mid-Cap Advisor stocks are automatically rated volatile. All IPO stocks are automatically rated volatile within the first 12 months of trading.

Analysts' coverage universe weightings* are distinct from analysts' stock ratings and are based on the expected performance of an analyst's coverage universe versus the relevant broad market benchmark***:**

Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.

Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

CSFB HOLT Small and Mid-Cap Advisor stocks do not have coverage universe weightings.

***An analyst's coverage universe consists of all companies covered by the analyst within the relevant sector.*

****The broad market benchmark is based on the expected return of the local market index (e.g., the S&P 500 in the U.S.) over the next 12 months.*

CSFB's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Outperform/Buy*	39%	(54% banking clients)
Neutral/Hold*	43%	(54% banking clients)
Underperform/Sell*	15%	(46% banking clients)
Restricted	3%	

**For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

CSFB's policy is to update research reports as it deems appropriate, based on developments with the subject company, the sector or the market that may have a material impact on the research views or opinions stated herein.

CSFB's policy is only to publish investment research that is impartial, independent, clear, fair and not misleading. For more detail please refer to CSFB's Policies for Managing Conflicts of Interest in connection with Investment Research: http://www.csfb.com/research-and-analytics/disclaimer/managing_conflicts_disclaimer.html

CSFB does not provide any tax advice. Any statement herein regarding any US federal tax is not intended or written to be used, and cannot be used, by any taxpayer for the purposes of avoiding any penalties.

See the Companies Mentioned section for full company names.

Price Target: (12 months) for (TER.TO)

Method: Dividend yield versus the 10 year government of Canada forecast bond yield.

Risks: Rapid rise in the 10-year government of Canada bond yield.

See the Companies Mentioned section for full company names.

CSFB expects to receive or intends to seek investment banking related compensation from the subject company (TER.TO) within the next 3 months.

Important Regional Disclosures

The analyst(s) involved in the preparation of this report have not visited the material operations of the subject company (TER.TO) within the past 12 months.

Restrictions on certain Canadian securities are indicated by the following abbreviations: NVS--Non-Voting shares; RVS--Restricted Voting Shares; SVS--Subordinate Voting Shares.

Individuals receiving this report from a Canadian investment dealer that is not affiliated with CSFB should be advised that this report may not contain regulatory disclosures the non-affiliated Canadian investment dealer would be required to make if this were its own report.

For Credit Suisse First Boston Canada Inc.'s policies and procedures regarding the dissemination of equity research, please visit http://www.csfb.com/legal_terms/canada_research_policy.shtml.

As of the date of this report, CSFB acts as a market maker or liquidity provider in the equities securities that are the subject of this report.

Stock Data

52-Week Range:	C$31.20-C$23.10
Symbol / Exchange:	YTER / Toronto Stock Exchange
Institutional Ownership-Vickers:	NA

Highlights:

- ***TER reported clean seasonal operating earnings of C$25.6mm or C$0.24/share in 2Q05 compared to C$104.7mm or C$0.17/share in 2Q04.*** Including mark-to-market hedging gains of C$3.9mm (AT) related to natural gas derivatives at Clean Energy, earnings would be C$29.5mm or C$0.28/share.
- **Petroleum Transportation** earned C$20.9mm, up from C$16.2mm in 2Q04. Higher throughput on the Trans-Mountain mainline and Express System were the main reasons for the increase in earnings. TransMountain throughput on the Canadian mainline increased 8.3%.
- **Natural Gas Distribution** posted earnings of C$7.7mm compared to C$5.1mm in 2Q04. The segment was impacted by the lower allowable rate of return, which was partially offset by operating efficiencies at Terasen Gas.
- **Water and Utility Services earned** C$3.8mm compared to C$2.6mm in 2Q04. Growth in the base business and the contribution from TER's 50% interest in Fairbanks Sewer and Water Inc were the main reasons for the improvement in earnings year over year.
- **Other Activities** for 2Q05 posted a loss of C$2.9mm compared to a loss of C$6.0mm in the year ago period. Adjusting for a C$3.9mm AT hedging gain at Clean Energy (TER holds a 45.0% interest) the loss was C$6.8mm.
- ***No change to our 2005 EPS estimates of C$1.48 or our 2006 EPS estimate of C$1.57.***
- ***No change to our Neutral (A-2-7) opinion.***

Merrill Lynch does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report.

Investors should consider this report as only a single factor in making their investment decision.

*iQmethod*SM

iQmethod is the set of Merrill Lynch standard measures that serve to maintain global consistency under three broad headings: Business Performance, Quality of Earnings, and Valuation.

The key features of ***iQmethod*** are:

- A consistently structured, detailed, and transparent methodology.
- Guidelines to maximize the effectiveness of the comparative valuation process, and to identify some common pitfalls.

*iQdatabase*SM

The ***iQdatabase*** is our real-time global research database that is sourced directly from our equity analysts' earnings models and includes forecasted as well as historical data for income statements, balance sheets, and cash flow statements for companies covered by Merrill Lynch.

iQprofile, *iQmethod*, *iQdatabase* are service marks of Merrill Lynch & Co., Inc.

*iQmethod*SM Measures Definitions

Business Performance	
Return On Capital Employed =	[NOPAT = (EBIT + Interest Income) * (1 - Tax Rate) + Goodwill Amortization] / [Avg (Total Assets – Current Liabilities + ST Debt + Accumulated Goodwill Amortization)]
Return On Equity =	[Net Income] / [Avg Shareholders' Equity]
Operating Margin =	[Operating Profit] / [Sales]
Earnings Growth =	[Expected 5-Year CAGR From Latest Actual] or the analysts' estimate of the sustainable growth rate
Free Cash Flow =	[Cash Flow From Operations – Total Capex]
Quality of Earnings	
Cash Realization Ratio =	[Cash Flow From Operations] / [Net Income]
Asset Replacement Ratio =	[Capex] / [Depreciation]
Tax Rate =	[Tax Charge] / [Pre-Tax Income]
Net Debt-To-Equity Ratio =	[Net Debt = Total Debt, Less Cash & Equiv] / [Total Equity]
Interest Cover =	[EBIT] / [Interest Expense]
Valuation	
Price / Book Value =	[Current Sh Price] / [Shareholders' Equity / Current Basic Sh]
Dividend Yield =	[Annualized Declared Cash Div] / [Current Sh Price]

2Q05 Results

TER reported clean seasonal operating earnings of C$25.6mm or C$0.24/share in 2Q05 compared to C$104.7mm or C$0.17/share in 2Q04. Including mark-to-market hedging gains of C$3.9mm (AT) related to natural gas derivatives at Clean Energy, earnings would be C$29.5mm or C$0.28/share.

Operating income in Petroleum transportation rose from the year ago period as volumes on the TransMountain pipeline returned to full capacity. In addition, the capacity expansion at the Express system also impacted results positively. Natural gas distribution results were also higher compared to the year ago period as operating efficiencies and customer growth at Terasen Gas offset a lower allowed rate of return on equity in 2005. Operating income at Water and Utility Services increased by C$1.2mm from continued growth in the base waterworks and the contribution from Fairbanks Sewer & Water (50% interest).

TER's Board of Directors declared a regular common dividend per share of C$0.225 per quarter (annual dividend of C$0.90/share).

Management indicated on its conference call that the company remains comfortable with an earnings growth rate of 6% in 2005.

Segment Breakdown

Petroleum Transportation earned C$20.9mm, up from C$16.2mm in 2Q04. Higher throughput on the Trans-Mountain mainline and Express System were the main reasons for the increase in earnings. TransMountain throughput on the Canadian mainline increased 8.3%.

The Express System contributed C$7.6mm in 2Q05 compared to C$3.2mm in 2Q04.

Natural Gas Distribution posted earnings of C$7.7mm compared to C$5.1mm in 2Q04. The segment was impacted by the lower allowable rate of return, which was partially offset by operating efficiencies at Terasen Gas.

Water and Utility Services earned C$3.8mm compared to C$2.6mm in 2Q04. Growth in the base business and the contribution from TER's 50% interest in Fairbanks Sewer and Water Inc (FSW – no relation to the analyst) were the main reasons for the improvement in earnings year over year.

Other Activities for 2Q05 posted a loss of C$2.9mm compared to a loss of C$6.0mm in the year ago period. Adjusting for a C$3.9mm AT hedging gain at Clean Energy (TER holds a 45.0% interest) the loss was C$6.8mm.

Key Developments

■ Vancouver Island Gas Supply

On February 16, 2005, the BCUC approved the C$100mm LNG storage facility at Vancouver Island. The decision was subject to several conditions including the execution of a long-term Transportation Service Agreement (TSA) with BC Hydro backed by the capacity demand requirements of the Duke Point Power project. On June 17th, BC Hydro decided to abandon the Duke Point Power project on Vancouver Island. As a result, TER believes the TGVI's proposed storage facility has been delayed. TER plans to re-file the project with the BCUC later this year as it believes there is strong customer demand growth that will support the expansion of the natural gas distribution system, including the LNG storage facility.

■ Corridor Expansion

TER is working with Shell Canada and its AOSP partners. TER expects to begin engineering, environmental and consultation activities on the project soon. TER plans to file an application for the Corridor Pipeline Expansion Project with the AEUB and Alberta Environment in the fall of 2005. Pending regulatory approval, TER hopes to begin construction in late 2006.

■ TMX

TER continues to progress with work on the TMX expansion. The company filed an application in July with the National Energy Board (NEB) for the pump station expansion. This expansion would increase capacity to 260,000 b/d from 225,000 b/d at a cost of C$210mm. TER expects to hold an open season later this summer for the Anchor Loop Project (a 30-inch pipeline loop between Hinton, Alberta and Valemount, BC at a cost of C$365mm).

Investment Summary

No change to our 2005 EPS estimates of C$1.48 or our 2006 EPS estimate of C$1.57.

No change to our Neutral opinion. Nonetheless, we very much like the strategy, assets, and management of the company. While we like TER's current dividend yield of 3%, low risk business model, strategy, and disciplined corporate culture, we regard the shares as being close to fairly valued. TER has generated a strong, steady long-term track record of EPS and dividend growth.

Terasen Inc.

Kinder Morgan Agrees to Buy TER; Change to "No Opinion"

NO RATING

Reason for Report: Change to No Opinion

Company

YTER; C$31.40; A-2-7 to 6

EPS (Dec): 2004A C$1.39; 2005E C$1.48; 2006E C$1.57
P/E (Dec): 2004A 22.6x; 2005E 21.2x; 2006E 20.0x

GAAP EPS (Dec): 2004A C$1.42; 2005E C$1.54; 2006E C$1.57
GAAP P/E (Dec): 2004A 22.1x; 2005E 20.4x; 2006E 20.0x

Event

Kinder Morgan (KMI) announced that it will acquire Terasen for a total purchase price, including the assumption of debt, of approximately US$5.6 billion (C$6.9 billion). The transaction has been approved by the Board of Directors of Terasen and Kinder Morgan as well as a special committee of independent directors created by the Terasen board to oversee the process.

The transaction requires the approval of 75% of Terasen shareholders who will vote at a special meeting to be held on or before October 31, 2005. For each TER share, Terasen shareholders will be able to elect from three options: 1) C$35.75 in cash, 2) 0.3331 share of KMI common stock, or 3) C$23.25 in cash plus 0.1165 shares of KMI common stock. There will be a conference call to discuss the transaction by Kinder Morgan at 8:30 am ET and Terasen at 10:00 AM ET.

Analysis

The prorated value of the offer is C$35.91 per TER share based on KMI's share price and C$/US$ exchange rates as of July 29th, representing a premium of 14% over Friday's closing price of TER's shares. The offer valuation equates to 24 times our prior 2005 EPS estimates and 23x our old 2006 EPS.

Recommendation

Based on today's announcement, we believe that the stock is no longer trading on equity fundamentals. Therefore, we are changing our investment opinion on the stock to a 6 (No Rating).

Investors should no longer rely on Merrill Lynch's prior estimates or ratings.

Merrill Lynch does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report.

Investors should consider this report as only a single factor in making their investment decision.

(NBF Economics & Strategy Group)

Company Profile:
TER is a holding company and its largest investment is Terasen Gas (TG), British Columbia's largest diversified natural gas distributor. It also owns Terasen Gas-Vancouver Island (TGVI). TER also controls Terasen Pipelines-Trans Mountain (TMP), Canada's second-largest petroleum pipeline. TER entered gas transmission in British Columbia in November 2000, and on May 1, 2003 began commercial shipping on the Corridor Pipeline (CP) for Shell Canada.

Winfried Fruehauf, PHD - (416) 869-7932

Associate: Ramin Burney - (416) 869-7933
ramin.burney@nbfinancial.com

HIGHLIGHTS

- **Q4 2004 reported earnings:**
  $53.9 million or $0.51 per share vs. $50.9 million or $0.49 per share year-over-year (y/y). For 2004, earnings increased to $149.8 million or $1.43 per share vs. $136.1 million or $1.31 per share y/y. **2004 EPS were $0.01 higher than our estimate.**

- **Earnings from Natural Gas Distribution declined y/y…**
  …as a result of lower allowed RROE for both Terasen Gas (TG) and Terasen Gas-Vancouver Island (TGVI), which more than offset operating efficiencies achieved from the integration of their operations.

- **Petroleum Transportation, and Water and Utility Services businesses contributed y/y earnings improvements of 26% and 61%, respectively.**
  High levels of throughput continued at Trans Mountain Pipe Line (TMP) and at the Express System (ES), while Corridor Pipeline (CP) contributed a full year of solid earnings.

- **TER's Board of Directors approved a 7.1% increase in the quarterly common share dividend to $0.225 from $0.21 per share.**

- **We have raised our target price slightly to $24.50 from $24.15 but…**
  …still believe that TER is over-priced relative to its peers and its own dividend and earnings metrics. Hence, our Underperform rating is sustained.

Stock Performance

NATIONAL BANK FINANCIAL

Assessment

TER's diversified investments have been able to supplement earnings from its relatively mature gas distribution business. The recent expansion of Trans Mountain Pipe Line's (TMP) mainline capacity and the expected completion of the Express System (ES) expansion by April 2005, as well as potential improvements in its water and utility services business will provide some earnings growth in 2005. But earnings growth beyond 2005, will hinge on the success of TER's planned petroleum-pipeline projects that will most surely encounter stiff competition from the likes of Enbridge Inc. (TSX; NYSE-ENB) and possibly TransCanada Corp. (TSX; NYSE-TRP).

We continue to view TER's common share prices as quite over-priced relative to share prices of Canadian pipelines and utilities. **Our Underperform rating is sustained.**

Fourth-Quarter 2004 Highlights

Q4 2004 reported earnings: $53.9 million or $0.51 per share vs. $50.9 million or $0.49 per share y/y. Earnings from Petroleum Transportation, and from Water and Utility Services improved y/y, while Natural Gas Distribution posted lower earnings y/y.

Segmented Reported Earnings ($mln)	Q4 2004	Q4 2003
Natural Gas Distribution	$42.6	$44.8
Petroleum Transportation	$19.9	$17.9
Water and Utility Services	$0.7	$0.4
Other Activities	$(9.3)	$(8.8)
Earnings applicable to common shares	**$53.9**	**$50.9**

Source: Terasen Inc.

Natural Gas Distribution

- **Q4 2004 natural gas distribution earnings: Earnings of $42.6 million vs. $44.8 million y/y.** In 2004, earnings decreased to $95.9 million from $98.8 million in 2003. Earnings were negatively impacted by the lower allowed RROE for 2004 for Terasen Gas (TG) (9.15% vs. 9.42% in 2003) and Terasen Gas-Vancouver Island (TGVI) (9.65% vs. 9.92% in 2003), and the introduction of the 50/50 over-earnings incentive sharing mechanism which arose from the PBR settlement that came into effect on Jan. 1, 2004. This more than offset $4.1 million of operating efficiencies achieved from the integration of TG and TGVI operations. For 2005, the allowed RROE for TG is 9.03%, and TGVI is 9.53%.
- Starting in Q4 2004, Terasen Gas' income tax expense was determined by applying the effective annual tax rate to the pre-tax income in the quarter as opposed to the previous method of allocating annual tax expense based on budgeted sales revenue for the four quarters. Earnings for every quarter of 2004 were restated but the change had no impact on the total 2004 fiscal year results.
- On Feb. 16, 2005, the British Columbia Utilities Commission (BCUC) approved TGVI's proposed $100 million LNG storage facility (1 bcf of natural gas-equivalent capacity) near Nanaimo, B.C. The approval is subject to various conditions including the execution of a long-term Transportation Service Agreement (TSA) with B.C. Hydro which yesterday received BCUC approval to enter into an energy purchase contract with developers of a 262-MW electricity plant in the same area. However, construction of the LNG facility or the electricity plant is not assured.

Petroleum Transportation

- **Q4 2004 petroleum transportation earnings: $19.9 million vs. $17.9 million y/y.** For 2004, earnings jumped to $70.9 million from $56.2 million in 2003. The y/y improvement resulted due to high levels of throughput at Trans Mountain Pipe Line (TMP) and the Express System (ES), and a full year contribution from the Corridor Pipeline (CP).

- **TMP's Q4 2004 earnings increased to $11.2 million from $10 million y/y.** For 2004, earnings were $39.4 million vs. $35.8 million. The y/y improvement was due to throughput increases of 9% on the Canadian mainline (236,100 barrels per day [b/d] vs. 216,100) and 68% on the U.S. mainline (91,700 b/d vs. 54,600), as well as lower operating and maintenance costs. A 27,000 b/d expansion of TMP ($19 million cost) was completed in early October 2004.
- **The Express System (ES) contributed in Q4 2004 $4.9 million vs. $3.9 million y/y.** For 2004, earnings increased to $15.9 million from $9.7 million in 2003. Earnings increased y/y as mostly as a result of higher throughput (175,300 b/d from 171,200 b/d a year ago). A foreign exchange hedging transaction of balance-sheet items placed in late 2003 has been able to reduce earnings volatility on ES. Expansion of ES is on target for an in-service date of April 2005. Total system capacity will increase by 108,000 b/d to 280,000 b/d at a cost of about US$100 million, but earnings improvements are expected to be relatively modest because of ship-or-pay arrangements.
- On Jan. 31, 2005, Terasen Pipelines announced that it had received strong support from 17 different parties including existing and new customers who participated in the TMX Project's Expression of Interest process. It now plans to proceed with an Open Season in summer 2005. However, support from residents adjacent to the right-of-way is not assured.
- The TMX Project proposes a staged expansion of the existing Trans Mountain system (225,000 b/d capacity) between Edmonton, Alberta and Burnaby, B.C. The expansion consists of the looping of the existing pipeline to existing facilities in Burnaby, B.C. and/or could include the extension of Trans Mountain through the B.C. Interior to a potential new VLCC capable port on the B.C. coast. However, passage of VLCC through the Strait of Juan de Fuca is not assured environmentally.
- TER's initial expansion phase (TMX1), subject to final commercial arrangements and regulatory approvals, would increase the system's capacity to 300,000 b/d from 225,000 b/d by the end of 2008. Further stages of the expansion would bring the capacity to 850,000 b/d. The new capacity would allow additional transportation from Alberta's tar sands to the West Coast and Asian markets. TER Pipelines will now attempt to finalize a tolling framework with customers which will lead to the formal Open Season. However, we view transhipments of petroleum from TER's marine terminal to Kitimat/Prince Rupert and, thence, to East Asia as costly and time-consuming.
- TER's TMX Project is, in part, in direct competition with **Enbridge Inc.'s (TSX-ENB)** proposed $2.5 billion Gateway Project. We believe that ENB's proposal has more support and a better probability of succeeding. ENB is expected to sign commitments by mid-2005 for about 80% of the planned 400,000 b/d capacity. ENB is also prepared to lower its equity stake in the pipeline to no less than 51%. To the extent that refinery markets in Washington State (and possibly California) are concerned, there is likely to be room for incremental pumping capacity; however, we view looping requiring additional rights-of-way as a material challenge to TMX, and hasten to add that shipper and refiner support is one thing, but the NIMBY-syndrome is quite another.
- So far, TER has not addressed the latter publicly, which we view as the litmus test of TER's expansion plans. The NIMBY syndrome covers not only pipeline expansion, but also tanker, especially VLCC, traffic in the Straits of Georgia and Juan de Fuca.

Water and Utility Services

- **Q4 2004 water and utility services earnings: $0.7 million vs. $0.4 million y/y.** Earnings from this segment are typically stronger in the second and third quarters, and are weaker in first and fourth quarters reflecting seasonal patterns of new construction. For 2004, earnings increased to $6.6 million from $4.1 million, with $1.2 million of the earnings growth attributable to the July 31, 2004 acquisition of a 50% interest in the Fairbanks Sewer and Water Inc. (FSW) for $40.8 million and other minor acquisitions, and $1.3 million due to organic growth in existing businesses. TER expects this business to deliver one-third of its annual growth objectives of 6%.

Other Activities

- **Other Activities** (including Terasen International, TER's 45% interest in Clean Energy, and corporate interest and administration charges), **lost $9.3 million in Q4 2004 vs. a loss of $8.8 million y/y.** This quarter's higher loss was due to lower tax recovery. For 2004, net loss increased to $23.6 million from $23 million in 2003 due to lower tax recovery offset by lower corporate and financing costs, as well as a $3.3 million (after-tax) gain at Clean Energy from its price risk management activities.

Financial and Outlook

- **Capital Expenditures**: Q4 2004: $49.6 million vs. $63.6 million in Q4 2003. 2004: $154.4 million vs. $222.9 million in 2003. Projected 2005 capital expenditures are about $350 million including: **Natural Gas Distribution ($240 million)** - the acquisition of the Coastal Facilities buildings ($50 million); the Fraser River crossing ($20 million); the purchase and upgrade of the Texada Island compressor station ($15 million); and initial capital expenditures on the construction of the LNG storage facility on Vancouver Island ($23 million). **Petroleum Transportation** ($50 million) – the TMX Project, and Corridor Pipeline de-bottlenecking. **Water & Utility Services ($50 million)** – for organic expansion and minor water acquisitions.
- **Cash from Operations**: Q4 2004: $40.7 million vs. $32.2 million y/y. 2004: $342 million vs. $269.8 million in 2003.
- TER's Board of Directors approved a 7.1% increase in the quarterly common share dividend to $0.225 from $0.21 per share.
- **TER's growth forecast is 6% using the 2004 EPS base of $1.40 (excluding Clean Energy's $3.3 million after-tax gain).** TER expects TMP to have weaker throughput in Q1 2005, due to the impact of production outages by producers such as Shell, Syncrude and Suncor, and two refinery turnarounds.

Valuation

For the 2006 calendar year, we are estimating EPS of $1.58; DPS of $1.02; retained EPS of $0.56; a retained EPS multiple of 10x; and a nominal long-term corporate bond yield of 6.75%, tax-effected to 5.40%. The support price is $18.89 and the residual price is $5.60, for a target price of $24.50.

DISCLOSURES:
Ratings And What They Mean:
PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months.
SECONDARY STOCK RATING: Under Review – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock.
INDUSTRY RATING: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months.
RISK RATING: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

HIGHLIGHTS

- **Q1 2005 reported earnings: $66.3 million or $0.63 per share vs. $67.9 million or $0.65 per share year-over-year (y/y). EPS was one penny lower than our and the Street's estimate.**

- **Earnings from Petroleum Transportation fell sharply to $12.7 million from $18.3 million y/y, mostly due to a weak contribution from Trans Mountain Pipe Line (TMP)…** TMP's throughput dropped 35.72% y/y as a result of maintenance turnarounds at refineries connected to TMP and temporary production outages in the Alberta tar sands which reduced supply.

- **Improved earnings from Natural-Gas (Gas) Distribution ($55.7 mln vs. $54.7 mln) and Water and Utilities Services ($0.8 mln vs. nil), as well as a decrease in operating losses at Other Activities managed to offset most of the weakness in Petroleum Transportation.**

- **Operating efficiencies and customer growth at Terasen Gas (TG) and Terasen Gas-Vancouver Island (TGVI) more than offset the lower allowed RROE for 2005.**

- **We continue to note that TER is over-priced relative to its peers, based on dividend and retained-earnings metrics. Hence, we sustain our Underperform rating.**

Stock Performance

Industry Rating: Underweight
(NBF Economics & Strategy Group)

Company Profile:
TER is a holding company and its largest investment is Terasen Gas (TG), British Columbia's largest diversified natural gas distributor. It also owns Terasen Gas-Vancouver Island (TGVI). TER also controls Terasen Pipelines-Trans Mountain (TMP), Canada's second-largest petroleum pipeline. TER entered gas transmission in British Columbia in November 2000, and on May 1, 2003 began commercial shipping on the Corridor Pipeline (CP) for Shell Canada.

Associate: Ramin Burney - (416) 869-7933
ramin.burney@nbfinancial.com

Assessment – *no earth-shattering developments*

We continue to view TER's common share prices as quite over-priced relative to share prices of Canadian pipelines and utilities, as evidenced by a price-to-retained-earnings multiple that far exceeds fundamentals. **Hence, we are sustaining our Underperform rating.**

First-Quarter 2005 Highlights

Q1 2005 reported earnings: $66.3 million or $0.63 per share vs. $67.9 million or $0.65 per share y/y. EPS was one penny lower than our and the Street's estimate.

Earnings decreased y/y as **Petroleum Transportation** earnings fell sharply to $12.7 million from $18.3 million y/y, mostly due to a weak contribution from **Trans Mountain Pipe Line (TMP)**. TMP's throughput dropped 35.72% y/y as a result of maintenance turnarounds at refineries connected to TMP, and temporary production outages in the Alberta oil sands which reduced supply. Improved earnings from **Gas Distribution** ($55.7 million vs. $54.7 million) and **Water and Utilities Services** ($0.8 mln vs. nil), as well as a decrease in operating losses at **Other Activities** managed to offset most of the weakness in Petroleum Transportation.

Segmented Reported Earnings ($mln)	Q1 2005	Q1 2004
Natural Gas Distribution	$55.7	$54.7
Petroleum Transportation	$12.7	$18.3
Water and Utility Services	$0.8	-
Other Activities	$(2.9)	$(5.1)
Earnings applicable to common shares	**$66.3**	**$67.9**
Source: Terasen Inc.		

Gas Distribution

- **Q1 2005 natural gas distribution earnings: Earnings of $55.7 million vs. $54.7 million y/y.** Operating efficiencies and strong customer growth at Terasen Gas (TG) and Terasen Gas-Vancouver Island (TGVI) more than offset the lower allowed RROE for 2005. For 2005, TG's RROE is 9.03% vs. 9.15% in 2004, and TGVI's 9.53% vs. 9.65% in 2004.
- Higher revenues and cost of gas y/y reflected customer growth during the quarter and the cost of gas charged to customers. Increased operation and maintenance expenses were partially offset by improved operating efficiencies related to the operational integration of TG and TGVI. Customer additions during the quarter for TG and TGVI were 2,345 and 1,049, respectively, driven by strong economic conditions and housing activity in B.C.
- On Feb. 16, 2005, the British Columbia Utilities Commission (BCUC) approved TGVI's proposed $100 million LNG storage facility (1 bcf of gas-equivalent capacity) near Nanaimo, B.C. The approval is subject to various conditions including the execution of a long-term Transportation Service Agreement (TSA) with B.C. Hydro. TGVI is working with B.C. Hydro to obtain a TSA to serve the Duke Power Point Project on Vancouver Island. However, construction of the LNG facility or the electricity plant is not assured.

Petroleum Transportation

- **Q1 2005 petroleum transportation earnings: $12.7 million vs. $18.3 million y/y.** Earnings fell sharply due to a lower earnings contribution from all three pipelines but primarily the **Trans Mountain Pipe Line (TMP).**
- **TMP's Q1 2005 earnings decreased to $5.4 million from $10.4 million** as throughput dropped 35.72% y/y as a result of maintenance turnarounds at refineries connected to TMP, and temporary production outages in the Alberta oil sands which reduced supply. Throughput decreased 29% y/y on the Canadian mainline (170,000 barrels per day [b/d] vs. 240,400 b/d), and 52% y/y on the U.S. mainline (44,500 b/d vs. 93,300 b/d). **However, this drop in throughput is not expected to recur during the balance of 2005. TMP**

has been running at full capacity during April and had to apportion nominations for April and May 2005.

- **The Corridor Pipeline (CP) earnings contribution decreased to $3.6 million from $3.9 million y/y** as a result of a lower RROE for 2005. TER has been discussing with Shell and its partners in the Athabasca Oil Sands Project on the potential expansion of CP to 300,000 b/d from 155,000 b/d for 2009 with 90,000 b/d increments every two years thereafter. The expansion would occur in phases with the first phase (already approved by the CP Shippers' Committee) increasing capacity by about 35,000 b/d by adding pumping capacity with a fall 2005 in-service date, at a cost of $6.5 million; and the second phase (under review) adding 110,000 b/d by 2009 at a cost of $700-800 million. TER is also looking at increasing the capacity past the 500,000 b/d level.
- **However, in our view, what complicates sharing of CP's capacity is Shell's apprehension about potential degradation of its bitumen by lower-quality bitumen of third parties.**
- **The Express System (ES) contributed $3.7 million vs. $4.0 million y/y.** Earnings decreased y/y due to the same temporary production outages in the Alberta tar sands which reduced supply and reduced TMP's throughput. Throughput decreased to 166,900 b/d from 171,300 b/d a year ago. On April 19, 2005, TER announced that ES had completed its expansion thereby increasing capacity by 108,000 b/d to 280,000 b/d at a cost of about US$100 million, but earnings improvements are expected to be relatively modest because of ship-or-pay arrangements. They resemble, in essence, the fundamentals of gas-pipeline operations, making ES more or less unique.
- During Q1, TMP continued work on the TMX Project. It proposes a staged expansion of the existing Trans Mountain system (225,000 b/d capacity) between Edmonton, Alberta and Burnaby, B.C. The expansion consists of looping of the existing pipeline to existing facilities in Burnaby, B.C. and/or could include the extension of Trans Mountain through the B.C. Interior to a potential new VLCC capable port on the B.C. coast. On Jan. 31, 2005, Terasen Pipelines announced that it had received strong support from 17 different parties including existing and new customers who participated in the TMX Project's Expression of Interest process. TMP continues to develop the technical, regulatory and commercial components of the project and is working with potential shippers to attempt to finalize an interim commercial and tolling framework in Q2 prior to proceeding with an Open Season in summer 2005.
- **However, we view transhipments, if any, of petroleum from TER's marine terminal to Kitimat/Prince Rupert and, thence, to East Asia as costly and time-consuming.**

Water and Utility Services

- **Q1 2005 water and utility services earnings: $0.8 million vs. nil y/y.** Earnings from this segment which includes TER Waterworks, TER Utility Services, and TER's 30% interest in CustomerWorks LP, are typically stronger in the second and third quarters, and are weaker in first and fourth quarters reflecting seasonal patterns of new construction. Earnings increased y/y due to growth in the base waterworks and utility service businesses and a small contribution from the July 31, 2004 acquisition of a 50% interest in the Fairbanks Sewer and Water Inc. (FSW).
- TER still expects this business to deliver one-third of its annual growth objectives of 6%.

Other Activities

- **Other Activities** (including Terasen International, TER's 45% interest in Clean Energy (CE), and corporate interest and administration charges), **reduced its loss to $2.9 million in Q1 2005 vs. a loss of $5.1 million y/y.** The lower loss y/y was due to a reduction in corporate expenses, improved operations at CE, and a $2.6 million net after-tax mark-to-market gain from CE's outstanding gas positions.
- Operation and maintenance expenses declined to $3.9 million from $5.1 million due to cost reductions and operating efficiencies.

Financial and Outlook

- **Capital Expenditures** in Q1 2005 were $83.8 million vs. $28.9 million in Q1 2004, mostly on the $49.4 million acquisition of the Coastal Facilities buildings by Natural Gas Distribution. Projected 2005 capital expenditures are about $350 million.
- **Cash from Operations**: Q1 2005: $99.1 million vs. $105.2 million y/y.
- **TER's growth forecast is 6% using the 2004 EPS base of $1.40 (excluding Clean Energy mark-to-market gains).** TER expects to make up the Q1 shortfall in Petroleum Transportation earnings with better performances from all businesses throughout the balance of 2005.

Valuation

For the 12-month period ending March 2007, we are estimating EPS of $1.61; DPS of $1.04; retained EPS of $0.57; a retained EPS multiple of 10x; and a nominal long-term corporate bond yield of 6.75%, tax-effected to 5.40%. The support price is $19.26 and the residual price is $5.70, for a target price of $24.95 (rounded).

DISCLOSURES:

Ratings And What They Mean:

PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months.

SECONDARY STOCK RATING: Under Review – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock.

INDUSTRY RATING: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months.

RISK RATING: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

General

National Bank Financial (NBF) is an indirect wholly owned subsidiary of National Bank of Canada. National Bank of Canada is a public company listed on Canadian stock exchanges.

“Moving Full Steam Ahead” With TMX Project

Event

Given strong support from its customers, Terasen plans to proceed to the next phase of the Trans Mountain system expansion project (“TMX Project”).

Investment Opinion

- **Expression of Interest process confirms support.** Through a non-binding Expression of Interest process, Terasen’s customers have indicated a strong need for additional crude oil pipeline capacity from Alberta to the west coast of B.C. by 2008. Based on the customer support, Terasen plans to move ahead with the initial expansion phase, TMx1. The next step is to finalize a tolling framework with customers leading to a formal open season expected this summer. Whether the tolling framework for TMx1 will be included as part of the discussions on the renewal of Trans Mountain’s Incentive Toll Settlement (ITS) still needs to be determined.
- **Future expansion plans past 2008 still uncertain.** While customers also indicated the need for significant expansion of the Trans Mountain system beyond 2008, there is no clear consensus on whether the future expansion should involve the Southern Option (i.e., further expansion of the existing Trans Mountain System to the Lower Mainland of B.C.) or the Northern Option (i.e. greenfield pipeline to a deepwater port at Prince Rupert or Kitimat). The lack of consensus is not surprising given the various issues that must be considered as discussed in our *Moving Oil Sands Product to Market* report dated December 22, 2004.
- **Implications.** Overall, we view yesterday’s announcement as a positive development for Terasen and the TMX Project. We believe there is a reasonable probability that Terasen will eventually proceed to the construction phase of TMx1. It is difficult to evaluate the financial impact to Terasen without additional information on the final tolling arrangement for TMx1 and the outcome of the renewal of Trans Mountain’s ITS, which expires at the end of 2005. We believe that Terasen will look to address the two issues at the same time. Nevertheless, we have attempted to estimate the EPS impact for TMx1 on a standalone basis assuming a cost of service methodology. Based on our assumptions, we estimate a full-year EPS impact of approximately $0.07 in 2009.
- **Valuation.** Our target price of $32.00 (unchanged) reflects a 12-month dividend distribution one-year forward of $0.95 and a required dividend yield of 2.95%. Terasen is ranked Outperform, Average Risk.

Details

Yesterday, Terasen announced that it has received strong support from 17 different parties including existing and new customers to proceed to the next phase of the Trans Mountain system expansion project ("TMX"). The TMX Project is designed to meet increased demand for pipeline capacity to the west coast of British Columbia due to growing Alberta oil sands production. While it has not provided information on the specific customers that support the projects or the volumes that they are interested in transporting, Terasen indicated that it has received support from Canadian producers, West Coast refiners and Far East interests.

In December 2004, Terasen commenced a non-binding Expression of Interest process to confirm the level of support from potential customers for the TMX Project and its various phases. Through this process, customers have indicated a strong need for additional pipeline capacity from Alberta to the west coast of B.C. by 2008. Based on the customer support, Terasen plans to move ahead with the initial expansion phase, TMx1. The next step is to finalize a tolling framework with customers, leading to a formal open season expected this summer. Whether the tolling framework for TMx1 will be included as part of the discussions on the renewal of Trans Mountain's Incentive Toll Settlement (ITS) still needs to be determined.

Pending final commercial arrangements and regulatory approvals, TMx1 would increase Trans Mountain's capacity from 225,000 bpd to 300,000 bpd by the end of 2008. TMx1 would be constructed in two phases. The first phase would add 35,000 bpd of capacity by the end of 2006 through the addition of pump stations along the pipeline system at an estimated cost of $205 million. The second phase would involve looping 178 kilometres of the system, providing an additional 40,000 bpd by the end of 2008 at an estimated cost of $365 million.

While customers also indicated the need for significant expansion of the Trans Mountain system beyond 2008, there is no clear consensus on whether the future expansion should involve the Southern Option (i.e., further expansion of the existing Trans Mountain System to the Lower Mainland of B.C.) or the Northern Option (i.e. greenfield pipeline to a deepwater port at Prince Rupert or Kitimat). The lack of consensus is not surprising given the various issues that must be considered as discussed in our *Moving Oil Sands Product to Market* report dated December 22, 2004.

Exhibit 1: TMX Project

Source: Company reports

Implications

Overall, we view yesterday’s announcement as a positive development for Terasen and the TMX Project. We believe there is a reasonable probability that Terasen will eventually proceed to the construction phase of TMx1.

It is difficult to evaluate the financial impact to Terasen without additional information on the final tolling arrangement for TMx1 and the outcome of the renewal of Trans Mountain’s ITS, which expires at the end of 2005. We believe that Terasen will attempt to address the two issues at the same time. Trans Mountain has performed well under its ITS over the last four years and faces the risk that its earnings could decline under a renewed agreement. While the ultimate impact could be more significant, we have reflected a $3 million decline in Trans Mountain’s earnings in 2006 compared to 2005 pending additional information on the status of the ITS renewal negotiations that we hope will be forthcoming over the coming months. Depending on the outcome of Terasen’s negotiations, the development of TMx1 could mitigate part or all of the potential negative impact associated with the ITS renewal.

While we believe that the TMx1 tolling arrangement and Trans Mountain’s ITS renewal agreement could be linked, we have attempted to estimate the EPS impact for TMx1 on a standalone basis assuming a cost of service methodology. In our analysis, we have assumed a deemed common equity component of 35%, an allowed ROE of 10%, an equity issuance of 6.2 million shares at $32.00 to finance Terasen’s equity investment, and assumed EPS growth of 6% between 2006 and 2009. Based on our assumptions, we estimate a full-year EPS impact of approximately $0.07 in 2009.

Exhibit 2: 2009E EPS Impact

	2009E
TMx 1 Phase 1	$205.0
TMx 1 Phase 2	365.0
Total	$570.0
Deemed common equity	35.0%
Deemed common equity	$199.5
Allowed ROE	10.0%
Allowed earnings	$20.0
Shares outstanding before TMx1	104.9
Additional shares from TMx1	6.2
Total shares (MM)	111.1
EPS impact before dilution	$0.18
Dilution based on assumed 6% annual EPS growth	($0.10)
Potential EPS Impact	$0.07

Source: RBC Capital Markets estimates

Valuation

Our valuation for Terasen is largely based on a dividend yield approach. When the current yield of the ten-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Terasen. Our target price of $32.00 reflects a 12-month dividend distribution one-year forward of $0.95 and a required dividend yield of 2.95%.

Price Target Impediments

Factors that could have negative implications for Terasen’s earnings and our target price include unexpected increases in operating costs that are unrecoverable under its incentive agreements, failure to renew Trans Mountain’s Incentive Toll Settlement after the end of 2005 and a significant and prolonged decline in Western Canadian petroleum production.

Company Description

Terasen is engaged in the transmission and distribution of natural gas and the transportation of crude oil and refined products.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

Event

Terasen announced its 2004 financial results and increased its annual dividend.

Investment Opinion

- **2004 results in line with expectations.** Terasen's normalized EPS was $1.40 in 2004 compared to our estimate of $1.41 and $1.37 in 2003. Lower-than-expected results from Natural Gas Distribution and Other Activities were largely offset by higher-than-expected Petroleum Transportation results.
- **Annual dividend increased by 7.1% from $0.84 to $0.90.** The increase was in line with our expectations, but the timing was earlier than expected. In previous years, Terasen increased its common dividend in the second quarter. According to Terasen, the decision to increase the dividend in the first quarter reflects strong results, a positive outlook for 2005 and aligns the dividend increase with the company's fiscal year.
- **2005 EPS estimate decreased to reflect lower throughput volumes.** For 2005, Terasen's management is targeting EPS growth of 6% from a base of $1.40. EPS growth is expected to be driven by incremental earnings from Trans Mountain and the Express System expansion, operating efficiencies and customer growth in the Natural Gas Distribution business, and continued growth in the water and utility services business. During the first few months of 2005, management expects temporary weakness in throughput volumes on the Trans Mountain system primarily due to production outages in the Alberta oil sands and west coast refinery turnarounds. Largely reflecting weaker throughput volumes on the Trans Mountain system, we have reduced our 2005 EPS estimate from $1.54 to $1.50.
- **Growth outlook remains positive.** Notwithstanding the potential risk to earnings associated with a new Incentive Tolling Settlement at Trans Mountain and the temporary decline in throughput volumes expected on the Trans Mountain System in the first few months of 2005, we believe that the overall growth outlook for Terasen remains positive given the number of potential opportunities that are available to the company.
- **Valuation.** Our target price of $32.00 (unchanged) reflects a 12-month dividend distribution one-year forward of $0.96 and a required dividend yield of 2.95%. Terasen is ranked Outperform, Average Risk.

Details

Overall, the 2004 results were in line with our expectations. Terasen's normalized EPS was $1.40 in 2004 compared to our estimate of $1.41 and $1.37 in 2003. Lower-than-expected results from Natural Gas Distribution and Other Activities were largely offset by higher-than-expected Petroleum Transportation results. Terasen's 2004 financial results are summarized in Exhibit 1.

Exhibit 1: 2004 Financial Results Summary ($MM Except EPS or Otherwise Indicated)

	For 3 mos. ended Dec. 31		For 12 mos. ended Dec. 31

Source: Terasen; RBC Capital Markets

Natural Gas Distribution

Normalized earnings from Natural Gas Distribution were $95.9 million in 2004 compared to $98.8 million in 2003. The decline was attributed to a reduction in the allowed returns on equity at Terasen Gas (Vancouver Island) ("TGVI") and Terasen Gas (-$2.4 million) and the introduction of an earnings sharing mechanism for operating efficiencies (-$4.7 million), partially offset by operating efficiencies achieved through the integration of the Terasen Gas and TGVI operations (+$4.1 million).

In Q4/04, the accounting for income tax expense at Terasen Gas was changed. Under the new accounting methodology, income tax expense is determined by applying the effective annual tax rate to pre-tax income in the quarter. Previously, Terasen Gas allocated annual income tax expense was based on budgeted sales revenue for the four quarters. Reflecting the change in accounting, Terasen Gas' quarterly results prior to Q4/04 were restated. According to Terasen, the change in accounting had no impact on annual financial results. However, it should be noted that recurring earnings from Natural Gas Distribution declined by $0.7 million during the first nine months of 2004 instead of increasing by $1 million as previously reported by Terasen. Based on the previously reported results and our forecast for a modest decline in Q4/04 earnings at Terasen Gas and TGVI, we had expected a relatively flat contribution from Natural Gas Distribution in 2004 compared to 2003.

Petroleum Transportation

Normalized earnings from Petroleum Transportation were $70.9 million in 2004 compared to earnings of $60.8 million in 2003. Notwithstanding slightly lower-than-expected throughput volumes on the Trans Mountain Canadian mainline, earnings from Petroleum Transportation were higher-than-expected due to operating efficiencies at Trans Mountain and increased earnings from the Express System.

Water and Utility Services

Normalized earnings from Water and Utility Services increased from $4.1 million in 2003 to $6.6 million in 2004. The increase reflected growth in existing operations, as well as contributions from acquisitions including Fairbanks Sewer & Water Inc. The Fairbanks acquisition was completed on July 31, 2004.

Other Activities

Excluding a $3.3 million after-tax mark-to-market gain for natural gas derivative positions at Clean Energy, earnings from Other Activities decreased from ($21.2) million to ($26.9) million. The decrease largely reflects higher income tax expense in 2004.

Dividend Increase

Yesterday, Terasen's Board of Directors approved a 7.1% increase to the annual dividend from $0.84 to $0.90. The increase was in line with our expectations, but the timing was earlier than expected. In previous years, Terasen increased its common dividend in the second quarter. According to Terasen, the decision to increase the dividend in the first quarter reflects strong results, a positive outlook for 2005 and aligns the dividend increase with the company's fiscal year.

EPS Estimates / Management Guidance

For 2005, Terasen's management is targeting EPS growth of 6% from a base of $1.40. EPS growth is expected to be driven by incremental earnings from Trans Mountain and the Express System expansion, operating efficiencies and customer growth in the Natural Gas Distribution business, and continued growth in the water and utility services business. During the first few months of 2005, management expects temporary weakness in throughput volumes on the Trans Mountain system primarily due to production outages in the Alberta oil sands and west coast refinery turnarounds.

Largely reflecting weaker throughput volumes on the Trans Mountain system, we have reduced our 2005 EPS estimate from $1.54 to $1.50. The outlook for 2006 will depend on the outcome of Trans Mountain's negotiations with its shippers with respect to a new Incentive Toll Settlement (ITS). Management expects to reach a satisfactory agreement on a new ITS and remains committed to delivering on its target of 6% annual EPS growth. Pending additional information on the new ITS, we are maintaining our 2006 EPS estimate of $1.57 at this time.

Outlook

ITS

Trans Mountain has initiated discussions with its shippers regarding the commercial terms for a new ITS, which would replace the current ITS that is set to expire at the end of 2005. Depending on the final tolling arrangement with shippers, Trans Mountain's earnings could be materially negatively impacted in 2006. However, as previously stated, management expects to reach a satisfactory agreement on a new ITS.

TMX

Terasen is working with shippers on finalizing the commercial and tolling framework for its TMX project prior to holding an open season for binding commitments by mid-2005. The company expects to spend an additional $7 to $12 million prior to receiving binding support for the project. At this time, negotiations for the tolling framework for the TMX project and discussions for a new ITS are being conducted separately. However, an umbrella tolling agreement with shippers is not out of the question in the future.

If Terasen proceeds with the first phase of the project (TMx1), it expects to recognize an allowance for funds used during construction (AFUDC) during the construction period. Booking AFUDC could mitigate the potential negative earnings impact associated with a new ITS. TMx1 would be constructed in two phases. The first phase would add 35,000 bpd of capacity by the end of 2006 through the addition of pump stations along the pipeline system at an estimated cost of $205 million. The second phase would involve looping 178 kilometres of the system, providing an additional 40,000 bpd by the end of 2008 at an estimated cost of $365 million.

2005 Capital Expenditures Program

Terasen is forecasting $350 million of capital expenditures in 2005 compared to $154.4 million in 2004. Major capital expenditures in 2005 include the unwinding of a synthetic lease that was previously entered into by Terasen Gas to finance new building facilities in the Greater Vancouver area ($50 million), the purchase and upgrade of the Texada Island compressor station ($15 milllion), initial expenditures for TGVI's proposed LNG storage facility ($23 million), further development of Trans Mountain's TMX Project ($13.5 million) and Corridor Pipeline de-bottlenecking ($6.5 million). The 2005 capital expenditures budget also includes minor acquisitions at the water and utility services business. Terasen expects to finance the planned capital expenditures with internally generated funds and debt.

Vancouver Island Capacity Expansion

On February 16, the British Columbia Utilities Commission (BCUC) approved TGVI's proposal to build a $100 million LNG storage facility near Nanaimo, subject to several conditions, including the execution of a long-term Transportation Service Agreement (TSA) with BC Hydro substantially in the form indicated as acceptable by the BCUC. Yesterday, the BCUC approved BC Hydro's agreement to purchase electricity from Duke Point Power Limited Partnership's proposed power plant, subject to BC Hydro entering into a long-term TSA with TGVI to serve the proposed power plant. In reaction to the BCUC decision, the Joint Industry Electricity Steering Committee announced plans to appeal the regulator's ruling to the appropriate court in the next several days. TGVI plans to work with BC Hydro on a TSA, but there is no certainty that a TSA will ultimately be executed as highlighted by the expected legal action.

Corridor Expansion

Terasen has been working with Shell and its partners on the potential expansion of the Corridor Pipeline from 155,000 bpd to 300,000 bpd. Expansion of the system is expected to be undertaken in phases. The first phase, which has been approved by the shippers, involves de-bottlenecking the existing system by adding pumping capacity. The initial phase is expected to add 35,000 bpd of capacity by the fall of 2005 at an estimated cost of $6.5 million. The second phase would increase system capacity by 110,000 bpd at an estimated cost of $500-$600 million. This phase is under review and, if approved, is expected to be in service by 2009.

Summary

Notwithstanding the potential risk to earnings associated with a new Incentive Tolling Settlement at Trans Mountain and the temporary decline in throughput volumes expected on the Trans Mountain System in the first few months of 2005, we believe that the overall growth outlook for Terasen remains positive given the number of potential opportunities that are available to the company. Key events to watch for in 2005 include the outcome of the discussions on a new ITS and the TMX project.

Valuation

Our valuation for Terasen is largely based on a dividend yield approach. When the current yield of the ten-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Terasen. Our target price of $32.00 reflects a 12-month dividend distribution one-year forward of $0.96 and a required dividend yield of 2.95%.

Price Target Impediments

Factors that could have negative implications for Terasen’s earnings and our target price include unexpected increases in operating costs that are unrecoverable under its incentive agreements, failure to renew Trans Mountain’s Incentive Toll Settlement after the end of 2005 and a significant and prolonged decline in Western Canadian petroleum production.

Company Description

Terasen is engaged in the transmission and distribution of natural gas and the transportation of crude oil and refined products.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

Event

We have reduced our 2005 EPS estimate to reflect lower forecast earnings from Trans Mountain in Q1/05.

Investment Opinion

- **Throughput in Q1/05 expected to be lower than originally forecast.** Due to production outages in the Alberta oil sands and west coast refinery turnarounds, we had reflected a decline in throughput on the Trans Mountain Canadian mainline in Q1/05. Based on a recent presentation by Terasen to the National Energy Board, we believe that we have underestimated the extent of the decline.
- **Expect throughput volumes to rebound.** Trans Mountain has throughput protection if annual volumes on the Canadian mainline decline below 179,265 bpd. However, we believe the decline in Q1/05 is due to temporary factors and we do not expect annual volumes to decline below 179,265 bpd. Supporting our view, April nominations for the Trans Mountain Canadian mainline have been fairly strong and the pipeline is back in apportionment.
- **2005 EPS estimate decreased to reflect lower throughput volumes.** Reflecting weaker-than-forecast throughput volumes on the Trans Mountain system in Q1/05, we have reduced our 2005 EPS estimate from $1.50 to $1.48.
- **Valuation.** Our target price of $32.00 reflects a 12-month dividend distribution one-year forward of $0.96 and a required dividend yield of 2.95%.

For Required Disclosures, please see page 2.

Maureen Howe, a member of the Canadian pipelines and utilities team, is an associate of an insider of Terasen Inc., a component of the pipelines and utilities sector.

Details

Terasen's management indicated during its fourth quarter conference call that it expected temporary weakness in throughput volumes on the Trans Mountain system during the first few months of 2005, primarily due to production outages in the Alberta oil sands and west coast refinery turnarounds. In our financial model, we had reflected a decline in throughput on the Trans Mountain Canadian mainline from 239,100 bpd in Q4/04 to 200,000 bpd in Q1/05. Based on a recent presentation by Terasen to the National Energy Board, we believe Trans Mountain Canadian mainline throughput will fall below our previous estimate. It appears that throughput in January and February was about 170,000 bpd and the forecast for March is about 190,000 bpd.

Trans Mountain has throughput protection if annual volumes on the Canadian mainline decline below 179,265 bpd. However, we believe the decline in Q1/05 is due to temporary factors and we do not expect annual volumes to decline below 179,265 bpd. According to Terasen, April nominations for the Trans Mountain Canadian mainline have been fairly strong and the pipeline is back in apportionment.

Reflecting weaker-than-forecast throughput volumes on the Trans Mountain system in Q1/05, we have reduced our 2005 EPS estimate from $1.50 to $1.48.

Valuation

Our valuation for Terasen is largely based on a dividend yield approach. When the current yield of the ten-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Terasen. Our target price of $32.00 reflects a 12-month dividend distribution one-year forward of $0.96 and a required dividend yield of 2.95%.

Price Target Impediments

Factors that could have negative implications for Terasen's earnings and our target price include unexpected increases in operating costs that are unrecoverable under its incentive agreements, failure to renew Trans Mountain's Incentive Toll Settlement after the end of 2005 and a significant and prolonged decline in Western Canadian petroleum production.

Company Description

Terasen is engaged in the transmission and distribution of natural gas and the transportation of crude oil and refined products.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	421	46.93	156	37.05
HOLD [SP]	398	44.37	105	26.38
SELL [U]	78	8.70	15	19.23

Enbridge Signs MOU with PetroChina; We Remain Positive on Terasen's TMx1 Project

Event

Enbridge announced a memorandum of understanding (MOU) with PetroChina International Company Limited.

Investment Opinion

- **MOU with PetroChina.** Under the MOU, Enbridge and PetroChina have agreed to cooperate on the development of the Gateway Pipeline and supply of crude oil from Canada to China. The Gateway Pipeline is a proposed 400,000 bpd pipeline project designed to transport Alberta oil sands production from Edmonton, Alberta to a port on the west coast of British Columbia. The Gateway project can be considered as a rival project to the northern option of Terasen's TMX Project.
- **We don't view the MOU as a major obstacle for the TMX Project.** Enbridge's management indicated that the MOU is a preliminary step in the development of the Gateway Project and it cautioned against reading too much into the announcement. At this time, we believe that there is insufficient information to accurately determine the implications, if any, of Enbridge's MOU on Terasen's TMX Project. For example, we do not know the terms of PetroChina's involvement/commitment in the Gateway project, whether PetroChina has agreed to deal exclusively with Enbridge or if there are any sunset clauses to the MOU.
- **Still remain positive about development of TMx1**. Notwithstanding Enbridge's announcement, we remain positive with respect to the development of the first phase of Terasen's TMX project ("TMx1") based on the results of its previously announced Expression of Interest process and discussions with Terasen's management.
- **Valuation.** Our target price of $32.00 (unchanged) reflects a 12-month dividend distribution one-year forward of $0.96 and a required dividend yield of 2.95%.

Details

Yesterday, Enbridge announced that it has entered into a memorandum of understanding with PetroChina International Company Limited to cooperate on the development of the Gateway Pipeline and supply of crude oil from Canada to China. PetroChina is a large integrated company that is involved in the exploration, development and production of crude oil and natural gas; refining, transportation, storage and marketing, including import and export, of crude oil and petroleum products; production and sale of chemical products; and transmission, marketing and sale of natural gas.

Under the MOU, Enbridge will assist PetroChina to aggregate long-term supplies of Canadian crude oil with a target of approximately 200,000 bpd. Enbridge is seeking commitments from other potential shippers on the Gateway Pipeline to fill the remaining capacity.

Enbridge's management indicated that the MOU is a preliminary step in the development of the Gateway Project and it cautioned against reading too much into the announcement stating, "…there remains a great deal to be accomplished before the Gateway Pipeline can become a reality." At this time, we believe that there is insufficient information to accurately determine the implications, if any, of Enbridge's MOU on Terasen's TMX Project. For example, we do not know the terms of PetroChina's involvement/commitment in the Gateway project, whether PetroChina has agreed to deal exclusively with Enbridge or if there are any sunset clauses to the MOU. Notwithstanding Enbridge's announcement, we remain positive with respect to the development of the first phase of Terasen's TMX project ("TMx1") based on the results of its previously announced Expression of Interest process and discussions with Terasen's management.

Valuation

Our valuation for Terasen is largely based on a dividend yield approach. When the current yield of the ten-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Terasen. Our target price of $32.00 reflects a 12-month dividend distribution one-year forward of $0.96 and a required dividend yield of 2.95%.

Price Target Impediments

Factors that could have negative implications for Terasen's earnings and our target price include unexpected increases in operating costs that are unrecoverable under its incentive agreements, failure to renew Trans Mountain's Incentive Toll Settlement after the end of 2005 and a significant and prolonged decline in Western Canadian petroleum production.

Company Description

Terasen is engaged in the transmission and distribution of natural gas and the transportation of crude oil and refined products.

Event

Terasen announced its first quarter results.

Investment Opinion

- **Q1/05 results in line with expectations.** Terasen's normalized EPS were $0.60 in Q1/05 compared to our estimate of $0.61 and $0.63 in Q1/04. Lower-than-expected results from Petroleum Transportation were largely offset by higher-than-expected results from Water and Utility Services and Other Activities. As expected, petroleum transportation throughput was negatively impacted by a temporary decline in production from the Alberta oilsands and refinery turnarounds.
- **Guidance for 2005 unchanged.** Notwithstanding the decline in first quarter results, Terasen's management is confident that it will achieve its target of 6% EPS growth in 2005. In the second quarter, Trans Mountain returned to operating at full capacity and was at 35% apportionment for May nominations. Management expects throughput to remain strong through the remainder of the year. Further, the recent completion of the Express pipeline expansion should provide increased earnings through the remainder of the year. Based on this outlook, we remain comfortable with our 2005 EPS estimate.
- **Outlook for 2006 still somewhat uncertain**. The earnings outlook for 2006 will depend on the outcome of Trans Mountain's negotiations with its shippers on the renewal of the existing Incentive Toll Settlement (ITS), which expires at the end of 2005. Given the preliminary nature of Trans Mountain's negotiations with its shippers, Terasen's management was unable to provide guidance with respect to the expected impact of the ITS renewal. Developments with respect to Terasen's TMX Project could also impact 2006 earnings. Pending additional information on the outcome of the ITS negotiations and the TMX project, we are maintaining our 2006 EPS estimate at this time.
- **Business development activities continue.** Terasen continues to work on a number of potential growth opportunities including development of the TMX Project and LNG Storage Facility, as well as the expansion of the Corridor Pipeline and Express System.
- **Valuation.** Our target price of $32.00 reflects a 12-month dividend distribution one-year forward of $0.97 and a required dividend yield of 2.95%.

Details

In general, the Q1/05 results were in line with our expectations. Terasen's normalized EPS were $0.60 in Q1/05 compared to our estimate of $0.61 and $0.63 in Q1/04. Lower-than-expected results from Petroleum Transportation were largely offset by higher-than-expected results from Water and Utility Services and Other Activities. As expected, petroleum transportation throughput was negatively impacted by a temporary decline in production from the Alberta oilsands, as well as maintenance turnarounds at refineries connected the Trans Mountain pipeline. Terasen's first quarter financial results are summarized in Exhibit 1.

Exhibit 1: Financial Results Summary ($MM Except EPS or Otherwise Indicated)

	For 3 months Ended Mar. 31			
	2005	2004	RBC CM Est. Q1/05	Comments

Source: Terasen; RBC Capital Markets

Natural Gas Distribution

Normalized earnings from Natural Gas Distribution were $49.0 million in Q1/05 compared to $48.0 million in Q1/04. Operating efficiencies and customer growth at Terasen Gas more than offset the lower allowed rate of return on equity in 2005.

Petroleum Transportation

Normalized earnings from Petroleum Transportation were $12.7 million in Q1/05 compared to earnings of $18.3 million in Q1/04. The first quarter results were negatively impacted by lower throughput volumes on Trans Mountain's mainline, which were attributable to temporary production outages in the Alberta oilsands and refinery turnarounds. In Q1/05, throughput averaged 170,000 bpd on Trans Mountain's Canadian mainline and 44,500 bpd on the U.S. mainline. In comparison, throughput averaged 240,400 bpd on the Canadian mainline and 93,300 bpd on the U.S. mainline in Q1/04. Based on March 2005 presentation by Terasen to the National Energy Board, we had expected Q1/05 throughput of approximately 175,000 bpd on the Canadian mainline and 40,000 bpd on the U.S. mainline.

Earnings from the Express System decreased from $4.0 million in Q1/04 to $3.7 million in Q1/05. The Q1/05 contribution from Express was also negatively impacted by the temporary production outages in the Alberta oilsands. Reflecting a lower allowed return on equity, earnings from the Corridor Pipeline declined by $0.3 million from $3.9 million in Q1/04 to $3.6 million Q1/05.

Water and Utility Services

Normalized earnings from Water and Utility Services increased from nil in Q1/04 to $0.8 million in Q1/05. The increase reflected continued growth in the base waterworks and utility service business combined with a small contribution from Fairbanks Sewer and Water Inc., which was acquired on July 31, 2004.

Other Activities

Excluding mark-to-market gains for natural gas derivative positions at Clean Energy, normalized earnings from Other Activities increased from ($6.8) million in Q1/04 to ($5.5) million in Q1/05. The increase was attributed to a reduction in corporate expenses and improved operations at Clean Energy.

EPS Estimates

Notwithstanding the decline in first quarter results, Terasen's management is confident that it will achieve its target of 6% EPS growth in 2005. In the second quarter, Trans Mountain returned to operating at full capacity and was at 35% apportionment for May nominations. Management expects throughput to remain strong through the remainder of the year. Further, the recent completion of the Express pipeline expansion should provide increased earnings through the remainder of the year. Based on the Q1/05 results and the expected outlook for the remainder of the year, we remain comfortable with our 2005 EPS estimate at this time.

The earnings outlook for 2006 will depend on the outcome of Trans Mountain's negotiations with its shippers on the renewal of the existing Incentive Toll Settlement (ITS), which expires at the end of 2005. In our financial forecast, we have assumed a $3 million decline in earnings at Trans Mountain in 2006 compared to 2004. Our 2006 EPS estimate would be negatively impacted if the renewal of the ITS reduced Trans Mountain's annual earnings contribution below $36 million. Given the preliminary nature of Trans Mountain's negotiations with its shippers, Terasen's management was unable to provide guidance with respect to the expected impact of the ITS renewal. Developments with respect to Terasen's TMX Project could also impact 2006 earnings. Pending additional information on the outcome of the ITS negotiations and the TMX project, we are maintaining our 2006 EPS estimate at this time.

Outlook

TMX Project

Terasen continues to work on its TMX project including developing the technical, regulatory and commercial components of the project. The pump station expansion project, which falls under the first phase of the TMX project, has received good interest from shippers. Through the construction of 13 new pump stations, the $205 million project would add 35,000 bpd of incremental capacity in 2006. Terasen is also working with potential domestic and overseas shippers on finalizing an interim commercial and tolling framework in the second quarter prior to holding an open season for long-term commitments for the first phase of the project. The open season could be held as early as June or July 2005.

Corridor Pipeline

Shell Canada recently filed regulatory applications to expand the capacity at its Muskeg River Mine and Scotford Upgrader. To accommodate the expected increase in production volumes, Terasen is actively working with Shell and its partners in the Athabasca Oil Sands Project on potentially expending the Corridor Pipeline from 155,000 bpd to 300,000 bpd by 2009 with 90,000 bpd increments every two years thereafter. Terasen is presently working on the first phase of the project, which consists of de-bottlenecking the existing system by adding pumping capacity at an estimated cost of $6.5 million. The first phase is expected to be in service by the fall of 2005. The second phase would expand the Corridor Pipeline by an additional 110,000 bpd at an estimated cost of $700 million to $800 million. Terasen is also working on expansion opportunities to ship third party volumes on the Corridor Pipeline.

Express System

In April 2005, Terasen completed its expansion plans for the Express System increasing total capacity by 108,000 bpd to 280,000 bpd at a total cost of approximately US$100 million. Approximately 84% of the total capacity is committed under long-term contracts. Terasen expects to start shipping uncommitted volumes in June or July 2005. The company has started to work on further expansion opportunities of the Express System to provide incremental capacity into PADD II, PADD V or possibly PADD III.

LNG Storage Facility

Terasen Gas Vancouver Island (TGVI) is working with BC Hydro on finalizing a long-term Transportation Service Agreement (TSA) to serve the Duke Point Power Project on Vancouver Island. In February 2005, the British Columbia Utilities Commission (BCUC) approved the construction of a liquefied natural gas storage facility on Vancouver Island subject to the execution of the TSA. According to Terasen, it has made substantial progress with respect to its negotiations with BC Hydro.

In April 2005, a B.C. Court of Appeal judge dismissed an appeal motion filed by third parties seeking to overturn the BCUC's decision to approve BC Hydro's electricity purchase agreement with Pristine Power, which will construct the Duke Point Power Project. The third parties have filed a request to have a three-judge Appeal Court panel review the original ruling and a hearing has been set for June 3, 2005. Notwithstanding the appeal hearing, Terasen remains optimistic that the LNG storage facility will proceed ahead.

Summary

The Q1/05 results were generally in line with our expectations. We remain comfortable with our current 2005 EPS estimate. Terasen's 2006 earnings outlook is somewhat unclear given the expiry of Trans Mountain's current ITS and the uncertainty with respect to its renewal. On the positive side, Terasen has a number of potential organic growth opportunities within its existing businesses.

Valuation

Our valuation for Terasen is largely based on a dividend yield approach. When the current yield of the ten-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Terasen. Our target price of $32.00 reflects a 12-month dividend distribution one-year forward of $0.96 and a required dividend yield of 2.95%.

Price Target Impediments

Factors that could have negative implications for Terasen's earnings and our target price include unexpected increases in operating costs that are unrecoverable under its incentive agreements, failure to renew Trans Mountain's Incentive Toll Settlement after the end of 2005 and a significant and prolonged decline in Western Canadian petroleum production.

Company Description

Terasen is engaged in the transmission and distribution of natural gas and the transportation of crude oil and refined products.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	398	43.45	132	33.17
HOLD [SP]	433	47.27	134	30.95
SELL [U]	85	9.28	25	29.41

Event

BC Hydro recently abandoned its Duke Point Power Project.

Investment Opinion

- **Unexpected decision from BC Hydro.** BC Hydro recently decided to abandon its proposed $285 million Duke Point Power Project. The provincially owned utility claimed that the B.C. Court of Appeal's decision to hear an appeal of the project by a number of intervenors resulted in a great risk that the plant would not be built in time. We had not expected this decision given the progress that had been made on the project.
- **Decision may mean potential delay for Terasen's LNG storage facility.** Terasen had been working with BC Hydro on finalizing a long-term Transportation Service Agreement that would have resulted in the construction of a LNG storage facility to serve the Duke Point Power Project. Notwithstanding BC Hydro's decision, Terasen's management believes that there still could be a need for its proposed LNG storage facility in the future. As a result, Terasen is considering the possibility of filing for regulatory approval to construct the facility at a later date.
- **EPS estimates reduced to reflect regulatory uncertainty**. Given the uncertainty regarding whether the provincial regulator will approve another application for a LNG storage facility on Vancouver Island, we have decided to exclude the potential impact of the LNG facility from our financial forecast. Accordingly, we have reduced our 2006 and 2007 EPS estimates for Terasen from $1.57 and $1.60, respectively, to $1.56 and $1.58.
- **Valuation.** Our target price of $32.50 (unchanged) reflects a 12-month dividend distribution one-year forward of $0.98 and a required dividend yield of 3.0%.

Details

BACKGROUND

BC Hydro recently decided to abandon its proposed $285 million Duke Point Power Project on Vancouver Island. The provincially owned utility claimed that the B.C. Court of Appeal's decision to hear an appeal of the project by a number of intervenors resulted in a great risk that the plant would not be built in time.

We were surprised by BC Hydro's decision, particularly given the progress that had been made on the project. BC Hydro had already spent $70 million on turbines and other equipment related to the project. This amount does not include the $50 million spent on the Georgia Strait Crossing (GSX) pipeline project that was cancelled in late 2004. The GSX project was designed to supply natural gas to BC Hydro's power plant and other facilities on Vancouver Island.

Following the cancellation of the GSX project, Terasen Gas Vancouver Island (TGVI) had been working with BC Hydro on finalizing a long-term Transportation Service Agreement (TSA) to serve the Duke Point Power Project. In February 2005, the British Columbia Utilities Commission (BCUC) approved Terasen's application to construct a liquefied natural gas storage facility on Vancouver Island subject to the execution of the TSA.

IMPLICATIONS

Notwithstanding BC Hydro's decision, Terasen's management believes that there still could be a need for its proposed LNG storage facility on Vancouver Island in the future. As a result, Terasen is considering the possibility of filing another application with the BCUC for the construction of the LNG storage facility at a later date.

Given the uncertainty regarding whether the BCUC will approve another application for a LNG storage facility on Vancouver Island, we have decided to exclude the potential impact of the LNG facility from our financial forecast. Accordingly, we have reduced our 2006 and 2007 EPS estimates for Terasen from $1.57 and $1.60, respectively, to $1.56 and $1.58.

Valuation

Our valuation for Terasen is largely based on a dividend yield approach. When the current yield of the ten-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Terasen. Our target price of $32.50 reflects a 12-month dividend distribution one-year forward of $0.98 and a required dividend yield of 3.0%.

Price Target Impediments

Factors that could have negative implications for Terasen's earnings and our target price include unexpected increases in operating costs that are unrecoverable under its incentive agreements, failure to renew Trans Mountain's Incentive Toll Settlement after the end of 2005 and a significant and prolonged decline in Western Canadian petroleum production.

Company Description

Terasen is engaged in the transmission and distribution of natural gas and the transportation of crude oil and refined products.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings

Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.
Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.

Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.

Maureen Howe, a member of the Canadian pipelines and utilities team, is an associate of an insider of Terasen Inc., a component of the pipelines and utilities sector.

Event

Enbridge reached an agreement with the Canadian Association of Petroleum Producers (CAPP) on a new incentive tolling settlement.

Investment Opinion

- **No widespread rebasing of tolls.** CAAP did not seek a complete rebasing of Enbridge's tolls. Instead, Enbridge's earnings base was reduced to account for the difference between the 2005 National Energy Board Multi-Pipeline return on equity and the implied return reflected in Enbridge's 1994 base tolls. If we apply a similar adjustment for Terasen, we arrive at a $4 million reduction to the earnings base for Terasen's Trans Mountain system. After normalizing for the temporary decline in Trans Mountain's throughput in Q1/05, this level of reduction is consistent with our current 2006 financial forecast for Terasen.
- **Possible incentive opportunities.** Under its agreement with CAPP, Enbridge will have the opportunity to realize bonuses for improving batch quality, delivery predictability and capacity reliability. Through these bonuses and cost savings, Enbridge expects to partially mitigate the impact of the decline in its earnings base. Based on discussions with Terasen's management, we expect similar types of incentives to be incorporated into any agreement that Terasen may reach with CAPP.
- **Focus on service quality rather than cost reduction.** As observed in Enbridge's agreement, we expect CAPP to focus more on the issue of providing proper incentives to meet service targets instead of reducing overall pipeline tolls in its negotiations with Terasen.
- **Encouraged by Enbridge's agreement.** In recent months, Terasen's share performance has lagged behind other energy infrastructure stocks. We believe that Terasen's underperformance may be related to concerns over the renewal of its existing incentive toll settlement for Trans Mountain. We view Enbridge's agreement as encouraging and recommend investors consider increasing their weighting in Terasen at this time.
- **Valuation.** Our target price of $32.50 (unchanged) reflects a 12-month dividend distribution one-year forward of $0.98 and a required dividend yield of 3.0%.

Details

BACKGROUND

On Friday, Enbridge announced that it had reached an agreement with CAPP on the key terms of a new 5-year incentive tolling settlement effective January 1, 2005. The new incentive tolling settlement outlines the methodology for calculating base tolls on the Enbridge mainline system over the five-year period. For additional details on Enbridge's incentive tolling settlement, please refer to our June 27th *Morning Comment* for Enbridge.

Enbridge's previous incentive tolling settlement expired on December 31, 2004. Similar to Enbridge, Terasen has been in discussions with CAPP on renewing its incentive toll settlement (ITS) for the Trans Mountain system before it expires on December 31, 2005. Given the earlier expiry of Enbridge's incentive tolling settlement, CAPP has been more focused on completing its negotiations with Enbridge than negotiating with Terasen. With Enbridge's settlement finalized, we expect CAPP to focus its attention on reaching a new agreement with Terasen for the Trans Mountain system.

IMPLICATIONS FOR TERASEN

We should emphasize that Terasen's existing ITS for the Trans Mountain system is quite different from Enbridge's agreement with CAPP. For example, Terasen has some exposure to throughput risk under its agreement, whereas Enbridge does not. Given these differences, it is somewhat difficult to apply the terms of Enbridge's new agreement to arrive at an accurate prediction of a possible agreement for Terasen. Nevertheless, we will attempt to extrapolate some general implications for Terasen from Enbridge's new agreement with CAAP.

No Widespread Rebasing of Tolls

CAAP did not seek a complete rebasing of Enbridge's tolls. Instead, Enbridge's earnings base was only reduced by $10.9 million after taking into account $6 million of non-routine adjustments rolled into the earnings base. The reduction largely reflects an adjustment to account for the difference between the 2005 National Energy Board (NEB) Multi-Pipeline return on equity and the implied return reflected in Enbridge's 1994 base tolls. When Enbridge's original agreement was reached in 1994, the allowed return on equity implied by the base toll was 12.5%. In comparison, the 2005 NEB Multi-Pipeline ROE is 9.46%. According to Enbridge, the rate base for its mainline system is in the range of $1 billion. If we assume a rate base of $800 million and a 45% common equity component, the reduction in Enbridge's earnings base can be almost entirely accounted for by the difference between current NEB Multi-Pipeline ROE and the implied ROE in 1994 ($800 million X 45% X 300 bps ≈ $10.9 million).

If we applied a similar adjustment to Terasen using an assumed rate base of $300 million, a 45% common equity component and a 300 basis point differential, we would arrive at a reduction to Trans Mountain's earnings base of about $4 million. After normalizing for the temporary decline in Trans Mountain's throughput in Q1/05, this level of reduction is consistent with our current 2006 financial forecast for Terasen.

Opportunities to Offset Lower Earnings Base

Under its agreement with CAPP, Enbridge will have the opportunity to realize bonuses for improving batch quality, delivery predictability and capacity reliability. Through these bonuses and cost savings, Enbridge expects to partially mitigate the impact of the decline in its earnings base. Based on discussions with Terasen's management, we expect similar types of incentives to be incorporated into any agreement that Terasen may reach with CAPP.

We believe that improved service quality has a greater financial benefit to shippers than a small reduction in tolls. With oil prices at almost US$60 per barrel, the pipeline toll (approx. US$1.30/bbl for Trans Mountain) represents a small percentage of producers' revenue on a per barrel basis. To realize the benefit of high oil prices, producers need to have their product delivered in a timely and reliable fashion. As observed in Enbridge's agreement, we expect CAPP to focus more on the issue of providing proper incentives to meet service targets instead of reducing overall pipeline tolls in its negotiations with Terasen.

Conclusion

Based on the outcome of Enbridge's agreement with CAPP, we do not expect a significant negative financial impact for Terasen associated with its ITS renewal. In recent months, Terasen's share performance has lagged behind other energy infrastructure stocks. We believe that Terasen's underperformance may be related to concerns over the ITS renewal. We view Enbridge's agreement as encouraging and recommend investors consider increasing their weighting in Terasen at this time.

Valuation

Our valuation for Terasen is largely based on a dividend yield approach. When the current yield of the ten-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for

Terasen. Our target price of $32.50 reflects a 12-month dividend distribution one-year forward of $0.98 and a required dividend yield of 3.0%.

Price Target Impediments

Factors that could have negative implications for Terasen's earnings and our target price include unexpected increases in operating costs that are unrecoverable under its incentive agreements, failure to renew Trans Mountain's Incentive Toll Settlement after the end of 2005 and a significant and prolonged decline in Western Canadian petroleum production.

Company Description

Terasen is engaged in the transmission and distribution of natural gas and the transportation of crude oil and refined products.

Maureen Howe, a member of the Canadian pipelines and utilities team, is an associate of an insider of Terasen Inc., a component of the pipelines and utilities sector.

Event

Terasen Pipelines filed an application with the National Energy Board to expand the Trans Mountain pipeline system.

Investment Opinion

- **Trans Mountain capacity will increase from 225,000 bpd to 260,000 bpd.** The $210 million expansion will add 35,000 bpd of heavy crude oil capacity through new pump station facilities. Pending regulatory approval, the new capacity is expected to be in service by April 2007.
- **Shippers are supportive of expansion.** The Canadian Association of Petroleum Producers (CAPP) has expressed its support for the project subject to the successful negotiation of tolling and operational arrangements. The tolling treatment for the new facilities is expected to be linked to the discussions on the renewal of Trans Mountain's Incentive Toll Settlement (ITS), which expires at the end of 2005.
- **Expansion represents first step in multi-phased expansion project.** The next phase of expansion is expected to commence in August when Terasen will hold an open season for the construction of a 30-inch pipeline loop between Hinton, Alberta and Valemount, B.C. Subject to necessary approvals, the new loop would increase Trans Mountain's capacity from 260,000 bpd to 300,000 bpd by the end of 2008 at an estimated cost of $365 million.
- **EPS impact difficult to determine at this time.** On a standalone basis, we estimate a full-year EPS impact of approximately $0.06 to $0.07 per share from the pump station expansion project based on our assumptions. However, the ultimate EPS impact to Terasen is difficult to determine at this time given the linking of the negotiations on the tolling treatment for the new pump station facilities with discussions on the renewal of Trans Mountain's ITS. Pending additional information on the final tolling arrangements, we are maintaining our EPS estimates at this time.
- **Announcement very positive sign for Terasen.** We believe yesterday's announcement highlights the advantages of Terasen's phased expansion approach for Trans Mountain as opposed to a greenfield pipeline project that would take considerably longer to develop. Further, we believe the announcement is indicative of producers' support for significant new pipeline capacity from Alberta to the west coast of British Columbia.
- **Valuation.** Our target price of $36.00 (unchanged) reflects a 12-month dividend distribution one-year forward of $0.98 and a required dividend yield of 2.75%.

Details

Terasen Pipelines filed an application with the National Energy Board to increase the capacity of the Trans Mountain pipeline system from 225,000 barrels per day (bpd) to 260,000 bpd. The $210 million expansion will add 35,000 bpd of heavy crude oil capacity through new and upgraded pump stations along the pipeline system between Edmonton, Alberta and Burnaby, B.C. Pending regulatory approval, the new capacity is expected to be in service by April 2007.

The expansion project has the support of the shippers, as represented by the Canadian Association of Petroleum Producers, subject to the successful negotiation of tolling and operational arrangements for the project between CAPP and Terasen. Terasen expects the tolling treatment for the new facilities to be linked to the discussions on the renewal of Trans Mountain's Incentive Toll Settlement, which expires at the end of 2005. According to Terasen, it has made concrete progress on its ITS renewal negotiations with CAPP.

The pump station expansion represents the first step in Terasen's proposed multi-phased expansion of the Trans Mountain system. The next phase is expected to commence in August when Terasen will hold an open season for the construction of a 30-inch pipeline loop between Hinton, Alberta and Valemount, B.C. (the "Anchor Loop"). Subject to necessary approvals, the Anchor Loop would increase Trans Mountain's capacity from 260,000 bpd to 300,000 bpd by the end of 2008 at an estimated cost of $365 million.

Implications For Terasen

On a standalone basis, we estimate a full-year EPS impact of approximately $0.06 to $0.07 per share from the pump station expansion project based on our assumptions. In our analysis, we assumed a realized ROE of 12% and a deemed common equity component of 45%. In addition, we assumed financing of required project equity with an issuance of new shares under Scenario 1 and financing with internally generated funds at an after-tax opportunity cost of 4% under Scenario 2. Our analysis is outlined in Exhibit 1.

Exhibit 1 – Estimated EPS Impact on a Standalone Basis ($MM except per share amounts or otherwise indicated)

	2008E
Pump station expansion capital cost	$210.0
Deemed common equity component	45.0%
Deemed common equity	$94.5
Realized ROE	12.0%
Earnings contribution from expansion	$11.3
Scenario 1 - Financing with New Shares	
Shares outstanding before pump station expansion	104.9
Shares issued @ $36.00 per share to finance expansion	2.6
Total shares (MM)	107.5
EPS impact before dilution	$0.11
Dilution based on assumed 6% annual EPS growth	($0.04)
Estimated EPS Impact	$0.06
Scenario 2 - Financing with Internally Generated Funds	
Earnings impact before opportunity cost of equity	$11.3
After-tax opportunity cost of equity at 4.0%	(3.8)
Estimated earnings impact	$7.6
Estimated EPS impact	$0.07

Source: Company reports, RBC Capital Markets estimates

Notwithstanding our analysis, the ultimate EPS impact to Terasen is difficult to determine at this time given the linking of the negotiations on the tolling treatment for the new pump station facilities with discussions on the renewal of Trans Mountain's ITS. In our financial forecast, we had assumed a modest negative financial impact to Terasen in 2006 related to the renewal of the ITS. In its negotiations with CAPP, Terasen may forego some of the financial benefit associated with the pump station expansion project in order to mitigate any negative financial impact in 2006 related to the ITS renewal. According to Terasen, CAPP is receptive to the concept of stabilizing Trans Mountain's tolls over the next few years instead of having tolls decline in 2006 due to the ITS renewal and increase in 2007 and 2008 due to the pump station expansion project. Pending additional information on the final tolling arrangements, we are maintaining our EPS estimates at this time.

We believe yesterday's announcement highlights the advantages of Terasen's phased expansion approach for Trans Mountain as opposed to a greenfield pipeline project that would take considerably longer to develop. Further, we believe the announcement is indicative of producers' support for significant new pipeline capacity from Alberta to the west coast of British Columbia.

Valuation

Our valuation for Terasen is largely based on a dividend yield approach. When the current yield of the ten-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Terasen. Our target price of $36.00 reflects a 12-month dividend distribution one-year forward of $0.98 and a required dividend yield of 2.75%.

Price Target Impediments

Factors that could have negative implications for Terasen's earnings and our target price include unexpected increases in operating costs that are unrecoverable under its incentive agreements, failure to renew Trans Mountain's Incentive Toll Settlement after the end of 2005 and a significant and prolonged decline in Western Canadian petroleum production.

Company Description

Terasen is engaged in the transmission and distribution of natural gas and the transportation of crude oil and refined products.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent

TMX Project Announcement

Event

- Terasen announced "strong support" by 17 different parties for its initial TMX oil pipeline expansion of 75,000 bbl/d.

What It Means

- Long term EPS growth from expanding its oil pipeline system appears more assured based on the press release. It is, however, the first step of several more that have to lead to long-term take-or pay shipper contracts for the project to go ahead.
- Terasen still does not believe that there is sufficient oil available before 2010 for both the Enbridge $2.5B Gateway and Terasen's TMX oil pipeline expansion projects to proceed at the same time.

For important disclosure information see Appendix A of this report.

Expression of Interest Information

- Terasen's management stated that the proposed confidentiality agreements limit the information it could provide to date. What Terasen asked for was:
  "1. Please provide incremental oil volumes that you plan to ship westbound to either the U.S., Canada or Asia over the next 10 years on a year by year basis and
  2. Please break out these incremental oil volumes you plan to ship by location, i.e. Burnaby, Washington State, Northern B.C. or Southern B.C. "
- **Next Steps:** Terasen stated that the response has led to an "obvious" need to proceed with a 2-3 month effort with the 17 parties to work out commercial arrangements. If successful, Terasen would then proceed to an Open Season to try to contract most/all of the initial 75,000 bbl/d of the TMX looping project. Terasen is targeting for a July 2005 completion.
- The first 75,000 bbl/d of Terasen's TMX expansion (phase 1) will be the costliest of the three phases that could lift volume shipped by 500,000 bbl/d over time. Terasen's TMX project is in direct competition with Enbridge's $2.5 B Gateway oil export project (See page 63-67 of our January 2005 *Gas and Electric Utilities Outlook*).
- The initial expressions of interest on any major pipeline project are not that significant as many pipeline projects have become "paper pipelines" if solid take-or-pay shipper contracts are not ultimately signed to support project financing. Enbridge stated that it was very close to getting several anchor shipper contracts from Asian shippers. If Enbridge is successful, it could delay Terasen's TMX project if it materially reduces Terasen's 17 expressions of interest into fewer than expected shipper contracts.

Valuation

- Both Terasen's and Enbridge's stocks have hit all-time highs many times in the past 4-5 weeks on their oil pipeline expansion prospects and huge flow of funds into defensive higher yielding equity products. We value Terasen one-year out at $27 per share using a 17x P/E on 2006 EPS of $1.60 per share. The only energy utility stock that we attribute a higher P/E multiple to is Enbridge at 18x. Terasen's stock at over $29 per share is currently trading at over 18x 2006 EPS. While we did not change our one-year target, we are increasing our two-year target by $0.50 per share for relatively better longer-term TMX looping pipeline prospects.
- We believe the stock market is paying a lot for Terasen's stock and EPS growth prospects of 6% per year. Terasen's debt to total cap is 67% which limits its EPS growth rate, while Enbridge is 700 bp lower at a 60% debt to total cap, which allows for a marginally higher EPS growth rate of about 8% per year. However, Terasen has many regulatory deferred accounts at its gas utility that protect its equity shareholders and allow for higher than normal debt leverage that is fully passed through to customers.
- Terasen's senior unsecured debt rating is BBB minus at S&P while ENB has an A minus credit rating from S&P. However, Terasen's rating under Moody's of A3/Stable is identical to Enbridge's. We understand that Terasen's debt trades at 15-20 basis points above Enbridge's so the market views Enbridge's debt as superior by one notch, not the three notches implied by S&P nor Moody's parity assumption.
- Terasen's dividend yield has gone under 3%, representing another record low for the interest sensitive energy utility sector. We believe that Terasen will raise its dividend by $0.06 per share in 2005 or 5%. Enbridge's dividend was raised by 9.3% recently to $2.00 per share. Our preference therefore remains Enbridge.

Definition of Scotia Capital Equity Research Ratings & Risk Rankings

We have a three-tiered rating system, with ratings of 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe.

Our risk ranking system provides transparency as to the underlying financial and operational risk of each stock covered. Statistical and judgmental factors considered are: historical financial results, share price volatility, liquidity of the shares, credit ratings, analyst forecasts, consistency and predictability of earnings, EPS growth, dividends, cash flow from operations, and strength of balance sheet. The Director of Research and the Supervisory Analyst jointly make the final determination of all risk rankings.

Ratings

1-Sector Outperform
The stock is expected to outperform the average total return of the analyst's coverage universe by sector over the next 12 months.

2-Sector Perform
The stock is expected to perform approximately in line with the average total return of the analyst's coverage universe by sector over the next 12 months.

3-Sector Underperform
The stock is expected to underperform the average total return of the analyst's coverage universe by sector over the next 12 months.

Other Ratings
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Rankings

Low
Low financial and operational risk, high predictability of financial results, low stock volatility.

Medium
Moderate financial and operational risk, moderate predictability of financial results, moderate stock volatility.

High
High financial and/or operational risk, low predictability of financial results, high stock volatility.

Caution Warranted

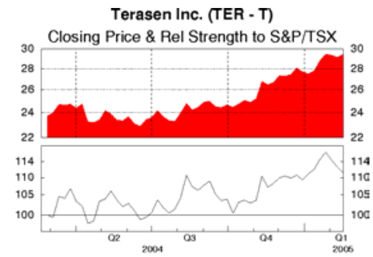
Q4/04 EPS Lower Than Expected



Source: Global Insight, Inc.

Event

- TER reported Q4/04 EPS of $0.51/share that was lower than our and consensus estimates of $0.59/share. There were no non-recurring items, however, a change in accounting for income taxes in Q4/04 cost about $0.06/share and led to a restatement of quarterly earnings in prior periods such that the net effect on annual earnings was nil.

What It Means

- Earnings from gas distribution declined by 5% YOY mainly due to a lower allowed ROE that was only partly offset by cost efficiencies due to the integration of the mainland and Vancouver Island operations. Earnings from petroleum transportation were up 11% YOY driven by Trans Mountain and Express. TER's water and utility services also posted strong results.
- TER maintained its guidance of 6% growth in recurring EPS that implies 2005 EPS of $1.48/share.
- We downgraded TER to a 3-Sector Underperform on Sept 16, 2004 due to its relatively expensive P/E valuation. TER's unchanged target P/E multiple on 2006 EPS of 18x yields a one-year target of $29/share.

Valuation

- **Shaved 2005-06 EPS forecasts, Targets unchanged:** We reduced our 2005 and 2006 EPS estimates for TER by $0.02 per share as our earlier estimates appear slightly optimistic on petroleum transportation earnings. Furthermore, expected low forecast 2006 interest rates will remain a headwind for gas distribution earnings and the risk that contribution from Trans Mountain may initially decline once the current Incentive Toll Settlement (ITS) expires at the end of 2005. It is modeled after ENB's five-year agreement that has expired and has an April 2005 deadline for resettlement. TER's management also guided to 6% growth in EPS (unchanged) in 2005 (from a base of $1.40 per share in 2004) and implied that growth is likely to be similar in 2006 if the Trans Mountain settlement is not unfavourable. We increased TER's target P/E multiple from 17x to 18x on February 2, 2005 when we moved up our valuation multiples for all Canadian gas and electric utilities due to faltering economic data in Canada, weak earnings outlook in Canada and continued strong inflow in dividend and income funds ($2.7B in Q4/04 and $1B in Jan 2005). We continue to value TER at a premium multiple (second only to ENB) due to a) longer-term oil pipeline growth prospects that are more certain with high crude oil prices and visible 6% plus per year organic EPS growth through at least 2005. Our one- and two-year targets are unchanged at $29 per share and $28 per share.

Q4/04 Highlights

- **Q4/04 EPS:** TER's Q4/04 earnings of $0.51 per share appeared to be clean. However, changes in recording income tax at Terasen Gas had a negative impact of about $0.06 per share that was not expected. This change has impacted all the quarterly earnings which net out on an annual basis. The quarterly dividend was increased to $0.225 per share from $0.21 per share, however, the increase came one quarter earlier than usual. The annualized divided for 2005 will be $0.90 per share compared to our forecast of $0.89 per share. Capital expenditures are expected to rise significantly to $350M in 2005 from $154M in 2004. Management expects to fund this capex via internal cash flows and subsidiary-level debt. Most of this capex will be in gas distribution ($240M) that includes $50M for putting Coastal Facilities buildings into the rate base from its present lease arrangement, the Fraser river crossing ($20M) and initial expenditures for LNG storage at Vancouver Island ($23M). The capital budget also includes $40M at Trans Mountain and $10M mainly for de-bottlenecking at Corridor.
- **Q4/04 Petroleum Transportation Strong:** Petroleum transportation earnings rose to $19.9M from $17.9M in Q4/03 despite a 2.5% decline in revenue due to lower tolls at Trans Mountain. Operating efficiencies at Trans Mountain and better contributions from Express led to the rise in earnings despite a 5% ($0.2M) YOY decline in earnings from Corridor. Trans Mountain had strong volume growth in both Canada and U.S. while volumes at Express remained flat YOY. TER management stated that Trans Mountain volumes were lower in December 2004 and remained so in Q1/05 mainly due to outages at several oil sands facilities (Shell, Suncor) and refinery turnarounds. A $2.5M decline in O&M expenses was partially offset by a $0.7M rise in depreciation. Financing costs continued to fall due to debt repayment and were down 6% and 5% in Q4/04 and 2004 respectively. TER has some foreign exchange hedges that have reduced the earnings impact of balance sheet translation. A C$0.10 swing would impact TER's income statement by only $1.1M ($0.01/share). TER is currently negotiating a new ITS with Trans Mountain shippers as the current incentive-based agreements are expiring at the end of 2005. We believe that this is a material risk to 2006 earnings.
- **Q4/04 Gas Distribution:** Gas distribution earnings were down 5% and 3% in Q4/04 and 2004 mainly due to lower allowed ROEs and earnings sharing. Customer additions remained strong during Q4/04 and total additions during 2004 were 15,983, double that of previous

years. Q4/04 natural gas sales volumes were down 6% to 41.4 PJ while 2004 volumes were also down 3% to 121.6 PJ. A drop in allowed ROE due to lower 2004 forecast interest rates and the impact of 50:50 cost efficiency sharing with customers were partly offset by organic growth and synergies of merging the Mainland and Island gas utilities. Allowed ROE's will fall further by 12 bps in 2005 to 9.03% at Terasen Gas and 9.53% at TGVI. TER has also filed a request with BCUC to consider ROE and capital structure adjustments based on the July 2004 generic EUB decision. TER's CEO estimated that a decision on this application is not likely before Q3/05.

- **Water & Utility Services and Other:** Earnings from the small water and utility services segment were up 75% to $0.7M in a seasonally weak quarter. Most of this growth is attributable to the US$30M Fairbanks Alaska water utility acquisition that started contributing effective August 1, 2004. TER has allocated $50M in its 2005 capital plan for acquisition (20%-50%) and organic growth (50%-80%) in this segment. Management stated that they were currently considering a few small acquisitions in this segment and maintained their expectation that about 33% of its 6% per year EPS growth target will come from this segment. Losses from the other activities segment increased to $9.3M from $8.8M mainly due to lower tax recovery.
- **Growth Outlook:** TER has a few growth opportunities under consideration at present.
  1. **LNG Storage:** On November 3, 2004, BC Hydro announced that Duke Point Power Energy has been selected to build a 250 MW gas-fired power project on Vancouver Island. In the Q4/04 release TER announced that BCUC had approved TER's proposed $100M LNG storage and gas compression facility subject to several conditions including a long-term transportation service agreement with BC Hydro on Feb 16, 2005. On Feb 17, 2005, BCUC approved a PPA between BC Hydro and Duke Point Power that is contingent on a natural gas procurement contract with TER, so this project looks like it is likely to go ahead. TER's board has approved $94.4M (excluding gas compression) for this project.
  2. **Express Expansion:** The 108,000 bpd Express expansion is targeted for April 2005 and is on-time and under budget ($0.05 per share EPS impact post split based on current tolling agreements). TER is also working with shippers such as Shell for the Corridor expansion.
  3. **TMX Project:** TER hopes to get expressions of interest for its TMX looping project by year-end with a possible Open Season to take place by mid-2005 as initial EOIs suggest strong shipper support. TER has capitalized approximately $4M of expenses with regard to this project in 2004 and expects to spend between $7M-12M in 2005 (all capitalized). It is proposing two options:
     - **Option 1:** A looping proposal that would transport crude to Vancouver for delivery to U.S. refineries in California.
     - Option 2: A northern leg that will transport oil sands crude to Prince Rupert for export to Asia via VLCC tankers. This is identical to ENB's Gateway Oil Pipeline proposal.

  The Canadian Association of Petroleum Producers estimated that 600,000 bpd of new pipeline capacity will be required to service incremental oil sands production over the next decade. There are various projects including TER's TMX (625,000 bpd), ENB's Gateway (400,000 bpd), TRP's Keystone pipeline (435,000 bpd), Koch's Minnesota pipeline (350,000 bpd) and Southern Access (250,000 bpd) that are competing for this incremental oil production. We believe that only one pipeline will be successful in the short-term and continue to view ENB's Gateway oil proposal as having better chances of success compared to TER's TMX looping proposal and TRP's recently announced US$1.7B Keystone oil pipeline proposal from Alberta to Illinois. Strategically, it appears to make political sense for both the Alberta and Federal Governments to support Alberta oil exports to China to keep the U.S. honest in trade matters. ENB has seeded the Chinese refinery market for several years and has a materially larger balance sheet than TER's that could tip the project in ENB's favour. There is only room for one project in the mid-term and both companies continue to point this out to investors. We believe that ENB is in advanced talks with Asian shippers like Sinopec and Petrochina for contracts on its Gateway pipeline.

Definition of Scotia Capital Equity Research Ratings & Risk Rankings

We have a three-tiered rating system, with ratings of 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe.

Our risk ranking system provides transparency as to the underlying financial and operational risk of each stock covered. Statistical and judgmental factors considered are: historical financial results, share price volatility, liquidity of the shares, credit ratings, analyst forecasts, consistency and predictability of earnings, EPS growth, dividends, cash flow from operations, and strength of balance sheet. The Director of Research and the Supervisory Analyst jointly make the final determination of all risk rankings.

Ratings

1-Sector Outperform
The stock is expected to outperform the average total return of the analyst's coverage universe by sector over the next 12 months.

2-Sector Perform
The stock is expected to perform approximately in line with the average total return of the analyst's coverage universe by sector over the next 12 months.

3-Sector Underperform
The stock is expected to underperform the average total return of the analyst's coverage universe by sector over the next 12 months.

Other Ratings
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Rankings

Low
Low financial and operational risk, high predictability of financial results, low stock volatility.

Medium
Moderate financial and operational risk, moderate predictability of financial results, moderate stock volatility.

High
High financial and/or operational risk, low predictability of financial results, high stock volatility.

Caution Warranted
Exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, exceptionally high stock volatility. For risk-tolerant investors only.

Venture
Risk and return consistent with Venture Capital. For risk-tolerant investors only.

Q1/05 EPS Temporarily Off, 2005 Still OK

Event

- TER reported Q1/05 EPS of $0.63/share that was lower than our $0.68/share estimate and the First Call Average of $0.64/share (eased from $0.66/share recently). 2006 EPS of 6% growth was unchanged.

What It Means

- We discount the temporary shortfall of $0.05/share that Trans Mountain lost due to major oil sands problems as a one time event. (Suncor plant fire, Syncrude problems).
- Earnings from gas distribution firmed $0.01/share to $0.47/share from $0.46/share even though 2005 allowed ROE fell due to cost efficiencies and strong customer growth. TER's water and utility services added $0.01/share as well and Corporate activities lost $0.03/share (a $0.02/share improvement due to mark to market gains at Clean Power).
- We decided to upgrade TER to a 2-Sector Perform as it has corrected 8% since early February on some concern of temporary throughput loss and possibly some improved prospects for Enbridge's Gateway oil pipeline export project that competes against TER's TMX project.

Valuation

- **2005-06 EPS Forecasts, Targets Unchanged:** TER's management kept its 6% growth target in EPS intact for 2005 from a base of $1.40 per share in 2004. There is some risk from Trans Mountain in 2006 regarding an Incentive Toll Settlement (ITS) that expires at the end of 2005. ENB's five-year agreement expired in April 2005 without a resettlement so TER has yet to negotiate its renewal. We increased TER's target P/E multiple from 17x to 18x on February 2, 2005 when we moved up our valuation multiples for all Canadian gas and electric utilities due to faltering economic data in Canada, weak earnings outlook in Canada and continued strong inflow into dividend and income funds. We continue to value TER at a premium multiple (second only to ENB) due to a) its longer-term oil pipeline growth prospects that are more certain with high crude oil prices and consistent track record of 6% per year organic EPS growth. Our one year target is unchanged at $29 per share but with the stock correcting towards $27 per share from just under $30 per share in February 2005, we upgraded TER to a 2-Sector Perform.

Q1/05 Highlights

- **Q1/05 EPS:** TER's Q1/05 earnings of $0.63 per share included a $0.02/share mark to market gain in its 30% go forward equity interest in Clean Energy. However, on its Q1/05 Conference call, TER management stated that its 6% 2005 EPS growth guidance excluded mark to market gains. When questioned how TER will make up the modest Q1/05 EPS shortfall in several different ways, TER's management kept coming back to tighter cost control and efficiency improvements.
- **2005 Capital Expenditures:** Capital expenditures may rise to $350M in 2005 from $154M in 2004. Management expects to fund this capex via internal cash flows and subsidiary-level debt. Most of this capex will be in regulated gas distribution ($240M) that includes $50M for putting Coastal Facilities buildings into the rate base from its present lease arrangement, the Fraser river crossing ($20M) and initial expenditures for approved LNG storage at Vancouver Island ($23M) that is going through a final appeal process next month. The capital budget also includes $40M at Trans Mountain and $10M mainly for de-bottlenecking at Corridor.
- **Q1/05 Petroleum Transportation Temporarily Weak:** Petroleum transportation earnings fell to $12.7M from $18.3M in Q1/05 due mainly to Trans Mountain losing 29% and 52% of its YOY oil throughput volume respectively on its Canadian mainline (down to 170,000 bbl/day) and U.S. mainline (down to 44,500 bbl/day). This was more of a drop than we expected and was due to the fire at Suncor, problems at Syncrude and several refinery turnarounds. Both Express and Corridor Q1/05 earnings eased just under $0.01 per share each. Express suffered a temporary volume hit as well while Corridor's 2005 allowed return fell with forecast 2005 interest rates. TER management stated that Trans Mountain oil nominations for May were at a record 400,000 bbl/day so apportionment is in effect. TER is currently negotiating the framework for a new long term operation deal with Trans Mountain shippers. The Enbridge settlement is due imminently and will set the parameters for the TER deal. In general, both Enbridge and TER have earned materially above regulated ROE levels on their oil pipeline investment under long term operating contracts due to success in managing costs and/or higher volumes. It is therefore likely that the initial year of their new agreements may be low for both companies.
- **Q1/05 Gas Distribution:** Gas distribution earnings were up $1M or $0.01 per share to $49M or $0.47 per share. A 22 basis point lower allowed ROE for 2005 (9.03%) was more than offset by strong customer additions and tag end synergies of merging the Mainland and Island gas utilities. Allowed ROE for 2005 is 9.53% at TGVI. TER has also filed a request with BCUC to consider ROE and capital structure adjustments based on the July 2004 generic EUB decision. TER's CEO estimated that a decision on this application is not likely before Q3/05.

- **Water & Utility Services and Other:** Q1/05 earnings from the small water and utility services segment were up 75% to $0.8M in a seasonally weak quarter. Most of this growth is attributable to the US$30M Fairbanks Alaska water utility acquisition that started contributing effective August 1, 2004. TER has allocated $50M in its 2005 capital plan for acquisition (20%-50%) and organic growth (50%-80%) in this segment.
- **Other Activities:** Losses from the other activities segment decreased to $2.9M from $5.1M mainly due to higher mark to market gains of $2.6M from $1.7M in Q1/05 at 30% owned Clean Energy.
- **Growth Outlook:** TER has more than a few growth opportunities under consideration at present.
    1. **LNG Storage:** The BCUC had approved TER's $100M LNG storage and gas compression facility subject to a final appeal in June 2005.
    2. **Express Expansion:** The 108,000 bbl/day Express expansion was finished on time and $10M under budget at the end of April 2005 ($0.05 per share EPS impact post split based on current tolling agreements).
    3. **Alberta Gathering Oil Line:** TER is working in an exclusive negotiation with Shell for a possible $700M oil gather pipeline expansion in Alberta.
    4. **TMX Project:** TER hopes to go to an Open Season to get firm contract for TMX 1 pumping ($570M) by mid-2005. As a stand-alone economic project, it does not appear to work but it is a pre-cursor to TMX 2 and TMX 3 stages that in total, could add 625,000 bbl/day. TER capitalized $4M of TMX expenses in 2004 and expects to spend between $7M-$12M in 2005 (all to be capitalized). It is proposing two options:
        - **Option 1:** A looping proposal that would transport crude to Vancouver for delivery to U.S. refineries in California.
        - **Option 2:** A northern leg that will transport oil sands crude to Prince Rupert for export to Asia via VLCC tankers. This is identical to ENB's Gateway Oil Pipeline proposal.

    The Canadian Association of Petroleum Producers estimated that 600,000 bbl/day of new pipeline capacity will be required to service incremental oil sands production over the next decade. There are various projects including TER's TMX (625,000 bbl/day), ENB's Gateway (400,000 bbl/day), TRP's Keystone pipeline (435,000 bbl/day), Koch's Minnesota pipeline (350,000 bbl/day) and Southern Access (250,000 bbl/day) that are competing for this incremental oil production.

    We believe that only one pipeline will be successful in the short-term and have viewed ENB's Gateway oil proposal as having better chances of success compared to TER's TMX looping proposal. TRP's recently announced US$1.7B Keystone oil pipeline proposal from Alberta to Illinois also initially appeared to be too little too late.

    Strategically, it appears to make political sense for the Alberta, B.C. and Federal Governments to support Alberta oil exports to China to help keep the U.S. honest in trade matters. ENB has a Memorandum of Understanding for 50% of its proposed capacity from PetroChina. Our confidence in ENB's Gateway pipeline prospects improved materially after seeing PetroChina in Beijing on the Scotia Capital China tour in 2004.

    Suncor's View of TMX: We can speculate all we want on which project will win but companies like Suncor that are adding up to 300,000 bbl/day to its existing 250,000 bbl/day of Alberta oil sand capacity by 2012 may have a different view. We listened to Rick George, CEO of Suncor who presented at a Scotia Capital Luncheon on Wednesday May 3, 2005. His thoughts are:

1) **Gateway was handicapped at only 10% by Suncor in May 2004.** Mr. George raised that handicap to 50/50 recently based on Enbridge's success to date with PetroChina on preliminary terms to take 50% of the throughput.

2) He initially thought that TransCanada's Keystone project had no chance but Suncor's marketing people have convinced him that this alternative route has some merit and should be looked at further.

3) He initially thought that Trans Mountain's TMX looping project that can be done in stages had the most logical and highest probability of success but points 1 and 2 negate that somewhat lately.

4) When asked what would make him get excited about aggressively participating on Enbridge's Gateway project, **Mr. George stated that if China committed to paying WTI plus prices for equivalent Alberta crude and put up $1B-$2B of firm commitments for Gateway, he would get excited in supplying it.** This of course, would negate his interest in TMX until later in the decade or into the next decade. Therefore, to speculate on Enbridge's prospects over Terasen's, one has to take a view on China's desire to commit to Alberta oil sands crude with billions and not words to satisfy Alberta oil sand producers that they are serious. **After watching China's growth in oil imports to 3M bbl/day from nothing in 5 years with forecasts as wild as 20M bbl/day of imports in 20 years, we suggest China had better hurry and commit prior to Terasen's Open Season for TMX 1 if it wants any significant Alberta crude by 2010. Our speculative sense from Enbridge is that they will commit.**

Definition of Scotia Capital Equity Research Ratings & Risk Rankings

We have a three-tiered rating system, with ratings of 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe.

Our risk ranking system provides transparency as to the underlying financial and operational risk of each stock covered. Statistical and judgmental factors considered are: historical financial results, share price volatility, liquidity of the shares, credit ratings, analyst forecasts, consistency and predictability of earnings, EPS growth, dividends, cash flow from operations, and strength of balance sheet. The Director of Research and the Supervisory Analyst jointly make the final determination of all risk rankings.

Ratings

1-Sector Outperform
The stock is expected to outperform the average total return of the analyst's coverage universe by sector over the next 12 months.

2-Sector Perform
The stock is expected to perform approximately in line with the average total return of the analyst's coverage universe by sector over the next 12 months.

3-Sector Underperform
The stock is expected to underperform the average total return of the analyst's coverage universe by sector over the next 12 months.

Other Ratings
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Rankings

Low
Low financial and operational risk, high predictability of financial results, low stock volatility.

Medium
Moderate financial and operational risk, moderate predictability of financial results, moderate stock volatility.

High
High financial and/or operational risk, low predictability of financial results, high stock volatility.

Caution Warranted
Exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, exceptionally high stock volatility. For risk-tolerant investors only.

Venture
Risk and return consistent with Venture Capital. For risk-tolerant investors only.

Terasen Presentation

Event

- Terasen (TER) presented at Scotia Capital's Spring Issuer's Bond Conference on May 19, 2005 where management updated bond investors on its prospects and credit quality features.

What It Means

- TER stated that it uses the exact same presentation for both equity and debt audiences. Beside its more obvious oil pipeline growth opportunities, TER spent some time explaining its water and sewer activities as well as the status of B.C. LNG and thoughts of possible acquisition of certain assets if Duke Energy becomes a seller.
- We recently upgraded TER to a 2-Sector Perform on an 8% stock price correction from peak and less certainty that Enbridge wins the next major oil pipeline expansion (Gateway) over TER's TMX due to possible native issues that emanate from Mackenzie Valley.

Presentation Highlights

- **Growth Outlook:** Terasen (TER) presented at Scotia Capital's Spring Issuer's Bond Conference on May 19, 2005. TER's annual EPS growth target of 6% was reiterated. It has realized 8.1% annual average EPS growth since 1999. TER mentioned the status of several major growth prospects that have been known for a while:
  1. **LNG Storage:** The BCUC has approved TER's $150M LNG storage and gas compression facility on Vancouver Island subject to a fourth and final leave to appeal that should be concluded one way or another in June 2005. TER's LNG tank project would freeze natural gas for injection in summer months and withdraw gas for peak shipping demand in winter months.
  2. **Alberta Gathering Oil Line:** TER is currently working on a negotiation with Shell for a possible $700M - $800M oil gathering pipeline expansion in Alberta. This 110,000 bbl/day pipeline project was described by TER as Phase 2 of the Corridor Expansion/Bison project. TER stated that it would continue negotiations with Shell into early 2006 while also looking for third party shipper opportunities to augment the project. Tentative in-service date is 2009.
  3. **TMX Project Open Season:** TER hopes to go to an open season to get firm contracts for the TMX 1 pumping expansion and anchor loop project by mid-2005. During this open season TER would also be looking for commitments by shippers for the base load for the entire TMX expansion project. TER indicated that the pumping station expansion on Trans Mountain would cost $205M and add 35,000 bbls/day in 2006 while the anchor loop project would cost $365M for an additional 40,000 bbls/day capacity in 2008. TER would then have to assess:
     - **TMX Option 1:** A looping proposal that would transport crude to Vancouver for delivery to U.S. refineries in California or to Asia through small (550,000 bbls per ship) tankers. TER's estimated cost is $2.3B for 550,000 bbls/day.
     - **TMX Option 2:** A northern leg that will transport oil sands crude to Prince Rupert for export to Asia via VLCC tankers (1M+ bbls per ship). This is similar to ENB's Gateway oil pipeline proposal. TER's estimated cost is $2.6B for 550,000 bbls/day.

     The Canadian Association of Petroleum Producers estimated that 600,000 bbl/day of new pipeline capacity will be required to service incremental Alberta oil sands production over the next decade while TER estimates 800,000 bbl/day.
  4. **Water and Utility Service:** TER management spoke about its expansion potential in water and utility services and explained the four fragmented services it offers: 1) sell plumbing products, 2) operate water and sewer systems (90 utility systems to date in over 50 communities around North America), 3) operate a blend of utilities including water and 4) outsource services via 30% owned CustomerWorks like billing, meter reading etc. Management continues to see small (~$25M) acquisition potential in this area, where regulated returns are slightly higher than what TER achieves from a regulated gas utility rate.
     - **Whistler Utility Infrastructure Project (New):** TER is working with the municipality of Whistler to develop a hybrid gas/ground source heat pump (GSHP) utility for the town prior to the 2010 Olympics. It would include a $35M gas pipeline from Squamish to Whistler to replace the existing propane bases system there.
  5. **Inland Pacific Connector:** TER still believes that its $300 to $500M Inland Pacific Connector gas transmission line project connecting its Southern Crossing Pipeline to the Lower Mainland and Sumas area has merit but no further progress was announced. TER said this line would require major third party support with other utilities in the Pacific Northwest.

- **TER Financial Objectives**: TER reiterated its 6% per year EPS growth guidance while maintaining a strong balance sheet that would allow for low cost of capital acquisition and investment opportunities. When asked about the potential for an acquisition of some of the Duke/Westcoast assets if they became available in B.C. and/or Ontario, TER said its was a "natural acquirer" for those assets should the opportunity arise, particularly the T South gas pipeline in B.C. as TER has contracts for 40% of that transmission line's capacity. TER said it would likely be going to the equity market in late 2007 or 2008 assuming the above growth prospects go forward. TER stated that if partners become involved in the list of projects presented (possible) then equity may not be required.

Valuation

- **2005-06 EPS Forecasts, Targets Unchanged:** TER’s 6% EPS growth target is based on a $1.40 per share normalized 2004 level. There remains some risk that Trans Mountain's earnings fall significantly in 2006 at the beginning of a new 5 year Incentive Toll Settlement (ITS) that expires at the end of 2005. ENB’s five-year agreement expired in April 2005 without a resettlement so TER has yet to negotiate its renewal. ENB stated on its Q1/05 EPS conference call that is took an undisclosed provision against its Q1/05 EPS for a likely lower initial return. Both ENB and TER have at times, earned ROE's on their oil pipeline assets that approached 15% over the past several years from their 5 year incentive tolling arrangements.
- We use an 18x P/E for TER to establish our $29 per share one year target. This is a premium multiple (second only to ENB at 20x) due to a) TER's longer-term oil pipeline growth prospects that are more certain with high crude oil prices and oil sands developments and b) consistent track record of 6% plus per year organic EPS growth. We value ENB at 20x due to a consistent historical EPS growth rate of closer to 10% per year with a superior balance sheet, a more global footprint of energy infrastructure assets, greater liquidity and a New York listing.

Buy. Debt levels remain the principal knock in the credit markets against **Terasen Inc. (A(low)/ BBB-(pi)/ A3)** and its operating subsidiaries. The very thin deemed equity capitalization of its regulated gas distribution operations is the main driver of consolidated leverage. This leverage translates into weak credit ratios, with FFO interest coverage of just 2.8x in 2004, and only moderate prospects for improvement. Leverage appears to be the principal reason for the lowly "public information only" rating from S&P, which we think is far too conservative, but which we also acknowledge is unlikely to change. Apart from leverage, however, we see much to like in Terasen's businesses. All of its operating units exhibit very good stability of earnings, which is crucial to managing with leverage. Diversification is increasingly broad, with 2004 earnings split 56% from gas distribution, 40% from petroleum transportation, and 5% from water utility services. Compared to peers Enbridge and TransCanada PipeLines, we think Terasen's event risk is slightly lower, as we see Terasen management as less aggressive with acquisitions, and Terasen has a much lower likelihood of major participation in the big-ticket Alaska or Mackenzie Valley gas pipeline construction projects. Even if the big TMX project proceeds, it has distinct stages, and thus in our view less risk, than a one-shot line from Alberta to the West Coast of B.C. We see Terasen management's 6% earnings growth target as achievable with low-risk, incremental growth. In our judgement, these credit-positive features of Terasen compensate for most of its leverage handicap, and the roughly 10 bps of spread pickup over its peers make it, in our view, good value, in the context of today's expensive corporate market.

Gas Distribution

Terasen's current thrust in the gas distribution business is towards achieving operational efficiency gains. In particular, the company has already declared progress on "…improved operating efficiencies … through the ongoing integration of Terasen Gas and Terasen Gas Vancouver Island." This initiative brings to our mind a Toronto operations centre facilities tour staged in 2003 by sectoral peer Enbridge Gas Distribution, which left us very favourably impressed. The tour demonstrated what we see as solid, practical potential for operational efficiency gains in the gas distribution sector, opened up by the innovative application of modern information and communications technology, as well as other technical innovations. We believe similar applications are available to Terasen Gas Inc. and Terasen Gas Vancouver Island Inc. (TGVI), beyond the more direct synergies available on operational amalgamation of the two organizations. We note that an increasing amount of the efficiency gains must be shared with consumers under the multi-year performance based regulation settlement approved for 2004-2008 by the BCUC. The risk that efficiency gains could fail to meet targets, thereby lowering ROEs and interest coverage ratios, is a risk we take seriously, and it has been mentioned most recently by DBRS in its report on Terasen Gas this week. However, we think this risk is tempered by the ability to use technology to drive productivity in the sector.

TGVI has for some time pursued a project to increase natural gas capacity on Vancouver Island. TGVI's current proposal is for a compression facility with an adjacent LNG storage facility, with up to 1 billion cubic feet storage capacity. This would allow storage of gas shipped to the island during the off-peak season, and allow more efficient use of existing pipeline transmission capacity to the island. In February, the British Columbia Utilities Commission gave conditional approval to the LNG facility. The conditions included signing a long-term transportation service agreement with BC Hydro. BC Hydro, in turn, was to be the offtaker of the proposed Duke Point gas-fired power plant on Vancouver Island. Last week, BC Hydro abandoned the Duke Point project, as legal impediments achieved by the opposition of environmental activist groups had introduced delays that jeopardized the project's targeted 2007-2008 availability date. At present, it appears that the cancellation of Duke Point will delay TGVI's proposed LNG facility, perhaps by one to three years. TGVI will thus have a scaled-back capex program over the next few years, though some amounts (we believe less than $50 million) will probably be spent to allow the island's existing natural gas-fired electricity generation plant to shift towards base load operation (from peaking operation), to help meet electricity demand prior to BC Hydro's installation of a new electric transmission cable, probably in 2008. Part of BC Hydro's back-up plan to ensure electric system reliability on the Island until the new transmission cable is operative may include curtailment of industrial loads, though we understand that this curtailment will probably not stimulate near-term natural gas demand. Terasen believes that the LNG facility remains desirable to meet medium-term demand for natural gas on Vancouver Island, and we think the company will approach the regulator with a similar storage facility proposal at some future date.

Petroleum Transportation

Terasen has a one-third share in the Express pipeline, and is the operating partner. The Express expansion was completed on time, and a little under budget, in April, representing a capacity increase (on Express) of over

60%. The capital cost was about US$100 million, and was entirely debt financed through the $110 million US market debt issue last July. The earnings impact should be evident in Q2 results, and should annualize to about $5 million, or a 3% increase in Terasen's consolidated earnings. Express earnings are sensitive to changes in throughput, subject to a floor provided by ship-or-pay contracts for most of its capacity. Q1 throughputs on Express were weak, affected by temporary interruptions in Albertan oil sands production, notably at Suncor, though Q2 should show improvement.

The Trans-Mountain pipeline also saw lower volumes in Q1 due to Alberta production outages, but should also rebound in Q2. The Corridor pipeline is contracted (primarily to Shell Canada) on a ship-or-pay basis, and its earnings are not sensitive to throughput. Terasen continues to work with Shell towards a capacity expansion of Corridor from the current 155,000 bpd, which would occur in stages. The first of these, already approved by shippers, is a simple pumping capacity upgrade, good for an incremental 35,000 bpd for only $6.5 million. The second is a much larger expansion, for roughly $800 to $900 million. It is as yet unapproved, but could be available for service as soon as 2009.

Terasen management continues development work on the TMX proposal. Should Enbridge's Gateway proposal prevail, we would not view the "loss" as negative for Terasen credit quality. Nonetheless, we continue to think the staged nature of TMX probably makes it a less risky project from a credit perspective than a single-stage Edmonton to West Coast B.C. alternative (subject, of course, to financing, contracting, and other details).

Water

Terasen's water segment's second and third quarters (the strongest quarters seasonally) should see materially higher earnings this year, reflecting the inclusion of the Fairbanks, Alaska water utility's results. The Fairbanks acquisition, for US$30 million, closed on August 1, 2004. Management expects about one-third of Terasen's targeted average 6% future earnings growth will come from water utilities. We continue to think that the acquisition of assets in the sector is at present politically contentious among some interest groups in Canada, and even in the U.S. Nonetheless, we also think that Terasen should be able to appeal to some municipal councils by offering efficient, effective, consistently high-quality facility management, and thus expand its business gradually, with fairly small, low-risk capital or operating contracts, or acquisitions. Terasen has allocated up to $50 million of its capital plan for 2005 to the sector, though the availability and attractiveness of opportunities will always be hard to predict, and we anticipate "lumpy" growth for the segment. We note EPCOR's valuable water utility business (which contributed 27% of 2004 earnings), and we continue to view the water business line as a very attractive, diversifying complement to Terasen's gas distribution and petroleum transportation core business lines.

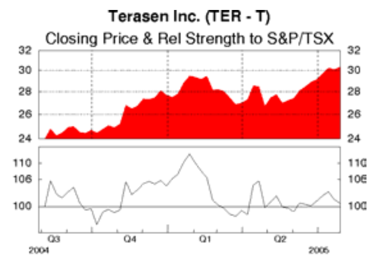
Higher Q2/05 EPS and 2006 EPS



Source: Global Insight, Inc.

Event

- TER reported Q2/05 EPS of $0.28/share that was higher than our $0.18/share estimate and the First Call Average of $0.21/share as Trans Mountain ran at 100% of capacity, the Express expansion added more than expected, and non-recurring mark to market gains continued.

What It Means

- We discounted the temporary Q1/05 shortfall at Trans Mountain due to oil sands problems at Suncor and Syncrude and were surprised Trans Mountain ran full in Q2/05 since Suncor was short 90,000bpd.
- Earnings from gas distribution firmed $0.02/share on strong customer growth and cost efficiencies but half was simply deferred. Stronger Water and utility services results added $0.01/share while non-recurring mark to market gains at 40% owned Clean Power added $0.03/share.
- The bigger positive surprise was an extra $4M/year of tax related benefits from the Express Pipeline expansion ($0.02/share taken in Q2/05) that are viewed as "permanent".

Valuation

- **2005 EPS Forecast Unchanged, 2006-07 $0.05 per share Higher:** TER's management kept its 6% growth target in EPS intact for 2005 from a 2004 base of $1.40 per share adding that several small acquisition in the water business in Q3/5 are still required to make its 6% target and that mark to market gains are not part of the target. **However, 2006 and forward EPS will rise a "permanent" $0.04 per share due to better than expected results from the Express Pipeline expansion than previously estimated.** We also awarded $0.01 per share more for TER's water business that is growing better than expected. There is still some risk from Trans Mountain to 2006 EPS regarding its new 5 year Incentive Toll Settlement (ITS) but management appeared satisfied that good progress is being made now that Enbridge signed its 5 year CAPP agreement. We last increased TER's target P/E multiple from 18x to 18.5x on July 7, 2005 instead of 1x for all Alberta based utilities including Enbridge due to the strength of Alberta's economy at $60/bbl oil, lower than expected interest rates (4.2% 10 year Canada forecast) non-existent inflation in Canada, negative retail sales in May 2005 and record funds flow into dividend and income funds.
- **Raise P/E by 0.5x:** Given TER's increasingly likely success on several oil pipeline projects with a) the upgrade in CAPP's Canadian oil production and imminent Shell Corridor prospects, we are adding 0.5x to TER's P/E to 19x. Our one year target at 19x on $0.05 per share higher 2006-07 EPS adds $2 per share so our new 1 year target is $32 per share, up from $30 per share. The stock market instantly reacted to the Q2/05 EPS release and added $1.40 per share to TER's stock price so we maintain our 2-Sector Perform rating.

Q2/05 Highlights

- **Q2/05 EPS:** TER's Q2/05 earnings of $0.28 per share beat our $0.18 per share and the First Call Average of $0.21 per share. The number included 1) a $0.04 per share non-recurring mark to market gain at its 40.4% equity interest in Clean Energy, 2) $0.01 per share for Q1/05 taken in Q2/05 from the higher tax related Express earnings of $1M per quarter and 3) $0.01 per share of deferred maintenance. The rest was mildly better than expected water and utility services contribution on a 30% revenue increase and the Trans Mountain pipeline system running flat out in Q2/05 versus our view that it would not. TER's line is volume sensitive under its expiring 5 year agreement with CAPP while Enbridge's previous 5 year agreement was not volume sensitive to the downside.
- **2005 Capital Expenditures Unchanged:** Capital expenditures may rise to $325M in 2005 from $154M in 2004. Management expects to fund this capex via internal cash flows and subsidiary-level debt. Most of this capex will be in regulated gas distribution ($240M) that includes $50M for putting Coastal Facilities buildings into the rate base from its present lease arrangement, the Fraser river crossing ($20M) and includes $40M at Trans Mountain and $10M mainly for de-bottlenecking at Corridor. TER's capital structure is currently about 66% debt to total capitalization so any major incremental project will likely require equity.
- **Q2/05 Petroleum Transportation:** Q2/05 petroleum transportation earnings increased YOY to $20.9M from $16.2M in Q2/04 due mainly to the Trans Mountain pipeline running full again after losing Q1/05 oil sands production from the Suncor fire and Syncrude problems. TER did not elaborate on its $1M/quarter of permanent or near permanent tax structuring benefits from its non-taxable partners ($1M per quarter for the foreseeable future, $2M taken in Q2/05 for Q1/05 catch-up) from the Express expansion starting up in April 2005.Express Q2/05 earnings therefore increased to $0.07 per share from $0.03 per share in Q2/04. Corridor Q2/05 earnings were flat YOY at $0.04 per share.
    - TER is currently negotiating the framework for a new long term operation deal with Trans Mountain shippers, which will likely be impacted by Enbridge's (ENB) new Incentive Tolling Settlement (ITS). TER stated that there is good progress on the ITS now that ENB has settled and TER's ITS is expected to be completed by the end of 2005.

- **Q3/05 EPS**: TER stated on the conference call that in Q3/05 there was a small spill on a Trans Mountain pipeline lateral which caused 600 bbls to leak that may cost $0.5M and $1M. TER also noted that due to a customer's plant problem in Edmonton, July throughput on Trans Mountain was down to 200,000 bbls/day from 242,000 bbls/day in Q2/05. However, in August, the pipeline system was on apportionment again.

- **Q2/05 Gas Distribution:** Q2/05 Gas distribution earnings were up $2.6M or $0.02 per share to $0.07 per share from $0.05 per share in Q2/04. A 22 basis point lower allowed ROE for 2005 (9.03%) was more than offset by strong customer growth and remaining operating efficiencies of merging the Mainland and Island gas utilities. Allowed ROE for 2005 is 9.53% at TGVI.
- **Water & Utility Services and Other:** Q2/05 earnings from the small water and utility services segment were up $0.01 per share or $1.2M to $3.8M or $0.03 per share from $2.6M in Q2/04. Most of this growth is from the Waterworks business which continues to capitalize on the strength in the Alberta and B.C. economies as well as increased earnings from Fairbanks Sewer and Water (acquired July 2004). TER has allocated $50M in its 2005 capital plan for acquisition (20%-50%) and organic growth (50%-80%) in this segment.
- **Other Activities:** Losses from the other activities segment decreased to $2.9M (loss of $0.02 per share) from a loss of $6.0M in Q2/04 due to higher Q2/05 mark to market gains of $3.9M up from $0.6M in Q2/04 at 40.4% owned Clean Energy.
- **Regulatory:** In Q2/05, TER filed a rate application with the BUC in which it requested a 5% increase in equity thickness (from 33% to 38% for Terasen Gas) and an increase to ROE of 1.75%. TER believes that it has a good chance of receiving these increases as gas prices have increased considerably recently relative to more stable local power prices and that the current rates are out of synch with Alberta based ROEs. We are not as optimistic on the ROE request, as it is questionable that TER's risk profile has actually increased materially. While TER may receive some amount of equity thickness increase, it would likely be required to inject more equity at the corporate level similar to what Emera experienced at its 100% owned Nova Scotia Power Inc regulated entity. TER also stated that it has filed to extend its existing TGVI settlement so that it better aligns with the requested Terasen Gas regulatory settlement.

Growth Outlook

- **TMX:** TER's growth opportunities improved in Q2 and Q3 2005. On July 12, 2005 TER filed an application with the National Energy Board (NEB) to increase the capacity of the Trans Mountain pipeline by 35,000 bbls/day from 225,000 bbls/day to 260,000 bbls/day for an estimated $210M (TMX Phase I) for Q1/07. The TMX Phase I was also included by the Canadian Association of Petroleum Producers (CAPP) in the ongoing TER ITS discussions. TER stated that the next TMX system expansion request will occur late in Q3/05 when TER will hold an open season for the $365M TMX 30 inch pipeline loop in Alberta and eastern BC (Phase II), which could lead to an eventual twinning of the entire Trans Mountain system (Phase III) that would transport crude to Vancouver for delivery to U.S. refineries in California or a northern leg into Prince Rupert that will transport oil sands crude to Prince Rupert for export to Asia via VLCC tankers. The northern leg option is identical to ENB's Gateway Oil Pipeline proposal. TMX 2 and 3 could add 625,000bbls/day.
  - **CAPP Increases Canadian Oil Production Forecast:** On July 19, 2005, CAPP raised its total Canadian crude oil production forecast from 3.6M bbls/day to 3.9M bbls/day in 2015. CAPP increased forecast 2015 conventional oil production in Western Canada by 125K bbls/day and oil sands production by 100K bbls/day from the 2004 numbers. CAPP had previously estimated that 600K bbls/day of new pipeline capacity will be required to service incremental oil sands production over the next decade. **We believe that with CAPP's latest revision, 825K bbls/day may be necessary.** There are various projects including TER’s TMX (625K bbls/day), ENB’s Gateway (400K

bbls/day), TRP's Keystone pipeline (435K bbls/day), Koch's Minnesota pipeline (350K bbls/day) and Southern Access (250K bbls/day) that are competing.

- ENB's $2.5B Gateway oil export pipeline project and $1.7B condensate import line (less $600m if built together) are claimed to be ahead of Terasen's TMX project at this time. TRP's US$1.7B Keystone oil pipeline proposal from Alberta to Illinois initially appears to be too little too late.

- **LNG Storage Delay:** The BCUC had approved TER's $100M LNG storage and gas compression facility, however in Q2/05 B.C. Hydro announced it was not going to be proceeding with the power plant on Vancouver Island that the storage facility was set up to serve. **The BCUC approval was contingent on that power plant being constructed.** TER stated that it thinks there is still a need for LNG storage on Vancouver Island and is in the process of resubmitting the application (est. Q4/05) and expects a 1-2 year delay in construction.
- **Corridor Expansion:** TER is in an exclusive negotiation with Shell for the $800M Corridor pipeline expansion in Alberta with an estimated in service date of 2009. TER stated that it is currently working on engineering and environmental plans for the 42 inch expansion from Muskeg River to Edmonton which could carry 1M bbls/day. Shell will likely have a minimum take or pay contract to guarantee TER a certain minimum return on the investment, but TER noted there would be significant capacity left for third party shippers. The benefit from allowing third party shippers will be split somehow between Shell and TER.
- **Water Operations:** TER stated that it has more opportunities to grow its water business based on its bidding in Alaska and Southern Alberta for water operations. It expects to close on a couple of small deals in Q3/05, one in B.C. and one in Alberta. The earnings lift from these deals will be small and is already included in the 6% 2005 EPS growth guidance.

Definition of Scotia Capital Equity Research Ratings & Risk Rankings

We have a three-tiered rating system, with ratings of 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe.

Our risk ranking system provides transparency as to the underlying financial and operational risk of each stock covered. Statistical and judgmental factors considered are: historical financial results, share price volatility, liquidity of the shares, credit ratings, analyst forecasts, consistency and predictability of earnings, EPS growth, dividends, cash flow from operations, and strength of balance sheet. The Director of Research and the Supervisory Analyst jointly make the final determination of all risk rankings.

Ratings

1-Sector Outperform
The stock is expected to outperform the average total return of the analyst's coverage universe by sector over the next 12 months.

2-Sector Perform
The stock is expected to perform approximately in line with the average total return of the analyst's coverage universe by sector over the next 12 months.

3-Sector Underperform
The stock is expected to underperform the average total return of the analyst's coverage universe by sector over the next 12 months.

Other Ratings
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Rankings

Low
Low financial and operational risk, high predictability of financial results, low stock volatility.

Medium
Moderate financial and operational risk, moderate predictability of financial results, moderate stock volatility.

High
High financial and/or operational risk, low predictability of financial results, high stock volatility.

Caution Warranted
Exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, exceptionally high stock volatility. For risk-tolerant investors only.

Venture
Risk and return consistent with Venture Capital. For risk-tolerant investors only.

Event

- Terasen (TER) announced on August 1, 2005 after market close that it had entered into an agreement where it may be 100% purchased by Kinder Morgan Inc. (KMI.N) with a targeted year-end close.

What It Means

- We continue to suggest TransAlta (TA), Enbridge (ENB), and ATCO (ACO.nv.x) as the best risk-reward alternatives to Terasen in Canadian Energy Utilities with Enbridge being the closest comp to TER. All three also benefit from $60/bbl plus oil in different ways: TA through higher power margins in the U.S., ENB through oil pipeline expansions like TER is pursuing and ATCO through housing/infrastructure for oil sands projects.
- California called two stage 2 power supply emergencies in July 2005 which highlights the tight California power market. Total also announced it was purchasing Deer Creek Energy which, along with the TER/KMI deal will have the effect of increasing Alberta's oil sands' visibility further.
- We increased our one- and two-year targets on all stocks in our coverage universe on July 7, 2005 due to a) $60/bbl oil that heavily favours Alberta energy utilities in Canada's highest growth and wealthiest province and b) record dividend and income funds flow that doubled YOY in May 2005.

Universe of Coverage

	Price	Rating	Risk	1-Yr	ROR	2-Yr	ROR

KMI/TER Transaction Details

- **Offer Valuation:** Kinder Morgan Inc. (KMI.N) will acquire 100% of the shares of Terasen Inc. (TER) for a purchase price, including debt of US$5.6B or C$6.9B. The transaction represents about 24x P/E on 2005 Terasen consensus estimate earnings and 2.6x book, smashing previous Canadian energy utility takeover records by 20%+ on both metrics. The takeover premium is 14% over Terasen's closing share price on July 29, 2005, 20% over TER's 20 day average closing price and an additional 2% for the positive reaction to KMI's stock price that rose 6% on August 2, 2005 as 35% of any increase/decrease in KMI's stock will be added to/subtracted from TER's stock. For further KMI offer details, see our August 2, 2005 TER note.
- **Westcoast/Duke 2001 Transaction:** This transaction served as a proxy to the proposed KMI-TER deal. In September, 2001 Duke offered to purchase Westcoast Energy (W) for similar stock premiums of 14.8% one day prior, 18.5% on 20 days average. The W deal size was larger at C$13B (including C$7.2B in net debt and preferred). Due to a perceived scarcity premium on Canadian pipeline companies after Duke's bid for Westcoast, we upgraded the shares of Enbridge and TransCanada on future pipeline stock scarcity value as well as BC Gas (Terasen) due to its expanding oil pipeline position in Western Canada (See Exhibit 1 for historic transaction details). While we are not raising our P/E multiples yet again although we are tempted, KMI's bid for TER at 24x P/E on current 2005 EPS is confirmation of our record high P/E multiples that we currently use on 2006-7 EPS averaged to set our one year stock targets.

Exhibit 1- Historic Regulated Asset/Company Transactions

Sellers	Asset/Company	Buyer	Date	Est. P/B Regulated Equity	Est. Share Takeover Premium

Source: Company Reports, Scotia Capital.

What does the TER takeover mean for:

- **Enbridge (ENB):** We value ENB at a 1x-3x premium multiple over the rest of the Canadian energy utility sector at 21x for the following reasons:
  1. ENB has had the best management team in the business for the past 20 years. This is evidenced by their double digit EPS and dividend growth record and stock price performance over the past 10 years.
  2. We continue to believe that ENB wins the Gateway oil export pipeline race with Terasen although Kinder Morgan will be a formidable competitor.
  3. ENB is the owner of the best Canadian gas LDC (Toronto) that has the third best growth rate in North America behind Las Vegas and Phoenix-Scottsdale.
  4. Its balance sheet remains under-levered even after its $600M acquisition of Shell's gas pipelines in the Gulf of Mexico (60% debt to total cap, A- credit).

5. The proposed TER takeover by Kinder Morgan leaves ENB as the remaining way for major international companies to play the Canadian oil sands on the pipeline plane. ENB has exposure to the upside of the oil sands production without the same downside commodity risk as a pure-play oil sands company. In our view, ENB will continue to experience a pipeline scarcity premium going forward as it becomes more difficult to invest in either Canadian pipelines or pipelines with a focus on the Alberta oil sands. We do not believe that ENB is a takeover candidate for the likes of Duke or Warren Buffett at its premium P/E multiple.

- **TransCanada (TRP):** Like ENB, TRP may benefit from the KMI deal, but somewhat less than ENB from a pipeline scarcity premium in Canada as 100% of TRP's current pipelines are gas based and do not serve the oil sands. TRP may receive some of the re-allocation of TER equity from Canadian institutional shareholders, especially since the KMI/TER transaction will not have exchangeable shares offered. In the short term, TRP's stock was buffeted a little by a poor Q2/05 EPS number due to unplanned Bruce nuclear plant outages.
- **TransAlta (TA):** Terasen's business profile is less correlated to TA, which benefits more directly from $60/bbl plus oil through higher forecast forward power contract renewals in the deregulated Pacific Northwest (PNW) U.S. power market. Higher PNW prices are TA's greatest EPS upside as its 9M MWh of contracts roll over from $30/MWh today to sharply higher levels ($50/MWh plus?) based partly on high oil and gas costs. We listened to both Duke Energy's and Calpine's conference calls on August 3, 2005. Both spoke to the sharp increase in forward contract power prices in Western U.S. markets but did not quantify them. TA estimated PNW power prices of $50-$55/MWh for 2008 base-load contracts on its Q2/05 EPS conference call. Oil over $60/bbl has meant U.S. natural gas over $8/mcf. Even at that price, Calpine announced another gas based power plant for California with GE this week to be built for 2008. It will need power prices closer to $80/MWh to make a full return at today's gas prices.
- **ATCO:** $60/bbl plus oil means more Alberta oil sand projects, particularly now that Total has also decided to enter the fray via its acquisition of an oil sands junior. ATCO's non-regulated expertise and EPS sensitivity lies in housing/sheltering large construction support facilities for major multi-year projects. ATCO has the Nexen-OPTI 2,500 person camp infrastructure contract and is pursuing the 6,000 working Horizon project for Canadian Natural Resources for 2006.
- **Alberta Based Utilities at a Premium:** We wrote at the beginning of July that the stock revaluation mania that has gripped the oil and gas sector had spilled over into the second best TSX sub-sector this year, oil and gas infrastructure utilities. This trend continues, particularly for those stocks that are Alberta based, due to $60/bbl plus oil prices and now the TER/KMI and Total/Deer Creek deals.
- **Mid-Cap Comps:** For investors that held Terasen as a mid-cap growth play, Fortis, ATCO and Canadian Utilities would be appropriate mid-cap replacements as all 3 have expected EPS growth of 5% plus per year.
- **Other Canadian Utilities:** The remaining Canadian utilities that are not related to Alberta (Emera, Caribbean Utilities) will see the least increase in value should the deal go through, due to there being one less Canadian utility in the space.

Stay Overweight Energy Utilities

- Our Overweight Energy Utilities recommendation since December 2004 was/is still predicated on:
  - **Strong C$/Weak Economic Data:** Scotia Economics' C$ forecast of US$0.90 continues albeit with a lag. This signals weaker Canadian manufacturing and current account surplus data going forward. In 1990, the last time the C$ approached US$0.90, interest sensitive stocks such as TRP outperformed the slumping S&P/TSX index by about 20%.
  - **Lower Interest Rates:** Interest rates are at 1958 levels with 10-year Canada yields at about 3.9% at present. Our 1 year forecast for 10 year Canada rates is a benign 4.2%.

- **Outstanding Dividend and Income Funds Flow:** Funds flow into dividend and income funds remains at record levels that are about double normal levels. June 2005 dividend and income funds inflows were $508M. YTD June 2005 ($6.173B) is 52% up over YTD June 2004 (See Exhibit 2). **If it wasn't for record 2005 income trust IPO's and conversions, Canadian Energy Utility P/E multiples would be higher.**
- **Dow Jones Utilities Soaring:** The Dow Jones Utilities index has just hit 405, **up 27% from November 1, 2004** and up 100% since November 1, 2002 (See Exhibit 3). One of President Bush's major re-election promises was to maintain a reduced 15% dividend tax rate for at least another four years. The Dow Utilities trade more off after tax yield values than any other equity class, similar to Canadian energy utilities. By cutting the U.S. individual dividend tax rate to 15% from as high as 40% in some states, **President Bush effectively raised the value of high dividend paying stocks by as much as 25%!** This makes the New York Inter-listed Canadian Energy utilities (TA, ENB and TRP) more attractive to U.S. investors than any other energy utilities in Canada as U.S. inter-listed foreign stocks that pay dividends are not prejudiced by the 15% U.S. dividend tax rate.
- New is the agreed upon U.S. Energy Bill that will repeal the restrictive energy utility takeover rules in place since the 1930's in the U.S. (known as PUHCA) that President Bush will sign into law later this month. This opens the playing field to numerous takeovers that are already beginning to line up (MidAmerica-Pacificorp, Duke-Cinergy and Exelon-PSEG). This may lead to higher P/E multiples on U.S. takeover targets.

Definition of Scotia Capital Equity Research Ratings & Risk Rankings

We have a three-tiered rating system, with ratings of 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe.

Our risk ranking system provides transparency as to the underlying financial and operational risk of each stock covered. Statistical and judgmental factors considered are: historical financial results, share price volatility, liquidity of the shares, credit ratings, analyst forecasts, consistency and predictability of earnings, EPS growth, dividends, cash flow from operations, and strength of balance sheet. The Director of Research and the Supervisory Analyst jointly make the final determination of all risk rankings.

Ratings

1-Sector Outperform
The stock is expected to outperform the average total return of the analyst's coverage universe by sector over the next 12 months.

2-Sector Perform
The stock is expected to perform approximately in line with the average total return of the analyst's coverage universe by sector over the next 12 months.

3-Sector Underperform
The stock is expected to underperform the average total return of the analyst's coverage universe by sector over the next 12 months.

Other Ratings
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Rankings

Low
Low financial and operational risk, high predictability of financial results, low stock volatility.

Medium
Moderate financial and operational risk, moderate predictability of financial results, moderate stock volatility.

High
High financial and/or operational risk, low predictability of financial results, high stock volatility.

Caution Warranted
Exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, exceptionally high stock volatility. For risk-tolerant investors only.

Venture
Risk and return consistent with Venture Capital. For risk-tolerant investors only.

Scotia Capital Equity Research Ratings Distribution*

Kinder-Morgan to Purchase TER

Event

- Terasen (TER) announced on August 1, 2005 after market close that it had entered into an agreement where it may be 100% purchased by Kinder Morgan Inc. (KMI.N) with a targeted year-end close.

What It Means

- The 14% 1 day and 20% 20 trailing day trading premium bid for TER's stock at $35.75/TER share takes us to a 3-Sector Underperform from 2-Sector Perform.
- This will over time, release most of the $3.75B 65% cash 35% Kinder equity total bid for TER's equity to mostly Canadian income oriented individuals and funds to re-deploy.
- We continue to suggest TransAlta, Enbridge, and ATCO (our 1-Sector Outperforms) as the best risk-reward alternatives in Canadian Energy Utilities with Enbridge being the closest comp to TER. All three also benefit from $60/bbl plus oil in different ways.

Terasen's Take-over Transaction Details

- **Offer Details:** Kinder Morgan Inc. (KMI.N) will acquire 100% of the shares of Terasen Inc. (TER) for a purchase price, including debt of US$5.6B or C$6.9B. TER's equity in the offer is valued at about $3.75B (105M at $35.75 per TER share). The agreement was unanimously approved by both companies' boards. The transaction yields a premium of 14% over Terasen's closing share price on July 29, 2005 and 20% over TER's 20 day average closing price. Since the deal is forecast to be 6%-8% EPS accretive to Kinder Morgan in year 1, its shares immediately reacted favourably, moving up as much as 10% at one point yesterday to $98.45 per share. KMI also stated that its annual $3 per share dividend is expected to rise to $3.50 per share in 2006 but did not state that the deal closing is conditional to the KMI dividend increase. TER shareholders have the choice to elect for 1) C$35.75 per share in cash, 2) 0.3331 shares of KMI per TER share or 3) C$23.25 in cash (65%) plus 0.1165 shares of KMI (35%).
- All elections to KMI's offer will be subject to pro-ration in the event total cash elections exceed 65% or share elections exceed 35%. **Therefore, TER's stock will move at 35% of the rate of the move in Kinder Morgan's stock price until the deal closes.** Non-electing shareholders will receive option 3, the 65%/35% cash/shares split. There were **no** exchangeable shares offered for Canadian shareholders. The termination fee of C$75M is 1.9% of the deal price. KMI's offer is above our 1-year target price of C$32 and represents about 23.8x 2005E consensus earnings of $1.49 per share.
- **Timeline:** Steps to deal completion include: 1) regulatory filings in Q3/05, 2) end-October 2005 TER shareholder vote (75% approval required) 3) Canadian regulatory approvals from the BCUC, Investment Canada and the Canadian Competition Act, and 4) U.S. regulatory approvals from Hart-Scott-Radino. Both companies expect the deal to close by year-end 2005.
- **Valuation:** We raised our TER valuation on July 29, 2005 given TER's increasingly likely success on several oil pipeline projects with the upgrade in CAPP's Canadian oil production and imminent Shell Corridor prospects by adding 0.5X P/E to TER's target P/E. The stock market immediately reacted to TER's Q2/05 EPS release by adding $1.40 per share to TER's stock price so we maintained our 2-Sector Perform rating. The 14% 1 day and 20% 20 trailing day trading premium bid by KMI for TER's stock at $35.75 per TER share now takes us to a 3-Sector Underperform from 2-Sector Perform.

Developments

- **Kinder Morgan's Strategic Rationale:** KMI is a U.S. based midstream energy company (enterprise value of US$30B) based in Houston and founded by Richard Kinder, who continues on as CEO and Chairman. Mr. Kinder owns 19.68% of KMI's shares outstanding and pays himself $1 per year in salary. KMI has 35,000 miles of natural gas and product pipelines and 145 terminals. It also owns 16% and is the General Partner of Kinder Morgan Energy Partners (KMP.N), a large public pipeline master partnership. KMP also owns petroleum product pipelines, terminals, natural gas and C02 pipelines. KMI focuses on fee-based businesses where it collects fees on the transportation and storage of energy products, avoiding direct commodity price risk. On its conference call, KMI stated that the TER deal featured stable, low risk assets receiving reasonable regulated rates, giving 6% - 8% 2006 earnings accretion for KMI in the first year following the acquisition and provides "hellacious" large growth opportunities from Alberta's oil sands. TER's backlog of opportunities around crude oil export pipelines total $3B according to TER's conference call. (See Exhibits 1 and 2).
  - KMI also stated that since both companies were BBB rated, the combined company should receive a BBB rating. After the call S&P placed KMI's BBB rating on Watch Negative based on the increased leverage necessary to fund the purchase, while Moody's reaffirmed KMI's Baa2/Stable rating. Moody's placed TER's senior unsecured A3 debt on review for possible downgrade due to KMI's debt being lower rated than TER's
  - KMI's CEO said on the conference call that Canadian oil sand production growth over the next 5 - 7 years was analogous to incremental supply from an entirely new Permian basin (1M bbls/day - the largest oil basin in the U.S.). This analogy should allow U.S. investors to better correlate the size of the oil sands opportunities to a U.S. equivalent deposit. There is further room for supply increases beyond the next 1M bbls/day after 2010/12 (See CAPP discussion below).
- **Regulatory Issues:** Both KMI and TER stated on their respective conference calls that there shouldn't be any substantial regulatory issues with the deal. TER stated that it had already notified several regulatory stakeholders about the deal and will bring the transaction up with the BCUC on August 3, 2005 when it convenes the latest TER rate hearing. **We assume regulatory approvals will be received in the 5-month timeline given.**
-

Union Energy	100% of Company	Westcoast	Q4/92	1.5x	32%

Source: Company Reports, Scotia Capital.

Duke/Westcoast Deal Precedent: On September 23, 2001 Duke Energy offered a 15% share price premium for 100% of Westcoast Energy at that time. This is likely the precedent transaction which formed the structure of the KMI/TER deal. The Duke/Westcoast deal took just over 5 months to complete, with the closing coming in a few weeks late due to a specific U.S. FERC regulatory issue with one of the assets (Maritimes & Northeast Pipeline). We believe that the KMI/TER deal will fit into this precedent timeline (See Exhibit 3 for precedent transaction details).

- **Other Possible Suitors:** The only Canadian company that could takeover Terasen and enjoy material synergies is Enbridge (ENB). Other U.S. or international companies (including China's) could be interested in TER's growth prospects and oil sands exposure; however, KMI has already paid a record sector premium. KMI noted that the deal was done for its growth prospects and that cost savings were likely going to be limited to some minor operating redundancies. This is typical of most utility acquisitions.
- **Financing Terasen:** KMI did specify its debt to total cap after closing the Terasen deal would be 56% versus 53.9% as of June 30, 2005. We speculate that KMI will issue a Canadian debt instrument through a wholly owned Canadian sub similar to a Dominion Resources' Canadian issue that used a Nova Scotia incorporated subsidiary.

Background: TER's Growth Outlook

- **TMX:** On July 12, 2005 TER filed an application with the National Energy Board (NEB) to increase the capacity of the Trans Mountain pipeline by 35,000 bbls/day from 225,000 bbls/day to 260,000 bbls/day for an estimated $210M (TMX Phase I) for Q1/07. The TMX Phase I was also included by the Canadian Association of Petroleum Producers (CAPP) in the ongoing TER ITS discussions. TER stated that the next TMX system expansion request will occur late in Q3/05 when TER will hold an open season for the $365M TMX 30 inch pipeline loop in Alberta and eastern BC (Phase II), which could lead to an eventual twinning of the entire Trans Mountain system (Phase III) that would transport crude to Vancouver for delivery to U.S. refineries in California or a northern leg into Prince Rupert that will transport oil sands crude to Prince Rupert for export to Asia via VLCC tankers. The northern leg option is identical to ENB's Gateway Oil Pipeline proposal. TMX 2 and 3 could add 625,000bbls/day.
  - **CAPP Increases Canadian Oil Production Forecast:** On July 19, 2005, CAPP raised its total Canadian crude oil production forecast from 3.6M bbls/day to 3.9M bbls/day in 2015. CAPP increased forecast 2015 conventional oil production in Western Canada by 125K bbls/day and oil sands production by 100K bbls/day from the 2004 numbers. CAPP had previously estimated that 600K bbls/day of new pipeline capacity will be required to service incremental oil sands production over the next decade. **We believe that with CAPP's latest revision, 825K bbls/day may be necessary.** There are various projects including TER's TMX (625K bbls/day), ENB's Gateway (400K bbls/day), TRP's Keystone pipeline (435K bbls/day), Koch's Minnesota pipeline (350K bbls/day) and Southern Access (250K bbls/day) that are competing.
  - ENB's $2.5B Gateway oil export pipeline project and $1.7B condensate import line (less $600m if built together) are claimed to be ahead of Terasen's TMX project at this time. TRP's US$1.7B Keystone oil pipeline proposal from Alberta to Illinois initially appears to be too little too late.

- **Corridor Expansion:** TER is in an exclusive negotiation with Shell for the $800M Corridor pipeline expansion in Alberta with an estimated in service date of 2009. TER stated that it is currently working on engineering and environmental plans for the 42 inch expansion from Muskeg River to Edmonton which could carry 1M bbls/day. Shell will likely have a minimum take or pay contract to guarantee TER a certain minimum return on the investment, but TER noted there would be significant capacity left for third party shippers. The benefit from allowing third party shippers will be split somehow between Shell and TER.
- Additionally, for more information on Canadian crude oil pipelines please see pages 59 - 63 from our July 2005 *Gas & Electric Utilities Outlook.*

H3 The Head of Equity Research/Supervisory Analyst, in his/her own account or in a related account, owns securities of this issuer.

S Scotia Capital Inc. and its affiliates collectively beneficially own in excess of 1% of one or more classes of the issued and outstanding equity securities of this issuer.

Definition of Scotia Capital Equity Research Ratings & Risk Rankings

We have a three-tiered rating system, with ratings of 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe.

Our risk ranking system provides transparency as to the underlying financial and operational risk of each stock covered. Statistical and judgmental factors considered are: historical financial results, share price volatility, liquidity of the shares, credit ratings, analyst forecasts, consistency and predictability of earnings, EPS growth, dividends, cash flow from operations, and strength of balance sheet. The Director of Research and the Supervisory Analyst jointly make the final determination of all risk rankings.

Ratings

1-Sector Outperform
The stock is expected to outperform the average total return of the analyst's coverage universe by sector over the next 12 months.

2-Sector Perform
The stock is expected to perform approximately in line with the average total return of the analyst's coverage universe by sector over the next 12 months.

3-Sector Underperform
The stock is expected to underperform the average total return of the analyst's coverage universe by sector over the next 12 months.

Other Ratings
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Rankings

Low
Low financial and operational risk, high predictability of financial results, low stock volatility.

Medium
Moderate financial and operational risk, moderate predictability of financial results, moderate stock volatility.

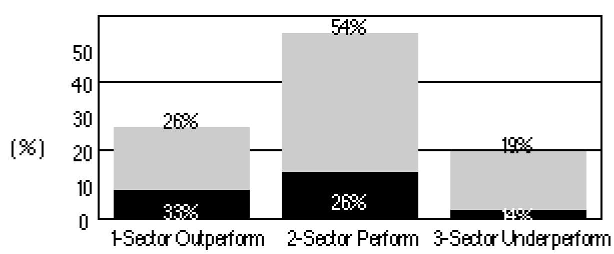
High
High financial and/or operational risk, low predictability of financial results, high stock volatility.

Caution Warranted
Exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, exceptionally high stock volatility. For risk-tolerant investors only.

Venture
Risk and return consistent with Venture Capital. For risk-tolerant investors only.

Scotia Capital Equity Research Ratings Distribution*

Distribution by Ratings and Equity and Equity-Related Financings*



- Percentage of companies covered by Scotia Capital Equity Research within each rating category.
- Percentage of companies within each rating category for which Scotia Capital has undertaken an underwriting liability or has provided advice for a fee within the last 12 months.

* As at July 29, 2005.

Source: Scotia Capital.

For the purposes of the ratings distribution disclosure the NASD requires members who use a ratings system with terms different than "buy," "hold/neutral" and "sell," to equate their own ratings into these categories. Our 1-Sector Outperform, 2-Sector Perform, and 3-Sector Underperform ratings are based on the criteria above, but for this purpose could be equated to buy, neutral and sell ratings, respectively.

Terasen Inc.

(TER-T; C$29.02)

Terasen Raises Stakes in West Coast Pipeline Race

Event
Terasen announced that phase 1 of its proposed TMX pipeline expansion project received a high level of endorsement during the company's recent expression of interest solicitation.

Impact - Mildly Positive
Support for phase 1 of the proposed project appears to be broadly based. In total, 17 shippers, including Canadian producers, west coast refiners, and Far East refiners, indicated strong endorsement for the project. However, no clear consensus on which route out of the Northern or Southern Options emerged during the solicitation.

While we view this development positively, expressions of interest are non-binding and we consider the upcoming open season to be a more important milestone.

Details
Phase 1 of the TMX expansion would expand TransMountain's capacity by 75,000 bbls/d to 300,000 bbls/d from the existing 225,000 bbls/d. Initially, 35,000 bbls/d of additional capacity will be derived from adding pump stations, followed by an incremental 40,000 bbls/day from looping 178 km of the existing system. The pump upgrades could be in service by the end of 2006 at an estimated cost of $205 million, while looping could be completed by the end of 2008 at an estimated cost of $365 million.

For a more detailed explanation of the Southern and Northern pipeline expansion opportunities available after the completion of phase 1, please see our *Action Note* dated December 8, 2004.

Valuation
Our $27.30 target price is based on our 2006 estimates, 10-year bond yield assumption of 4.5%, and the following blended valuation: 1) 50% relative earnings yield to 10-year bond of 126% (versus historical average of 124%); 2) 25% relative dividend yield to 10-year bond of 76% (versus historical average of 72%); and 3) 25% price-to-book value of 1.9 times (versus the historical average of 1.7x). It implies a 17.6x price-to-earnings multiple and 3.4% dividend yield, compared to historical averages of 14.2x and 4.2%, respectively.

We believe Terasen deserves a premium versus the sector due to management's track record of value creation, our expectation of above-utility-average growth, and strong fundamentals of its petroleum transportation business. Terasen has traded at a premium to the sector, and we expect this premium to continue.

Key risks to our target price include: 1) materially different bond yields versus our estimate, 2) potential reduction in the historical valuation premium vs. the sector, 3) tougher-than-expected competition for new oil transmission pipeline capacity, 4) unexpected negative surprises on the regulatory front, and 5) substantial delays and/or cancellations of oil sands projects.

Conclusion
While we believe that the results from the expression of interest solicitation are positive, Terasen's TMX expansion faces competition from Enbridge's Gateway proposal. The upcoming open season will be a more telling indicator of TMX's prospects because it will force producers not only to commit to building the project but also to a specific company (i.e. Enbridge or Terasen).

We are maintaining our HOLD recommendation based on our opinion that Terasen is fairly valued. We will continue to monitor the company's progress on its proposed greenfield projects, the renewal of the existing TransMountain incentive tolling agreement in late 2005 and the results of Terasen's TMX open season solicitation.

Terasen Inc.

(TER-T; C$29.34)

Surprise Dividend Increase

Event - Q4/04 Earnings Release
Terasen reported Q4/04 EPS of $0.51 (f.d.), which was five cents below our estimate of $0.56 (f.d.) and $0.02 below Q4/03 adjusted EPS of $0.53 (f.d.). Q4/03 EPS was adjusted to reflect a $1.8 million writedown against Terasen's investment in Westport Innovations Ltd. In addition, earnings were restated to reflect a change in the quarterly accounting for income tax - Terasen now records quarterly tax expense by applying its effective tax rate to pretax income for the quarter as opposed to its previous method of allocating quarterly income tax based on actual taxes estimated to have been collected in rates. This change affects quarterly tax allocations, but has no effect on annual EPS.

In concert with the Q4/04 earnings release, Terasen's board approved a 7.1% increase in the dividend to $0.90 (annualized) from $0.84. In previous years, Terasen's Board timed dividend increases to coincide with Q1 earnings.

Impact - Mildly Positive
We have adjusted our 2005E EPS down by $0.03 to $1.46 to reflect slightly higher other expenses. Our 2006E EPS of $1.55 remains intact.

Our dividend estimate for 2006E has increased by three cents to $0.96 reflective of our expectation that annual dividend increases will now be declared in conjunction with Q4 earnings releases instead of with Q1 releases.

Our target price increases to $29.00, reflective of our slightly higher 2006 financial forecasts.

Details
Natural Gas Distribution reported a decline in earnings to $42.6 million in Q4/04 from $44.8 million in Q4/03, which was primarily due to the 27 bps reduction in allowed ROE experienced in 2004. Although we expected reduced returns at the Gas Distribution division due to relatively low regulated ROEs, the division's 2004 annual performance exceeded our expectations and the strong cost performance there partially offset increased costs in other divisions (Terasen estimates its achieved $4.1 million in cost efficiencies during 2004).

The **Petroleum Transportation** division earned $19.9 million in Q4/04, up from $17.9 million in Q3/04. A 2.5% revenue decrease in Q4/04 to $58.5 million from $60.0 million caused by lower tolls on Trans Mountain was offset by increased throughput and operating efficiencies on the pipeline, and increased contributions from Express.

Water and Utility Services reported an earnings contribution of $0.7 million in Q4/04, up from $0.4 million in Q4/03. Contributions from the Fairbanks Sewer & Water Inc. acquisition, which closed on July 31, 2004 was partially offset by higher acquisition-related depreciation and other business development costs.

The **Corporate** segment increased its loss to $9.3 million in Q4/04 from $7.0 million in Q4/03 after adjusting for the $1.8 million writedown against Westport Innovations. The increased loss was due to an increase in financing costs and lower tax recoveries.

Updates on key initiatives included:

- News of preliminary approval to build a LNG storage facility on Vancouver Island. Final approval of the terminal is still subject to numerous conditions, the most important being the approval of a proposed gas-fired electricity plant on the island. The estimated cost of the LNG facility is between $90 and $130 million, with an anticipated in-service date between 2008-2009, assuming the project proceeds.
- Indication that the proposed TMX pipeline expansion is proceeding well. While the final outcome of this project remains speculative, Terasen noted that it continues to talk with shippers and hopes to conduct a formal open season on Phase 1 of the project by the end of Q2/05.

- An announcement that discussions with Shell and other third party shippers to expand the capacity of its Corridor Pipeline in the oil sands region are still in progress.
- The announcement of a more conservative capital structure, with a goal of 30-33% equity as a percentage of total capital, after excluding preferred securities, which are now classified as debt and carry a weight of approximately 3%. In the past, Terasen had target a capital structure of 33% equity including the preferred securities, which is at the low end of the new range.
- Guidance that volumes on the Trans Mountain line will be weak during Q1/05 due to refinery turnarounds and production outages in the Alberta oil sands.

Outlook - Terasen has a stated long-term goal of growing EPS in the range of 6-8%, however, management consistently guided to EPS growth of 6% throughout the call. The reduced guidance was likely due to the relatively low regulated ROE rates (9.03% for 2005) the company is facing on its legacy natural gas distribution assets. Terasen's Trans Mountain pipeline is up for re-basing in 2005, which could also put pressure on earnings.

We assume that the proposed Vancouver Island LNG facility will ultimately proceed, and, this, combined with other greenfield opportunities, should bode well for longer-term returns. In the near-term, Terasen will likely focus on obtaining ROE relief during a potential generic cost of capital review with the BCUC (Q3/05), growing its water services division, and delivering cost performance.

Valuation - Our $29.00 target price is based on our 2006 estimates, 10-year bond yield assumption of 4.3%, and the following blended valuation: 1) 50% relative earnings yield to 10-year bond of 124% (versus historical average of 124%); 2) 25% relative dividend yield to 10-year bond of 77% (versus historical average of 72%); and 3) 25% price-to-book value of 2.0 times (versus the historical average of 1.7x). It implies a 18.7x price-to-earnings multiple and 3.3% dividend yield, compared to historical averages of 14.2x and 4.2%, respectively.

We believe Terasen deserves a premium versus the sector due to management's track record of value creation, our expectation of above-utility-average growth, and strong fundamentals of its petroleum transportation business. Terasen has traded at a premium to the sector, and we expect this premium to continue.

Key risks to our target price include: 1) materially different bond yields versus our estimate, 2) potential reduction in the historical valuation premium vs. the sector, 3) tougher-than-expected competition for new oil transmission pipeline capacity, 4) unexpected negative surprises on the regulatory front, and 5) substantial delays and/or cancellations of oil sands projects.

Conclusion - In our view, Terasen's track record of EPS and dividend increases warrant a continued premium in the sector. We expect numerous infrastructure opportunities to offset the impact of any re-basing in Trans Mountain when its incentive tolling settlement expires at the end of this year. Given the modest returns implied by our target price; however, we continue to recommend that investors HOLD Terasen.

Terasen Inc.

(TER-T; C$27.45)

Q1 Impacted by Oil Sands Disruptions

Event - Q1/05 Earnings Release
Terasen reported Q1/05 EPS of $0.63 (f.d.) vs. our estimate of $0.65 and Q1/04 EPS of $0.64 (f.d.). (Note that Q1/04 earnings were restated to reflect a change in the quarterly accounting for income tax. Effective Q4/04, Terasen records quarterly tax expense by applying its effective tax rate to pretax income for the quarter as opposed to its previous method of allocating quarterly income tax based on actual taxes estimated to have been collected in rates. This change affects quarterly tax allocations, but has no effect on annual EPS.)

Impact - Neutral

Details
Natural Gas Distribution's Q1/05 earnings of $55.7 million were largely consistent with earnings of $54.7 million in Q1/04, as operating efficiencies and customer growth at Terasen Gas were able to offset a 12 bps drop in allowed ROEs for 2005. A lower effective tax rate reduced income tax expense, while lower interest rates were able to reduce financing costs.

The **Petroleum Transportation** division's Q1/05 earnings declined by 31% to $12.7 million from $18.3 million in Q1/04. Current earnings contributions from the TransMountain system fell by 48% to $5.4 million from $10.4 million in Q1/04 as production outages in the oil sands and refinery turnarounds impacted throughput. A decrease in the allowed return on equity for the Corridor pipeline decreased its Q1/05 earnings contribution to $3.6 million from $3.9 million in Q1/04. The Express System was also affected by the operational outages in the oil sands, although not to the same degree as TransMountain. Q1/05 earnings contribution from Express fell to $3.7 million from $4.0 million in Q1/04.

Water and Utility Services reported a Q1/05 earnings contribution of $0.8 million vs. $nil in Q1/04. Strong economic growth in BC and Alberta led to improved results in the base waterworks and utility service businesses, while Fairbanks (acquired on July 31/04) made a small contribution during the seasonally weak first quarter.

The **Corporate** segment's Q1/05 loss declined to $2.9 million from $5.1 million in Q1/04. The decreased loss was due to higher revenues, the realization of a larger hedging gain at Clean Energy ($2.6 million in Q1/05, vs. $1.7 million in Q1/04), and lower operating and maintenance expenses, which were partially offset by higher financing costs (due to higher debt levels) and a lower income tax recovery.

Other Details
- Terasen continues to forward its **TMX** expansion, and might hold an open season in June or July for TMX 1 pump stations (+ 35,000 bpd at a cost of $205 million) and the Anchor Loop (+ 40,000 bpd at a cost of $365 million).
- The **Corridor Pipeline** could benefit from Shell's recent regulatory filings to increase capacity at two of its oil sands projects. Terasen is in discussions with Shell to build a $700-$900 million pipeline to transport the additional throughput.
- **Express System** recently completed its 108,000 bpd expansion, just under budget at US$100 million. Management is now exploring adding incremental capacity into the PADD II and PADD IV markets in the U.S.
- **Natural Gas Distribution** could benefit if the BC regulator goes ahead with a generic cost of capital hearing, as the 2005 generic ROE of 9.03% is one of the lowest in Canada.
- Terasen still plans to construct an LNG terminal on Vancouver Island to supply the proposed Duke Point natural gas fired plant, which is still facing local opposition. While the BC Court of Appeal refused to grant opposition groups leave to appeal the BCUC's decision to approve the power plant, a request has been filed with the Appeal Court review panel to reconsider this ruling. The review hearing is scheduled for early June.

Valuation
Our $29.00 target price is based on our 2006 estimates, 10-year bond yield assumption of 4.3%, and the following blended valuation: 1) 50% relative earnings yield to 10-year bond of

124% (versus historical average of 124%); 2) 25% relative dividend yield to 10-year bond of 77% (versus historical average of 72%); and 3) 25% price-to-book value of 2.0 times (versus the historical average of 1.7x). It implies a 18.7x price-to-earnings multiple and 3.3% dividend yield, compared to historical averages of 14.2x and 4.2%, respectively.

We believe Terasen deserves a premium versus the sector due to management's track record of value creation, our expectation of above-utility-average growth, and leverage to growing volumes in the oil sands. Terasen has traded at a premium to the sector, and we expect this premium to continue.

Key risks to our target price include: 1) higher than expected long bond yields, 2) acquisitions that do not create shareholder value, 3) operational disruptions, 4) potential reduction in the historical valuation premium vs. the sector, 5) tougher-than-expected competition for new oil transmission pipeline capacity, 6) regulatory surprises, 7) substantial delays and/or cancellations of oil sands projects, and 8) WCSB risk.

Outlook & Conclusion
Terasen's non-petroleum businesses will have to perform strongly in order for management to meet its 6% EPS growth target for 2005. In addition, TransMountain faces some re-basing risk in 2006. The potential for a generic cost of capital hearing in British Columbia later this year could provide some incremental upside for gas distribution utility returns in 2006. In addition, we assume the Vancouver Island LNG facility will proceed, which when combined with growth in the water services businesses and significant expansion potential for the oil pipelines, provides some visibility to continued high single-digit EPS growth.

In our view, Terasen's track record of shareholder value creation warrant a continued premium to the sector despite a tough start to 2005 and the potential re-basing of TransMountain in 2006. The modest returns implied by our target price; however, result in no change to our HOLD rating.

Terasen Inc.

(TER-T; C$31.40)

Kinder Morgan Inc. to Acquire Terasen

Event – On August 1, 2005 Kinder Morgan Inc. (KMI) announced that it is has agreed to purchase Terasen (TER) for approximately US$5.6 billion, including the assumption of US$2.5 billion debt, and subject to regulatory and TER shareholder approvals. Both boards of directors have unanimously approved the transaction. The transaction is expected by year-end 2005. Under present terms, TER shareholders can elect to receive i) C$35.75 in cash; or ii) 0.3331 shares of KMI common stock, or iii) C$23.25 in cash plus 0.1165 shares of KMI common stock. Elections are subject to proration if total cash elections exceed 65% of total consideration to be paid, or stock elections exceed 35%. Based on KMI's share price and the CAD/USD exchange rate on July 29, 2005, the offer is worth approximately $35.91/share.

Impact – Positive

Attractive Valuation Leads Us to Not Expect Any Competing Bids: The offer represents a premium of approximately 20% over TER's 20-day average share price (14% over its July 29, 2005 closing price), 23.8x 2005 expected earnings, 11.5x 2005 projected EBITDA, and 2.6x price-to-book. We believe KMI is paying a premium for access to oil sands growth opportunities. We don't expect any competing bids. We don't believe any other U.S. company has the valuation and financial strength to pay this price. We also don't think it is likely that Enbridge or TransCanada would pay more for TER because they already have a presence in the WCSB and relationships with Canadian producers.

Great Strategic and Operational Fit: We believe that there is a strategic and operational fit with the two businesses. With a combined pro-forma E.V. of more than US$19 billion, KMI will have the local presence, resources and scale to compete with Enbridge (approx. EV of C$21 billion) and TransCanada (approx. EV of C$30 billion) to build new energy infrastructure in Canada, in our view. We see a cultural fit because both TER and KMI have 1) a track record of shareholder value creation delivering above-utility average total returns, 2) a focus on operational excellence, 3) ownership of predominantly fee-based or regulated businesses focused on the transportation and storage of energy products across North America, and 4) access to low cost-of-capital through tax-efficient structures. We expect further details on potential revenue and cost synergies to be provided on the conference call.

Diversifies Geography and Business Mix: While we view both companies as having relatively low-risk assets, the combined entity will have further diversified the geography and business mix. This is of particular benefit to Terasen shareholders, as its petroleum pipeline operations service only one basin (WCSB), and its British Columbia based natural gas distribution business is required to compete with the province's with low-cost hydroelectricity. The combined entity will own and operate interest in natural gas pipelines, crude oil and refined product pipelines, natural gas distribution, and four power plants.

Details

Shareholders Approval Needed: Terasen will hold a special meeting of shareholders to approve the transaction no later than October 31, 2005. For the deal to proceed, 75% of TER shareholders in attendance must vote in favor of the transaction. There is a $75 million, or approximate $0.71 per share, break fee should TER shareholders reject KMI's offer, or accept a competing bid.

We Expect Regulatory Approvals Will be Granted: The transaction is subject to regulatory approval in both Canada and the US. We believe that KMI's intention to maintain Terasen Gas' head office in Vancouver, BC should ease some of any potential local concerns surrounding potential domestic job losses in British Columbia.

Details on Kinder Morgan: Headquartered in Houston, Texas, KMI is one of the largest midstream energy companies in the U.S., operating more than 35,000 miles of natural gas and products pipelines and approximately 145 terminals that store and handle products like gasoline and coal. KMI also owns a 240,000 customer natural gas retail distribution network in Colorado, Wyoming, and Nebraska. Kinder Morgan Inc. own approximately 16% of Kinder Morgan Energy Partners L.P. (KMP), and acts as its general partner. KMI and KMP have a combined E.V. of approximately U.S. $30 billion. The CEO Richard D. Kinder owns about 19% of KMI and receives a salary of $1 per year with no bonuses, no option grants, and no restricted stock. Over the past six years, KMI has delivered 40% annualized total returns.

Conference Call Information: Kinder Morgan will host a live webcast at www.kindermorgan.com at 8:30 AM ET, August 2, 2005 to discuss the transaction. Terasen will host a separate call at 10:00 AM ET (1-877-375-5688).

Valuation: Our target price of $35.75 is based on our view that the acquisition of TER by KMI will proceed under the current terms at what we view as an attractive cash offer. Note that we attribute a low probability to a higher competing offer. This new target price implies a P/E of 23.1x our standalone 2006E Terasen EPS, a historically high valuation.

Key risks to our target price include: 1) regulatory and Terasen shareholder approvals for the transaction, 2) post-merger integration risk, 3) higher than expected long bond yields in North America, 4) lower than expected earnings and cash flow growth by Kinder Morgan 5) tougher-than-expected regulatory decisions, 6) operational disruptions, and 7) a competing higher offer.

Conclusion - Expect the Stock to Trade Up: We are upgrading Terasen to BUY purely based on the total returns implied by the closing price on July 29, 2005; however, we expect the stock to trade up rapidly to between $34 and 35 (just below the offer price in recognition of the time value of money and relatively low transaction risk), and we would accumulate the shares up to $34. We do not expect the shares to trade above the offer price as we view the probability of a competing bid as low.

We believe that this acquisition would create substantial value for TER shareholders. While there is some transaction risk associated with an acquisition of this scale, we believe that regulatory and TER shareholder approvals will be granted. In addition, the challenges of integrating two organizations with unique cultures could result in transaction EPS accretion to Kinder Morgan Inc. shareholders falling short of six to eight percent in 2006; however, given the track record of Kinder Morgan management we believe that the post-merger integration risk is modest.

Conclusion - Broad Implications for the Canadian Sector : This announcement dramatically alters the competitive landscape, as it creates a third large pipeline and energy infrastructure company in Canada. We expect high levels of competition between KMI, Enbridge, and TransCanada for the mandate to build new energy infrastructure, especially as it relates to the oil sands and Alaskan gas. While it is possible for Enbridge and TransCanada to compete with their current scale, we believe that these companies will likely consider a strategic response over the coming year. This could come in the form of an acquisition of a U.S. company to achieve north-south scale economies. It is also feasible that Enbridge and TransCanada consider a merger between themselves, as there is little overlap in their current businesses and it would likely bring revenue and cost synergies. ***We will be updating our thesis on all companies in the sector in the near term as a result of this acquisition announcement.***

Terasen Inc.

(TER-T; C$36.00)

Terasen and Kinder Morgan Discuss Merger

Event: Kinder Morgan and Terasen hosted conference calls to discuss Kinder Morgan Inc.'s (KMI) proposed acquisition of Terasen. Please see our Terasen *Action Note* dated August 2, 2005 for more details on the transaction.

Impact – Neutral

Details: Some new information and additional context was provided on the respective conference calls. Our takeaways are as follows:

Rationale for Terasen's Acceptance of KMI's Bid: KMI's bid was an unsolicited offer that Terasen felt it could not refuse. Terasen has had high-level, ongoing discussions about potential partial and total business combinations. Based on its perception of maximizing shareholder returns, and a review of KMI's bid by an external adviser, Terasen felt that KMI's offer was very attractive.

Preliminary Customer and Regulatory Reaction: Terasen perceives a generally favorable reaction by key stakeholders, based on preliminary discussions with various Canadian governments, regulators, customers and pension fund partners.

Growth Opportunities More the Focus than Cost Synergies: Terasen does not view much risk in customers or partners seeking to participate in benefits of the acquisition (and thereby potentially diluting benefits to Kinder Morgan) as the rationale for the transaction was based on the strategic fit, oilsands volume growth and improved competitive positioning rather than wringing operating synergies out of the combined entity. We note, however, that Terasen Gas is requesting a higher ROE and equity thickness from the BCUC, and given the premium KMI is paying for the parent company, Terasen's previous argument that its allowed rates of return hinder its ability to attract capital may be less persuasive. In addition, the TransMountain pipeline is in negotiations for a new 5-year deal with shippers. Our perception is that KMI is factoring in continuing high returns from this pipeline, and we see that as optimistic given our view on the likelihood of at least some re-basing.

BCUC Review Expected to be the Largest: Out of the many regulatory reviews to which this transaction will be subject, KMI expects the BCUC's to be the largest, since there will be an onus on KMI to prove that the transaction will not be detrimental to existing ratepayers and in fact all stakeholders. KMI believes that this risk has been mitigated by its decision to allow Terasen Gas to continue operating as an autonomous business unit, with the Terasen Gas head office remaining in Vancouver. In addition, Terasen believes that Duke Energy's 2001 acquisition of Westcoast Energy, which received regulatory approval, will serve as a precedent and that the regulator should be relatively indifferent to this transaction since the majority of acquisition related changes will occur at the corporate parent rather than at Terasen Gas Inc.

Other Details

- The tax-efficient Express Pipeline structure is fully protected under this acquisition.
- Terasen's CEO will be focused on consummating the transaction, and it is still to be determined whether he will sit on KMI board or obtain a senior position within KMI after the deal is completed.
- Non-electing Terasen shareholders will receive proceeds of 65 % cash and 35% KMI stock.
- There are no plans to offer KMI exchangeable shares to Terasen shareholders.

Outlook and Conclusion: Based on the information provided on the respective conference calls, our view continues to be that the transaction will likely proceed, and competing bids are unlikely. We believe that Terasen shares are now trading on the basis of the underlying value of the 65% cash and 35% stock offer, and will likely continue to do so until the transaction is finalized.

A full pipeline of opportunities

■ Earlier than expected dividend increase

Terasen reported Q4 2004 EPS of C$0.51 which was below our estimate of C$0.55 and the Street's view of C$0.58, however, we note a considerable part of the difference arose from a regulatory accounting change that does not impact overall annual earnings. Positively, the company increased its dividend one quarter earlier than expected.

■ Better things to come

Overall this quarter (after considering the accounting change) was largely in line with expectations, however, we continue to believe that better things are potentially ahead for Terasen's oil sands related exposure.

■ Abundant opportunities, but slow and steady

While Terasen faces a number of somewhat compelling opportunities, we believe only a seletion of these prospects will come to fruition. Additionally, we believe the progression into a much larger and potentially higher earning and returning company will take some time to develop.

■ Valuation: C$28.00 12-month target price

We continue to utilize multiple valuation methods to obtain our C$28.00 12-month target price, including: a 17.5x P/E multiple on our 2006 earnings estimate; a projected dividend yield of 3.2%; and, a dividend yield spread of 180 bps. We retain our Neutral 1 rating.

ANALYST CERTIFICATION AND REQUIRED DISCLOSURES BEGIN ON PAGE 7

UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Terasen reported Q4 2004 EPS of C$0.51 versus adjusted EPS of C$0.52 one year earlier. The quarterly result was below our C$0.55 estimate and the Street's C$0.58, however, we note a considerable part of the difference arose from a regulatory accounting change that does not impact overall annual earnings. For the full year, after adjusting for an unrealized hedge gain, the company's results were in line with our expectations of C$1.40 which reinforces the accounting change only having an impact on the allocation of taxation through the quarters and not on the full year's economics. Positively, the company deviated from its usual approach of raising its dividend with the Q1 results and increased the dividend one quarter earlier than expected. We continue to believe Terasen faces relatively good prospects in its core business areas. In our view, strong crude fundamentals, continued oil sands growth prospects and new market access issues underpin a significant portion of Terasen's future growth. This research note is divided into three categories: (1) results; (2) going forward; and, (3) valuation.

Continuing to exceed expectations

Results

Terasen reported Q4 2004 EPS of C$0.51 versus adjusted EPS of C$0.52 one year earlier. The quarterly result was below our C$0.55 estimate and the Street's C$0.58, however, we note a considerable part of the difference arose from a regulatory accounting change that does not impact overall annual earnings. For the full year, after adjusting for an unrealized hedge gain, the company's results were in line with our expectations of C$1.40 which reinforces the accounting change only having an impact on the allocation of taxation through the quarters and not on the full year's economics. Our segmented analysis appears below.

Annual earnings in line with expectations

Natural gas distribution

The full year earnings generated by Terasen's natural gas distribution unit were largely in line with expectations, however, as discussed above, there was a regulatory accounting change that impacts past and future quarterly earnings potential for this segment. Table 1 contains the restated earnings for Terasen Gas.

Modest (and immaterial) restatement

Table 1: Natural Gas earnings restatement (C$ millions)

	2004				2003			
	Q4	Q3	Q2	Q1	Q4	Q3	Q2	Q1
Restated	36.2	(13.3)	(1.2)	48.0	37.5	(14.4)	(1.9)	51.4
Previous	42.2	(24.7)	(8.5)	60.7	45.3	(25.5)	(8.3)	61.1

Source: Company reports

The restatement involves the method for calculated income tax expense. The change does not affect full year earnings, however, quarterly earnings are impacted by this change. Previously, Terasen Gas' annual tax expense had been allocated based on budgeted sales revenue for the four quarters. Beginning in the fourth quarter of 2004, Terasen Gas' income tax expense is determined by applying the effective annual tax rate to the pre-tax income in the quarter. This treatment is much more consistent with the existing peer group. Selected comparative data appears in Table 2.

Table 2: Natural gas distribution data points

	Q4 2004	Q4 2003	Q3 2004	FY 2004	FY 2003	Q4 Chg (%) y-o-y	Chg (%) sequential	FY Chg (%) y-o-y

Source: Company reports and UBS

Solid customer growth and transportation volumes

Additional pertinent information include: (a) y-o-y, the number of natural gas customers increased by 1.0% over the course of Q4, and 1.9% for the full year; (b) operations and maintenance costs increased by a very modest 0.6% for the full-year 2004; and, (c) financing costs declined by roughly 6.9% in 2004. In summary, aside from the accounting change, these results were roughly inline with our expectations.

Petroleum transportation

Similar to Natural Gas Distribution, this segment performed inline with our expectations by delivering net earnings growth of 11.2% in Q4 2004 and 26.2% in 2004 on a year-over-year basis (see Table 3). Trans Mountain and the Express System produced the majority of the growth during Q4, while the Express System and Corridor delivered the bulk of the Petroleum Transportation segment's growth over the full year. Strong volumetric growth on all of the systems helped contribute to increased revenues that aided profitability.

Table 3: Petroleum transportation data points

	Q4 2004	Q4 2003	Q3 2004	FY 2004	FY 2003	Q4 Chg (%) y-o-y	Chg (%) sequential	FY Chg (%) y-o-y

Source: Company reports and UBS

We believe Terasen's Trans Mountain Pipeline and the Westridge Dock are enviably positioned to continue benefiting from very robust Californian refinery margins.

Water and utility services

Reflecting the contribution of Fairbanks acquisition, among other factors, net income improved by more than 50% to C$6.6 million for 2004, up from C$4.1m in 2003.

Other activities

Year-over-year performance in 2004 weakened in this segment by delivering a disappointing loss of C$23.3 million versus a loss of C$23.0 million in the previous year.

Going forward

We believe Terasen investors, whether existing or prospective, should be aware of three major issues: (1) Oil sands affection; (2) New market development; and, (3) Gas distribution growth. Each of these will be addressed in greater detail below.

Oil sands affection?

Fundamentally, we have viewed the oil sands as a unique investment opportunity that may provide relatively visible growth over an extended period of time. Moreover, we regard pipelines that provide takeaway capacity from the oil sands as being similarly unique. The ongoing strength in global oil prices has led to an increased amount of investor attention being directed towards oil sands related companies, including Enbridge and Terasen. As several of the large oil and gas companies are on the verge of embarking upon significant capital programs for continued or new oil sands development, we believe a number of investors are building significant expectations into an indirect method of playing oil sands developments: the liquids pipeline companies. In our view, this increased affection towards oil sands related names has moderately boosted recent valuations. Yet, as per capital expenditure theory, we are likely to become far less bullish when the major capital programs commence. Prior to that time, we continue to believe that "oil sands affection" along with a number of other factors are likely to support rather robust valuations for selected oil sands pipeline plays.

Increased affection towards oil sands names

Go west, young man, go west!

In our report titled "*Go west, young man, go west!*" (dated 27 January 2005), we have outlined a number of issues related to new market development for western Canadian crude and related products. Much of the thrust for new market development arises from the necessity of avoiding a significant market saturation of Canadian crudes (including heavy and synthetic) in any one market region. In our view, new market development is necessary and Terasen is likely to benefit from such market diversification. We continue to believe a number of market areas will be attractive and necessary for Canadian based producers. By way of corollary, the pipeline and appropriate transportation network serving those markets will be equally important. Potential developments such as Enbridge's Gateway project and Teresen's various TMX projects may both have a role in future new market development. Yet, one must be cognizant that more significant expansions and other initiatives will be entirely dependent upon the desires of a proposed system's shippers. Additionally, the attractiveness of these potential investments has attracted considerable attention and increased project competition (consider TransCanada's recent Keystone proposal - for greater details please refer to our 9 February 2005 note "*Keystone proposal*"). Despite some significant concerns (i.e. rising steel costs and significant capital expenditure programs being upwardly revised), over the longer term, the trend toward crude market diversification is likely to continue. That trend is likely to be economically beneficial for companies exposed to the oil sands.

Greater crude dispersion necessary

Shippers play a lead role

Gas distribution growth

As with many regulated utilities, Terasen's natural gas distribution utility has suffered from a declining yield curve that has translated into lower allowed regulated returns. Yet, there have been some positive trends and announcements for the company's natural gas distribution business. For instance, on 16 February the British Columbia Utilities Commission approved a C$100 million liquefied natural gas storage facility near Nanaimo, British Colubmia that would be used for peak shaving and load management activities (note this facility as with Terasen's existing LNG facility would not be used for imports). One of the driving factors for this project is the need for additional generation capacity on Vancouver Island. Regarding that issue, the BCUC approved an energy purchase contract between BC Hydro and Duke Point Power LP for a 262MW natural gas power plant That generation facility and the LNG proposal may benefit Terasen in a number of ways, including: (1) increased distribution rate base; (2)

Incremental distribution growth on Vancouver Island driven by power plant development increased system throughput; and (3) gradual transmission system expansion. We view this prospective plant and other prospective projects within the province as beneficial for Teresen's utility business. Additionally, recent electricity rate increases within British Columbia are slowly improving the relative competitiveness of natural gas for home heating versus baseboard electric.

Valuation

In our view, the company faces relatively good prospects in its core business areas and continued oil sands growth, combined with new market access issues, underpin a significant portion of Terasen's future growth. Additionally, a number of marco factors, are likely to be supportive of the company's existing valuation, including: currency fundamentals; the Canadian interest rate environment; and, fund flows (for greater details please refer to our 14 January 2005 research report "*Rise of the loonie?*"). Clearly, a number of positives exist for the stock. However, we believe a portion of future growth is priced within the stock at this point. We continue to utilize multiple valuation methods to obtain our C$28.00 12-month target price, including: 17.5x P/E multiple on our 2006 earnings estimate; a projected dividend yield of 3.2%; and, a dividend yield spread of 180 bps. We retain our Neutral 1 rating.

■ Terasen Inc.

Terasen is a traditional regulated natural gas distribution utility serving several market areas in the Province of British Columbia. The company also possesses a substantial liquids pipelines business that provides direct access into three separate Petroleum Administration Defence Districts (PADD) for Alberta crude products.

■ Statement of Risk

Competitive pipeline expansions may significantly affect volume throughput and, therefore, earnings. Additionally, Terasen's business is exposed to a number of specific risks, including: throughput; weather; interest rates; and, competitive energy sources. Finally, one should never underestimate the power of the regulator in any regulated business.

KEY DEFINITIONS

Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months.
Market Return Assumption (MRA) is defined as the one-year local market interest rate plus 5% (an approximation of the equity risk premium).
Predictability Level The predictability level indicates an analyst's conviction in the FSR. A predictability level of '1' means that the analyst's estimate of FSR is in the middle of a narrower, or smaller, range of possibilities. A predictability level of '2' means that the analyst's estimate of FSR is in the middle of a broader, or larger, range of possibilities.
Under Review (UR) Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation.
Rating/Return Divergence (RRD) This qualifier is automatically appended to the rating when stock price movement has caused the prevailing rating to differ from that which would be assigned according to the rating system and will be removed when there is no longer a divergence, either through market movement or analyst intervention.

EXCEPTIONS AND SPECIAL CASES

US Closed-End Fund ratings and definitions are: Buy: Higher stability of principal and higher stability of dividends; Neutral: Potential loss of principal, stability of dividend; Reduce: High potential for loss of principal and dividend risk.
UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; Neutral: Neutral on factors such as structure, management, performance record, discount; Reduce: Negative on factors such as structure, management, performance record, discount.
Core Banding Exceptions (CBE): Exceptions to the standard +/-10% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Companies Mentioned table in the relevant research piece.

UBS

UBS Investment Research

Terasen Inc.

Less than full pipeline

■ EPS falls short

Terasen reported Q1 2005 EPS of C$0.63, which fell short of our C$0.68 estimate and the Street's view of C$0.71. Yet, two notable issues skewed these results: 1) an after tax mark-to-market gain of C$0.02/sh; and, 2) low petroleum throughput which resulted in a drag on earnings of C$0.05/sh.

■ Weak volumes due to oil supply disruption

Several production outages in the Alberta oil sands coupled with certain refinery outages resulted in lower throughput volumes on both the Trans Mountain and Express Systems. When compared to Q1 of last year, volumes on the Trans Mountain system were down nearly 30%, while volumes on the Express system were down 2.6%.

■ Expect short term weakness; opportunities remain ahead

While Terasen faces a number of somewhat compelling opportunities, we believe only a seletion of these prospects will come to fruition. Additionally, we believe the progression into a much larger and potentially higher earning and returning company will take some time to develop.

■ Valuation: C$28.00 12-month target price

We continue to utilize multiple valuation methods to obtain our C$28.00 12-month target price, including: a 17.5x P/E multiple on our 2006 earnings estimate; a projected dividend yield of 3.2%; and, a dividend yield spread of 180 bps. We retain our Neutral 1 rating.

ANALYST CERTIFICATION AND REQUIRED DISCLOSURES BEGIN ON PAGE 6

UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Terasen reported Q1 2005 EPS of C$0.63, which fell short of our C$0.68 estimate and the Street's view of C$0.71. Yet, two notable issues skewed these results: 1) an after tax mark-to-market gain of C$0.02/sh in the "other activities" segment; and, 2) low petroleum throughput which resulted in a drag on earnings in the amount of C$0.05/sh. Several production outages in the Alberta oil sands coupled with certain refinery outages resulted in lower throughput on both the Trans Mountain and the Express Systems. When compared to Q1 of last year, volumes on the Trans Mountain system were down nearly 30%, while volumes on the Express system were down 2.6%. We continue to believe Terasen faces relatively good prospects in its core business areas. In our view, strong crude fundamentals, continued oil sands growth prospects and new market access issues underpin a significant portion of Terasen's future growth. This research note is divided into three categories: (1) results; (2) going forward; and, (3) valuation.

Results

Selected issues affected pipeline volumes

Terasen reported Q1 2005 EPS of C$0.63, which fell short of our C$0.68 estimate and the Street's view of C$0.71. Yet, two notable issues skewed these results: 1) an after tax mark-to-market gain of C$0.02/sh in the "other activities" segment; and, 2) low petroleum throughput which resulted in a drag on earnings in the amount of C$0.05/sh. Several production outages in the Alberta oil sands coupled with certain refinery outages resulted in lower throughput on both the Trans Mountain and the Express Systems. When compared to Q1 of last year, volumes on the Trans Mountain system were down nearly 30%, while volumes on the Express system were down 2.6%. We continue to believe Terasen faces relatively good prospects in its core business areas. In our view, strong crude fundamentals, continued oil sands growth prospects and new market access issues underpin a significant portion of Terasen's future growth. Our segmented analysis appears below.

Natural gas distribution

Moderately disappointing results

While total volumes in the natural gas segment were nearly flat at 75.1PJ in Q1 2005 compared to 75.4PJ during the same quarter last year, earnings in this segment grew 1.8% from C$54.7m in Q1 2004 to C$55.7m in Q1 2005. This performance was partially attributable to operating efficiencies and customer growth. Selected comparative data appears in the table below.

Table 1: Natural gas distribution data points

	Q1 2005	Q1 2004	Q4 2004	Chg (%) y-o-y	Chg (%) seq
Earnings (C$millions)					
Terasen Gas	49.0	48.0	36.2	2.1%	35.4%
TGVI	6.7	6.7	6.4	0.0%	4.7%
Total	55.7	54.7	42.6	1.8%	30.8%
Number of Customers	878,560	862,631		1.8%	
Volumes (petajoules)					
Sales Volumes	48.8	49.3	41.1	-1.0%	18.7%
Transportation volumes	21.6	21.9	19.6	-1.4%	10.2%
Throughput	4.7	4.2	5.5	11.9%	-14.5%
	75.1	75.4	66.2	-0.4%	13.4%

Source: Company reports and UBS

Additional pertinent information includes: (a) During Q1 2005 the customer base grew by roughly 4%, which is roughly equivalent to the customer growth experienced during Q1 2004; (b) operations and maintenance costs increased by a very modest 0.8% compared to the same quarter last year; and, (c) financing costs declined by roughly 2% in Q1 2005.

Customer growth continues

Petroleum transportation

Temporary production outages in the Alberta oil sands coupled with certain refinery outages resulted in lower throughput volumes in both the Trans Mountain system and the Express System. When compared to Q1 of last year, volumes on the Trans Mountain system were down nearly 30%, while volumes on the Express system were down 2.6%.

Substantial volume declines are unlikely to be ongoing

Table 2: Petroleum transportation data points

	Q1 2005	Q1 2004	Q4 2004	Chg (%) y-o-y	Chg (%) seq
Earnings (C$millions)					
Trans Mountain	5.4	10.4	11.2	-48.1%	-51.8%
Express System	3.7	4.0	4.9	-7.5%	-24.5%
Corridor	3.6	3.9	3.8	-7.7%	-5.3%
Total	12.7	18.3	19.9	-30.6%	-36.2%
Volumes (b/d)					
Trans Mtn Cdn mainline	170,000	240,400	239,100	-29.3%	-28.9%
Trans Mtn US mainline	44,500	93,300	89,300	-52.3%	-50.2%
Express System	166,900	171,300	175,400	-2.6%	-4.8%
Total	381,400	505,000	503,800	-24.5%	-24.3%

Source: Company reports and UBS

The volume declines were largely related to production problems and several oil sands projects (eg: Suncor Energy) coupled with selected refinery outages. Naturally, risks exist in the pipeline transmission business, however, we consider the confluence of activities in Q1 to be somewhat rare. Yet, we are considering them to be of an operating nature, rather than one-time.

Water and utility services

Reflecting the contribution of Fairbanks acquisition, among other factors, net income improved to C$0.8m in Q1 2005 compared to C$0.0m in Q1 2004.

Other activities

Based on reported figures, year-over-year performance in this segment improved, with a loss of C$2.9m in Q1 2005 compared to a loss of C$5.1m in Q1 2004. However, after extracting the effect of mark-to-market gains in each of the quarters being compared, losses in this segment during Q1 2005 were C$5.5 compared to a loss of C$6.8m during the same quarter last year.

Going forward

We believe Terasen investors, whether existing or prospective, should be aware of three major issues: (1) Oil sands affection; (2) New market development; and, (3) Gas distribution growth. Each of these will be addressed in greater detail below.

Oil sands affection?

Increased affection towards oil sands names

Fundamentally, we have viewed the oil sands as a unique investment opportunity that may provide relatively visible growth over an extended period of time. Moreover, we regard pipelines that provide takeaway capacity from the oil sands as being similarly unique. The ongoing strength in global oil prices has led to an increased amount of investor attention being directed towards oil sands related companies, including Enbridge and Terasen. As several of the large oil and gas companies are on the verge of embarking upon significant capital programs for continued or new oil sands development, we believe a number of investors are building significant expectations into an indirect method of playing oil sands developments: the liquids pipeline companies. Notably, as discussed on the Terasen conference call, the significant oil sands expansion project recently filed by Shell Canada for its Muskeg River mine is likely to provide opportunities for the Corridor Pipeline. In our view, the long-term and highly visible growth associated with the oil sands has moderately boosted recent valuations. Yet, as per capital expenditure theory, we are likely to become far less bullish when the major capital programs commence. Prior to that time, we continue to believe that “oil sands affection” along with a number of other factors are likely to support rather robust valuations for selected oil sands pipeline plays.

Go west, young man, go west!

Greater crude dispersion necessary

In our report titled "*Go west, young man, go west!*" (dated 27 January 2005), we have outlined a number of issues related to new market development for western Canadian crude and related products. Much of the thrust for new market development arises from the necessity of avoiding a significant market saturation of Canadian crudes (including heavy and synthetic) in any one market region. In our view, new market development is necessary and Terasen is likely to benefit from such market diversification. We continue to believe a number of market areas will be attractive and necessary for Canadian based producers. By way of corollary, the pipeline and appropriate transportation network serving those markets will be equally important. Potential developments such as Enbridge's Gateway project and Teresen's various TMX projects may both have a role in future new market development. At this time, we are seeing substantial evidence that crude diversification strategies are truly taking hold with the recent National Energy Board decision relating to the Spearhead and Corsicana pipelines. Additionally, with the relatively recent announcement regarding the Enbridge-PetroChina Memorandum of Understanding about the Gateway Pipeline provides further evidence of the forces of supply push and demand pull coming into balance (for greater details please refer to our 14 April 2005 research note "*When east meets west*"). Over the longer term, the trend toward crude market diversification is likely to continue. That trend is likely to be economically beneficial for companies exposed to the oil sands.

Shippers play a lead role

Gas distribution growth

As compared to the company's Petroleum Transportation business, we believe Terasen will have a lower growth profile in its natural gas distribution utility. In our view, there are a number of issues of which one should be cognizant, including:

Incremental distribution growth on Vancouver Island driven by power plant development

- The British Columbia Utilities Commission approved a C$100m Terasen peak shaving liquefied natural gas storage facility near Nanaimo, British Columbia;
- One of the driving factors for the LNG facility is the need to help fuel proposed additional natural gas fired generation capacity on Vancouver Island; and,
- Weaker Pacific Northwest hydrology combined with electricity rate increases within British Columbia are slowly improving the relative competitiveness of natural gas for home heating versus that of baseboard electric.

Valuation

In our view, this quarter's earnings were a bit of a disappointment. Yet, over the longer-term, we believe Terasen faces relatively good prospects in its core business areas and continued oil sands growth, combined with new market access issues, underpin a significant portion of the company's future growth. We continue to utilize multiple valuation methods to obtain our C$28.00 12-month target price, including: 17.5x P/E multiple on our 2006 earnings estimate; a projected dividend yield of 3.2%; and, a dividend yield spread of 180 bps. We retain our Neutral 1 rating.

■ Terasen Inc.

Terasen is a traditional regulated natural gas distribution utility serving several market areas in the Province of British Columbia. The company also possesses a substantial liquids pipelines business that provides direct access into three separate Petroleum Administration Defence Districts (PADD) for Alberta crude products.

■ Statement of Risk

Competitive pipeline expansions may significantly affect volume throughput and, therefore, earnings. Additionally, Terasen's business is exposed to a number of specific risks, including: throughput; weather; interest rates; and, competitive energy sources. Finally, one should never underestimate the power of the regulator in any regulated business.

■ Analyst Certification

Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers; and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

1: Percentage of companies under coverage globally within this rating category.

2: Percentage of companies within this rating category for which investment banking (IB) services were provided within the past 12 months.

Source: UBS; as of 31 March 2005.

KEY DEFINITIONS

Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months.
Market Return Assumption (MRA) is defined as the one-year local market interest rate plus 5% (an approximation of the equity risk premium).
Predictability Level The predictability level indicates an analyst's conviction in the FSR. A predictability level of '1' means that the analyst's estimate of FSR is in the middle of a narrower, or smaller, range of possibilities. A predictability level of '2' means that the analyst's estimate of FSR is in the middle of a broader, or larger, range of possibilities.
Under Review (UR) Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation.
Rating/Return Divergence (RRD) This qualifier is automatically appended to the rating when stock price movement has caused the prevailing rating to differ from that which would be assigned according to the rating system and will be removed when there is no longer a divergence, either through market movement or analyst intervention.

EXCEPTIONS AND SPECIAL CASES

US Closed-End Fund ratings and definitions are: Buy: Higher stability of principal and higher stability of dividends; Neutral: Potential loss of principal, stability of dividend; Reduce: High potential for loss of principal and dividend risk.
UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; Neutral: Neutral on factors such as structure, management, performance record, discount; Reduce: Negative on factors such as structure, management, performance record, discount.
Core Banding Exceptions (CBE): Exceptions to the standard +/-10% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Companies Mentioned table in the relevant research piece.

Source: UBS; as of 3 May 2005.

Note: On October 13, 2003, UBS adopted new definition criteria for its rating system. (See 'UBS Investment Research: Global Equity Ratings Definitions and Allocations' table for details.) Between January 11 and October 12, 2003, the UBS ratings and their definitions were: Buy 1: Excess return potential > 15%, smaller range around price target; Buy 2: Excess return potential > 15%, larger range around price target; Neutral 1: Excess return potential between -15% and 15%, smaller range around price target; Neutral 2: Excess return potential between -15% and 15%, larger range around price target; Reduce 1: Excess return potential < -15%, smaller range around price target; Reduce 2: Excess return potential < -15%, larger range around price target. Prior to January 11, 2003, the UBS ratings and definitions were: Strong Buy: Greater than 20% excess return potential, high degree of confidence; Buy: Positive excess return potential; Hold: Low excess return potential, low degree of confidence; Reduce: Negative excess return potential; Sell: Greater than 20% negative excess return potential, high degree of confidence. Under both ratings systems, excess return is defined as the difference between the FSR and the one-year local market interest rate.

Pumping up Trans Mountain

■ Modestly upping capacity

Terasen has filed an application with the National Energy Board (NEB) to increase the capacity of its Trans Mountain system by 35,000 bpd. If approved, the expansion will cost C$210 million and will come online in Q1 2007.

■ Phase one of many

The expansion, which involves building new as well as upgrading existing pumpstations, is the first phase in potentially larger Trans Mountain expansions to follow. The next phase involves gaining shipper support for the construction of a 30-inch pipeline loop between Hinton, Alberta and Valemount, B.C.

■ Short-term weakness; opportunities remain ahead

While Terasen faces a number of somewhat compelling opportunities, we believe only a seletion of these prospects will come to fruition. Additionally, we believe the progression into a much larger and potentially higher earning and returning company will take some time to develop.

■ Valuation: C$28.00 12-month target price

We continue to utilize multiple valuation methods to obtain our C$28.00 12-month target price, including: a 17.5x P/E multiple on our 2006 earnings estimate; a projected dividend yield of 3.3%; and, a dividend yield spread of 170 bps. We rate the stock Neutral 1 (RRD).

ANALYST CERTIFICATION AND REQUIRED DISCLOSURES BEGIN ON PAGE 2

*Rating/return divergence; See page 3

UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

wi

■ Terasen Inc.

Terasen is a traditional regulated natural gas distribution utility serving several market areas in the Province of British Columbia. The company also possesses a substantial liquids pipelines business that provides direct access into three separate Petroleum Administration Defence Districts (PADD) for Alberta crude products.

■ Statement of Risk

Competitive pipeline expansions may significantly affect volume throughput and, therefore, earnings. Additionally, Terasen's business is exposed to a number of specific risks, including: throughput; weather; interest rates; and, competitive energy sources. Finally, one should never underestimate the power of the regulator in any regulated business.

■ Analyst Certification

Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers; and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

Required Disclosures

This report has been prepared by UBS Securities Canada Inc, an affiliate of UBS AG (UBS).

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; and certain additional disclosures concerning UBS research recommendations, please visit www.ubs.com/disclosures.

UBS Investment Research: Global Equity Ratings Definitions and Allocations

UBS rating	Definition	UBS rating	Definition	Rating category	Coverage[1]	IB services[2]
Buy 1	FSR is > 10% above the MRA, higher degree of predictability	**Buy 2**	FSR is > 10% above the MRA, lower degree of predictability	**Buy**	40%	41%
Neutral 1	FSR is between -10% and 10% of the MRA, higher degree of predictability	**Neutral 2**	FSR is between -10% and 10% of the MRA, lower degree of predictability	**Hold/Neutral**	49%	43%
Reduce 1	FSR is > 10% below the MRA, higher degree of predictability	**Reduce 2**	FSR is > 10% below the MRA, lower degree of predictability	**Sell**	11%	35%

1: Percentage of companies under coverage globally within this rating category.

2: Percentage of companies within this rating category for which investment banking (IB) services were provided within the past 12 months.

Source: UBS; as of 30 June 2005.

KEY DEFINITIONS

Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months.
Market Return Assumption (MRA) is defined as the one-year local market interest rate plus 5% (an approximation of the equity risk premium).
Predictability Level The predictability level indicates an analyst's conviction in the FSR. A predictability level of '1' means that the analyst's estimate of FSR is in the middle of a narrower, or smaller, range of possibilities. A predictability level of '2' means that the analyst's estimate of FSR is in the middle of a broader, or larger, range of possibilities.
Under Review (UR) Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation.
Rating/Return Divergence (RRD) This qualifier is automatically appended to the rating when stock price movement has caused the prevailing rating to differ from that which would be assigned according to the rating system and will be removed when there is no longer a divergence, either through market movement or analyst intervention.

EXCEPTIONS AND SPECIAL CASES

US Closed-End Fund ratings and definitions are: Buy: Higher stability of principal and higher stability of dividends; Neutral: Potential loss of principal, stability of dividend; Reduce: High potential for loss of principal and dividend risk.
UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; Neutral: Neutral on factors such as structure, management, performance record, discount; Reduce: Negative on factors such as structure, management, performance record, discount.
Core Banding Exceptions (CBE): Exceptions to the standard +/-10% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Companies Mentioned table in the relevant research piece.

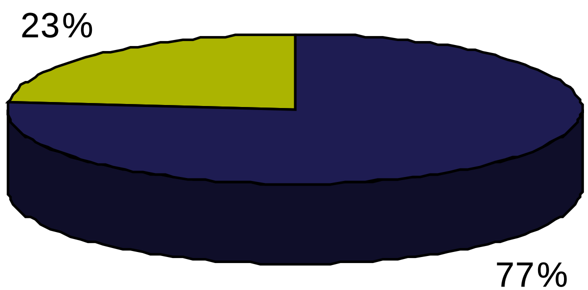
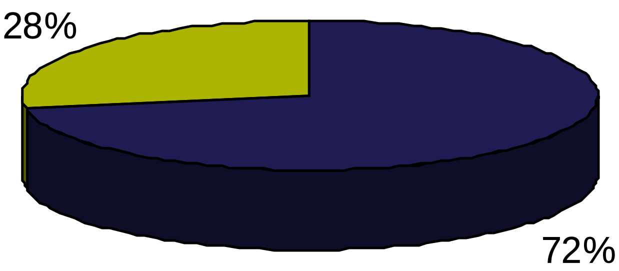
(12 months ended December 31, 2005)



Assets: $5,054 million
(at December 31, 2005)



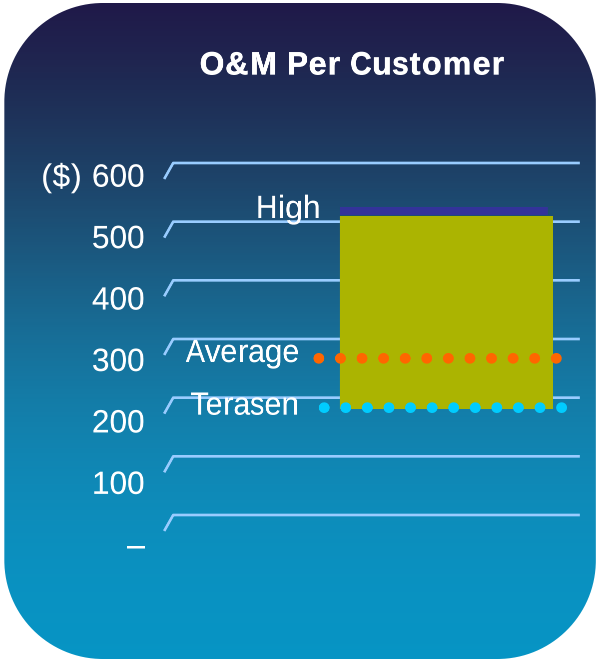
Natural Gas Distribution **Petroleum Transportation**

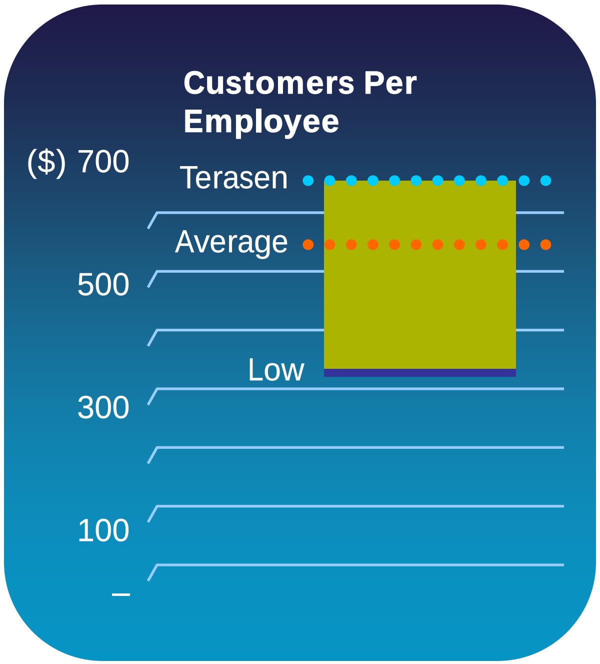
Terasen Gas

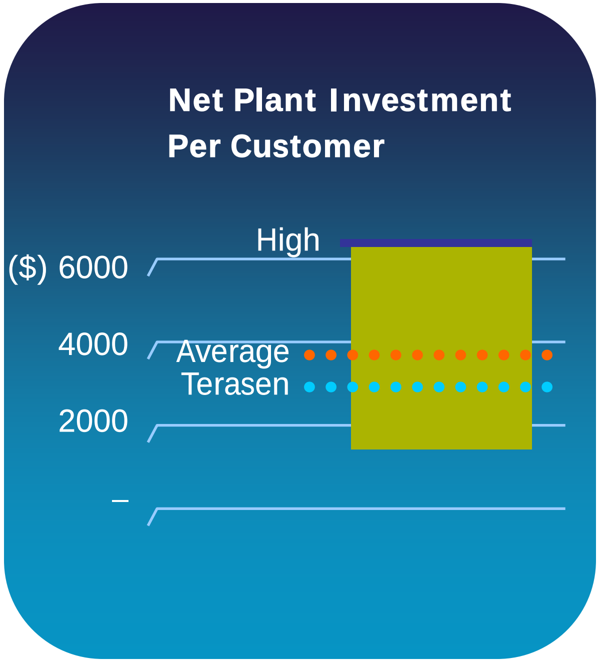
2005 Highlights

- Continued growth in rate base for both TGI and TGVI
- TGI customer additions of 12,613 in 2005 versus 11,750 in 2004
- TGVI customer additions of 4,354 in 2005 versus 4,233 in 2004
- Net income, once adjusted for KMI acquisition costs, higher as rate base growth and operating efficiencies offset lower allowed ROE

Operating Efficiency







Source: LSM Consulting

terasen

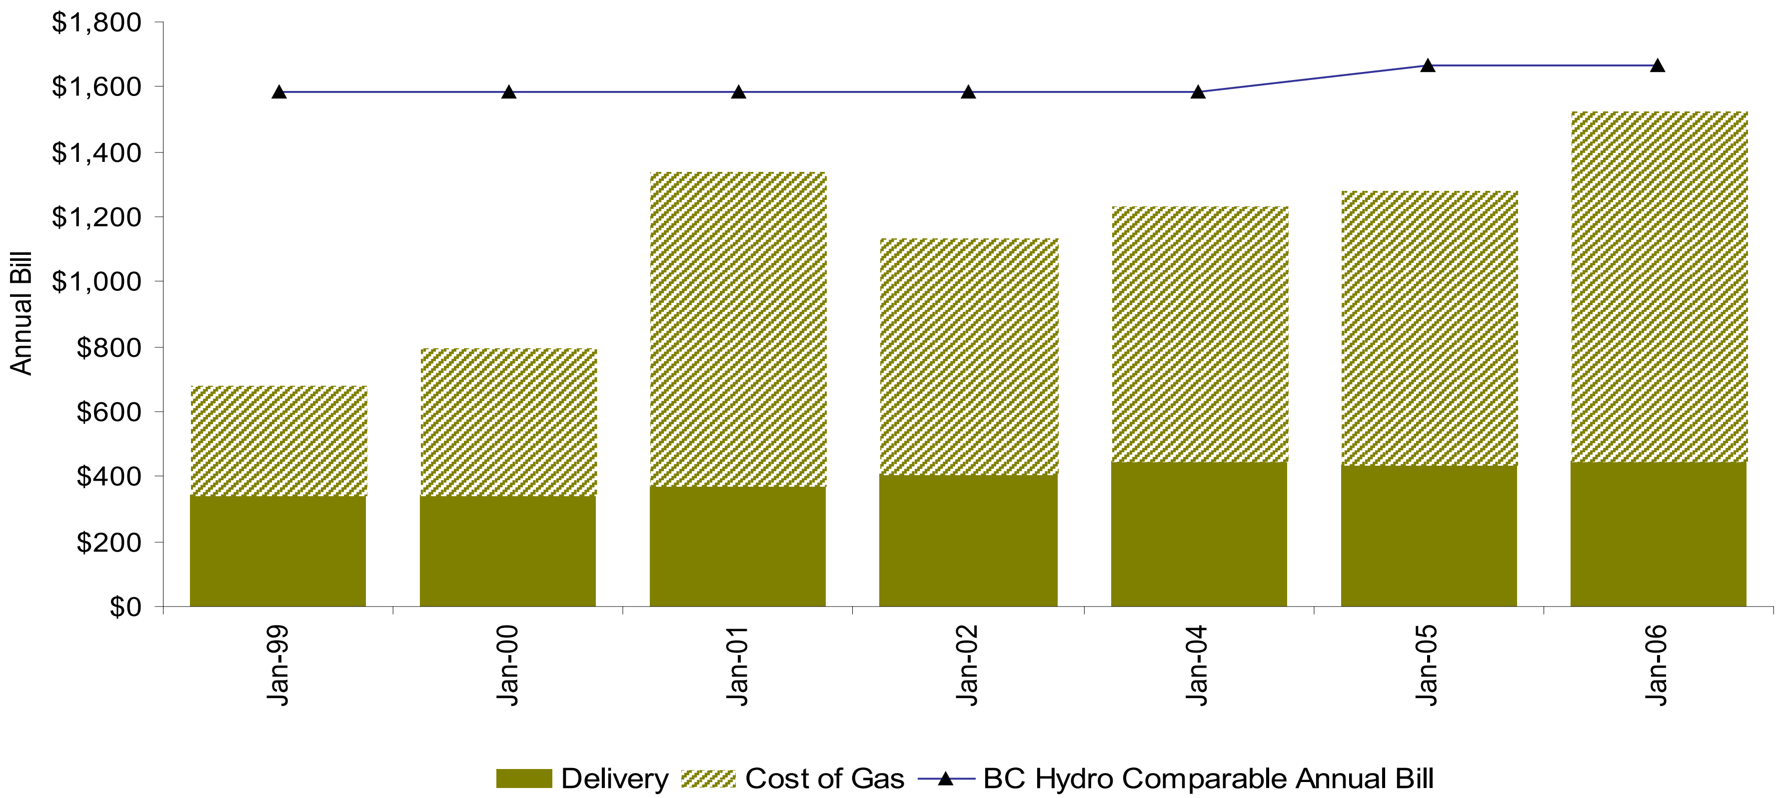
Price Competitiveness

- Increases in the market price of natural gas, combined with a government-mandated electricity price freeze, have eroded the historical advantage over electricity
- Terasen Gas maintains an active price risk management program (on behalf of customers) which mitigates this risk
- BC Hydro has been supportive of demand-side management initiatives to encourage efficient energy use decisions
- BC Hydro is seeking price increase of approximately 4.6%

terasen

Price Competitiveness

Lower Mainland Residential Annual Bill History - Gas vs. Electric Comparison
Terasen Gas Delivery and Commodity Charges



Regulatory Arrangements

- 2004-2007 PBR in place for Terasen Gas
  - O&M and capital cost incentives, 50/50 sharing
  - Numerous deferral accounts
- 2006-2007 PBR in place for TGVI
  - O&M incentives, no sharing
  - Comprehensive deferral arrangements through Revenue Deficiency Deferral Account
  - Two-year extension aligns regulatory calendar with Terasen Gas

terasen

Regulatory Arrangements

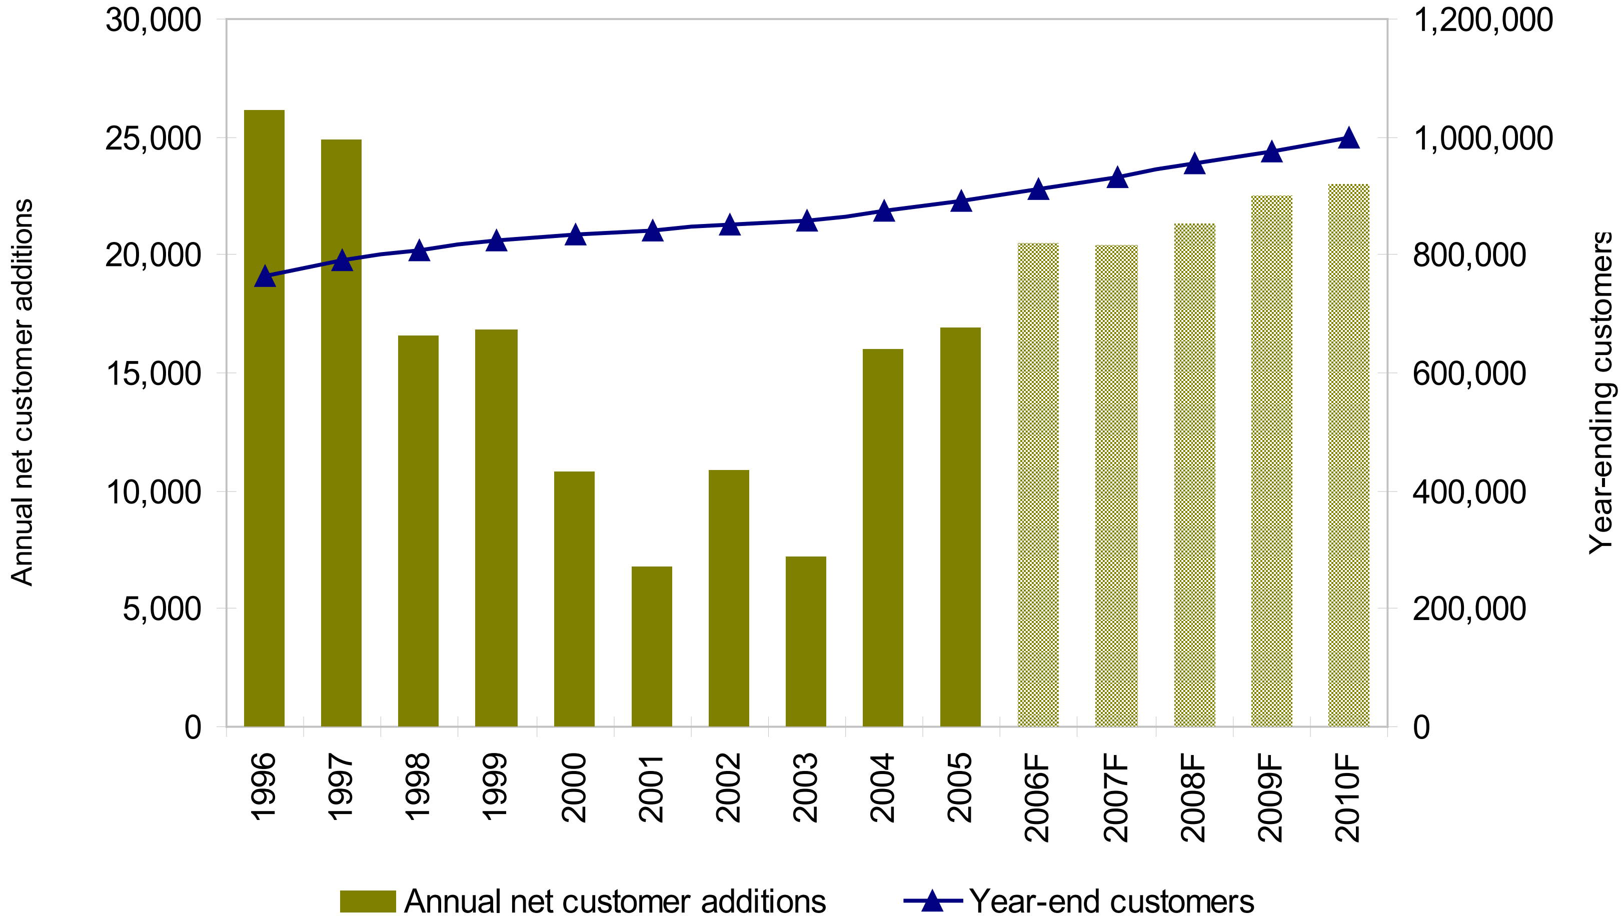
- ROE and Capital Structure hearing Q3 2005
- BCUC decision rendered March 2006
  - Equity component for TGI 35% from 33%
  - Equity component for TGVI 40% from 35%
  - Amended ROE formula
    - 3.90% premium over forecast 30 year GoC yield
    - TGVI risk premium 70 bps over TGI premium
    - Risk premium adjusted by 75% of change in forecast yield year over year
  - Effective retroactive to Jan. 1, 2006

terasen

Terasen Gas - Outlook

- Successful efforts to improve operating efficiency in the past has limited the scope for future efficiencies
- Focus will be on increasing customer capture rates
  - Target of 1 million gas customers in 2010 (up from 891,000 currently)
  - Opportunity to improve capture rates for multi-family housing starts
  - Regional economy remains very strong

Customer Growth



LNG Expansion

- BCUC previously approved $100 million Vancouver Island LNG Project subject to Duke Point power plant proceeding
- LNG Project subsequently cancelled when BC Hydro withdrew from the Duke Point project
- TGI and TGVI jointly reconsidering a LNG storage facility, located on Vancouver Island
  - Possible CPCN filing Q4 2006
  - In-service in 2010
  - Approximate capital cost of $140 million

terasen

Growth – Whistler

- Working with the Resort Municipality of Whistler to develop a Sustainable Energy Strategy
  - Establish a hybrid gas/GSHP energy utility
  - Construct a natural gas pipeline from Squamish to Whistler
  - Develop renewable district energy systems or other sustainable options
- Estimated pipeline cost – $43 million
- Model for integrating natural gas with renewable energy sources

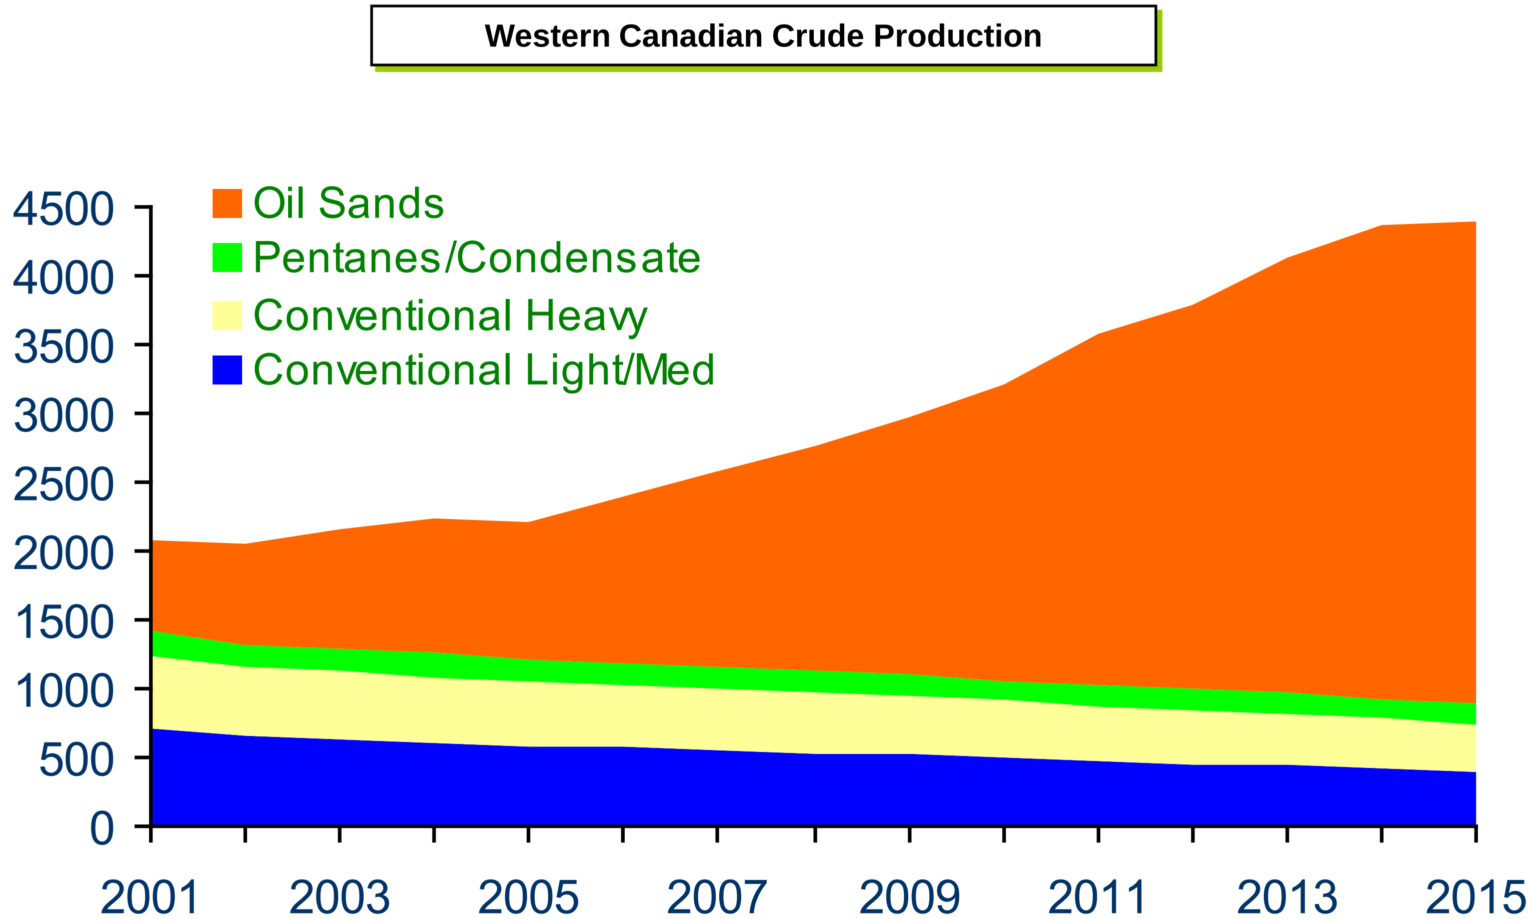
Canadian Crude Supply Forecast



CAAP May 2006 Canadian Crude Production and Supply Forecast

Trans Mountain - Regulatory

- Throughput growth has resulted in attractive returns from the 2001-2005 Incentive Toll Settlement
- ITS renewal nearing completion
  – MOU with CAPP
  – Final agreement expected July 2006
  – Settlement covers 2006 – 2010. Key elements:
    - Cost of service structure
    - Incentives on throughputs
    - 10.75% ROE on 45% equity
- TMX PSE and Anchor Loop Projects included in rate base, capital cost risk sharing

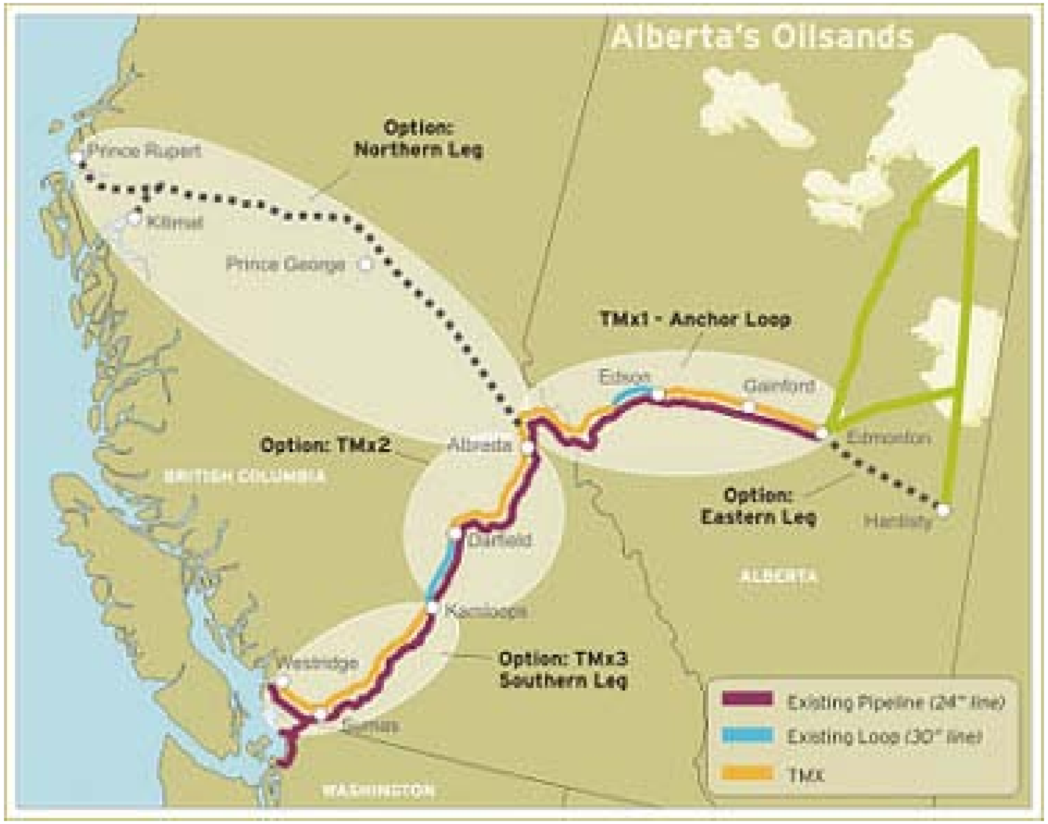
terasen

Trans Mountain Expansion

- Oil sands production driving throughput growth
- Expansion can provide producers with greater access to California & Far East markets
- Completed 27,000 bpd expansion of the mainline at a cost of $19 million in October 2004

terasen

Trans Mountain Expansion

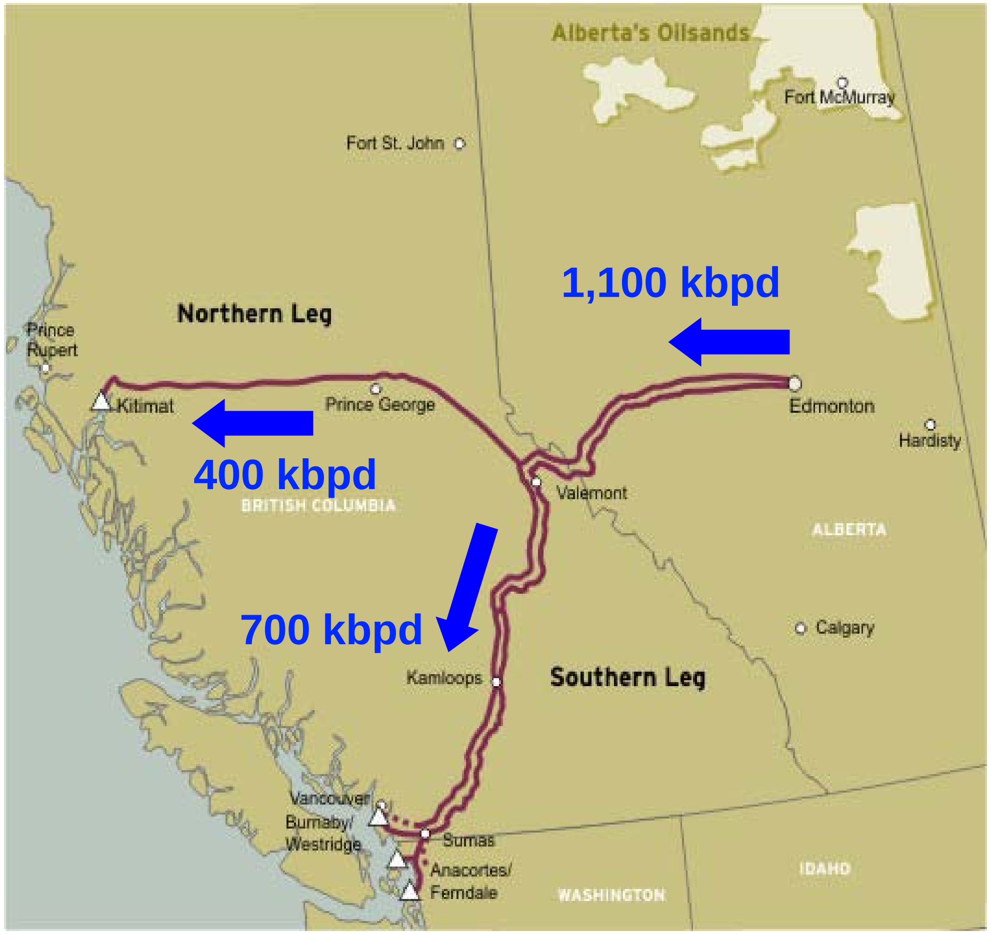


- Oilsands supply is actively seeking new markets
- Match with continued import growth on U.S. West Coast and Asia
- Expressions of Interest from potential shippers confirm demand for new capacity

Terasen

Trans Mountain Expansion

Staged Expansion To Capture Oilsands Growth



Existing: 225,000 bpd (heavy)

TMX-1: 2007/08

- **Pump Station Expansion -** 35,000 bpd
- **Anchor Loop -** 40,000 bpd

Southern Expansion: 2010/11

- **TMX-2 –** 100,000 bpd
- **TMX-3 –** 300,000 bpd

Northern Expansion: 2012

- **TMX-North –** 400,000 bpd

terasen

TMx1 Expansion – Two Components

TMx1 Expansion – Two Components

- Pump Station Expansion Project
  - $228 million to add 35,000 bpd of pumping capacity
  - NEB Approval November 2005
  - Completion Q2 2007
- Anchor Loop Project
  - $438 million to add 40,000 bpd additional capacity through looping
  - NEB filing February 2006, approval expected Q4 2006
  - Completion by Q3 2008

Terasen

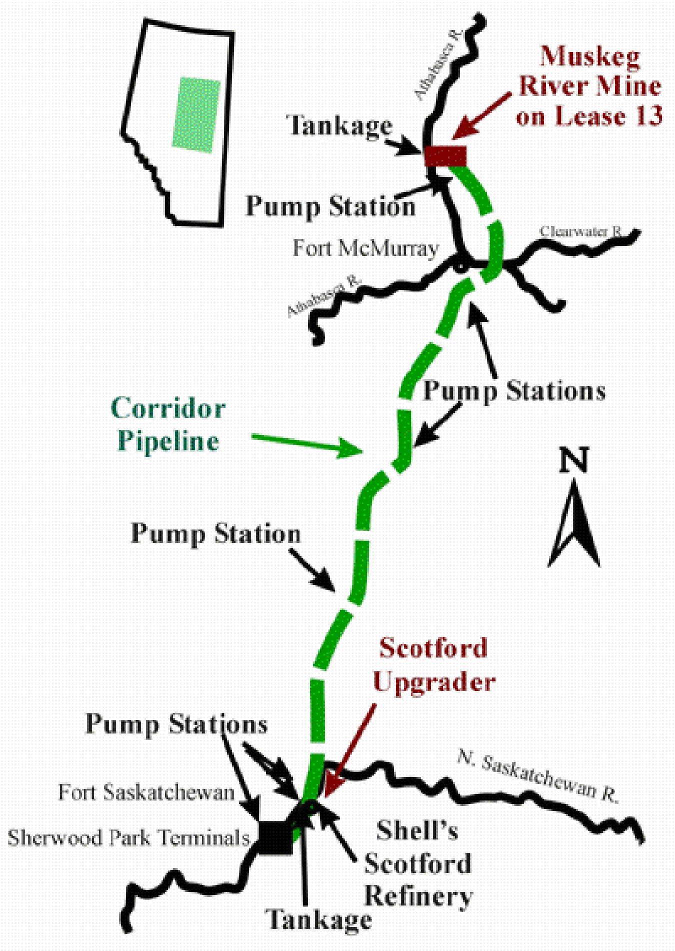
TMx2 and TMx3 Expansion

- TMx2 additional 100,000 bpd
- Forecast cost $1.3 billion, in-service 2010
- TMx3 additional 300,000 bpd
- Forecast cost $1.1 billion, in-service 2011
- Open Season to be concluded August 2006
- Move from negotiated tolls to contracted carrier, cost recovery and incentive sharing

terasen

Corridor

- Completed on time and on budget in May 2003
- Backed by 25 year ship-or-pay contract with Shell Canada (60%), Chevron (20%) and Western Oil Sands (20%)
- Provides for recovery of all operating costs, depreciation, taxes and financing costs in revenue requirement
- 26% equity component, ROE is long-term Canada's plus 350 bps



terasen

Corridor Expansion

- Linked to expansion plans for Athabasca Oil Sands Project
- Estimated cost up to $1.5 billion, depending on configuration
- Currently examining configuration options with Corridor shippers
- Engineering and procurement underway, final decision expected Q3 2006
- In-service expected in 2009
- Subject to terms of FSA

Terasen

Express

- Acquired January 2003
- 84% of the 280,000 post-expansion capacity is committed through long-term contracts
- Express expansion
  - Feeds PADD IV demand
  - In-service April 2005
    - On-time and under budget

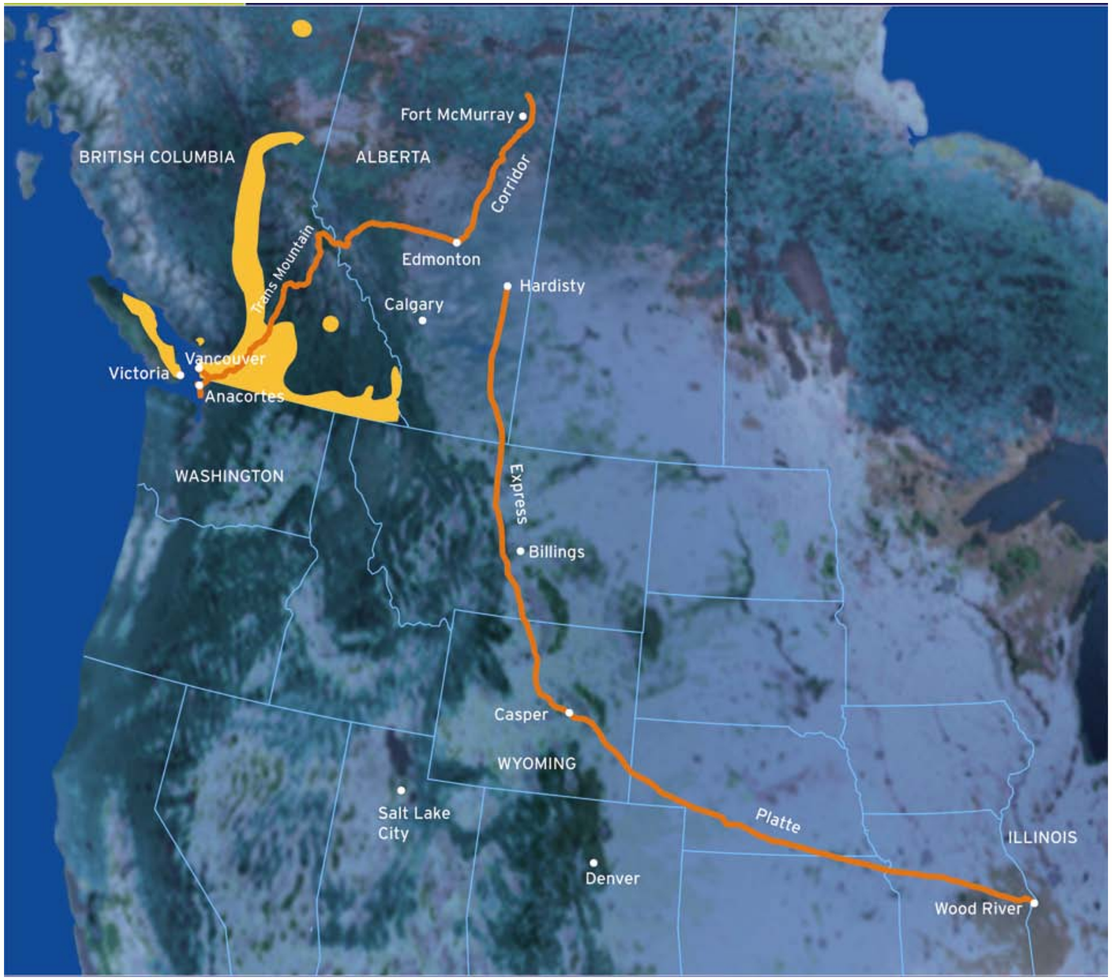
- Terasen Pipelines
- Terasen Gas
- Terasen Water and Utility Services
- Appendix – Municipal Leasing Transactions

Corporate Structure

- Terasen Inc.
  - Natural Gas Distribution
    - Terasen Gas
    - Terasen Gas (Vancouver Island)
  - Petroleum Transportation
    - Trans Mountain Pipeline
    - Corridor Pipeline
    - Express/Platte Pipelines (33.3% ownership)
  - Water & Utility Services
    - Terasen Utility Services
    - Terasen Waterworks
    - Customerworks (30% ownership)

Corporate Overview



Natural Gas Distribution

Petroleum Transportation

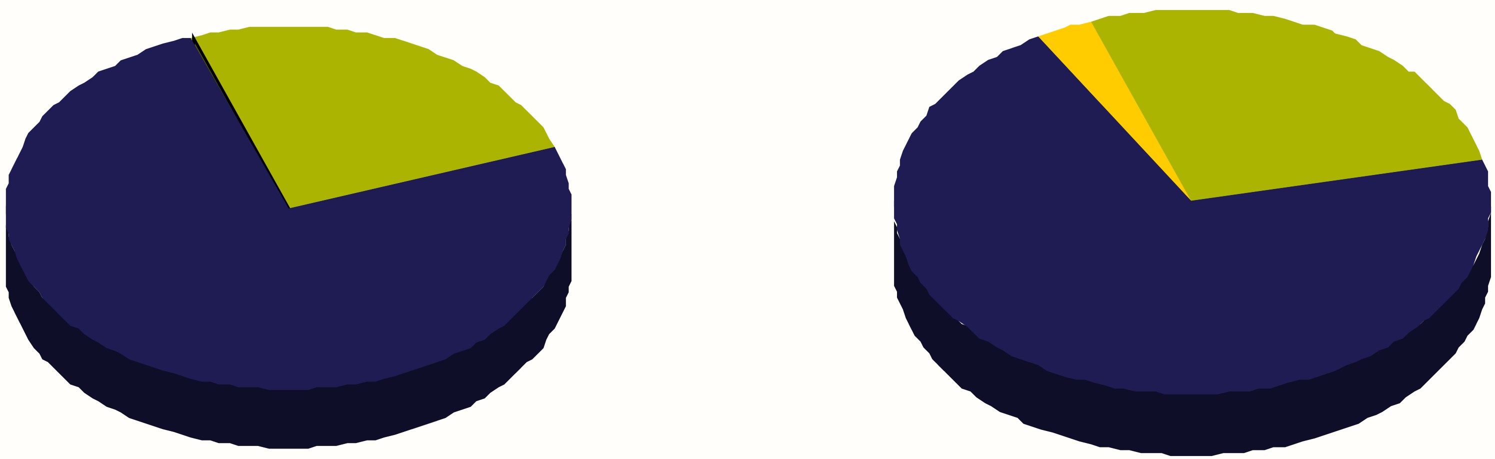
Corporate Overview

Operating Income: $366 million

(12 months ended December 31, 2003)

Assets: $4,915 million

(at December 31, 2003)



Natural Gas Distribution

Petroleum Transportation

Other Activities

2003 Highlights

- BCUC approval of a negotiated settlement of a 2004-2007 Performance-Based Rate Plan for Terasen Gas
- BCUC approval of a 2003-2005 regulatory settlement for TGVI, which extends incentive mechanisms
- Initiation of commercial operations of Corridor in May 2003, following on time, on budget completion of its construction
- Completion of the acquisition of a one-third interest in the Express Pipeline System and shipper support for the expansion plans for Express
- Initiation of the expansion of the Trans Mountain pipeline which will add 27,000 bbl/day in capacity

Management

- John Reid, President & CEO
  - Gordon Barefoot, Senior VP Finance & CFO
  - Stephen Swaffield, Senior VP Corporate Development
  - Patrick Lloyd, Senior VP HR & Governmental Affairs
  - Steve Richards, General Counsel, CRO & Corporate Secretary
  - Randy Jesperson, President, Terasen Gas
  - Richard Ballantyne, President, Terasen Pipelines
  - Brett Hodson, President, TUS & Terasen Waterworks

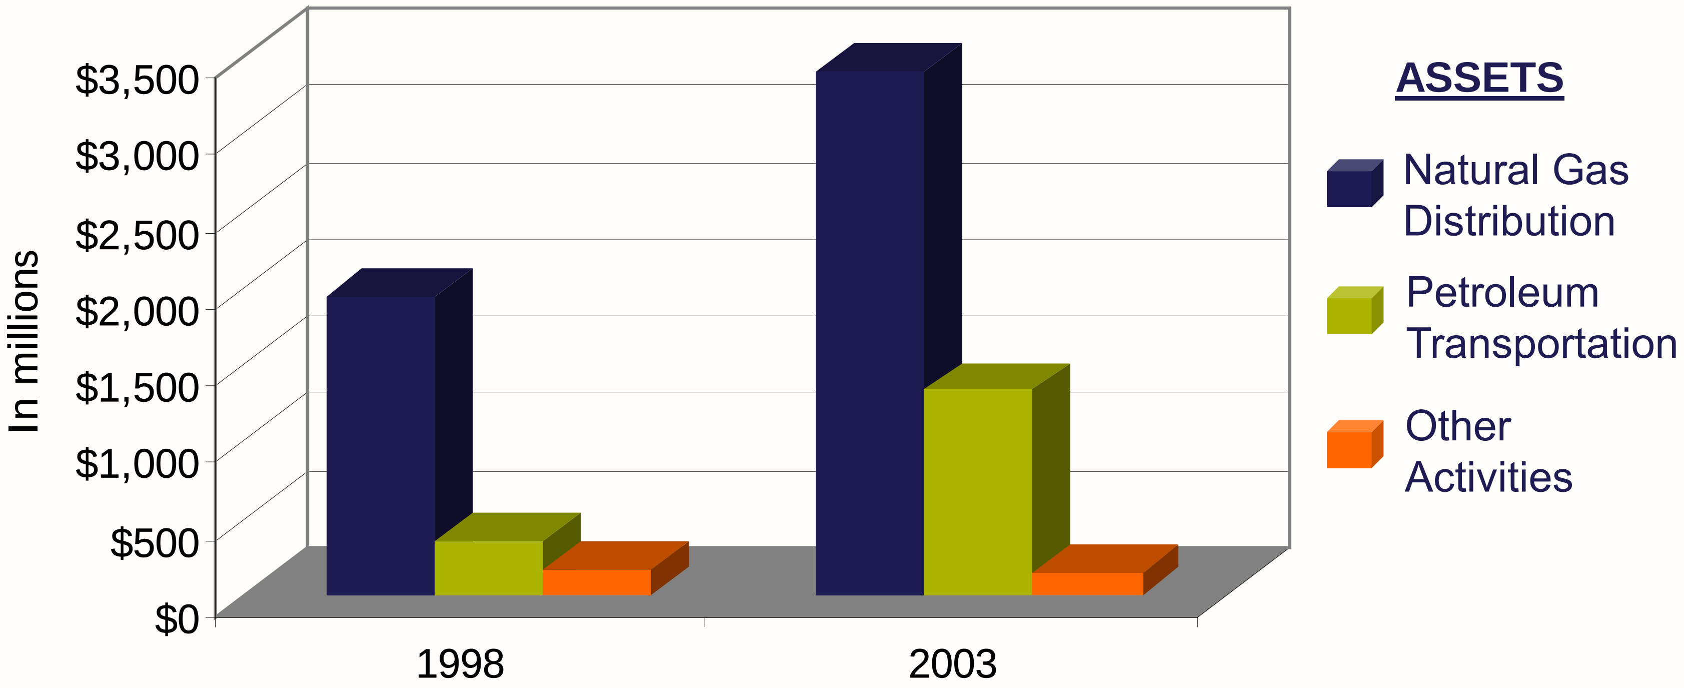
STRATEGY

Our Value Proposition

- **Focused** on our regulated businesses
- **Reliable** and consistent results from low risk businesses
- **Growing** and steadily outperforming through value creation

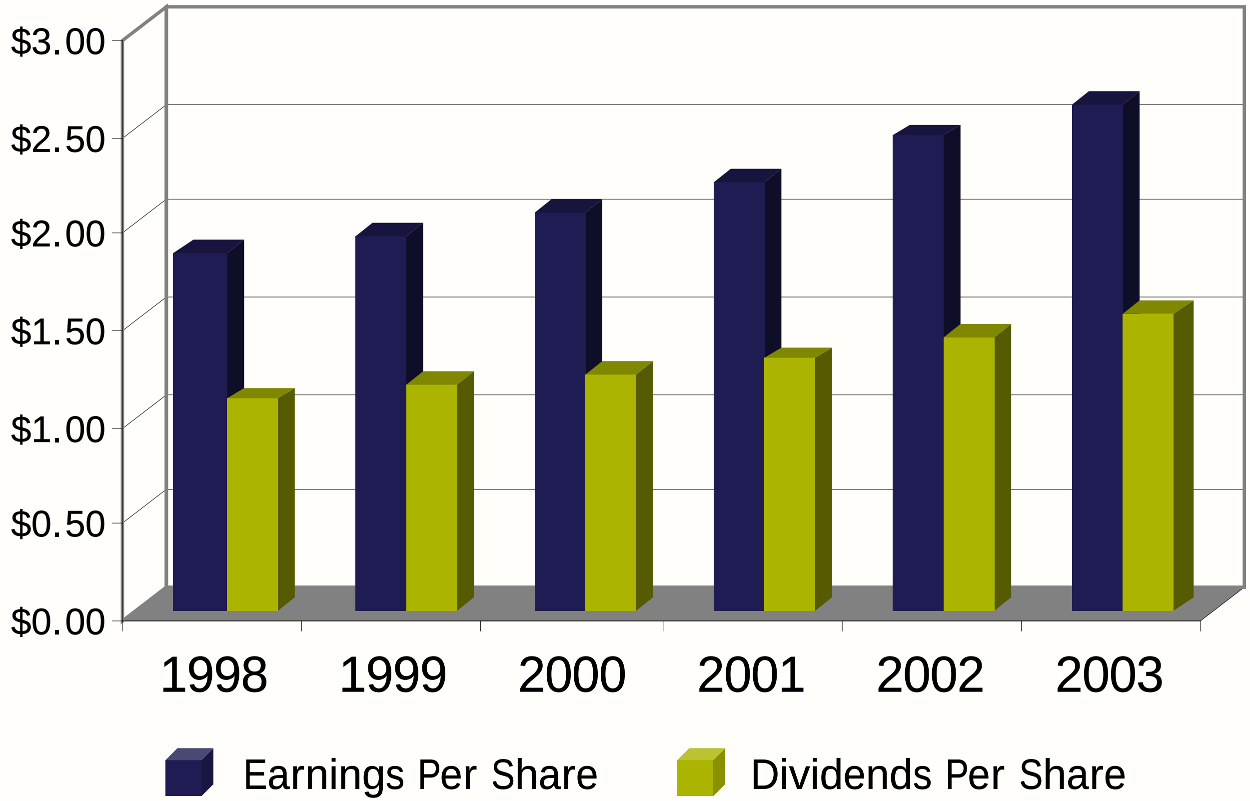
Focused

Growth has come from investments in core regulated businesses



Reliable

Consistent results from low risk businesses – target earnings growth of 6% and dividend payout of 60%

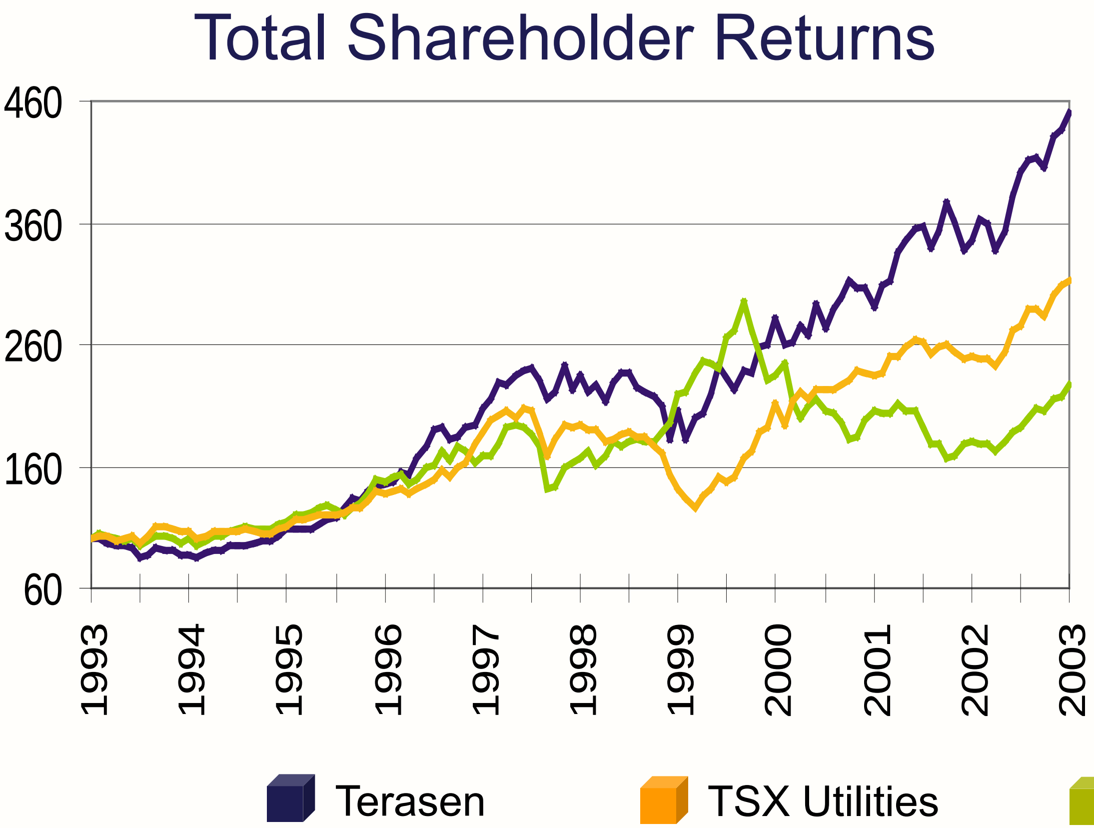


7.2% Annual EPS Growth

7.0% Annual DPS Growth

Growing

Consistent outperformance through value creation



Annualized Total Returns

	One Year	Three Year	Five Year	Ten Year
Terasen	30%	17%	14%	16%
TSX Utilities Index	27%	14%	10%	12%
TSX Composite Index	27%	-1%	7%	9%

For the period ended December 2003

Asset and Risk Management

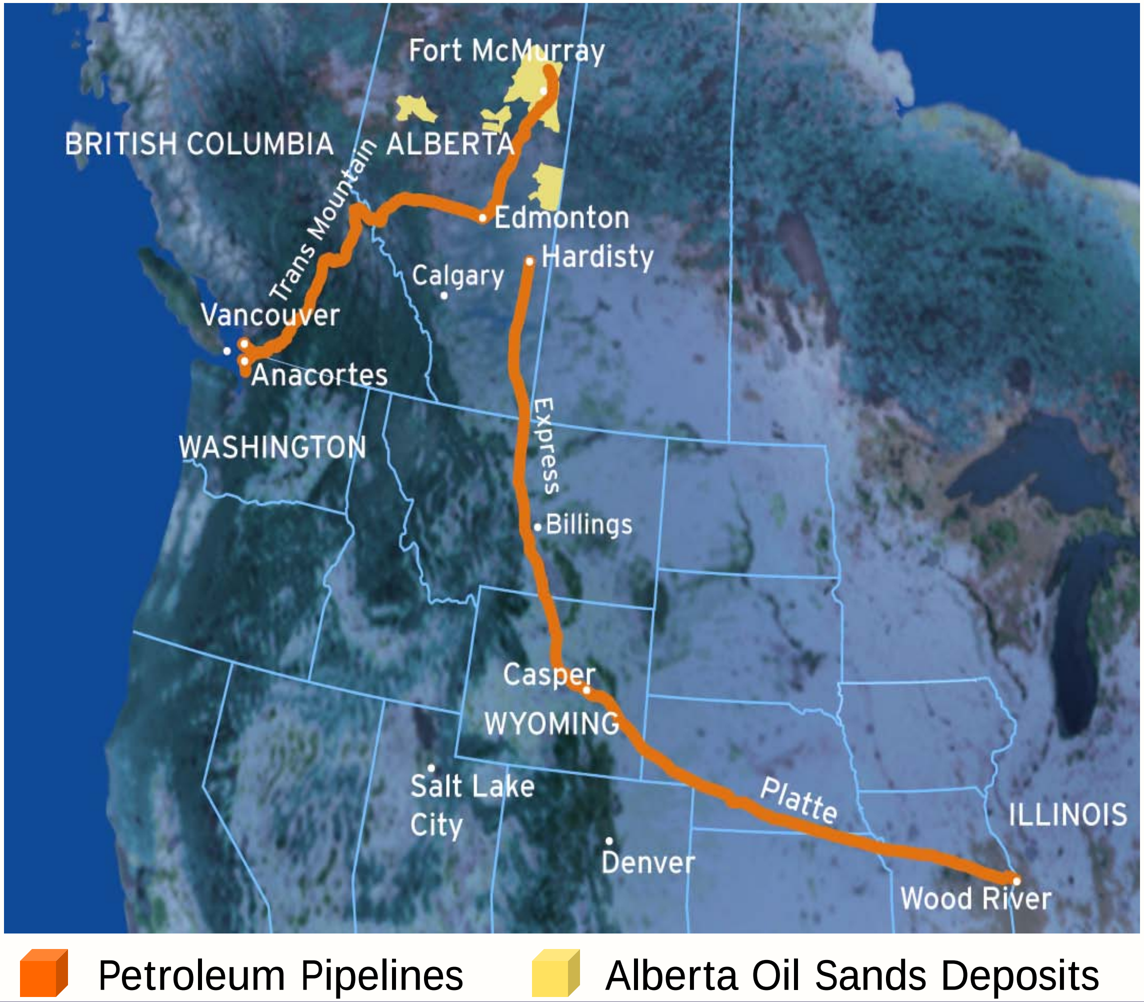
- 97% of assets are regulated
  - Major growth is in regulated activities
- Regulatory arrangements
  - No weather or customer usage risk
  - No cost of gas risk
- No international investments
- No non-regulated energy trading

Core Value Strategies

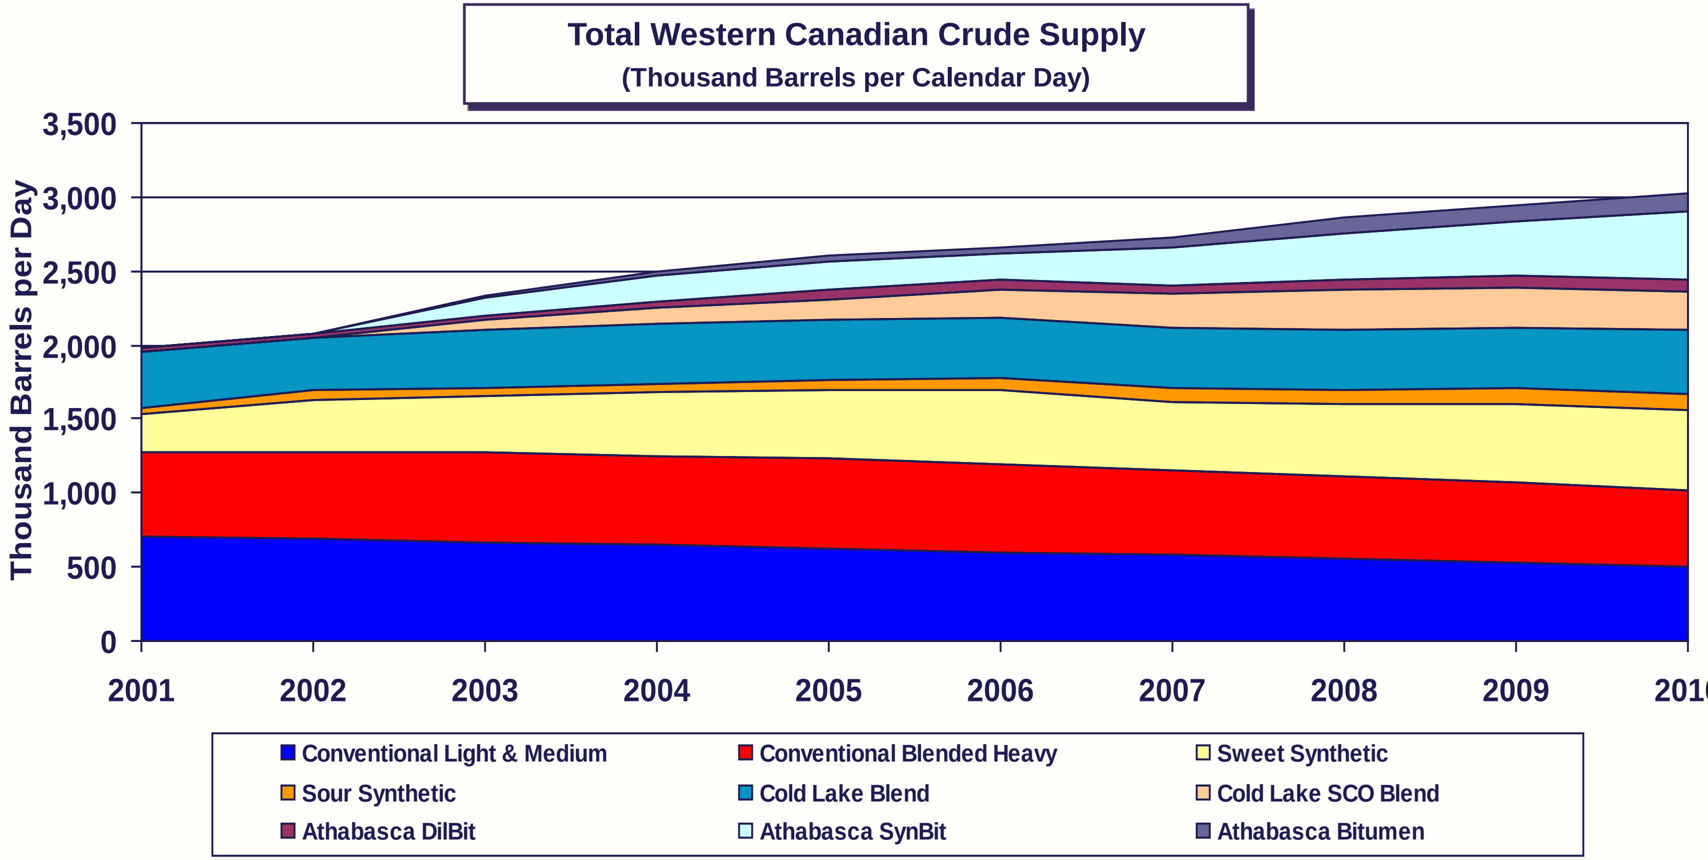
- **Operational excellence** within incentive regulation
- **Focused growth** based on value creation
- **Financial excellence** ensuring access to competitive sources of capital

Terasen Pipelines

Terasen Pipelines



Canadian Crude Supply Forecast

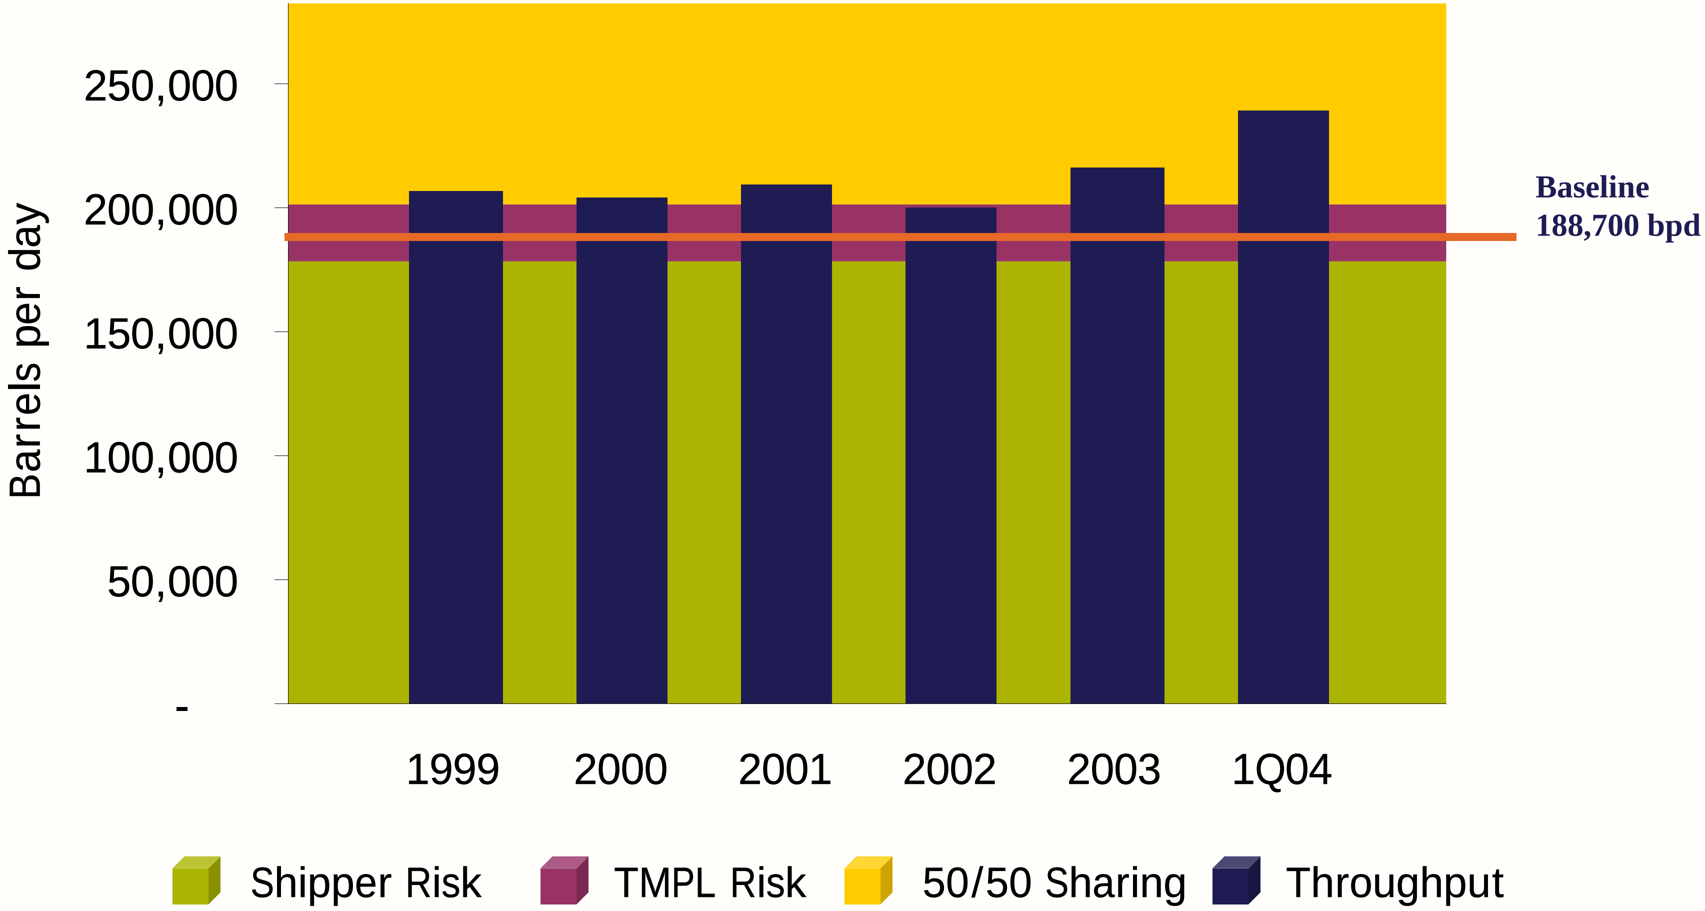


CAPP Upper Supply Case – Total Supply

Trans Mountain 2001 – 2005 Incentive Toll Settlement

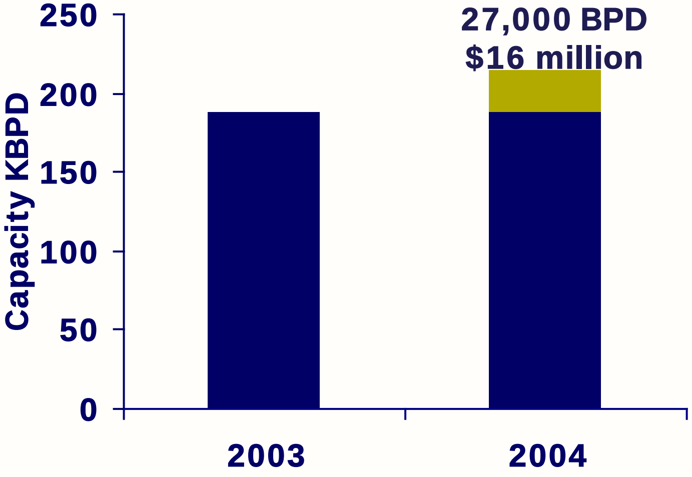
- Structured around Shipper's desire for fixed tolls
- TMPL benefits from 100% of operating cost reductions
  - No escalation of tolls for inflation
- TMPL assumes limited throughput risk
- Incentives for additional throughpu

Trans Mountain
Canadian Throughput and Volume Risk



Trans Mountain

- Oil sands production driving throughput growth
- Expansion can provide producers with greater access to California & Far East markets

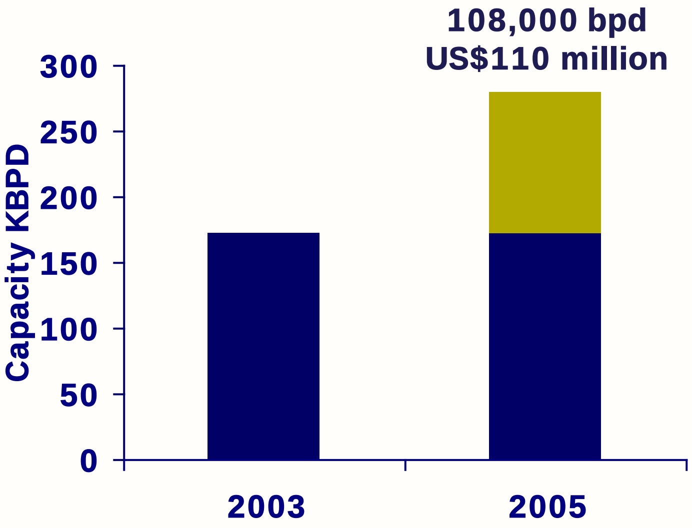


Express

- Acquired January 2003
- Express has been running at capacity, with 85% of total capacity of 172,000 bpd committed through long-term contracts
- Strong shipper response to recent open season
- Following the expansion 79% of the 280,000 total capacity will be committed through long-term contracts

Express

- Both phases of the expansion are expected to be completed by April 2005

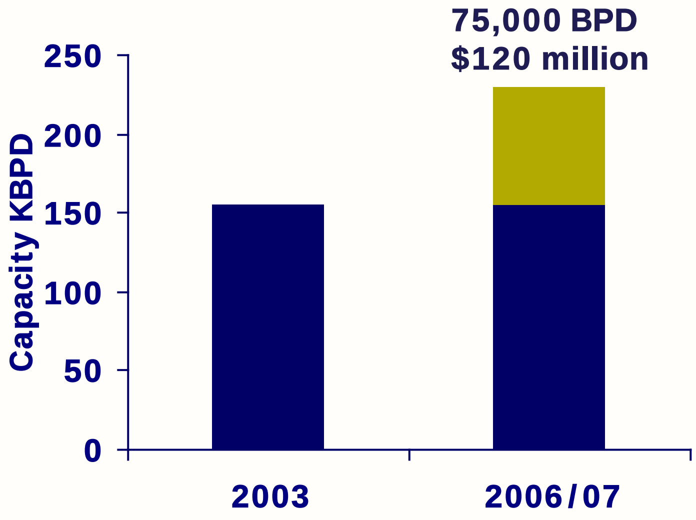


Corridor

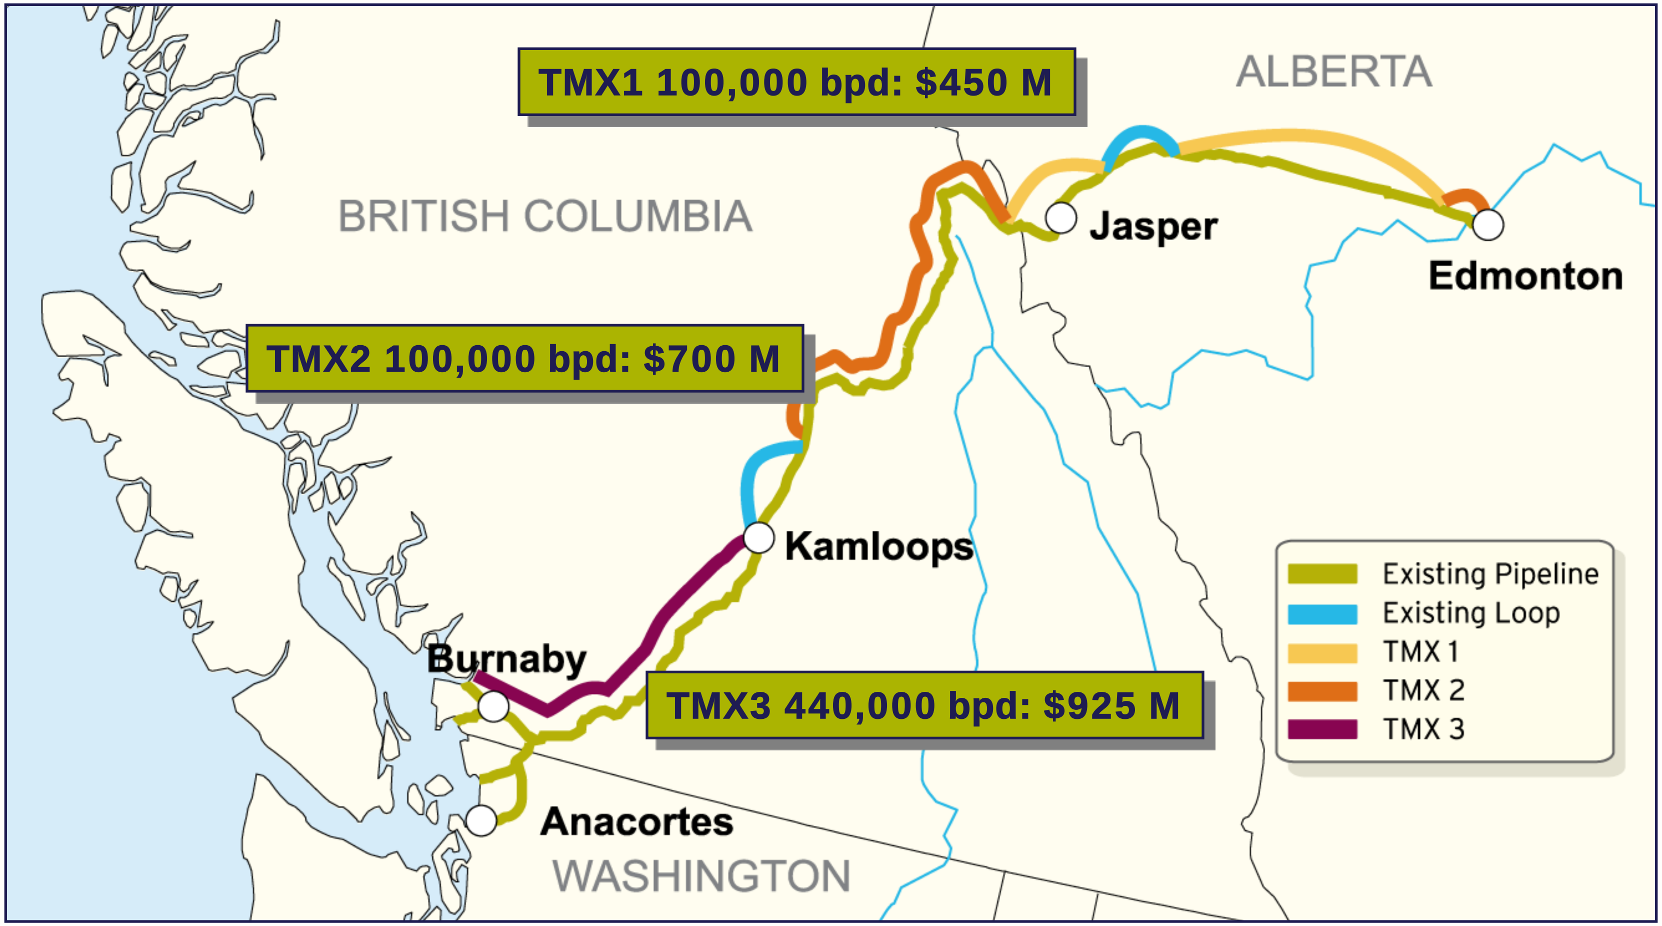
- Completed on time and on budget in May 2003
- Backed by 25 year ship-or-pay contract with Shell Canada (60%), Chevron (20%) and Western Oil Sands (20%)
- Provides for recovery of all operating costs, depreciation, taxes and financing costs in revenue requirement
- 25% equity component, ROE is long-term Canada's plus 350 bps

Corridor

- Expansion will be undertaken on similar terms as original agreement
- Timing dependent on mine expansion plans



TMX



TMX1 100,000 bpd: $450 M
TMX2 100,000 bpd: $700 M
TMX3 440,000 bpd: $925 M

Anacortes
Existing Pipeline
Existing Loop
TMX 1
TMX 2
TMX 3

TMX Advantages

- Built in stages
  - Lower construction risk
  - Matches capacity with supply/demand growth
  - Lowers risk of overbuild
- Washington State refinery access
  - 550,000 bpd capacity
  - 10% current market share
- Existing rights-of-way
  - Options on private land

Terasen

Terasen Gas

2004-2007 PBR Settlement

- Capital structure – 33% common equity/67% debt

- Allowed ROE is determined annually using BCUC-established formula
  - ROE = Forecast Cda. Bond Yield + Risk Premium
  - Mechanism is similar to NEB Multi-Pipeline formula
  - ROE for Terasen Gas in 2004 was set at 9.15%, compared with 9.42% in 2003

2004-2007 PBR Settlement

- Performance-based regulatory settlement with incentives for operating efficiencies – benefits shared 50% with customers

- Performance-based regulatory arrangements have enabled Terasen Gas to exceed allowed ROE in every year since 1994

2004-2007 PBR Settlement

- O&M formula:
  - [Base Cost x (1+Growth) x (1+Inflation-Adjustment factor)]
  - Adjustment factors of 50% CPI in 2004 and 2005, and 66% CPI in 2006 and 2007

- New deferral accounts established for insurance and pension costs

2004-2007 PBR Settlement

- Gross margin protected by two deferral accounts:
  - Gas Cost Reconciliation Account (GCRA)
  - Revenue Stabilization Adjustment Mechanism (RSAM)

- RSAM defers any variances in use per customer among residential and commercial customers
  - Eliminates exposure to weather variations
  - Also eliminates exposure to reductions in use per customer caused by other factors (e.g. higher prices)

2004-2007 PBR Settlement

- RSAM does not cover margin from industrial customers
  - Less sensitive to weather fluctuations
  - Industrial margin is reset annually
  - Regulatory relief can be sought if industrial margins fall significantly below forecast
- Industrial and large commercial customers can select commodity+transportation or transportation service only
  - Terasen earns approximately the same margin in either case

2004-2007 PBR Settlement

- Variances between actual and forecast gas costs are deferred and recovered through GRCA
- During 2003, RSAM and GCRA balances were recovered in rates, thereby reducing the recovery balances
  - Combined GCRA/RSAM balance $34.8 million at end of 2003, compared with $76.7 million at the end of 2002

2004-2007 PBR Settlement

- BCUC has approved a mechanism for quarterly adjustment of rates
  - If projected recovery of:
    a) actual gas costs, and
    b) amortization of prior GCRA balances,
    falls outside of 95-105% deadband, rates are adjusted, subject to BCUC approval
- Lower natural gas costs resulted in the BCUC approving a decrease in customer rates in December 2003 (7.5% decrease for the average residential customer)

2004-2007 PBR Settlement

- Gas Supply Incentive Program
  - Provides an incentive to mitigate fixed costs of gas supply & transportation by selling excess gas and transportation capacity to off-system customers
  - Has generated shareholder revenues of $1-2 million per year over the last several years
- Unbundling
  - Terasen Gas, BCUC & customer representatives have all been supportive of unbundling
  - Unbundling for commercial customers expected in late 2004
  - No financial impact on Terasen anticipated

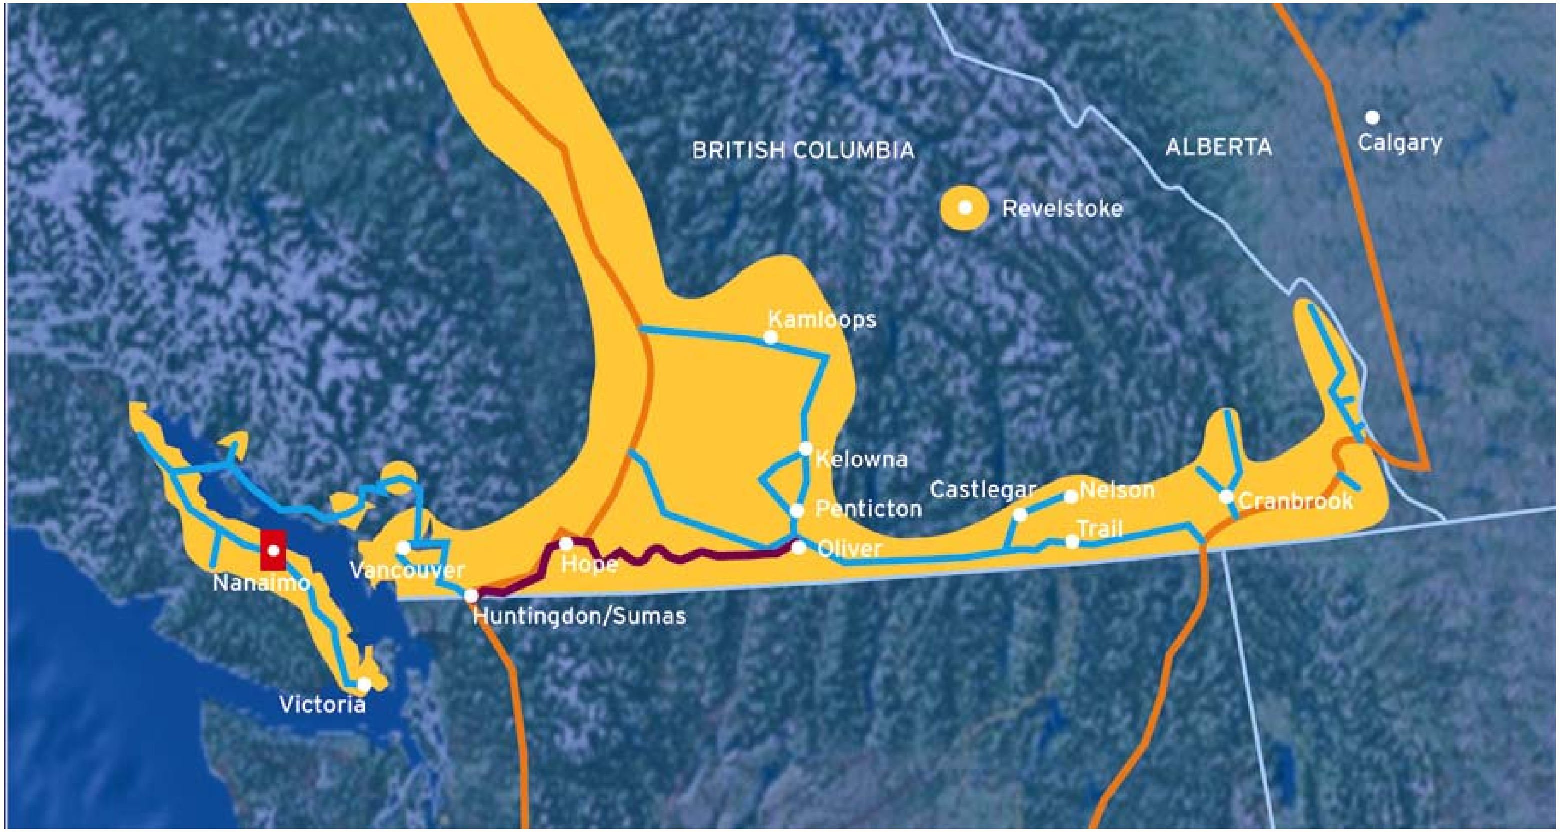
TGVI – 2003-2005 Regulatory Settlement

- Took effect January 1, 2003
- Capital structure – 35% common equity/65% debt
- Allowed rate of ROE that is 0.50% higher than Terasen Gas – 9.65% for 2004, compared with 9.92% in 2003
- Continuation of operating and maintenance cost incentive mechanisms
- Deferral accounts protect against cost of gas, weather risk, etc. – similar to Terasen Gas, but more comprehensive

TGVI – RDDA

- Revenue deficiency deferral account (RDDA) arose from low customer rates charged prior to December 31, 2002
  - Deferral account balances funded by preferred shares issued to parent
  - BCUC directed to set rates to recover RDDA over the shortest period possible, while remaining competitive with alternative energy sources
  - Customer rates set using conventional methods beginning January 1, 2003

New Infrastructure Projects



Terasen Transmission Lines

Terasen Distribution Service Area

Other Natural Gas Lines

Proposed Inland Pacific Connector Pipeline

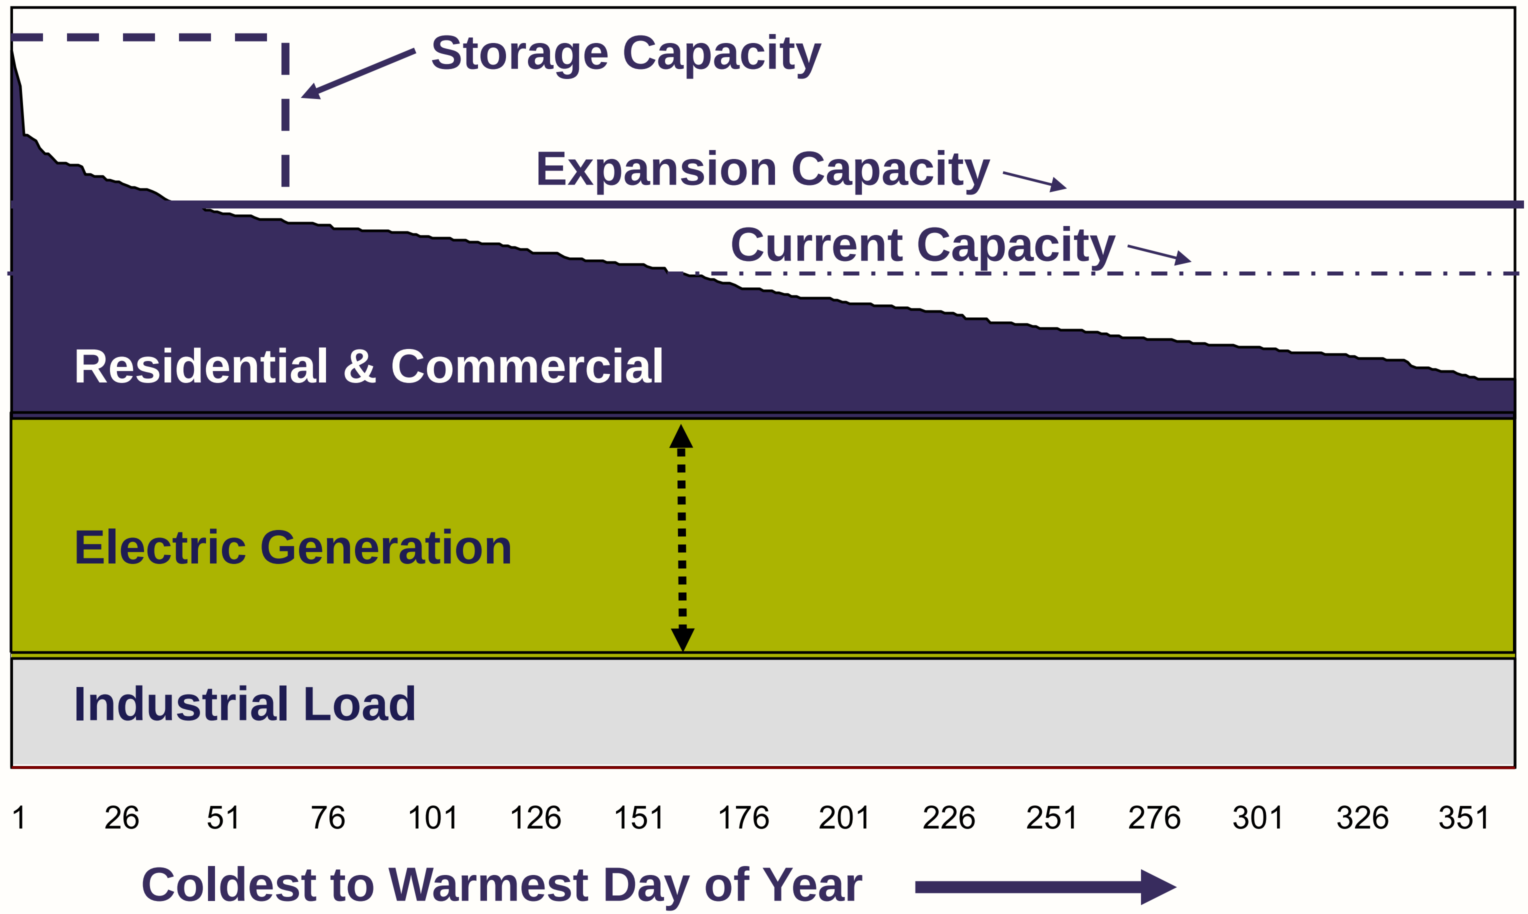
Proposed LNG Storage Tank

New Infrastructure Projects

Capacity expansion to Vancouver Island

- New on-Island power generation needed
- $180 million capacity expansion proposed
  - Additional compression and a new LNG tank

New Infrastructure Projects



New Infrastructure Projects

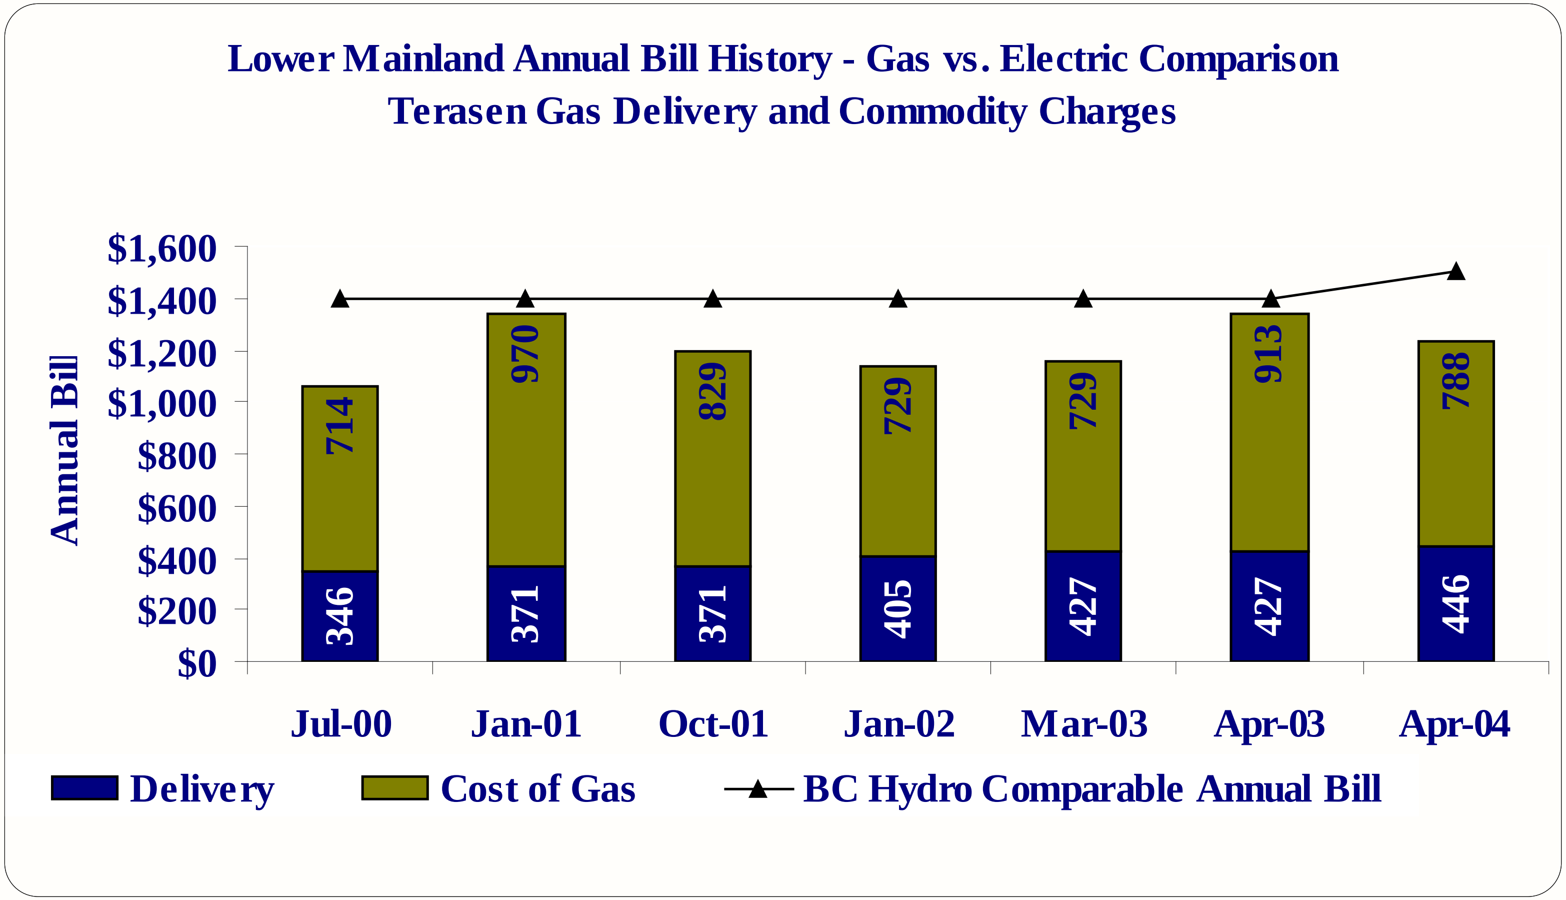
Inland Pacific Connector

- New pipeline to extend Southern Crossing pipeline to Sumas/Huntingdon
- Positioned to meet demand for natural gas capacity expansion in Pacific Northwest

Price Competitiveness

- In B.C., natural gas has historically enjoyed a significant cost advantage vs. alternative fuels, including electricity
- Increases in the market price of natural gas, combined with a government-mandated electricity price freeze, eroded this advantage
- Terasen Gas maintains an active price risk management program (on behalf of customers) which mitigates this risk
- Recent rate reductions have partially restored natural gas' price advantage

Price Competitiveness



Terasen Utility Services

Terasen Waterworks

Water and Utility Services

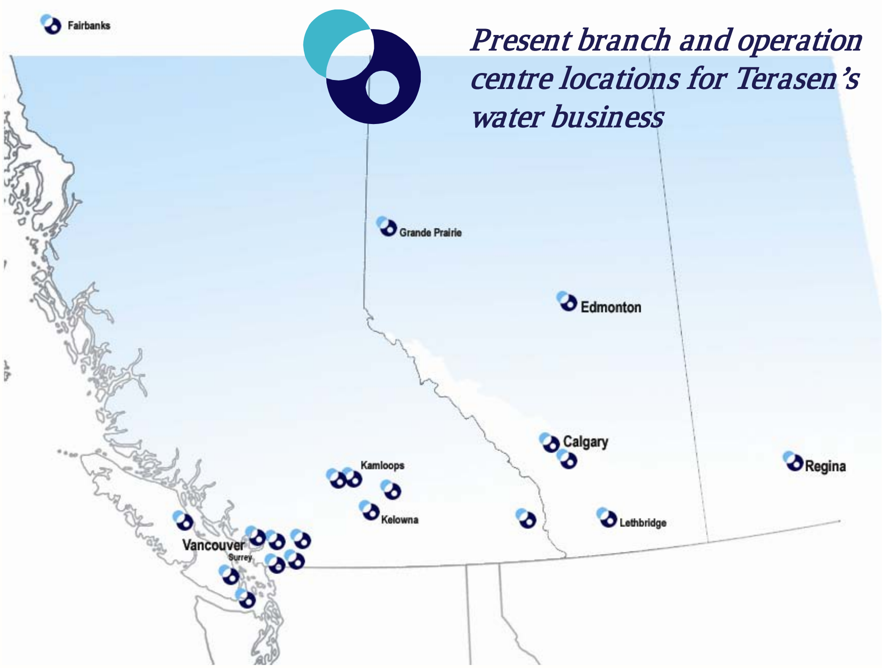
- Continues to be a relatively small part, but growing, of our asset base and operating income

- Looking for opportunities to capitalize on economies of scope and scale, in terms of the services that are provided and regions that are covered

Water and Utility Services

- Largest private water services company in Western Canada

- Focus on annuity operating contracts and selective investment opportunities



Fairbanks Acquisition

- April 2004 – acquired a 50% interest in Fairbanks Sewer & Water (FSW) for approximately US$30 million
- FSW provides water and wastewater treatment and water distribution services to the 82,000 residents of Fairbanks, Alaska
- FSW will provide a model for other opportunities in Western North America
- Option to purchase remaining 50% in 2009 at fair market value
- The transaction is subject to regulatory approvals, and is expected to be finalized in the summer of 2004

Appendix: Municipal Leasing Transactions

Municipal Leasing Transactions

- Certain municipalities have franchise agreements which permit the municipality to purchase the distribution assets at “fair value”
  - No munis in Vancouver area have this option
  - Most munis elsewhere have given up the option through agreement renewals
- Munis can finance Terasen Gas assets with 100% MFA debt, and does not pay tax.
- Leasing arrangements negotiated to provide Munis with financial benefits and risks of ownership, while allowing Terasen Gas to operate.

Municipal Leasing Transactions

- Terasen Gas assets are leased to Kelowna for $50 million prepaid rent under a long-term capital lease
- Terasen Gas enters into an operating lease to operate the assets
  - Kelowna is paid the revenue requirement associated with $50 million of utility capital
    - return on equity
    - cost of debt
    - income taxes
    - depreciation
- Changes in revenue requirement (e.g. ROE) are flowed through to Kelowna

Municipal Leasing Transactions

- No change for regulatory purposes
  - Lease simply flows through certain components of revenue requirement to Munis
  - No impact on customers
- Terasen Gas retains option to terminate agreements at the end of 17 years and retain ownership benefits
  - Termination payment = depreciated book value

Municipal Leasing Transactions

- Terasen Gas transfers risk and reward associated with assets and retains the option to control the assets after year 17
- Closed Nelson lease agreement on March 2, 2004 – value $8 million
- Terasen Gas has entered into leasing transactions with a total value of $83 million
- Total potential value (including current leases) of $200 million

Area of Operations

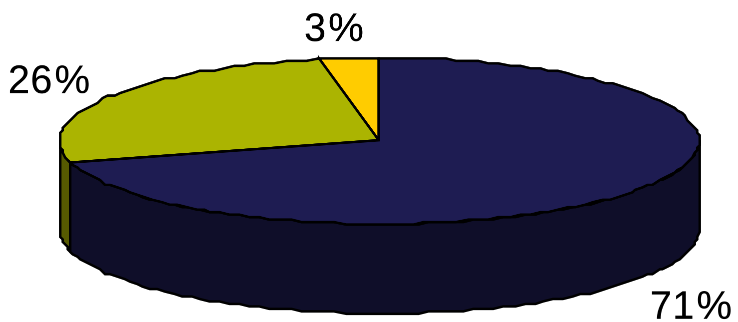
Petroleum Transportation

Natural Gas Distribution

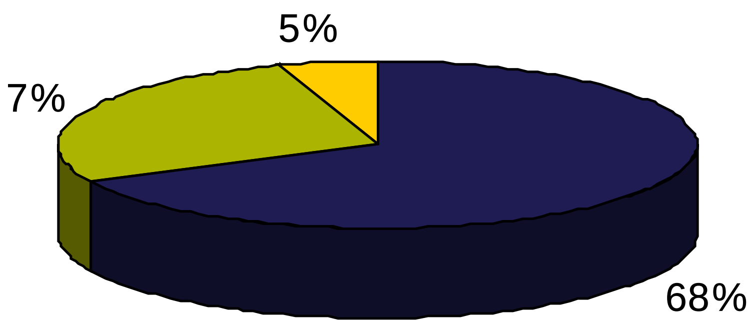
Terasen

Corporate Overview

Operating Income: $377 million
(12 months ended December 31, 2004)



Assets: $4,971 million
(at December 31, 2004)



terasen

2004 Highlights

- Natural Gas Distribution – achieved operating efficiencies between TGVI and Terasen Gas, which were shared with customers
- Trans Mountain Expansion – completed the 27,000 barrel per day upgrade of the Trans Mountain pipeline
- Express Expansion – commenced construction on the expansion, which is now in-service and providing additional capacity of 108,000 bpd

2004 Highlights

- Fairbanks Acquisition – acquired a 50% interest in Fairbanks Sewer and Water Inc.

- Earnings Growth – Continuing earnings in 2004 were \$1.40 per share, up 6.9% over EPS (before non-recurring items) of \$1.31 in 2003

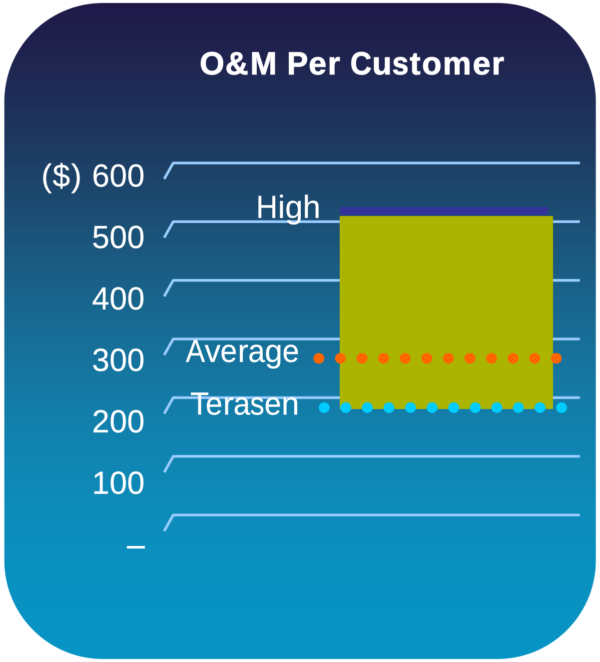
- Financial Strength – EBIT Interest Coverage increased from 2.1x in 2003 to 2.4x in 2004, and Common Equity/Total Capital increased from 30.0% to 31.7%

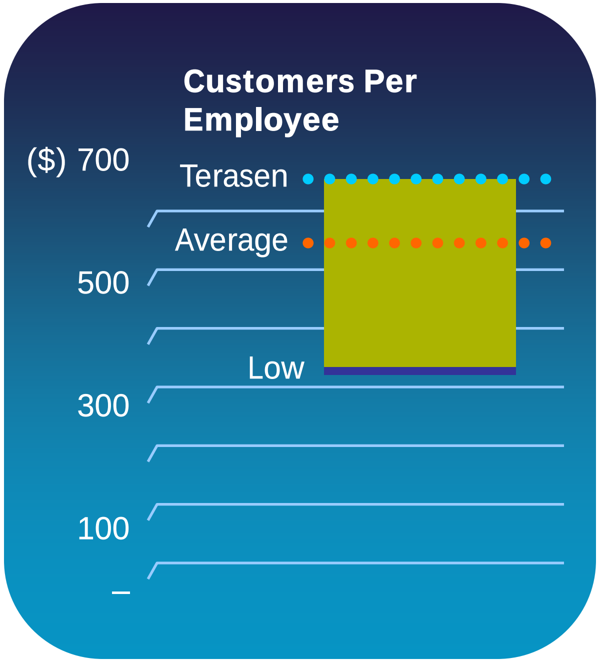
terasen

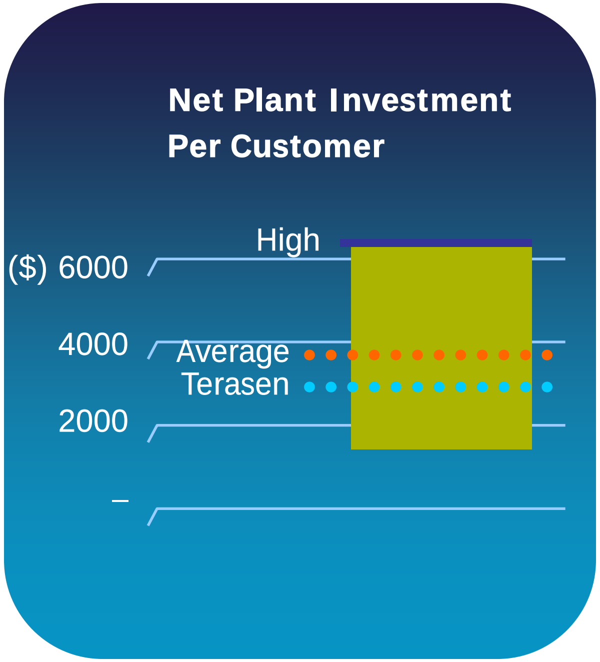
Terasen Gas/TGVI Integration

- Management and operational integration of TGI and TGVI is substantially complete
  - Single management team, common processes, common systems
- Earnings contribution from operational efficiencies was $4.1 million in 2004
  - Reinforces Terasen Gas' best-in-class position on operating efficiency

Operating Efficiency







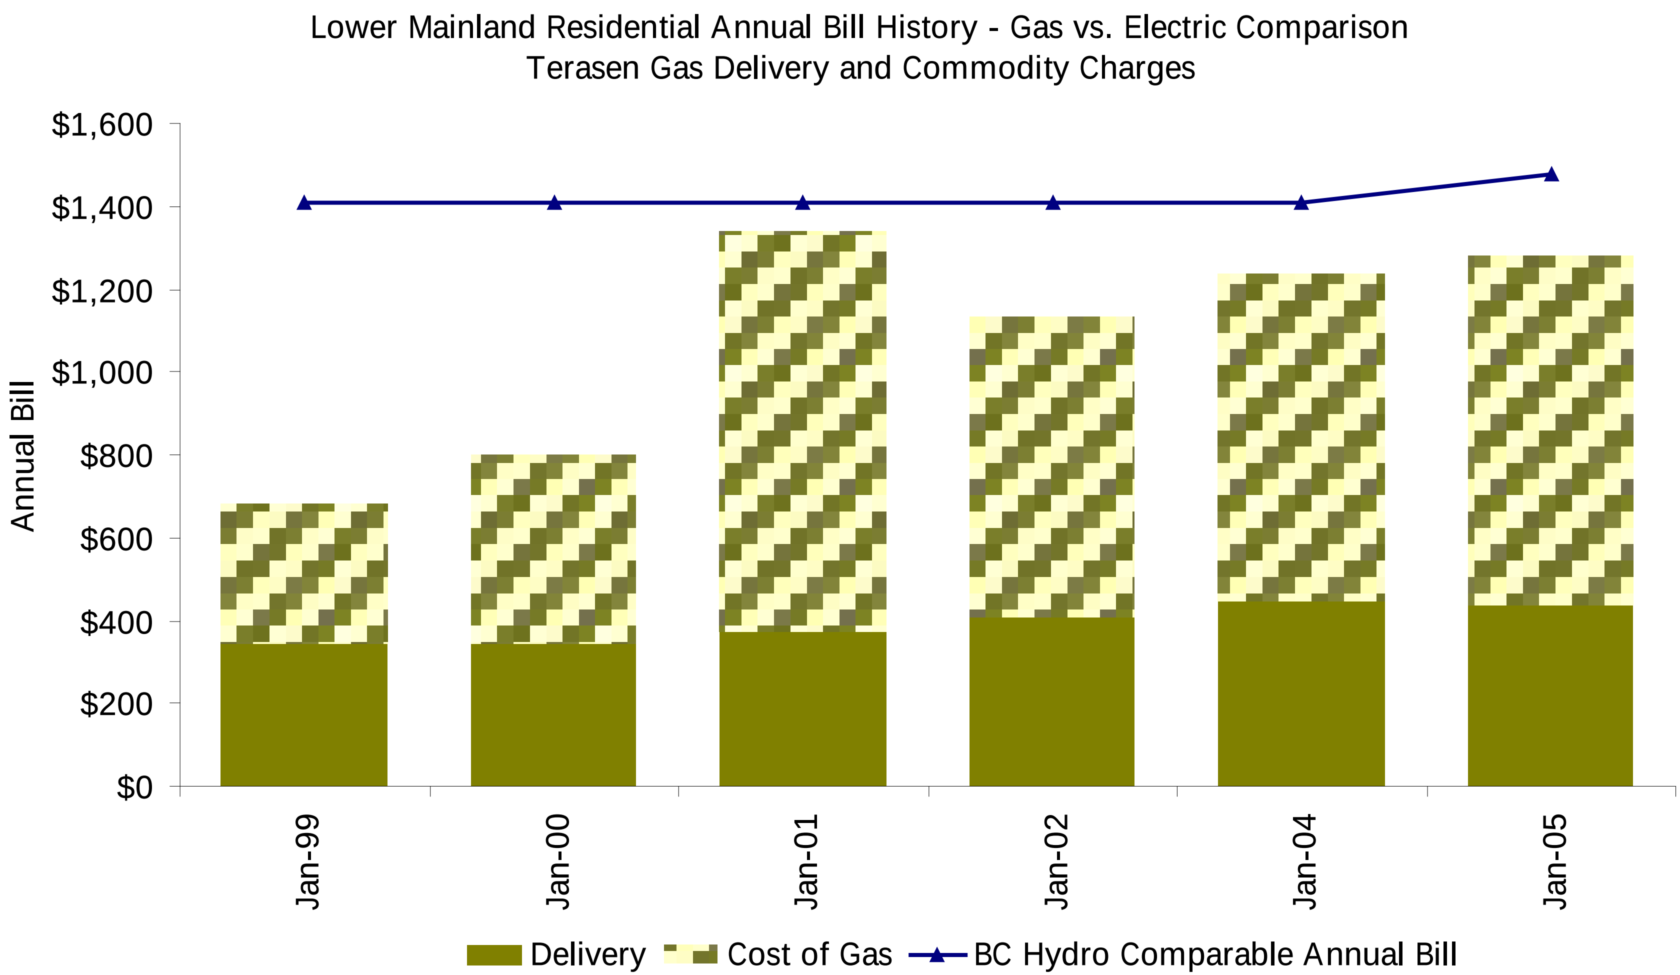
Source: LSM Consulting

Price Competitiveness

- Increases in the market price of natural gas, combined with a government-mandated electricity price freeze, have eroded the historical advantage over electricity
- Terasen Gas maintains an active price risk management program (on behalf of customers) which mitigates this risk
- BC Hydro has been supportive of demand-side management initiatives to encourage efficient energy use decisions

terasen

Price Competitiveness



Regulatory Arrangements

- 2004-2007 PBR in place for Terasen Gas
  - O&M and capital cost incentives, 50/50 sharing
  - Numerous deferral accounts
- 2003-2005 PBR in place for TGVI
  - O&M incentives, no sharing
  - Comprehensive deferral arrangements through Revenue Deficiency Deferral Account
  - Preference is to obtain a two-year extension to align regulatory calendar with Terasen Gas

Terasen

Regulatory Arrangements

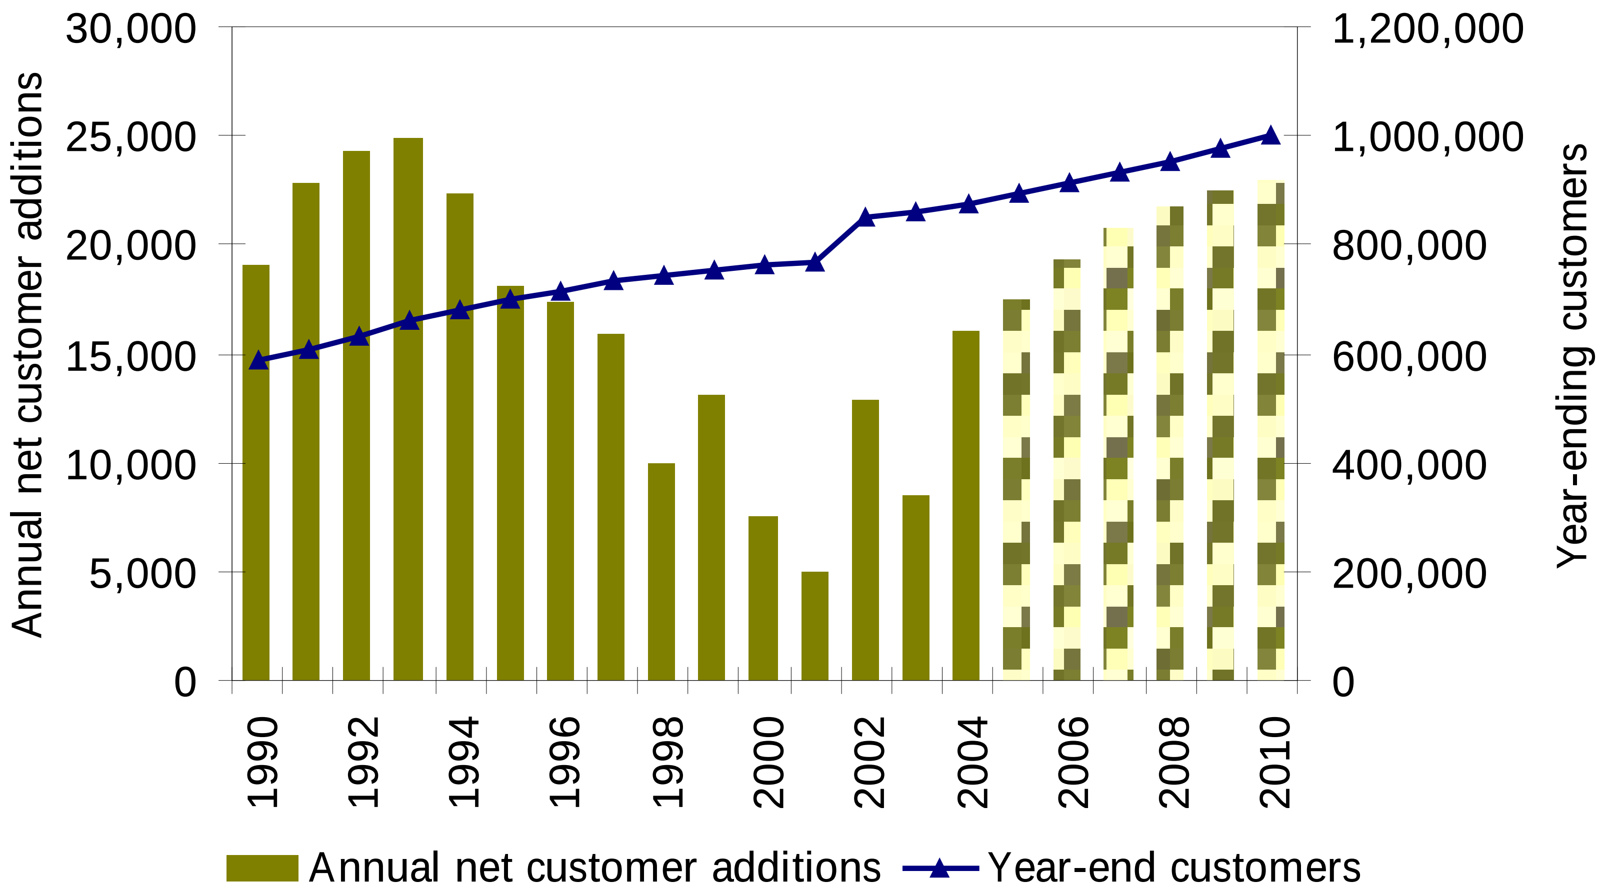
- ROE and Capital Structure hearing planned for Q3 2005
  - Allowed returns and equity components in B.C. are exceptionally low compared to other Canadian jurisdictions
    - April 2005 consensus forecast (if unchanged in November) would result in ROEs of 8.58% for Terasen Gas and 9.08% for TGVI in 2006
  - Since the last review in B.C. in 1999, gas/electric price competitiveness has narrowed significantly
- Good opportunity to present a case for higher ROE and/or equity components

terasen

Terasen Gas - Outlook

- Successful efforts to improve operating efficiency in the past has limited the scope for future efficiencies
- Focus will be on increasing customer capture rates
  - Target of 1 million gas customers in 2010 (up from 878,000 currently)
  - Opportunity to improve capture rates for multi-family housing starts
  - Regional economy remains very strong
- Additional target of $1 billion in new investment by 2010

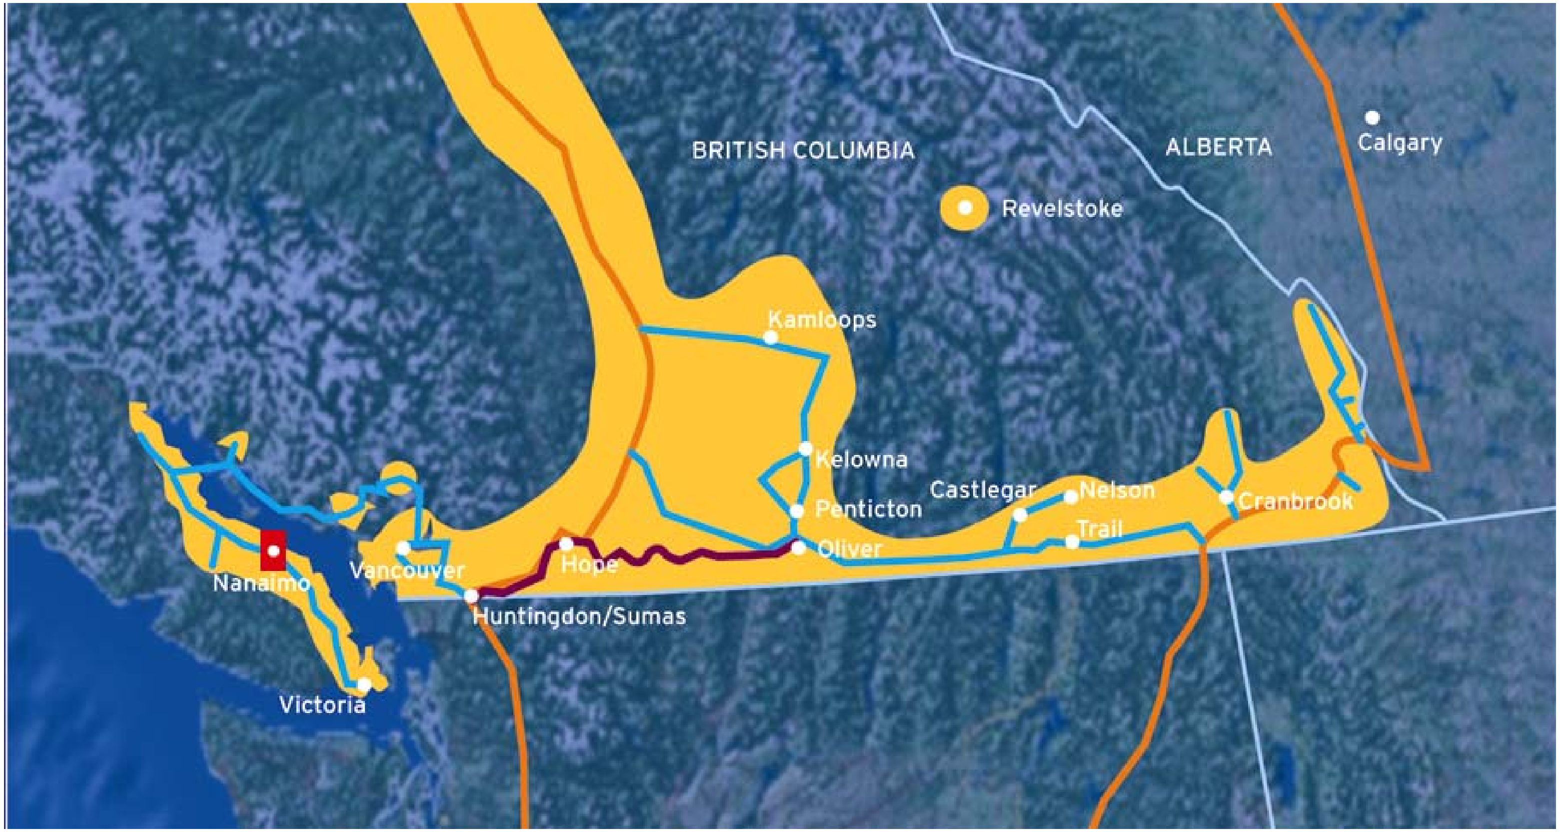
Customer Growth



*Data prior to 2002 excludes TGVI

Terasen

New Infrastructure Projects



- Terasen Transmission Lines
- Terasen Distribution Service Area
- Other Natural Gas Lines
- Proposed Inland Pacific Connector Pipeline
- Proposed LNG Storage Tank

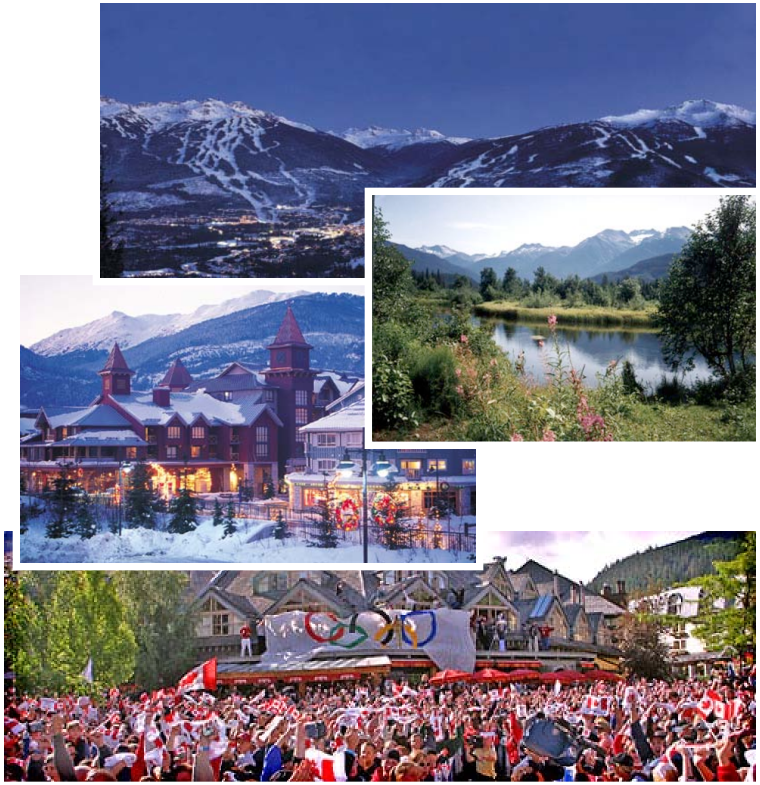
terasen

TGVI Expansion

- BCUC approved $100 mln Vancouver Island LNG Project subject to Duke Point power plant proceeding
- New LNG facility plus $50 mln compression expansion will be supported by long-term, take-or-pay contracts with BC Hydro for capacity on TGVI
- BCUC approval of Duke Point currently subject to appeal
  – Resolution expected in June
  – Initial request for leave to appeal was rejected

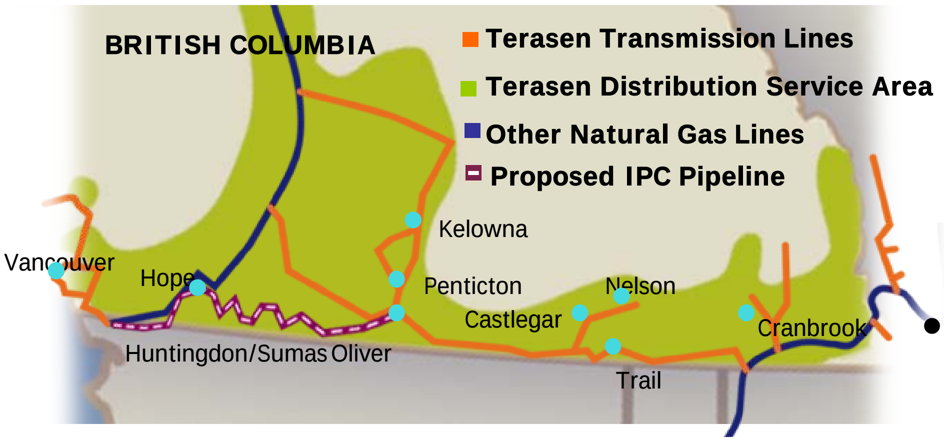
Growth – Whistler

- Working with the Resort Municipality of Whistler to develop a Sustainable Energy Strategy
  - Establish a hybrid gas/GSHP energy utility
  - Construct a natural gas pipeline from Squamish to Whistler
  - Develop renewable district energy systems or other sustainable options
- Estimated pipeline cost – $35 million
- Model for integrating natural gas with renewable energy sources



Terasen

Inland Pacific Connector



- Potential $300 to $500 mln gas transmission line connecting SCP to the Lower Mainland & Sumas (NWPL)
- Project will require support from multiple shippers to move forward
- Increasing tolls on Duke System improving competitiveness

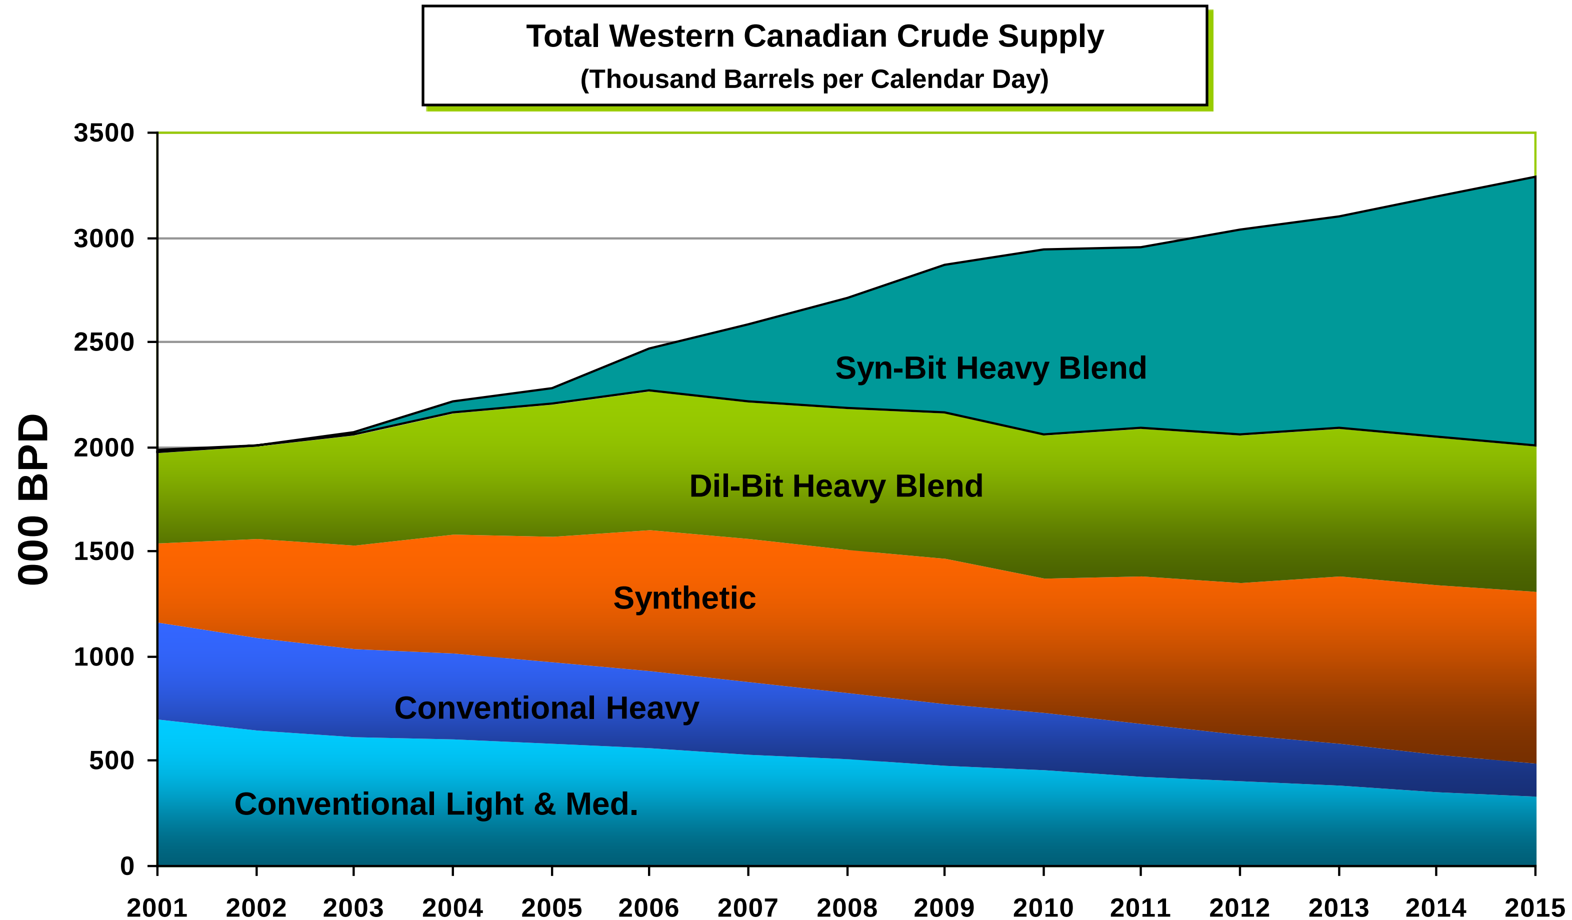
terasen

Terasen
Pipelines

Terasen Pipelines

Petroleum Pipelines   Alberta Oil Sands Deposits

Canadian Crude Supply Forecast

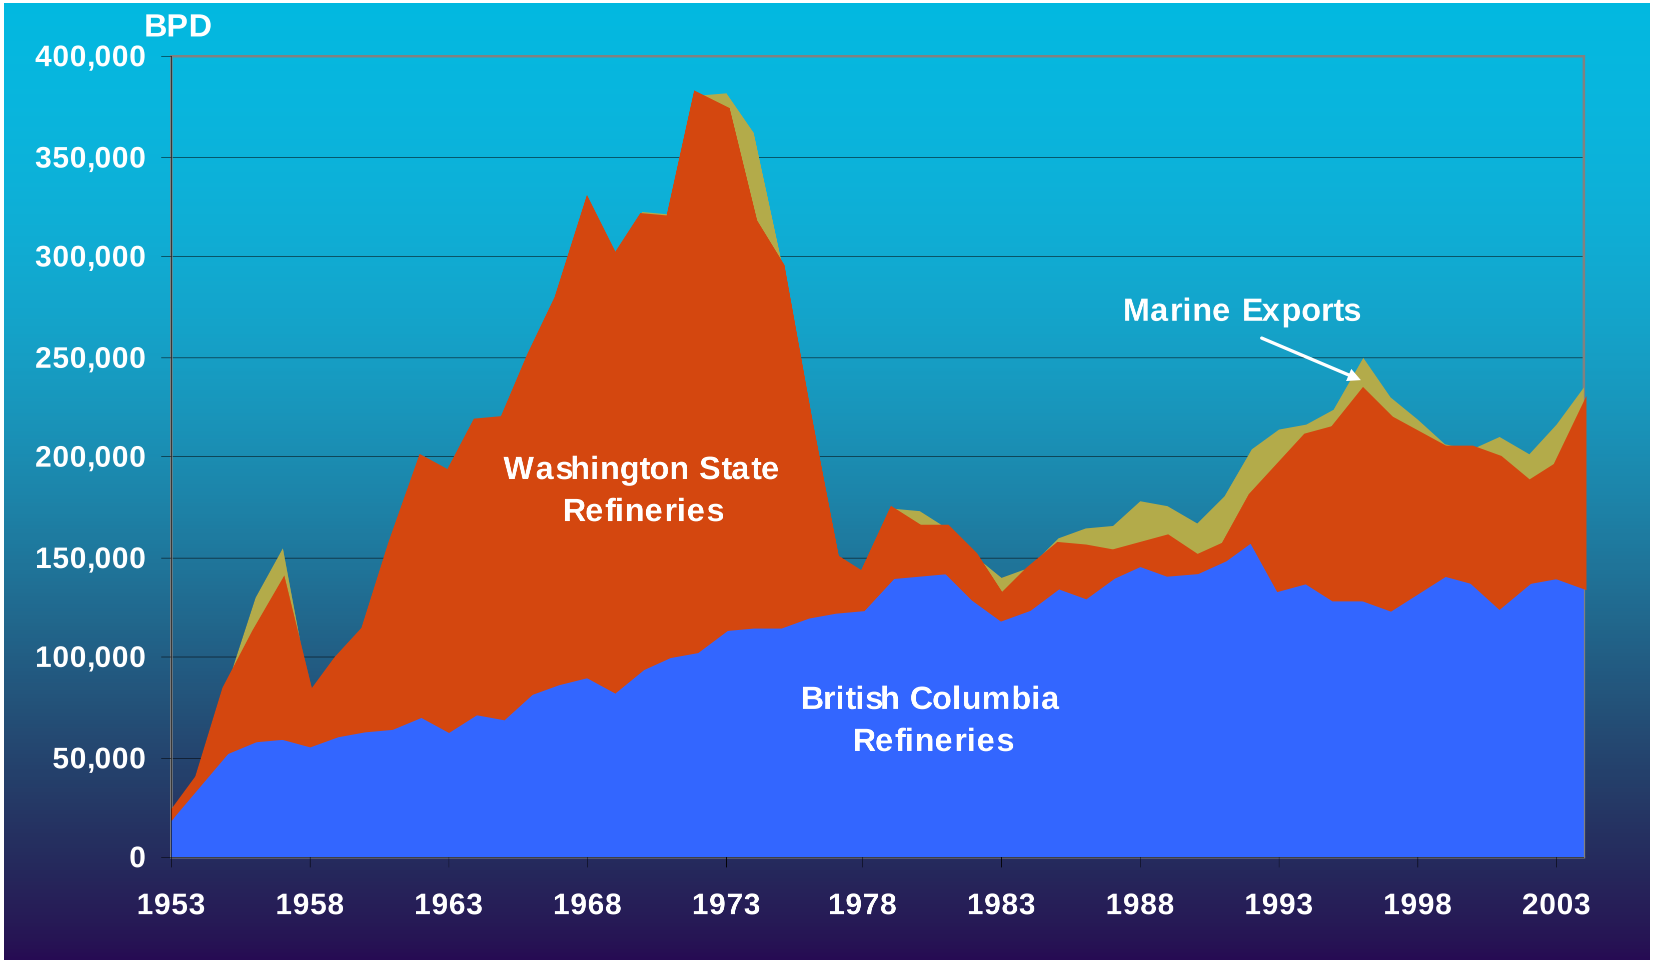


CAPP Upper Supply Case – Total Supply

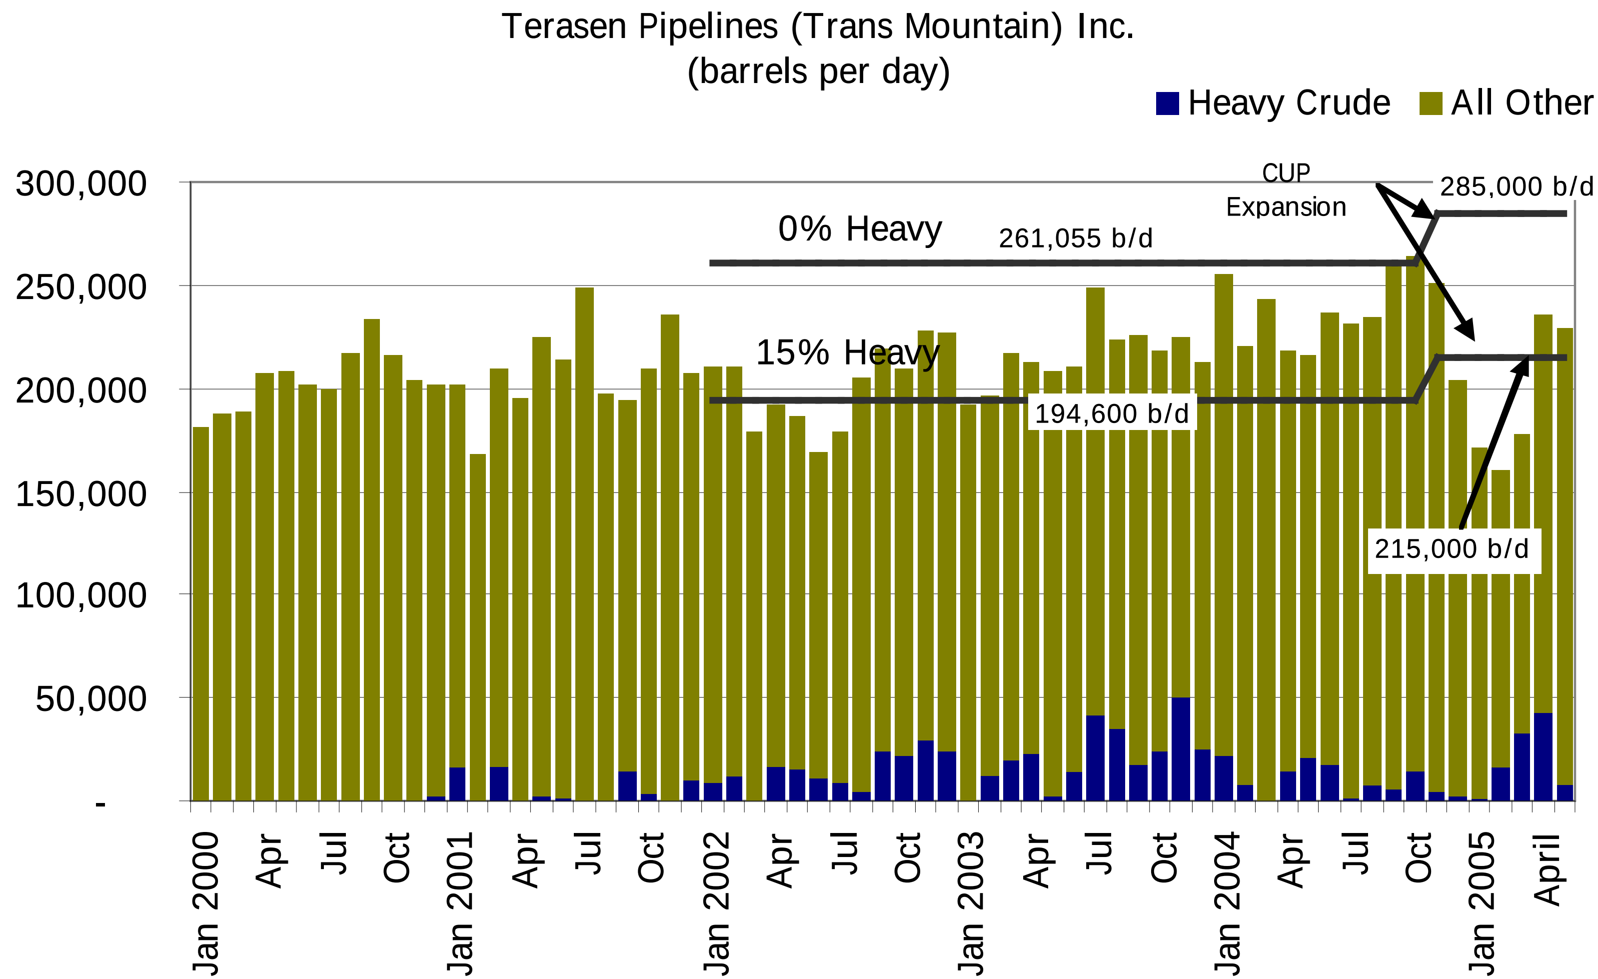
Trans Mountain - Regulatory

- Throughput growth has resulted in attractive returns from the 2001-2005 Incentive Toll Settlement
- ITS renewal discussions are underway
- Opportunity to meet shipper needs for more pipeline capacity provides negotiating flexibility

Trans Mountain Throughput



Trans Mountain Throughput



*May 2005 throughput based on forecast

terasen

Trans Mountain Throughput

- First quarter throughput affected by "perfect storm":
  - Outages at both Syncrude and Suncor
  - Maintenance turnarounds at Chevron refinery and the Washington State refinery that takes the most Canadian crude
- April and May throughput has returned to apportionment
  - Despite continuing supply issues from the oilsands, and additional throughput on the Express system
  - Significant interest in tanker loadings in May

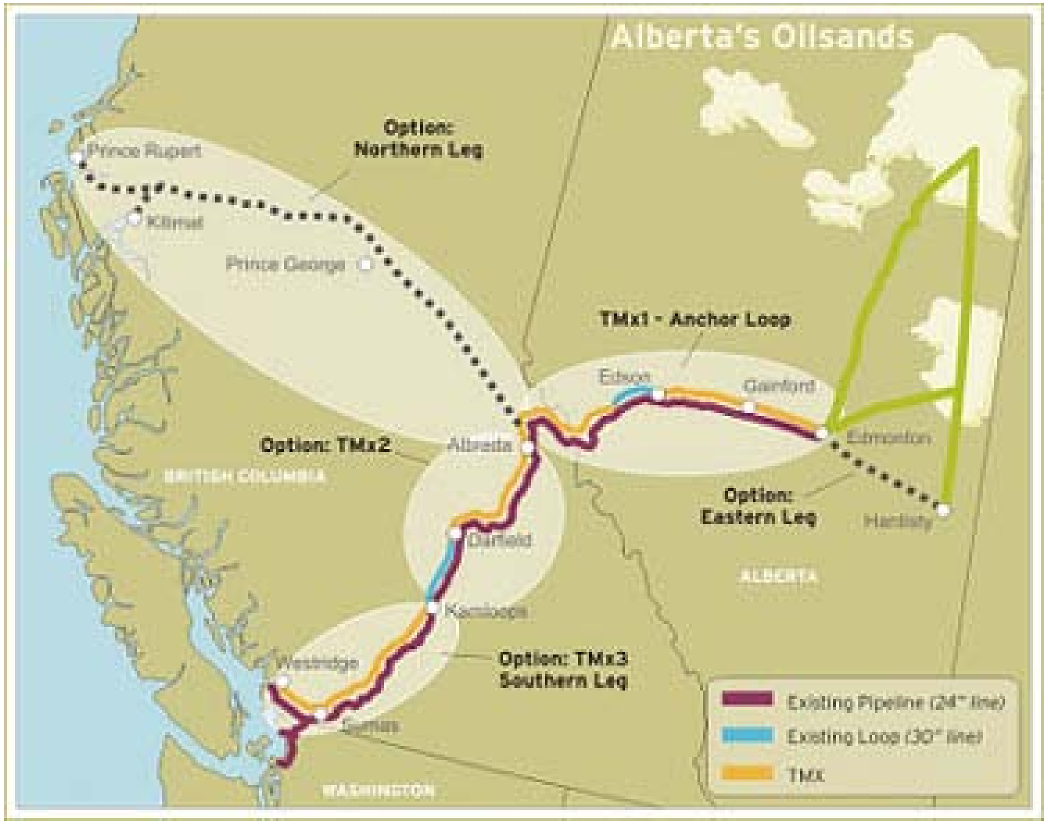
terasen

Trans Mountain Expansion

- Oil sands production driving throughput growth
- Expansion can provide producers with greater access to California & Far East markets
- Completed 27,000 bpd expansion of the mainline at a cost of $19 million in October 2004

terasen

TMX Expansion



- Oilsands supply is actively seeking new markets
- Match with continued import growth on U.S. West Coast and Asia
- Expressions of Interest from potential shippers confirm demand for new capacity

terasen

TMx1 Expansion – Two Components

TMx1 Expansion – Two Components

- Pump Station Expansion Project
  - $205 million to add 35,000 bpd of pumping capacity for 2006
  - Currently discussing expedited shipper approvals
- Anchor Loop Project
  - $365 million to loop pipeline (40,000 bpd additional capacity) for 2008
  - Actively pursuing commercial discussions with shippers
  - Open season targeted for Q2/05

Terasen

TMX Expansion

- Further 550,000 bpd capacity to either Northern or Southern port
- TMx1 plus Southern option C$2.3 billion
- TMx1 plus Northern option C$2.6 billion
- Full range of potential options to match marketing plans of Producers

Terasen

Northern/ Southern Option
2004
2005
2006
2007
2008
2009
2010
2011

Corridor

- Completed on time and on budget in May 2003.
- Backed by 25 year ship-or-pay contract with Shell Canada (60%), Chevron (20%) and Western Oil Sands (20%).
- Provides for recovery of all operating costs, depreciation, taxes and financing costs in revenue requirement.
- 26% equity component, ROE is long-term Canada's plus 350 bps

Corridor Expansion

- Linked to expansion plans for Athabasca Oil Sands Project
  - > Increase bitumen production to 290,000 bpd by 2010
- Will require looping of Corridor system
- Estimated cost $700-800 million, depending on configuration
- Opportunities for third party shipper volumes
- Status: Examining options with Corridor shippers

terasen

Express

- Acquired January 2003
- 84% of the 280,000 post-expansion capacity is committed through long-term contracts.
- Express expansion
  - Feeds PADD IV demand
  - In-service April 2005
    - On-time and under budget

Express – Business Developments

- Tie-in to Billings
  - $8 million project to interconnect with the ExxonMobil Silvertip Pipeline
  - Additional 14k bpd 10-year contract signed to support tie-in
- Platte de-bottlenecking
  - $6 million project to enhance capacity of the Platte pipeline and facilitate flows to PADD II
- Currently examining options for further expansion of the Express System, including new looping

Contracted Capacity

Summary by Shipper

Shipper	Credit Rating	2007	2012	2014	2015
Alberta Government	AAA		15,000		
Canadian Natural	BBB+	3,000	3,000		
ConocoPhillips	A-		10,000	30,000	25,000
EnCana Crude Mktg.	BBB+		70,000

[ ]	BB		13,800		10,000
Sinclair Oil*	AAA				10,000
Suncor Energy	A				30,000
Talisman Energy	BBB+	1,000			
Total		4,000	111,800	30,000	89,000

*Internal rating

terasen

Expansion Financing

- Excess proceeds of $10 million are being used to fund small expansions noted previously
- Process of converting Notes from Holdings level to System level is underway
- Result is that an additional $110 million of 6.09% Senior Secured Notes due January 2020 will be outstanding at the Express system level

Terasen

Express – Financing Plans

- Future looping plans are preliminary, so financing requirements and plans are yet to be determined
  - Expansion will be financed prudently, based on business risk and contractual support
- Small amounts of additional debt may be raised at a holdco level, with no impact on the existing Trust Indenture
  - Mainly to replace a component of scheduled amortization on initial notes

Terasen
Water & Utility Services

Water and Utility Services

- Western Canada's private sector market leader providing water/wastewater infrastructure services
- Primary operator for outsourced utility services
- Operates over 90 systems in over 50 communities

terasen

Water and Utility Services

- Fairbanks acquisition
  - Acquired a 50% interest in the water and sewer utility that serves Fairbanks, Alaska for C$40 million
  - Fairbanks is an example of the private water utility model that Terasen is developing in Western Canada
    - Regulated by the Regulatory Commission of Alaska
    - 70% deemed equity component, 13.8% allowed ROE in most recent revenue requirement decision

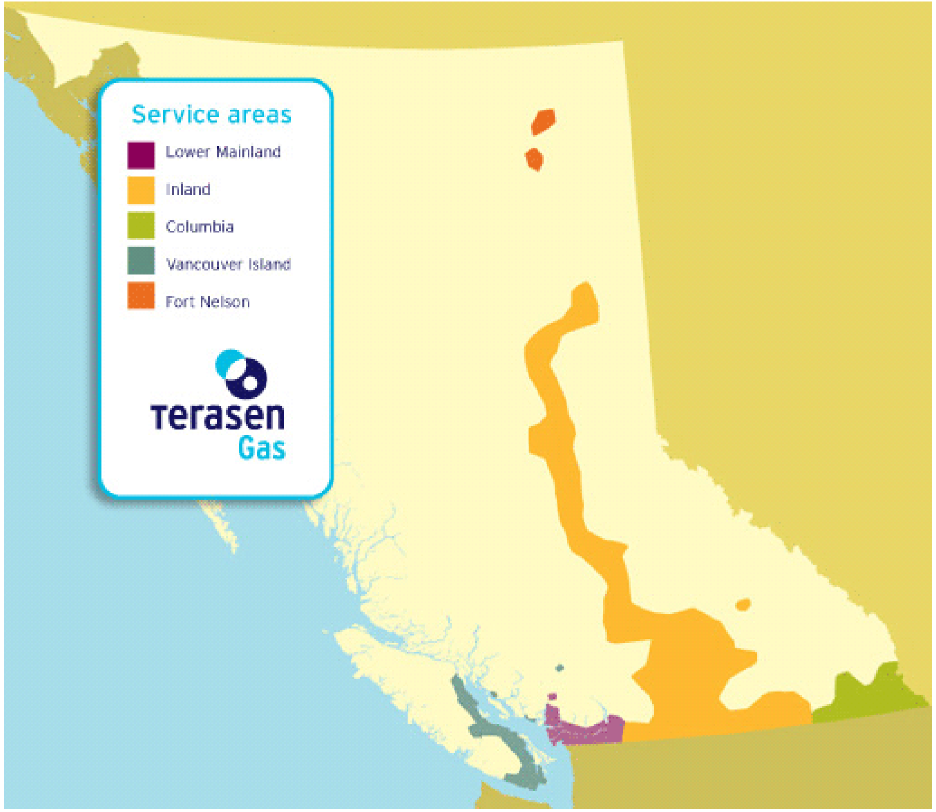
Terasen Gas Overview

terasen



* Map includes TGVI service areas

- Terasen Gas Inc. is a regulated natural gas transmission and distribution utility
  - Providing service to lower mainland, interior and northern areas of BC
  - Customer base of ~825,000
  - Rate base of ~$2.5 billion
- Experienced management team with significant energy industry expertise
- Strong ownership provide by Fortis Inc.
- Sister company to Terasen Gas (Vancouver Island) Inc. and Terasen Gas (Whistler) Inc.
  - Combined, the three entities provide service to over 900,000 customers, ~96% of natural gas users in BC
  - TGI, TGVI and TGW share a common management and administrative structure with the cost allocation reviewed by BCUC
- Operates within a supportive regulatory environment, under the British Columbia Utilities Commission

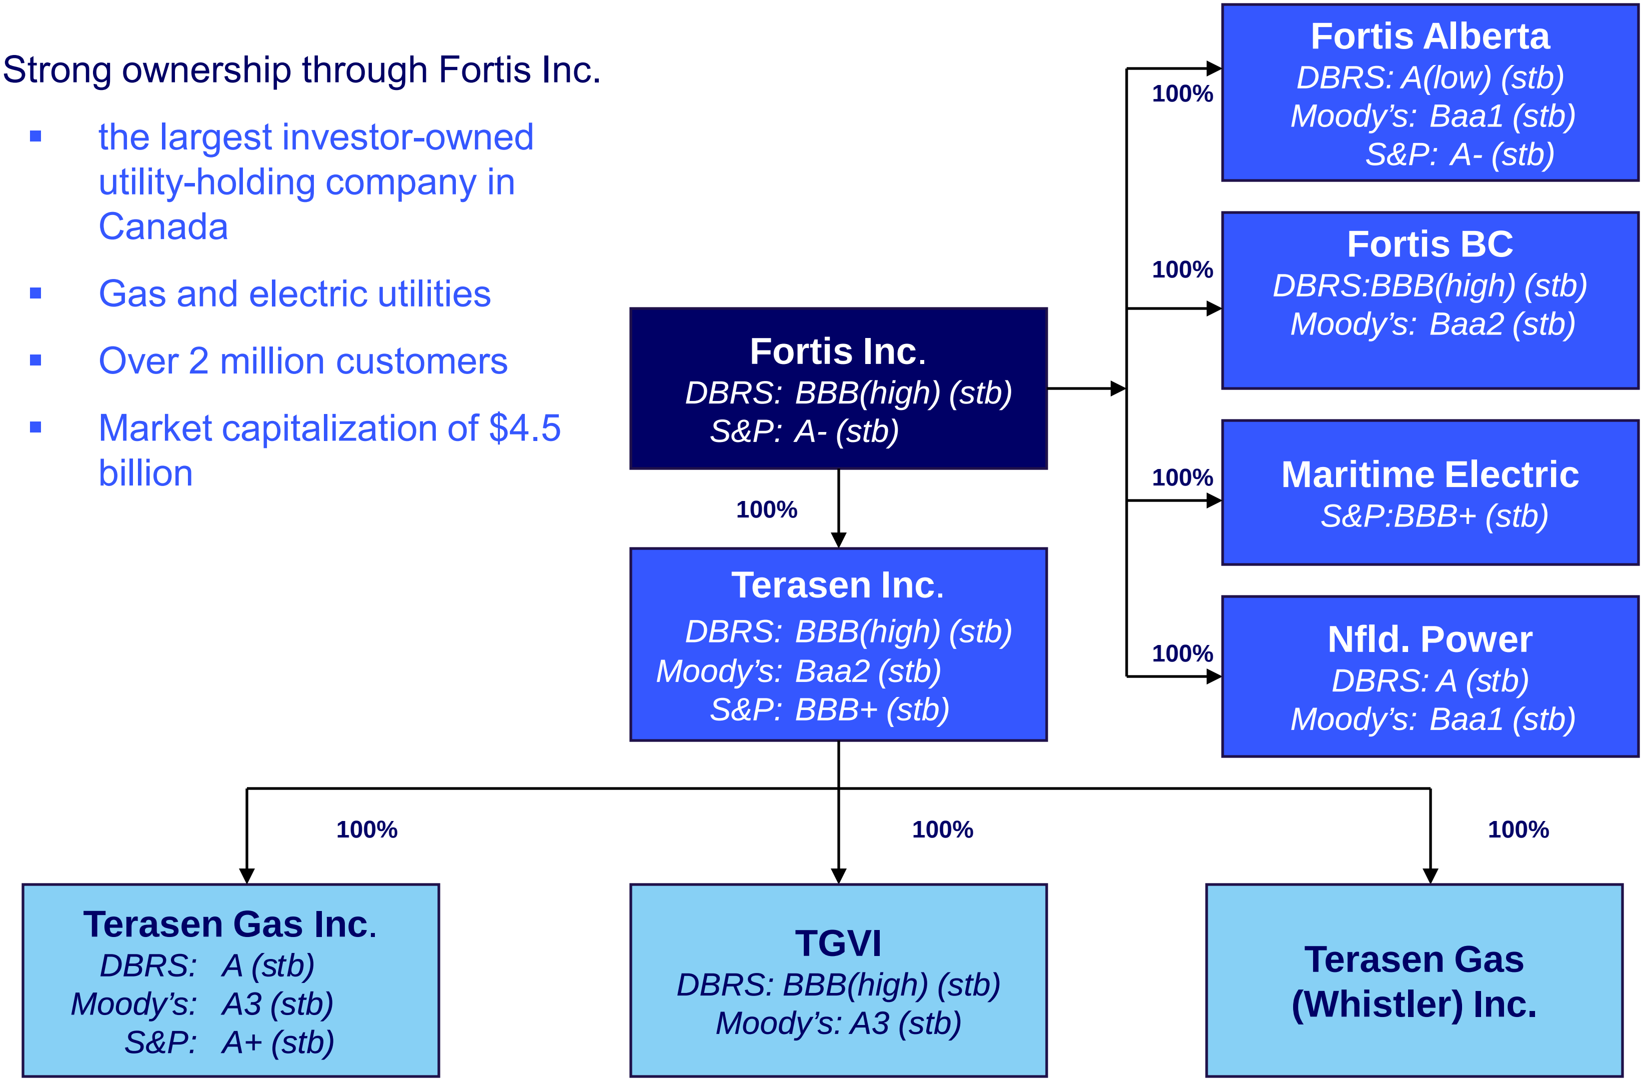
VP, Corporate Development & Treasurer

Strong Ownership

- Strong ownership through Fortis Inc.
  - the largest investor-owned utility-holding company in Canada
  - Gas and electric utilities
  - Over 2 million customers
  - Market capitalization of $4.5 billion

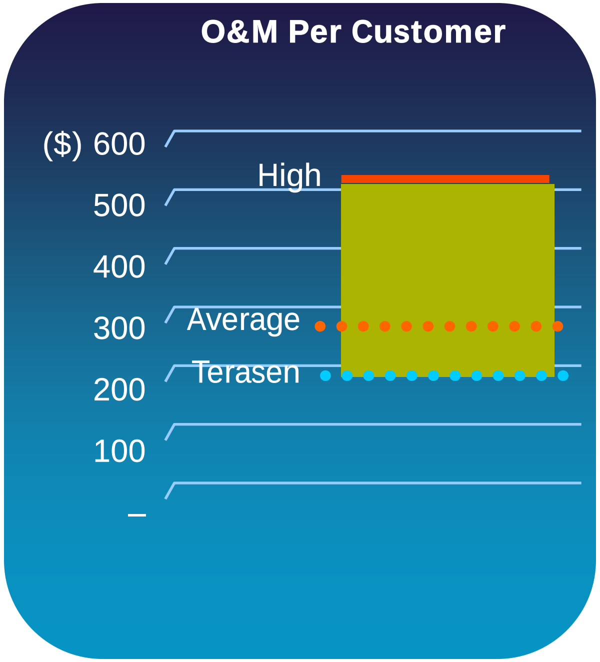


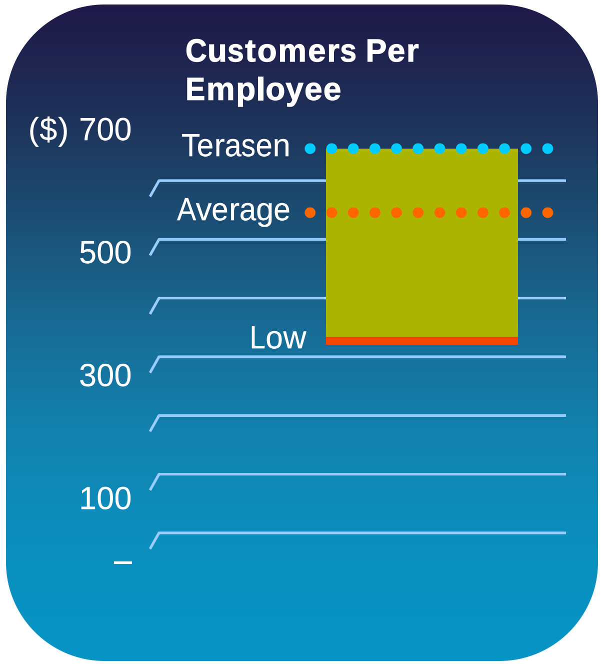
2007 Highlights

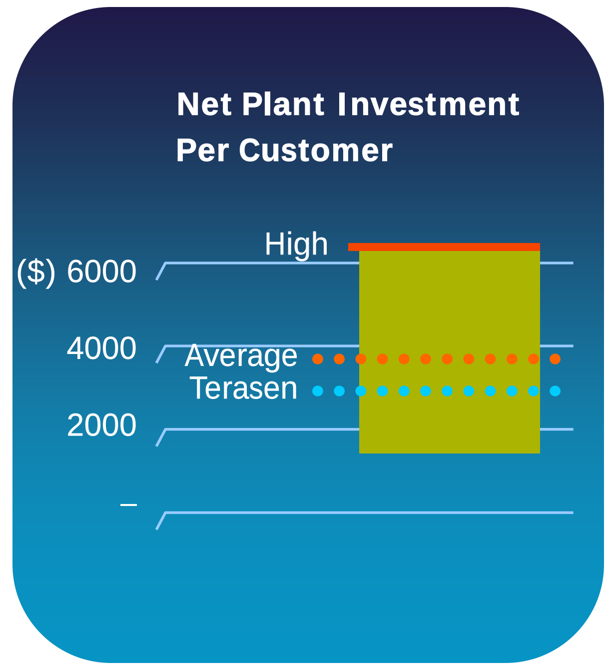
Terasen

- Net Income of $78.2 million compared to $68.4 million for 2006
  - Surplus land sale, O&M and capital efficiencies offset lower allowed ROE
  - 2007 allowed ROE at 8.37% compared to 8.80% for 2006
- Continued customer growth due to population growth and economy
  - Net customer additions of ~10,000, similar to 2006
- Extension of PBR construct for 2008-2009 period
  - Incentive mechanism in place
  - Continuation of use of regulatory deferral accounts
- Amalgamation of Terasen Gas (Squamish) on blended rate base
- Issuance of $250 million debt during difficult market conditions
- Extended $500 million syndicated credit facility, including $100 million accordion feature allowing for rapid access to operating credit

Operating Efficiency



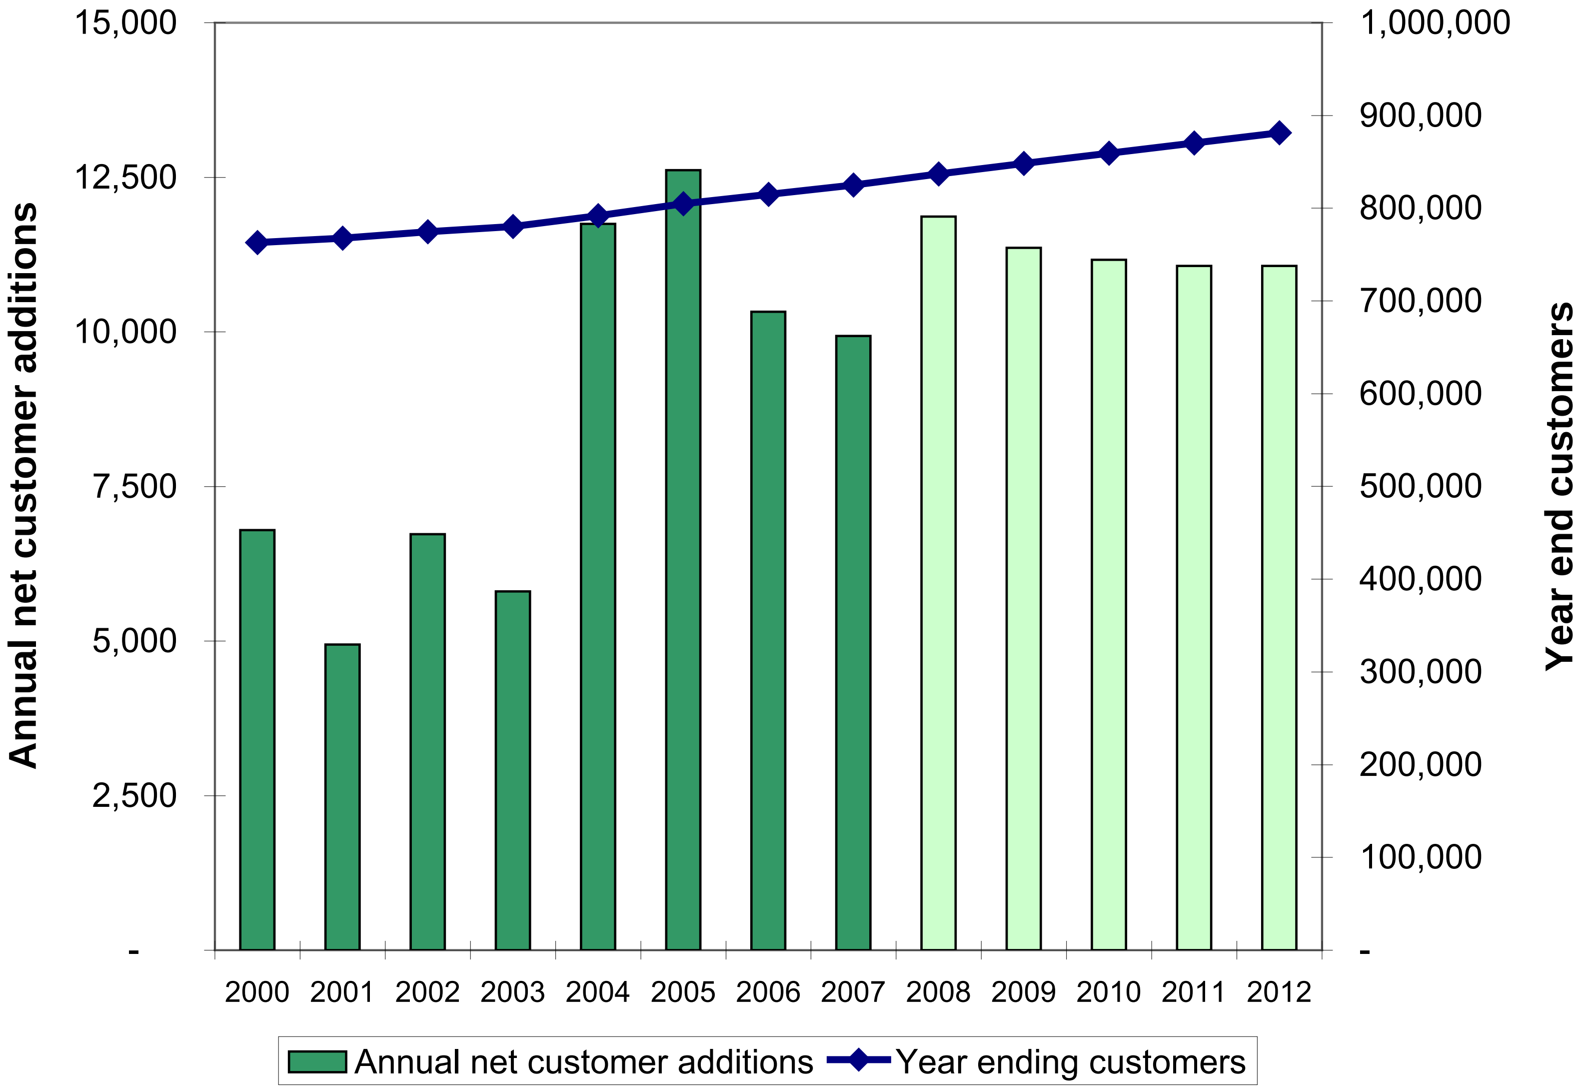




Source: LSM Consulting

Terasen Gas Estimates including TGI and TGVI

Customer Growth

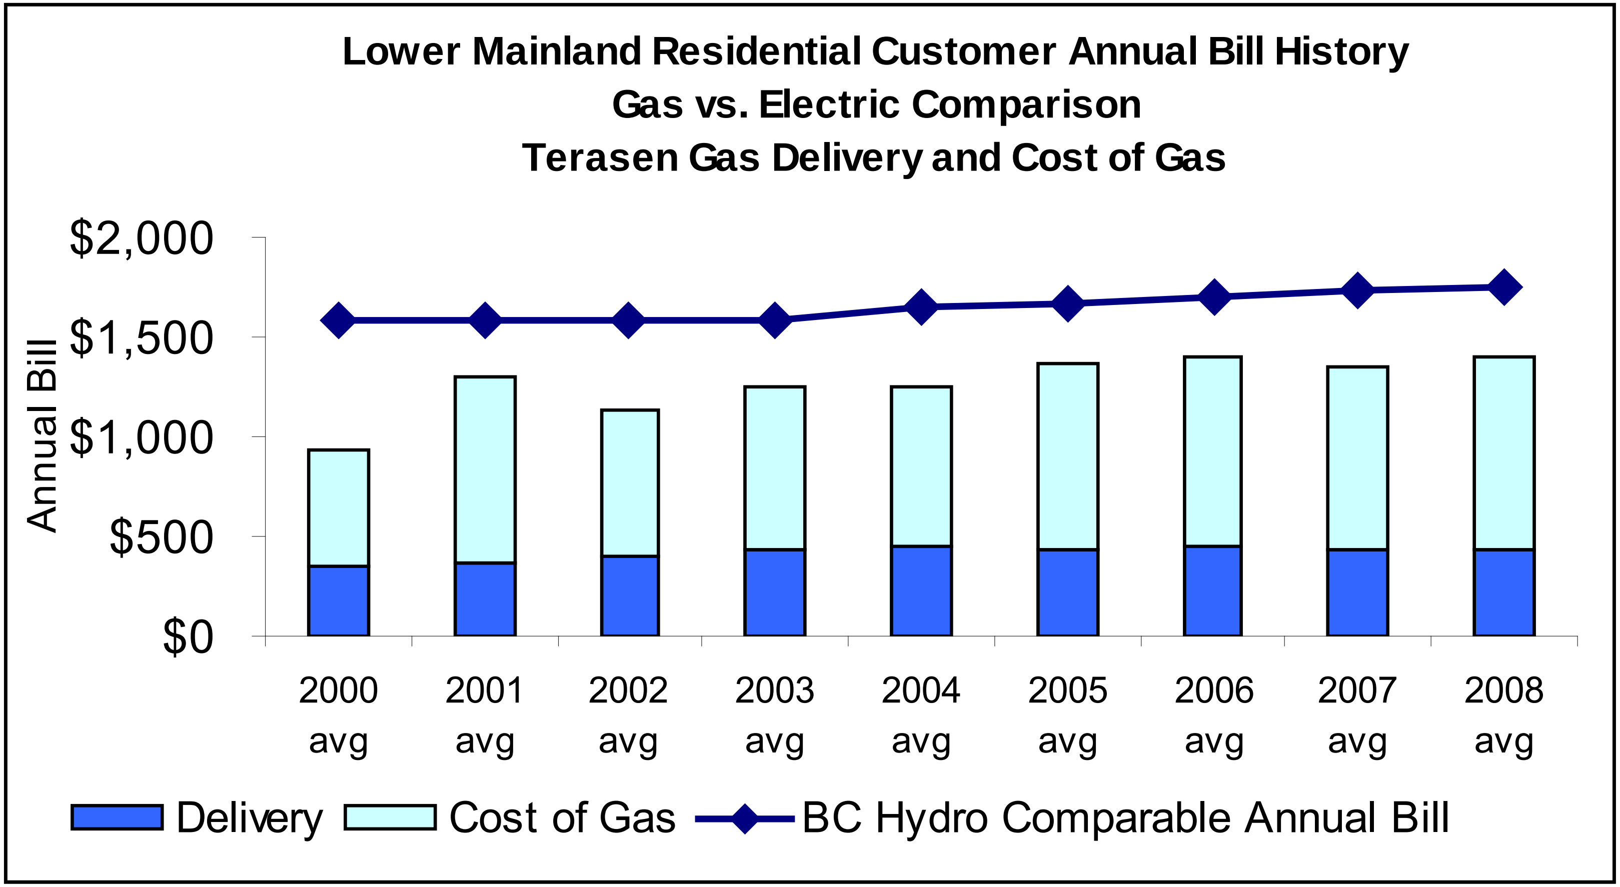


Price Competitiveness

terasen

- Terasen Gas maintains a price advantage relative to electricity, the primary competitor to natural gas
- Increases in the market price of natural gas, combined with subsidized electricity prices, have in recent years eroded the historical advantage over electricity
- Terasen Gas maintains an active price risk management program (on behalf of customers with BCUC approval) which mitigates this risk
- Terasen Gas focus on operational efficiency has kept delivery charge component relatively flat over the last five years
- Introduction of Carbon Tax plus pressure on natural gas prices will create competitive pricing pressures
- BC Energy Plan focus on emission reduction and "clean-power" is expected to result in larger increases in electricity rates relative to recent experience

Price Competitiveness



Regulatory Arrangements

- 2004-2007 PBR previously in place for Terasen Gas extended through 2009
  - O&M and capital cost incentives, 50/50 sharing
  - Continuation of numerous deferral accounts
- Equity component for TGI 35.01% (post Terasen Squamish roll-in)
- Allowed ROE formula
  - 3.90% premium over forecast 30 year GoC yield
  - Risk premium adjusted by 75% of change in forecast yield year over year
  - 2008 allowed ROE set at 8.62%, up from 8.37% allowed ROE for 2007

BCUC Ring Fencing

- BCUC in April 30, 2007 Order approving the Fortis acquisition specified certain ring-fencing conditions
  - Maintain a common equity to total capital ratio at least as high as the level determined by BCUC
  - No dividends without BCUC approval if equity:capital ratio would be violated
  - Restrictions on interaction with affiliates (separate cash management, no financial support, no tax sharing, transactions only on an arms length basis)
  - No financial support or guarantee of non-regulated businesses
  - Maintain existing governance policies, in particular, independence of Directors

Terasen Gas - Outlook

terasen

- Financial performance will continue to be predictable
- Focus will be on increasing customer capture rates and retaining customers
  - Opportunity to focus on multi-family dwellings
  - Regional economy remains strong, expected to continue through 2010
- Focus on retaining customers through expanded energy conservation and efficiency programs
- Pursuing fair return for natural gas utilities in Canada
  - 2008 allowed ROE 8.62%, up from 8.37% 2007
- Planning underway for potential replacement of current PBR
- Infrastructure opportunities focused on transmission and CIS
  - Inland Pacific Connector potential for 2012
  - Reviewing AMI/AMR infrastructure opportunities

- Strong ownership provided by Fortis Inc.
- Sister company to Terasen Gas (Vancouver Island) Inc. and Terasen Gas (Whistler) Inc.
  - Combined, the three entities provide service to over 931,000 customers, ~96% of natural gas users in BC
  - TGI, TGVI and TGW share a common management and administrative structure with the cost allocation reviewed by BCUC
- Operates within a supportive regulatory environment, under the British Columbia Utilities Commission

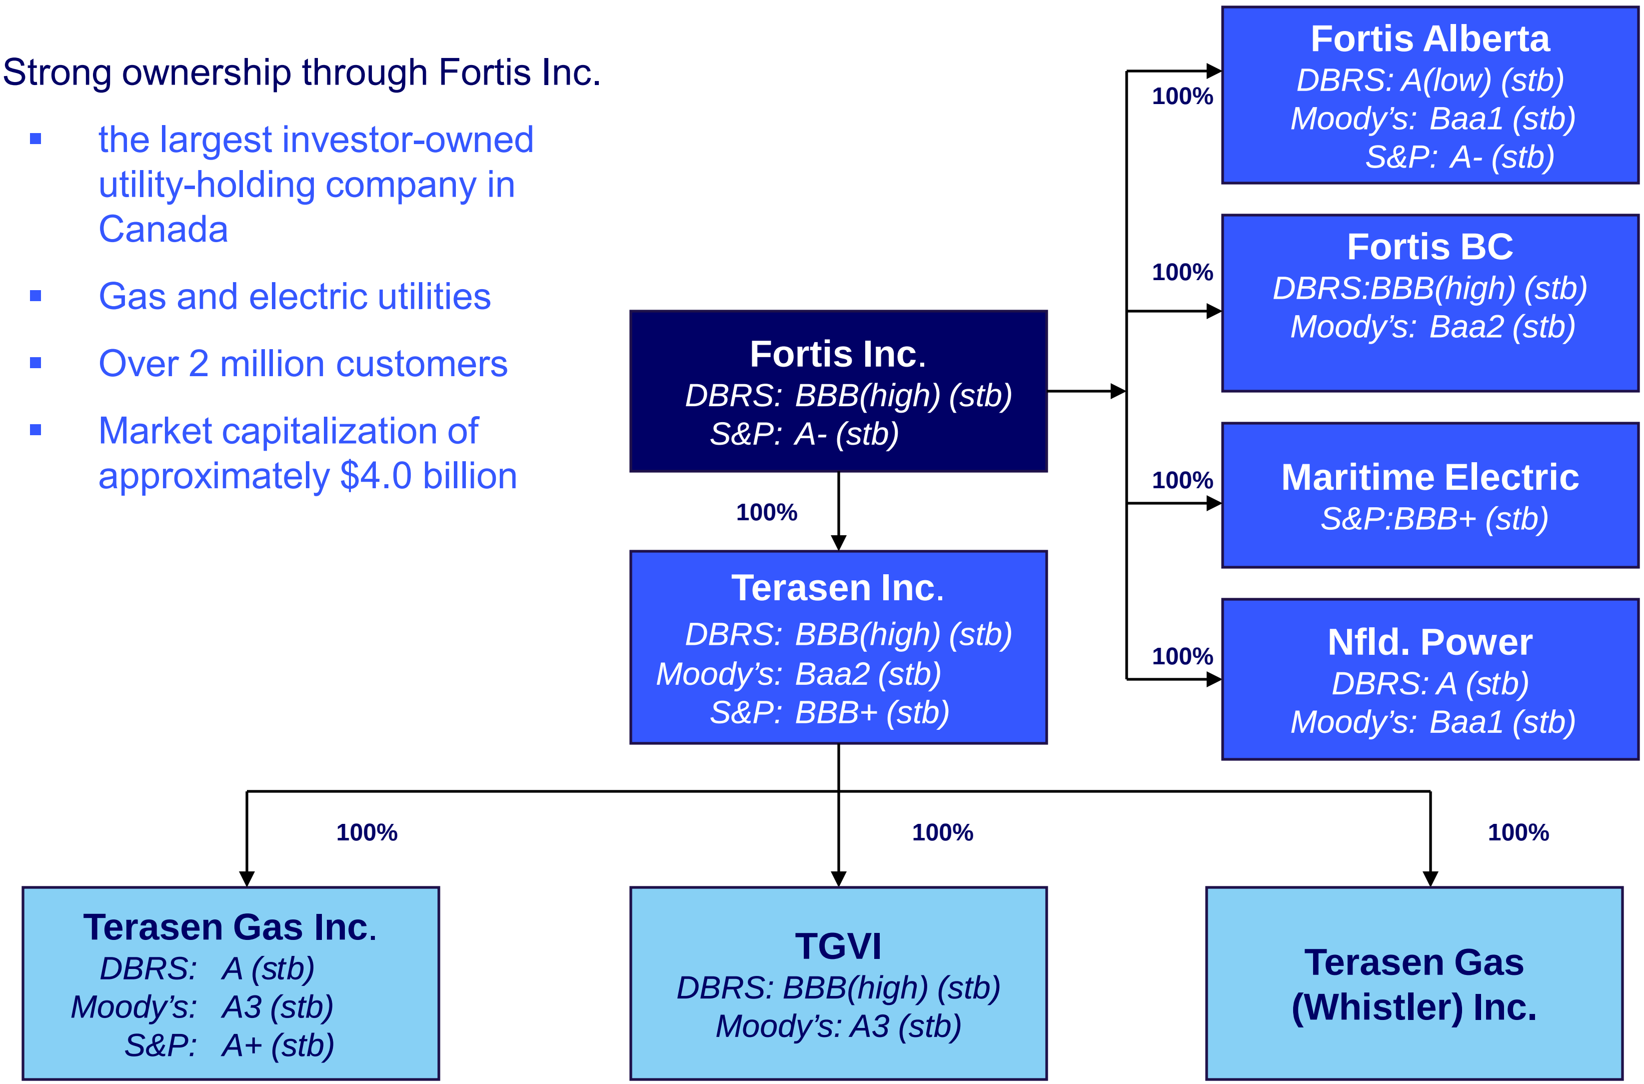
Strong Ownership

terasen

- Strong ownership through Fortis Inc.
  - the largest investor-owned utility-holding company in Canada
  - Gas and electric utilities
  - Over 2 million customers
  - Market capitalization of approximately $4.0 billion



Common Management Structure

terasen

- Ownership and Operatorship
  - In addition to TGI, Terasen Inc. also owns and operates TGVI and Terasen Gas (Whistler) (“TGW”), which provides service to the Whistler region

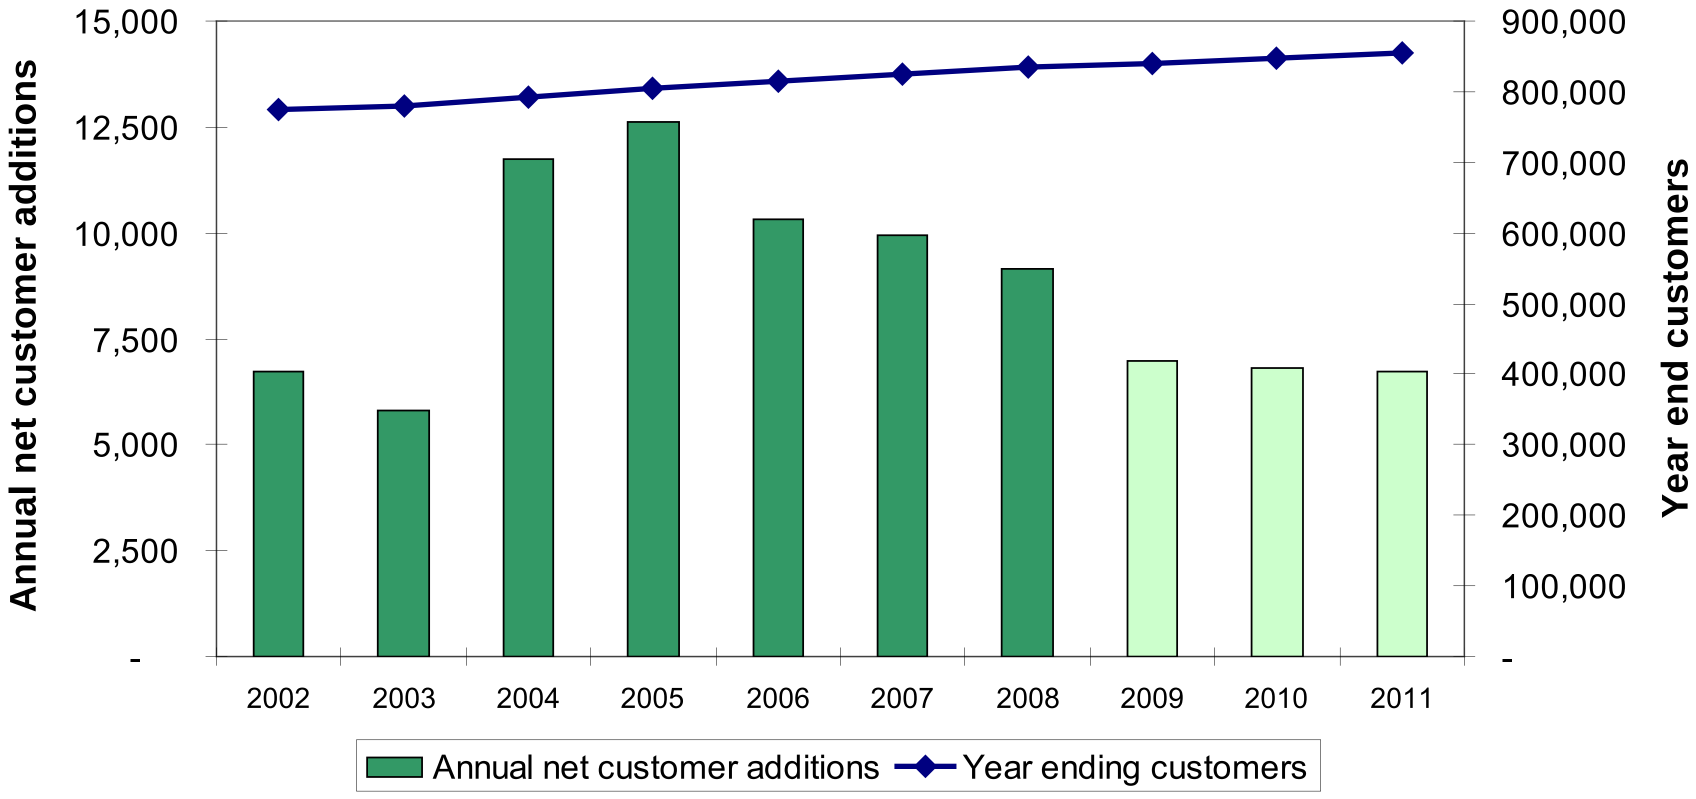
	TGI	TGVI	TGW	Total
Customers	**834,226**	**94,778**	**2,457**	**931,461**
% BC Natural Gas Users	**86%**	**10%**	**<1%**	**~96%**
Pipeline Network (km)	**39,899**	**6,098**	**132**	**46,129**
2009 Estimated Rate Base (mm)	**$2,547**	**$514**	**$39**	**$3,100**
Assets (mm)	**$3,109**	**$697**	**$24**	**$3,830**

  - TGI, TGVI and TGW share a common management and administrative structure with the cost allocation reviewed by BCUC

2008 Highlights

- Net Income of $91.5 million compared to $78.2 million for 2007
  - 2008 results include settlements with CRA of $11.6 million
  - 2008 allowed ROE at 8.62% compared to 8.37% for 2007
- Continued customer growth but a lower rate of additions due to a slowing economy in British Columbia
  - Net customer additions of ~9,000
- Extension of PBR construct for 2008-2009 period
  - Incentive mechanism in place
  - Continuation of use of regulatory deferral accounts
- Issuance of $250 million debt in 2008
- Extended existing $500 million syndicated credit facility by one year to 2013

Customer Growth

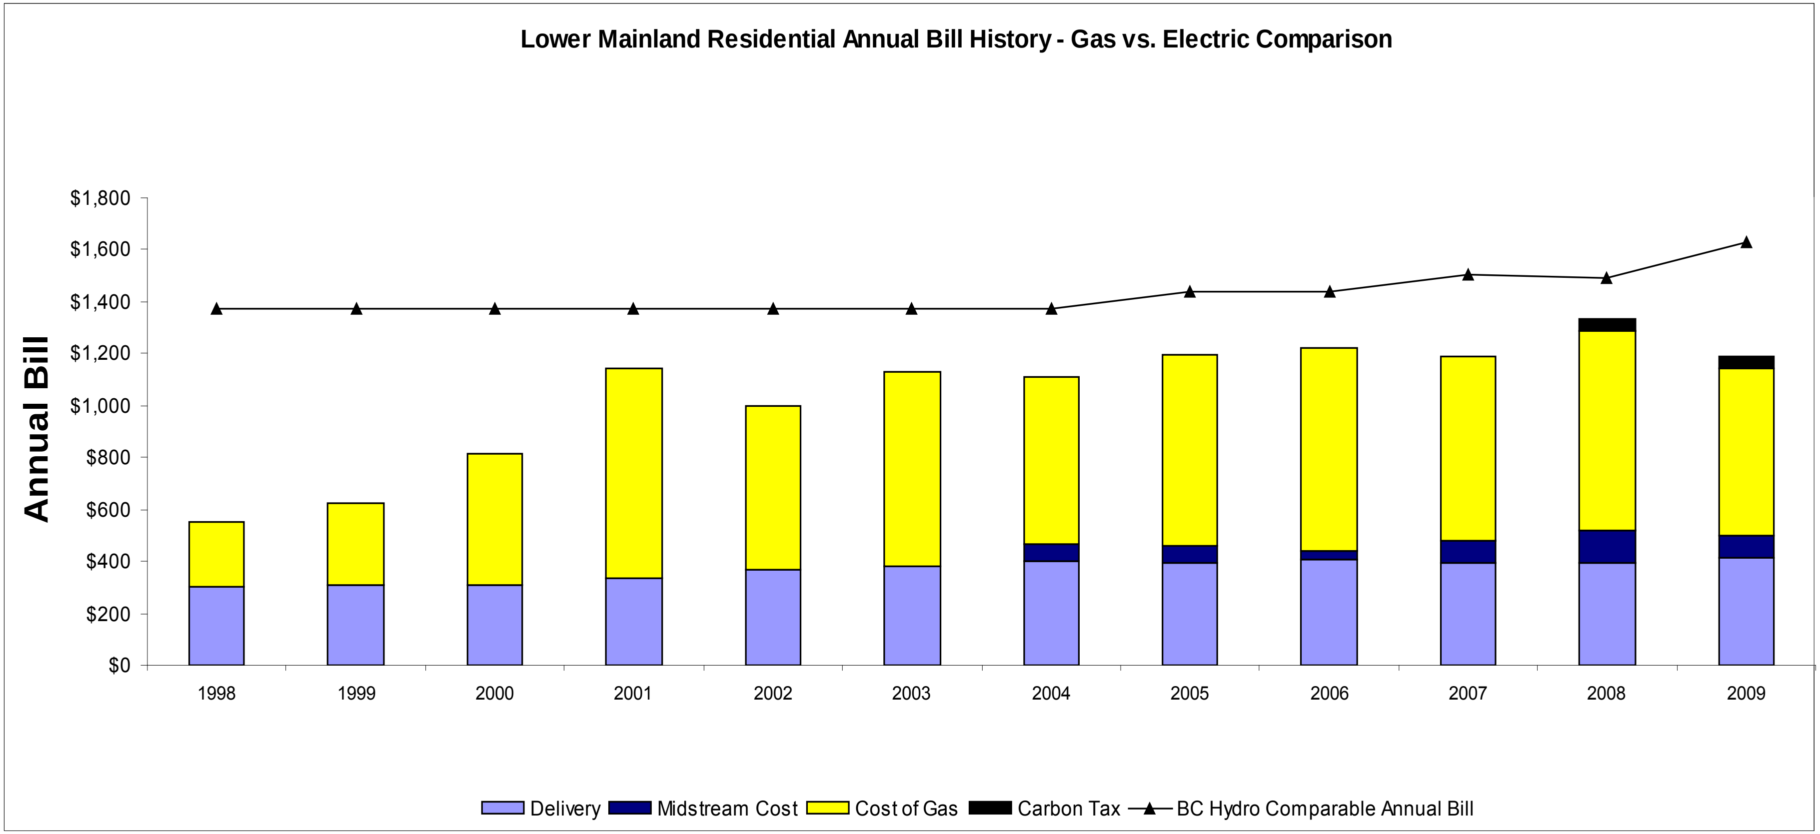


Price Competitiveness

- Terasen Gas maintains a price advantage relative to electricity, the primary competitor to natural gas
- Increases in the market price of natural gas, combined with subsidized electricity prices, have in recent years eroded the historical advantage over electricity
- Terasen Gas maintains an active price risk management program (on behalf of customers with BCUC approval) which mitigates this risk
- Terasen Gas focus on operational efficiency has kept delivery charge component relatively flat over the last five years
- BC Energy Plan focus on emission reduction and “clean-power”:
  - Expected to result in larger increases in electricity rates relative to recent experience;
  - However emmissions reduction focus will put pressure on natural gas demand

Price Competitiveness

Terasen



Assumes:

Natural gas use of 95 GJ

Efficiency of gas equipment is 90% relative to 100% for electricity

Terasen Gas amount includes the basic charge

BC Hydro amount does not include basic charge since a household already pays the basic electric charge for non-heating use

Regulatory Arrangements

- 2004-2007 PBR previously in place for Terasen Gas extended through 2009
  - O&M and capital cost incentives, 50/50 sharing
  - Continuation of numerous deferral accounts
- Equity component for TGI 35.01% (post Terasen Squamish roll-in)
- Allowed ROE formula
  - 3.90% premium over forecast 30 year GoC yield at a base level of 5.25%
  - Current GoC yields suggest a lower ROE in 2010
  - Risk premium adjusted by 75% of change in forecast yield year over year
  - 2009 allowed ROE set at 8.47%, down from 8.62% allowed ROE for 2008

BCUC Ring Fencing

- BCUC in April 30, 2007 Order approving the Fortis acquisition specified certain ring-fencing conditions
  - Maintain a common equity to total capital ratio at least as high as the level determined by BCUC
  - No dividends without BCUC approval if equity:capital ratio would be violated
  - Restrictions on interaction with affiliates (separate cash management, no financial support, no tax sharing, transactions only on an arms length basis)
  - No financial support or guarantee of non-regulated businesses
  - Maintain existing governance policies, in particular, independence of Directors

Terasen Gas - Outlook

- Near term financial performance expected to be predictable
- Lower customer growth than in the past few years due to a slowing economy and fewer new housing starts
- Focus will be on increasing customer capture rates and retaining customers
- Focus on retaining customers through expanded energy conservation and efficiency programs
- Planning for ROE/Capital structure application in 2009
  - 2009 allowed ROE 8.47%, down from 8.62% 2008
  - Based on current GoC yields, formula ROE would be 7.92% as of the end of March 2009
- Planning underway for a Revenue Requirement Application in mid 2009
- In 2011, the Company will transition to IFRS and this may create significant volatility in the earnings

Corporate Overview

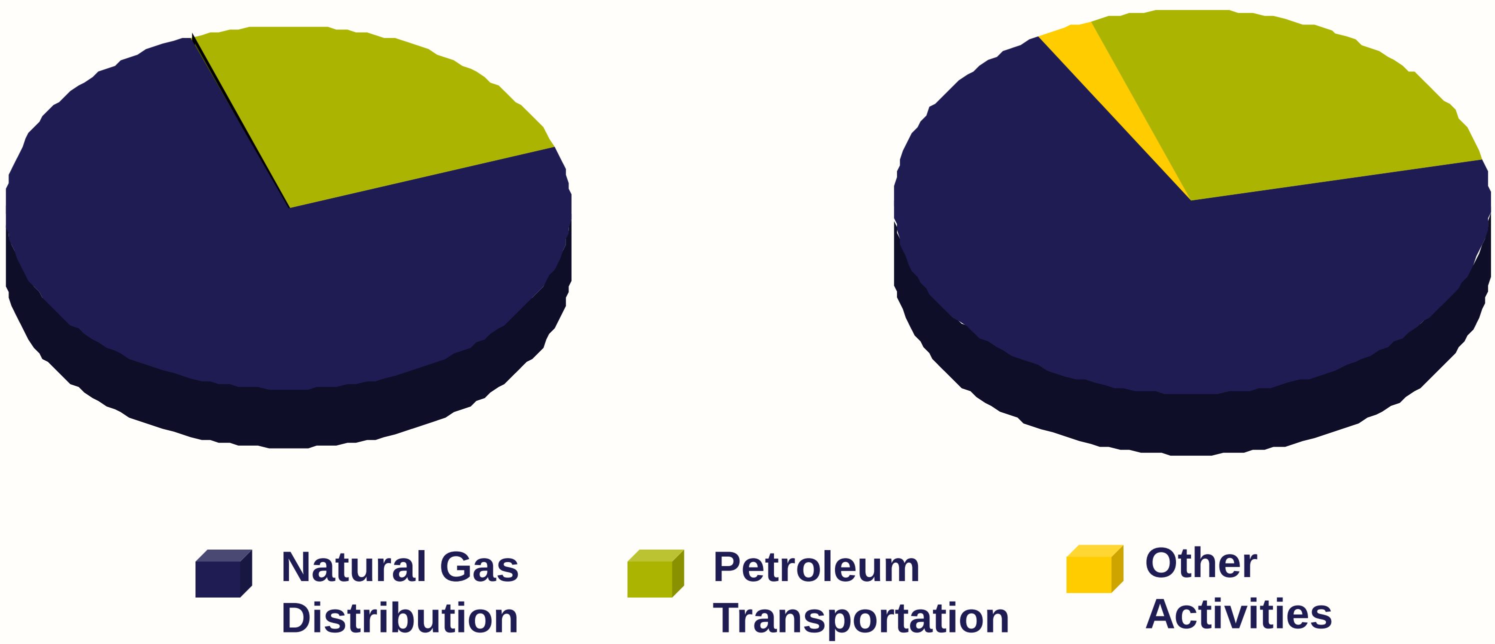
Operating Income: $366 million

(12 months ended December 31, 2003)

Assets: $4,915 million

(at December 31, 2003)



2003 Highlights

- BCUC approval of a negotiated settlement of a 2004-2007 Performance-Based Rate Plan for Terasen Gas
- BCUC approval of a 2003-2005 regulatory settlement for TGVI, which extends incentive mechanisms
- Initiation of commercial operations of Corridor in May 2003, following on time, on budget completion of its construction
- Completion of the acquisition of a one-third interest in the Express Pipeline System and shipper support for the expansion plans for Express
- Initiation of the expansion of the Trans Mountain pipeline which will add 27,000 bbl/day in capacity

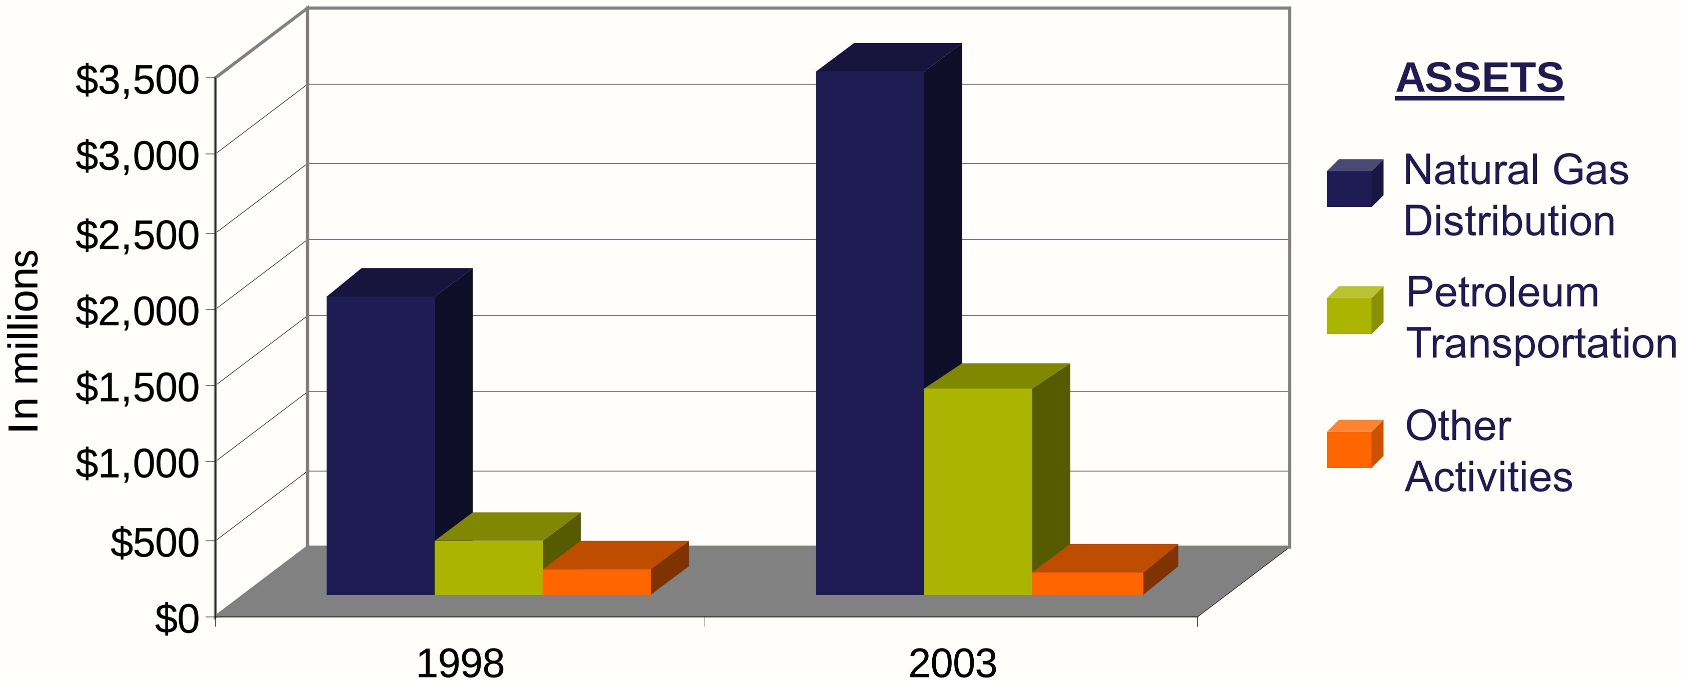
STRATEGY

Our Value Proposition

- **Focused** on our regulated businesses
- **Reliable** and consistent results from low risk businesses
- **Growing** and steadily outperforming through value creation

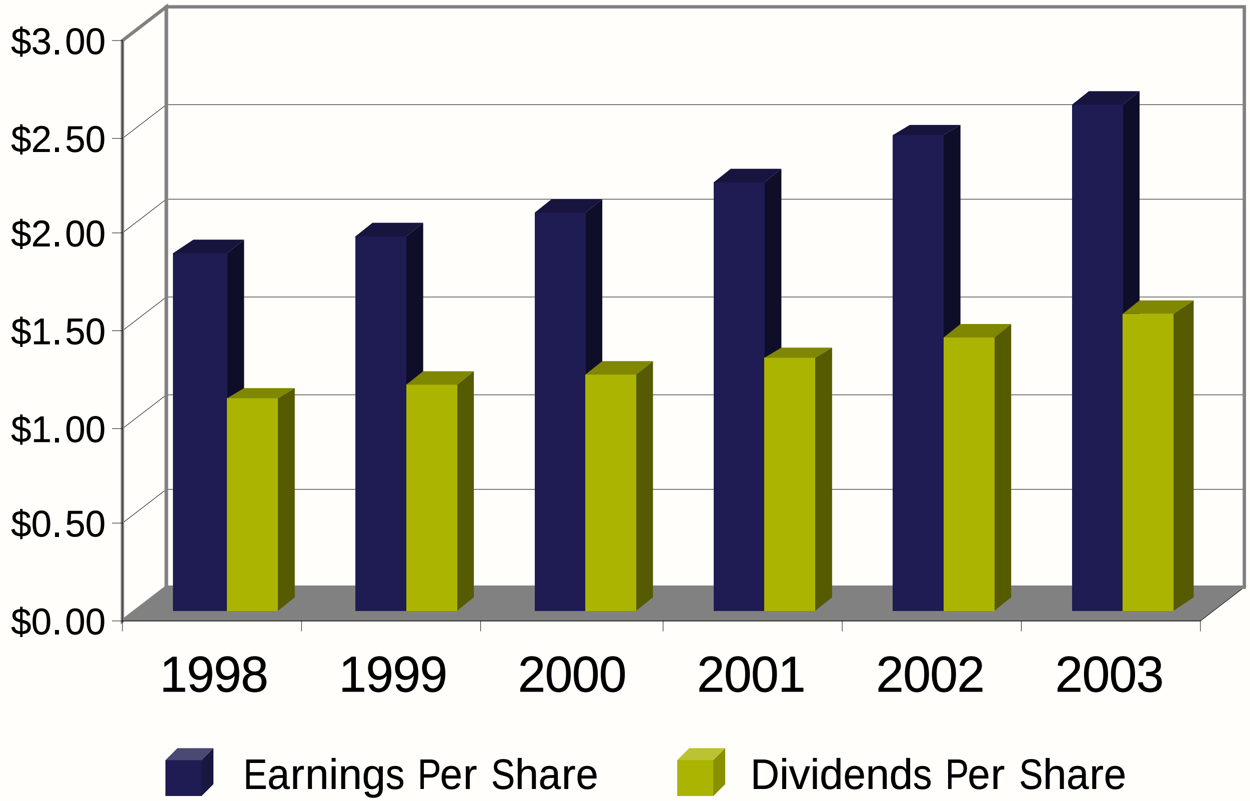
Focused

Growth has come from investments in core regulated businesses



Reliable

Consistent results from low risk businesses – target earnings growth of 6% and dividend payout of 60%



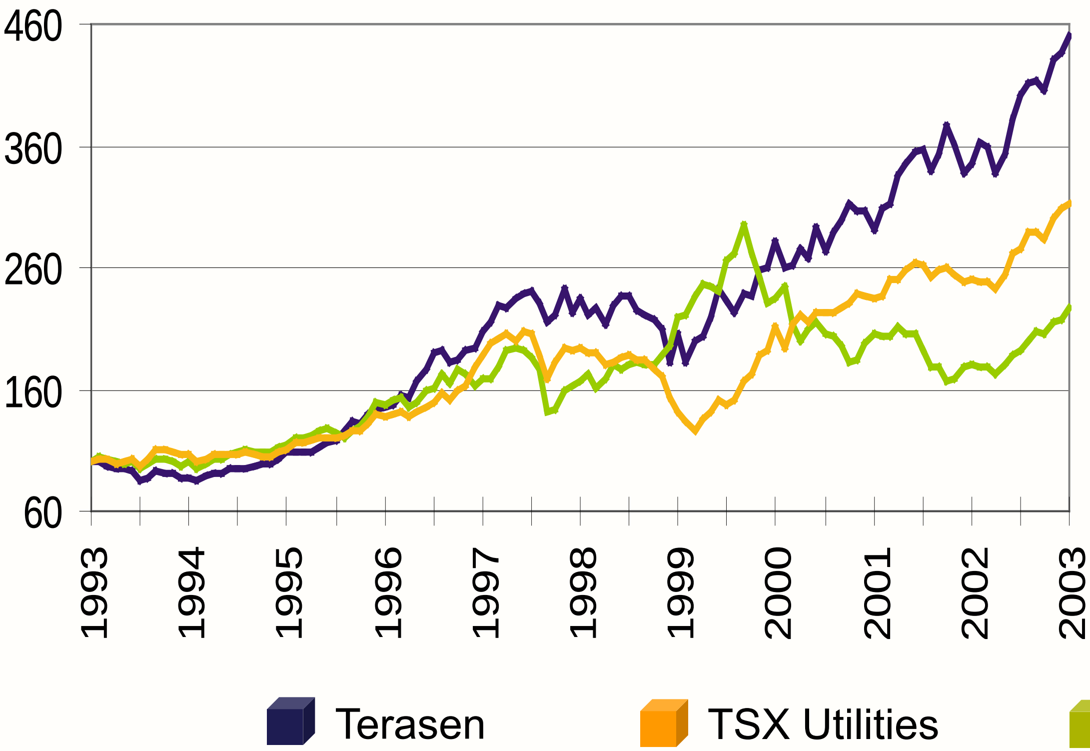
7.2% Annual EPS Growth

7.0% Annual DPS Growth

Growing

Consistent outperformance through value creation

Total Shareholder Returns



Annualized Total Returns

	One Year	Three Year	Five Year	Ten Year
Terasen	30%	17%	14%	16%
TSX Utilities Index	27%	14%	10%	12%
TSX Composite Index	27%	-1%	7%	9%

For the period ended December 2003

Asset and Risk Management

- 97% of assets are regulated
  - Major growth is in regulated activities
- Regulatory arrangements
  - No weather or customer usage risk
  - No cost of gas risk
- No international investments
- No non-regulated energy trading

Core Value Strategies

- **Operational excellence** within incentive regulation
- **Focused growth** based on value creation
- **Financial excellence** ensuring access to competitive sources of capital

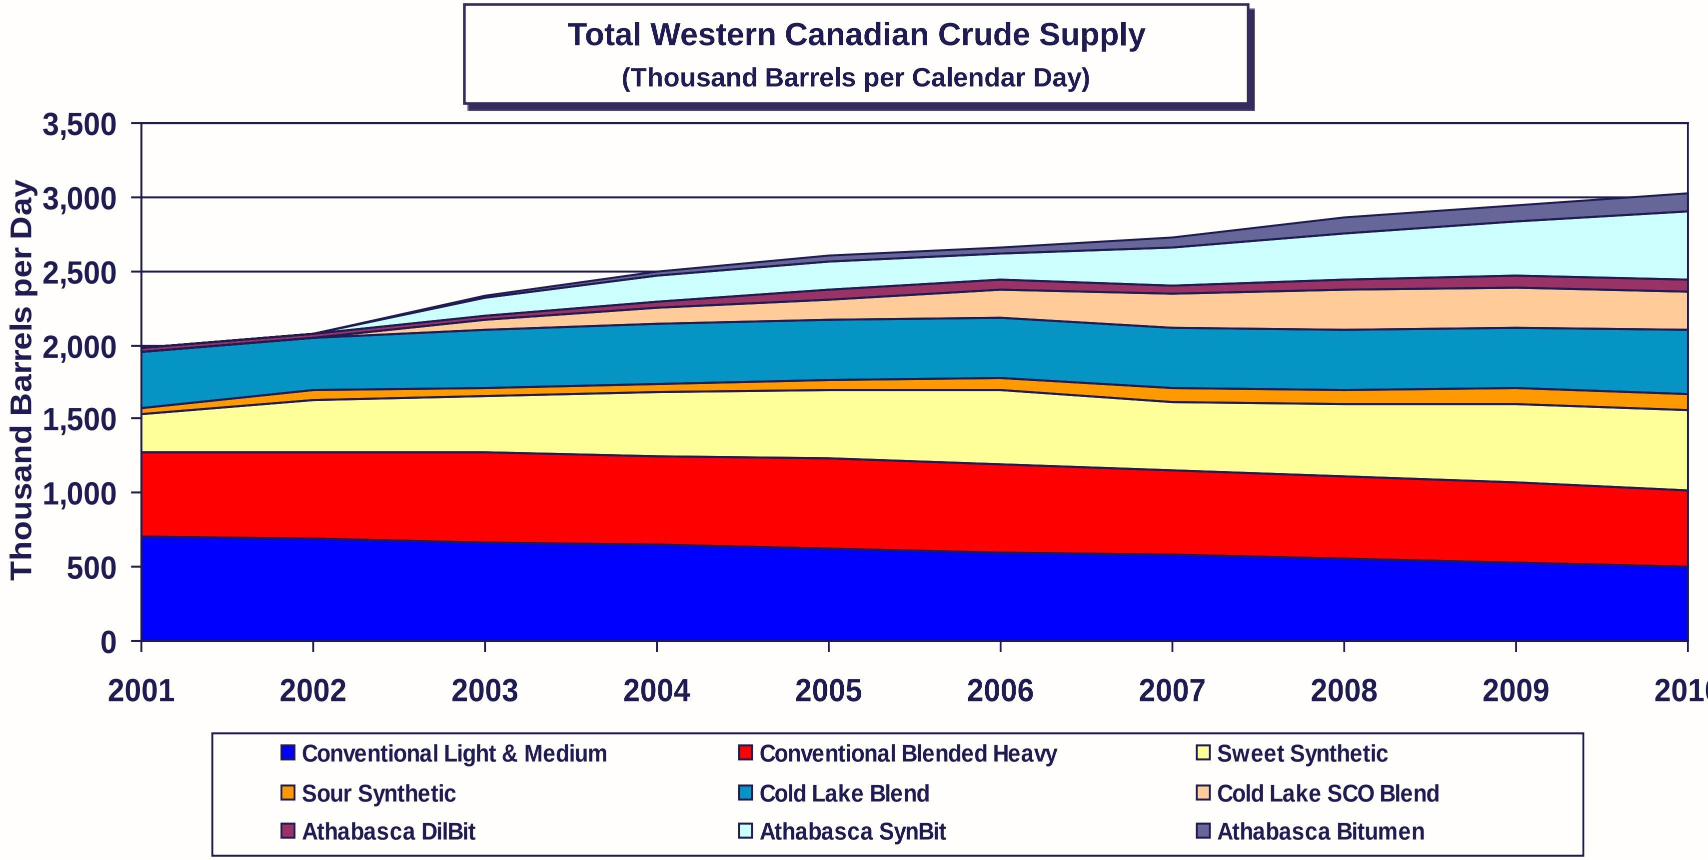
Terasen

Terasen Pipelines

Terasen Pipelines

Petroleum Pipelines   Alberta Oil Sands Deposits

Canadian Crude Supply Forecast

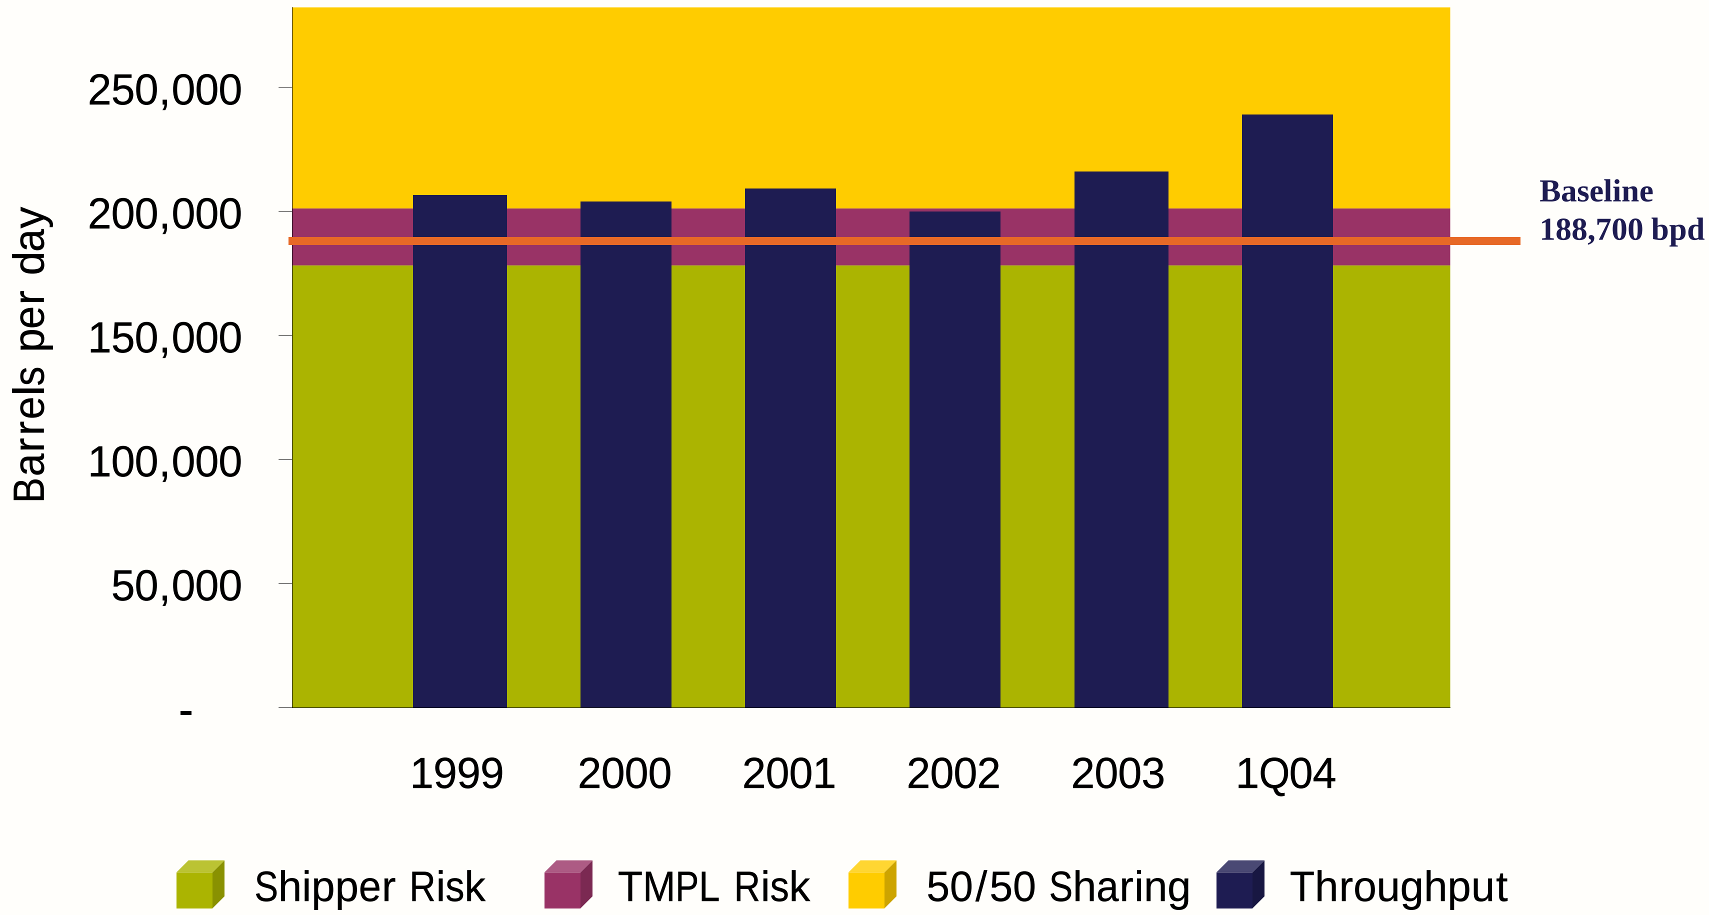


CAPP Upper Supply Case – Total Supply

Trans Mountain 2001 – 2005 Incentive Toll Settlement

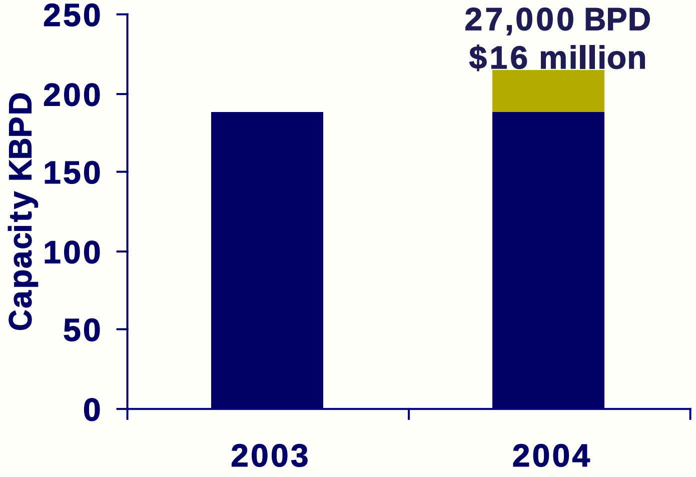
- Structured around Shipper’s desire for fixed tolls
- TMPL benefits from 100% of operating cost reductions
  - – No escalation of tolls for inflation
- TMPL assumes limited throughput risk
- Incentives for additional throughpu

Trans Mountain
Canadian Throughput and Volume Risk



Trans Mountain

- Oil sands production driving throughput growth
- Expansion can provide producers with greater access to California & Far East markets

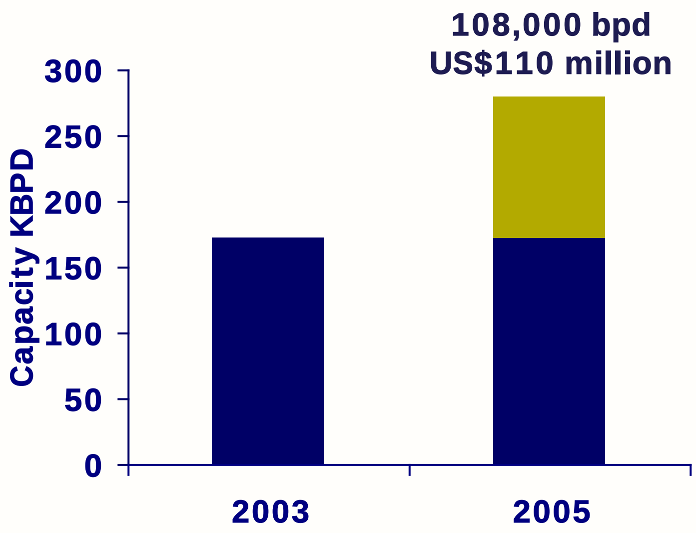


Express

- Acquired January 2003
- Express has been running at capacity, with 85% of total capacity of 172,000 bpd committed through long-term contracts
- Strong shipper response to recent open season
- Following the expansion 79% of the 280,000 total capacity will be committed through long-term contracts

Express

- Both phases of the expansion are expected to be completed by April 2005

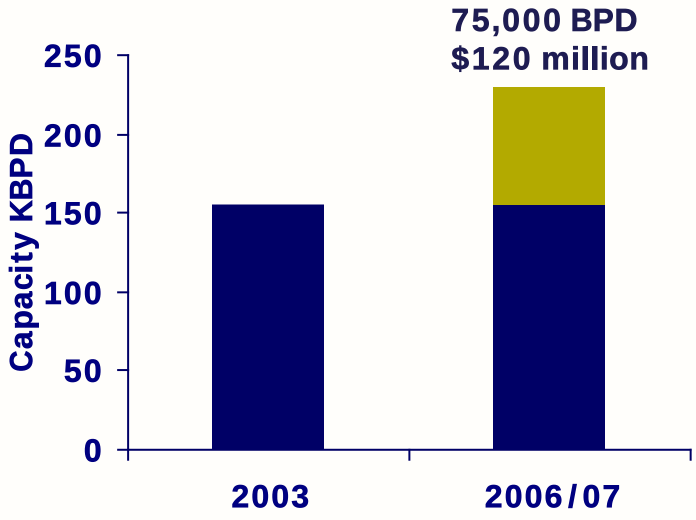


Corridor

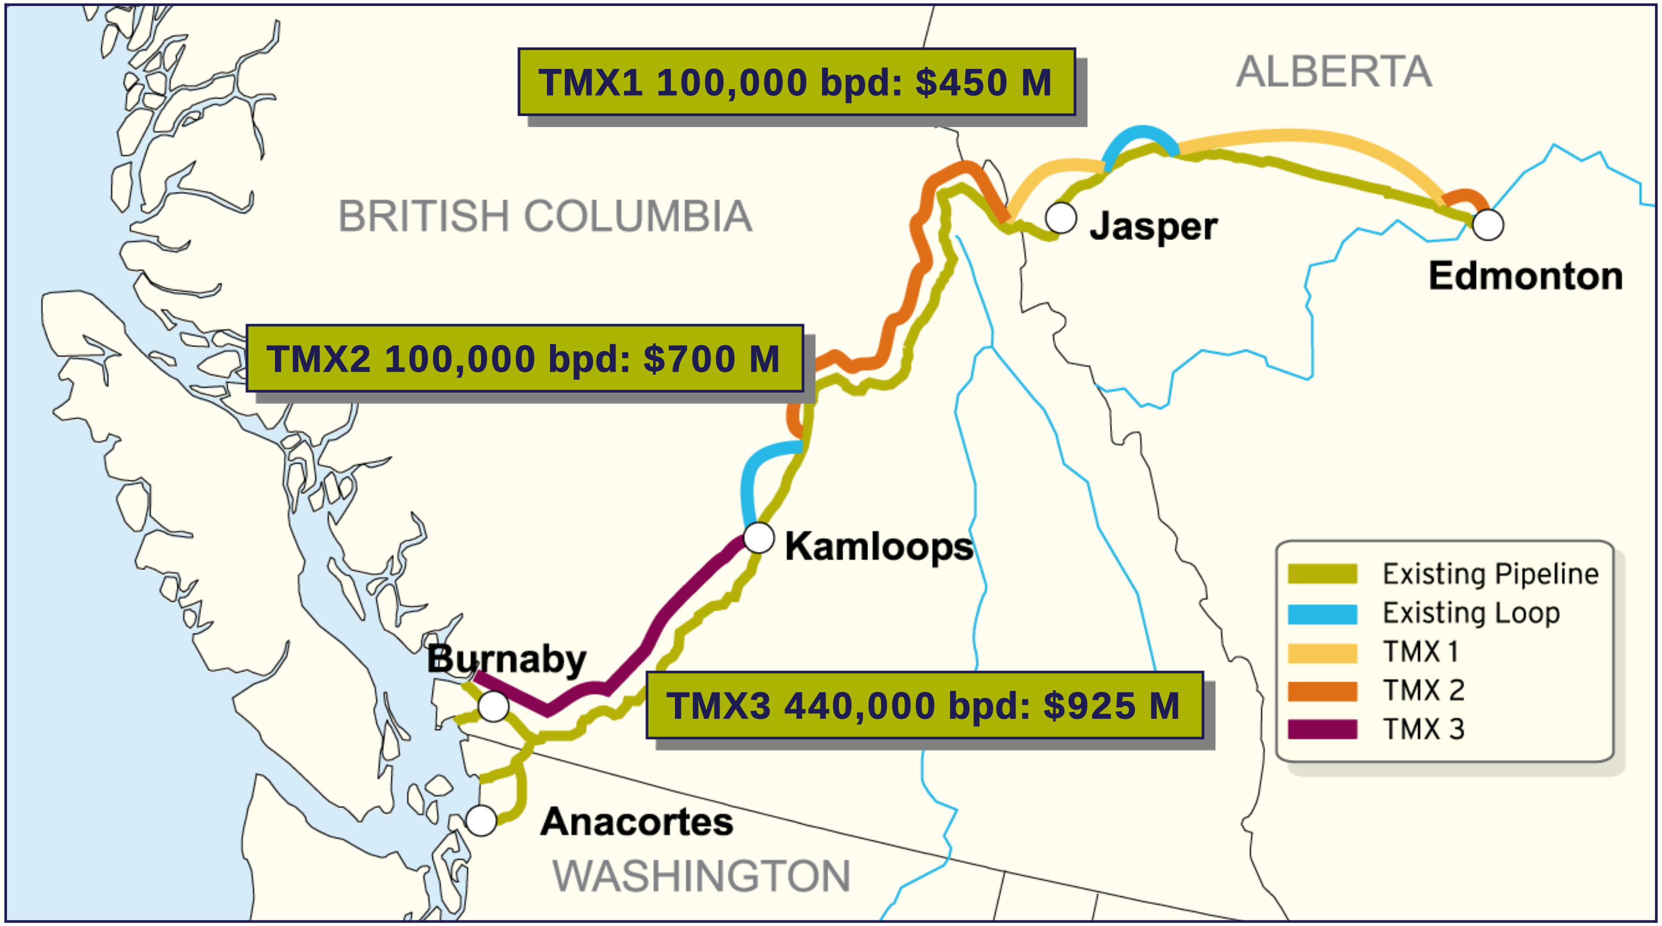
- Completed on time and on budget in May 2003
- Backed by 25 year ship-or-pay contract with Shell Canada (60%), Chevron (20%) and Western Oil Sands (20%)
- Provides for recovery of all operating costs, depreciation, taxes and financing costs in revenue requirement
- 25% equity component, ROE is long-term Canada's plus 350 bps

Corridor

- Expansion will be undertaken on similar terms as original agreement
- Timing dependent on mine expansion plans



TMX



TMX1 100,000 bpd: $450 M
ALBERTA
BRITISH COLUMBIA
Jasper
Edmonton
TMX2 100,000 bpd: $700 M
Kamloops
Burnaby
TMX3 440,000 bpd: $925 M
Anacortes
WASHINGTON
Existing Pipeline
Existing Loop
TMX 1
TMX 2
TMX 3

TMX Advantages

- Built in stages
  - Lower construction risk
  - Matches capacity with supply/demand growth
  - Lowers risk of overbuild
- Washington State refinery access
  - 550,000 bpd capacity
  - 10% current market share
- Existing rights-of-way
  - Options on private land

Terasen

Terasen Gas

2004-2007 PBR Settlement

- Capital structure – 33% common equity/67% debt
- Allowed ROE is determined annually using BCUC-established formula
  - ROE = Forecast Cda. Bond Yield + Risk Premium
  - Mechanism is similar to NEB Multi-Pipeline formula
  - ROE for Terasen Gas in 2004 was set at 9.15%, compared with 9.42% in 2003

2004-2007 PBR Settlement

- Performance-based regulatory settlement with incentives for operating efficiencies – benefits shared 50% with customers
- Performance-based regulatory arrangements have enabled Terasen Gas to exceed allowed ROE in every year since 1994

2004-2007 PBR Settlement

- O&M formula:
  – [Base Cost x (1+Growth) x (1+Inflation-Adjustment factor)]
  – Adjustment factors of 50% CPI in 2004 and 2005, and 66% CPI in 2006 and 2007

- New deferral accounts established for insurance and pension costs

2004-2007 PBR Settlement

- Gross margin protected by two deferral accounts:
  - Gas Cost Reconciliation Account (GCRA)
  - Revenue Stabilization Adjustment Mechanism (RSAM)

- RSAM defers any variances in use per customer among residential and commercial customers
  - Eliminates exposure to weather variations
  - Also eliminates exposure to reductions in use per customer caused by other factors (e.g. higher prices)

2004-2007 PBR Settlement

- RSAM does not cover margin from industrial customers
  - Less sensitive to weather fluctuations
  - Industrial margin is reset annually
  - Regulatory relief can be sought if industrial margins fall significantly below forecast
- Industrial and large commercial customers can select commodity+transportation or transportation service only
  - Terasen earns approximately the same margin in either case

Terasen

2004-2007 PBR Settlement

- Variances between actual and forecast gas costs are deferred and recovered through GRCA
- During 2003, RSAM and GCRA balances were recovered in rates, thereby reducing the recovery balances
  - Combined GCRA/RSAM balance $34.8 million at end of 2003, compared with $76.7 million at the end of 2002

2004-2007 PBR Settlement

- BCUC has approved a mechanism for quarterly adjustment of rates
  - If projected recovery of:
    a) actual gas costs, and
    b) amortization of prior GCRA balances,
    falls outside of 95-105% deadband, rates are adjusted, subject to BCUC approval
- Lower natural gas costs resulted in the BCUC approving a decrease in customer rates in December 2003 (7.5% decrease for the average residential customer)

2004-2007 PBR Settlement

- Gas Supply Incentive Program
  - Provides an incentive to mitigate fixed costs of gas supply & transportation by selling excess gas and transportation capacity to off-system customers
  - Has generated shareholder revenues of $1-2 million per year over the last several years
- Unbundling
  - Terasen Gas, BCUC & customer representatives have all been supportive of unbundling
  - Unbundling for commercial customers expected in late 2004
  - No financial impact on Terasen anticipated

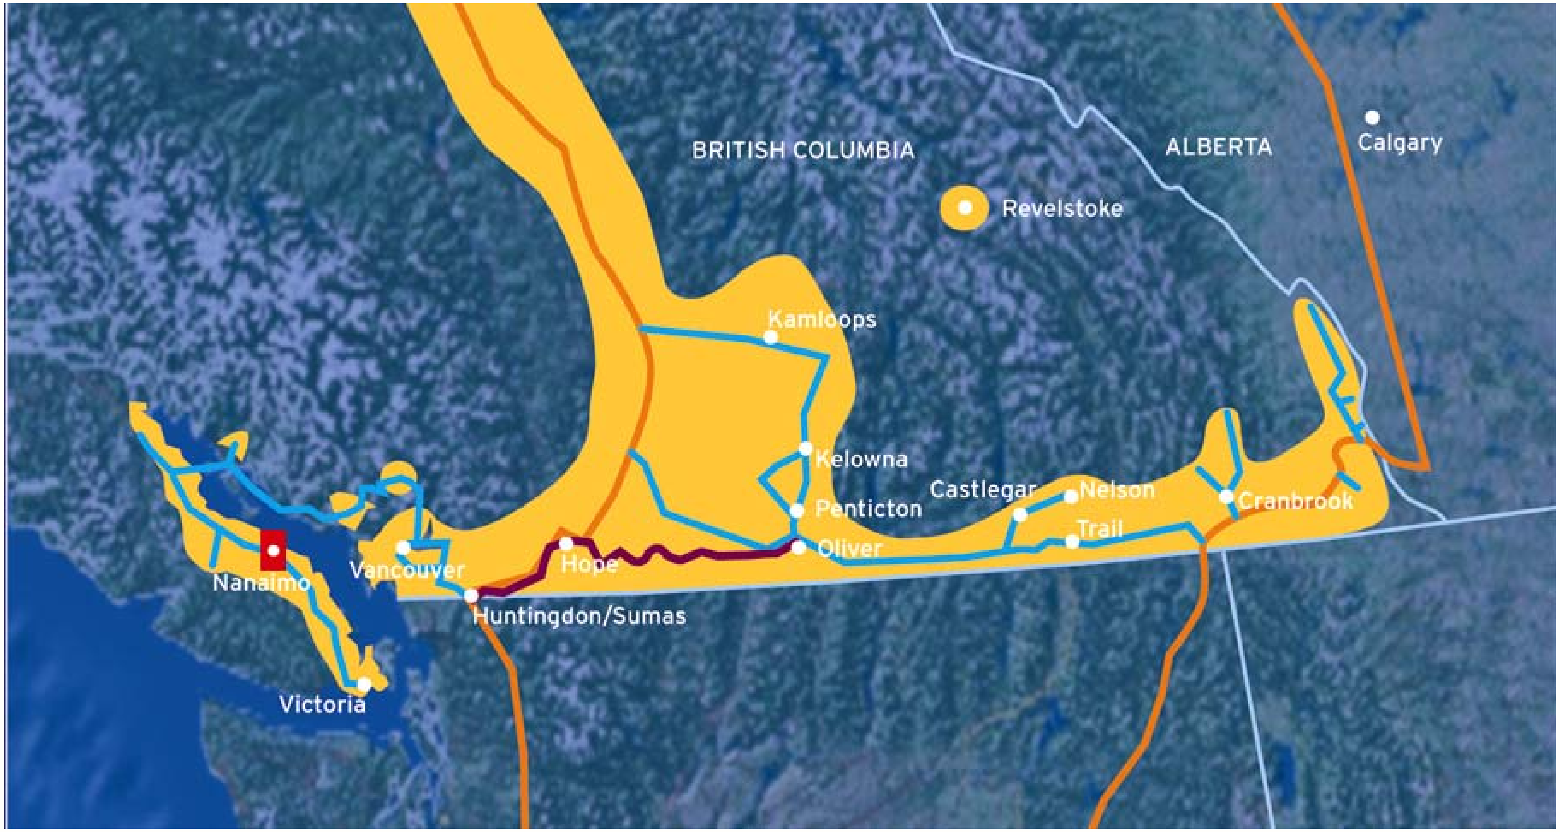
TGVI – 2003-2005 Regulatory Settlement

- Took effect January 1, 2003
- Capital structure – 35% common equity/65% debt
- Allowed rate of ROE that is 0.50% higher than Terasen Gas – 9.65% for 2004, compared with 9.92% in 2003
- Continuation of operating and maintenance cost incentive mechanisms
- Deferral accounts protect against cost of gas, weather risk, etc. – similar to Terasen Gas, but more comprehensive

TGVI – RDDA

- Revenue deficiency deferral account (RDDA) arose from low customer rates charged prior to December 31, 2002
  - Deferral account balances funded by preferred shares issued to parent
  - BCUC directed to set rates to recover RDDA over the shortest period possible, while remaining competitive with alternative energy sources
  - Customer rates set using conventional methods beginning January 1, 2003

New Infrastructure Projects



Terasen Transmission Lines

Terasen Distribution Service Area

Other Natural Gas Lines

Proposed Inland Pacific Connector Pipeline

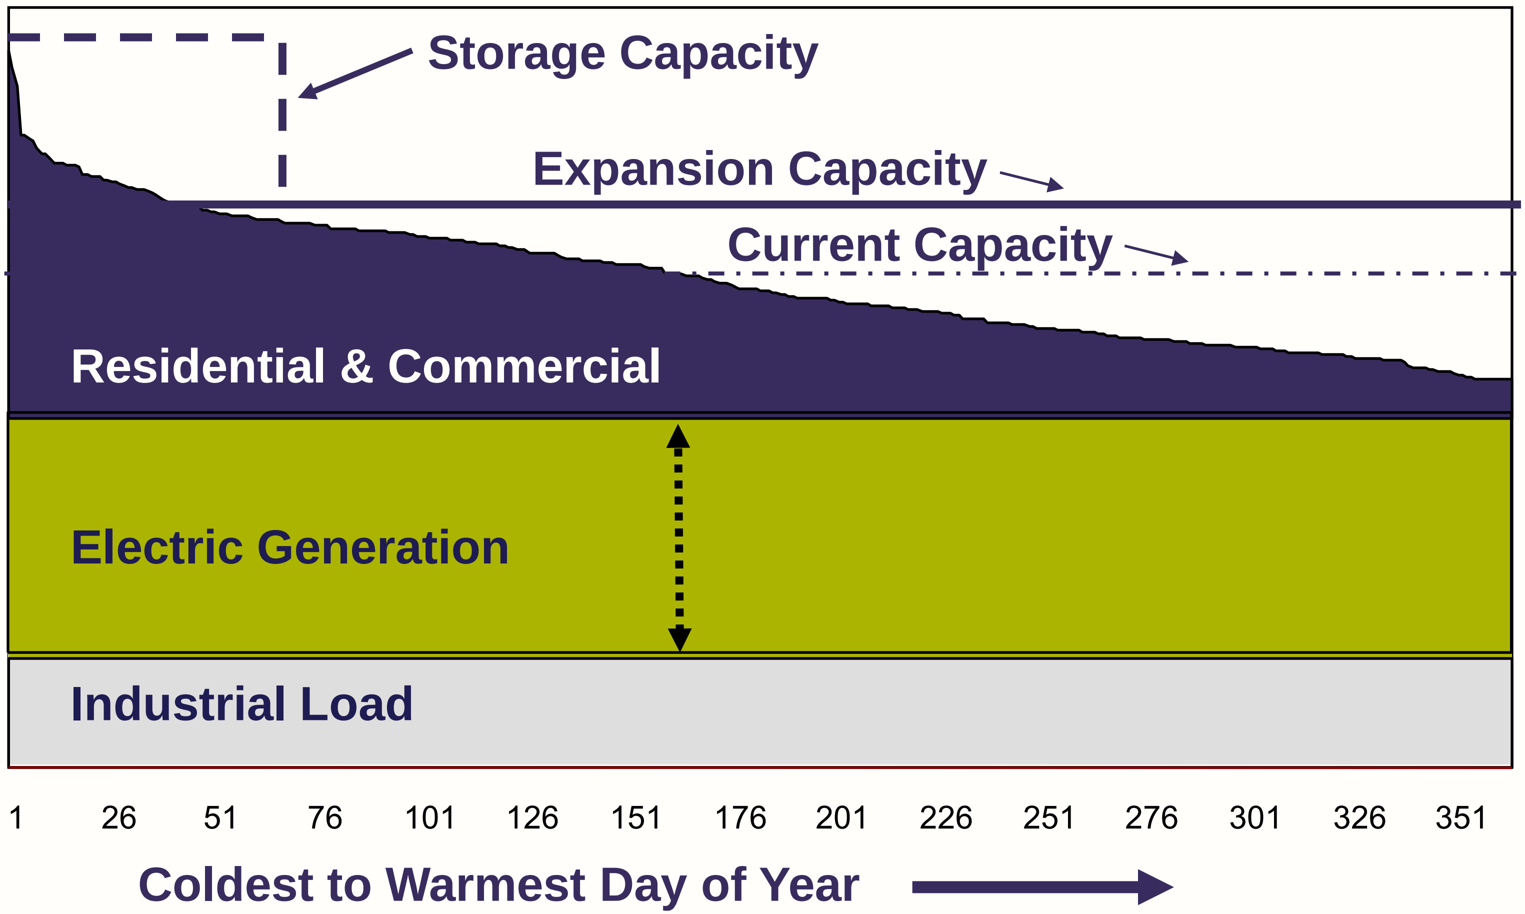
Proposed LNG Storage Tank

New Infrastructure Projects

Capacity expansion to Vancouver Island

- New on-Island power generation needed
- $180 million capacity expansion proposed
  - Additional compression and a new LNG tank

New Infrastructure Projects



New Infrastructure Projects

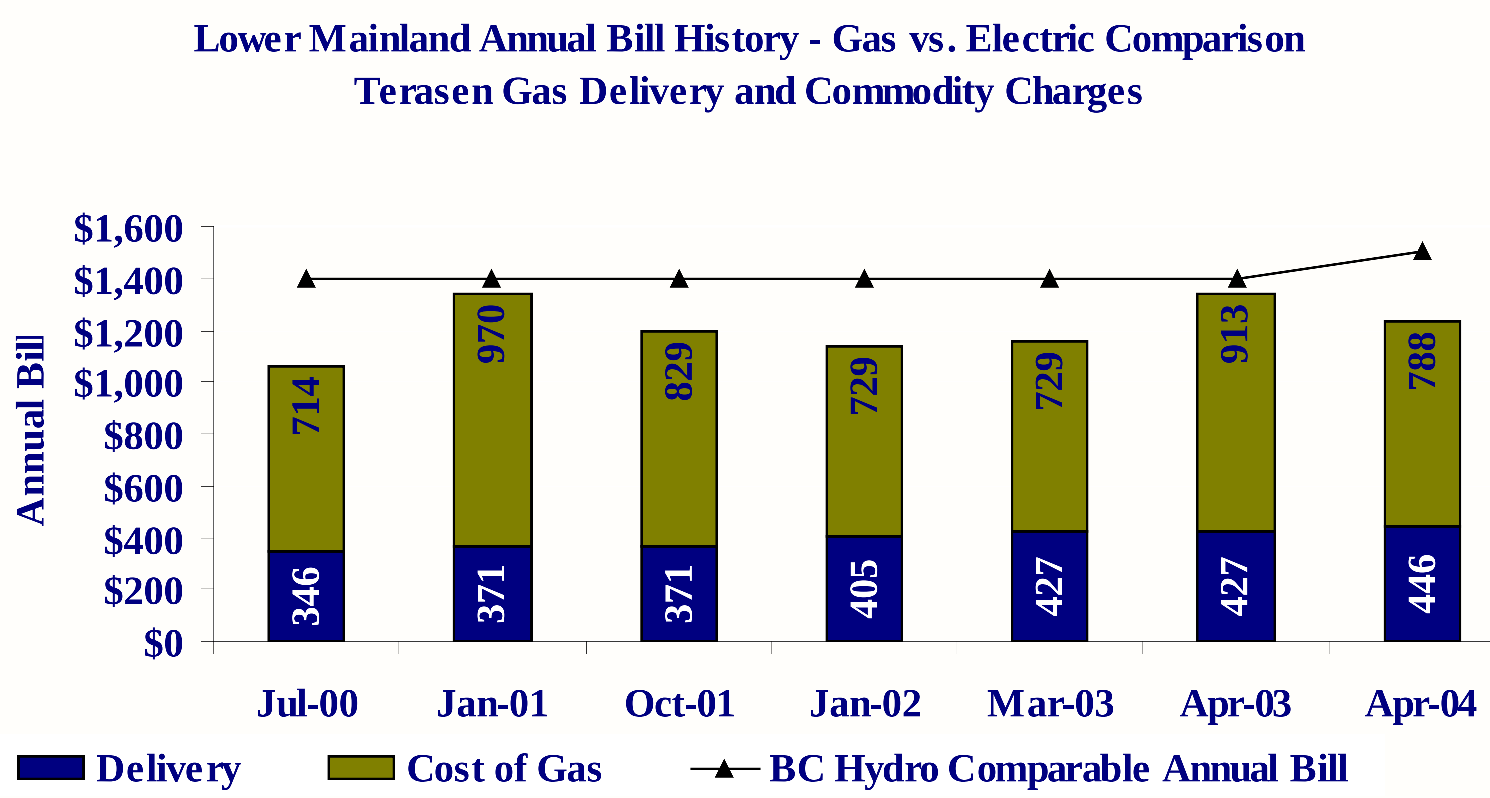
Inland Pacific Connector

- New pipeline to extend Southern Crossing pipeline to Sumas/Huntingdon
- Positioned to meet demand for natural gas capacity expansion in Pacific Northwest

Price Competitiveness

- In B.C., natural gas has historically enjoyed a significant cost advantage vs. alternative fuels, including electricity
- Increases in the market price of natural gas, combined with a government-mandated electricity price freeze, eroded this advantage
- Terasen Gas maintains an active price risk management program (on behalf of customers) which mitigates this risk
- Recent rate reductions have partially restored natural gas' price advantage

Price Competitiveness



Terasen Utility Services

Terasen Waterworks

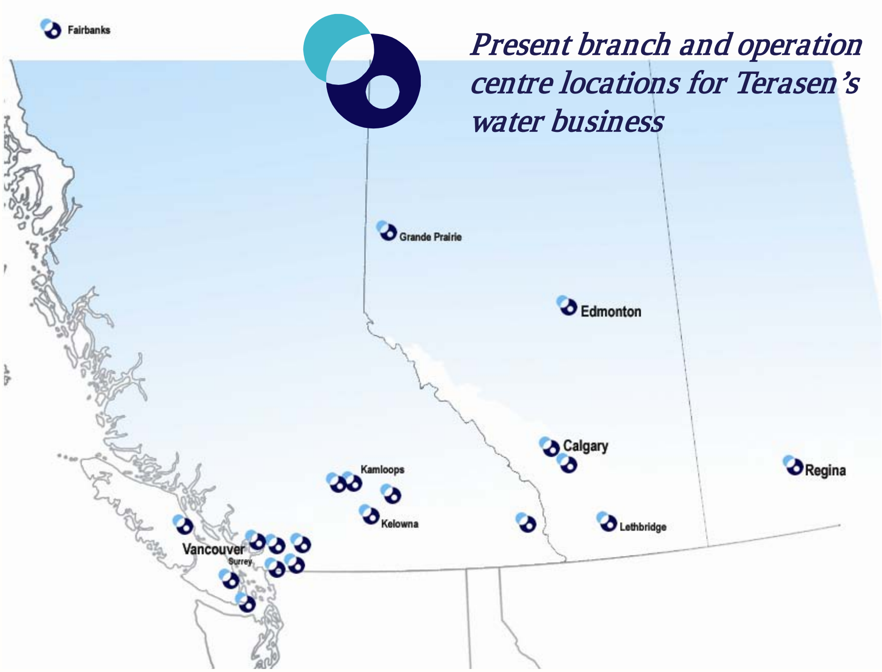
Water and Utility Services

- Continues to be a relatively small part, but growing, of our asset base and operating income
- Looking for opportunities to capitalize on economies of scope and scale, in terms of the services that are provided and regions that are covered

Water and Utility Services

- Largest private water services company in Western Canada

- Focus on annuity operating contracts and selective investment opportunities



Fairbanks Acquisition

- April 2004 – acquired a 50% interest in Fairbanks Sewer & Water (FSW) for approximately US$30 million
- FSW provides water and wastewater treatment and water distribution services to the 82,000 residents of Fairbanks, Alaska
- FSW will provide a model for other opportunities in Western North America
- Option to purchase remaining 50% in 2009 at fair market value
- The transaction is subject to regulatory approvals, and is expected to be finalized in the summer of 2004

Appendix: Municipal Leasing Transactions

Municipal Leasing Transactions

- Certain municipalities have franchise agreements which permit the municipality to purchase the distribution assets at "fair value"
  - No munis in Vancouver area have this option
  - Most munis elsewhere have given up the option through agreement renewals
- Munis can finance Terasen Gas assets with 100% MFA debt, and does not pay tax.
- Leasing arrangements negotiated to provide Munis with financial benefits and risks of ownership, while allowing Terasen Gas to operate.

Municipal Leasing Transactions

- Terasen Gas assets are leased to Kelowna for $50 million prepaid rent under a long-term capital lease
- Terasen Gas enters into an operating lease to operate the assets
  - Kelowna is paid the revenue requirement associated with $50 million of utility capital
    - return on equity
    - cost of debt
    - income taxes
    - depreciation
- Changes in revenue requirement (e.g. ROE) are flowed through to Kelowna

Municipal Leasing Transactions

- No change for regulatory purposes
  - Lease simply flows through certain components of revenue requirement to Munis
  - No impact on customers
- Terasen Gas retains option to terminate agreements at the end of 17 years and retain ownership benefits
  - Termination payment = depreciated book value

Municipal Leasing Transactions

- Terasen Gas transfers risk and reward associated with assets and retains the option to control the assets after year 17
- Closed Nelson lease agreement on March 2, 2004 – value $8 million
- Terasen Gas has entered into leasing transactions with a total value of $83 million
- Total potential value (including current leases) of $200 million

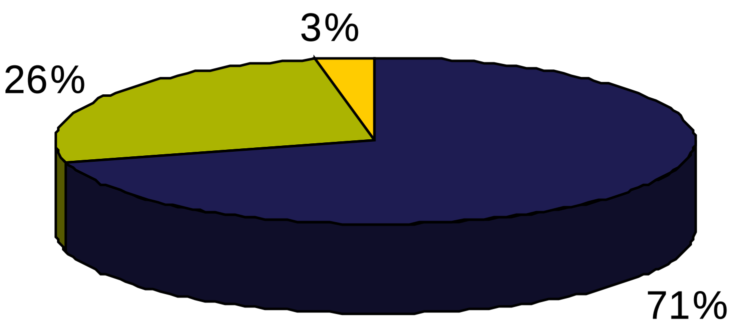
Natural Gas Distribution

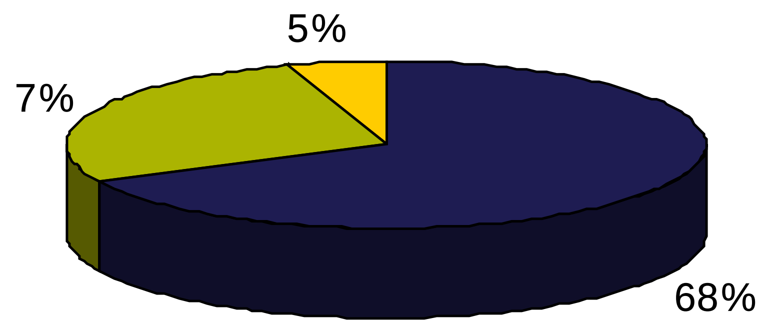
Terasen

Corporate Overview

Operating Income: $377 million
(12 months ended December 31, 2004)



Assets: $4,971 million
(at December 31, 2004)



Natural Gas Distribution **Petroleum Transportation** **Other Activities**

Terasen

2004 Highlights

- Natural Gas Distribution – achieved operating efficiencies between TGVI and Terasen Gas, which were shared with customers
- Trans Mountain Expansion – completed the 27,000 barrel per day upgrade of the Trans Mountain pipeline
- Express Expansion – commenced construction on the expansion, which is now in-service and providing additional capacity of 108,000 bpd

terasen

2004 Highlights

- Fairbanks Acquisition – acquired a 50% interest in Fairbanks Sewer and Water Inc.
- Earnings Growth – Continuing earnings in 2004 were $1.40 per share, up 6.9% over EPS (before non-recurring items) of $1.31 in 2003
- Financial Strength – EBIT Interest Coverage increased from 2.1x in 2003 to 2.4x in 2004, and Common Equity/Total Capital increased from 30.0% to 31.7%

Terasen

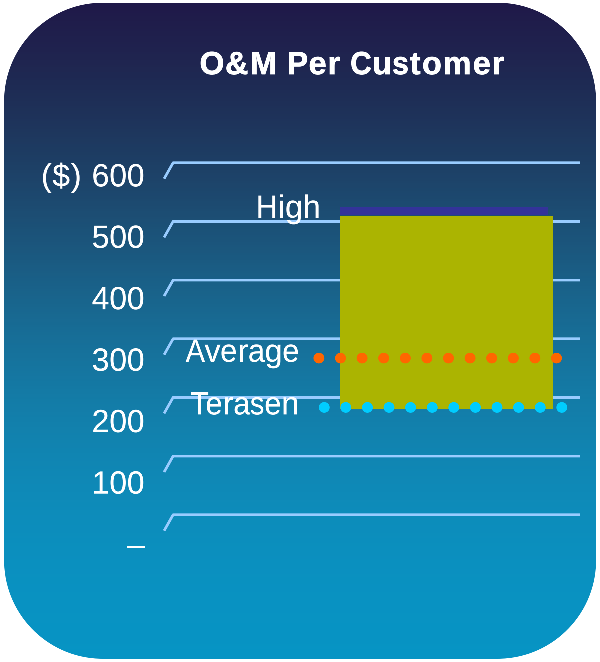
Terasen Gas

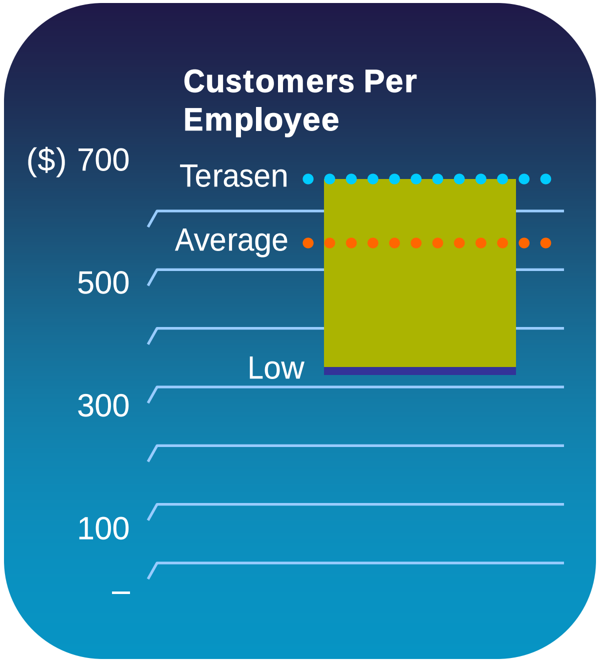
Terasen Gas/TGVI Integration

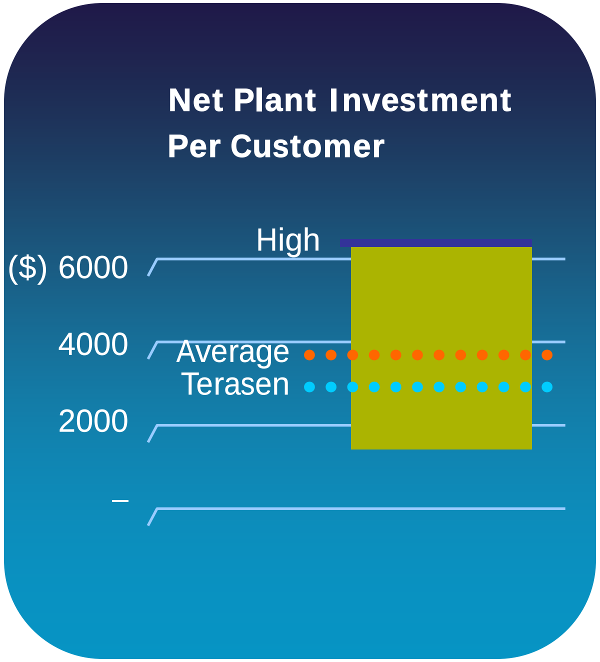
- Management and operational integration of TGI and TGVI is substantially complete
  - Single management team, common processes, common systems
- Earnings contribution from operational efficiencies was $4.1 million in 2004
  - Reinforces Terasen Gas' best-in-class position on operating efficiency

terasen

Operating Efficiency





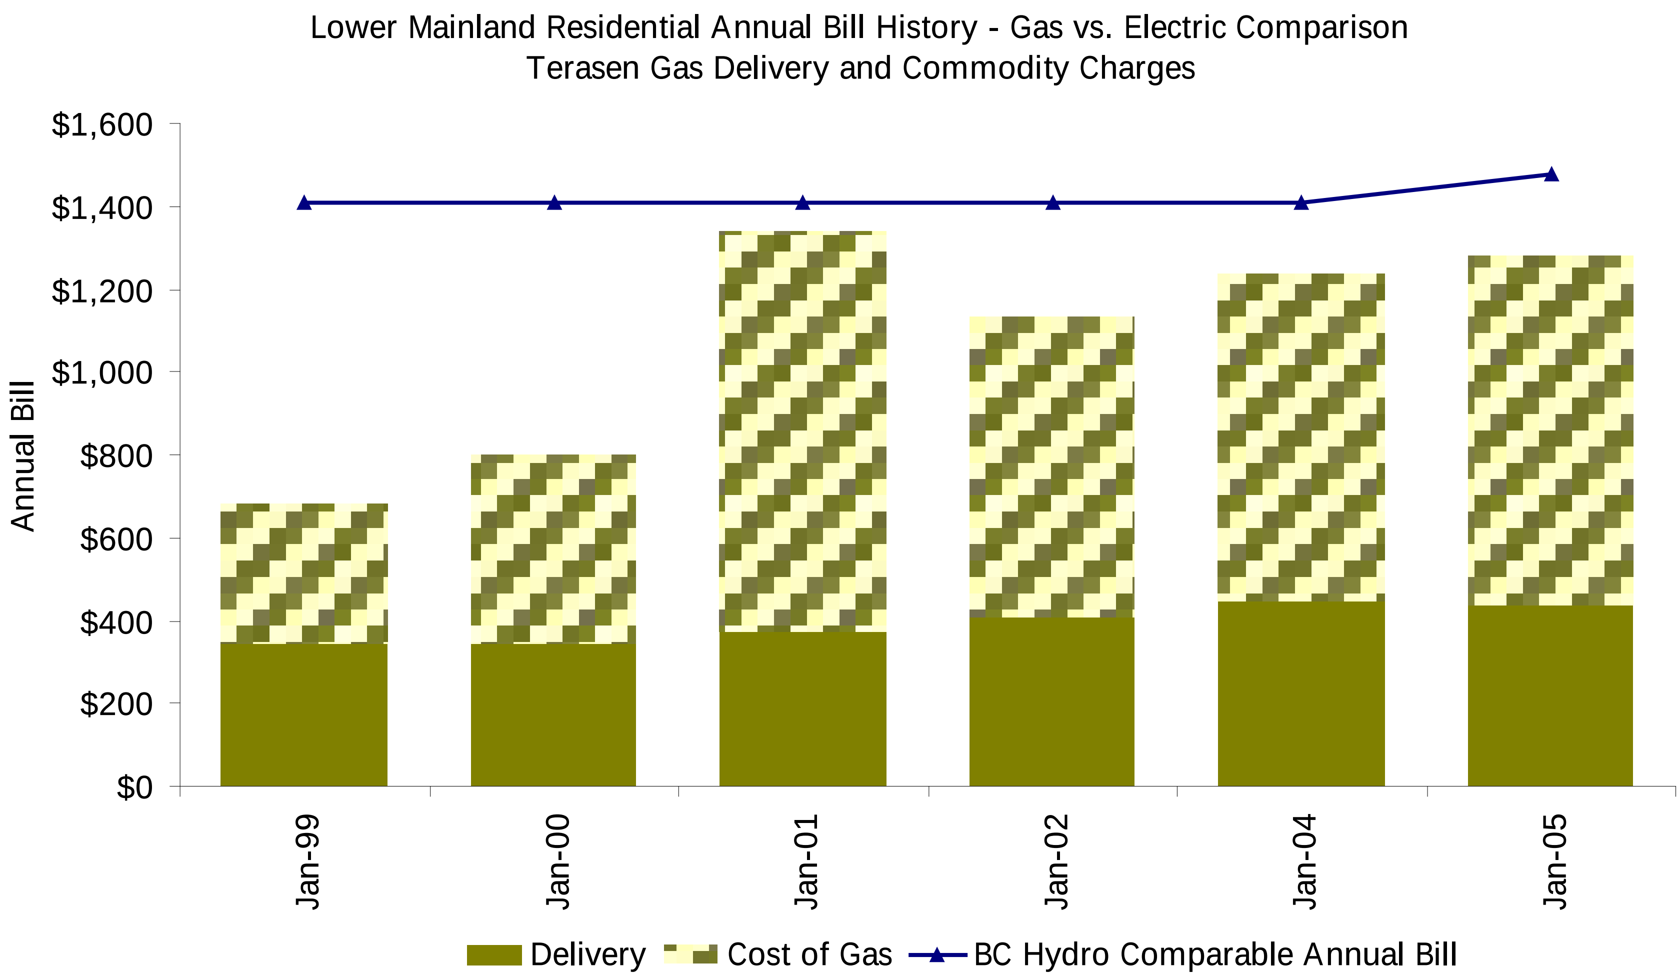


Source: LSM Consulting

Price Competitiveness

- Increases in the market price of natural gas, combined with a government-mandated electricity price freeze, have eroded the historical advantage over electricity
- Terasen Gas maintains an active price risk management program (on behalf of customers) which mitigates this risk
- BC Hydro has been supportive of demand-side management initiatives to encourage efficient energy use decisions

Price Competitiveness



Regulatory Arrangements

- 2004-2007 PBR in place for Terasen Gas
  - O&M and capital cost incentives, 50/50 sharing
  - Numerous deferral accounts
- 2003-2005 PBR in place for TGVI
  - O&M incentives, no sharing
  - Comprehensive deferral arrangements through Revenue Deficiency Deferral Account
  - Preference is to obtain a two-year extension to align regulatory calendar with Terasen Gas

Regulatory Arrangements

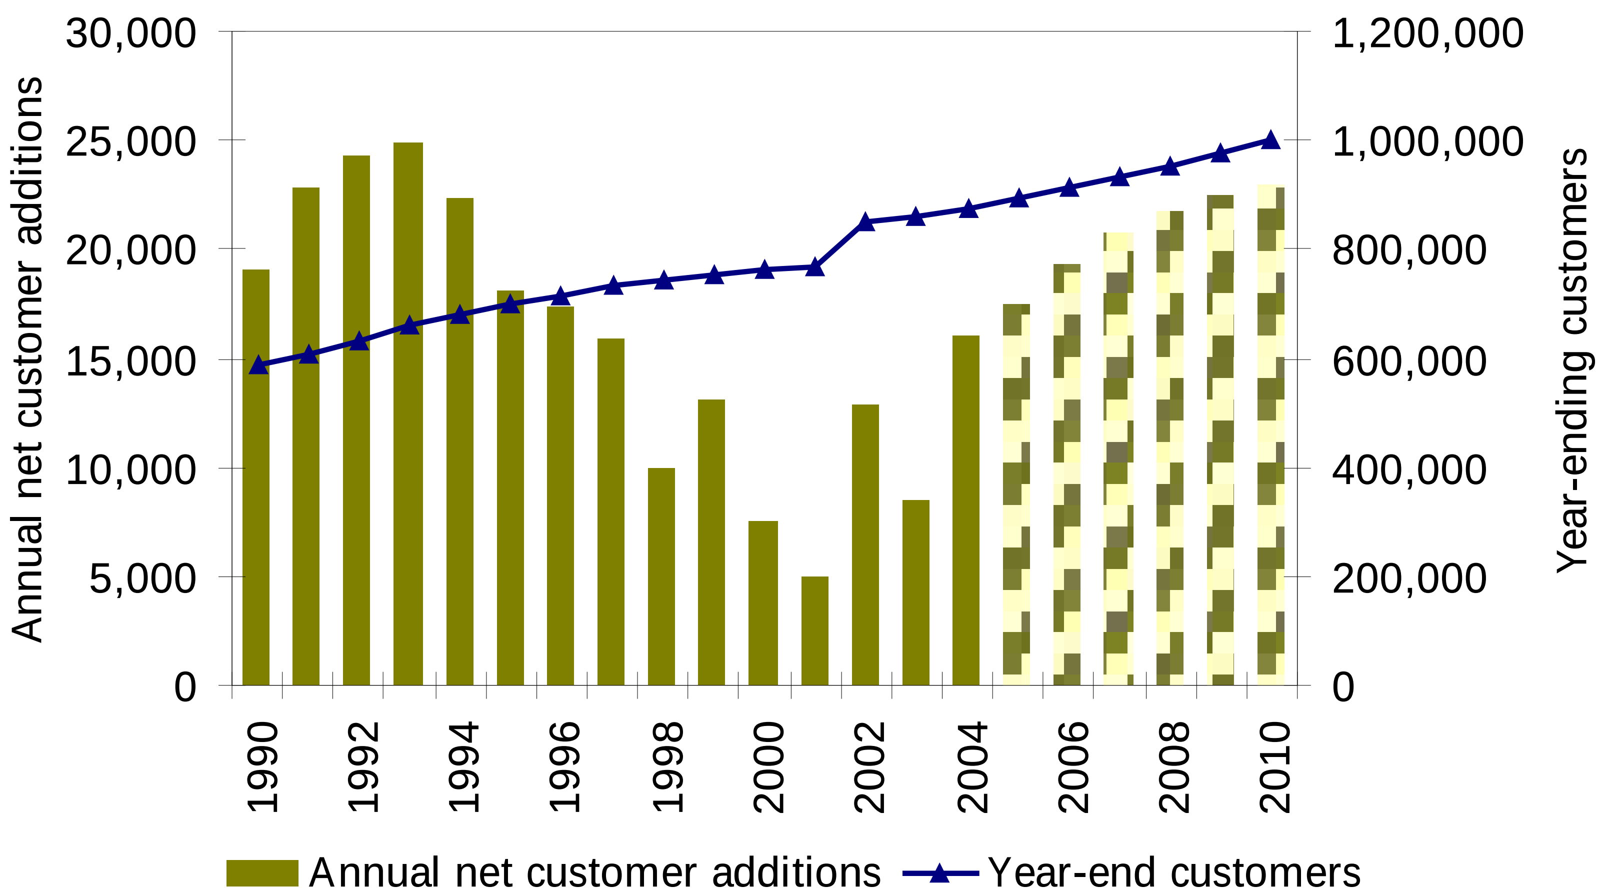
- ROE and Capital Structure hearing planned for Q3 2005
  - Allowed returns and equity components in B.C. are exceptionally low compared to other Canadian jurisdictions
    - April 2005 consensus forecast (if unchanged in November) would result in ROEs of 8.58% for Terasen Gas and 9.08% for TGVI in 2006
  - Since the last review in B.C. in 1999, gas/electric price competitiveness has narrowed significantly
- Good opportunity to present a case for higher ROE and/or equity components

Terasen

Terasen Gas - Outlook

- Successful efforts to improve operating efficiency in the past has limited the scope for future efficiencies
- Focus will be on increasing customer capture rates
  - Target of 1 million gas customers in 2010 (up from 878,000 currently)
  - Opportunity to improve capture rates for multi-family housing starts
  - Regional economy remains very strong
- Additional target of $1 billion in new investment by 2010

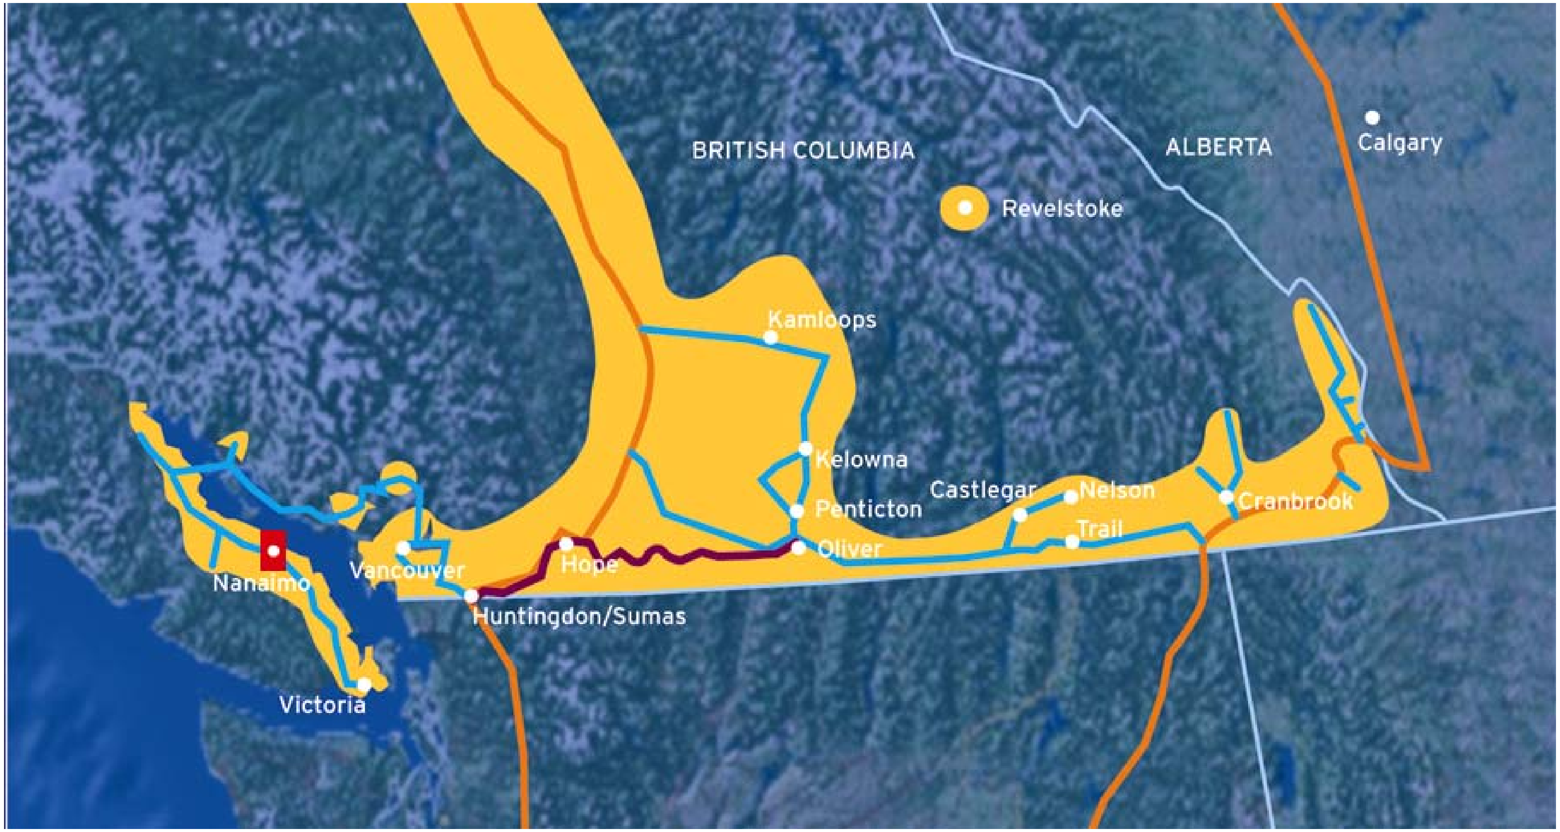
Customer Growth



*Data prior to 2002 excludes TGVI

terasen

New Infrastructure Projects



Terasen Transmission Lines

Terasen Distribution Service Area

Other Natural Gas Lines

Proposed Inland Pacific Connector Pipeline

Proposed LNG Storage Tank

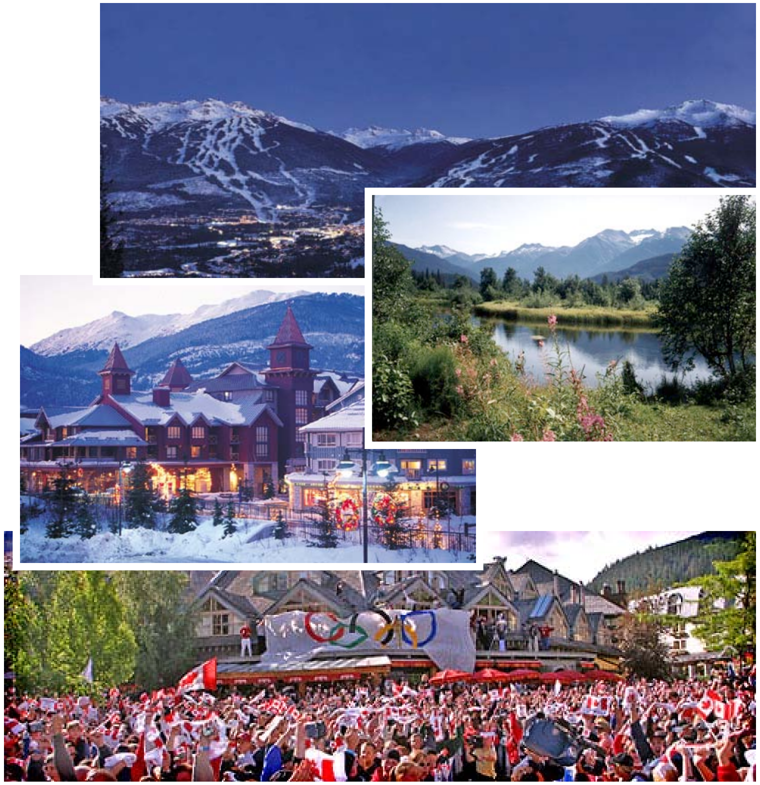
terasen

TGVI Expansion

- BCUC approved $100 mln Vancouver Island LNG Project subject to Duke Point power plant proceeding
- New LNG facility plus $50 mln compression expansion will be supported by long-term, take-or-pay contracts with BC Hydro for capacity on TGVI
- BCUC approval of Duke Point currently subject to appeal
  – Resolution expected in June
  – Initial request for leave to appeal was rejected

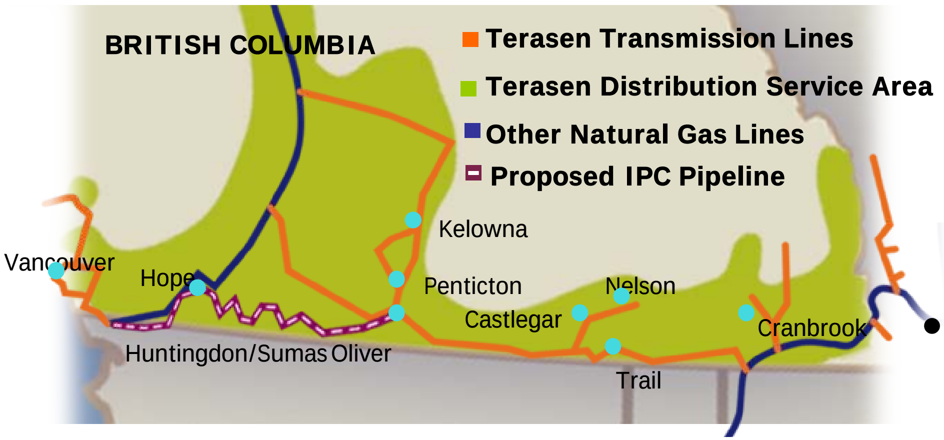
Growth – Whistler

- Working with the Resort Municipality of Whistler to develop a Sustainable Energy Strategy
  - Establish a hybrid gas/GSHP energy utility
  - Construct a natural gas pipeline from Squamish to Whistler
  - Develop renewable district energy systems or other sustainable options
- Estimated pipeline cost – $35 million
- Model for integrating natural gas with renewable energy sources



terasen

Inland Pacific Connector



- Potential $300 to $500 mln gas transmission line connecting SCP to the Lower Mainland & Sumas (NWPL)
- Project will require support from multiple shippers to move forward
- Increasing tolls on Duke System improving competitiveness

terasen

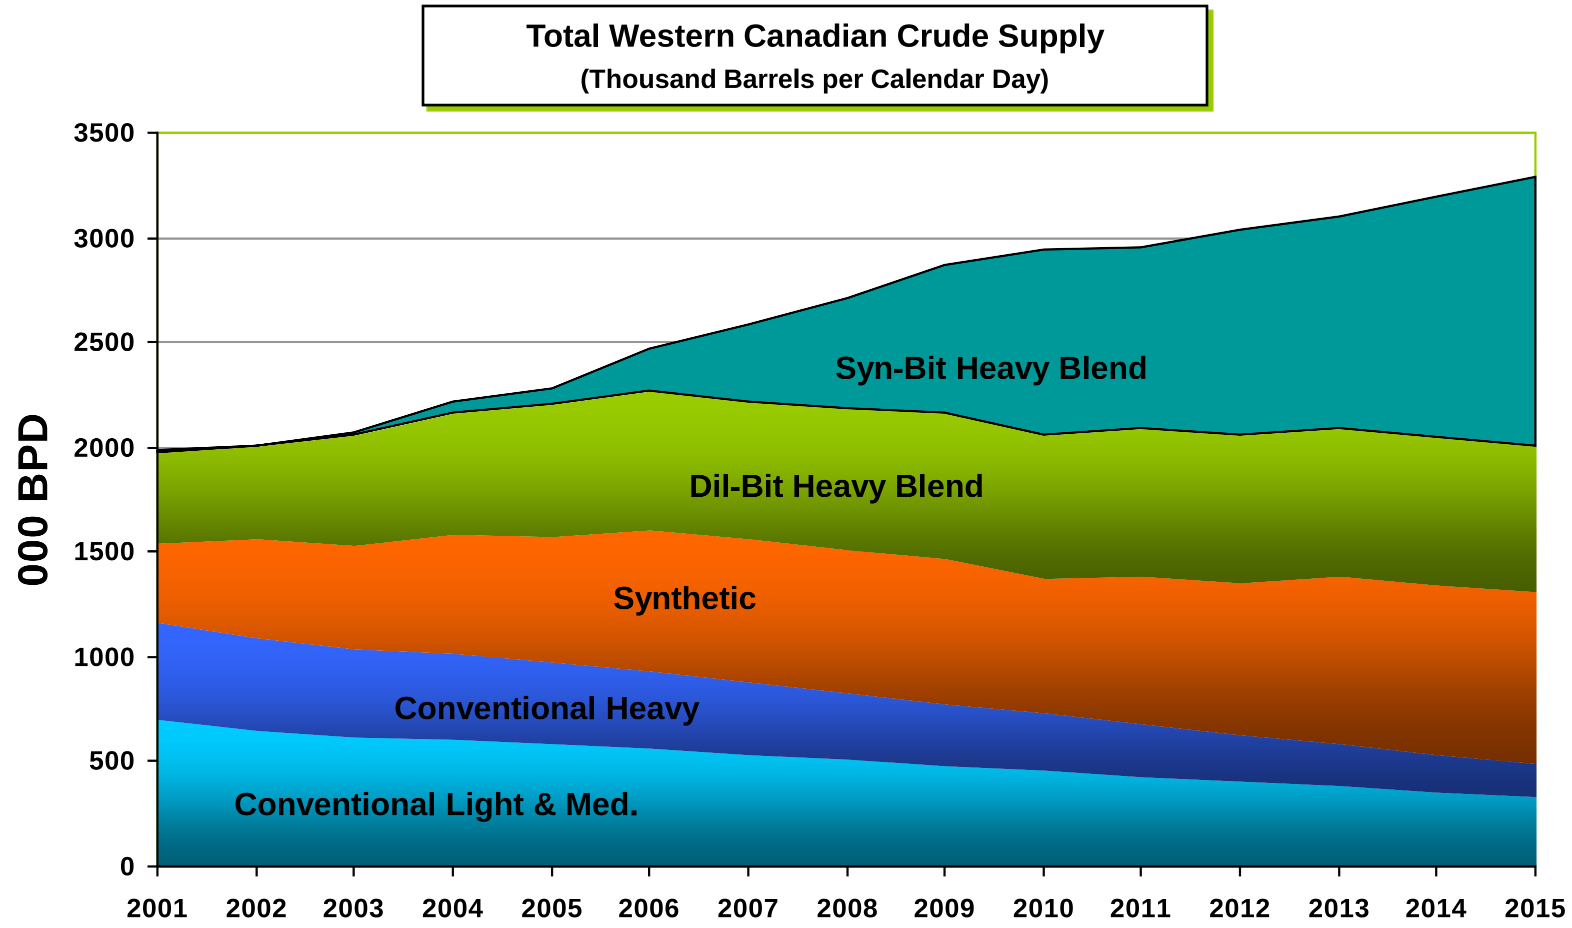
Terasen
Pipelines

terasen

Terasen Pipelines

Petroleum Pipelines　Alberta Oil Sands Deposits

Canadian Crude Supply Forecast



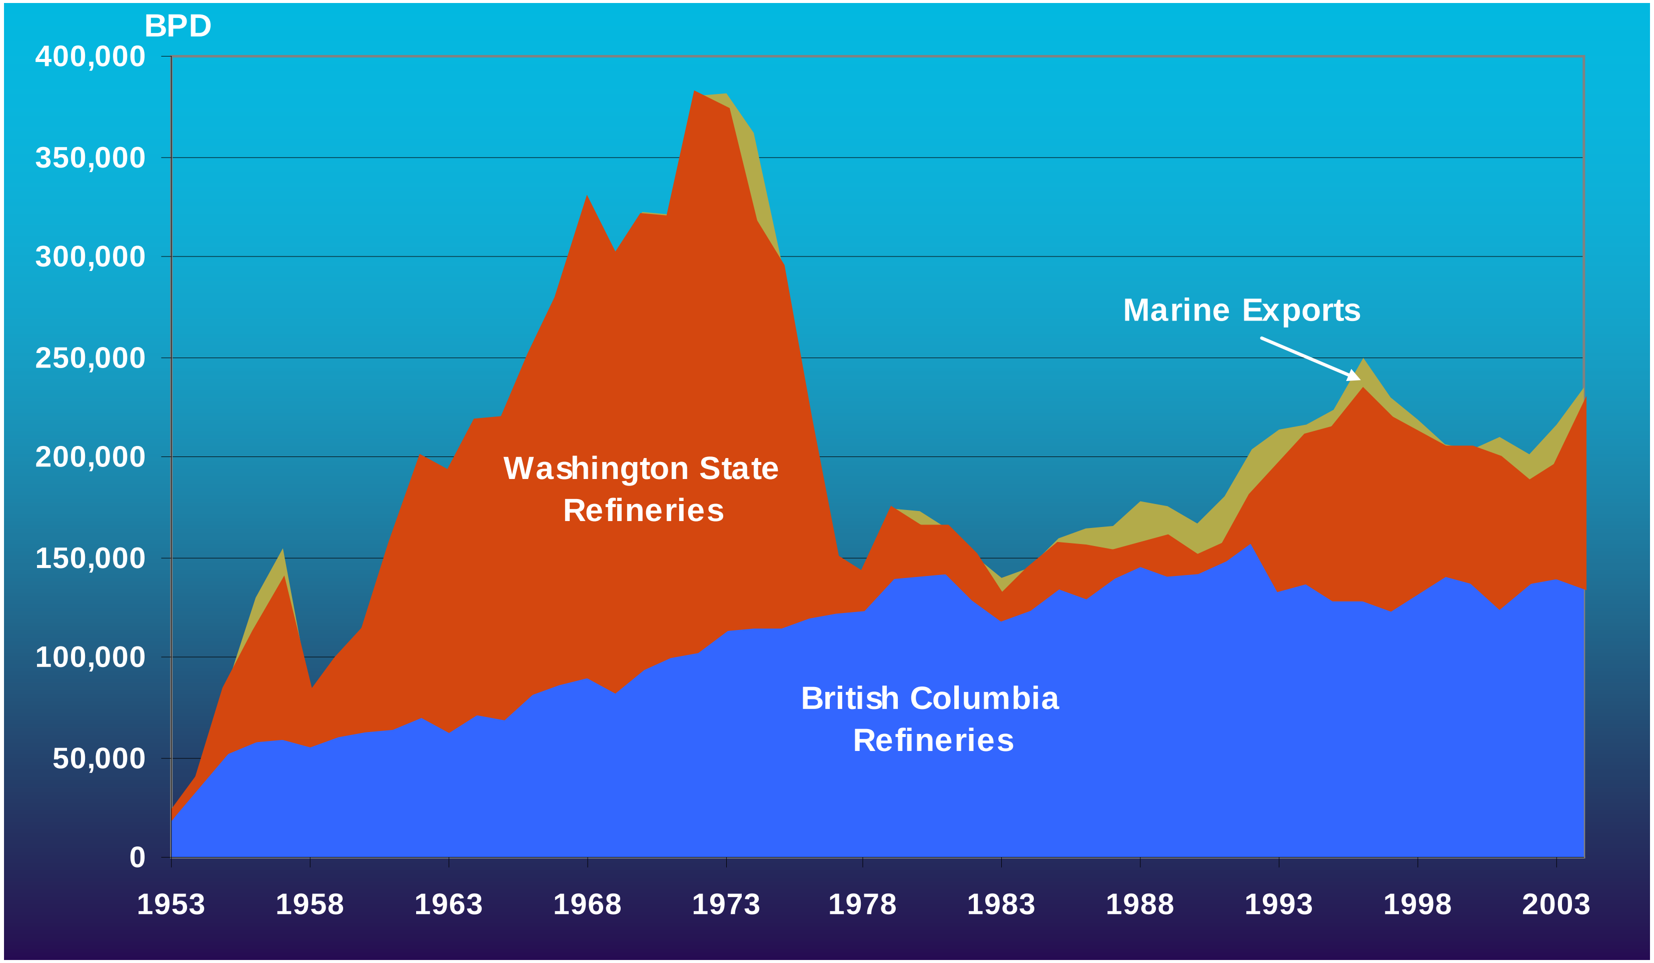
CAPP Upper Supply Case – Total Supply

terasen

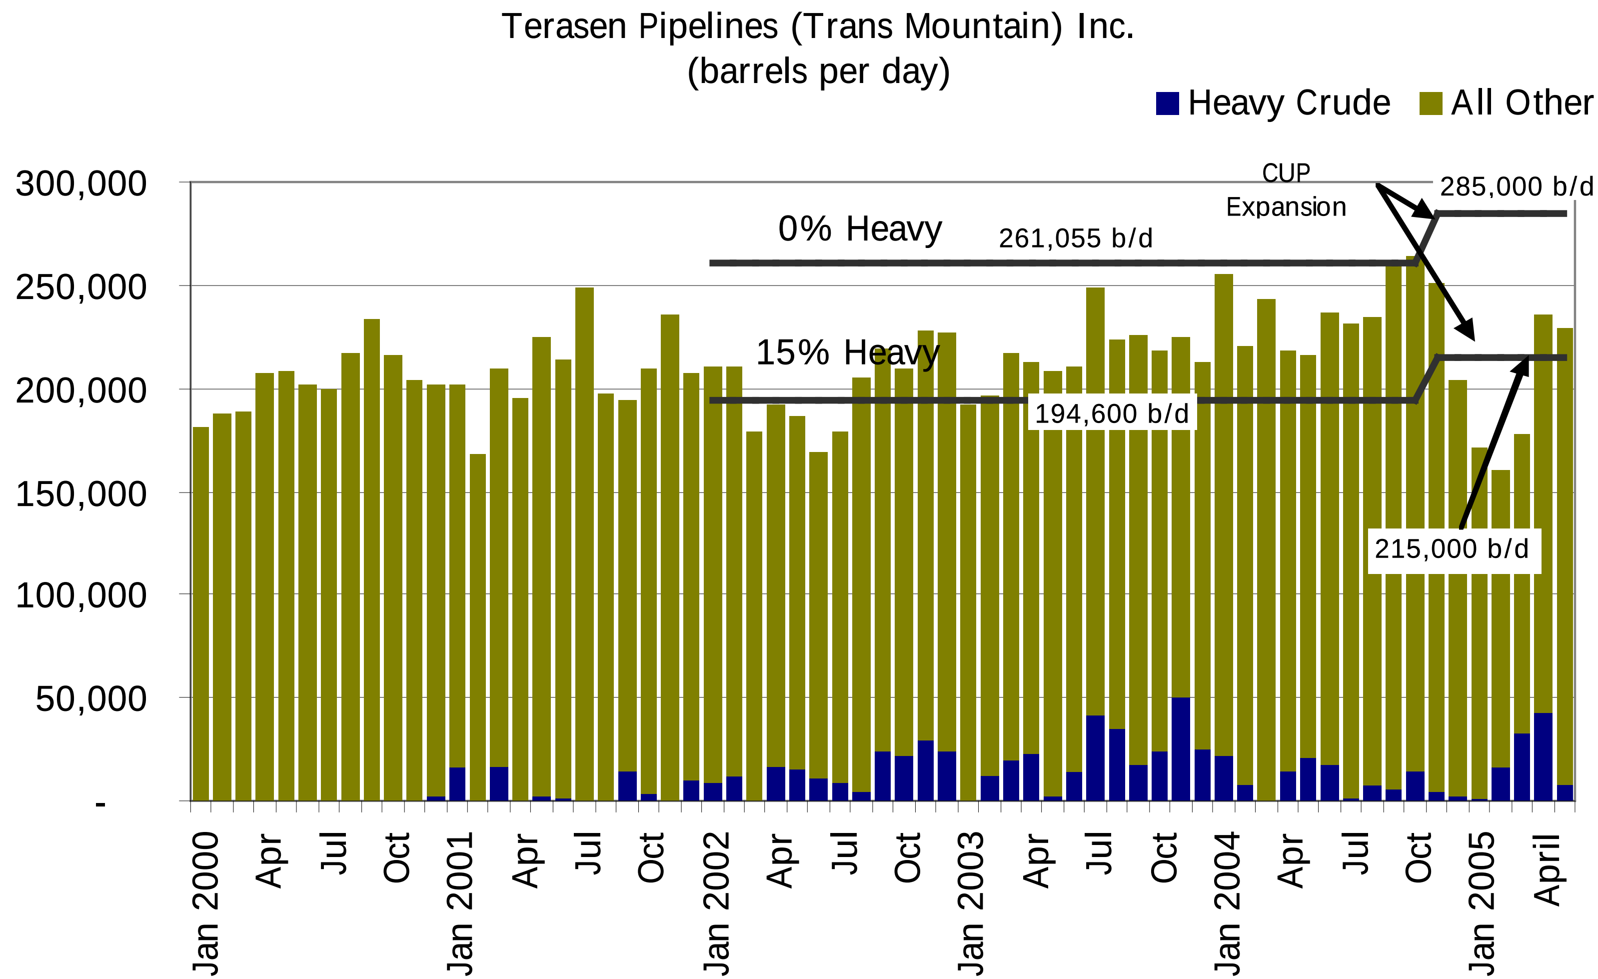
Trans Mountain - Regulatory

- Throughput growth has resulted in attractive returns from the 2001-2005 Incentive Toll Settlement
- ITS renewal discussions are underway
- Opportunity to meet shipper needs for more pipeline capacity provides negotiating flexibility

Trans Mountain Throughput



Trans Mountain Throughput



*May 2005 throughput based on forecast

Trans Mountain Throughput

- First quarter throughput affected by “perfect storm”:
  - Outages at both Syncrude and Suncor
  - Maintenance turnarounds at Chevron refinery and the Washington State refinery that takes the most Canadian crude
- April and May throughput has returned to apportionment
  - Despite continuing supply issues from the oilsands, and additional throughput on the Express system
  - Significant interest in tanker loadings in May

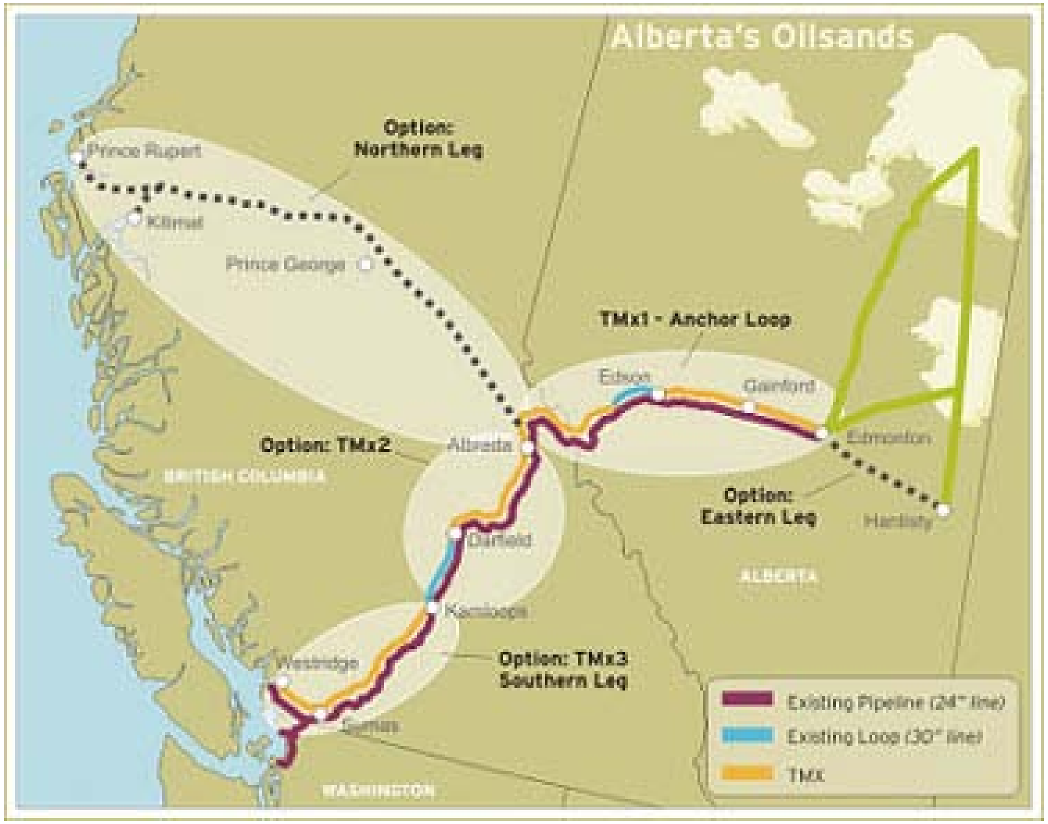
terasen

Trans Mountain Expansion

- Oil sands production driving throughput growth
- Expansion can provide producers with greater access to California & Far East markets
- Completed 27,000 bpd expansion of the mainline at a cost of $19 million in October 2004

terasen

TMX Expansion



- Oilsands supply is actively seeking new markets
- Match with continued import growth on U.S. West Coast and Asia
- Expressions of Interest from potential shippers confirm demand for new capacity

TMx1 Expansion – Two Components

TMx1 Expansion – Two Components

- Pump Station Expansion Project
  - $205 million to add 35,000 bpd of pumping capacity for 2006
  - Currently discussing expedited shipper approvals
- Anchor Loop Project
  - $365 million to loop pipeline (40,000 bpd additional capacity) for 2008
  - Actively pursuing commercial discussions with shippers
  - Open season targeted for Q2/05

Terasen

TMX Expansion

- Further 550,000 bpd capacity to either Northern or Southern port
- TMx1 plus Southern option C$2.3 billion
- TMx1 plus Northern option C$2.6 billion
- Full range of potential options to match marketing plans of Producers

terasen

2010
2011

Corridor

- Completed on time and on budget in May 2003.
- Backed by 25 year ship-or-pay contract with Shell Canada (60%), Chevron (20%) and Western Oil Sands (20%).
- Provides for recovery of all operating costs, depreciation, taxes and financing costs in revenue requirement.
- 26% equity component, ROE is long-term Canada's plus 350 bps

terasen

Corridor Expansion

- Linked to expansion plans for Athabasca Oil Sands Project
  - > Increase bitumen production to 290,000 bpd by 2010
- Will require looping of Corridor system
- Estimated cost $700-800 million, depending on configuration
- Opportunities for third party shipper volumes
- Status: Examining options with Corridor shippers

terasen

Express

- Acquired January 2003
- 84% of the 280,000 post-expansion capacity is committed through long-term contracts.
- Express expansion
  - Feeds PADD IV demand
  - In-service April 2005
    - On-time and under budget

Terasen

Express – Business Developments

- Tie-in to Billings
  - $8 million project to interconnect with the ExxonMobil Silvertip Pipeline
  - Additional 14k bpd 10-year contract signed to support tie-in
- Platte de-bottlenecking
  - $6 million project to enhance capacity of the Platte pipeline and facilitate flows to PADD II
- Currently examining options for further expansion of the Express System, including new looping

terasen

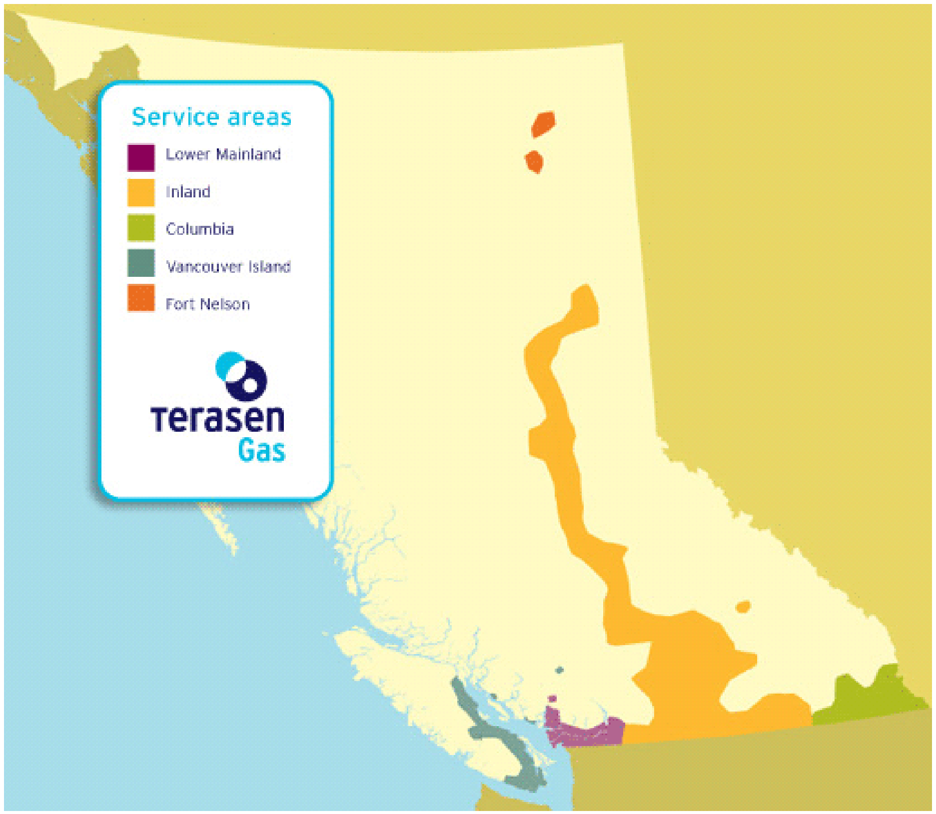
Terasen Gas Overview



* Map includes TGVI service areas

- Terasen Gas Inc. is a regulated natural gas transmission and distribution utility
  - Providing service to lower mainland, interior and northern areas of BC
  - Customer base of ~825,000
  - Rate base of ~$2.5 billion
- Experienced management team with significant energy industry expertise
- Strong ownership provide by Fortis Inc.
- Sister company to Terasen Gas (Vancouver Island) Inc. and Terasen Gas (Whistler) Inc.
  - Combined, the three entities provide service to over 900,000 customers, ~96% of natural gas users in BC
  - TGI, TGVI and TGW share a common management and administrative structure with the cost allocation reviewed by BCUC
- Operates within a supportive regulatory environment, under the British Columbia Utilities Commission

Experienced Management Team

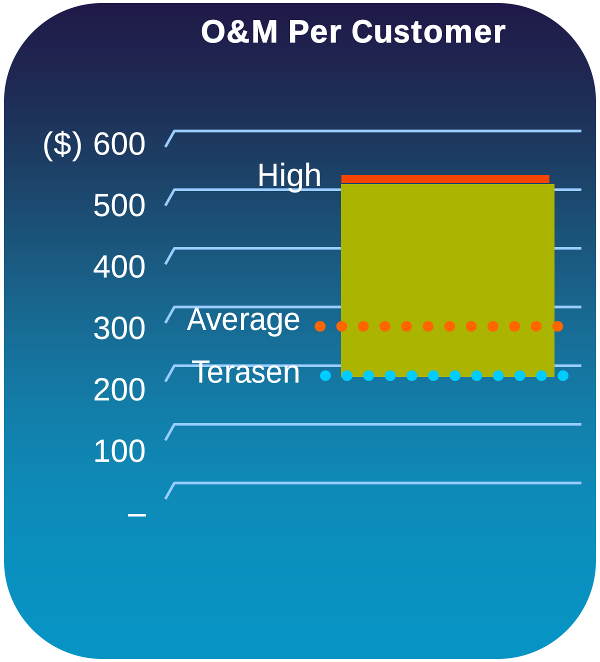
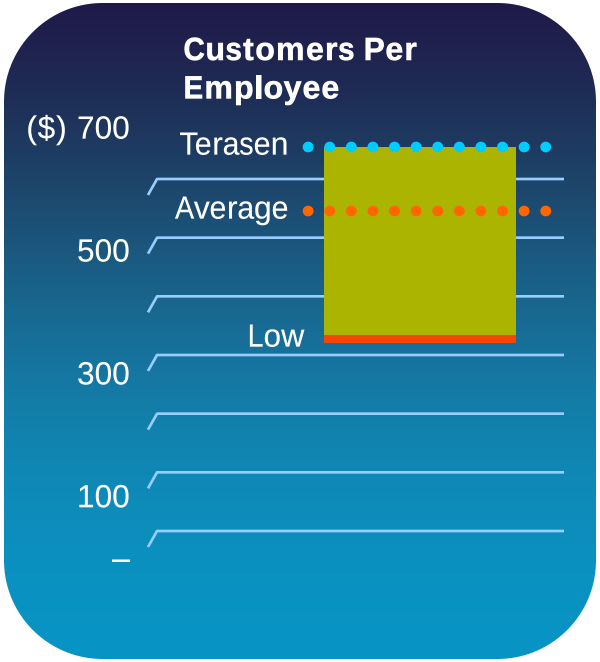
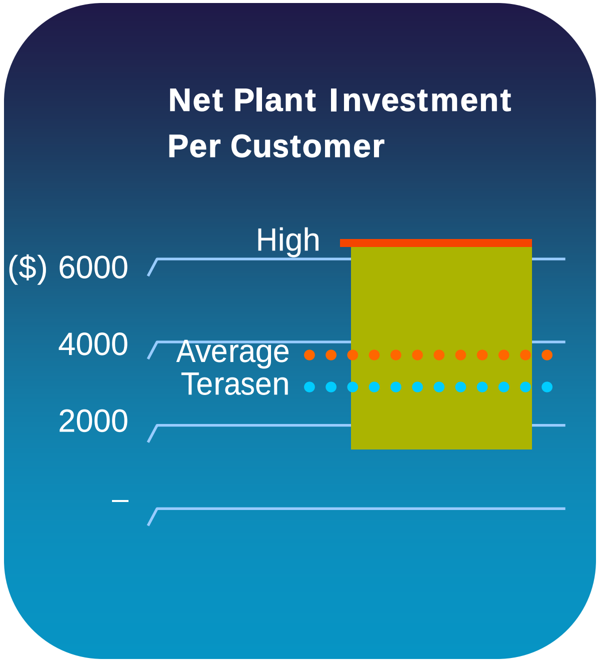
2007 Highlights

- Net Income of $78.2 million compared to $68.4 million for 2006
  - Surplus land sale, O&M and capital efficiencies offset lower allowed ROE
  - 2007 allowed ROE at 8.37% compared to 8.80% for 2006
- Continued customer growth due to population growth and economy
  - Net customer additions of ~10,000, similar to 2006
- Extension of PBR construct for 2008-2009 period
  - Incentive mechanism in place
  - Continuation of use of regulatory deferral accounts
- Amalgamation of Terasen Gas (Squamish) on blended rate base
- Issuance of $250 million debt during difficult market conditions
- Extended $500 million syndicated credit facility, including $100 million accordion feature allowing for rapid access to operating credit

Operating Efficiency



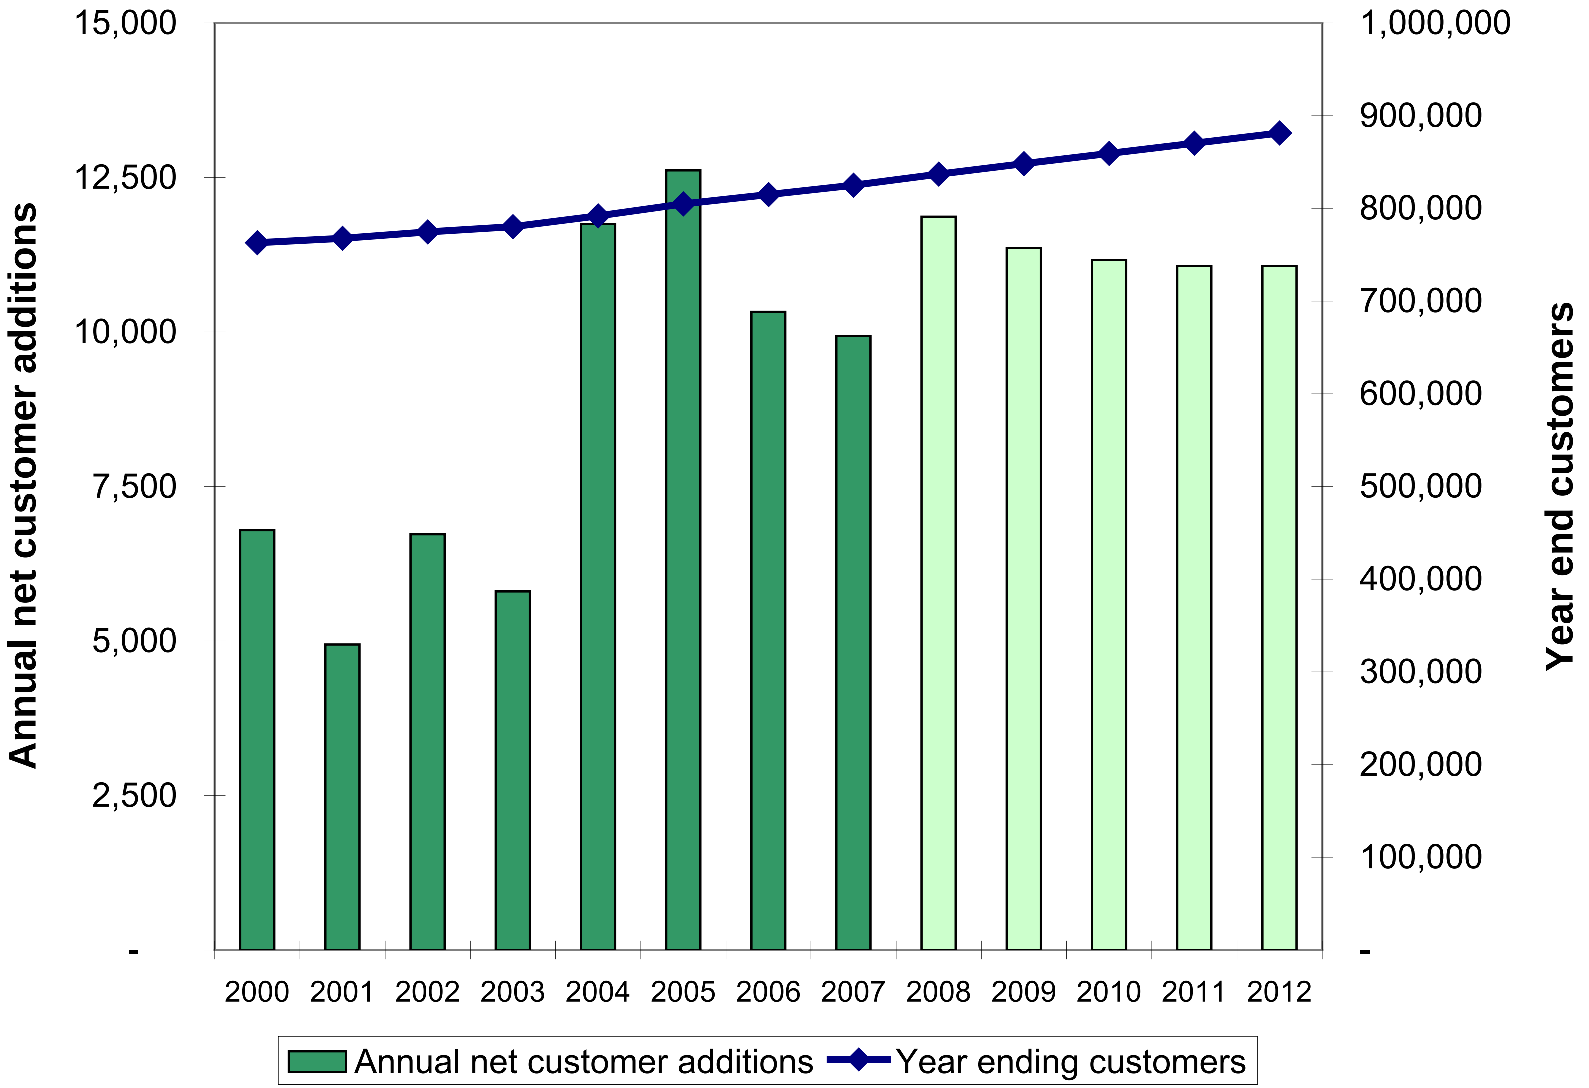




Source: LSM Consulting

Terasen Gas Estimates including TGI and TGVI

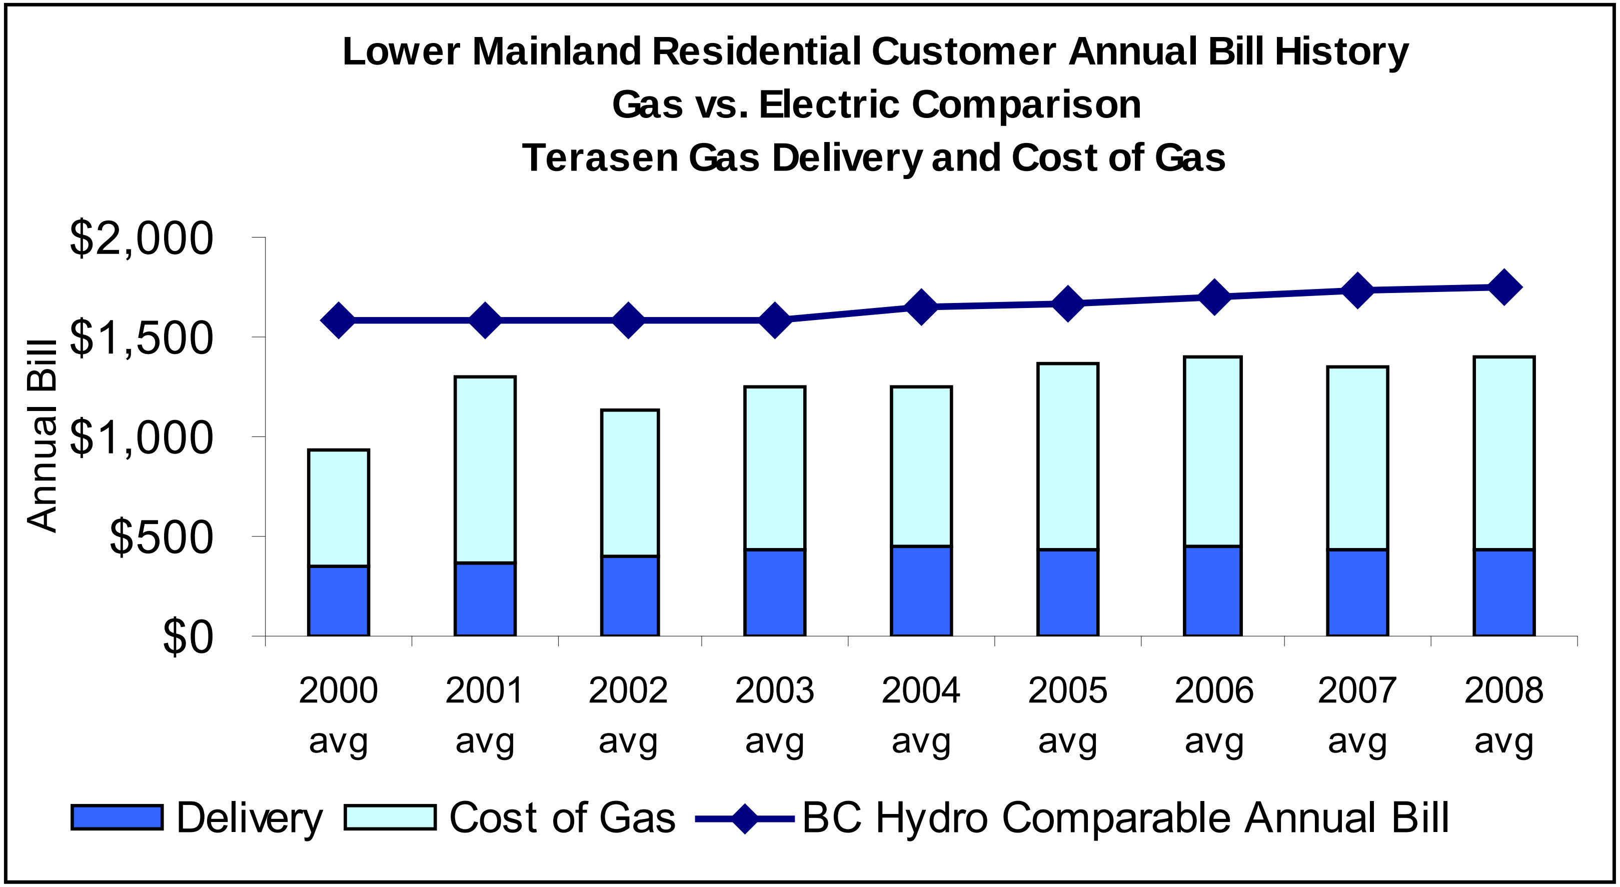
Customer Growth



Price Competitiveness

- Terasen Gas maintains a price advantage relative to electricity, the primary competitor to natural gas
- Increases in the market price of natural gas, combined with subsidized electricity prices, have in recent years eroded the historical advantage over electricity
- Terasen Gas maintains an active price risk management program (on behalf of customers with BCUC approval) which mitigates this risk
- Terasen Gas focus on operational efficiency has kept delivery charge component relatively flat over the last five years
- Introduction of Carbon Tax plus pressure on natural gas prices will create competitive pricing pressures
- BC Energy Plan focus on emission reduction and “clean-power” is expected to result in larger increases in electricity rates relative to recent experience

Price Competitiveness



Regulatory Arrangements

- 2004-2007 PBR previously in place for Terasen Gas extended through 2009
  - O&M and capital cost incentives, 50/50 sharing
  - Continuation of numerous deferral accounts
- Equity component for TGI 35.01% (post Terasen Squamish roll-in)
- Allowed ROE formula
  - 3.90% premium over forecast 30 year GoC yield
  - Risk premium adjusted by 75% of change in forecast yield year over year
  - 2008 allowed ROE set at 8.62%, up from 8.37% allowed ROE for 2007

BCUC Ring Fencing

- BCUC in April 30, 2007 Order approving the Fortis acquisition specified certain ring-fencing conditions
  - Maintain a common equity to total capital ratio at least as high as the level determined by BCUC
  - No dividends without BCUC approval if equity:capital ratio would be violated
  - Restrictions on interaction with affiliates (separate cash management, no financial support, no tax sharing, transactions only on an arms length basis)
  - No financial support or guarantee of non-regulated businesses
  - Maintain existing governance policies, in particular, independence of Directors

Terasen Gas - Outlook

- Financial performance will continue to be predictable
- Focus will be on increasing customer capture rates and retaining customers
  - Opportunity to focus on multi-family dwellings
  - Regional economy remains strong, expected to continue through 2010
- Focus on retaining customers through expanded energy conservation and efficiency programs
- Pursuing fair return for natural gas utilities in Canada
  - 2008 allowed ROE 8.62%, up from 8.37% 2007
- Planning underway for potential replacement of current PBR
- Infrastructure opportunities focused on transmission and CIS
  - Inland Pacific Connector potential for 2012
  - Reviewing AMI/AMR infrastructure opportunities

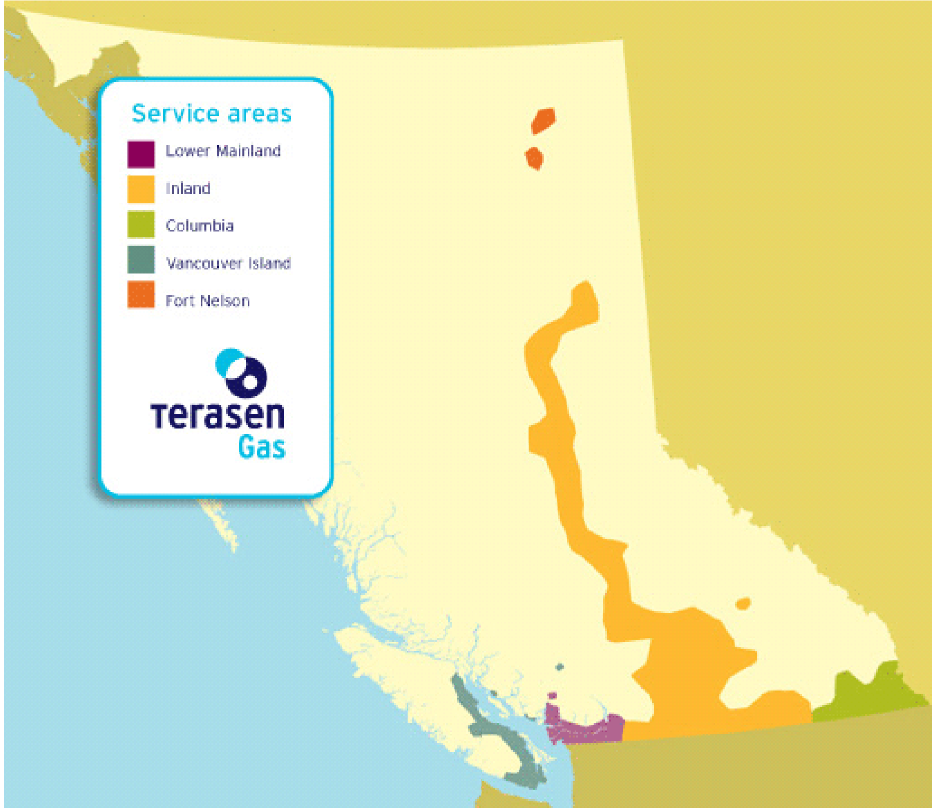
Terasen Gas Overview



* Map includes TGVI service areas

- Terasen Gas Inc. is a regulated natural gas transmission and distribution utility
  - Providing service to lower mainland, interior and northern areas of BC
  - Customer base of ~834,000
  - Rate base of ~$2.5 billion
- Experienced management team with significant energy industry expertise
- Strong ownership provided by Fortis Inc.
- Sister company to Terasen Gas (Vancouver Island) Inc. and Terasen Gas (Whistler) Inc.
  - Combined, the three entities provide service to over 931,000 customers, ~96% of natural gas users in BC
  - TGI, TGVI and TGW share a common management and administrative structure with the cost allocation reviewed by BCUC
- Operates within a supportive regulatory environment, under the British Columbia Utilities Commission

Assets (mm)	**$3,109**	**$697**	**$24**	**$3,830**

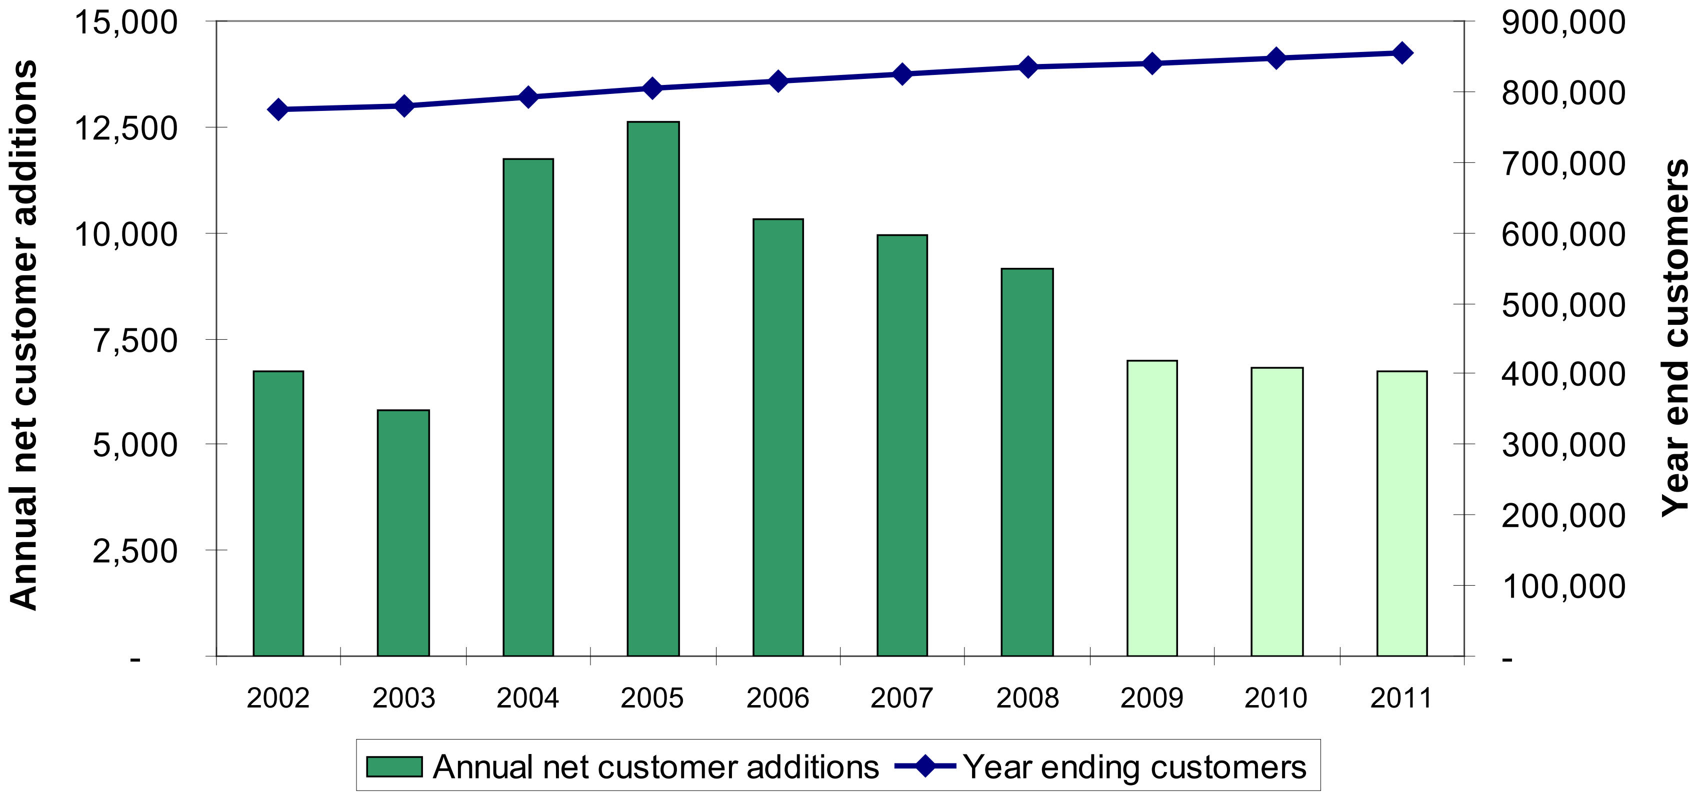
  - TGI, TGVI and TGW share a common management and administrative structure with the cost allocation reviewed by BCUC

2008 Highlights

Terasen

- Net Income of $91.5 million compared to $78.2 million for 2007
  - 2008 results include settlements with CRA of $11.6 million
  - 2008 allowed ROE at 8.62% compared to 8.37% for 2007
- Continued customer growth but a lower rate of additions due to a slowing economy in British Columbia
  - Net customer additions of ~9,000
- Extension of PBR construct for 2008-2009 period
  - Incentive mechanism in place
  - Continuation of use of regulatory deferral accounts
- Issuance of $250 million debt in 2008
- Extended existing $500 million syndicated credit facility by one year to 2013

Customer Growth

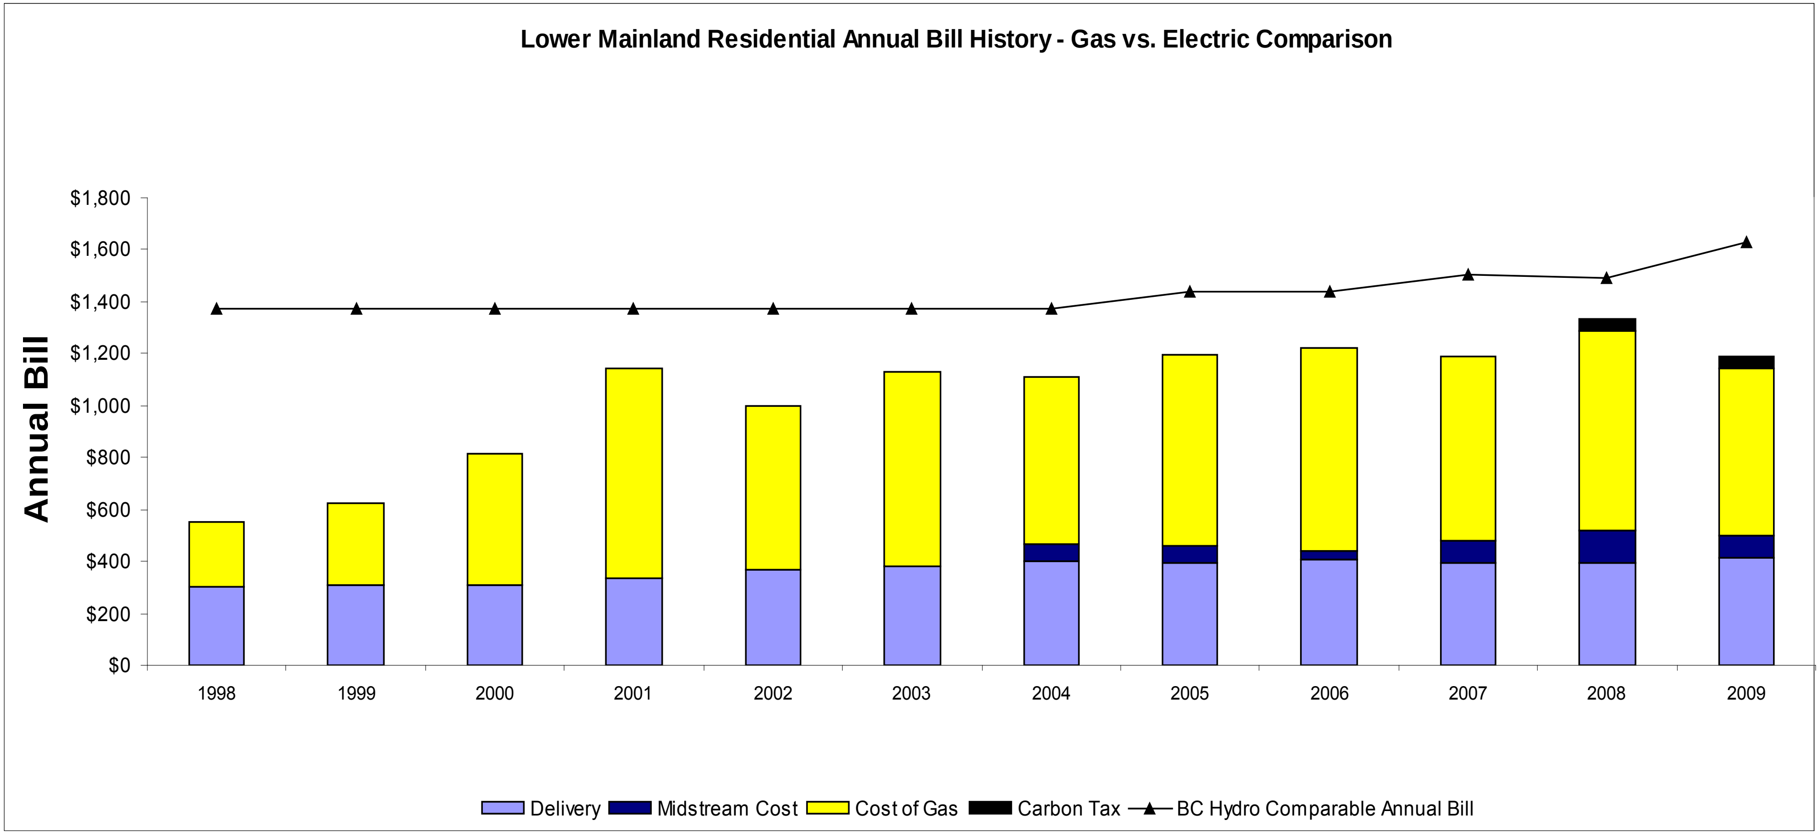


Price Competitiveness

- Terasen Gas maintains a price advantage relative to electricity, the primary competitor to natural gas
- Increases in the market price of natural gas, combined with subsidized electricity prices, have in recent years eroded the historical advantage over electricity
- Terasen Gas maintains an active price risk management program (on behalf of customers with BCUC approval) which mitigates this risk
- Terasen Gas focus on operational efficiency has kept delivery charge component relatively flat over the last five years
- BC Energy Plan focus on emission reduction and “clean-power”:
  - Expected to result in larger increases in electricity rates relative to recent experience;
  - However emmissions reduction focus will put pressure on natural gas demand

Price Competitiveness

terasen



Assumes:

Natural gas use of 95 GJ

Efficiency of gas equipment is 90% relative to 100% for electricity

Terasen Gas amount includes the basic charge

BC Hydro amount does not include basic charge since a household already pays the basic electric charge for non-heating use

Regulatory Arrangements

- 2004-2007 PBR previously in place for Terasen Gas extended through 2009
  - O&M and capital cost incentives, 50/50 sharing
  - Continuation of numerous deferral accounts
- Equity component for TGI 35.01% (post Terasen Squamish roll-in)
- Allowed ROE formula
  - 3.90% premium over forecast 30 year GoC yield at a base level of 5.25%
  - Current GoC yields suggest a lower ROE in 2010
  - Risk premium adjusted by 75% of change in forecast yield year over year
  - 2009 allowed ROE set at 8.47%, down from 8.62% allowed ROE for 2008

BCUC Ring Fencing

- BCUC in April 30, 2007 Order approving the Fortis acquisition specified certain ring-fencing conditions
  - Maintain a common equity to total capital ratio at least as high as the level determined by BCUC
  - No dividends without BCUC approval if equity:capital ratio would be violated
  - Restrictions on interaction with affiliates (separate cash management, no financial support, no tax sharing, transactions only on an arms length basis)
  - No financial support or guarantee of non-regulated businesses
  - Maintain existing governance policies, in particular, independence of Directors

Terasen Gas - Outlook

- Near term financial performance expected to be predictable
- Lower customer growth than in the past few years due to a slowing economy and fewer new housing starts
- Focus will be on increasing customer capture rates and retaining customers
- Focus on retaining customers through expanded energy conservation and efficiency programs
- Planning for ROE/Capital structure application in 2009
  - 2009 allowed ROE 8.47%, down from 8.62% 2008
  - Based on current GoC yields, formula ROE would be 7.92% as of the end of March 2009
- Planning underway for a Revenue Requirement Application in mid 2009
- In 2011, the Company will transition to IFRS and this may create significant volatility in the earnings

Opinion

Rating Drivers

Relatively low-risk, cost of service regulated gas transmission and distribution utility with no unregulated operations.

Small customer base, high cost system and relatively weak credit metrics are balanced by a history of strong regulatory and political support.

Expiry of government subsidies in 2011 could cause TGVI's rates to be uncompetitive with alternate forms of energy and lead to fuel switching.

Development of Mt. Hayes LNG storage facility.

Strong regulatory ring-fencing mechanisms.

Corporate Profile

Headquartered in Surrey, British Columbia, Terasen Gas (Vancouver Island) Inc. (TGVI) is a regulated natural gas transmission and distribution utility serving approximately 95,000 customers on Vancouver Island and the Sunshine Coast. TGVI, which has no unregulated operations, is regulated on a cost of service basis by the British Columbia Utilities Commission (BCUC). TGVI is one of the smallest gas utilities rated by Moody's with a 2008 mid-year rate base of approximately $500 million.

TGVI is a wholly-owned subsidiary of Terasen Inc. (TER), a holding company which also owns 100% of Terasen Gas Inc. (TGI) and Terasen Gas Whistler Inc. (TGW), and a 30% interest in CustomerWorks, L.P. TER, and consequently TGVI, has been an indirect, wholly-owned subsidiary of Fortis Inc. (FTS) since May 17, 2007.

SUMMARY RATING RATIONALE

TGVI's A3 senior unsecured rating and stable outlook reflect TGVI's relatively low-risk business model and supportive regulatory and political environment balanced by normalized credit metrics that are generally in the Baa category. TGVI's normalized financial metrics are generally weaker than those of similarly rated U.S. local distribution company (LDC) peers such as Connecticut Natural Gas Corporation, Northwest Natural Gas Company, Piedmont Natural Gas Company, Inc. and UGI Utilities, Inc. However, TGVI's financial metrics are somewhat stronger than those of its sister company, TGI (A3, senior unsecured), reflecting the fact that the BCUC deems a higher level of equity for TGVI (40% vs. TGI's 35%) and allows a higher ROE (70 BP premium to TGI). Moody's recognizes that the weaker financial metrics of TGVI and TGI relative to similarly rated U.S. peers are largely a function of the relatively lower deemed equity and allowed ROE permitted by the BCUC. Moody's believes that this is offset to a significant degree by the supportiveness of the business and regulatory environments in Canada generally and in British Columbia specifically. While Moody's quantitative analysis has considered TGVI's historical and forecast financial performance, Moody's believes that TGVI's historical metrics are probably not representative of future performance due to the impact of regulatory deferrals and recoveries as well as government subsidies. Similarly, TGVI's near-term financial forecast is distorted by ongoing recovery of regulatory deferrals, the termination of government subsidies in 2011, and elevated capital expenditures. Accordingly, Moody's has focused on a set of normalized credit metrics that remove these distortions. While Moody's does not entirely discount the potential risks associated with TGVI's unique business and regulatory situation and its planned capital expenditures, we believe that these risks are manageable. Utilizing the normalized set of financial metrics, Moody's rating methodology for North American Regulated Gas Distribution Companies indicates an A3 rating for TGVI which mirrors TGVI's actual A3 senior unsecured rating.

DETAILED RATING CONSIDERATIONS

RELATIVELY LOW-RISK REGULATED GAS TRANSMISSION AND DISTRIBUTION UTILITY IN A SUPPORTIVE ENVIRONMENT

In general, Moody's considers gas distribution utilities to be at the low end of the risk spectrum within the universe of regulated utilities, both gas and electric. Similarly, we consider regulated utilities be generally lower risk relative to companies that are outside of the utility space and do not benefit from cost of service regulation. Accordingly, Moody's considers regulated gas LDCs like TGVI to be among the lowest risk corporate entities. Nevertheless, two key features of TGVI's operations cause its business risk to be higher than most gas LDCs. Firstly, TGVI's system has a relatively high capital cost on a per customer basis reflecting the significant investment in transmission infrastructure, including three sub-sea crossings, to reach the relatively small customer base on Vancouver Island. Secondly, as a consequence of the high capital cost of TGVI's system, its costs of service and therefore its rates are high. To ensure that natural gas was roughly cost competitive with fuel oil and electricity, the Province, the BCUC and TGVI agreed to cap TGVI's rates at levels similar to those of alternative forms of energy. Prior to 2003, TGVI's rates were insufficient to cover TGVI's costs of service and the shortfall was deferred in the Revenue Deficiency Deferral Account (RDDA). TGVI financed the increases in the RDDA balance by issuing Class B subordinated debt instruments which were purchased by TER.

While the high cost of TGVI's system and the historically uncompetitive position of gas on Vancouver Island cause TGVI's business risk to be higher than that of most gas LDCs, Moody's believes that this higher risk and TGVI's relatively weak credit metrics are balanced by a long history of government support and a supportive regulatory environment. In support of its policy goal of ensuring the availability of natural gas on Vancouver Island, the Province of British Columbia has provided both financial and regulatory support to TGVI and its predecessors virtually since their inception. In the past, both the Province and the Federal Government have provided financial support to TGVI in the form of non-interest bearing loans. Ongoing Provincial support is provided through the Vancouver Island Natural Gas Pipeline Agreement (VINGPA) under which the Province pays royalty revenues to TGVI that subsidize the cost of natural gas. The Province also provides regulatory support in the form of the Special Direction to the BCUC which governs the recovery of RDDA balances. Beginning in 2003, TGVI reached a point where, with the benefit of the Provincial royalty revenues, it was able to not only recover its costs of service but begin recovering the accumulated regulatory assets (principally the RDDA) while charging rates that were roughly competitive with costs of alternative sources of energy on Vancouver Island. The terms of the Special Direction dictate that it will not expire before the RDDA balance has been fully recovered.

As the RDDA balance is recovered, TGVI utilizes the cash recovered to retire the Class B subordinated debt instruments purchased by TER. TGVI currently anticipates that it will have fully recovered the RDDA balance by early 2010 which, all else being equal, is expected to result in a slight reduction in TGVI's rates in 2010. However, TGVI's rates are expected to increase substantially in 2012 to compensate for the lack of Provincial royalty revenues which are scheduled to terminate in 2011. While Moody's anticipates that TGVI may seek regulatory approval for some mechanism to smooth out these potential rate fluctuations, there can be no assurance that the BCUC would agree to any proposals that TGVI might make. In the absence of some smoothing mechanism, TGVI's rates during the 2010 to 2012 period are expected to be somewhat volatile.

In addition to support provided by the Provincial Government, TGVI has benefited from British Columbia's economic performance, which has until recently been relatively strong. Moody's considers Canada to have supportive regulatory and business environments relative to other jurisdictions globally. Furthermore, the regulatory environment in the Province of British Columbia is considered one of the more supportive in Canada. This view reflects the fact that regulatory proceedings tend to be less adversarial and decisions tend to be timely and balanced although these relative strengths have been tempered somewhat by deemed equity levels and allowed ROEs that have tended to be lower than in other Canadian provinces. TGVI benefits from deemed equity levels and allowed ROEs for ratemaking purposes that are higher than those of its A3-rated sister company, TGI. For rate-making purposes, the BCUC allows TGVI a deemed equity component of 40% vs. TGI's 35% and an allowed ROE that is 70 BP higher than TGI's which tends to cause TGVI's financial metrics to be somewhat stronger than those of TGI. TGVI's more favourable rate-making inputs relative to those of TGI reflect the relatively small size of TGVI's service territory and customer base as well as its relatively high investment in fixed assets on a per customer basis. TGVI's current rate settlement expires at the end 2009 and the company expects to file a two year rate application around mid-year 2009. With the expected elimination of the RDDA balance in 2010, Moody's expects that TGVI will seek and receive regulatory protection against key business risks such as commodity prices, customer demand, interest expense, pension costs and insurance costs. TGVI's sister company, TGI, currently benefits from regulatory protection against such risks.

EXPIRY OF GOVERNMENT ROYALTY REVENUES IN 2011 ADVERSELY IMPACTS COMPETITVENESS OF GAS RELATIVE TO ALTERNATE FORMS OF ENERGY

A material risk faced by TGVI is the competitiveness of natural gas relative to alternative forms of energy on Vancouver Island. As noted above, the development of TGVI's system was relatively expensive and only in recent years has TGVI accumulated a sufficiently large customer base to permit it to recover from ratepayers both its current costs of service and accumulated regulatory deferrals while charging rates that have been comparable to the costs of alternative forms of energy on Vancouver Island. Furthermore, TGVI has only been able to do this with the benefit of Provincial royalty revenues. The rate increases that will be required to offset the loss of Provincial royalty revenues post-2011 could cause TGVI's rates to exceed the cost of alternative forms of energy. However, we expect that the costs of alternative energy sources are likely to rise significantly over an extended period of time which could provide TGVI with some breathing room.

Nevertheless, if TGVI ultimately finds itself in a position where its rates are uncompetitive and ratepayers begin to use less gas or even convert to electricity or fuel oil, Moody's expects that TGVI and its ultimate shareholder, FTS, would seek to merge TGVI with TGI and harmonize their rates. Rate harmonization would be expected to eliminate the cost disadvantage of gas on Vancouver Island as the higher costs of TGVI's system would be spread across TGI's larger base of approximately 834,000 customers (roughly nine times the customer base of TGVI).

Clearly, FTS would be supportive of such a move as a means of preserving the value of its investment in TGVI, but Moody's also believes that the Province of British Columbia would likely be supportive as well. As noted above, the Province has long provided financial and regulatory support to TGVI in order to promote its policy goal of ensuring availability of gas on Vancouver Island. While Provincial support of amalgamation/rate harmonization is not assured, it is Moody's view that it is unlikely that the Province would simply stand by and allow the Vancouver Island gas distribution infrastructure to falter and fail given the Province's well established track-record of supporting the development of TGVI's franchise. Moody's also notes that there is precedence for such a transaction within the Terasen group of companies: on November 2, 2006, Terasen Gas (Squamish) Inc. was amalgamated with TGI and the rates of the two entities were harmonized. While TGVI is considerably larger than Terasen Gas (Squamish), we believe the Squamish transaction is a positive precedent in the event that at some point in the future, the long-term competitiveness of TGVI's rates comes into question.

DEVELOPMENT OF MT. HAYES LNG STORAGE FACILITY

In November 2007, TGVI received conditional approval from the BCUC for the 1.5 billion cubic foot Mt. Hayes liquefied natural gas (LNG) storage facility. TGVI commenced construction of the project in 2008. Based on a cost estimate of approximately $215 million, including an allowance for funds used during construction (AFUDC), the value of the project would exceed 40% of the value of TGVI's 2008 mid-year rate base of $500 million. However, Moody's believes that this measurement overstates both the magnitude and importance of the project for a number of reasons. Firstly, Mt. Hayes is being constructed under an Engineering Procurement Construction (EPC) contract which has shifted much of the cost and schedule risk to the EPC contractor, Chicago Bridge & Iron (CB&I), who has successfully constructed a number of similar LNG projects. Secondly, by early 2009, TGVI had hedged the majority of the Mt. Hayes cost elements that were not transferred to CB&I under the EPC contract. As of early 2009, the project was on budget, on schedule and within the $200 million pre-AFUDC cost parameters established by the BCUC. Thirdly, the project will form part of TGVI's rate base but TGVI has entered into BCUC-approved 35 year contract with TGI under which TGI will pay for approximately two thirds of the facility's capacity in the early years of the contract. Therefore, initially only about a third of the project costs will be borne by TGVI's existing ratepayers. Over time, as TGVI grows and requires a greater share of Mt. Hayes' capacity, TGVI's ratepayers will be required to support an increasing share of the project's costs. Fourthly, Mt. Hayes is a rather modest project both in absolute terms and relative to the experience and expertise of TGVI's management team (TGVI shares a common management team with TGI, a utility with a rate base of approximately $2.5 billion). For these reasons, Moody's does not expect that the Mt. Hayes project will pose a significant credit challenge for TGVI.

TGVI expects to finance the development of Mt. Hayes primarily with debt until the project enters service and rate base which is currently expected to occur in 2011. Accordingly, during the construction period, TGVI's debt to capital will be elevated and its cash flow metrics will be depressed.

STRONG REGULATORY RING-FENCING SEPARATES TGVI FROM PARENT, TERASEN INC.

Moody's believes that TGVI's ring-fencing is very good relative to that of its peers outside of British Columbia. TGVI is subject to a set of regulatory ring-fencing conditions imposed by the BCUC (refer to Moody's October 14, 2005 Comment on Proposed Regulatory Ring-Fencing Conditions). The ring-fencing conditions provide that, unless otherwise approved by the BCUC, TGVI shall: maintain a ratio of common equity to total capital at least as high as the deemed equity capitalization utilized by the BCUC for ratemaking purposes (currently 40%); not pay dividends if they would cause TGVI's common equity to total capital to fall below the BCUC's deemed equity percentage; not invest in or financially support non-regulated business; and not engage in affiliate transactions on anything other than an arm's length basis. Moody's believes that the BCUC ring-fencing provisions effectively insulate TGVI from the greater financial and business risks of its parents, TER and FTS. The regulatory ring-fencing provisions, combined with FTS' philosophy of requiring its utility operating subsidiaries to be operationally and financially independent of FTS and other subsidiaries, allow Moody's to evaluate TGVI's credit profile on a stand-alone basis.

Liquidity Profile

Moody's believes that TGVI has sufficient liquidity resources to meet its needs in 2009. In evaluating a company's liquidity, Moody's typically assumes that the company loses access to new capital, other than amounts available under its committed credit agreements, for a period of 12 months. In this context, we then evaluate the company's various sources and uses of cash including the flexibility to defer or reduce uses of cash such as capital expenditures and dividends.

TGVI maintains a $350 million syndicated committed revolving credit agreement which matures on January 13, 2011. The credit agreement contains two maintenance covenants (debt to equity not greater than 70% and EBIT to interest expense not less than 2:1). As at September 30, 2008, TGVI's leverage and coverage were 63.2% and 3.89x, respectively, leaving significant headroom under the covenants. TGVI's credit agreement does not contain language such as a Material Adverse Change (MAC) clause or ratings triggers that would inhibit access to the unutilized portion of the facility in situations of financial stress. Moody's understands that at December 31, 2008, approximately $235 million was available under the $350 million committed facility reflecting approximately $115 million drawn against this facility.

TGVI is expected to generate approximately $40 million of adjusted funds from operations (FFO) in 2009. After dividends in the range of $20 million and capital expenditures and working capital changes of approximately $80 million, Moody's expects TGVI to be free cash flow (FCF) negative by approximately $60 million in 2009. Given the forecasted $60 million FCF shortfall and repayment of approximately $21 million Class B Instruments, TGVI's 2009 funding requirement is expected to be approximately $81 million. This is substantially less than the availability of approximately $235 million under TGVI's syndicated bank credit facility at December 31, 2008.

Rating Outlook

The stable outlook is predicated on TGVI's low business risk as a regulated gas distribution utility, the expectation that the Mt. Hayes project will be successfully completed on time and on budget and the expectation that TGVI will be able to recover its costs of service while charging rates competitive with the costs of alternative forms of energy following the cessation of provincial royalty revenues in 2011.

What Could Change the Rating - Up

It is unlikely that TGVI's rating would be upgraded absent material increases in the company's deemed equity thickness and/or allowed ROE that translated to significant improvements in TGVI's key credit metrics. At the A2, senior unsecured level, Moody's would expect TGVI's ROE to be approximately 11% or more, EBIT/Interest to be approximately 2.5x or more, RCF/Debt to be approximately 8.5% or more, Debt/Book Capitalization (Excluding Goodwill) to be below 60% and FCF/FFO to be approximately 0%.

What Could Change the Rating - Down

Notwithstanding TGVI's relatively low risk business profile, sustained weakening of TGVI's financial metrics resulting from an inability to recover its costs of service, lower deemed equity thickness, lower allowed ROE or other factors could result in a reduction of TGVI's rating. For instance, ROE below 9%, EBIT/Interest below 2.0x, RCF/Debt below 7%, Debt/Book Capitalization (Excluding Goodwill) above 65% and FCF/FFO below -15% would likely cause TGVI's senior unsecured rating to fall to Baa1. If the rates required to allow TGVI to recover its costs of service are uncompetitive with alternative forms of energy on Vancouver Island and TGVI experiences stagnation or loss of customers, TGVI's rating could be negatively impacted.

CREDIT RATINGS ARE MOODY'S INVESTORS SERVICE, INC.'S (MIS) CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES. MIS DEFINES CREDIT RISK AS THE RISK THAT AN ENTITY MAY NOT MEET ITS CONTRACTUAL, FINANCIAL OBLIGATIONS AS THEY COME DUE AND ANY ESTIMATED FINANCIAL LOSS IN THE EVENT OF DEFAULT. CREDIT RATINGS DO NOT ADDRESS ANY OTHER RISK, INCLUDING BUT NOT LIMITED TO: LIQUIDITY RISK, MARKET VALUE RISK, OR PRICE VOLATILITY. CREDIT RATINGS ARE NOT STATEMENTS OF CURRENT OR HISTORICAL FACT. CREDIT RATINGS DO NOT CONSTITUTE INVESTMENT OR FINANCIAL ADVICE, AND CREDIT RATINGS ARE NOT RECOMMENDATIONS TO PURCHASE, SELL, OR HOLD PARTICULAR SECURITIES. CREDIT RATINGS DO NOT COMMENT ON THE SUITABILITY OF AN INVESTMENT FOR ANY PARTICULAR INVESTOR. MIS ISSUES ITS CREDIT RATINGS WITH THE EXPECTATION AND UNDERSTANDING THAT EACH INVESTOR WILL MAKE ITS OWN STUDY AND EVALUATION OF EACH SECURITY THAT IS UNDER CONSIDERATION FOR PURCHASE, HOLDING, OR SALE.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, such information is provided "as is" without warranty of any kind and MOODY'S, in particular, makes no representation or warranty, express or implied, as to the accuracy, timeliness, completeness, merchantability or fitness for any particular purpose of any such information. Under no circumstances shall MOODY'S have any liability to any person or entity for (a) any loss or damage in whole or in part caused by, resulting from, or relating to, any error (negligent or otherwise) or other circumstance or contingency within or outside the control of MOODY'S or any of its directors, officers, employees or agents in connection with the procurement, collection, compilation, analysis, interpretation, communication, publication or delivery of any such information, or (b) any direct, indirect, special, consequential, compensatory or incidental damages whatsoever (including without limitation, lost profits), even if MOODY'S is advised in advance of the possibility of such damages, resulting from the use of or inability to use, any such information. The credit ratings and financial reporting analysis observations, if any, constituting part of the information contained herein are, and must be construed solely as, statements of opinion and not statements of fact or recommendations to purchase, sell or hold any securities. NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER. Each rating or other opinion must be weighed solely as one factor in any investment decision made by or on behalf of any user of the information contained herein, and each such user must accordingly make its own study and evaluation of each security and of each issuer and guarantor of, and each provider of credit support for, each security that it may consider purchasing, holding or selling.

MOODY'S hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and

commercial paper) and preferred stock rated by MOODY'S have, prior to assignment of any rating, agreed to pay to MOODY'S for appraisal and rating services rendered by it fees ranging from $1,500 to approximately $2,400,000. Moody's Corporation (MCO) and its wholly-owned credit rating agency subsidiary, Moody's Investors Service (MIS), also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually on Moody's website at www.moodys.com under the heading "Shareholder Relations - Corporate Governance - Director and Shareholder Affiliation Policy."

Terasen Gas Inc.
Approved Rate Base Deferrals
As at December 31, 2008

Line No.	Particulars	Description	Approval Order #
	(1)	(3)	(4)
1	Deferred Interest	Variations between actual and forecast interest rates and timing of long-term debt issues	G-85-97/G-48-00/G-7-03/G-51-03
2	Deferred Interest - funding benefits via Customer Depos	Variations between unfunded debt interest rate and interest rate on customer security deposits	G-112-04
3	NGV Conversion Grants	program	G-98-99/G-7-03/G-51-03
4	Demand Side Management	Rebates paid related to Demand Side Management programs	G-85-97/G-7-03/G-51-03
5	Property Tax Deferral	Variations between the actual and forecast amount of property taxes	G-51-03
6	Midstream Cost Reconciliation Account (MCRA)	Costs incurred in performing the midstream function and the revenue collected through midstream rates	G-25-04
7	Commodity Cost Reconciliation Account (CCRA)	Costs incurred in purchasing TGI's portion of baseload gas requirements and revenue collected through commodity rates	G-25-04
8	MCRA Interest	Interest on variations between the actual and forecast MCRA balance	G-51-03
9	CCRA Interest	Interest on variations between the actual and forecast CCRA balance	G-51-03
10	Revenue Stabilization Adjustment Mechanism (RSAM)	Variations between the actual and forecast use per customer for Residetial and Commercial customer classes	G-59-94/G-85-97-G-48-00/G-51-03
11	RSAM Interest	Interest on variations between the actual and forecast RSAM balance	G-51-03
12	Revelstoke Propane Cost	Variations between the actual cost of propane and the amount recovered in rates, based on the approved reference price of propane	G-72-90
13	ROE Hearing 2005	Costs incurred related to the 2005 ROE and Capital Structure Hearing	G-132-05

Terasen Gas Inc.

Approved Rate Base Deferrals

As at December 31, 2008

Line No.	Particulars	Description	Approval Order #
	(1)	(3)	(4)
1	Earnings Sharing Mechanism	The customers' 50% share of the pre-tax variations between the approved level of earnings as determined annually and the actual earnings realized	G-51-03
2	NGV Compression Equipment Recovery	The loss on the sale of NGV equipment/stations to 4Pro and the City of Surrey in the year 2000	G-143-99/G-7-03/G-51-03
3	Bad Debt Allowance for Rates 14 & 14A	The difference between 0.3 per cent of the Rate 14A revenues and the actual bad debt experience for Rate 14A	G-64-04
4	SCP Net Mitigation Revenues	Mitigation revenues for the use of SCP transportation capacity that has not been utilized by the firm transportation agreement customers and is sold to others	G-124-00/G-123-01/G-7-03/G-51-03
5	SCP West to East Transmission	Third party revenues related to back-haul movements from Kingsvale to Yahk which relate to transportation service in a West to East direction through the SCP system	G-124-00/G-123-01/G-7-03/G-51-03
6	SCP PG&E Contract Cancellation	Required payments related to the cancellation of the SCP PG&E Contract	G-98-05
7	SCP Tax Reassessment	Provincial sales tax reassessment related to the SCP project, pending resolution of appeal	G-160-06
8	CCT Assessment	This account includes the assessment amounts paid by for Federal Corporate Capital Tax less reimbursements received	G-85-97/G-48-00/G-7-03/G-51-03
9	Pension Variance	Variations between the actual and forecast actuarially-determined pension expenses	G-51-03
10	Insurance Variance	Variations between the actual and forecast insurance expense	G-51-03
11	BCUC Levies	Variations between the actual and approved BCUC levies	G-112-04

Terasen Gas Inc.

Approved Rate Base Deferrals

As at December 31, 2008

Line No.	Particulars	Description	Approval Order #
	(1)	(3)	(4)
1	OSC Certification Compliance	Ongoing costs related to OSC certification compliance M152-109	G-112-04
2	2006 LCT Elimination	Impact of the 2006 elimination of the Large Corporation Capital Tax; offset by the removal of the surtax credit in 2007	G-160-06/G-191-08
3	Terasen Gas Squamish (TGS) O&M Variance	under TGS cost of service and that allowed under the TGI PBR formula (post amalgamation)	G-160-06
4	TGS Amalgamation	Costs incurred to effect the amalgamation of TGI and TGS	G-160-06
5	IFRS Conversion Costs	Costs incurred to convert to International Financial Reporting Standards (IFRS)	G-191-08
6	Deferred Service Line Installation Fee	Amount of the Service Line Installation Fee not recovered from customers for the year 2008 due to changes in the System Extension and Customer Conenction policies	G-153-07/G-191-08
7	Carbon Tax Implementation	One time billing system changes related to the implementation of the Carbon Tax	G-88-08
8	Carbon Tax Cost of Service	Carbon tax associated with compressors and line heaters, offset by the reduced income tax rate in 2008	G-88-08
9	Olympics Security Costs Deferral	Security costs related to the 2010 Olympic and Paralympic games	G-191-08
10	Other Post Employment Benefit Funding (OPEB)	Difference between the amounts funded by ratepayers for OPEB and the amounts actually paid out by TGI	G-135-09/G-7-03/G-51-03

Terasen Gas Inc.
Approved Non-Rate Base Deferrals
As at December 31, 2008

Line No.	Particulars	Description	Approval Order #
	(1)	(3)	(4)
1	Commercial Commodity Unbundling - Capital	Capital costs related to the Commercial Commodity unbundling program	G-25-04/G-57-05
2	Residential Commodity Unbundling - O&M	O&M costs related to the Residential Commodity unbundling program	G-6-06
3	Commercial Commodity Unbundling - O&M	O&M costs related to the Commercial Commodity unbundling program	G-25-04
4	Residential Commodity Unbundling - Capital	Capital costs related to the Residential Commodity unbundling program	G-66-05/G-110-05
5	Lochburn Land Sale	Customers' share of the gain on the sale of the Lochburn land	G-116-07

Footnotes:

1) Data on GHG emissions are presented excluding GHG emissions related to electricity production.

2) "Other" includes steam and waste fuels from the cement industry.
