Strong 1Q as expected

(All figures in CAD unless otherwise noted)

Event

- Fortis reported 1Q08 EPS of $0.58 vs. our estimate of $0.61 and $0.40 in 1Q07.

Impact

- The earnings report should have a neutral impact on the stock.
- Earnings were well above last year but that is because Fortis did not own BC Gas until 2Q07. The gas utility books most of its annual earnings in the first quarter.
- Though the BC Gas acquisition stretched Fortis' balance sheet, it is now clear the deal was accretive to EPS.
- Since Fortis has a strong track record of effectively integrating utility acquisition targets, we believe investors anticipated the accretion.

Earnings revision

- We are not changing our earnings estimates following the 1Q release.
- The small shortfall was caused by seasonal factors in Newfoundland Power that will likely reverse over the next few quarters.
- Our 2009 forecast remains flat to 2008 due to a lower achieved return in Alberta and the loss of earnings from Ontario generation assets.

Price catalyst

- Our 12-month price target of $28 is based on a premium 10.1x EV/EBITDA multiple (Canadian group average 8.5x) and an 18.1x P/E multiple (Canadian group average 17.0x).
- Catalyst: The company's low-risk asset base and strong track record should support a relatively high valuation multiple.

Action and recommendation

- Earnings growth at Fortis will likely slow in 2009 following a strong year in 2008.
- We have confidence management will deliver to expectations, but are concerned valuation could compress absent new growth initiatives.
- Our Underperform ranking is premised on the assumption Fortis shares trade in a tight range while other Canadian energy infrastructure shares will appreciate in value.

Fortis Inc. (FTS CN, Underperform, Target price: C$28.00)

Volatility index definitions*

This is calculated from the volatility of historical price movements.

Very high–highest risk – stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.

* Applicable to Australian/NZ/Canada stocks only

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 31 March 2008

Belize drags down risk profile

(All figures in CAD unless otherwise noted)

Event

- On 26 June, the Public Utilities Commission (PUC) of Belize published its final rates decision for Fortis subsidiary Belize Electricity.
- The PUC approved an automatic monthly adjustment to purchased power costs but retroactively disallowed $12.6m (FTS share) in power costs and reduced the allowed return on assets from 12% to 10%.

Impact

- The final PUC decision should have a slightly negative impact on the stock. Problems with the Belize PUC were disclosed in the company's 1Q report but it appeared Fortis might be able to reverse any negative consequences. We now have less hope Fortis will achieve success in the Belize rates case.
- We believe the 10% return on assets is well below the cost of capital in Belize. Independent experts in the case noted the Belize Government cost of debt is over 9.0%. Given regulatory risk and hurricane risk the cost of equity must be well into the double digits.
- Compressed company valuation could be the most serious impact of the Belize situation. Fortis has generated about 20% of its earnings from utilities in the Caribbean. This regulatory problem highlights that Fortis trades at a premium valuation even though its business mix contains average risk.

Earnings revision

- We are reducing our 2008/9/10 EPS estimates by $0.05. The decision may impact more heavily this year than in future years due to retroactive fuel disallowance costs recorded in 2008.

Price catalyst

- 12-month price target: Our $27 target (down from $28) is still based on a premium 9.7x EV/EBITDA multiple (Canadian group average 9.0x) and an 18.0x P/E multiple (Canadian group average 17.0x). The company's strong track record may support a relatively high valuation multiple despite near-term risks.

Action and recommendation

- Earnings growth has slowed at Fortis. We have confidence management will deliver to expectations, but are concerned valuation could compress absent new growth initiatives. Our Underperform rating (unchanged) is premised on the assumption Fortis shares trade in a tight range while other Canadian energy infrastructure shares will appreciate in value.

Volatility index definitions*

This is calculated from the volatility of historical price movements.

Very high–highest risk – stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.

* Applicable to Australian/NZ/Canada stocks only

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Solid result but earnings growth slows

(All figures in CAD unless otherwise noted)

Event

- Fortis reported normalized 2Q08 EPS of $0.28 vs. our estimate of $0.26 and $0.31 in 2Q08.

Impact

- The earnings report should have a neutral impact on the stock. Earnings were slightly ahead of our expectations, but only because of changes in seasonality at Terasen Gas. Full-year gas distribution results should be in line with our expectations.
- The company booked a $13m ($0.08) charge related to rates changes in Belize that we normalized away from ongoing earnings. Going forward, earnings at Belize Electric will be lower than in prior years though.
- Our thesis on Fortis has been that earnings growth would slow due to the phase-out of tax benefits at FortisAlberta, the elimination of earnings from Ontario generation assets and the slow-growth nature of Terasen Gas.
- These factors all contributed to the bottom line result that has been uncommon to Fortis in the past – EPS that is lower on a YoY basis.
- Absent significant acquisitions, we see earnings flat next year and growing only modestly in 2010. Nothing in the earnings release changes those forecasts.

Earnings revision

- We are not changing our earnings estimates following the 2Q release. Seasonal factors at Terasen Gas should reverse in the back half of the year.

Price catalyst

- Our 12-month price target of $27 is based on a premium 9.7x EV/EBITDA multiple (Canadian group average 9.0x) and an 18.0x P/E multiple (Canadian group average 17.0x).
- Catalysts: The company's strong historical track record should support a relatively high valuation multiple. Acquisitions could impact the stock.

Action and recommendation

- We have confidence that management will deliver to expectations, but are concerned valuation could compress absent new growth initiatives.
- Our Underperform ranking is premised on the assumption FTS shares trade in a tight range while other energy infrastructure shares will appreciate in value.

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Volatility index definitions*

This is calculated from the volatility of historical price movements.

Very high–highest risk – stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.

* Applicable to Australian/NZ/Canada stocks only

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 30 June 2008

	AU/NZ	Asia	RSA	USA	CA
Outperform	41.88%	66.96%	66.13%	50.82%	71.01%
Neutral	42.96%	16.30%	22.58%	44.26%	24.64%
Underperform	15.16%	16.74%	11.29%	4.92%	4.35%

Defensive and expensive

(All figures in CAD unless otherwise noted)

Event

- Fortis reported normalized 3Q08 EPS of $0.26 vs. our estimate of $0.18 and $0.20 in 3Q07.

Impact

- The strong quarter was largely due to seasonal factors but should also lead to a strong year.
- Earnings from regulated utilities in Newfoundland and Alberta were strong in 3Q but will likely come off in 4Q. However, the full year earnings will be higher than anticipated too because hydrology in Belize is boosting Generation.
- The earnings stability at Fortis is as good as anyone due to the regulated and diversified asset base. We anticipate little negative impact arising from the challenging credit and financial conditions ($1.5bn of unused lines of credit).
- The only damper on the 3Q report was that sales growth at the 'growth engine' Western Canadian utilities was slow even considering weather normalization (actual sales were down YoY).
- We continue to believe that organic growth at Fortis is slowing due to lower achieved ROEs, economic stagnation and the expiry of an Ontario power contract next year.

Earnings revision

- We are taking our 2008 and 2009 EPS up from $1.50 and $1.50 to $1.60 and $1.55 (Belize Hydro). Our 2010 EPS is unchanged at $1.60.

Price catalyst

- Our 12-month price target of $24 is based on a premium 9.5x EV/EBITDA multiple (Canadian group average 8.5x) and a 15.5x P/E multiple (Canadian group average 14.5x).
- Catalysts: Acquisitions and slow but steady growth. At some point next year the company may have to issue equity to fund its organic growth program.

Action and recommendation

- We have confidence that management will deliver to expectations, but are concerned valuation could compress once investors move out of purely defensive stocks or if the company announces a large acquisition. We are maintaining our Underperform rating.

Please refer to the important disclosures and analyst certification in the Important Disclosures section of this document, or on our website www.macquarie.com.au/research/disclosures.

Volatility index definitions*

This is calculated from the volatility of historical price movements.

Very high–highest risk – stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.

* Applicable to Australian/NZ/Canada stocks only

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds

Earnings headwinds even for ‘defensive’ FTS

(All figures in CAD unless otherwise noted)

Event

- Fortis announced on 2 December that it will issue up to 13.5m new common shares by way of a bought deal.
- Separately, we believe the sharp economic downturn could negatively impact earnings.

Impact

- The combination of equity dilution and a slowing economy will likely negatively impact our prior EPS forecasts.
- The equity itself is not significantly bad news. It increases the shares outstanding by up to 8.5% but should reduce corporate costs (interest expense).
- Equity issuance also positions Fortis well for continued organic growth investments in its regulated utilities and potentially for small acquisitions (but not large ones) without issuing further equity.
- Despite Fortis’ reputation as a purely defensive regulated Canadian utility, we believe earnings could be negatively impacted by the economic downturn.
- The company’s real estate division (makes up about 11% of earnings this year) and its regulated Caribbean utilities (makes up about 12% of earnings this year) could both soften.
- We have previously written (and it is probably now widely known) that the unregulated hydroelectric assets will also produce less earnings in 2009.

Earnings revision

- We are reducing our 2009–10 EPS estimates by $0.05 to $1.50 and $1.55.

Price catalyst

- 12-month price target: Unchanged at $24.00 based on a 15.5x multiple of 2010 forecast EPS and a 9.9x EV/EBITDA multiple.
- Catalyst: Acquisitions and potentially softening earnings.

Action and recommendation

- Fortis shares have performed in line with the group this year despite slowing EPS growth. We attribute the performance to the company’s relatively defensive business mix and proven management. However, the stock could stagnate or depreciate in value due to market saturation, downside EPS surprises and expensive valuation. We recommend selling some shares to buy cheaper utility stocks like ATCO and TransAlta.

List of 2009 headwinds is long

The management team at Fortis has defied sceptics in the past but delivering EPS growth in 2009 without doing a major acquisition would be nothing short of heroic. Several headwinds were already present in the business earlier this year.

- **Loss of Rankin Dam contract –** The company has had a contract to sell about 700GW-hrs to the Ontario market at spot prices. This contract disappears in 2Q09 and probably removes about $10–12m in earnings.
- **Return to normal hydrology in Belize –** Belize is having an exceptional hydrology year in 2008 that will not likely continue in 2009 unless record rainfalls repeat. A return to normal hydrology in Belize could remove $5m in earnings.
- **Equity issuance –** Fortis has long stated that it requires a consistent stream of new equity to fund utility capex. However, we had estimated the company would only issue $200m in 2009 but instead it appears the company will issue about $300m.

Other factors have recently conspired to potentially dampen earnings in the coming quarters.

- **Slowing electricity sales in the Caribbean –** Fortis owns regulated electric utilities in Grand Cayman and Belize. We believe sales will slow – especially in Grand Cayman – in the context of a deep recession. We are now modelling Caribbean Utilities earnings flat for 2009–10 with sales growth at only about 2% compared to normal growth of 4–5%.
- **Lower room rates in properties –** Fortis owns several hotel properties across Canada that generally experience only small fluctuations in occupancy but still must feel some impact from the recession. In 3Q, the company noted that revenue per room was up YTD but down slightly in the quarter. We now anticipate further modest deterioration in occupancy and revenue per room.
- **Potential impact of Abitibi mill closure in Newfoundland –** Fortis is a 51% owner of hydroelectricity assets producing about 590GW-hrs in Newfoundland. Abitibi is the other 49% owner. The Abitibi operations at Grand Falls and Bishop's Falls take 450GW-hrs of the production and Newfoundland Hydro takes the rest. The recent announcement that Abitibi will close the Grand Falls mill in March of 2009 may not have a big impact on the operations if Newfoundland Hydro agrees to take excess energy production, but we doubt the mill closure can be anything but incrementally negative for the hydroelectricity assets.
- **Lower allowed ROEs –** Fortis owns several regulated utilities in Canada that will likely face lower allowed ROEs in 2009. We believe the company is particularly vulnerable to a reduction in British Columbia Utilities Commission (BCUC) allowed ROE. In 2008 the allowed ROE for BC Gas was 8.62% based on a forecast 10-Year Canada Bond yield of about 4.5%. The NEB allowed ROE for 2009 was set using a 3.85% forecast 10-Year Canada Bond yield. That means the BC Gas allowed ROE could drop by about 75 basis points in 2009, translating into an earnings reduction of about $5–6m.

Growth in rate base at the Western Canadian utilities is the one significant factor offsetting these headwinds. But we see rate base additions adding only about $6m in incremental profit next year – materially less than the negative impacts of the headwinds listed above.

In this context, it is difficult to forecast anything but an earnings reduction at Fortis in 2009. Many other companies will face economic headwinds causing earnings reductions next year. But most of those companies are not trading at big premiums. Fortis is trading at almost 17.0x forward earnings and over 10.0x EBITDA vs. a group average of 15.0x and 8.0x. This premium valuation could diminish in the coming quarters if investors realize not even Fortis management can deliver against these headwinds. We continue recommending a reduction in exposure to Fortis and an increase in exposure to cheaper utility/infrastructure stocks like ATCO and TransAlta.

Volatility index definitions*

This is calculated from the volatility of historical price movements.

Very high–highest risk – stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.

* Applicable to Australian/NZ/Canada stocks only

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Not much wrong except slower growth and high valuation

(All figures in CAD unless otherwise noted)

Event

- Fortis reported 4Q08 EPS of $0.48 versus our estimate for $0.47 and compared with $0.45 in 4Q07.

Impact

- The earnings report is Neutral to the stock and in line with expectations.
- Business units are generally running well at Fortis. Regulated utilities are reliable as usual and record hydrology (especially in Belize) boosted results.
- We remain concerned that the Properties division will show cracks as the economy softens. Earnings in the segment were down YoY and this trend will likely continue into 2009.
- Also, allowed returns on equity will likely decline unless regulators across the country alter the ROE formula – something they have been reluctant to do in past years.
- Softness in Properties, a return to normal hydrology, lower allowed returns, and the loss of a power contract in Ontario will probably soften earnings at Fortis, but not crater them.
- Fortis has ample liquidity, but with a $1bn+ capex program in 2009 (compared with cashflow from operations of about $650m), it probably has little balance sheet room to make significant acquisitions, despite the recent equity issuance.

Earnings revision

- We are maintaining our 2009–2010 EPS estimates and introducing a 2011 estimate of $1.65.

Price catalyst

- 12-month price target: Unchanged at $24.00 based on a 15.5x multiple of 2010 forecast EPS and a 9.5x EV/EBITDA multiple.
- Catalyst: Acquisitions and potentially softening earnings.

Action and recommendation

- Fortis shares have underperformed shares of the most directly comparable companies (Enbridge, TransCanada, Emera, CU) over the past year. There is probably some underperformance left to come due to softening earnings and still premium valuation. But we could get comfortable buying the stock on any further significant weakness, given the potential for a return to growth in 2011 and our confidence in management to create future value.

MGL provides a guarantee to the Monetary Authority of Singapore in respect of the obligations and liabilities of Macquarie Capital Securities (Singapore) Pte Ltd for up to SGD 35 million. This research has been prepared for the general use of the wholesale clients of the Macquarie Group and must not be copied, either in whole or in part, or distributed to any other person. If you are not the intended recipient you must not use or disclose the information in this research in any way. Nothing in this research shall be construed as a solicitation to buy or sell any security or product, or to engage in or refrain from engaging in any transaction. In preparing this research, we did not take into account the investment objectives, financial situation and particular needs of the reader. Before making an investment decision on the basis of this research, the reader needs to consider, with or without the assistance of an adviser, whether the advice is appropriate in light of their particular investment needs, objectives and financial circumstances. There are risks involved in securities trading. The price of securities can and does fluctuate, and an individual security may even become valueless. International investors are reminded of the additional risks inherent in international investments, such as currency fluctuations and international stock market or economic conditions, which may adversely affect the value of the investment. This research is based on information obtained from sources believed to be reliable but we do not make any representation or warranty that it is accurate, complete or up to date. We accept no obligation to correct or update the information or opinions in it. Opinions expressed are subject to change without notice. No member of the Macquarie Group accepts any liability whatsoever for any direct, indirect, consequential or other loss arising from any use of this research and/or further communication in relation to this research.

Canadian ROE decisions could boost regulated utilities

(All figures in CAD unless otherwise noted)

Event

- Canadian regulators are reviewing methodologies for establishing regulated returns on equity. In a full report published today, we reasoned that allowed returns should be increased because of the rising market cost of utility capital. We are raising our rating on the stock from Underperform to Neutral on this basis.

Impact

- The current ROE formulas across Canada establish returns using the long government bond yield as a benchmark.
- We believe this methodology now fails to meet the key regulatory criterion that regulated returns should be in line with comparable investments.
- Fortis owns regulated utilities across Canada that could benefit from an increase in allowed ROEs.
- Currently the Alberta Utilities Commission (AUC) is holding a generic hearing on the matter and Fortis owns a large regulated utility in that province.
- We believe that other provinces in which Fortis owns utilities – such as Newfoundland and British Columbia – will move in line with the National Energy Board and AUC.
- A 50 basis point increase in the allowed ROE across all of the Fortis' Canadian regulated utilities impacts EPS by about $0.07.

Earnings revision

- We are raising our 2009–10 EPS estimates from $1.50/$1.55 to $1.55/$1.60. We had previously assumed returns would be slightly lower in 2009–10 than they were in 2008. We now assume they will be 25 basis points higher.

Price catalyst

- 12-month price target: $25.00 (up from $24) based on a 15.6x multiple of 2010 forecast EPS and a 9.6x EV/EBITDA multiple.
- Catalyst: Acquisitions and regulatory decisions.

Action and recommendation

- Fortis shares have slightly underperformed shares of the most directly comparable companies (ENB, TRP, EMA, CU) over the past year. The stock should perform in line so we are upgrading it to Neutral. We now recommend holding the stock for safety, the potential for a return to growth in 2011, and our confidence in management to create future value.

Volatility index definitions*

This is calculated from the volatility of historical price movements.

Very high–highest risk – stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.

* Applicable to Australian/NZ/Canada stocks only

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 31 December 2008

Calm before the storm?

(All figures in CAD unless otherwise noted)

Event

- Fortis reported normalized 1Q09 EPS of $0.53 vs. our estimate of $0.55 and $0.58 in 1Q08.

Impact

- The earnings report is neutral for the stock. Growth at Fortis is in a lull but by now that is largely reflected in the stock price.
- Several headwinds, including lower allowed returns, weaker power prices, political turmoil in the Caribbean, and a weak real estate market conspired to reduce YoY performance.
- The results are not bad, but are uncharacteristic of Fortis. The company has a longstanding track record of posting consistent earnings growth. This year will be an exception.
- Growth should return to the company over the next couple of years, though, largely due to regulated rate base investments in Canada and the potential for higher allowed returns. Yet, we are forecasting growth rates that fall well short of historical growth rates that were at a premium to the utility group.
- The earnings report was eerily quiet and uneventful. Now that credit markets have stabilized (if not significantly improved), we wonder whether Fortis will make a large acquisition to regain its reputation as Canada's growth utility.
- Absent a significant acquisition, we see no need for new equity in the foreseeable future. The Terasen Gas assets are moderating the growth rate but generating sufficient cash to fund the large utility capital program.

Earnings revision

- We are maintaining our EPS estimates.

Price catalyst

- 12-month price target: $25.00 (down from $26.00 due to sector multiple compression) based on a 14.7x multiple of 2010 forecast EPS and a 9.3x EV/EBITDA multiple.
- Catalyst: Acquisitions and regulatory decisions.

Action and recommendation

- Fortis shares should continue performing in line with the Canadian group this year so we are maintaining our Neutral rating. The stock is not cheap, but we recommend holding the stock for safety, the potential for a return to growth in 2011, and our confidence in management to create future value.

Volatility index definitions*

This is calculated from the volatility of historical price movements.

Very high–highest risk – stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.

* Applicable to Australian/NZ/Canada stocks only

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 31 March 2009

	AU/NZ	Asia	RSA	USA	CA	EUR
Outperform	40.44%	49.55%	44.83%	38.49%	67.19%	43.84%

6 November 2009

Fortis

No unforced errors

Event

- Fortis reported normalized 3Q09 EPS of C$0.21 vs our estimate of C$0.22 and C$0.27 in 3Q08. The anticipated loss of a power sale contract in Ontario reduced earnings relative to last year.

Impact

- The earnings report should have a neutral impact on the stock. Earnings were lower YoY but that should have been anticipated. Importantly, Fortis has experienced few if any significant shocks to the business in what has been a challenging environment for most companies.
- Getting growth rates back to a premium relative to peers is Fortis' challenge. Following years of above-average growth through astute acquisitions, the business has for now slowed, yet the shares continue trading at a premium.
- Expansion of regulated utilities will still drive respectable 4% organic growth (lower this year, higher next year). And, no doubt that business has a lower risk profile than most. But achieving significantly higher growth will require a 100–200bp increase in allowed returns and/or material accretive acquisitions.
- In management's normally proactive way, Fortis utility subsidiaries across the country have applied for higher allowed returns. We have argued that returns should move up, and calculated that every 50bp are worth C$0.07 in EPS for Fortis. Achieving some success is likely but achieving great success on this front is never a foregone conclusion, though.
- At the same time, making accretive acquisitions in Canada is difficult. The income funds have a low cost of capital and remain aggressive on price (witness the AltaGas acquisition of gas distribution assets that could have fit with Fortis). Cross-border acquisitions are possible but fraught with risk and uncertainty.

Earnings and target price revision

- We are maintaining our EPS estimates and target price.

Price catalyst

- 12-month price target: C$26.00 based on an EV/EBITDA methodology.
- Catalyst: Stable earnings and dividends and the potential for acquisitions.

Action and recommendation

- The earnings report shows Fortis is fairly valued. The company has solid growth but is not invulnerable to a flat year from time to time. It trades at a premium EV/EBITDA multiple, but that can probably be justified by the relatively high leverage it can carry in the regulated utility business, and by the potential for modestly higher allowed returns in that business. Our Neutral rating reflects our view that, while holding Fortis shares probably cannot hurt, we see no compelling reason to actively accumulate the stock pending further news on any acquisitions.

Fortis

West beats East in ROE Bowl

Event

- The Newfoundland Public Utilities Board (NPUB) and British Columbia Utilities Commission (BCUC) delivered their ROE decisions this week.

Impact

- Regulatory decisions from the East Coast and West Coast regulators stood in stark contrast. While Newfoundland denied many of the company's revenue drivers, British Columbia materially boosted allowed returns.
- The good news for FTS shareholders is that, despite having its roots in Newfoundland, the BC operations in FTS far outweigh those on "The Rock".
- The BCUC was the last in a string of Canadian regulators to abandon prior formulae based solely on government bonds and to boost allowed returns and equity thickness for regulated pipelines and utilities.
- The BCUC raised its allowed ROE by about 100 basis points to 9.5% and also its equity thickness by about 500 basis points to 40.0%. In so-doing, it essentially followed the National Energy Board's logic to a tee, both in the establishment of principles and the application of them to using the US utility costs of capital.
- Unlike the Ontario Energy Board, the BCUC failed to replace the old formula ROE with a new updated adjustment mechanism. Instead, the current allowed ROE will remain in place until it is reviewed in a subsequent hearing. The Board gave FTS subsidiary Terasen Gas until 31 December 2010 to file evidence.

Earnings and target price revision

- We already raised estimates twice on FTS in anticipation of higher allowed ROEs. As recently as 16 November, we raised them by C$0.05. Since then, there have been two relatively negative developments (the NPUB decision and a settlement in BC to eliminate incentive rates) now offset by this positive decision. Therefore, we are not changing our 2010/11 estimates. We are raising our 2009 EPS estimate from C$1.55 to C$1.60 because the decision is effective as of July 2009. We are also raising our target price by C$1.00 now that the higher ROE is certain.

Price catalyst

- 12-month price target: C$29.00 based on an EV/EBITDA methodology.
- Catalyst: Stable earnings and the potential for acquisitions.

Action and recommendation

- Like much of the Canadian energy infrastructure group, Fortis' stock has run up and is expensive. But the appetite for yield and safety will likely keep the stock at higher trading multiples for now. We maintain our Neutral rating.

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Australian/NZ/Canada stocks only

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 30 September 2009

Fortis

Even FTS can't fully escape recession

Event

- Fortis reported normalized 4Q09 EPS of C$0.48 vs our estimate of C$0.55 and C$0.48 in 4Q08.

Impact

- Neutral to slightly negative. Canadian regulated utilities are performing well, but earnings remain contained in the Caribbean and Properties segments.
- It isn't often that FTS reports full year earnings that are lower than the prior year, but that is what happened in 2009. We do not expect this rare phenomenon to recur since regulated assets are growing and allowed returns have risen.
- But growth may not come on at as fast a pace as FTS investors are used to. We attribute this trend to the recession, not to management issues. The Properties division has slightly declining earnings despite making a C$50m acquisition in late 2007 and then spending another C$40m in capital over the past two years.
- And the "Battle for Belize" that Fortis is waging with the local government and that results in suboptimal returns for the regulated assets there has not waned. We view that issue as relating to recession conditions as well. When the economy weakens in the Caribbean, governments tend to seek utility rate reductions.
- There isn't much power price exposure left in FTS, but to the extent there is exposure, it has had a negative impact during the economic downturn and compounded other issues last year.
- Going forward, we see the company as much less sensitive to the economy. In reality, the Generation, Properties and Caribbean earnings will only make up 15–20% of total earnings this year and even less over time.

Earnings and target price revision

- We are reducing our 2010/11 EPS estimates by C$0.05 to C$1.70/C$1.80 due to lower non-regulated earnings and higher corporate expenses. We are also introducing a 2012 EPS estimate of C$1.90 assuming the company issues C$150m of equity over the next 12–18 months (would be C$1.95 without the equity).

Price catalyst

- 12-month price target: C$29.00 based on an EV/EBITDA methodology.
- Catalyst: Stable earnings and potential acquisitions.

Action and recommendation

- Our C$29 target price is based on a premium 9.7x forward EBITDA and 16.1x forward P/E. The stock may not move up much given its relatively high valuation, but owning it probably can't hurt given its relative stability going forward in choppy markets.

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Australian/NZ/Canada stocks only

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

3 May 2010

Fortis

Range-bound pending an acquisition

Event

- Fortis reported 1Q10 EPS of C$0.58, in line with our estimate and compared to C$0.53 in 1Q09.

Impact

- The impact of the earnings report is neutral. Profits lifted YoY primarily due to regulatory decisions across Canada last year that boosted allowed returns.
- Growth is steady, if unexciting, across the Canadian regulated utility businesses. Going forward, the C$1.0bn annual capex program should drive annual EPS and dividend growth of around 5.0% absent acquisitions.
- This growth could temporarily accelerate in an economic recovery scenario. Returns have compressed and could rebound in the Properties and Caribbean Utilities segments, two areas that can be considered as economically sensitive.
- Yet on the other hand, it is not inconceivable the company could face some reversal of gains made on regulated utility returns in Canada. Alberta will review the allowed return again in 2011 and BC will review it periodically. Given credit spread compression and continued low bond yields, the 100–150bp gains made on allowed ROEs are more likely to erode slightly than expand, in our view.
- Good news for Fortis shareholders came in the form of a deal not done last week. Fortis was widely rumoured as a front-runner in the LG&E acquisition from European utility giant E.ON. The market reacted negatively to the high price (US$7.6bn) PPL bid for the asset.
- But despite ultimately passing on LG&E, it is clearer than ever that Fortis needs acquisitions to get back to the premium EPS growth roots it left behind in the wake of its 2007 BC Gas acquisition (EPS CAGR only ~ 4.2% since 2006).

Earnings and target price revision

- We are slightly reducing our 2010/11/12 EPS estimates by C$0.05 to C$1.65/C$1.75/C$1.85 due to higher than anticipated corporate costs and an assumed equity issue to finance organic growth in mid-2011.

Price catalyst

- 12-month price target: C$29.00 based on an EV/EBITDA methodology.
- Catalyst: Growth projects, potential acquisitions and regulatory decisions.

Action and recommendation

- Holding Fortis shares for yield and modest appreciation can't hurt. However, given premium valuation (17.0x P/E and 9.4x EBITDA) and lack of catalyst pending acquisitions, we believe it is unlikely to outperform the group. We maintain our Neutral rating and C$29 target price.

Fortis Inc. (FTS CN, Neutral, Target price: C$29.00)

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Australian/NZ/Canada stocks only

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

5 August 2010

Fortis

Uncharacteristic lack of good news

Event

- FTS reported 2Q10 EPS of C$0.32 in line with our estimate and compared to C$0.31 in 2Q09. The stock traded off on the earnings report.

Impact

- The report was neutral to slightly negative for the stock. Earnings were in line but the absence of positive developments in the quarter is uncharacteristic and is a small disappointment due to the market's premium expectations.
- Our primary concern for Fortis is the prospect for slowing growth due to the potential for modest rollback in allowed ROEs and for a continued lack of accretive acquisition activity.
- In our opinion, returns on equity are vulnerable out in Western Canada due to lacklustre utility sales and the recent steep drop in bond yields.
- Lack of sales growth can pressure returns because absent a reduction in returns rates have to rise. In Alberta sales growth was running in the 2–3% range during 2006–08. This year, sales are down 1% YTD. At FortisBC, sales are down 5.5% YTD. These reductions are only partially due to weather impacts.
- Both Alberta and BC are set to review allowed ROEs for 2011. While we are not advocating for lower returns, we believe the reversal of credit spread widening that precipitated higher returns for 2009–10 could pressure returns in 2011.
- Newfoundland, too, will re-set the ROE for 2011 based on a formula linked to government bond yields. The allowed ROE there is only 9.0%, yet we see more downside risk than upside in that jurisdiction's allowed return.
- We believe incentive regulation (IR) in Alberta can help offset any ROE drag. The company can consolidate its recent growth and improve productivity. However, we doubt any decisions on IR will be forthcoming until mid/late 2012.

Earnings and target price revision

- We are maintaining our estimates and target price.

Price catalyst

- 12-month price target: C$30.00 based on an EV/EBITDA methodology.
- Catalyst: Regulatory decision and growth project announcements.

Action and recommendation

- Our opinion on FTS following the 2Q result is unchanged. We do not think holding shares can hurt as risks are relatively low and the yield is solid. However, the potential for outperformance is low as growth may slow again into 2011 as regulators review their allowed return formulas.

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie First South - South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 30 June 2010

	AU/NZ	Asia	RSA	USA	CA	EUR	
Outperform	50.55%	64.29%	54.41%	45.63%	65.08%	50.26%	(for US coverage by MCUSA, 4.58% of stocks covered are investment banking clients)
Neutral	35.16%	17.15%	38.24%	47.91%	30.69%	35.16%	(for US coverage by MCUSA, 5.56% of stocks covered are investment banking clients)
Underperform	14.29%	18.56%	7.35%	6.46%	4.23%	14.58%	(for US coverage by MCUSA, 0.00% of stocks covered are investment banking clients)

Important disclosure information regarding the subject companies covered in this report is available at www.macquarie.com/research/disclosures.

Analyst Certification:
The views expressed in this research accurately reflect the personal views of the analyst(s) about the subject securities or issuers and no part of the compensation of the analyst(s) was, is, or will be directly or indirectly related to the inclusion of specific recommendations or views in this research. The analyst principally responsible for the preparation of this research receives compensation based on overall revenues of Macquarie Group Ltd ABN 94 122 169 279 (AFSL No. 318062) (MGL) and its related entities (the Macquarie Group) and has taken reasonable care to achieve and maintain independence and objectivity in making any recommendations.

General Disclaimers:
Macquarie Securities (Australia) Ltd; Macquarie Capital (Europe) Ltd; Macquarie Capital Markets Canada Ltd; Macquarie Capital Markets North America Ltd; Macquarie Capital (USA) Inc; Macquarie Capital Securities Ltd and its Taiwan branch; Macquarie Capital Securities (Singapore) Pte Ltd; Macquarie Securities (NZ) Ltd; Macquarie First South Securities (Pty) Limited; Macquarie Capital Securities (India) Pvt Ltd; Macquarie Capital Securities (Malaysia) Sdn Bhd; Macquarie Securities Korea Ltd and Macquarie Securities (Thailand) Ltd are not authorized deposit-taking institutions for the purposes of the Banking Act 1959 (Commonwealth of Australia), and their obligations do not represent deposits or other liabilities of Macquarie Bank Limited ABN 46 008 583 542 (MBL) or MGL. MBL does not guarantee or otherwise provide assurance in respect of the obligations of any of the above mentioned entities. MGL provides a guarantee to the Monetary Authority of Singapore in respect of the obligations and liabilities of Macquarie Capital Securities (Singapore) Pte Ltd for up to SGD 35 million. This research has been prepared for the general use of the wholesale clients of the Macquarie Group and must not be copied, either in whole or in part, or distributed to any other person. If you are not the intended recipient you must not use or disclose the information in this research in any way. If you received it in error, please tell us immediately by return e-mail and delete the document. We do not guarantee the integrity of any e-mails or attached files and are not responsible for any changes made to them by any other person. MGL has established and implemented a conflicts policy at group level (which may be revised and updated from time to time) (the "Conflicts Policy") pursuant to regulatory requirements (including the FSA Rules) which sets out how we must seek to identify and manage all material conflicts of interest. Nothing in this research shall be construed as a solicitation to buy or sell any security or product, or to engage in or refrain from engaging in any transaction. In preparing this research, we did not take into account your investment objectives, financial situation or particular needs. Before making an investment decision on the basis of this research, you need to consider, with or without the assistance of an adviser, whether the advice is appropriate in light of your particular investment needs, objectives and financial circumstances. There are risks involved in securities trading. The price of securities can and does fluctuate, and an individual security may even become valueless. International investors are reminded of the additional risks inherent in international investments, such as currency fluctuations and international stock market or economic conditions, which may adversely affect the value of the investment. This research is based on information obtained from sources believed to be reliable but we do not make any representation or warranty that it is accurate, complete or up to date. We accept no obligation to correct or update the information or opinions in it. Opinions expressed are subject to change without notice. No member of the Macquarie Group accepts any liability whatsoever for any direct, indirect, consequential or other loss arising from any use of this research and/or further communication in relation to this research. Clients should contact analysts at, and execute transactions through, a Macquarie Group entity in their home jurisdiction unless governing law permits otherwise.

8 November 2010

Fortis

ROE-driven growth could reverse in 2011

Event

- Fortis (FTS) reported 3Q10 EPS of $0.26 vs our estimate of $0.24 and $0.21 in 3Q09.

Impact

- We see the earnings report as neutral for the stock. Earnings were slightly ahead of our estimate due to seasonal factors in 3Q (Belize hydrology and Properties revenues) that will likely reverse in 4Q.
- Fortis continues developing regulated and contracted infrastructure projects that deliver solid returns. The latest example is the 335MW Waneta Expansion hydroelectricity project.
- Our main concerns about FTS are the potential for a reduction in allowed returns and the stock's relatively low free cash yield compared to the peer group.
- Last year, regulators in Alberta and BC boosted allowed returns primarily due to widening credit spreads. As those conditions are no longer in place, we see a risk the increase could reverse in 2011/12.
- A 100bp reduction in allowed ROEs in both provinces is not out of the question (we are not advocating for it, but we see it as a risk). Last year, the company's gas utility, which makes up the lion's share of Western Canadian rate base, secured a 103bp increase in the ROE and a 500bp increase in the equity ratio.
- In our estimation, a 100bp reduction in allowed ROEs in Alberta and BC would impact EPS by about $0.14. It appears the allowed return will be examined in Alberta for 2011, while in BC it may take until 2012 (not clear at this time).

Earnings and target price revision

- We are reducing our 2011 EPS estimate by $0.05 to $1.70 on the risk of a 100bp reduction in allowed Alberta ROEs. We are reducing our 2012 estimate by $0.10 to $1.75 considering the potential impact in Alberta and a 50bp reduction in the allowed ROE in BC.

Price catalyst

- 12-month price target: C$30.00 based on an EV/EBITDA methodology.
- Catalyst: Regulatory decision and growth project announcements.

Action and recommendation

- FTS management continues navigating well in its regulatory landscape. However, a reduction in allowed returns may be inescapable. At the same time, the stock has one of the lowest free cash yields in our coverage universe (6.8% on 2012). Therefore, we recommend reducing holdings at these levels.

Important disclosures:

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie First South - South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 30 September 2010

	AU/NZ	Asia	RSA	USA	CA	EUR	
Outperform	51.06%	64.41%	55.07%	46.58%	66.99%	50.00%	(for US coverage by MCUSA, 13.73% of stocks covered are investment banking clients)
Neutral	34.15%	17.31%	36.23%	48.40%	28.71%	36.81%	(for US coverage by MCUSA, 11.76% of stocks covered are investment banking clients)
Underperform	14.79%	18.28%	8.70%	5.02%	4.31%	13.19%	(for US coverage by MCUSA, 0.00% of stocks covered are investment banking clients)

Long ENB vs Short FTS

Event

- We believe the pair trade of long Enbridge (ENB) to short Fortis (FTS) is compelling.

Analysis

- When the dust has settled on the year 2010, we believe ENB will have posted 14% EPS growth and raised its dividend by 15% – almost double the EPS growth rate and more than four times the dividend growth rate of FTS in the same year. Yet, the stocks have essentially performed in line.
- One of three things is driving the inconsistency between growth and share performance: ENB will not continue growing at a premium rate, ENB was relatively expensive in the first place, or there is a market imperfection and a trading opportunity. We believe it is the latter point driving relative performance.
- Our analysis suggests ENB will grow at a premium rate to FTS primarily for two reasons. First, ENB generally achieves higher returns on reinvested capital than FTS. The ENB assets and new investments, particularly intra-Alberta pipelines, often operate under negotiated tolls that drive higher returns than the standard ROEs realized on the FTS heavily-regulated distribution utility assets.
- Second, even to the extent ENB's assets are regulated, the embedded ROEs are at a premium to the nameplate regulated return (eg, Alberta Clipper at a 225bp premium to nameplate ROE). So, since both companies have similar payout ratios (about 70% of earnings), we believe ENB will grow faster than FTS, all else equal.
- Whether we think ENB will grow faster than FTS or not, the companies themselves appear to believe it. ENB has guided to "double-digit" growth through 2014 and, while FTS does not provide guidance, the 3.5% dividend increase for 2011 appears to signal a much slower growth rate.
- Assuming our estimates are correct, ENB is not more expensive than FTS. On the contrary, it is cheaper. It trades at 17.4x our 2012 GAAP EPS vs FTS at 19.5x. Moreover, the gap between the companies' price-to-cash-tax multiples is even wider (13.2x vs 18.5x) since ENB's cash tax rate will probably be half that of FTS'. As important, we estimate ENB's free cash yield at 9.3% vs FTS at 6.2%.
- It is important to highlight that ENB and FTS have comparable balance sheet metrics, since both earnings multiples and free cash yields are levered measures of valuation. Both have about 65% debt-to-capital and 5.5x debt-to-ebitda ratios.

Conclusion

- ENB and FTS are comparable companies due to their relatively low-risk profiles, similar balance sheets and regulated asset bases. On this basis, the stocks make a good pair trade. As ENB's premium growth and discounted valuation relative to FTS emerge as a consensus view, we believe ENB shares will outperform FTS. We would sell FTS to buy ENB shares now before that view fully proves out.

Important disclosures:

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie First South - South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 30 September 2010

	AU/NZ	Asia	RSA	USA	CA	EUR	
Outperform	51.06%	64.41%	55.07%	46.58%	66.99%	50.00%	(for US coverage by MCUSA, 13.73% of stocks covered are investment banking clients)
Neutral	34.15%	17.31%	36.23%	48.40%	28.71%	36.81%	(for US coverage by MCUSA, 11.76% of stocks covered are investment banking clients)
Underperform	14.79%	18.28%	8.70%	5.02%	4.31%	13.19%	(for US coverage by MCUSA, 0.00% of stocks covered are investment banking clients)

19 January 2011

Fortis

Return roulette

Event

- We are forecasting reductions in allowed returns between 2010 and 2012. Cost of capital filings have now been made in Alberta and British Columbia.

Impact

- It is too early to judge the outcome of allowed return proceedings but we remain cautious on potential outcomes because credit spreads – a key driver of higher allowed returns on 2009/10 – have narrowed.
- In Alberta, a generic hearing has commenced in earnest with round 1 evidence filings this winter (hearing in May). In 2009, The AUC boosted FTS Alberta's allowed return from 8.51% ROE on 37% equity to 9.0% ROE on 41% equity.
- In BC, the regulator directed Terasen Gas (the FTS gas utility) to study alternative ROE formulae and report back. On 8 December, FTS recommended that the regulator not adopt a formula return nor re-examine cost of capital at this time. That is not totally surprising since the BCUC had boosted the company's allowed return from 8.47% ROE on 35% equity to 9.5% ROE on 40% equity.
- We believe that any potential reductions in allowed returns on Alberta and BC will be based on perceived changes in the cost of risk and corporate credit spreads between mid-2009 and now.
- The Alberta regulator's decision specifically cited uncertainty over whether credit spreads would normalize as a rationale for boosting allowed returns for the 2009 and 2010 periods. Since those spreads have indeed normalized, at least one rationale for having boosted returns is gone.
- The BC regulator's decision relied primarily on DCF-based cost of equity tests on US utilities whose stocks were depressed during the credit crisis. Re-doing those tests today would likely result in lower required returns on equity.

Earnings and target price revision

- We are maintaining our estimates as we have already reduced them (on 5 November 2010) to factor our forecast reductions in allowed returns.

Price catalyst

- 12-month price target: C$31.00 based on an EV/EBITDA methodology.
- Catalyst: Regulatory decisions and growth project announcements

Action and recommendation

- FTS management continues navigating well in its regulatory landscape, in our view. However, a reduction in allowed returns may be inescapable. At the same time, the stock has one of the lowest free cash yields in our coverage universe (6.2% on 2012). Therefore, we recommend reducing holdings at these levels.

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie First South - South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 31 December 2010

	AU/NZ	Asia	RSA	USA	CA	EUR	
Outperform	46.38%	62.62%	52.17%	44.99%	67.57%	50.90%	(for US coverage by MCUSA, 13.59% of stocks covered are investment banking clients)
Neutral	37.68%	18.58%	34.78%	50.61%	28.83%	35.48%	(for US coverage by MCUSA, 15.22% of stocks covered are investment banking clients)
Underperform	15.94%	18.80%	13.04%	4.40%	3.60%	13.62%	(for US coverage by MCUSA, 0.00% of stocks covered are investment banking clients)

11 February 2011

Fortis

Reliable but expensive

Event

- FTS reported 4Q10 EPS of $0.49 vs our estimate of $0.48 and $0.48 in 4Q09.

Impact

- The earnings report may be slightly negative for the stock in that earnings came in below consensus ($0.51) and the stock trades at a premium. Relative to our expectations, there were no real surprises though. The Canadian regulated assets are performing as they should as FTS usually manages to earn slightly above their allowed returns due to an efficient operating model. On the other hand, sales and earnings in the Caribbean continue to lag.
- Following the 4Q report, our view is unchanged. We believe that, given potential headwinds on allowed returns, there is insufficient growth in earnings and dividends to justify the share valuation premium.
- So far, ROE headwinds have cropped up only in Newfoundland. A hearing is underway in Alberta, though. Whether there will be any review in BC is still up in the air, so we only assume a 50 basis point reduction starting in 2012.
- In this context, FTS may need a recovery in Belize Electricity earnings to get EPS growth back up above 5%. With only $1.5m in reported net income there last year, we believe the company has not been treated fairly. There may be $0.05 upside to our estimates if the Belize courts and government implement a regulatory policy that is fair and balanced to customers and the company (court decision 1H11).
- The company's capital program continues marching on and up with about $1.2bn of expenditure slated for 2011. Cashflow has strengthened and the DRIP take-up is strong ($80m common shares issued through DRIP last year). Therefore, we are not building any equity issuance into our model over and above the DRIP.
- With that type of organic growth – most of which entails investing in safe Canadian regulated utilities at 1.0x BV – one wonders why FTS continues seeking acquisitions that would undoubtedly be done at a premium to BV.

Earnings and target price revision

- We are maintaining our EPS estimates and introducing a 2013 estimate of $1.80. Our target price is unchanged.

Price catalyst

- 12-month price target: C$31.00 based on an EV/EBITDA methodology.
- Catalyst: Regulatory decisions and growth project announcements.

Action and recommendation

- We view FTS as a solid company. But given the growth profile (one of the slower dividend growers among its direct peers now) and premium valuation, we believe the shares will underperform on a relative basis in 2011.

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie First South - South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 31 December 2010

	AU/NZ	Asia	RSA	USA	CA	EUR

Macquarie Capital Markets Canada Ltd.

Fortis

Upside surprise may not sustain

Event

- FTS reported 1Q11 EPS of $0.67 vs our estimate of $0.61 and $0.58 in 1Q10.

Impact

- The earnings report could be positive for the stock in the near term, but we caution that upside surprises may not sustain. In particular, achieved returns on the fast-growing Alberta utility may compress over the next two years.
- FTS Alberta and all other Alberta electric utilities have experienced accelerated growth recently. Asset expansion is likely sustainable as oil production activity drives asset expansion and extension. Nevertheless, we remain concerned that achieved returns on that growing asset base are unsustainable.
- We have highlighted a risk that the Alberta regulator will reduce allowed returns in the current cost of capital proceeding. Though returns for comparable companies are not lower than the allowed return for FTS Alberta, risk-free rates and credit spreads have both come in since the last hearing on this issue.
- Regulators rarely grant consumer groups (or the companies) everything they are asking for but we note the consumer advocate has proposed an allowed return that could reduce EPS by about $0.10 relative to reported results.
- Outside of the Canadian regulated utility growth, there is not a lot to get excited about in the earnings report. Other businesses such as Caribbean, generation and properties lack growth at this time (though we acknowledge management has wisely avoided significant capital investment in the Caribbean lately).
- Business development costs are down $2m YoY in the quarter, which may just mean the company is looking at smaller deals than last year but we believe FTS remains active in seeking acquisition targets.

Earnings and target price revision

- Despite the variance to our forecast in 1Q, we are maintaining our estimates and target price. We expect regulated utility earnings growth will decelerate through the year due to timing issues and a potential reduction in the Alberta allowed ROE.

Price catalyst

- 12-month price target: C$31.00 based on an EV/EBITDA methodology.
- Catalyst: Regulatory decisions and growth project announcements.

Action and recommendation

- FTS management continues to achieve the best possible results from its utility assets. But given the risk of compression in ROEs combined with the company's relatively low free cash yield (7.5% vs group at 9.0%), and dividend yield, we believe the stock will continue to underperform in 2011.

Important disclosures:

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie First South - South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 31 March 2011

	AU/NZ	Asia	RSA	USA	CA	EUR	
Outperform	45.65%	65.72%	59.70%	43.02%	68.91%	51.16%	(for US coverage by MCUSA, 14.36% of stocks covered are investment banking clients)
Neutral	39.49%	19.00%	29.85%	53.09%	26.43%	35.73%	(for US coverage by MCUSA, 17.55% of stocks covered are investment banking clients)
Underperform	14.86%	15.28%	10.45%	3.89%	4.66%	13.11%	(for US coverage by MCUSA, 0.00% of stocks covered are investment banking clients)

Contents

Analyst's Perspective 03 Jan 2012

Fortis' predominant regulated revenue mix provides investors a stable earnings profile and support for the stock's consistent dividend growth. Significant capital expenditures will drive near-term earnings growth and set a base for future free cash flow generation. The company's Canadian regulated utilities operate in constructive regulatory jurisdictions, but with slightly lower allowed returns on equity than its U.S. counterparts. In addition to organic growth, company management has indicated a desire to expand in the U.S. We would view this positively given the similar regulatory structures, and it could be value-accretive given where Fortis' stock traded at year-end 2011 and the typically more favorable allowed returns in the U.S. We forecast normalized earnings can grow at 5% annually through 2015. At a 3.5% dividend yield and trading at 18 times our 2012 earnings forecast, we think Fortis is overvalued.

Key Investment Considerations

- Fortis generates more than 90% of its profit from its regulated utility segment, providing a stable earnings base.
- Across all of its utilities, regulators allow Fortis a 9.5% weighted-average return on equity, which is about 100 basis points lower than regulators allow U.S. utilities on average.
- We think the stock is overvalued as of year-end 2011, with Fortis trading at 18 times our 2012 earnings estimate.

Analyst Note:

Profile

Fortis primarily owns and operates utility transmission and distribution assets in Canada. It has smaller stakes in electricity generation, several Caribbean utilities, and Canadian hotel and commercial real estate. The firm's regulated natural gas operations serve 950,000 customers in British Columbia. Its regulated electric utility operations serve 1.1 million customers throughout Canada and in Grand Cayman and Turks and Caicos. Its Canadian operations accounted for 92% of its total assets as of 2010.

Morningstar Analysis

Fortis' low-risk operations result in stable earnings and support its consistent dividend growth the last four decades.

Thesis 03 Jan 2012

Fortis manages electric and gas regulated utilities in Canada and the Caribbean, resulting in stable operating results. The company's noncore generation and real estate holding operations account for 12% of operating earnings. While we are less excited by the distractions of these noncore operations, we are comforted that management continues to focus on electric and natural gas distribution in North America.

Fortis' main regulated Canadian operations reside in British Columbia, Alberta, and Newfoundland. These relatively low-risk operations result in stable earnings and fund the consistent dividend growth experienced the past four decades. Rate base additions should be significant through 2015, as the company plans to invest CAD 4.8 billion as the healthier Canadian economy drives usage and customer growth. This should allow the firm to increase its rate base at double-digit rates each year during this expansion period. On a weighted-average basis, Fortis' allowed returns on equity in its Canadian service territories are 9.25% after a series of rate increases in 2010. While this return is lower than that typically granted to comparable U.S. utilities, it does not seem unreasonable given the low-risk nature of Fortis' transmission and delivery operations.

The company also operates small utility operations in Belize and the Caribbean. While the allowed returns can be significantly higher than its Canadian operations, these operations also have a much higher risk profile than its Canadian operations. In the summer of 2011, the Government of Belize expropriated Fortis' 70% ownership in Belize Electricity Limited, resulting in an unknown recoverable asset representing 2% of Fortis' assets. While small in nature, the earnings of these operations are exposed to additional risks of economic instability, tenuous regulation, and weather events. Management has indicated it has little interest to expand operations in the Caribbean, which we see as a positive.

We are less enthusiastic about the firm's small presence in the cyclical hotel and commercial real estate industry. However, these holdings are held solely for tax strategy purposes and would likely be spun off should Canadian tax policy change. Currently, the Canadian government disallows entity tax consolidation, and the real estate asset revenues offset holding company expenses, mostly interest. While we believe the strategy behind these assets is sound, we worry they may distract management and drag on growth.

Fortis has expressed interest in expanding its operations through U.S. acquisitions and was outbid in June 2011 for the regulated Central Vermont Public Service Corporation. Strategically, we are encouraged by the similarity of regulatory jurisdictions and operations in the U.S. However, we were concerned by Fortis' relatively steep offer, but we like that management had the discipline to walk away when the price got too rich.

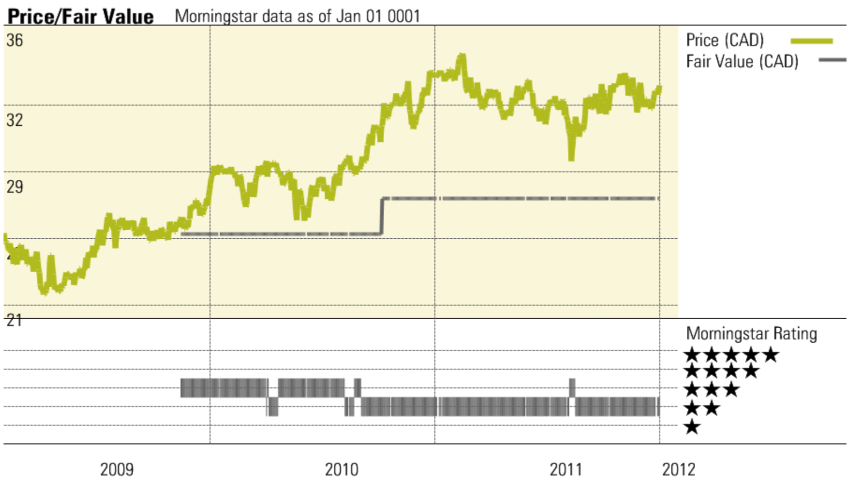
Given the high barriers to entry and regulated nature of Fortis' main operations, we award the company a narrow economic moat. The firm's exposure to noncore areas and foreign markets, though small, leads us to assign it a medium fair value uncertainty rating. We would consider lowering our uncertainty rating if Fortis were to divest the noncore assets.

Valuation, Growth and Profitability 03 Jan 2012

We are reinitiating coverage of Fortis under a new analyst with a CAD 29 fair value estimate, taking into consideration planned rate base additions through 2015. After the significant share dilution that occurred during 2011, we forecast 5% earnings growth in 2012 adjusting for lower dilution and normalized weather conditions. Beyond 2013, we assume 1.5% annual energy use growth at the Canadian utilities and consistent allowed returns on equity. Based on management's guidance, we forecast total investments of

Fortis, Inc. FTS (TSE) | ★★

Last Price	Fair Value	Consider Buy	Consider Sell	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Morningstar Credit Rating	Industry Group
33.37 CAD	29.00 CAD	20.30 CAD	39.15 CAD	Medium	Narrow		NA	—	Utilities - Regulated



CAD 4.6 billion at the utilities through 2015, leading to annualized rate base growth of 6%. We use a 10.0% cost of equity and a 7.5% weighted average cost of capital in our discounted cash flow model.

Scenario Analysis

The most significant near-term driver of our earnings forecast is our annualized energy growth rate at the regulated utilities. If energy growth is 50 bps lower than our 2013 estimate, our earnings per share would fall by 2% and our fair value estimate would decrease by CAD 2. We expect similar changes in earnings per share and fair value if energy growth is 50 bps higher.

Allowed returns at the Canadian utilities are also a significant driver of our valuation estimates. If we assume a 100 bps decrease in allowed returns on equity in 2012 and beyond, our fair value estimate decreases to CAD 21. Better-than-expected allowed returns on equity drive similar upside results. Finally, a 50 bps change in our cost of equity assumption changes our fair value estimate by about CAD 3 per share.

Economic Moat

Fortis owns a difficult-to-replicate network of regulated power generation, transmission, and distribution assets and provides an essential energy source: electricity. In exchange for its monopoly position, regulators set Fortis' returns at levels that aim to keep customer costs low while providing adequate returns for capital providers. This implicit contract between regulators and the utility should, in the long run, allow Fortis to earn its cost of capital, and leads us to assign Fortis' regulated utilities a narrow economic moat. As with all regulated utilities, we think regulatory caps on revenue and returns preclude Fortis from establishing a wide economic moat.

Moat Trend

We assign Fortis a stable moat due to its monopoly position and stable regulatory environment that will continue to allow the firm to earn its cost of capital. We do not expect the regulatory relationship to change in the future. The regulatory framework that caps revenue and returns prevent the firm from attaining a wide moat, as with all regulated utilities that we cover.

Bulls Say/Bears Say

Bulls Say

- The company operates a stable business profile, offering a strong base for consistent earnings.
- With an aggressive capital expenditure plan, rate base growth is forecast to grow at a 6% compound annual growth rate.
- Fortis has consistent dividend growth history, paying consecutive quarterly dividends for four decades and growing the dividend faster than most of its peers in recent years.
- Fortis operations are based in higher-growth regions within Canada, mainly in Alberta and British Columbia.

Bears Say

- The Canadian regulatory environment offers lower allowed returns than its U.S. peers.
- The recent Belize expropriation demonstrates how Caribbean operations offer higher growth opportunities but at a substantially higher risk.
- The company operates noncore hotel and commercial real estate assets, potentially distracting management from core regulated operations.

Financial Health

With a debt/capital ratio of just under 60% and interest coverage of 2.1 times, Fortis' financial health looks reasonably sound, particularly in light of its stable, low-risk business model. Fortis undertook a significant equity offering of 9 million shares resulting in CAD 300 million of proceeds. We expect the company to be active in the capital markets consistent with its current capital structure throughout its capital expenditure plan.

Capital Structure

Between 2011 and 2015, Fortis has CAD 5.5 billion of planned capital expenditures, which will require the company to access the debt and equity capital markets. We anticipate that Fortis will issue CAD 200 million in debt in 2012 and has manageable debt maturities through 2015. The company recently issued significant equity in July 2011 to help finance its capital expenditure plan, and we expect Fortis to issue minimal additional equity in 2012 to accommodate employee stock purchase plans and an executive DRIP plan.

Enterprise Risk

Fortis' key risk to future earnings is regulation. The company faces regulatory risks that create uncertainties around costs and allowed returns, especially given the significant capital expenditure plan from 2011 to 2015. Fortis is also exposed to political and economic instability at its Caribbean operations. With an eye towards acquisitions, the company risks overpaying for regulated U.S. assets and must be mindful of the strategic benefits. As with all regulated utilities, Fortis faces the risk of an inflationary environment that would raise borrowing costs and make other investments more attractive for income-seeking investors.

Stewardship: NA 03 Jan 2012

Stanley Marshall has been president and CEO since 1995, leading a group of experienced utility executives. Total direct compensation was $4.0 million for 2010, which we believe is in line with Fortis' industry group. Marshall's total compensation comprises base salary, annual incentives, stock options, and performance stock units, with 75% of total compensation at risk. We do not like that annual cash incentives are based on earnings per share targets, as EPS can be manipulated and may not be an indication of shareholder value creation. Marshall also has a significant ownership stake of 14 times his salary, which we believe aligns shareholder and management interests. From a corporate governance perspective, we like that the CEO and chairman positions are separated. While the board of directors has vast experience, we would prefer that members of the board have more direct utility experience.

Research Methodology for Valuing Companies

Components of Our Methodology

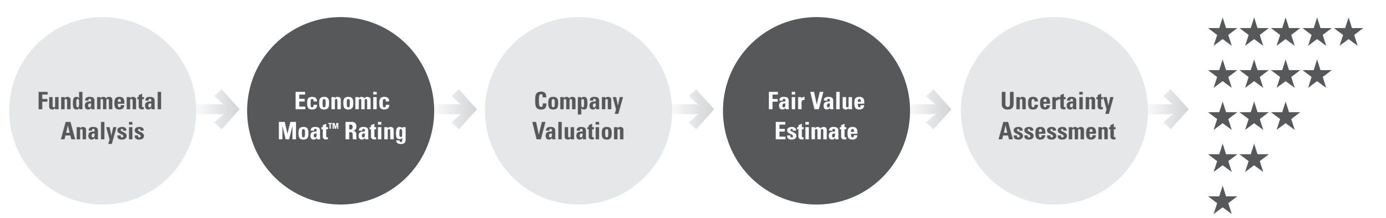
- Economic Moat™ Rating
- Moat Trend™ Rating
- Moat Valuation
- Three-Stage Discounted Cash Flow
- Weighted Average Cost of Capital
- Fair Value Estimate
- Scenario Analysis
- Uncertainty Ratings
- Margin of Safety
- Consider Buying/Selling
- Stewardship Grades
- Financial Health Grades

The Morningstar Rating for stocks identifies companies trading at a discount or premium to our analysts' assessment of their fair value. A number of components drive this rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's intrinsic value based on a discounted cash-flow model, (3) the margin of safety bands we apply to our Fair Value Estimate, and (4) the current stock price relative to our fair value estimate.

The concept of the Morningstar Economic Moat™ Rating plays a vital role not only in our qualitative assessment of a firm's investment potential, but also in our valuation process. We assign three moat ratings—none, narrow, or wide—as well as the Morningstar Moat Trend™ Rating—positive, stable, or negative—to each company we cover. There are two major requirements for firms to earn either a narrow or wide moat rating: (1) the prospect of earning above-average returns on capital; and (2) some competitive edge that prevents these returns from quickly eroding. The assumptions we make about a firm's moat determine the length of "economic outperformance" that we assume in the latter stages of our valuation model. We also quantify the value of each firm's moat, which represents the difference between a firm's enterprise value and the value of the firm if no future net investment were to occur. Said differently, moat value identifies the value generated by the firm as a result of any future net new investment. Our Moat Trend Rating reflects our assessment of whether each firm's competitive advantage is either getting stronger or weaker, since we think of moats as dynamic, rather than static.

At the heart of our valuation system is a detailed projection of a company's future cash flows. The first stage of our three-stage discounted cash flow model can last from 5 to 10 years and contains numerous detailed assumptions about various financial and operating items. The second stage of our model—where a firm's return on new invested capital (RONIC) and earnings growth rate implicitly fade until the perpetuity year—can last anywhere from 0 years (for no-moat firms) to 20 years (for wide-moat companies). In our third stage, we assume the firm's RONIC equals its weighted average cost of capital, and we calculate a continuing value using a standard

Morningstar Research Methodology for Valuing Companies



Analyst conducts company and industry research:

- Financial statement analysis
- Channel checks
- Trade-show visits
- Industry and company reports and journals
- Conference calls
- Management and site visits

Strength of competitive advantage is rated: None, Narrow, or Wide

Advantages that confer an economic moat:

High Switching Costs (Microsoft)

Cost advantage (Wal-Mart)

Intangible assets (Johnson & Johnson)

Network Effect (Mastercard)

Efficient Scale (Lockheed Martin)

Analyst considers past financial results and focuses on competitive position and future prospects to forecast future cash flows.

Assumptions are entered into Morningstar's proprietary discounted cash-flow model.

Analyst uses a discounted cash-flow model to develop a Fair Value Estimate, which serves as the foundation for the Morningstar Rating for stocks.

The analyst then evaluates the range of potential intrinsic values for the company and assigns an Uncertainty Rating: Low, Medium, High, Very High, or Extreme.

The Uncertainty Rating determines the margin of safety required before we would recommend the stock. The higher the uncertainty, the wider the margin of safety.

The current stock price relative to Morningstar's Fair Value Estimate, adjusted for uncertainty, determines the Morningstar Rating for stocks.

The Morningstar Rating for stocks is updated each evening after the market closes.

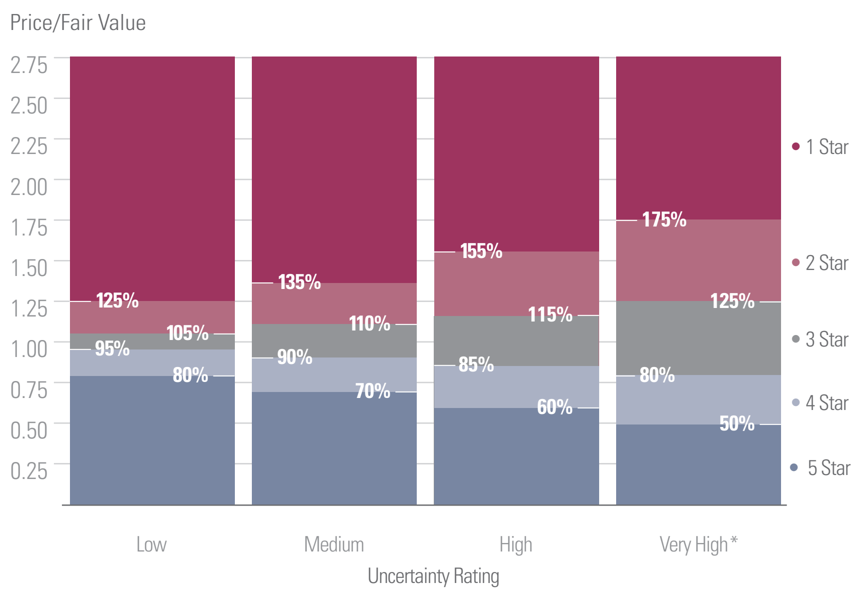
perpetuity formula. In deciding on the rate at which to discount future cash flows, we ignore stock-price volatility. Instead, we rely on a system that measures the estimated volatility of a firm's underlying future free cash flows, taking into account fundamental factors such as the diversity of revenue sources and the firm's fixed cost structure.

We also employ a number of other tools to augment our valuation process, including scenario analysis, where we assess the likelihood and performance of a business under different economic and firm-specific conditions. Our analysts typically model three to five scenarios for each company we cover, stress-testing the model and examining the distribution of resulting fair values.

The Morningstar Uncertainty Rating captures the range of these potential fair values, based on an assessment of a company's future sales range, the firm's operating and financial leverage, and any other contingent events that may impact the business. Our analysts use this range to assign an appropriate margin of safety—or the discount/premium to a fair value we apply in setting our consider buying/consider selling prices. Firms trading below our consider-buying prices receive our highest rating of five stars, whereas firms trading above our consider-selling prices receive our lowest rating of one star.

Our Stewardship Grades show our assessment of a management's commitment to shareholders, and include an analysis of a firm's transparency, incentives and ownership. We also provide Financial Health Grades, which are quantitative measures based on firms' distance to default scores. Distance to default measures the distance between the market value of a company's assets and the book value of its liabilities (expressed in standard deviations of asset value). For our grades, A is equivalent to "Excellent," while F is "Very Poor."

Morningstar Margin of Safety and Star Rating Bands



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Morningstar's Approach to Rating Corporate Credit

- Offers a proprietary measure of the credit quality of companies on our coverage list.
- Encapsulates our in-depth modeling and quantitative work in one letter grade.
- Allows investors to rank companies by each of the four underlying components of our credit ratings, including both analyst-driven and quantitative measures.
- Provides access to all the underlying forecasts that go into the rating, available through our institutional service.

Purpose

The Morningstar Corporate Credit Rating measures the ability of a firm to satisfy its debt and debt-like obligations. The higher the rating, the less likely we think the company is to default on these obligations.

The Morningstar Corporate Credit Rating builds on the modeling expertise of our securities research team. For each company, we publish:

- Five years of detailed pro-forma financial statements
- Annual estimates of free cash flow
- Annual forecasts of return on invested capital
- Scenario analyses, including upside and downside cases
- Forecasts of leverage, coverage, and liquidity ratios for five years
- Estimates of off balance sheet liabilities

These forecasts are key inputs into the Morningstar Corporate Credit Rating and are available to subscribers at select.morningstar.com.

Methodology

We feel it's important to perform credit analysis through different lenses—qualitative and quantitative, as well as fundamental and market-driven. We therefore evaluate each company in four broad categories.

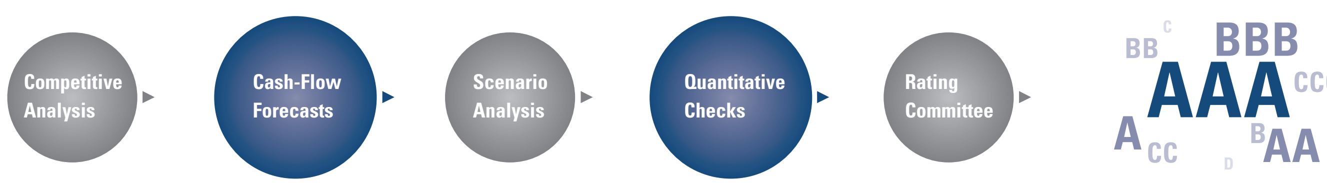
Business Risk

Business Risk captures the fundamental uncertainty around a firm's business operations and the cash flow generated by those operations. Key components of the Business Risk rating include the Morningstar Economic Moat™ Rating and the Morningstar Uncertainty Rating.

Cash Flow Cushion™

Morningstar's proprietary Cash Flow Cushion™ ratio is a fundamental indicator of a firm's future financial health The measure reveals how many times a company's internal cash generation plus total excess liquid cash will cover its debt-like contractual commitments over the next five years. The Cash Flow Cushion acts as a predictor of financial distress, bringing to light potential refinancing, operational, and liquidity risks inherent to the firm.

Morningstar Research Methodology for Determining Corporate Credit Ratings



Competitive Analysis: Analyst conducts company and industry research:

- Management interviews
- Conference calls
- Trade show visits
- Competitor, supplier, distributor, and customer interviews
- Assign Economic Moat™ Rating

Cash-Flow Forecasts: Analyst considers company financial statements and competitive dynamics to forecast future free cash flows to the firm.

Analyst derives estimate of Stress Test Score™

Scenario Analysis: Analysts run bull and bear cases through the model to derive alternate estimates of enterprise value.

Based on competitive analysis, forecasts, and scenario analysis, the analyst assigns Business Risk.

Quantitative Checks: We gauge a firm's health using quantitative tools supported by our own backtesting and academic research.

- Morningstar Bank Solvency Score™
- Distance to Default

Rating Committee: Senior personnel review each company to determine the appropriate final credit rating.

- Review modeling assumptions
- Approve company-specific adjustments

AAA	Extremely Low Default Risk
AA	Very Low Default Risk
A	Low Default Risk
BBB	Moderate Default Risk
BB	Above Average Default Risk
B	High Default Risk
CCC	Currently Very High Default Risk
CC	Currently Extreme Default Risk
C	Imminent Payment Default
D	Payment Default
UR	Under Review
UR+	Positive Credit Implication
UR-	Negative Credit Implication

Morningstar's Approach to Rating Corporate Credit

The advantage of the Cash Flow Cushion ratio relative to other fundamental indicators of credit health is that the measure focuses on the future cash-generating performance of the firm derived from Morningstar's proprietary discounted cash flow model. By making standardized adjustments for certain expenses to reflect their debt-like characteristics, we can compare future projected free cash flows with debt-like cash commitments coming due in any particular year. The forward-looking nature of this metric allows us to anticipate changes in a firm's financial health and pinpoint periods where cash shortfalls are likely to occur.

Morningstar Solvency Score™

The Morningstar Solvency Score™ is a quantitative score derived from both historical and forecasted financial ratios. It includes ratios that focus on liquidity (a company's ability to meet short term cash outflows), profitability (a company's ability to generate profit per unit of input), capital structure (how does the company finance its operations), and interest coverage (how much of profit is used up by interest payments).

Distance to Default

The Distance to Default rating is a quantitative, market-based measure of a company's current financial health. (Distance to Default serves as the basis for Morningstar's Financial Health Grade.) The underlying model treats the equity of a firm as a call option on that firm's assets. Based on estimates of asset volatility and the Black-Scholes option-pricing model, we can estimate the likelihood that the value of the company's assets falls below the value of its liabilities, implying likely default.

For each of these four categories, we assign a score, which we then translate into a descriptive rating along the scale of Very Good / Good / Fair / Poor / Very Poor.

Overall Credit Rating

The four component ratings roll up into a single preliminary credit rating. To determine the final credit rating, a credit committee of at least five senior research personnel reviews each preliminary rating.

We review credit ratings on a regular basis and as events warrant. Any change in rating must be approved by the Credit Rating Committee.

Investor Access

Morningstar Corporate Credit Ratings are available on Morningstar.com. Our credit research, including detailed cash-flow models that contain all of the components of the Morningstar Corporate Credit Rating, is available to subscribers at select.morningstar.com.

Analyst's Perspective 03 Jan 2012

Fortis' predominant regulated revenue mix provides investors a stable earnings profile and support for the stock's consistent dividend growth. Significant capital expenditures will drive near-term earnings growth and set a base for future free cash flow generation. The company's Canadian regulated utilities operate in constructive regulatory jurisdictions, but with slightly lower allowed returns on equity than its U.S. counterparts. In addition to organic growth, company management has indicated a desire to expand in the U.S. We would view this positively given the similar regulatory structures, and it could be value-accretive given where Fortis' stock traded at year-end 2011 and the typically more favorable allowed returns in the U.S. We forecast normalized earnings can grow at 5% annually through 2015. At a 3.5% dividend yield and trading at 18 times our 2012 earnings forecast, we think Fortis is overvalued.

Key Investment Considerations

- Fortis generates more than 90% of its profit from its regulated utility segment, providing a stable earnings base.
- Across all of its utilities, regulators allow Fortis a 9.5% weighted-average return on equity, which is about 100 basis points lower than regulators allow U.S. utilities on average.
- We think the stock is overvalued as of year-end 2011, with Fortis trading at 18 times our 2012 earnings estimate.

Analyst Note:

Profile

Fortis primarily owns and operates utility transmission and distribution assets in Canada. It has smaller stakes in electricity generation, several Caribbean utilities, and Canadian hotel and commercial real estate. The firm's regulated natural gas operations serve 950,000 customers in British Columbia. Its regulated electric utility operations serve 1.1 million customers throughout Canada and in Grand Cayman and Turks and Caicos. Its Canadian operations accounted for 92% of its total assets as of 2010.

Morningstar Analysis

Fortis' low-risk operations result in stable earnings and support its consistent dividend growth the last four decades.

Thesis 03 Jan 2012

Fortis manages electric and gas regulated utilities in Canada and the Caribbean, resulting in stable operating results. The company's noncore generation and real estate holding operations account for 12% of operating earnings. While we are less excited by the distractions of these noncore operations, we are comforted that management continues to focus on electric and natural gas distribution in North America.

Fortis' main regulated Canadian operations reside in British Columbia, Alberta, and Newfoundland. These relatively low-risk operations result in stable earnings and fund the consistent dividend growth experienced the past four decades. Rate base additions should be significant through 2015, as the company plans to invest CAD 4.8 billion as the healthier Canadian economy drives usage and customer growth. This should allow the firm to increase its rate base at double-digit rates each year during this expansion period. On a weighted-average basis, Fortis' allowed returns on equity in its Canadian service territories are 9.25% after a series of rate increases in 2010. While this return is lower than that typically granted to comparable U.S. utilities, it does not seem unreasonable given the low-risk nature of Fortis' transmission and delivery operations.

The company also operates small utility operations in Belize and the Caribbean. While the allowed returns can be significantly higher than its Canadian operations, these operations also have a much higher risk profile than its Canadian operations. In the summer of 2011, the Government of Belize expropriated Fortis' 70% ownership in Belize Electricity Limited, resulting in an unknown recoverable asset representing 2% of Fortis' assets. While small in nature, the earnings of these operations are exposed to additional risks of economic instability, tenuous regulation, and weather events. Management has indicated it has little interest to expand operations in the Caribbean, which we see as a positive.

We are less enthusiastic about the firm's small presence in the cyclical hotel and commercial real estate industry. However, these holdings are held solely for tax strategy purposes and would likely be spun off should Canadian tax policy change. Currently, the Canadian government disallows entity tax consolidation, and the real estate asset revenues offset holding company expenses, mostly interest. While we believe the strategy behind these assets is sound, we worry they may distract management and drag on growth.

Fortis has expressed interest in expanding its operations through U.S. acquisitions and was outbid in June 2011 for the regulated Central Vermont Public Service Corporation. Strategically, we are encouraged by the similarity of regulatory jurisdictions and operations in the U.S. However, we were concerned by Fortis' relatively steep offer, but we like that management had the discipline to walk away when the price got too rich.

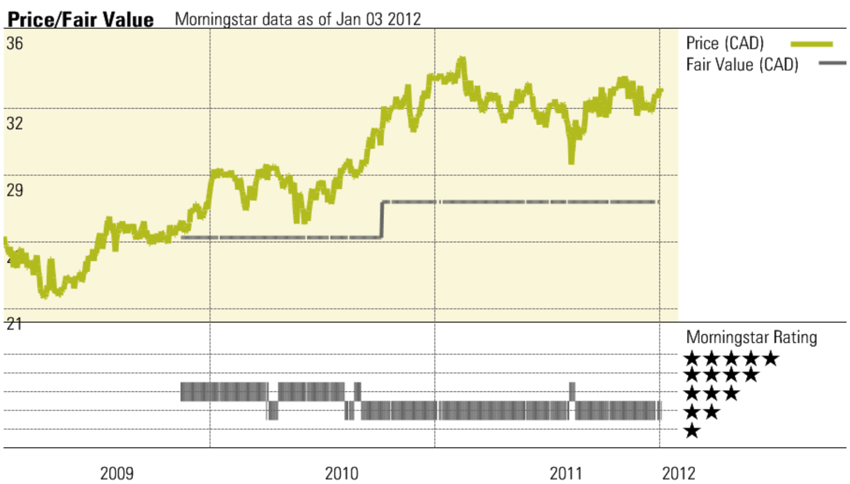
Given the high barriers to entry and regulated nature of Fortis' main operations, we award the company a narrow economic moat. The firm's exposure to noncore areas and foreign markets, though small, leads us to assign it a medium fair value uncertainty rating. We would consider lowering our uncertainty rating if Fortis were to divest the noncore assets.

Valuation, Growth and Profitability 03 Jan 2012

We are reinitiating coverage of Fortis under a new analyst with a CAD 29 fair value estimate, taking into consideration planned rate base additions through 2015. After the significant share dilution that occurred during 2011, we forecast 5% earnings growth in 2012 adjusting for lower dilution and normalized weather conditions. Beyond 2013, we assume 1.5% annual energy use growth at the Canadian utilities and consistent allowed returns on equity. Based on management's guidance, we forecast total investments of

Fortis, Inc. FTS (TSE) | ★★

Last Price	Fair Value	Consider Buy	Consider Sell	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Morningstar Credit Rating	Industry Group
33.17 CAD	29.00 CAD	20.30 CAD	39.15 CAD	Medium	Narrow		NA	—	Utilities - Regulated



CAD 4.6 billion at the utilities through 2015, leading to annualized rate base growth of 6%. We use a 10.0% cost of equity and a 7.5% weighted average cost of capital in our discounted cash flow model.

Scenario Analysis

The most significant near-term driver of our earnings forecast is our annualized energy growth rate at the regulated utilities. If energy growth is 50 bps lower than our 2013 estimate, our earnings per share would fall by 2% and our fair value estimate would decrease by CAD 2. We expect similar changes in earnings per share and fair value if energy growth is 50 bps higher.

Allowed returns at the Canadian utilities are also a significant driver of our valuation estimates. If we assume a 100 bps decrease in allowed returns on equity in 2012 and beyond, our fair value estimate decreases to CAD 21. Better-than-expected allowed returns on equity drive similar upside results. Finally, a 50 bps change in our cost of equity assumption changes our fair value estimate by about CAD 3 per share.

Economic Moat

Fortis owns a difficult-to-replicate network of regulated power generation, transmission, and distribution assets and provides an essential energy source: electricity. In exchange for its monopoly position, regulators set Fortis' returns at levels that aim to keep customer costs low while providing adequate returns for capital providers. This implicit contract between regulators and the utility should, in the long run, allow Fortis to earn its cost of capital, and leads us to assign Fortis' regulated utilities a narrow economic moat. As with all regulated utilities, we think regulatory caps on revenue and returns preclude Fortis from establishing a wide economic moat.

Moat Trend

We assign Fortis a stable moat due to its monopoly position and stable regulatory environment that will continue to allow the firm to earn its cost of capital. We do not expect the regulatory relationship to change in the future. The regulatory framework that caps revenue and returns prevent the firm from attaining a wide moat, as with all regulated utilities that we cover.

Bulls Say/Bears Say

Bulls Say

- The company operates a stable business profile, offering a strong base for consistent earnings.
- With an aggressive capital expenditure plan, rate base growth is forecast to grow at a 6% compound annual growth rate.
- Fortis has consistent dividend growth history, paying consecutive quarterly dividends for four decades and growing the dividend faster than most of its peers in recent years.
- Fortis operations are based in higher-growth regions within Canada, mainly in Alberta and British Columbia.

Bears Say

- The Canadian regulatory environment offers lower allowed returns than its U.S. peers.
- The recent Belize expropriation demonstrates how Caribbean operations offer higher growth opportunities but at a substantially higher risk.
- The company operates noncore hotel and commercial real estate assets, potentially distracting management from core regulated operations.

Financial Health

With a debt/capital ratio of just under 60% and interest coverage of 2.1 times, Fortis' financial health looks reasonably sound, particularly in light of its stable, low-risk business model. Fortis undertook a significant equity offering of 9 million shares resulting in CAD 300 million of proceeds. We expect the company to be active in the capital markets consistent with its current capital structure throughout its capital expenditure plan.

Capital Structure

Between 2011 and 2015, Fortis has CAD 5.5 billion of planned capital expenditures, which will require the company to access the debt and equity capital markets. We anticipate that Fortis will issue CAD 200 million in debt in 2012 and has manageable debt maturities through 2015. The company recently issued significant equity in July 2011 to help finance its capital expenditure plan, and we expect Fortis to issue minimal additional equity in 2012 to accommodate employee stock purchase plans and an executive DRIP plan.

Enterprise Risk

Fortis' key risk to future earnings is regulation. The company faces regulatory risks that create uncertainties around costs and allowed returns, especially given the significant capital expenditure plan from 2011 to 2015. Fortis is also exposed to political and economic instability at its Caribbean operations. With an eye towards acquisitions, the company risks overpaying for regulated U.S. assets and must be mindful of the strategic benefits. As with all regulated utilities, Fortis faces the risk of an inflationary environment that would raise borrowing costs and make other investments more attractive for income-seeking investors.

Stewardship: NA 03 Jan 2012

Stanley Marshall has been president and CEO since 1995, leading a group of experienced utility executives. Total direct compensation was $4.0 million for 2010, which we believe is in line with Fortis' industry group. Marshall's total compensation comprises base salary, annual incentives, stock options, and performance stock units, with 75% of total compensation at risk. We do not like that annual cash incentives are based on earnings per share targets, as EPS can be manipulated and may not be an indication of shareholder value creation. Marshall also has a significant ownership stake of 14 times his salary, which we believe aligns shareholder and management interests. From a corporate governance perspective, we like that the CEO and chairman positions are separated. While the board of directors has vast experience, we would prefer that members of the board have more direct utility experience.

Research Methodology for Valuing Companies

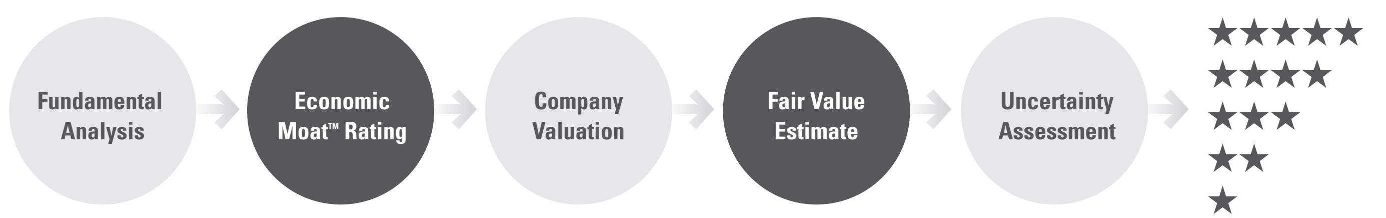
Components of Our Methodology
- Economic Moat™ Rating
- Moat Trend™ Rating
- Moat Valuation
- Three-Stage Discounted Cash Flow
- Weighted Average Cost of Capital
- Fair Value Estimate
- Scenario Analysis
- Uncertainty Ratings
- Margin of Safety
- Consider Buying/Selling
- Stewardship Grades
- Financial Health Grades

The Morningstar Rating for stocks identifies companies trading at a discount or premium to our analysts' assessment of their fair value. A number of components drive this rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's intrinsic value based on a discounted cash-flow model, (3) the margin of safety bands we apply to our Fair Value Estimate, and (4) the current stock price relative to our fair value estimate.

The concept of the Morningstar Economic Moat™ Rating plays a vital role not only in our qualitative assessment of a firm's investment potential, but also in our valuation process. We assign three moat ratings—none, narrow, or wide—as well as the Morningstar Moat Trend™ Rating—positive, stable, or negative—to each company we cover. There are two major requirements for firms to earn either a narrow or wide moat rating: (1) the prospect of earning above-average returns on capital; and (2) some competitive edge that prevents these returns from quickly eroding. The assumptions we make about a firm's moat determine the length of "economic outperformance" that we assume in the latter stages of our valuation model. We also quantify the value of each firm's moat, which represents the difference between a firm's enterprise value and the value of the firm if no future net investment were to occur. Said differently, moat value identifies the value generated by the firm as a result of any future net new investment. Our Moat Trend Rating reflects our assessment of whether each firm's competitive advantage is either getting stronger or weaker, since we think of moats as dynamic, rather than static.

At the heart of our valuation system is a detailed projection of a company's future cash flows. The first stage of our three-stage discounted cash flow model can last from 5 to 10 years and contains numerous detailed assumptions about various financial and operating items. The second stage of our model—where a firm's return on new invested capital (RONIC) and earnings growth rate implicitly fade until the perpetuity year—can last anywhere from 0 years (for no-moat firms) to 20 years (for wide-moat companies). In our third stage, we assume the firm's RONIC equals its weighted average cost of capital, and we calculate a continuing value using a standard

Morningstar Research Methodology for Valuing Companies



Fundamental Analysis	Economic Moat™ Rating	Company Valuation	Fair Value Estimate	Uncertainty Assessment	Stars
Analyst conducts company and industry research: ► Financial statement analysis ► Channel checks ► Trade-show visits ► Industry and company reports and journals ► Conference calls ► Management and site visits	Strength of competitive advantage is rated: None, Narrow, or Wide Advantages that confer an economic moat: **High Switching Costs** (Microsoft) **Cost advantage** (Wal-Mart) **Intangible assets** (Johnson & Johnson) **Network Effect** (Mastercard) **Efficient Scale** (Lockheed Martin)	Analyst considers past financial results and focuses on competitive position and future prospects to forecast future cash flows. Assumptions are entered into Morningstar's proprietary discounted cash-flow model.	Analyst uses a discounted cash-flow model to develop a Fair Value Estimate, which serves as the foundation for the Morningstar Rating for stocks.	The analyst then evaluates the range of potential intrinsic values for the company and assigns an Uncertainty Rating: Low, Medium, High, Very High, or Extreme. The Uncertainty Rating determines the margin of safety required before we would recommend the stock. The higher the uncertainty, the wider the margin of safety.	The current stock price relative to Morningstar's Fair Value Estimate, adjusted for uncertainty, determines the Morningstar Rating for stocks. The Morningstar Rating for stocks is updated each evening after the market closes.

* Please contact a sales representative for more information.

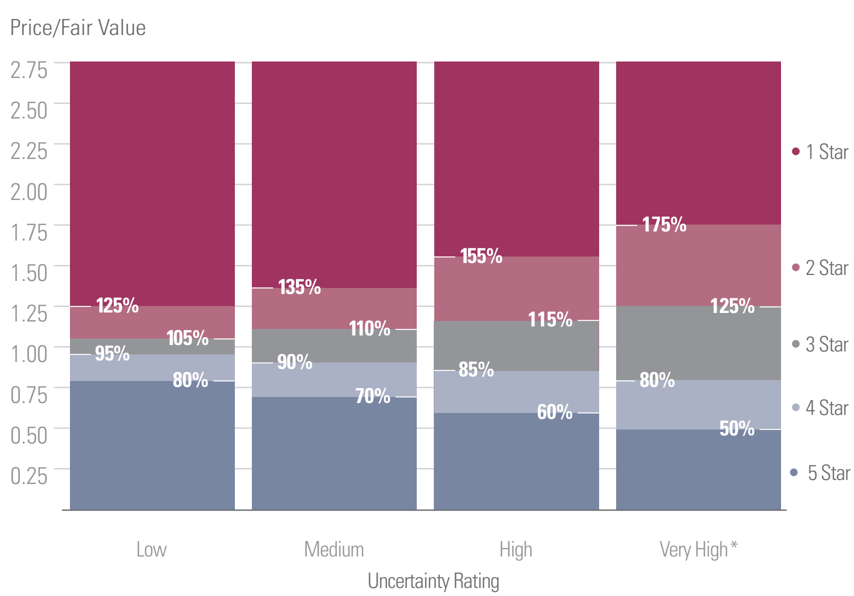
perpetuity formula. In deciding on the rate at which to discount future cash flows, we ignore stock-price volatility. Instead, we rely on a system that measures the estimated volatility of a firm's underlying future free cash flows, taking into account fundamental factors such as the diversity of revenue sources and the firm's fixed cost structure.

We also employ a number of other tools to augment our valuation process, including scenario analysis, where we assess the likelihood and performance of a business under different economic and firm-specific conditions. Our analysts typically model three to five scenarios for each company we cover, stress-testing the model and examining the distribution of resulting fair values.

The Morningstar Uncertainty Rating captures the range of these potential fair values, based on an assessment of a company's future sales range, the firm's operating and financial leverage, and any other contingent events that may impact the business. Our analysts use this range to assign an appropriate margin of safety—or the discount/premium to a fair value we apply in setting our consider buying/consider selling prices. Firms trading below our consider-buying prices receive our highest rating of five stars, whereas firms trading above our consider-selling prices receive our lowest rating of one star.

Our Stewardship Grades show our assessment of a management's commitment to shareholders, and include an analysis of a firm's transparency, incentives and ownership. We also provide Financial Health Grades, which are quantitative measures based on firms' distance to default scores. Distance to default measures the distance between the market value of a company's assets and the book value of its liabilities (expressed in standard deviations of asset value). For our grades, A is equivalent to "Excellent," while F is "Very Poor."

Morningstar Margin of Safety and Star Rating Bands



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Morningstar's Approach to Rating Corporate Credit

- Offers a proprietary measure of the credit quality of companies on our coverage list.
- Encapsulates our in-depth modeling and quantitative work in one letter grade.
- Allows investors to rank companies by each of the four underlying components of our credit ratings, including both analyst-driven and quantitative measures.
- Provides access to all the underlying forecasts that go into the rating, available through our institutional service.

Purpose

The Morningstar Corporate Credit Rating measures the ability of a firm to satisfy its debt and debt-like obligations. The higher the rating, the less likely we think the company is to default on these obligations.

The Morningstar Corporate Credit Rating builds on the modeling expertise of our securities research team. For each company, we publish:

- Five years of detailed pro-forma financial statements
- Annual estimates of free cash flow
- Annual forecasts of return on invested capital
- Scenario analyses, including upside and downside cases
- Forecasts of leverage, coverage, and liquidity ratios for five years
- Estimates of off balance sheet liabilities

These forecasts are key inputs into the Morningstar Corporate Credit Rating and are available to subscribers at select.morningstar.com.

Methodology

We feel it's important to perform credit analysis through different lenses—qualitative and quantitative, as well as fundamental and market-driven. We therefore evaluate each company in four broad categories.

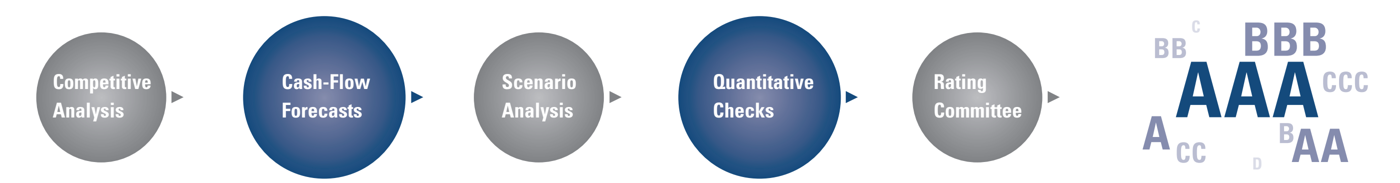
Business Risk

Business Risk captures the fundamental uncertainty around a firm's business operations and the cash flow generated by those operations. Key components of the Business Risk rating include the Morningstar Economic Moat™ Rating and the Morningstar Uncertainty Rating.

Cash Flow Cushion™

Morningstar's proprietary Cash Flow Cushion™ ratio is a fundamental indicator of a firm's future financial health The measure reveals how many times a company's internal cash generation plus total excess liquid cash will cover its debt-like contractual commitments over the next five years. The Cash Flow Cushion acts as a predictor of financial distress, bringing to light potential refinancing, operational, and liquidity risks inherent to the firm.

Morningstar Research Methodology for Determining Corporate Credit Ratings



Analyst conducts company and industry research:

- Management interviews
- Conference calls
- Trade show visits
- Competitor, supplier, distributor, and customer interviews
- Assign Economic Moat™ Rating

Analyst considers company financial statements and competitive dynamics to forecast future free cash flows to the firm.

Analyst derives estimate of Stress Test Score™

Analysts run bull and bear cases through the model to derive alternate estimates of enterprise value.

Based on competitive analysis, forecasts, and scenario analysis, the analyst assigns Business Risk.

We gauge a firm's health using quantitative tools supported by our own backtesting and academic research.

- Morningstar Bank Solvency Score™
- Distance to Default

Senior personnel review each company to determine the appropriate final credit rating.

- Review modeling assumptions
- Approve company-specific adjustments

AAA	Extremely Low Default Risk
AA	Very Low Default Risk
A	Low Default Risk
BBB	Moderate Default Risk
BB	Above Average Default Risk
B	High Default Risk
CCC	Currently Very High Default Risk
CC	Currently Extreme Default Risk
C	Imminent Payment Default
D	Payment Default
UR	Under Review
UR+	Positive Credit Implication
UR-	Negative Credit Implication

Morningstar's Approach to Rating Corporate Credit

The advantage of the Cash Flow Cushion ratio relative to other fundamental indicators of credit health is that the measure focuses on the future cash-generating performance of the firm derived from Morningstar's proprietary discounted cash flow model. By making standardized adjustments for certain expenses to reflect their debt-like characteristics, we can compare future projected free cash flows with debt-like cash commitments coming due in any particular year. The forward-looking nature of this metric allows us to anticipate changes in a firm's financial health and pinpoint periods where cash shortfalls are likely to occur.

Morningstar Solvency Score™

The Morningstar Solvency Score™ is a quantitative score derived from both historical and forecasted financial ratios. It includes ratios that focus on liquidity (a company's ability to meet short term cash outflows), profitability (a company's ability to generate profit per unit of input), capital structure (how does the company finance its operations), and interest coverage (how much of profit is used up by interest payments).

Distance to Default

The Distance to Default rating is a quantitative, market-based measure of a company's current financial health. (Distance to Default serves as the basis for Morningstar's Financial Health Grade.) The underlying model treats the equity of a firm as a call option on that firm's assets. Based on estimates of asset volatility and the Black-Scholes option-pricing model, we can estimate the likelihood that the value of the company's assets falls below the value of its liabilities, implying likely default.

For each of these four categories, we assign a score, which we then translate into a descriptive rating along the scale of Very Good / Good / Fair / Poor / Very Poor.

Overall Credit Rating

The four component ratings roll up into a single preliminary credit rating. To determine the final credit rating, a credit committee of at least five senior research personnel reviews each preliminary rating.

We review credit ratings on a regular basis and as events warrant. Any change in rating must be approved by the Credit Rating Committee.

Investor Access

Morningstar Corporate Credit Ratings are available on Morningstar.com. Our credit research, including detailed cash-flow models that contain all of the components of the Morningstar Corporate Credit Rating, is available to subscribers at select.morningstar.com.

Analyst's Perspective 03 Jan 2012

Fortis' predominant regulated revenue mix provides investors a stable earnings profile and support for the stock's consistent dividend growth. Significant capital expenditures will drive near-term earnings growth and set a base for future free cash flow generation. The company's Canadian regulated utilities operate in constructive regulatory jurisdictions, but with slightly lower allowed returns on equity than its U.S. counterparts. In addition to organic growth, company management has indicated a desire to expand in the U.S. We would view this positively given the similar regulatory structures, and it could be value-accretive given where Fortis' stock traded at year-end 2011 and the typically more favorable allowed returns in the U.S. We forecast normalized earnings can grow at 5% annually through 2015. At a 3.5% dividend yield and trading at 18 times our 2012 earnings forecast, we think Fortis is overvalued.

Key Investment Considerations

- Fortis generates more than 90% of its profit from its regulated utility segment, providing a stable earnings base.
- Across all of its utilities, regulators allow Fortis a 9.5% weighted-average return on equity, which is about 100 basis points lower than regulators allow U.S. utilities on average.
- We think the stock is overvalued as of year-end 2011, with Fortis trading at 18 times our 2012 earnings estimate.

Analyst Note:

Profile

Fortis primarily owns and operates utility transmission and distribution assets in Canada. It has smaller stakes in electricity generation, several Caribbean utilities, and Canadian hotel and commercial real estate. The firm's regulated natural gas operations serve 950,000 customers in British Columbia. Its regulated electric utility operations serve 1.1 million customers throughout Canada and in Grand Cayman and Turks and Caicos. Its Canadian operations accounted for 92% of its total assets as of 2010.

Morningstar Analysis

Fortis' low-risk operations result in stable earnings and support its consistent dividend growth the last four decades.

Strong Customer Growth Generates Impressive 2011 Results at Fortis. 09 Feb 2012

Fortis Inc. FTS posted $1.75 in EPS in 2011, higher than our own $1.71 estimate and a 6% increase from 2010. Strong customer growth and higher energy deliveries at its regulated Canadian utilities drove results. We are reaffirming our fair value estimate and forecast 5% EPS growth through 2016 as $5.5 billion in planned capital expenditures should drive earnings expansion. Fortis increased dividends 3.5% in mid-December to $1.20, an implied 66% payout ratio, with a current yield of 3.5%. At our fair value estimate, Fortis would yield 4%.

In 2012, significant regulatory rulings at the company's Newfound Power and FortisBC subsidiaries could significantly impact future operating results. With the Alberta Utilities Commission ruling in December 2011, allowed returns at Fortis Alberta were decreased 25 basis points to just 8.75%. Similar cuts could be seen at the firm's other regulated Canadian operating companies, putting pressure on earnings growth. Management provided no EPS guidance for 2012.

Thesis 03 Jan 2012

Fortis manages electric and gas regulated utilities in Canada and the Caribbean, resulting in stable operating results. The company's noncore generation and real estate holding operations account for 12% of operating earnings. While we are less excited by the distractions of these noncore operations, we are comforted that management continues to focus on electric and natural gas distribution in North America.

Fortis' main regulated Canadian operations reside in British Columbia, Alberta, and Newfoundland. These relatively low-risk operations result in stable earnings and fund the consistent dividend growth experienced the past four decades. Rate base additions should be significant through 2015, as the company plans to invest CAD 4.8 billion as the healthier Canadian economy drives usage and customer growth. This should allow the firm to increase its rate base at double-digit rates each year during this expansion period. On a weighted-average basis, Fortis' allowed returns on equity in its Canadian service territories are 9.25% after a series of rate increases in 2010. While this return is lower than that typically granted to comparable U.S. utilities, it does not seem unreasonable given the low-risk nature of Fortis' transmission and delivery operations.

The company also operates small utility operations in Belize and the Caribbean. While the allowed returns can be significantly higher than its Canadian operations, these operations also have a much higher risk profile than its Canadian operations. In the summer of 2011, the Government of Belize expropriated Fortis' 70% ownership in Belize Electricity Limited, resulting in an unknown recoverable asset representing 2% of Fortis' assets. While small in nature, the earnings of these operations are exposed to additional risks of economic instability, tenuous regulation, and weather events. Management has indicated it has little interest to expand operations in the Caribbean, which we see as a positive.

We are less enthusiastic about the firm's small presence in the cyclical hotel and commercial real estate industry. However, these holdings are held solely for tax strategy purposes and would likely be spun off should Canadian tax policy change. Currently, the Canadian government disallows entity tax consolidation, and the real estate asset revenues offset holding company expenses, mostly interest. While we believe the strategy behind these assets is sound, we worry they may distract management and drag on growth.

Fortis has expressed interest in expanding its operations through U.S. acquisitions and was outbid in June 2011 for the regulated Central Vermont Public Service Corporation. Strategically, we are encouraged by the similarity of

regulatory jurisdictions and operations in the U.S. However, we were concerned by Fortis' relatively steep offer, but we like that management had the discipline to walk away when the price got too rich.

Given the high barriers to entry and regulated nature of Fortis' main operations, we award the company a narrow economic moat. The firm's exposure to noncore areas and foreign markets, though small, leads us to assign it a medium fair value uncertainty rating. We would consider lowering our uncertainty rating if Fortis were to divest the noncore assets.

Valuation, Growth and Profitability 03 Jan 2012

We are reinitiating coverage of Fortis under a new analyst with a CAD 29 fair value estimate, taking into consideration planned rate base additions through 2015. After the significant share dilution that occurred during 2011, we forecast 5% earnings growth in 2012 adjusting for lower dilution and normalized weather conditions. Beyond 2013, we assume 1.5% annual energy use growth at the Canadian utilities and consistent allowed returns on equity. Based on management's guidance, we forecast total investments of CAD 4.6 billion at the utilities through 2015, leading to annualized rate base growth of 6%. We use a 10.0% cost of equity and a 7.5% weighted average cost of capital in our discounted cash flow model.

Scenario Analysis

The most significant near-term driver of our earnings forecast is our annualized energy growth rate at the regulated utilities. If energy growth is 50 bps lower than our 2013 estimate, our earnings per share would fall by 2% and our fair value estimate would decrease by CAD 2. We expect similar changes in earnings per share and fair value if energy growth is 50 bps higher.

Allowed returns at the Canadian utilities are also a significant driver of our valuation estimates. If we assume a 100 bps decrease in allowed returns on equity in 2012 and beyond, our fair value estimate decreases to CAD 21. Better-than-expected allowed returns on equity drive similar upside results. Finally, a 50 bps change in our cost of equity assumption changes our fair value estimate by about CAD 3 per share.

Economic Moat

Fortis owns a difficult-to-replicate network of regulated power generation, transmission, and distribution assets and provides an essential energy source: electricity. In exchange for its monopoly position, regulators set Fortis' returns at levels that aim to keep customer costs low while providing adequate returns for capital providers. This implicit contract between regulators and the utility should, in the long run, allow Fortis to earn its cost of capital, and leads us to assign Fortis' regulated utilities a narrow economic moat. As with all regulated utilities, we think regulatory caps on revenue and returns preclude Fortis from establishing a wide economic moat.

Moat Trend

We assign Fortis a stable moat due to its monopoly position and stable regulatory environment that will continue to allow the firm to earn its cost of capital. We do not expect the regulatory relationship to change in the future. The regulatory framework that caps revenue and returns prevent the firm from attaining a wide moat, as with all regulated utilities that we cover.

Bulls Say/Bears Say

Bulls Say

- The company operates a stable business profile, offering a strong base for consistent earnings.
- With an aggressive capital expenditure plan, rate base growth is forecast to grow at a 6% compound annual growth rate.
- Fortis has consistent dividend growth history, paying consecutive quarterly dividends for four decades and growing the dividend faster than most of its peers in recent years.
- Fortis operations are based in higher-growth regions within Canada, mainly in Alberta and British Columbia.

Bears Say

- The Canadian regulatory environment offers lower allowed returns than its U.S. peers.
- The recent Belize expropriation demonstrates how Caribbean operations offer higher growth opportunities but at a substantially higher risk.
- The company operates noncore hotel and commercial real estate assets, potentially distracting management from core regulated operations.

Financial Health

With a debt/capital ratio of just under 60% and interest coverage of 2.1 times, Fortis' financial health looks reasonably sound, particularly in light of its stable, low-risk business model. Fortis undertook a significant equity offering of 9 million shares resulting in CAD 300 million of proceeds. We expect the company to be active in the capital markets consistent with its current capital structure throughout its capital expenditure plan.

Capital Structure

Between 2011 and 2015, Fortis has CAD 5.5 billion of planned capital expenditures, which will require the company to access the debt and equity capital markets. We anticipate that Fortis will issue CAD 200 million in debt in 2012 and has manageable debt maturities through 2015. The company recently issued significant equity in July 2011 to help finance its capital expenditure plan, and we expect Fortis to issue minimal additional equity in 2012 to accommodate employee stock purchase plans and an executive DRIP plan.

Enterprise Risk

Fortis' key risk to future earnings is regulation. The company faces regulatory risks that create uncertainties around costs and allowed returns, especially given the significant capital expenditure plan from 2011 to 2015. Fortis is also exposed to political and economic instability at its Caribbean operations. With an eye towards acquisitions, the company risks overpaying for regulated U.S. assets and must be mindful of the strategic benefits. As with all regulated utilities, Fortis faces the risk of an inflationary environment that would raise borrowing costs and make other investments more attractive for income-seeking investors.

Stewardship: NA 03 Jan 2012

Stanley Marshall has been president and CEO since 1995, leading a group of experienced utility executives. Total direct compensation was $4.0 million for 2010, which we believe is in line with Fortis' industry group. Marshall's total compensation comprises base salary, annual incentives, stock options, and performance stock units, with 75% of total compensation at risk. We do not like that annual cash incentives are based on earnings per share targets, as EPS can be manipulated and may not be an indication of shareholder value creation. Marshall also has a significant ownership stake of 14 times his salary, which we believe aligns shareholder and management interests. From a corporate governance perspective, we like that the CEO and chairman positions are separated. While the board of directors has vast experience, we would prefer that members of the board have more direct utility experience.

Research Methodology for Valuing Companies

Components of Our Methodology
- Economic Moat™ Rating
- Moat Trend™ Rating
- Moat Valuation
- Three-Stage Discounted Cash Flow
- Weighted Average Cost of Capital
- Fair Value Estimate
- Scenario Analysis
- Uncertainty Ratings
- Margin of Safety
- Consider Buying/Selling
- Stewardship Grades
- Financial Health Grades

The Morningstar Rating for stocks identifies companies trading at a discount or premium to our analysts' assessment of their fair value. A number of components drive this rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's intrinsic value based on a discounted cash-flow model, (3) the margin of safety bands we apply to our Fair Value Estimate, and (4) the current stock price relative to our fair value estimate.

The concept of the Morningstar Economic Moat™ Rating plays a vital role not only in our qualitative assessment of a firm's investment potential, but also in our valuation process. We assign three moat ratings—none, narrow, or wide—as well as the Morningstar Moat Trend™ Rating—positive, stable, or negative—to each company we cover. There are two major requirements for firms to earn either a narrow or wide moat rating: (1) the prospect of earning above-average returns on capital; and (2) some competitive edge that prevents these returns from quickly eroding. The assumptions we make about a firm's moat determine the length of "economic outperformance" that we assume in the latter stages of our valuation model. We also quantify the value of each firm's moat, which represents the difference between a firm's enterprise value and the value of the firm if no future net investment were to occur. Said differently, moat value identifies the value generated by the firm as a result of any future net new investment. Our Moat Trend Rating reflects our assessment of whether each firm's competitive advantage is either getting stronger or weaker, since we think of moats as dynamic, rather than static.

At the heart of our valuation system is a detailed projection of a company's future cash flows. The first stage of our three-stage discounted cash flow model can last from 5 to 10 years and contains numerous detailed assumptions about various financial and operating items. The second stage of our model—where a firm's return on new invested capital (RONIC) and earnings growth rate implicitly fade until the perpetuity year—can last anywhere from 0 years (for no-moat firms) to 20 years (for wide-moat companies). In our third stage, we assume the firm's RONIC equals its weighted average cost of capital, and we calculate a continuing value using a standard

Morningstar Research Methodology for Valuing Companies

Analyst conducts company and industry research: ► Financial statement analysis ► Channel checks ► Trade-show visits ► Industry and company reports and journals ► Conference calls ► Management and site visits	Strength of competitive advantage is rated: None, Narrow, or Wide Advantages that confer an economic moat: **High Switching Costs** (Microsoft) **Cost advantage** (Wal-Mart) **Intangible assets** (Johnson & Johnson) **Network Effect** (Mastercard) **Efficient Scale** (Lockheed Martin)	Analyst considers past financial results and focuses on competitive position and future prospects to forecast future cash flows. Assumptions are entered into Morningstar's proprietary discounted cash-flow model.	Analyst uses a discounted cash-flow model to develop a Fair Value Estimate, which serves as the foundation for the Morningstar Rating for stocks.	The analyst then evaluates the range of potential intrinsic values for the company and assigns an Uncertainty Rating: Low, Medium, High, Very High, or Extreme. The Uncertainty Rating determines the margin of safety required before we would recommend the stock. The higher the uncertainty, the wider the margin of safety.	The current stock price relative to Morningstar's Fair Value Estimate, adjusted for uncertainty, determines the Morningstar Rating for stocks. The Morningstar Rating for stocks is updated each evening after the market closes.

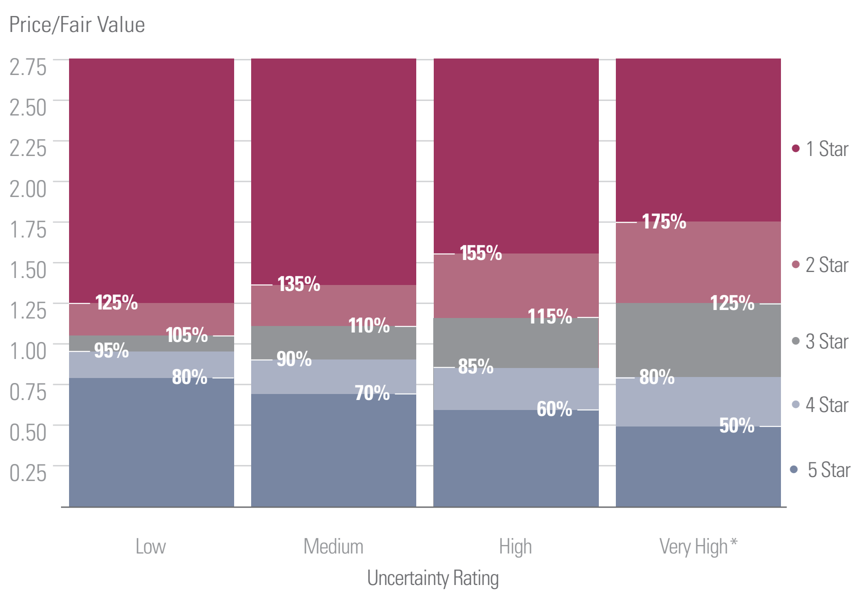
perpetuity formula. In deciding on the rate at which to discount future cash flows, we ignore stock-price volatility. Instead, we rely on a system that measures the estimated volatility of a firm's underlying future free cash flows, taking into account fundamental factors such as the diversity of revenue sources and the firm's fixed cost structure.

We also employ a number of other tools to augment our valuation process, including scenario analysis, where we assess the likelihood and performance of a business under different economic and firm-specific conditions. Our analysts typically model three to five scenarios for each company we cover, stress-testing the model and examining the distribution of resulting fair values.

The Morningstar Uncertainty Rating captures the range of these potential fair values, based on an assessment of a company's future sales range, the firm's operating and financial leverage, and any other contingent events that may impact the business. Our analysts use this range to assign an appropriate margin of safety—or the discount/premium to a fair value we apply in setting our consider buying/consider selling prices. Firms trading below our consider-buying prices receive our highest rating of five stars, whereas firms trading above our consider-selling prices receive our lowest rating of one star.

Our Stewardship Grades show our assessment of a management's commitment to shareholders, and include an analysis of a firm's transparency, incentives and ownership. We also provide Financial Health Grades, which are quantitative measures based on firms' distance to default scores. Distance to default measures the distance between the market value of a company's assets and the book value of its liabilities (expressed in standard deviations of asset value). For our grades, A is equivalent to "Excellent," while F is "Very Poor."

Morningstar Margin of Safety and Star Rating Bands



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Morningstar's Approach to Rating Corporate Credit

- Offers a proprietary measure of the credit quality of companies on our coverage list.
- Encapsulates our in-depth modeling and quantitative work in one letter grade.
- Allows investors to rank companies by each of the four underlying components of our credit ratings, including both analyst-driven and quantitative measures.
- Provides access to all the underlying forecasts that go into the rating, available through our institutional service.

Purpose

The Morningstar Corporate Credit Rating measures the ability of a firm to satisfy its debt and debt-like obligations. The higher the rating, the less likely we think the company is to default on these obligations.

The Morningstar Corporate Credit Rating builds on the modeling expertise of our securities research team. For each company, we publish:

- Five years of detailed pro-forma financial statements
- Annual estimates of free cash flow
- Annual forecasts of return on invested capital
- Scenario analyses, including upside and downside cases
- Forecasts of leverage, coverage, and liquidity ratios for five years
- Estimates of off balance sheet liabilities

These forecasts are key inputs into the Morningstar Corporate Credit Rating and are available to subscribers at select.morningstar.com.

Methodology

We feel it's important to perform credit analysis through different lenses—qualitative and quantitative, as well as fundamental and market-driven. We therefore evaluate each company in four broad categories.

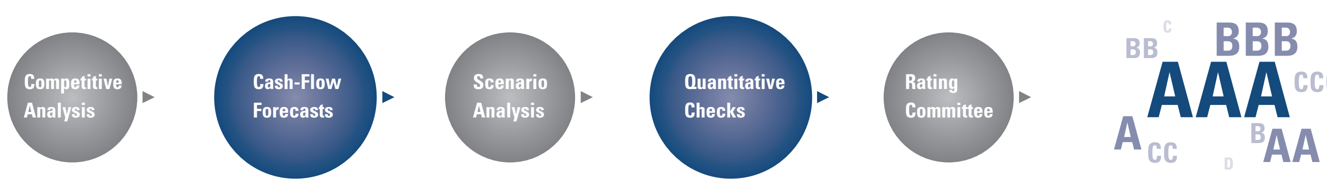
Business Risk

Business Risk captures the fundamental uncertainty around a firm's business operations and the cash flow generated by those operations. Key components of the Business Risk rating include the Morningstar Economic Moat™ Rating and the Morningstar Uncertainty Rating.

Cash Flow Cushion™

Morningstar's proprietary Cash Flow Cushion™ ratio is a fundamental indicator of a firm's future financial health The measure reveals how many times a company's internal cash generation plus total excess liquid cash will cover its debt-like contractual commitments over the next five years. The Cash Flow Cushion acts as a predictor of financial distress, bringing to light potential refinancing, operational, and liquidity risks inherent to the firm.

Morningstar Research Methodology for Determining Corporate Credit Ratings



Analyst conducts company and industry research:

- Management interviews
- Conference calls
- Trade show visits
- Competitor, supplier, distributor, and customer interviews
- Assign Economic Moat™ Rating

Analyst considers company financial statements and competitive dynamics to forecast future free cash flows to the firm.

Analyst derives estimate of Stress Test Score™

Analysts run bull and bear cases through the model to derive alternate estimates of enterprise value.

Based on competitive analysis, forecasts, and scenario analysis, the analyst assigns Business Risk.

We gauge a firm's health using quantitative tools supported by our own backtesting and academic research.

- Morningstar Bank Solvency Score™
- Distance to Default

Senior personnel review each company to determine the appropriate final credit rating.

- Review modeling assumptions
- Approve company-specific adjustments

AAA	Extremely Low Default Risk
AA	Very Low Default Risk
A	Low Default Risk
BBB	Moderate Default Risk
BB	Above Average Default Risk
B	High Default Risk
CCC	Currently Very High Default Risk
CC	Currently Extreme Default Risk
C	Imminent Payment Default
D	Payment Default
UR	Under Review
UR+	Positive Credit Implication
UR-	Negative Credit Implication

Morningstar's Approach to Rating Corporate Credit

The advantage of the Cash Flow Cushion ratio relative to other fundamental indicators of credit health is that the measure focuses on the future cash-generating performance of the firm derived from Morningstar's proprietary discounted cash flow model. By making standardized adjustments for certain expenses to reflect their debt-like characteristics, we can compare future projected free cash flows with debt-like cash commitments coming due in any particular year. The forward-looking nature of this metric allows us to anticipate changes in a firm's financial health and pinpoint periods where cash shortfalls are likely to occur.

Morningstar Solvency Score™

The Morningstar Solvency Score™ is a quantitative score derived from both historical and forecasted financial ratios. It includes ratios that focus on liquidity (a company's ability to meet short term cash outflows), profitability (a company's ability to generate profit per unit of input), capital structure (how does the company finance its operations), and interest coverage (how much of profit is used up by interest payments).

Distance to Default

The Distance to Default rating is a quantitative, market-based measure of a company's current financial health. (Distance to Default serves as the basis for Morningstar's Financial Health Grade.) The underlying model treats the equity of a firm as a call option on that firm's assets. Based on estimates of asset volatility and the Black-Scholes option-pricing model, we can estimate the likelihood that the value of the company's assets falls below the value of its liabilities, implying likely default.

For each of these four categories, we assign a score, which we then translate into a descriptive rating along the scale of Very Good / Good / Fair / Poor / Very Poor.

Overall Credit Rating

The four component ratings roll up into a single preliminary credit rating. To determine the final credit rating, a credit committee of at least five senior research personnel reviews each preliminary rating.

We review credit ratings on a regular basis and as events warrant. Any change in rating must be approved by the Credit Rating Committee.

Investor Access

Morningstar Corporate Credit Ratings are available on Morningstar.com. Our credit research, including detailed cash-flow models that contain all of the components of the Morningstar Corporate Credit Rating, is available to subscribers at select.morningstar.com.

Analyst's Perspective 03 Jan 2012

Fortis' predominant regulated revenue mix provides investors a stable earnings profile and support for the stock's consistent dividend growth. Significant capital expenditures will drive near-term earnings growth and set a base for future free cash flow generation. The company's Canadian regulated utilities operate in constructive regulatory jurisdictions, but with slightly lower allowed returns on equity than its U.S. counterparts. In addition to organic growth, company management has indicated a desire to expand in the U.S. We would view this positively given the similar regulatory structures, and it could be value-accretive given where Fortis' stock traded at year-end 2011 and the typically more favorable allowed returns in the U.S. We forecast normalized earnings can grow at 5% annually through 2015. At a 3.5% dividend yield and trading at 18 times our 2012 earnings forecast, we think Fortis is overvalued.

Key Investment Considerations

- Fortis generates more than 90% of its profit from its regulated utility segment, providing a stable earnings base.
- Across all of its utilities, regulators allow Fortis a 9.5% weighted-average return on equity, which is about 100 basis points lower than regulators allow U.S. utilities on average.
- We think the stock is overvalued as of year-end 2011, with Fortis trading at 18 times our 2012 earnings estimate.

Analyst Note:

Profile

Fortis primarily owns and operates utility transmission and distribution assets in Canada. It has smaller stakes in electricity generation, several Caribbean utilities, and Canadian hotel and commercial real estate. The firm's regulated natural gas operations serve 950,000 customers in British Columbia. Its regulated electric utility operations serve 1.1 million customers throughout Canada and in Grand Cayman and Turks and Caicos. Its Canadian operations accounted for 92% of its total assets as of 2010.

Morningstar Analysis

Fortis' low-risk operations result in stable earnings and support its consistent dividend growth the last four decades.

Strong Customer Growth Generates Impressive 2011 Results at Fortis. 09 Feb 2012

Fortis Inc. FTS posted $1.75 in EPS in 2011, higher than our own $1.71 estimate and a 6% increase from 2010. Strong customer growth and higher energy deliveries at its regulated Canadian utilities drove results. We are reaffirming our fair value estimate and forecast 5% EPS growth through 2016 as $5.5 billion in planned capital expenditures should drive earnings expansion. Fortis increased dividends 3.5% in mid-December to $1.20, an implied 66% payout ratio, with a current yield of 3.5%. At our fair value estimate, Fortis would yield 4%.

In 2012, significant regulatory rulings at the company's Newfound Power and FortisBC subsidiaries could significantly impact future operating results. With the Alberta Utilities Commission ruling in December 2011, allowed returns at Fortis Alberta were decreased 25 basis points to just 8.75%. Similar cuts could be seen at the firm's other regulated Canadian operating companies, putting pressure on earnings growth. Management provided no EPS guidance for 2012.

Thesis 03 Jan 2012

Fortis manages electric and gas regulated utilities in Canada and the Caribbean, resulting in stable operating results. The company's noncore generation and real estate holding operations account for 12% of operating earnings. While we are less excited by the distractions of these noncore operations, we are comforted that management continues to focus on electric and natural gas distribution in North America.

Fortis' main regulated Canadian operations reside in British Columbia, Alberta, and Newfoundland. These relatively low-risk operations result in stable earnings and fund the consistent dividend growth experienced the past four decades. Rate base additions should be significant through 2015, as the company plans to invest CAD 4.8 billion as the healthier Canadian economy drives usage and customer growth. This should allow the firm to increase its rate base at double-digit rates each year during this expansion period. On a weighted-average basis, Fortis' allowed returns on equity in its Canadian service territories are 9.25% after a series of rate increases in 2010. While this return is lower than that typically granted to comparable U.S. utilities, it does not seem unreasonable given the low-risk nature of Fortis' transmission and delivery operations.

The company also operates small utility operations in Belize and the Caribbean. While the allowed returns can be significantly higher than its Canadian operations, these operations also have a much higher risk profile than its Canadian operations. In the summer of 2011, the Government of Belize expropriated Fortis' 70% ownership in Belize Electricity Limited, resulting in an unknown recoverable asset representing 2% of Fortis' assets. While small in nature, the earnings of these operations are exposed to additional risks of economic instability, tenuous regulation, and weather events. Management has indicated it has little interest to expand operations in the Caribbean, which we see as a positive.

We are less enthusiastic about the firm's small presence in the cyclical hotel and commercial real estate industry. However, these holdings are held solely for tax strategy purposes and would likely be spun off should Canadian tax policy change. Currently, the Canadian government disallows entity tax consolidation, and the real estate asset revenues offset holding company expenses, mostly interest. While we believe the strategy behind these assets is sound, we worry they may distract management and drag on growth.

Fortis has expressed interest in expanding its operations through U.S. acquisitions and was outbid in June 2011 for the regulated Central Vermont Public Service Corporation. Strategically, we are encouraged by the similarity of

regulatory jurisdictions and operations in the U.S. However, we were concerned by Fortis' relatively steep offer, but we like that management had the discipline to walk away when the price got too rich.

Given the high barriers to entry and regulated nature of Fortis' main operations, we award the company a narrow economic moat. The firm's exposure to noncore areas and foreign markets, though small, leads us to assign it a medium fair value uncertainty rating. We would consider lowering our uncertainty rating if Fortis were to divest the noncore assets.

Valuation, Growth and Profitability 03 Jan 2012

We are reinitiating coverage of Fortis under a new analyst with a CAD 29 fair value estimate, taking into consideration planned rate base additions through 2015. After the significant share dilution that occurred during 2011, we forecast 5% earnings growth in 2012 adjusting for lower dilution and normalized weather conditions. Beyond 2013, we assume 1.5% annual energy use growth at the Canadian utilities and consistent allowed returns on equity. Based on management's guidance, we forecast total investments of CAD 4.6 billion at the utilities through 2015, leading to annualized rate base growth of 6%. We use a 10.0% cost of equity and a 7.5% weighted average cost of capital in our discounted cash flow model.

Scenario Analysis

The most significant near-term driver of our earnings forecast is our annualized energy growth rate at the regulated utilities. If energy growth is 50 bps lower than our 2013 estimate, our earnings per share would fall by 2% and our fair value estimate would decrease by CAD 2. We expect similar changes in earnings per share and fair value if energy growth is 50 bps higher.

Allowed returns at the Canadian utilities are also a significant driver of our valuation estimates. If we assume a 100 bps decrease in allowed returns on equity in 2012 and beyond, our fair value estimate decreases to CAD 21. Better-than-expected allowed returns on equity drive similar upside results. Finally, a 50 bps change in our cost of equity assumption changes our fair value estimate by about CAD 3 per share.

Economic Moat

Fortis owns a difficult-to-replicate network of regulated power generation, transmission, and distribution assets and provides an essential energy source: electricity. In exchange for its monopoly position, regulators set Fortis' returns at levels that aim to keep customer costs low while providing adequate returns for capital providers. This implicit contract between regulators and the utility should, in the long run, allow Fortis to earn its cost of capital, and leads us to assign Fortis' regulated utilities a narrow economic moat. As with all regulated utilities, we think regulatory caps on revenue and returns preclude Fortis from establishing a wide economic moat.

Moat Trend

We assign Fortis a stable moat due to its monopoly position and stable regulatory environment that will continue to allow the firm to earn its cost of capital. We do not expect the regulatory relationship to change in the future. The regulatory framework that caps revenue and returns prevent the firm from attaining a wide moat, as with all regulated utilities that we cover.

Bulls Say/Bears Say

Bulls Say

- The company operates a stable business profile, offering a strong base for consistent earnings.
- With an aggressive capital expenditure plan, rate base growth is forecast to grow at a 6% compound annual growth rate.
- Fortis has consistent dividend growth history, paying consecutive quarterly dividends for four decades and growing the dividend faster than most of its peers in recent years.
- Fortis operations are based in higher-growth regions within Canada, mainly in Alberta and British Columbia.

Bears Say

- The Canadian regulatory environment offers lower allowed returns than its U.S. peers.
- The recent Belize expropriation demonstrates how Caribbean operations offer higher growth opportunities but at a substantially higher risk.
- The company operates noncore hotel and commercial real estate assets, potentially distracting management from core regulated operations.

Financial Health

With a debt/capital ratio of just under 60% and interest coverage of 2.1 times, Fortis' financial health looks reasonably sound, particularly in light of its stable, low-risk business model. Fortis undertook a significant equity offering of 9 million shares resulting in CAD 300 million of proceeds. We expect the company to be active in the capital markets consistent with its current capital structure throughout its capital expenditure plan.

Capital Structure

Between 2011 and 2015, Fortis has CAD 5.5 billion of planned capital expenditures, which will require the company to access the debt and equity capital markets. We anticipate that Fortis will issue CAD 200 million in debt in 2012 and has manageable debt maturities through 2015. The company recently issued significant equity in July 2011 to help finance its capital expenditure plan, and we expect Fortis to issue minimal additional equity in 2012 to accommodate employee stock purchase plans and an executive DRIP plan.

Enterprise Risk

Fortis' key risk to future earnings is regulation. The company faces regulatory risks that create uncertainties around costs and allowed returns, especially given the significant capital expenditure plan from 2011 to 2015. Fortis is also exposed to political and economic instability at its Caribbean operations. With an eye towards acquisitions, the company risks overpaying for regulated U.S. assets and must be mindful of the strategic benefits. As with all regulated utilities, Fortis faces the risk of an inflationary environment that would raise borrowing costs and make other investments more attractive for income-seeking investors.

Stewardship: NA 03 Jan 2012

Stanley Marshall has been president and CEO since 1995, leading a group of experienced utility executives. Total direct compensation was $4.0 million for 2010, which we believe is in line with Fortis' industry group. Marshall's total compensation comprises base salary, annual incentives, stock options, and performance stock units, with 75% of total compensation at risk. We do not like that annual cash incentives are based on earnings per share targets, as EPS can be manipulated and may not be an indication of shareholder value creation. Marshall also has a significant ownership stake of 14 times his salary, which we believe aligns shareholder and management interests. From a corporate governance perspective, we like that the CEO and chairman positions are separated. While the board of directors has vast experience, we would prefer that members of the board have more direct utility experience.

Research Methodology for Valuing Companies

Components of Our Methodology

- Economic Moat™ Rating
- Moat Trend™ Rating
- Moat Valuation
- Three-Stage Discounted Cash Flow
- Weighted Average Cost of Capital
- Fair Value Estimate
- Scenario Analysis
- Uncertainty Ratings
- Margin of Safety
- Consider Buying/Selling
- Stewardship Grades
- Financial Health Grades

The Morningstar Rating for stocks identifies companies trading at a discount or premium to our analysts' assessment of their fair value. A number of components drive this rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's intrinsic value based on a discounted cash-flow model, (3) the margin of safety bands we apply to our Fair Value Estimate, and (4) the current stock price relative to our fair value estimate.

The concept of the Morningstar Economic Moat™ Rating plays a vital role not only in our qualitative assessment of a firm's investment potential, but also in our valuation process. We assign three moat ratings—none, narrow, or wide—as well as the Morningstar Moat Trend™ Rating—positive, stable, or negative—to each company we cover. There are two major requirements for firms to earn either a narrow or wide moat rating: (1) the prospect of earning above-average returns on capital; and (2) some competitive edge that prevents these returns from quickly eroding. The assumptions we make about a firm's moat determine the length of "economic outperformance" that we assume in the latter stages of our valuation model. We also quantify the value of each firm's moat, which represents the difference between a firm's enterprise value and the value of the firm if no future net investment were to occur. Said differently, moat value identifies the value generated by the firm as a result of any future net new investment. Our Moat Trend Rating reflects our assessment of whether each firm's competitive advantage is either getting stronger or weaker, since we think of moats as dynamic, rather than static.

At the heart of our valuation system is a detailed projection of a company's future cash flows. The first stage of our three-stage discounted cash flow model can last from 5 to 10 years and contains numerous detailed assumptions about various financial and operating items. The second stage of our model—where a firm's return on new invested capital (RONIC) and earnings growth rate implicitly fade until the perpetuity year—can last anywhere from 0 years (for no-moat firms) to 20 years (for wide-moat companies). In our third stage, we assume the firm's RONIC equals its weighted average cost of capital, and we calculate a continuing value using a standard

Morningstar Research Methodology for Valuing Companies

Fundamental Analysis

Analyst conducts company and industry research:

- Financial statement analysis
- Channel checks
- Trade-show visits
- Industry and company reports and journals
- Conference calls
- Management and site visits

Economic Moat™ Rating

Strength of competitive advantage is rated: None, Narrow, or Wide

Advantages that confer an economic moat:

High Switching Costs
(Microsoft)

Cost advantage
(Wal-Mart)

Intangible assets
(Johnson & Johnson)

Network Effect
(Mastercard)

Efficient Scale
(Lockheed Martin)

Company Valuation

Analyst considers past financial results and focuses on competitive position and future prospects to forecast future cash flows.

Assumptions are entered into Morningstar's proprietary discounted cash-flow model.

Fair Value Estimate

Analyst uses a discounted cash-flow model to develop a Fair Value Estimate, which serves as the foundation for the Morningstar Rating for stocks.

Uncertainty Assessment

The analyst then evaluates the range of potential intrinsic values for the company and assigns an Uncertainty Rating: Low, Medium, High, Very High, or Extreme.

The Uncertainty Rating determines the margin of safety required before we would recommend the stock. The higher the uncertainty, the wider the margin of safety.

★★★★★
★★★★
★★★
★★
★

The current stock price relative to Morningstar's Fair Value Estimate, adjusted for uncertainty, determines the Morningstar Rating for stocks.

The Morningstar Rating for stocks is updated each evening after the market closes.

* Please contact a sales representative for more information.

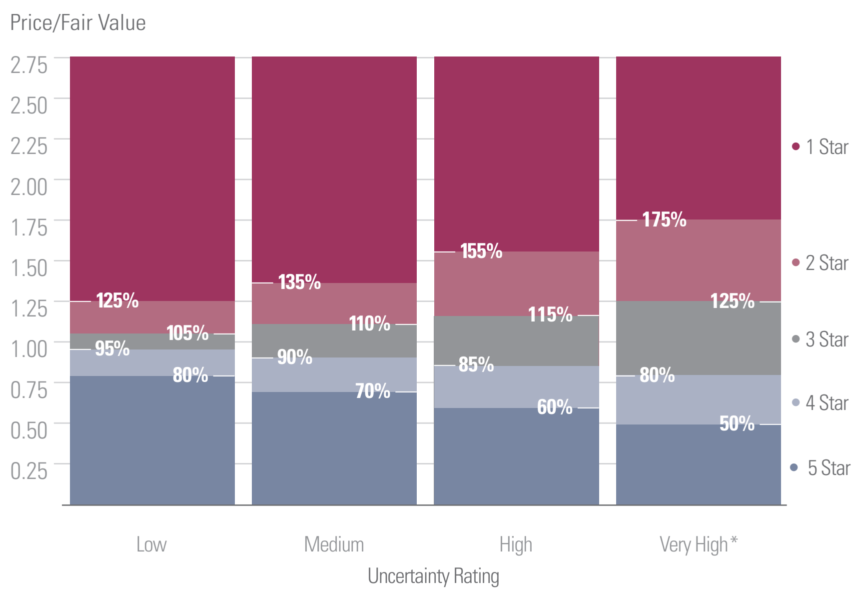
perpetuity formula. In deciding on the rate at which to discount future cash flows, we ignore stock-price volatility. Instead, we rely on a system that measures the estimated volatility of a firm's underlying future free cash flows, taking into account fundamental factors such as the diversity of revenue sources and the firm's fixed cost structure.

We also employ a number of other tools to augment our valuation process, including scenario analysis, where we assess the likelihood and performance of a business under different economic and firm-specific conditions. Our analysts typically model three to five scenarios for each company we cover, stress-testing the model and examining the distribution of resulting fair values.

The Morningstar Uncertainty Rating captures the range of these potential fair values, based on an assessment of a company's future sales range, the firm's operating and financial leverage, and any other contingent events that may impact the business. Our analysts use this range to assign an appropriate margin of safety—or the discount/premium to a fair value we apply in setting our consider buying/consider selling prices. Firms trading below our consider-buying prices receive our highest rating of five stars, whereas firms trading above our consider-selling prices receive our lowest rating of one star.

Our Stewardship Grades show our assessment of a management's commitment to shareholders, and include an analysis of a firm's transparency, incentives and ownership. We also provide Financial Health Grades, which are quantitative measures based on firms' distance to default scores. Distance to default measures the distance between the market value of a company's assets and the book value of its liabilities (expressed in standard deviations of asset value). For our grades, A is equivalent to "Excellent," while F is "Very Poor."

Morningstar Margin of Safety and Star Rating Bands



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Morningstar's Approach to Rating Corporate Credit

- Offers a proprietary measure of the credit quality of companies on our coverage list.
- Encapsulates our in-depth modeling and quantitative work in one letter grade.
- Allows investors to rank companies by each of the four underlying components of our credit ratings, including both analyst-driven and quantitative measures.
- Provides access to all the underlying forecasts that go into the rating, available through our institutional service.

Purpose

The Morningstar Corporate Credit Rating measures the ability of a firm to satisfy its debt and debt-like obligations. The higher the rating, the less likely we think the company is to default on these obligations.

The Morningstar Corporate Credit Rating builds on the modeling expertise of our securities research team. For each company, we publish:

- Five years of detailed pro-forma financial statements
- Annual estimates of free cash flow
- Annual forecasts of return on invested capital
- Scenario analyses, including upside and downside cases
- Forecasts of leverage, coverage, and liquidity ratios for five years
- Estimates of off balance sheet liabilities

These forecasts are key inputs into the Morningstar Corporate Credit Rating and are available to subscribers at select.morningstar.com.

Methodology

We feel it's important to perform credit analysis through different lenses—qualitative and quantitative, as well as fundamental and market-driven. We therefore evaluate each company in four broad categories.

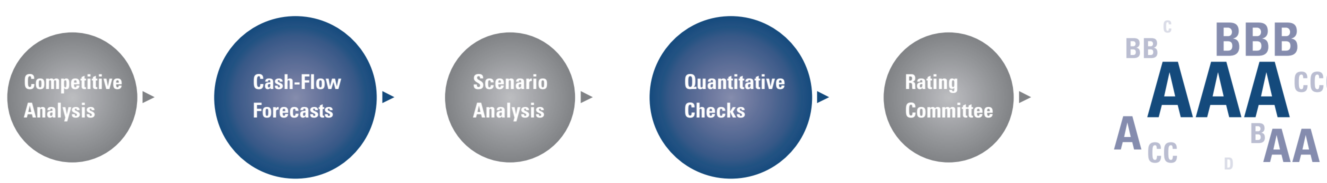
Business Risk

Business Risk captures the fundamental uncertainty around a firm's business operations and the cash flow generated by those operations. Key components of the Business Risk rating include the Morningstar Economic Moat™ Rating and the Morningstar Uncertainty Rating.

Cash Flow Cushion™

Morningstar's proprietary Cash Flow Cushion™ ratio is a fundamental indicator of a firm's future financial health The measure reveals how many times a company's internal cash generation plus total excess liquid cash will cover its debt-like contractual commitments over the next five years. The Cash Flow Cushion acts as a predictor of financial distress, bringing to light potential refinancing, operational, and liquidity risks inherent to the firm.

Morningstar Research Methodology for Determining Corporate Credit Ratings



Analyst conducts company and industry research:

- Management interviews
- Conference calls
- Trade show visits
- Competitor, supplier, distributor, and customer interviews
- Assign Economic Moat™ Rating

Analyst considers company financial statements and competitive dynamics to forecast future free cash flows to the firm.

Analyst derives estimate of Stress Test Score™

Analysts run bull and bear cases through the model to derive alternate estimates of enterprise value.

Based on competitive analysis, forecasts, and scenario analysis, the analyst assigns Business Risk.

We gauge a firm's health using quantitative tools supported by our own backtesting and academic research.

- Morningstar Bank Solvency Score™
- Distance to Default

Senior personnel review each company to determine the appropriate final credit rating.

- Review modeling assumptions
- Approve company-specific adjustments

AAA	Extremely Low Default Risk
AA	Very Low Default Risk
A	Low Default Risk
BBB	Moderate Default Risk
BB	Above Average Default Risk
B	High Default Risk
CCC	Currently Very High Default Risk
CC	Currently Extreme Default Risk
C	Imminent Payment Default
D	Payment Default
UR	Under Review
UR+	Positive Credit Implication
UR-	Negative Credit Implication

Morningstar's Approach to Rating Corporate Credit

The advantage of the Cash Flow Cushion ratio relative to other fundamental indicators of credit health is that the measure focuses on the future cash-generating performance of the firm derived from Morningstar's proprietary discounted cash flow model. By making standardized adjustments for certain expenses to reflect their debt-like characteristics, we can compare future projected free cash flows with debt-like cash commitments coming due in any particular year. The forward-looking nature of this metric allows us to anticipate changes in a firm's financial health and pinpoint periods where cash shortfalls are likely to occur.

Morningstar Solvency Score™

The Morningstar Solvency Score™ is a quantitative score derived from both historical and forecasted financial ratios. It includes ratios that focus on liquidity (a company's ability to meet short term cash outflows), profitability (a company's ability to generate profit per unit of input), capital structure (how does the company finance its operations), and interest coverage (how much of profit is used up by interest payments).

Distance to Default

The Distance to Default rating is a quantitative, market-based measure of a company's current financial health. (Distance to Default serves as the basis for Morningstar's Financial Health Grade.) The underlying model treats the equity of a firm as a call option on that firm's assets. Based on estimates of asset volatility and the Black-Scholes option-pricing model, we can estimate the likelihood that the value of the company's assets falls below the value of its liabilities, implying likely default.

For each of these four categories, we assign a score, which we then translate into a descriptive rating along the scale of Very Good / Good / Fair / Poor / Very Poor.

Overall Credit Rating

The four component ratings roll up into a single preliminary credit rating. To determine the final credit rating, a credit committee of at least five senior research personnel reviews each preliminary rating.

We review credit ratings on a regular basis and as events warrant. Any change in rating must be approved by the Credit Rating Committee.

Investor Access

Morningstar Corporate Credit Ratings are available on Morningstar.com. Our credit research, including detailed cash-flow models that contain all of the components of the Morningstar Corporate Credit Rating, is available to subscribers at select.morningstar.com.

Analyst's Perspective 03 Jan 2012

Fortis' predominant regulated revenue mix provides investors a stable earnings profile and support for the stock's consistent dividend growth. Significant capital expenditures will drive near-term earnings growth and set a base for future free cash flow generation. The company's Canadian regulated utilities operate in constructive regulatory jurisdictions, but with slightly lower allowed returns on equity than its U.S. counterparts. In addition to organic growth, company management has indicated a desire to expand in the U.S. We would view this positively given the similar regulatory structures, and it could be value-accretive given where Fortis' stock traded at year-end 2011 and the typically more favorable allowed returns in the U.S. We forecast normalized earnings can grow at 5% annually through 2015. At a 3.5% dividend yield and trading at 18 times our 2012 earnings forecast, we think Fortis is overvalued.

Key Investment Considerations

- Fortis generates more than 90% of its profit from its regulated utility segment, providing a stable earnings base.
- Across all of its utilities, regulators allow Fortis a 9.5% weighted-average return on equity, which is about 100 basis points lower than regulators allow U.S. utilities on average.
- We think the stock is overvalued as of year-end 2011, with Fortis trading at 18 times our 2012 earnings estimate.

Analyst Note:

Profile

Fortis primarily owns and operates utility transmission and distribution assets in Canada. It has smaller stakes in electricity generation, several Caribbean utilities, and Canadian hotel and commercial real estate. The firm's regulated natural gas operations serve 950,000 customers in British Columbia. Its regulated electric utility operations serve 1.1 million customers throughout Canada and in Grand Cayman and Turks and Caicos. Its Canadian operations accounted for 92% of its total assets as of 2010.

Morningstar Analysis

Fortis' low-risk operations result in stable earnings and support its consistent dividend growth the last four decades.

Fortis Enters U.S. Market With Acquisition of CH Energy Group 21 Feb 2012

On Tuesday, Fortis FTS announced a $1.5 billion cash and debt bid for CH Energy Group CHG , a regulated New York Mid-Hudson River Valley utility that would be Fortis' first based in the United States. Fortis offered $65 per share for CH Energy, a 10.5% premium to the most recent close price.

The $1 billion equity investment implies a pricey 1.9 times multiple on book- and rate-base equity. But that premium falls to 1.3 times book when we adjust for certain tax and regulatory balance sheet items. At this adjusted price, we believe the deal is slightly value-dilutive for Fortis, however we are reaffirming our fair value estimate given the relatively small size of the deal and regulatory approval uncertainty. New York state regulators and the Federal Energy Regulatory Commission must approve the deal.

We originally thought Fortis would make a larger splash into the U.S. market with an acquisition of $3 billion to $5 billion. The smaller deal for CH Energy indicates to us that there may be room for additional acquisitions in the future. Strategically, we think the acquisition is sound. The acquisition allows Fortis to enter the U.S.-regulated electric and gas distribution businesses in order to gain a better understanding of the U.S. market, with geographical proximity to its current Canadian operations.

N.Y. regulators allow CH Energy an industry average 10% return on its equity rate base through July 2013. With Fortis successfully integrating three utilities since 2004, we think the current management team is well-suited for the CH Energy Group acquisition. Our strategic enthusiasm for the merger is dampened by the price Fortis paid. To earn CH Energy's allowed return of 10%, significant synergy savings will be required to maintain current allowed returns.

Thesis 03 Jan 2012

Fortis manages electric and gas regulated utilities in Canada and the Caribbean, resulting in stable operating results. The company's noncore generation and real estate holding operations account for 12% of operating earnings. While we are less excited by the distractions of these noncore operations, we are comforted that management continues to focus on electric and natural gas distribution in North America.

Fortis' main regulated Canadian operations reside in British Columbia, Alberta, and Newfoundland. These relatively low-risk operations result in stable earnings and fund the consistent dividend growth experienced the past four decades. Rate base additions should be significant through 2015, as the company plans to invest CAD 4.8 billion as the healthier Canadian economy drives usage and customer growth. This should allow the firm to increase its rate base at double-digit rates each year during this expansion period. On a weighted-average basis, Fortis' allowed returns on equity in its Canadian service territories are 9.25% after a series of rate increases in 2010. While this return is lower than that typically granted to comparable U.S. utilities, it does not seem unreasonable given the low-risk nature of Fortis' transmission and delivery operations.

The company also operates small utility operations in Belize and the Caribbean. While the allowed returns can be significantly higher than its Canadian operations, these operations also have a much higher risk profile than its Canadian operations. In the summer of 2011, the Government of Belize expropriated Fortis' 70% ownership in Belize Electricity Limited, resulting in an unknown recoverable asset representing 2% of Fortis' assets. While small in nature, the earnings of these operations are exposed to additional risks of economic instability, tenuous regulation, and weather events. Management has indicated it has little interest to expand operations in the Caribbean, which we see as a positive.

We are less enthusiastic about the firm's small presence in

the cyclical hotel and commercial real estate industry. However, these holdings are held solely for tax strategy purposes and would likely be spun off should Canadian tax policy change. Currently, the Canadian government disallows entity tax consolidation, and the real estate asset revenues offset holding company expenses, mostly interest. While we believe the strategy behind these assets is sound, we worry they may distract management and drag on growth.

Fortis has expressed interest in expanding its operations through U.S. acquisitions and was outbid in June 2011 for the regulated Central Vermont Public Service Corporation. Strategically, we are encouraged by the similarity of regulatory jurisdictions and operations in the U.S. However, we were concerned by Fortis' relatively steep offer, but we like that management had the discipline to walk away when the price got too rich.

Given the high barriers to entry and regulated nature of Fortis' main operations, we award the company a narrow economic moat. The firm's exposure to noncore areas and foreign markets, though small, leads us to assign it a medium fair value uncertainty rating. We would consider lowering our uncertainty rating if Fortis were to divest the noncore assets.

Valuation, Growth and Profitability 03 Jan 2012

We are reinitiating coverage of Fortis under a new analyst with a CAD 29 fair value estimate, taking into consideration planned rate base additions through 2015. After the significant share dilution that occurred during 2011, we forecast 5% earnings growth in 2012 adjusting for lower dilution and normalized weather conditions. Beyond 2013, we assume 1.5% annual energy use growth at the Canadian utilities and consistent allowed returns on equity. Based on management's guidance, we forecast total investments of CAD 4.6 billion at the utilities through 2015, leading to annualized rate base growth of 6%. We use a 10.0% cost of equity and a 7.5% weighted average cost of capital in our discounted cash flow model.

Scenario Analysis

The most significant near-term driver of our earnings forecast is our annualized energy growth rate at the regulated utilities. If energy growth is 50 bps lower than our 2013 estimate, our earnings per share would fall by 2% and our fair value estimate would decrease by CAD 2. We expect similar changes in earnings per share and fair value if energy growth is 50 bps higher.

Allowed returns at the Canadian utilities are also a significant driver of our valuation estimates. If we assume a 100 bps decrease in allowed returns on equity in 2012 and beyond, our fair value estimate decreases to CAD 21. Better-than-expected allowed returns on equity drive similar upside results. Finally, a 50 bps change in our cost of equity assumption changes our fair value estimate by about CAD 3 per share.

Economic Moat

Fortis owns a difficult-to-replicate network of regulated

power generation, transmission, and distribution assets and provides an essential energy source: electricity. In exchange for its monopoly position, regulators set Fortis' returns at levels that aim to keep customer costs low while providing adequate returns for capital providers. This implicit contract between regulators and the utility should, in the long run, allow Fortis to earn its cost of capital, and leads us to assign Fortis' regulated utilities a narrow economic moat. As with all regulated utilities, we think regulatory caps on revenue and returns preclude Fortis from establishing a wide economic moat.

Moat Trend
We assign Fortis a stable moat due to its monopoly position and stable regulatory environment that will continue to allow the firm to earn its cost of capital. We do not expect the regulatory relationship to change in the future. The regulatory framework that caps revenue and returns prevent the firm from attaining a wide moat, as with all regulated utilities that we cover.

Bulls Say/Bears Say

Bulls Say

- The company operates a stable business profile, offering a strong base for consistent earnings.
- With an aggressive capital expenditure plan, rate base growth is forecast to grow at a 6% compound annual growth rate.
- Fortis has consistent dividend growth history, paying consecutive quarterly dividends for four decades and growing the dividend faster than most of its peers in recent years.
- Fortis operations are based in higher-growth regions within Canada, mainly in Alberta and British Columbia.

Bears Say

- The Canadian regulatory environment offers lower allowed returns than its U.S. peers.
- The recent Belize expropriation demonstrates how Caribbean operations offer higher growth opportunities but at a substantially higher risk.
- The company operates noncore hotel and commercial real estate assets, potentially distracting management from core regulated operations.

Financial Health

With a debt/capital ratio of just under 60% and interest coverage of 2.1 times, Fortis' financial health looks reasonably sound, particularly in light of its stable, low-risk business model. Fortis undertook a significant equity offering of 9 million shares resulting in CAD 300 million of proceeds. We expect the company to be active in the capital markets consistent with its current capital structure throughout its capital expenditure plan.

Capital Structure

Between 2011 and 2015, Fortis has CAD 5.5 billion of planned capital expenditures, which will require the company to access the debt and equity capital markets. We anticipate that Fortis will issue CAD 200 million in debt in 2012 and has manageable debt maturities through 2015. The company recently issued significant equity in July 2011 to help finance its capital expenditure plan, and we expect Fortis to issue minimal additional equity in 2012 to accommodate employee stock purchase plans and an executive DRIP plan.

Enterprise Risk

Fortis' key risk to future earnings is regulation. The company faces regulatory risks that create uncertainties around costs and allowed returns, especially given the significant capital expenditure plan from 2011 to 2015. Fortis is also exposed to political and economic instability at its Caribbean operations. With an eye towards acquisitions, the company risks overpaying for regulated U.S. assets and must be mindful of the strategic benefits. As with all regulated utilities, Fortis faces the risk of an inflationary environment that would raise borrowing costs and make other investments more attractive for income-seeking investors.

Stewardship: NA 03 Jan 2012

Stanley Marshall has been president and CEO since 1995, leading a group of experienced utility executives. Total direct compensation was $4.0 million for 2010, which we believe is in line with Fortis' industry group. Marshall's total compensation comprises base salary, annual incentives, stock options, and performance stock units, with 75% of total compensation at risk. We do not like that annual cash incentives are based on earnings per share targets, as EPS can be manipulated and may not be an indication of shareholder value creation. Marshall also has a significant ownership stake of 14 times his salary, which we believe aligns shareholder and management interests. From a corporate governance perspective, we like that the CEO and chairman positions are separated. While the board of directors has vast experience, we would prefer that members of the board have more direct utility experience.

Analyst Notes

Strong Customer Growth Generates Impressive 2011 Results at Fortis. 09 Feb 2012

Fortis Inc. FTS posted $1.75 in EPS in 2011, higher than our own $1.71 estimate and a 6% increase from 2010. Strong customer growth and higher energy deliveries at its regulated Canadian utilities drove results. We are reaffirming our fair value estimate and forecast 5% EPS growth through 2016 as $5.5 billion in planned capital expenditures should drive earnings expansion. Fortis increased dividends 3.5% in mid-December to $1.20, an implied 66% payout ratio, with a current yield of 3.5%. At our fair value estimate, Fortis would yield 4%.

In 2012, significant regulatory rulings at the company's Newfound Power and FortisBC subsidiaries could significantly impact future operating results. With the Alberta Utilities Commission ruling in December 2011, allowed returns at Fortis Alberta were decreased 25 basis points to just 8.75%. Similar cuts could be seen at the firm's other regulated Canadian operating companies, putting pressure on earnings growth. Management provided no EPS guidance for 2012.

Research Methodology for Valuing Companies

Components of Our Methodology
- Economic Moat™ Rating
- Moat Trend™ Rating
- Moat Valuation
- Three-Stage Discounted Cash Flow
- Weighted Average Cost of Capital
- Fair Value Estimate
- Scenario Analysis
- Uncertainty Ratings
- Margin of Safety
- Consider Buying/Selling
- Stewardship Grades
- Financial Health Grades

The Morningstar Rating for stocks identifies companies trading at a discount or premium to our analysts' assessment of their fair value. A number of components drive this rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's intrinsic value based on a discounted cash-flow model, (3) the margin of safety bands we apply to our Fair Value Estimate, and (4) the current stock price relative to our fair value estimate.

The concept of the Morningstar Economic Moat™ Rating plays a vital role not only in our qualitative assessment of a firm's investment potential, but also in our valuation process. We assign three moat ratings—none, narrow, or wide—as well as the Morningstar Moat Trend™ Rating—positive, stable, or negative—to each company we cover. There are two major requirements for firms to earn either a narrow or wide moat rating: (1) the prospect of earning above-average returns on capital; and (2) some competitive edge that prevents these returns from quickly eroding. The assumptions we make about a firm's moat determine the length of "economic outperformance" that we assume in the latter stages of our valuation model. We also quantify the value of each firm's moat, which represents the difference between a firm's enterprise value and the value of the firm if no future net investment were to occur. Said differently, moat value identifies the value generated by the firm as a result of any future net new investment. Our Moat Trend Rating reflects our assessment of whether each firm's competitive advantage is either getting stronger or weaker, since we think of moats as dynamic, rather than static.

At the heart of our valuation system is a detailed projection of a company's future cash flows. The first stage of our three-stage discounted cash flow model can last from 5 to 10 years and contains numerous detailed assumptions about various financial and operating items. The second stage of our model—where a firm's return on new invested capital (RONIC) and earnings growth rate implicitly fade until the perpetuity year—can last anywhere from 0 years (for no-moat firms) to 20 years (for wide-moat companies). In our third stage, we assume the firm's RONIC equals its weighted average cost of capital, and we calculate a continuing value using a standard

Morningstar Research Methodology for Valuing Companies

Analyst conducts company and industry research:
- Financial statement analysis
- Channel checks
- Trade-show visits
- Industry and company reports and journals
- Conference calls
- Management and site visits

Strength of competitive advantage is rated: None, Narrow, or Wide

Advantages that confer an economic moat:

High Switching Costs (Microsoft)

Cost advantage (Wal-Mart)

Intangible assets (Johnson & Johnson)

Network Effect (Mastercard)

Efficient Scale (Lockheed Martin)

Analyst considers past financial results and focuses on competitive position and future prospects to forecast future cash flows.

Assumptions are entered into Morningstar's proprietary discounted cash-flow model.

Analyst uses a discounted cash-flow model to develop a Fair Value Estimate, which serves as the foundation for the Morningstar Rating for stocks.

The analyst then evaluates the range of potential intrinsic values for the company and assigns an Uncertainty Rating: Low, Medium, High, Very High, or Extreme.

The Uncertainty Rating determines the margin of safety required before we would recommend the stock. The higher the uncertainty, the wider the margin of safety.

The current stock price relative to Morningstar's Fair Value Estimate, adjusted for uncertainty, determines the Morningstar Rating for stocks.

The Morningstar Rating for stocks is updated each evening after the market closes.

* Please contact a sales representative for more information.

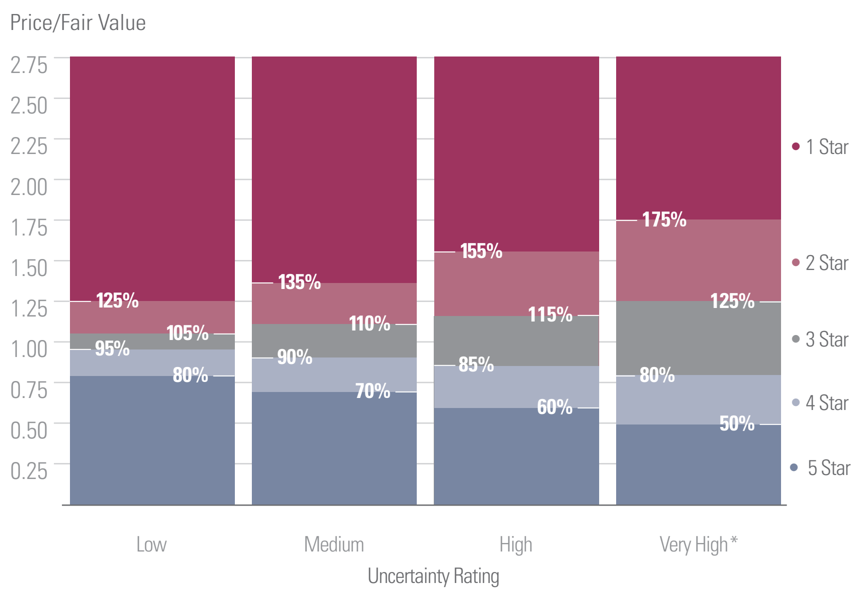
perpetuity formula. In deciding on the rate at which to discount future cash flows, we ignore stock-price volatility. Instead, we rely on a system that measures the estimated volatility of a firm's underlying future free cash flows, taking into account fundamental factors such as the diversity of revenue sources and the firm's fixed cost structure.

We also employ a number of other tools to augment our valuation process, including scenario analysis, where we assess the likelihood and performance of a business under different economic and firm-specific conditions. Our analysts typically model three to five scenarios for each company we cover, stress-testing the model and examining the distribution of resulting fair values.

The Morningstar Uncertainty Rating captures the range of these potential fair values, based on an assessment of a company's future sales range, the firm's operating and financial leverage, and any other contingent events that may impact the business. Our analysts use this range to assign an appropriate margin of safety—or the discount/premium to a fair value we apply in setting our consider buying/consider selling prices. Firms trading below our consider-buying prices receive our highest rating of five stars, whereas firms trading above our consider-selling prices receive our lowest rating of one star.

Our Stewardship Grades show our assessment of a management's commitment to shareholders, and include an analysis of a firm's transparency, incentives and ownership. We also provide Financial Health Grades, which are quantitative measures based on firms' distance to default scores. Distance to default measures the distance between the market value of a company's assets and the book value of its liabilities (expressed in standard deviations of asset value). For our grades, A is equivalent to "Excellent," while F is "Very Poor."

Morningstar Margin of Safety and Star Rating Bands



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Morningstar's Approach to Rating Corporate Credit

- Offers a proprietary measure of the credit quality of companies on our coverage list.
- Encapsulates our in-depth modeling and quantitative work in one letter grade.
- Allows investors to rank companies by each of the four underlying components of our credit ratings, including both analyst-driven and quantitative measures.
- Provides access to all the underlying forecasts that go into the rating, available through our institutional service.

Purpose

The Morningstar Corporate Credit Rating measures the ability of a firm to satisfy its debt and debt-like obligations. The higher the rating, the less likely we think the company is to default on these obligations.

The Morningstar Corporate Credit Rating builds on the modeling expertise of our securities research team. For each company, we publish:

- Five years of detailed pro-forma financial statements
- Annual estimates of free cash flow
- Annual forecasts of return on invested capital
- Scenario analyses, including upside and downside cases
- Forecasts of leverage, coverage, and liquidity ratios for five years
- Estimates of off balance sheet liabilities

These forecasts are key inputs into the Morningstar Corporate Credit Rating and are available to subscribers at select.morningstar.com.

Methodology

We feel it's important to perform credit analysis through different lenses—qualitative and quantitative, as well as fundamental and market-driven. We therefore evaluate each company in four broad categories.

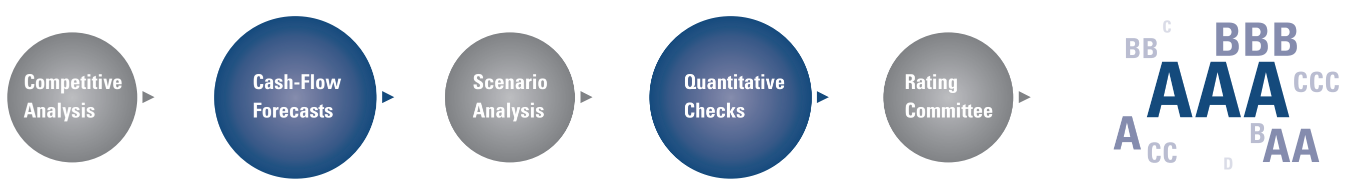
Business Risk

Business Risk captures the fundamental uncertainty around a firm's business operations and the cash flow generated by those operations. Key components of the Business Risk rating include the Morningstar Economic Moat™ Rating and the Morningstar Uncertainty Rating.

Cash Flow Cushion™

Morningstar's proprietary Cash Flow Cushion™ ratio is a fundamental indicator of a firm's future financial health The measure reveals how many times a company's internal cash generation plus total excess liquid cash will cover its debt-like contractual commitments over the next five years. The Cash Flow Cushion acts as a predictor of financial distress, bringing to light potential refinancing, operational, and liquidity risks inherent to the firm.

Morningstar Research Methodology for Determining Corporate Credit Ratings



Competitive Analysis

Analyst conducts company and industry research:

- Management interviews
- Conference calls
- Trade show visits
- Competitor, supplier, distributor, and customer interviews
- Assign Economic Moat™ Rating

Cash-Flow Forecasts

Analyst considers company financial statements and competitive dynamics to forecast future free cash flows to the firm.

Analyst derives estimate of Stress Test Score™

Scenario Analysis

Analysts run bull and bear cases through the model to derive alternate estimates of enterprise value.

Based on competitive analysis, forecasts, and scenario analysis, the analyst assigns Business Risk.

Quantitative Checks

We gauge a firm's health using quantitative tools supported by our own backtesting and academic research.

- Morningstar Bank Solvency Score™
- Distance to Default

Rating Committee

Senior personnel review each company to determine the appropriate final credit rating.

- Review modeling assumptions
- Approve company-specific adjustments

AAA	Extremely Low Default Risk
AA	Very Low Default Risk
A	Low Default Risk
BBB	Moderate Default Risk
BB	Above Average Default Risk
B	High Default Risk
CCC	Currently Very High Default Risk
CC	Currently Extreme Default Risk
C	Imminent Payment Default
D	Payment Default
UR	Under Review
UR+	Positive Credit Implication
UR-	Negative Credit Implication

Morningstar's Approach to Rating Corporate Credit

The advantage of the Cash Flow Cushion ratio relative to other fundamental indicators of credit health is that the measure focuses on the future cash-generating performance of the firm derived from Morningstar's proprietary discounted cash flow model. By making standardized adjustments for certain expenses to reflect their debt-like characteristics, we can compare future projected free cash flows with debt-like cash commitments coming due in any particular year. The forward-looking nature of this metric allows us to anticipate changes in a firm's financial health and pinpoint periods where cash shortfalls are likely to occur.

Morningstar Solvency Score™

The Morningstar Solvency Score™ is a quantitative score derived from both historical and forecasted financial ratios. It includes ratios that focus on liquidity (a company's ability to meet short term cash outflows), profitability (a company's ability to generate profit per unit of input), capital structure (how does the company finance its operations), and interest coverage (how much of profit is used up by interest payments).

Distance to Default

The Distance to Default rating is a quantitative, market-based measure of a company's current financial health. (Distance to Default serves as the basis for Morningstar's Financial Health Grade.) The underlying model treats the equity of a firm as a call option on that firm's assets. Based on estimates of asset volatility and the Black-Scholes option-pricing model, we can estimate the likelihood that the value of the company's assets falls below the value of its liabilities, implying likely default.

For each of these four categories, we assign a score, which we then translate into a descriptive rating along the scale of Very Good / Good / Fair / Poor / Very Poor.

Overall Credit Rating

The four component ratings roll up into a single preliminary credit rating. To determine the final credit rating, a credit committee of at least five senior research personnel reviews each preliminary rating.

We review credit ratings on a regular basis and as events warrant. Any change in rating must be approved by the Credit Rating Committee.

Investor Access

Morningstar Corporate Credit Ratings are available on Morningstar.com. Our credit research, including detailed cash-flow models that contain all of the components of the Morningstar Corporate Credit Rating, is available to subscribers at select.morningstar.com.

Contents

Analyst's Perspective 03 Jan 2012

Fortis' predominant regulated revenue mix provides investors a stable earnings profile and support for the stock's consistent dividend growth. Significant capital expenditures will drive near-term earnings growth and set a base for future free cash flow generation. The company's Canadian regulated utilities operate in constructive regulatory jurisdictions, but with slightly lower allowed returns on equity than its U.S. counterparts. In addition to organic growth, company management has indicated a desire to expand in the U.S. We would view this positively given the similar regulatory structures, and it could be value-accretive given where Fortis' stock traded at year-end 2011 and the typically more favorable allowed returns in the U.S. We forecast normalized earnings can grow at 5% annually through 2015. At a 3.5% dividend yield and trading at 18 times our 2012 earnings forecast, we think Fortis is overvalued.

Key Investment Considerations

- Fortis generates more than 90% of its profit from its regulated utility segment, providing a stable earnings base.
- Across all of its utilities, regulators allow Fortis a 9.5% weighted-average return on equity, which is about 100 basis points lower than regulators allow U.S. utilities on average.
- We think the stock is overvalued as of year-end 2011, with Fortis trading at 18 times our 2012 earnings estimate.

Analyst Note:

Profile

Fortis primarily owns and operates utility transmission and distribution assets in Canada. It has smaller stakes in electricity generation, several Caribbean utilities, and Canadian hotel and commercial real estate. The firm's regulated natural gas operations serve 950,000 customers in British Columbia. Its regulated electric utility operations serve 1.1 million customers throughout Canada and in Grand Cayman and Turks and Caicos. Its Canadian operations accounted for 92% of its total assets as of 2010.

Morningstar Analysis

Fortis' low-risk operations result in stable earnings and support its consistent dividend growth the last four decades.

Fortis Enters U.S. Market With Acquisition of CH Energy Group 21 Feb 2012

On Tuesday, Fortis FTS announced a $1.5 billion cash and debt bid for CH Energy Group CHG , a regulated New York Mid-Hudson River Valley utility that would be Fortis' first based in the United States. Fortis offered $65 per share for CH Energy, a 10.5% premium to the most recent close price.

The $1 billion equity investment implies a pricey 1.9 times multiple on book- and rate-base equity. But that premium falls to 1.3 times book when we adjust for certain tax and regulatory balance sheet items. At this adjusted price, we believe the deal is slightly value-dilutive for Fortis, however we are reaffirming our fair value estimate given the relatively small size of the deal and regulatory approval uncertainty. New York state regulators and the Federal Energy Regulatory Commission must approve the deal.

We originally thought Fortis would make a larger splash into the U.S. market with an acquisition of $3 billion to $5 billion. The smaller deal for CH Energy indicates to us that there may be room for additional acquisitions in the future. Strategically, we think the acquisition is sound. The acquisition allows Fortis to enter the U.S.-regulated electric and gas distribution businesses in order to gain a better understanding of the U.S. market, with geographical proximity to its current Canadian operations.

N.Y. regulators allow CH Energy an industry average 10% return on its equity rate base through July 2013. With Fortis successfully integrating three utilities since 2004, we think the current management team is well-suited for the CH Energy Group acquisition. Our strategic enthusiasm for the merger is dampened by the price Fortis paid. To earn CH Energy's allowed return of 10%, significant synergy savings will be required to maintain current allowed returns.

Thesis 03 Jan 2012

Fortis manages electric and gas regulated utilities in Canada and the Caribbean, resulting in stable operating results. The company's noncore generation and real estate holding operations account for 12% of operating earnings. While we are less excited by the distractions of these noncore operations, we are comforted that management continues to focus on electric and natural gas distribution in North America.

Fortis' main regulated Canadian operations reside in British Columbia, Alberta, and Newfoundland. These relatively low-risk operations result in stable earnings and fund the consistent dividend growth experienced the past four decades. Rate base additions should be significant through 2015, as the company plans to invest CAD 4.8 billion as the healthier Canadian economy drives usage and customer growth. This should allow the firm to increase its rate base at double-digit rates each year during this expansion period. On a weighted-average basis, Fortis' allowed returns on equity in its Canadian service territories are 9.25% after a series of rate increases in 2010. While this return is lower than that typically granted to comparable U.S. utilities, it does not seem unreasonable given the low-risk nature of Fortis' transmission and delivery operations.

The company also operates small utility operations in Belize and the Caribbean. While the allowed returns can be significantly higher than its Canadian operations, these operations also have a much higher risk profile than its Canadian operations. In the summer of 2011, the Government of Belize expropriated Fortis' 70% ownership in Belize Electricity Limited, resulting in an unknown recoverable asset representing 2% of Fortis' assets. While small in nature, the earnings of these operations are exposed to additional risks of economic instability, tenuous regulation, and weather events. Management has indicated it has little interest to expand operations in the Caribbean, which we see as a positive.

We are less enthusiastic about the firm's small presence in

the cyclical hotel and commercial real estate industry. However, these holdings are held solely for tax strategy purposes and would likely be spun off should Canadian tax policy change. Currently, the Canadian government disallows entity tax consolidation, and the real estate asset revenues offset holding company expenses, mostly interest. While we believe the strategy behind these assets is sound, we worry they may distract management and drag on growth.

Fortis has expressed interest in expanding its operations through U.S. acquisitions and was outbid in June 2011 for the regulated Central Vermont Public Service Corporation. Strategically, we are encouraged by the similarity of regulatory jurisdictions and operations in the U.S. However, we were concerned by Fortis' relatively steep offer, but we like that management had the discipline to walk away when the price got too rich.

Given the high barriers to entry and regulated nature of Fortis' main operations, we award the company a narrow economic moat. The firm's exposure to noncore areas and foreign markets, though small, leads us to assign it a medium fair value uncertainty rating. We would consider lowering our uncertainty rating if Fortis were to divest the noncore assets.

Valuation, Growth and Profitability 03 Jan 2012

We are reinitiating coverage of Fortis under a new analyst with a CAD 29 fair value estimate, taking into consideration planned rate base additions through 2015. After the significant share dilution that occurred during 2011, we forecast 5% earnings growth in 2012 adjusting for lower dilution and normalized weather conditions. Beyond 2013, we assume 1.5% annual energy use growth at the Canadian utilities and consistent allowed returns on equity. Based on management's guidance, we forecast total investments of CAD 4.6 billion at the utilities through 2015, leading to annualized rate base growth of 6%. We use a 10.0% cost of equity and a 7.5% weighted average cost of capital in our discounted cash flow model.

Scenario Analysis

The most significant near-term driver of our earnings forecast is our annualized energy growth rate at the regulated utilities. If energy growth is 50 bps lower than our 2013 estimate, our earnings per share would fall by 2% and our fair value estimate would decrease by CAD 2. We expect similar changes in earnings per share and fair value if energy growth is 50 bps higher.

Allowed returns at the Canadian utilities are also a significant driver of our valuation estimates. If we assume a 100 bps decrease in allowed returns on equity in 2012 and beyond, our fair value estimate decreases to CAD 21. Better-than-expected allowed returns on equity drive similar upside results. Finally, a 50 bps change in our cost of equity assumption changes our fair value estimate by about CAD 3 per share.

Economic Moat

Fortis owns a difficult-to-replicate network of regulated power generation, transmission, and distribution assets and provides an essential energy source: electricity. In exchange for its monopoly position, regulators set Fortis' returns at levels that aim to keep customer costs low while providing adequate returns for capital providers. This implicit contract between regulators and the utility should, in the long run, allow Fortis to earn its cost of capital, and leads us to assign Fortis' regulated utilities a narrow economic moat. As with all regulated utilities, we think regulatory caps on revenue and returns preclude Fortis from establishing a wide economic moat.

Moat Trend

We assign Fortis a stable moat due to its monopoly position and stable regulatory environment that will continue to allow the firm to earn its cost of capital. We do not expect the regulatory relationship to change in the future. The regulatory framework that caps revenue and returns prevent the firm from attaining a wide moat, as with all regulated utilities that we cover.

Bulls Say/Bears Say

Bulls Say

- The company operates a stable business profile, offering a strong base for consistent earnings.
- With an aggressive capital expenditure plan, rate base growth is forecast to grow at a 6% compound annual growth rate.
- Fortis has consistent dividend growth history, paying consecutive quarterly dividends for four decades and growing the dividend faster than most of its peers in recent years.
- Fortis operations are based in higher-growth regions within Canada, mainly in Alberta and British Columbia.

Bears Say

- The Canadian regulatory environment offers lower allowed returns than its U.S. peers.
- The recent Belize expropriation demonstrates how Caribbean operations offer higher growth opportunities but at a substantially higher risk.
- The company operates noncore hotel and commercial real estate assets, potentially distracting management from core regulated operations.

Financial Health

With a debt/capital ratio of just under 60% and interest coverage of 2.1 times, Fortis' financial health looks reasonably sound, particularly in light of its stable, low-risk business model. Fortis undertook a significant equity offering of 9 million shares resulting in CAD 300 million of proceeds. We expect the company to be active in the capital markets consistent with its current capital structure throughout its capital expenditure plan.

Capital Structure

Between 2011 and 2015, Fortis has CAD 5.5 billion of planned capital expenditures, which will require the company to access the debt and equity capital markets. We anticipate that Fortis will issue CAD 200 million in debt in 2012 and has manageable debt maturities through 2015. The company recently issued significant equity in July 2011 to help finance its capital expenditure plan, and we expect Fortis to issue minimal additional equity in 2012 to accommodate employee stock purchase plans and an executive DRIP plan.

Enterprise Risk

Fortis' key risk to future earnings is regulation. The company faces regulatory risks that create uncertainties around costs and allowed returns, especially given the significant capital expenditure plan from 2011 to 2015. Fortis is also exposed to political and economic instability at its Caribbean operations. With an eye towards acquisitions, the company risks overpaying for regulated U.S. assets and must be mindful of the strategic benefits. As with all regulated utilities, Fortis faces the risk of an inflationary environment that would raise borrowing costs and make other investments more attractive for income-seeking investors.

Stewardship: NA 03 Jan 2012

Stanley Marshall has been president and CEO since 1995, leading a group of experienced utility executives. Total direct compensation was $4.0 million for 2010, which we believe is in line with Fortis' industry group. Marshall's total compensation comprises base salary, annual incentives, stock options, and performance stock units, with 75% of total compensation at risk. We do not like that annual cash incentives are based on earnings per share targets, as EPS can be manipulated and may not be an indication of shareholder value creation. Marshall also has a significant ownership stake of 14 times his salary, which we believe aligns shareholder and management interests. From a corporate governance perspective, we like that the CEO and chairman positions are separated. While the board of directors has vast experience, we would prefer that members of the board have more direct utility experience.

Analyst Notes

Strong Customer Growth Generates Impressive 2011 Results at Fortis. 09 Feb 2012

Fortis Inc. FTS posted $1.75 in EPS in 2011, higher than our own $1.71 estimate and a 6% increase from 2010. Strong customer growth and higher energy deliveries at its regulated Canadian utilities drove results. We are reaffirming our fair value estimate and forecast 5% EPS growth through 2016 as $5.5 billion in planned capital expenditures should drive earnings expansion. Fortis increased dividends 3.5% in mid-December to $1.20, an implied 66% payout ratio, with a current yield of 3.5%. At our fair value estimate, Fortis would yield 4%.

In 2012, significant regulatory rulings at the company's Newfound Power and FortisBC subsidiaries could significantly impact future operating results. With the Alberta Utilities Commission ruling in December 2011, allowed returns at Fortis Alberta were decreased 25 basis points to just 8.75%. Similar cuts could be seen at the firm's other regulated Canadian operating companies, putting pressure on earnings growth. Management provided no EPS guidance for 2012.

Research Methodology for Valuing Companies

Components of Our Methodology

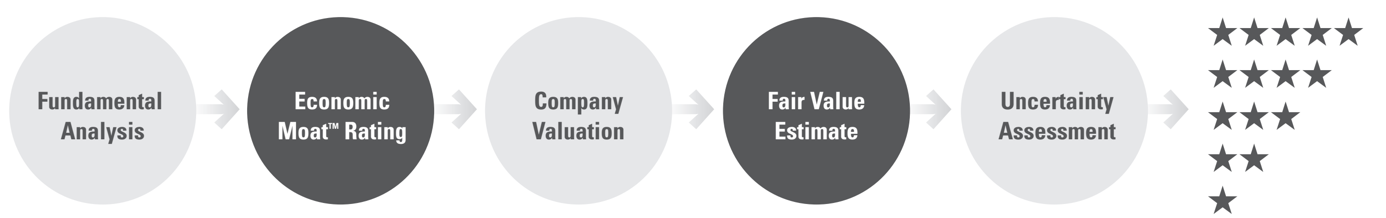
- Economic Moat™ Rating
- Moat Trend™ Rating
- Moat Valuation
- Three-Stage Discounted Cash Flow
- Weighted Average Cost of Capital
- Fair Value Estimate
- Scenario Analysis
- Uncertainty Ratings
- Margin of Safety
- Consider Buying/Selling
- Stewardship Grades
- Financial Health Grades

The Morningstar Rating for stocks identifies companies trading at a discount or premium to our analysts' assessment of their fair value. A number of components drive this rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's intrinsic value based on a discounted cash-flow model, (3) the margin of safety bands we apply to our Fair Value Estimate, and (4) the current stock price relative to our fair value estimate.

The concept of the Morningstar Economic Moat™ Rating plays a vital role not only in our qualitative assessment of a firm's investment potential, but also in our valuation process. We assign three moat ratings—none, narrow, or wide—as well as the Morningstar Moat Trend™ Rating—positive, stable, or negative—to each company we cover. There are two major requirements for firms to earn either a narrow or wide moat rating: (1) the prospect of earning above-average returns on capital; and (2) some competitive edge that prevents these returns from quickly eroding. The assumptions we make about a firm's moat determine the length of "economic outperformance" that we assume in the latter stages of our valuation model. We also quantify the value of each firm's moat, which represents the difference between a firm's enterprise value and the value of the firm if no future net investment were to occur. Said differently, moat value identifies the value generated by the firm as a result of any future net new investment. Our Moat Trend Rating reflects our assessment of whether each firm's competitive advantage is either getting stronger or weaker, since we think of moats as dynamic, rather than static.

At the heart of our valuation system is a detailed projection of a company's future cash flows. The first stage of our three-stage discounted cash flow model can last from 5 to 10 years and contains numerous detailed assumptions about various financial and operating items. The second stage of our model—where a firm's return on new invested capital (RONIC) and earnings growth rate implicitly fade until the perpetuity year—can last anywhere from 0 years (for no-moat firms) to 20 years (for wide-moat companies). In our third stage, we assume the firm's RONIC equals its weighted average cost of capital, and we calculate a continuing value using a standard

Morningstar Research Methodology for Valuing Companies



Analyst conducts company and industry research: ► Financial statement analysis ► Channel checks ► Trade-show visits ► Industry and company reports and journals ► Conference calls ► Management and site visits	Strength of competitive advantage is rated: None, Narrow, or Wide Advantages that confer an economic moat: **High Switching Costs** (Microsoft) **Cost advantage** (Wal-Mart) **Intangible assets** (Johnson & Johnson) **Network Effect** (Mastercard) **Efficient Scale** (Lockheed Martin)	Analyst considers past financial results and focuses on competitive position and future prospects to forecast future cash flows. Assumptions are entered into Morningstar's proprietary discounted cash-flow model.	Analyst uses a discounted cash-flow model to develop a Fair Value Estimate, which serves as the foundation for the Morningstar Rating for stocks.	The analyst then evaluates the range of potential intrinsic values for the company and assigns an Uncertainty Rating: Low, Medium, High, Very High, or Extreme. The Uncertainty Rating determines the margin of safety required before we would recommend the stock. The higher the uncertainty, the wider the margin of safety.	The current stock price relative to Morningstar's Fair Value Estimate, adjusted for uncertainty, determines the Morningstar Rating for stocks. The Morningstar Rating for stocks is updated each evening after the market closes.

* Please contact a sales representative for more information.

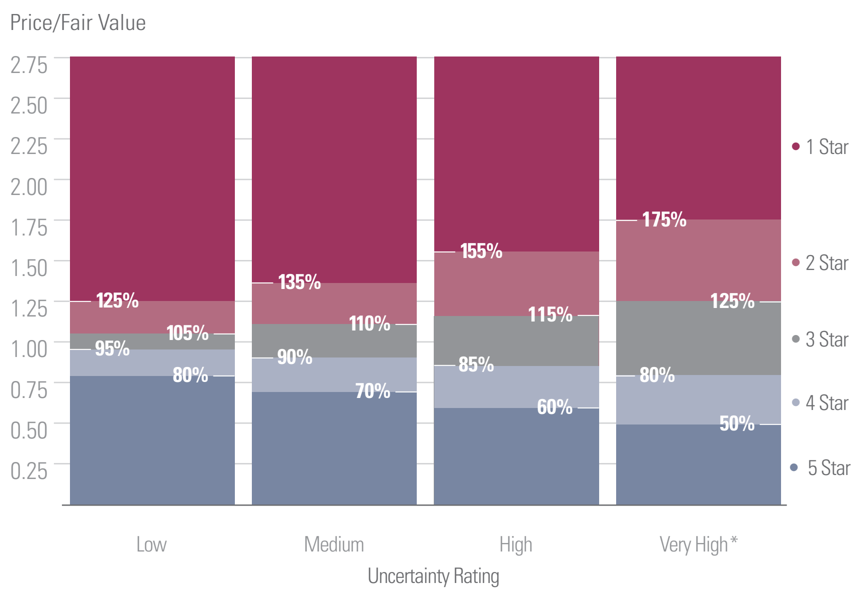
perpetuity formula. In deciding on the rate at which to discount future cash flows, we ignore stock-price volatility. Instead, we rely on a system that measures the estimated volatility of a firm's underlying future free cash flows, taking into account fundamental factors such as the diversity of revenue sources and the firm's fixed cost structure.

We also employ a number of other tools to augment our valuation process, including scenario analysis, where we assess the likelihood and performance of a business under different economic and firm-specific conditions. Our analysts typically model three to five scenarios for each company we cover, stress-testing the model and examining the distribution of resulting fair values.

The Morningstar Uncertainty Rating captures the range of these potential fair values, based on an assessment of a company's future sales range, the firm's operating and financial leverage, and any other contingent events that may impact the business. Our analysts use this range to assign an appropriate margin of safety—or the discount/premium to a fair value we apply in setting our consider buying/consider selling prices. Firms trading below our consider-buying prices receive our highest rating of five stars, whereas firms trading above our consider-selling prices receive our lowest rating of one star.

Our Stewardship Grades show our assessment of a management's commitment to shareholders, and include an analysis of a firm's transparency, incentives and ownership. We also provide Financial Health Grades, which are quantitative measures based on firms' distance to default scores. Distance to default measures the distance between the market value of a company's assets and the book value of its liabilities (expressed in standard deviations of asset value). For our grades, A is equivalent to "Excellent," while F is "Very Poor."

Morningstar Margin of Safety and Star Rating Bands



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Morningstar's Approach to Rating Corporate Credit

- Offers a proprietary measure of the credit quality of companies on our coverage list.
- Encapsulates our in-depth modeling and quantitative work in one letter grade.
- Allows investors to rank companies by each of the four underlying components of our credit ratings, including both analyst-driven and quantitative measures.
- Provides access to all the underlying forecasts that go into the rating, available through our institutional service.

Purpose

The Morningstar Corporate Credit Rating measures the ability of a firm to satisfy its debt and debt-like obligations. The higher the rating, the less likely we think the company is to default on these obligations.

The Morningstar Corporate Credit Rating builds on the modeling expertise of our securities research team. For each company, we publish:

- Five years of detailed pro-forma financial statements
- Annual estimates of free cash flow
- Annual forecasts of return on invested capital
- Scenario analyses, including upside and downside cases
- Forecasts of leverage, coverage, and liquidity ratios for five years
- Estimates of off balance sheet liabilities

These forecasts are key inputs into the Morningstar Corporate Credit Rating and are available to subscribers at select.morningstar.com.

Methodology

We feel it's important to perform credit analysis through different lenses—qualitative and quantitative, as well as fundamental and market-driven. We therefore evaluate each company in four broad categories.

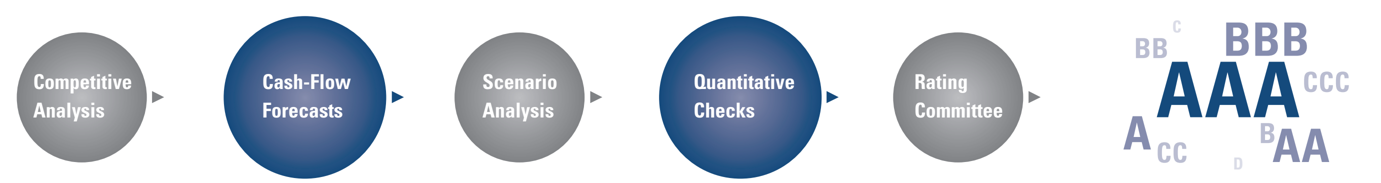
Business Risk

Business Risk captures the fundamental uncertainty around a firm's business operations and the cash flow generated by those operations. Key components of the Business Risk rating include the Morningstar Economic Moat™ Rating and the Morningstar Uncertainty Rating.

Cash Flow Cushion™

Morningstar's proprietary Cash Flow Cushion™ ratio is a fundamental indicator of a firm's future financial health The measure reveals how many times a company's internal cash generation plus total excess liquid cash will cover its debt-like contractual commitments over the next five years. The Cash Flow Cushion acts as a predictor of financial distress, bringing to light potential refinancing, operational, and liquidity risks inherent to the firm.

Morningstar Research Methodology for Determining Corporate Credit Ratings



Analyst conducts company and industry research:

- Management interviews
- Conference calls
- Trade show visits
- Competitor, supplier, distributor, and customer interviews
- Assign Economic Moat™ Rating

Analyst considers company financial statements and competitive dynamics to forecast future free cash flows to the firm.

Analyst derives estimate of Stress Test Score™

Analysts run bull and bear cases through the model to derive alternate estimates of enterprise value.

Based on competitive analysis, forecasts, and scenario analysis, the analyst assigns Business Risk.

We gauge a firm's health using quantitative tools supported by our own backtesting and academic research.

- Morningstar Bank Solvency Score™
- Distance to Default

Senior personnel review each company to determine the appropriate final credit rating.

- Review modeling assumptions
- Approve company-specific adjustments

AAA	Extremely Low Default Risk
AA	Very Low Default Risk
A	Low Default Risk
BBB	Moderate Default Risk
BB	Above Average Default Risk
B	High Default Risk
CCC	Currently Very High Default Risk
CC	Currently Extreme Default Risk
C	Imminent Payment Default
D	Payment Default
UR	Under Review
UR+	Positive Credit Implication
UR-	Negative Credit Implication

Morningstar's Approach to Rating Corporate Credit

The advantage of the Cash Flow Cushion ratio relative to other fundamental indicators of credit health is that the measure focuses on the future cash-generating performance of the firm derived from Morningstar's proprietary discounted cash flow model. By making standardized adjustments for certain expenses to reflect their debt-like characteristics, we can compare future projected free cash flows with debt-like cash commitments coming due in any particular year. The forward-looking nature of this metric allows us to anticipate changes in a firm's financial health and pinpoint periods where cash shortfalls are likely to occur.

Morningstar Solvency Score™

The Morningstar Solvency Score™ is a quantitative score derived from both historical and forecasted financial ratios. It includes ratios that focus on liquidity (a company's ability to meet short term cash outflows), profitability (a company's ability to generate profit per unit of input), capital structure (how does the company finance its operations), and interest coverage (how much of profit is used up by interest payments).

Distance to Default

The Distance to Default rating is a quantitative, market-based measure of a company's current financial health. (Distance to Default serves as the basis for Morningstar's Financial Health Grade.) The underlying model treats the equity of a firm as a call option on that firm's assets. Based on estimates of asset volatility and the Black-Scholes option-pricing model, we can estimate the likelihood that the value of the company's assets falls below the value of its liabilities, implying likely default.

For each of these four categories, we assign a score, which we then translate into a descriptive rating along the scale of Very Good / Good / Fair / Poor / Very Poor.

Overall Credit Rating

The four component ratings roll up into a single preliminary credit rating. To determine the final credit rating, a credit committee of at least five senior research personnel reviews each preliminary rating.

We review credit ratings on a regular basis and as events warrant. Any change in rating must be approved by the Credit Rating Committee.

Investor Access

Morningstar Corporate Credit Ratings are available on Morningstar.com. Our credit research, including detailed cash-flow models that contain all of the components of the Morningstar Corporate Credit Rating, is available to subscribers at select.morningstar.com.

Contents

Analyst's Perspective 03 May 2012

Fortis' predominant regulated revenue mix provides investors a stable earnings profile and support for the stock's consistent dividend growth. Significant capital expenditures will drive near-term earnings growth and set a base for future free cash flow generation. The company's Canadian regulated utilities operate in constructive regulatory jurisdictions but with slightly lower allowed returns on equity than its U.S. counterparts. In addition to organic growth, company management has expanded into the U.S. market with the announced acquisition of CH Energy in February 2012. Given the small size of the transaction, we expect the company to continue U.S. expansion after the transaction is complete. We forecast normalized earnings can grow at 5% annually through 2015. At a 3.5% dividend yield and trading at 18 times our 2012 earnings forecast, we think Fortis is overvalued.

Key Investment Considerations

- Fortis generates more than 90% of its profit from its regulated utility segment, providing a stable earnings base.
- Across all of its utilities, regulators allow Fortis a 9.5% weighted-average return on equity, which is about 100 basis points lower than regulators allow U.S. utilities on average.
- Trading at 18 times our 2012 earnings estimate as of May, we think the stock is overvalued.

Profile

Fortis primarily owns and operates utility transmission and distribution assets in Canada. It has smaller stakes in electricity generation, several Caribbean utilities, and Canadian hotel and commercial real estate. The firm's regulated natural gas operations serve 950,000 customers in British Columbia. Its regulated electric utility operations serve 1.1 million customers throughout Canada and in Grand Cayman and Turks and Caicos. Its Canadian operations accounted for 92% of its total assets as of 2010.

Morningstar Analysis

Fortis' low-risk operations result in stable earnings and support its consistent dividend growth the last four decades.

Fortis Reports Flat First-Quarter Earnings 04 May 2012

Fortis Inc FTS posted slightly lower earnings per share of $0.64 compared with $0.66 in the year-ago quarter. The results were down mostly due to a common stock offering in mid-2011. Excluding the share offering, results were flat from the prior year. In 2012, the company will pay $1.20 per share in dividends, up from 3.4% from 2011. At our fair value estimate, the current dividend yield is 4%. We are reaffirming our fair value estimate and forecast 2% EPS growth in 2012.

The company's Canadian regulated gas utilities overall earnings increased 9%, mostly due to weather, continued infrastructure investment, and volume strength from certain industrial sectors. Conversely, the company's Canadian regulated utilities earnings were mostly flat, in large part to regulatory mechanisms and expense timing. The company received clarity with regulatory decisions at FortisBC Energy gas delivery and Fortis Alberta distribution rates, with pending regulatory outcomes expected in 2012 for FortisBC, Fortis Alberta, and Newfoundland Power. Finally, favorable weather increased production in Belize with a favorable $3 million benefit to the company's bottom line.

Announced in February 2012, the company entered into a $1.5 billion purchase agreement to acquire New York regulated utility CH Energy Group CHG . We believe the transaction is slightly value-dilutive for Fortis shareholders. Fortis is awaiting regulatory approval from New York regulators and the Federal Energy Regulatory Commission, and given the size and nature of the transaction, we forecast a relatively high 85% probability that the transaction closes. Company management expects the transaction to close in early 2013.

Thesis 03 May 2012

Fortis manages electric and gas regulated utilities in Canada and the Caribbean, resulting in stable operating results. The company's noncore generation and real estate holding operations account for 12% of operating earnings. While we are less excited by the distractions of these noncore operations, we are comforted that management continues to focus on electric and natural gas distribution in North America.

Fortis' main regulated Canadian operations reside in British Columbia, Alberta, and Newfoundland. These relatively low-risk operations result in stable earnings and fund the consistent dividend growth experienced the past four decades. Rate base additions should be significant through 2015, as the company plans to invest CAD 4.8 billion as the healthier Canadian economy drives usage and customer growth. This should allow the firm to increase its rate base at double-digit rates each year during this expansion period. On a weighted-average basis, Fortis' allowed returns on equity in its Canadian service territories are 9.25% after a series of rate increases in 2010. While this return is lower than that typically granted to comparable U.S. utilities, it does not seem unreasonable given the low-risk nature of Fortis' transmission and delivery operations.

The company also operates small utility operations in Belize and the Caribbean. While the allowed returns can be significantly higher than its Canadian operations, these operations also have a much higher risk profile than its Canadian operations. In the summer of 2011, the Government of Belize expropriated Fortis' 70% ownership in Belize Electricity Limited, resulting in an unknown recoverable asset representing 2% of Fortis' assets. While small in nature, the earnings of these operations are exposed to additional risks of economic instability, tenuous regulation, and weather events. Management has indicated it has little interest to expand operations in the Caribbean, which we see as a positive.

We are less enthusiastic about the firm's small presence in

Fortis, Inc. FTS (TSE) | ★★

Last Price	Fair Value	Consider Buy	Consider Sell	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Morningstar Credit Rating	Industry Group

the cyclical hotel and commercial real estate industry. However, these holdings are held solely for tax strategy purposes and would likely be spun off should Canadian tax policy change. Currently, the Canadian government disallows entity tax consolidation, and the real estate asset revenues offset holding company expenses, mostly interest. While we believe the strategy behind these assets is sound, we worry they may distract management and drag on growth.

Fortis has long expressed interest in expanding its operations through U.S. acquisitions. In February 2012, Fortis announced a $1.5 billion cash and debt bid for CH Energy Group CHG, a regulated New York Mid-Hudson River Valley utility. The acquisition allows Fortis to enter the U.S.-regulated electric and gas distribution businesses in order to gain a better understanding of the U.S. market, with geographical proximity to its current Canadian operations. Given the relatively small size of CH Energy, we would look for Fortis to continue expansion through acquisitions after the CH Energy transaction is complete.

Given the high barriers to entry and regulated nature of Fortis' main operations, we award the company a narrow economic moat. The firm's exposure to noncore areas and foreign markets, though small, leads us to assign it a medium fair value uncertainty rating. We would consider lowering our uncertainty rating if Fortis were to divest the noncore assets.

Valuation, Growth and Profitability 03 May 2012

We are increasing our fair value estimate to CAD 30 per share from CAD 29 per share after updating our five-year operating plan and incorporating the planned CH Energy merger. In accounting for the merger, we adjusted for certain tax and regulatory balance sheet items. We believe that the deal is only slightly value-dilutive for Fortis.

After the significant share dilution in 2011, we forecast 5% earnings growth in 2012 adjusting for lower dilution and normalized weather conditions. Beyond 2013, we assume 1.5% annual energy use growth at the Canadian utilities and consistent allowed returns on equity. Based on management's guidance, we forecast total investments of CAD 4.6 billion at the utilities through 2015, leading to annualized rate base growth of 6%.

We use a 10.0% cost of equity and current credit spreads to arrive at a 7.1% weighted average cost of capital in our discounted cash flow model.

Scenario Analysis

The most significant near-term driver of our earnings forecast is our annualized energy growth rate at the regulated utilities. If energy growth is 50 bps lower than our 2013 estimate, our earnings per share would fall by 2% and our fair value estimate would decrease by CAD 2. We expect similar changes in EPS and fair value if energy growth is 50 bps higher.

Allowed returns at the Canadian utilities are also a significant driver of our valuation estimates. If we assume

Last Price	Fair Value	Consider Buy	Consider Sell	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Morningstar Credit Rating	Industry Group
33.82 CAD	30.00 CAD	21.00 CAD	40.50 CAD	Medium	Narrow		Standard	—	Utilities - Regulated

a 100 bps decrease in allowed returns on equity in 2012 and beyond, our fair value estimate decreases to CAD 21. Better-than-expected allowed returns on equity drive similar upside results. Finally, a 50 bps change in our cost of equity assumption changes our fair value estimate by about CAD 3 per share.

Economic Moat

Fortis owns a difficult-to-replicate network of regulated power generation, transmission, and distribution assets and provides an essential energy source: electricity. In exchange for its monopoly position, regulators set Fortis' returns at levels that aim to keep customer costs low while providing adequate returns for capital providers. This implicit contract between regulators and the utility should, in the long run, allow Fortis to earn its cost of capital, and leads us to assign Fortis' regulated utilities a narrow economic moat. As with all regulated utilities, we think regulatory caps on revenue and returns preclude Fortis from establishing a wide economic moat.

Moat Trend

We assign Fortis a stable moat due to its monopoly position and stable regulatory environment that will continue to allow the firm to earn its cost of capital. We do not expect the regulatory relationship to change in the future. The regulatory framework that caps revenue and returns prevent the firm from attaining a wide moat, as with all regulated utilities that we cover.

Bulls Say/Bears Say

Bulls Say

- The company operates a stable business profile, offering a strong base for consistent earnings and dividend growth.
- With an aggressive capital expenditure plan, rate base growth could increase at a 6% compound annual growth rate.
- Fortis has consistent dividend growth history, paying consecutive quarterly dividends for four decades and growing the dividend faster than most of its peers in recent years.
- Fortis operations are based in higher-growth regions within Canada, mainly in Alberta and British Columbia.

Bears Say

- The Canadian regulatory environment offers lower allowed returns than its U.S. peers.
- The recent Belize expropriation demonstrates how Caribbean operations offer higher growth opportunities but at a substantially higher risk.
- The company operates noncore hotel and commercial real estate assets, potentially distracting management from core regulated operations.

Financial Health

With a debt/capital ratio of just under 60% and interest coverage of 3.0 times, Fortis' financial health looks reasonably sound, particularly in light of its stable, low-risk business model. Fortis undertook a significant equity offering of 9 million shares resulting in CAD 300 million of proceeds. We expect the company to be active in the capital markets consistent with its current capital structure throughout its capital expenditure plan.

Capital Structure

Between 2012 and 2016, Fortis has CAD 6.0 billion of planned capital expenditures, which will require the company to access the debt and equity capital markets. We anticipate that Fortis will issue CAD 200 million in debt in 2012 and has manageable debt maturities through 2015. The company recently issued significant equity in July 2011 to help finance its capital expenditure plan, and we expect Fortis to issue minimal additional equity in 2012 to accommodate employee stock purchase plans and an executive DRIP plan.

Enterprise Risk

Fortis' key risk to future earnings is regulation. The company faces regulatory risks that create uncertainties around costs and allowed returns, especially given the significant capital expenditure plan in 2012-16. Fortis is also exposed to political and economic instability at its Caribbean operations. With an eye towards acquisitions, the company risks overpaying for regulated U.S. assets and must be mindful of the strategic benefits. As with all regulated utilities, Fortis faces the risk of an inflationary environment that would raise borrowing costs and make other investments more attractive for income-seeking investors.

Stewardship: 03 May 2012

Stanley Marshall has been president and CEO since 1995, leading a group of experienced utility executives. Total direct compensation is in line with Fortis' industry group. Marshall's total compensation comprises base salary, annual incentives, stock options, and performance stock units, with 75% of total compensation at risk. We do not like that annual cash incentives are based on earnings per share targets, as EPS can be manipulated and may not be an indication of shareholder value creation. Marshall also has a significant ownership stake of 14 times his salary, which we believe aligns shareholder and management interests. From a corporate governance perspective, we like that the CEO and chairman positions are separated. While the board of directors has vast experience, we would prefer that members of the board have more direct utility experience.

Company management expects the transaction to close in early 2013.

Fortis Enters U.S. Market With Acquisition of CH Energy Group 21 Feb 2012

On Tuesday, Fortis FTS announced a $1.5 billion cash and debt bid for CH Energy Group CHG , a regulated New York Mid-Hudson River Valley utility that would be Fortis' first based in the United States. Fortis offered $65 per share for CH Energy, a 10.5% premium to the most recent close price.

The $1 billion equity investment implies a pricey 1.9 times multiple on book- and rate-base equity. But that premium falls to 1.3 times book when we adjust for certain tax and regulatory balance sheet items. At this adjusted price, we believe the deal is slightly value-dilutive for Fortis, however we are reaffirming our fair value estimate given the relatively small size of the deal and regulatory approval uncertainty. New York state regulators and the Federal Energy Regulatory Commission must approve the deal.

We originally thought Fortis would make a larger splash into the U.S. market with an acquisition of $3 billion to $5 billion. The smaller deal for CH Energy indicates to us that there may be room for additional acquisitions in the future. Strategically, we think the acquisition is sound. The acquisition allows Fortis to enter the U.S.-regulated electric and gas distribution businesses in order to gain a better understanding of the U.S. market, with geographical proximity to its current Canadian operations.

N.Y. regulators allow CH Energy an industry average 10% return on its equity rate base through July 2013. With Fortis successfully integrating three utilities since 2004, we think the current management team is well-suited for the CH Energy Group acquisition. Our strategic enthusiasm for the merger is dampened by the price Fortis paid. To earn CH Energy's allowed return of 10%, significant synergy savings will be required to maintain current allowed returns.

Analyst Notes

Strong Customer Growth Generates Impressive 2011 Results at Fortis. 09 Feb 2012

Fortis Inc. FTS posted $1.75 in EPS in 2011, higher than our own $1.71 estimate and a 6% increase from 2010. Strong customer growth and higher energy deliveries at its regulated Canadian utilities drove results. We are reaffirming our fair value estimate and forecast 5% EPS growth through 2016 as $5.5 billion in planned capital expenditures should drive earnings expansion. Fortis increased dividends 3.5% in mid-December to $1.20, an implied 66% payout ratio, with a current yield of 3.5%. At our fair value estimate, Fortis would yield 4%.

In 2012, significant regulatory rulings at the company's Newfound Power and FortisBC subsidiaries could significantly impact future operating results. With the Alberta Utilities Commission ruling in December 2011, allowed returns at Fortis Alberta were decreased 25 basis points to just 8.75%. Similar cuts could be seen at the firm's other regulated Canadian operating companies, putting pressure on earnings growth. Management provided no EPS guidance for 2012.

Research Methodology for Valuing Companies

Components of Our Methodology
- Economic Moat™ Rating
- Moat Trend™ Rating
- Moat Valuation
- Three-Stage Discounted Cash Flow
- Weighted Average Cost of Capital
- Fair Value Estimate
- Scenario Analysis
- Uncertainty Ratings
- Margin of Safety
- Consider Buying/Selling
- Stewardship Rating

The Morningstar Rating for stocks identifies companies trading at a discount or premium to our analysts' assessment of their fair value. A number of components drive this rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's intrinsic value based on a discounted cash-flow model, (3) the margin of safety bands we apply to our Fair Value Estimate, and (4) the current stock price relative to our fair value estimate.

The concept of the Morningstar Economic Moat™ Rating plays a vital role not only in our qualitative assessment of a firm's investment potential, but also in our valuation process. We assign three moat ratings—none, narrow, or wide—as well as the Morningstar Moat Trend™ Rating—positive, stable, or negative—to each company we cover. There are two major requirements for firms to earn either a narrow or wide moat rating: (1) the prospect of earning above-average returns on capital; and (2) some competitive edge that prevents these returns from quickly eroding. The assumptions we make about a firm's moat determine the length of "economic outperformance" that we assume in the latter stages of our valuation model. We also quantify the value of each firm's moat, which represents the difference between a firm's enterprise value and the value of the firm if no future net investment were to occur. Said differently, moat value identifies the value generated by the firm as a result of any future net new investment. Our Moat Trend Rating reflects our assessment of whether each firm's competitive advantage is either getting stronger or weaker, since we think of moats as dynamic, rather than static.

At the heart of our valuation system is a detailed projection of a company's future cash flows. The first stage of our three-stage discounted cash flow model can last from 5 to 10 years and contains numerous detailed assumptions about various financial and operating items. The second stage of our model—where a firm's return on new invested capital (RONIC) and earnings growth rate implicitly fade until the perpetuity year—can last anywhere from 0 years (for no-moat firms) to 20 years (for wide-moat companies). In our third stage, we assume the firm's RONIC equals its weighted average cost of capital, and we calculate a continuing value using a standard

Morningstar Research Methodology for Valuing Companies

Fundamental Analysis	Economic Moat™ Rating	Company Valuation	Fair Value Estimate	Uncertainty Assessment	Rating
Analyst conducts company and industry research: ► Financial statement analysis ► Channel checks ► Trade-show visits ► Industry and company reports and journals ► Conference calls ► Management and site visits	Strength of competitive advantage is rated: None, Narrow, or Wide Advantages that confer an economic moat: **High Switching Costs** (Microsoft) **Cost advantage** (Wal-Mart) **Intangible assets** (Johnson & Johnson) **Network Effect** (Mastercard) **Efficient Scale** (Lockheed Martin)	Analyst considers past financial results and focuses on competitive position and future prospects to forecast future cash flows. Assumptions are entered into Morningstar's proprietary discounted cash-flow model.	Analyst uses a discounted cash-flow model to develop a Fair Value Estimate, which serves as the foundation for the Morningstar Rating for stocks.	The analyst then evaluates the range of potential intrinsic values for the company and assigns an Uncertainty Rating: Low, Medium, High, Very High, or Extreme. The Uncertainty Rating determines the margin of safety required before we would recommend the stock. The higher the uncertainty, the wider the margin of safety.	The current stock price relative to Morningstar's Fair Value Estimate, adjusted for uncertainty, determines the Morningstar Rating for stocks. The Morningstar Rating for stocks is updated each evening after the market closes.

* Please contact a sales representative for more information.

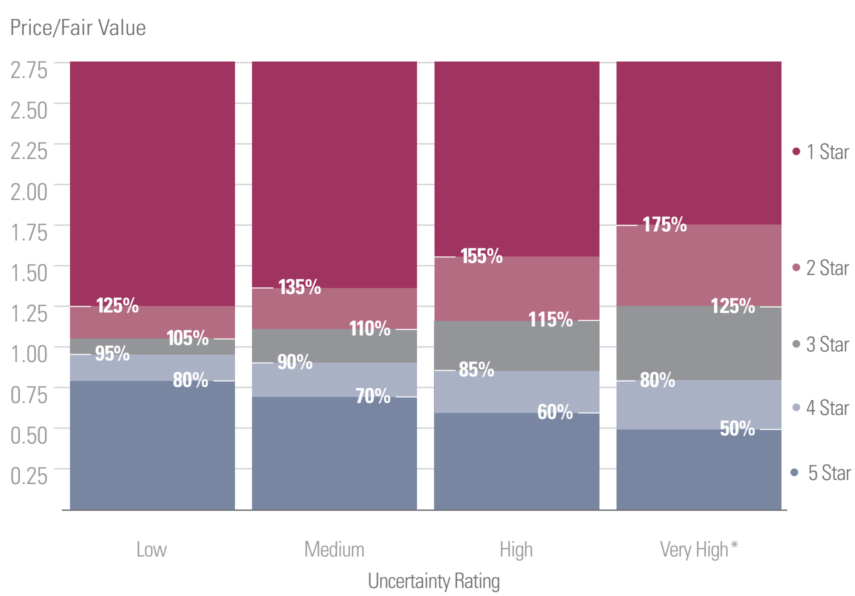
perpetuity formula. In deciding on the rate at which to discount future cash flows, we ignore stock-price volatility. Instead, we rely on a system that measures the estimated volatility of a firm's underlying future free cash flows, taking into account fundamental factors such as the diversity of revenue sources and the firm's fixed cost structure.

We also employ a number of other tools to augment our valuation process, including scenario analysis, where we assess the likelihood and performance of a business under different economic and firm-specific conditions. Our analysts typically model three to five scenarios for each company we cover, stress-testing the model and examining the distribution of resulting fair values.

The Morningstar Uncertainty Rating captures the range of these potential fair values, based on an assessment of a company's future sales range, the firm's operating and financial leverage, and any other contingent events that may impact the business. Our analysts use this range to assign an appropriate margin of safety—or the discount/premium to a fair value we apply in setting our consider buying/consider selling prices. Firms trading below our consider-buying prices receive our highest rating of five stars, whereas firms trading above our consider-selling prices receive our lowest rating of one star.

Our corporate Stewardship Rating represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Morningstar Margin of Safety and Star Rating Bands



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Morningstar's Approach to Rating Corporate Credit

- Offers a proprietary measure of the credit quality of companies on our coverage list.
- Encapsulates our in-depth modeling and quantitative work in one letter grade.
- Allows investors to rank companies by each of the four underlying components of our credit ratings, including both analyst-driven and quantitative measures.
- Provides access to all the underlying forecasts that go into the rating, available through our institutional service.

Purpose

The Morningstar Corporate Credit Rating measures the ability of a firm to satisfy its debt and debt-like obligations. The higher the rating, the less likely we think the company is to default on these obligations.

The Morningstar Corporate Credit Rating builds on the modeling expertise of our securities research team. For each company, we publish:

- Five years of detailed pro-forma financial statements
- Annual estimates of free cash flow
- Annual forecasts of return on invested capital
- Scenario analyses, including upside and downside cases
- Forecasts of leverage, coverage, and liquidity ratios for five years
- Estimates of off balance sheet liabilities

These forecasts are key inputs into the Morningstar Corporate Credit Rating and are available to subscribers at select.morningstar.com.

Methodology

We feel it's important to perform credit analysis through different lenses—qualitative and quantitative, as well as fundamental and market-driven. We therefore evaluate each company in four broad categories.

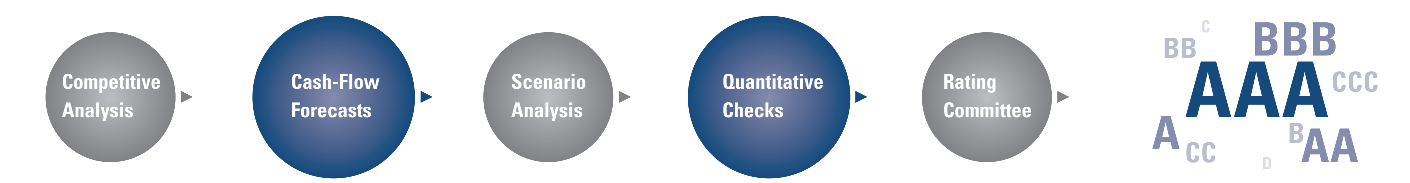
Business Risk

Business Risk captures the fundamental uncertainty around a firm's business operations and the cash flow generated by those operations. Key components of the Business Risk rating include the Morningstar Economic Moat™ Rating and the Morningstar Uncertainty Rating.

Cash Flow Cushion™

Morningstar's proprietary Cash Flow Cushion™ ratio is a fundamental indicator of a firm's future financial health The measure reveals how many times a company's internal cash generation plus total excess liquid cash will cover its debt-like contractual commitments over the next five years. The Cash Flow Cushion acts as a predictor of financial distress, bringing to light potential refinancing, operational, and liquidity risks inherent to the firm.

Morningstar Research Methodology for Determining Corporate Credit Ratings



Competitive Analysis

Analyst conducts company and industry research:

- Management interviews
- Conference calls
- Trade show visits
- Competitor, supplier, distributor, and customer interviews
- Assign Economic Moat™ Rating

Cash-Flow Forecasts

Analyst considers company financial statements and competitive dynamics to forecast future free cash flows to the firm.

Analyst derives estimate of Stress Test Score™

Scenario Analysis

Analysts run bull and bear cases through the model to derive alternate estimates of enterprise value.

Based on competitive analysis, forecasts, and scenario analysis, the analyst assigns Business Risk.

Quantitative Checks

We gauge a firm's health using quantitative tools supported by our own backtesting and academic research.

- Morningstar Bank Solvency Score™
- Distance to Default

Rating Committee

Senior personnel review each company to determine the appropriate final credit rating.

- Review modeling assumptions
- Approve company-specific adjustments

AAA	Extremely Low Default Risk
AA	Very Low Default Risk
A	Low Default Risk
BBB	Moderate Default Risk
BB	Above Average Default Risk
B	High Default Risk
CCC	Currently Very High Default Risk
CC	Currently Extreme Default Risk
C	Imminent Payment Default
D	Payment Default
UR	Under Review
UR+	Positive Credit Implication
UR-	Negative Credit Implication

Morningstar's Approach to Rating Corporate Credit

The advantage of the Cash Flow Cushion ratio relative to other fundamental indicators of credit health is that the measure focuses on the future cash-generating performance of the firm derived from Morningstar's proprietary discounted cash flow model. By making standardized adjustments for certain expenses to reflect their debt-like characteristics, we can compare future projected free cash flows with debt-like cash commitments coming due in any particular year. The forward-looking nature of this metric allows us to anticipate changes in a firm's financial health and pinpoint periods where cash shortfalls are likely to occur.

Morningstar Solvency Score™

The Morningstar Solvency Score™ is a quantitative score derived from both historical and forecasted financial ratios. It includes ratios that focus on liquidity (a company's ability to meet short term cash outflows), profitability (a company's ability to generate profit per unit of input), capital structure (how does the company finance its operations), and interest coverage (how much of profit is used up by interest payments).

Distance to Default

The Distance to Default rating is a quantitative, market-based measure of a company's current financial health. (Distance to Default serves as the basis for Morningstar's Financial Health Grade.) The underlying model treats the equity of a firm as a call option on that firm's assets. Based on estimates of asset volatility and the Black-Scholes option-pricing model, we can estimate the likelihood that the value of the company's assets falls below the value of its liabilities, implying likely default.

For each of these four categories, we assign a score, which we then translate into a descriptive rating along the scale of Very Good / Good / Fair / Poor / Very Poor.

Overall Credit Rating

The four component ratings roll up into a single preliminary credit rating. To determine the final credit rating, a credit committee of at least five senior research personnel reviews each preliminary rating.

We review credit ratings on a regular basis and as events warrant. Any change in rating must be approved by the Credit Rating Committee.

Investor Access

Morningstar Corporate Credit Ratings are available on Morningstar.com. Our credit research, including detailed cash-flow models that contain all of the components of the Morningstar Corporate Credit Rating, is available to subscribers at select.morningstar.com.

Analyst Note 04 May 2012

Fortis Inc FTS posted slightly lower earnings per share of $0.64 compared with $0.66 in the year-ago quarter. The results were down mostly due to a common stock offering in mid-2011. Excluding the share offering, results were flat from the prior year. In 2012, the company will pay $1.20 per share in dividends, up from 3.4% from 2011. At our fair value estimate, the current dividend yield is 4%. We are reaffirming our fair value estimate and forecast 2% EPS growth in 2012.

The company's Canadian regulated gas utilities overall earnings increased 9%, mostly due to weather, continued infrastructure investment, and volume strength from certain industrial sectors. Conversely, the company's Canadian regulated utilities earnings were mostly flat, in large part to regulatory mechanisms and expense timing. The company received clarity with regulatory decisions at FortisBC Energy gas delivery and Fortis Alberta distribution rates, with pending regulatory outcomes expected in 2012 for FortisBC, Fortis Alberta, and Newfoundland Power. Finally, favorable weather increased production in Belize with a favorable $3 million benefit to the company's bottom line.

Announced in February 2012, the company entered into a $1.5 billion purchase agreement to acquire New York regulated utility CH Energy Group CHG . We believe the transaction is slightly value-dilutive for Fortis shareholders. Fortis is awaiting regulatory approval from New York regulators and the Federal Energy Regulatory Commission, and given the size and nature of the transaction, we forecast a relatively high 85% probability that the transaction closes. Company management expects the transaction to close in early 2013.

Profile

Fortis primarily owns and operates utility transmission and distribution assets in Canada. It has smaller stakes in electricity generation, several Caribbean utilities, and Canadian hotel and commercial real estate. The firm's regulated natural gas operations serve 950,000 customers in British Columbia. Its regulated electric utility operations serve 1.1 million customers throughout Canada and in Grand Cayman and Turks and Caicos. Its Canadian operations accounted for 92% of its total assets as of 2010.

HIGHLIGHTS

- **Q4 2005 reported earnings: $22.3 million or $0.22 per share vs. $21.2 million or $0.22 per share in Q4 2004 (y/y).**

- **Q4 2005 operational EPS: $0.26. Higher earnings from Non-regulated Generation, due to higher wholesale energy prices in Ontario and Upper New York State and increased production (partially offset by increased operating expenses) drove operational earnings.**

- **2005 reported earnings: $137.1 million or $1.35 per share vs. $90.9 million or $1.07 per share in 2004. 2005 operational EPS of about $1.19 matched our estimate.**

- **2005 earnings increased y/y as a result of a full year of earnings contributions from FortisAlberta (FA) and FortisBC (FBC) (vs. seven months in 2004), higher wholesale energy prices in Ontario…**
  …higher generation, higher equity income from Caribbean Utilities (TSX-CUP.U), and a $7.9 million (after-tax) gain from the settlement of contractual matters between Fortis Ontario (FO) and Ontario Power Generation (OPG).

- **We view our 2006 estimated EPS of $1.28 as slightly conservative**
  We are introducing our 2007 EPS of $1.36. We are maintaining our Sector Perform rating.

Industry Rating: Underweight
(NBF Economics & Strategy Group)

Company Profile:
FTS is a holding company that owns 100% of Newfoundland Power, Atlantic Canada's second-largest utility. FTS is quite active outside Newfoundland through investments in Maritime Electric (100%)-P.E.I.; FortisOntario (100%); FortisAlberta (100%); FortisBC (100%); FortisUS Energy (100%)-N.Y. State; Belize Electricity (68%); Belize Electricity Company Ltd. (BECOL) (100%); and Caribbean Utilities (37.3%)-Cayman Islands. FTS has also diversified into commercial real estate through Fortis Properties in Alberta, Manitoba, Ontario and Atlantic Canada, where FTS is the largest hotelier and investor in commercial real estate.

Assessment

FTS's 2005 operational earnings matched our expectation and confirm that having substantially integrated the acquisition of FA and FBC by year-end 2005, FTS is on track for growth in earnings and dividends. FTS's remarkably conservative dividend payout of 53.8% (based on operational EPS of $1.19 for 2005) leaves manoeuvring room for non-organic and organic growth.

FTS estimates to spend about $2 billion on capital projects between 2006 and 2010. Organic and non-organic capital spending could increase this amount further. We expect FTS to stick to its knitting, characterized by capable management with a conservative bias and strength in execution of its business plan.

We see FA in a growing flagship role in 2006 and 2007, followed by non-regulated generation and FBC.

Year-over-year results are distorted, because reported 2004 results reflect less than a year's earnings from FA and FBC. Unregulated generation in Ontario was once again the driver of quarterly earnings (disregarding the one-time contractual settlement with OPG.

Q4 2005 and 2005 results

Q4 2005 reported earnings: $22.3 million or $0.22 per share vs. $21.2 million or $0.22 per share in Q4 2004 (y/y).

Q4 2005 operational EPS: $0.26, after the exclusion of the following items: 1) a one-time $3-million adjustment related to the implementation of the Negotiated Rate Settlement reached on May 24, 2005, 2) a $1.1 million (after-tax) charge related to the writedown of the Rankine plant assets, 3) a $0.4 million (after-tax) insurance gain related to the involuntary disposition of assets associated with the Dolgeville plant in Upper New York State, and 4) a $0.8 million (after-tax) charge to operating expenses in Corporate related to the finalization of certain restructuring costs related to FA and FBC that were not quite fully provided for in the acquisition price (acquired on May 31, 2004).

Higher earnings from Non-regulated Generation due to higher wholesale energy prices in Ontario and Upper New York State and increased production (partially offset by increased operating expenses), were partly offset by lower reported earnings from Regulated Utilities and higher Corporate expenses.

2005 reported earnings: $137.1 million or $1.35 per share vs. $90.9 million or $1.07 per share in 2004. **2005 operating EPS were about $1.19 matching our estimate.**

2005 earnings increased y/y as a result of a full year of earnings contributions from FA and FBC (vs. seven months in 2004), higher wholesale energy prices in Ontario; higher generation; higher equity income from Caribbean Utilities (TSX-CUP.U), and a $7.9 million (after-tax) gain from the settlement of contractual matters between Fortis Ontario (FO) and Ontario Power Generation (OPG) (which we have treated as a one-time item and have deducted to arrive at operational EPS).

Business Segment Highlights

Segmented Reported Earnings ($Mln)	Q4 '05	Q4 '04	2005	2004
Regulated Utilities-Canadian	$14.7	$25.1	$104.8	$79.8

Source: FTS				

Regulated Utilities – Canadian
Newfoundland Power (NP): Q4 Reported Earnings: $2.9 million vs. $3.3 million y/y. The y/y decrease in earnings was due to lower electricity sales, a 0.5% rate reduction in electricity rates (effective Jan. 1, 2005), increased early retirement costs, higher finance charges, partially offset by a lower purchased power unit cost, the seasonal affect of the new purchased power rate structure and reduced operating expenses. For 2005, earnings decreased by $0.4 million y/y to $30.7 million, due to the 0.5% rate reduction in electricity rates, increased early retirement costs, higher finance charges, partially offset by interest revenue from the income tax settlement with Canada Revenue Agency (CRA) in June 2005 (which increased earnings by $1.4 million (after-tax)), a lower purchase power unit cost, higher electricity sales and increased pole rental revenue. NP's allowed rate of return on equity for 2006 is 9.24%, unchanged from 2005 but still lower than the 9.75% in 2004.

Maritime Electric (ME): **Q4 Reported Earnings:** $1.7 million vs. $1.8 million y/y. For 2005, earnings rose primarily due to increased electricity sales (989 GWh vs. 977 GWh), a 2% increase in basic electricity rates (effective July 1, 2005), and lower finance charges. ME is currently in the commissioning phase of the new $35 million 50-MW dual-fuelled gas turbine, with commissioning and winter operation testing scheduled for completion later this month. This will reduce dependence on out-of-Province electricity and help alleviate submarine-cable congestion.

FortisOntario (FO) consists mainly of the distribution businesses of **Canadian Niagara Power (CNP)** and **Cornwall Electric (CE)**. The **Port Colborne lease** (signed in 2000) as well as **Granite Power Corp.** (acquired in May 2003) are included in CNP. **Q4 Reported Earnings:** $0.2 million vs. $0.9 million y/y. The $0.7 million y/y decrease in earnings was due to costs associated with an early retirement program offered in Q4 2005, as well as higher operating expenses. For 2005, earnings were basically flat at $4.3 million and were aided by the recognition of an out-of-period $1.6 million future tax asset associated with the favourable resolution of a Canada Revenue Agency (CRA) reassessment related to CE.

FortisAlberta (FA) and FortisBC (FBC):
FA Q4 Reported Earnings: $4.2 million vs. $7.5 million y/y. FA's earnings decreased due to revenue deferrals and higher amortization costs resulting from the Negotiated Settlement as well as higher finance charges and a higher effective income tax rate. For 2005, earnings were $36.1 million vs. $18.6 million (May-Dec. 2004), and included $7.1 million (net) in earnings primarily associated with the resolution of items from prior periods related to taxes, load settlement and the EPCOR claim settlement (Q3 2005), net of the insurance recovery, partially offset by adjustments associated with the implementation of the Negotiated Settlement and the impact of a higher effective corporate income tax rate. For 2006, FA is allowed to earn an 8.93% rate of return on common equity (RRCE), down from 9.5% in 2005.

FBC Q4 Reported Earnings: $5.7 million vs. $11.6 million y/y. The decrease in earnings was mostly due to lower accrued unbilled electricity revenue, increased operating expenses, amortization costs and finance charges, partially offset by an increase in other revenue. For 2005, earnings rose to $24.6 million from $17.7 million y/y, reflecting a full year of earnings contributions from FBC. For 2006, FBC is allowed to earn an 8.69% RRCE, down from 9.43% in 2005.

Regulated Utilities – Caribbean:

Belize Electricity (BE): Q4 Reported Earnings increased to $2.0 million from $1.6 million. 2005 earnings were $8.0 million vs. $7.2 million. Earnings were higher for the quarter and the year due mainly to a 11% increase in electricity rates effective July 1, 2005 (new four-year tariff agreement), higher electricity sales, and the foreign exchange impact associated with BE's euro-denominated debt. This was partially offset by increased finance charges and the impact of depreciation of the U.S. dollar. Electricity sales increased to 350 GWh from 330 GWh in 2004.

In Q4, Caribbean Utilities (CUP.U) (36.9% interest) **contributed $2.0 million in equity earnings** vs. a loss of $5.8 million last year. Earnings were higher y/y due primarily to the recording of Hurricane Ivan-related costs of about $8.2 million in Q4 2004, and the favourable impact of continuing business interruption loss insurance (BI) claims and the impact of the Cost Recovery Surcharge (CRS) effective Aug. 1, 2005. For 2005, equity earnings increased to $11.4 million from $0.8 million in 2004.

About 5% of pre-Ivan customers remained without electricity at the end of October 2005, and CUP.U expects electricity sales to achieve 100% of pre-Ivan sales by the end of April 2006.

CUP.U's existing licence is scheduled to expire in 2011 and on Nov. 23, 2005, it resumed licence extension discussions with the Cayman Islands government.

Non-Regulated - Fortis Generation: Operates non-regulated generation in Canada, the United States and Belize. **Q4 Reported Earnings:** $8.5 million vs. $4.7 million y/y. For 2005, earnings more than doubled to $29.6 million from $12.8 million, with the earnings jump due mainly to the impact of much higher average wholesale energy prices in Ontario and the $7.9 million (after-tax) gain from the settlement of contractual matters between Fortis Ontario (FO) and Ontario Power Generation (OPG).

Generation revenues for Q4 were $26.0 million vs. $20.0 million last year, aided by the higher wholesale energy prices in Ontario (avg. wholesale energy price of $71.46/MWh vs. $50.80/MWh last year) and Upper New York State (US$70.94/MWh vs. US$46.75/MWh y/y), as well as higher production (311 GWh vs. 299 GWh). For 2005, the average wholesale energy price in Ontario climbed to $68.49/MWh from $49.95/MWh last year.

In Belize, BECOL's US$30 million Chalillo-Dam Project began storing water on July 12, 2005, and commenced production at the new 7-MW hydro-electric plant in mid-September 2005. We understand that the reservoir has reached about 75% of its storage capacity, equivalent to about 75 gigawatt hours. By the end of the current rainy season, FTS expects that, with favourable rain falls, the reservoir may be filled to capacity. In Q4 2005, filling of the Chalillo reservoir reduced water availability and, hence, generation and revenues at the existing downstream 25-MW Mollejon station on the Macal River, mitigated somewhat by minor generation at the Chalillo plant.

Non-Regulated - Fortis Properties (FP): Q4 Reported Earnings: $2.9 million vs. $2.8 million y/y. 2005 earnings rose to $14.1 million from $11.8 million, with the strong increase attributable to higher earnings from operations, including the contribution from the February 2005 acquisition of the three Greenwood Inn-branded hotels in Western Canada for $62.6 million, and the expanded Delta St. John's Hotel operations (completed on June 1, 2005), partially offset by increased amortization and finance charges. We expect strong earnings growth organically and from acquisitions.

In 2005, FP started a $7 million expansion of the Holiday Inn Sarnia, a $2.5-million expansion to the catering and conference facilities at the Holiday Inn Kitchener-Waterloo, and a $7.2 million 55,000 leasable square foot expansion to the Blue Cross Centre in Moncton, New Brunswick.

Corporate: Q4 Reported Expenses: $8.6 million vs. $7.2 million y/y. The increase in expenses was mostly due to lower revenue, increased operating expenses, and lower net unrealized foreign exchange gains, partially offset by lower finance charges. Earnings were also hit by a $0.8 million (after-tax) charge to operating expenses related to the finalization of certain restructuring costs related to FortisAlberta (FA) and FortisBC (FBC) that were not provided for in the acquisition price (acquired on May 31, 2004). For 2005, expenses jumped by $9.3 million y/y to $30.8 million reflecting higher finance charges, preference share dividends and operating expenses.

Financial and Outlook

Funds from operations in 2005 were $312.6 million vs. $224.9 million in 2004.

During Q4 2005, utility capital expenditures (mostly on FA and FBC) were about $134 million, compared with $124.7 million in Q4 2004. For 2005, utility capital expenditures totalled $424.8 million vs. $262.5 million.

For 2006, capital expenditures are expected to be about $450 million of which about $420 million will be invested in regulated electric utilities (with about 75% scheduled for FA and FBC).

FTS expects the majority of its (organic) capital expenditures of about $2 billion over the next five years to be associated with FA and FBC. FTS's total utility assets are expected to grow at an average annual rate of 6% over the next five years.

FTS will continue to pursue electric utility asset acquisitions inside and outside Canada and will also focus on growing its non-regulated businesses including hydroelectric generation, hotels and real estate.

Valuation

For the 2007 fiscal year, we are estimating EPS of $1.36; DPS of $0.74; retained EPS of $0.62; a retained-EPS multiple of 13x; and a long-term corporate bond yield of 6.25%, tax-effected to 4.63% using a 1.35 dividend-tax-credit divisor. This generates a support price of $15.98 and a residual price of $8.06 for a target price of $24.05 (rounded).

Company Profile:
FTS is a holding company that owns 100% of Newfoundland Power, Atlantic Canada's second-largest utility. FTS is quite active outside Newfoundland through investments in Maritime Electric (100%)-P.E.I.; FortisOntario (100%); FortisAlberta (100%); FortisBC (100%); FortisUS Energy (100%)-N.Y. State; Belize Electricity (68%); Belize Electricity Company Ltd. (BECOL) (100%); and Caribbean Utilities (37%)-Cayman Islands. FTS has also diversified into commercial real estate through Fortis Properties in Alberta, Manitoba, Ontario and Atlantic Canada, where FTS is the largest hotelier and investor in commercial real estate.

Associate: Ramin Burney - (416) 869-7933
ramin.burney@nbfinancial.com

HIGHLIGHTS

- **Q1 2006 reported earnings: $36.6 million or $0.35 per share vs. $39.2 million or $0.40 per share in Q1 2005 (y/y).**

- **Q1 2006 operational EPS: $0.35 vs. $0.32, after the exclusion of a Q1 2005 $7.9 million (after-tax) gain from the settlement of contractual matters between Fortis Ontario (FO) and Ontario Power Generation (OPG).**

- **Operational earnings increased y/y due mostly to higher earnings from FortisBC (FBC) and FortisAlberta (FA); increased non-regulated hydroelectric production in Belize, and an 11% electricity rate increase effective July 1, 2005 and higher electricity sales at Belize Electricity (BE).**
  This was mitigated by lower earnings from Newfoundland Power (NP) due to a change in the revenue recognition policy to the accrual method; a decrease in equity income from Caribbean Utilities (TSX-CUP.U) (due to the timing of expensing higher deferred fuel costs), and the impact of lower average wholesale energy prices in Ontario.

- **We still view our 2006 estimated EPS of $1.28 as slightly conservative. Our Sector Perform rating is sustained.**

Stock Performance

Assessment

Because of our assessment of FTS's growth prospects, we view it as Canada's premier utility-holding company. Consistent with its recent past, we expect FTS to continue to achieve growth organically and non-organically, with FA and FBC as growth leaders.

The fact that FTS missed our EPS estimate by $0.03 in the quarter results from timing differences in accounting for revenues at Newfoundland Power (NP) and fuel expenses at Caribbean Utilities (CUP.U), as explained below.

There are those fretting about "the world coming to an end at the close of 2009," when the Ontario Settlement with Ontario Power Generation (OPG) terminates. Yes, FTS will lose an attractive source of earnings that we don't expect to be replaced overnight. However, the relative significance of the Settlement's earnings contribution, compared with FTS's other operations at that time, will have decreased by then further causing us not to lose sleep between now and 2010.

FTS remains on track for growth in earnings and dividends after having substantially and successfully integrated FA and FBC by the end of 2005.

FTS estimates to spend about $2 billion on capital projects between 2006 and 2010 (2006-$450 million). Organic and non-organic capital spending could increase this amount further. The way FTS put it, at an annual capital-spending rate of $450 million it is adding to earnings one Maritime Electric (ME) annually.

We continue to see FA in a growing flagship role in 2006 and 2007, followed by FBC and non-regulated generation.

Q1 2006 highlights

Q1 2006 reported earnings: $36.6 million or $0.35 per share vs. $39.2 million or $0.40 per share in Q1 2005 (y/y).

Q1 2006 operational earnings: $36.6 million or $0.35 per share vs. $31.3 million vs. $0.32 y/y, after the exclusion of a Q1 2005 $7.9 million (after-tax) gain from the settlement of contractual matters between Fortis Ontario (FO) and Ontario Power Generation (OPG) (which we have treated as a one-time item and have deducted to arrive at operational EPS).

Operational earnings increased y/y due mostly to higher earnings from FortisBC (FBC) and FortisAlberta (FA); increased non-regulated hydroelectric production in Belize, and a 11% electricity rate increase effective July 1, 2005, and higher electricity sales at Belize Electricity (BE). This was mitigated by lower earnings from Newfoundland Power (NP) due to a change in the revenue recognition policy to the accrual method ($2 million impact); a decrease in equity income from Caribbean Utilities (TSX-CUP.U) (due to higher-than-usual expensing of deferred fuel costs), and the impact of lower average wholesale energy prices in Ontario.

Regulated Utilities – Canadian

Newfoundland Power (NP): Reported Earnings: $10.7 million vs. $13.0 million y/y. The y/y decrease in earnings was primarily the result of a change (effective Jan. 1, 2006) in NP's revenue recognition policy (to the accrual basis from the revenue recognition basis), which lowered earnings by about $2 million vs. last year. This move to the accrual basis will NOT have a material impact on annual earnings but will shift earnings from Q1 and Q2 to Q3 and, especially, Q4. In Q1, 1,633 GWh of electricity were sold vs. 1,700 GWh y/y. NP's allowed rate of return on equity for 2006 is 9.24%, unchanged from 2005 but still lower than the 9.75% in 2004.

Maritime Electric (ME): **Reported Earnings:** $2.1 million, flat y/y. Electricity sales were also flat y/y (255 GWh vs. 256 GWh). During Q1, ME commissioned the new $35 million 50-MW dual fuelled gas turbine which will reduce dependence on out-of-Province electricity and help alleviate submarine-cable congestion. On Jan. 31, 2006, ME filed an application with the Island Regulatory and Appeals Commission (IRAC) proposing an overall increase in customer electricity rates of 1.6% effective July 1, 2006, and a further amortization of the $20.8 million in recoverable costs accumulated (as at Dec.31, 2003) of $1.5 million in 2006 and $1.3 million in 2007.

FortisOntario (FO) consists mainly of the distribution businesses of **Canadian Niagara Power (CNP)** and **Cornwall Electric (CE)**. The **Port Colborne lease** (signed in 2000) as well as **Granite Power Corp.** (acquired in May 2003) are included in CNP. **Reported Earnings:** $1.0 million vs. $1.1 million y/y. The slight decrease in earnings was due to lower electricity sales (325 GWh vs. 331 GWh) and an increase in the allocation of shared service costs from non-regulated Ontario generation operations. This was partly offset by savings realized from an early retirement program that was completed in Q4 2005.

FortisAlberta (FA) and FortisBC (FBC):

FA Reported Earnings: $9.5 million vs. $7.8 million y/y. FA's earnings were higher y/y due to increased revenue and a lower effective corporate income tax rate, partly offset by higher operating expenses, amortization costs and finance charges. In Q1, 3,754 GWh of electricity was sold vs. 3,685 GWh y/y. For 2006, FA is allowed to earn an 8.93% rate of return on common equity (RRCE), down from 9.5% in 2005.

FBC Reported Earnings: $11.8 million vs. $8.9 million y/y. The increase in earnings was mostly due to increased electricity revenue and lower operating expenses, partly offset by increased amortization costs, finance charges and energy supply costs. In Q1, 840 GWh of electricity was sold vs. 832 GWh y/y. For 2006, FBC is allowed to earn an 8.69% RRCE, down from 9.43% in 2005.

On Jan. 31, 2006, FBC received approval from the British Columbia Utilities Commission (BCUC) for its 2006 Capital Plan of $111.7 million, net of customer contributions of which about $27 million in projects is subject to further review and approval.

Regulated Utilities – Caribbean:

Belize Electricity (BE): Reported Earnings increased to $1.5 million from $1.0 million y/y. Earnings were higher y/y mostly due to a 11% increase in electricity rates effective July 1, 2005 (new four-year tariff agreement), and higher electricity sales, partly offset by the foreign exchange impact associated with BE's euro-denominated debt and higher finance charges. Electricity sales increased to 80 GWh vs. 76 GWh y/y.

In Q1, Caribbean Utilities (CUP.U) (37% interest) **contributed $1.6 million in equity earnings** vs. $2.5 million last year. Earnings were lower y/y due primarily to higher fuel expenses associated with the timing of expensing previously deferred fuel costs. Also, Q1 2006 was impacted by increased insurance premiums, insurance-related consulting fees, interest expense and lease costs associated with temporary generation that, because of the post-Hurricane Ivan sales recovery and revenue associated with the hurricane cost recovery surcharge (CRS) implemented on Aug. 1, 2005, mitigated cost increases.

CUP.U is now regularly meeting pre-Ivan generation and sales levels and expects to consistently meet or exceed the pre-Ivan levels as well as achieve 100% of pre-Ivan sales by the end of July 2006. CUP.U also expects to return to a total owned generating capacity of about 120-MW by summer 2006 vs. 123-MW pre-Ivan.

CUP.U's existing licence is scheduled to expire in 2011 and licence extension discussions with the Cayman Islands government are still ongoing. If all goes well, CUP.U may be replacing its existing licence with a price-cap regime.

Non-Regulated - Fortis Generation: Operates non-regulated generation in Canada, the United States and Belize. **Reported Earnings:** $5.4 million vs. $10 million y/y. **Operationally,** excluding the Q1 2005 $7.9 million (after-tax) gain from the settlement of contractual matters between Fortis Ontario (FO) and Ontario Power Generation (OPG), earnings increased by $3.3 million y/y as a result of increased electricity production and lower finance charges and operating costs, partly offset by lower average wholesale energy prices in Ontario ($50.98/MWh vs. $55.99/MWh y/y).

Generation revenues for Q1 were $19.3 million vs. $17.0 million last year, aided by higher production in Belize (due to higher rainfall levels and commencement of generation at the new Chalillo dam) and Upper New York State (three months of Dodgeville plant operations vs. only one month last year).

Non-Regulated - Fortis Properties (FP): Reported Earnings: $1.5 million, flat vs. last year. During Q1, FP continued work on the $7.7 million expansion of the Holiday Inn Sarnia, a $2.5-million expansion to the catering and conference facilities at the Holiday Inn Kitchener-Waterloo, and a $7.2 million 55,000 leasable square foot expansion to the Blue Cross Centre in Moncton, New Brunswick. Work on all of these projects is expected to be completed during Q2 2006. We expect them to contribute incremental earnings as of Q3 2006. These assets as well as the three Greenwood Inn-branded hotels in Western Canada (acquired in February 2005) and the expanded Delta St. John's Hotel operations (completed on June 1, 2005) are expected to drive revenue and earnings growth in 2006. We continue to expect earnings growth organically and from acquisitions.

Corporate: Reported Expenses: $8.5 million vs. $8.7 million y/y. The decrease in expenses was mostly due to lower finance charges and a reduction in net unrealized foreign exchange losses, mitigated by a decrease in inter-company interest revenue.

Financial and Outlook

Funds from operations in Q1 2006 were $79.6 million vs. $79.1 million y/y. Cash flow from operations after working capital adjustments fell to $49.4 million from $79.3 million y/y as working capital decreased due to the timing of a large one-time, cash-income tax instalment payment at FA, FO, and Maritime Electric and a general change in the timing of receipt and payment of other WC items.

During Q1 2006, utility capital expenditures were $104.3 million including about $80 million spent on FA and FBC.

For 2006, capital expenditures are expected to be about $450 million of which about $425 million will be invested in regulated electric utilities (with about 75% scheduled for FA and FBC).

FTS expects the majority of its (organic) capital expenditures of about $2 billion over the next five years to be associated with FA and FBC. FTS's total utility assets are expected to grow at an average annual rate of 5-6% over the next five years. We expect FTS to achieve growth at the high end of the range, if not slightly more.

FTS is aware of the continued existence of negative working capital, and is taking steps to bring it more in line with other utilities. We believe that depreciation rates at FBC are still unusually low, requiring upward adjustments. We expect FTS to generate prospectively funds from operations in the range of $300 million to $350 million. This will aid internal cash generation.

Growing levels of internal cash generation, combined with dividend reinvestments, the exercise of share-purchase option and operation of share-purchase plans, will, in our view, defer public equity issues for several years, unless FTS comes across acquisition opportunities it cannot afford to reject.

FTS will continue to pursue electric utility asset acquisitions inside and outside Canada and will also focus on growing its non-regulated businesses including hydroelectric generation, hotels and real estate.

Valuation

For the 12-month period ending March 2008, we are estimating EPS of $1.38; DPS of $0.74; retained EPS of $0.64; a retained-EPS multiple of 13x; and a long-term corporate bond yield of 6.25%, tax-effected to 4.63% using a 1.35 dividend-tax-credit divisor. This generates a support price of $15.98 and a residual price of $8.32 for a target price of $24.30 (rounded).

(NBF Economics & Strategy Group)

Company Profile:
FTS is a holding company that owns 100% of Newfoundland Power, Atlantic Canada's second-largest utility. FTS is quite active outside Newfoundland through investments in Maritime Electric (100%)-P.E.I.; FortisOntario (100%); FortisAlberta (100%); FortisBC (100%); FortisUS Energy (100%)-N.Y. State; Belize Electricity (70.1%); Belize Electricity Company Ltd. (BECOL) (100%); and Caribbean Utilities (37.4%)-Cayman Islands. FTS has also diversified into commercial real estate through Fortis Properties in Alberta, Manitoba, Ontario and Atlantic Canada, where FTS is the largest hotelier and investor in commercial real estate.

Stock Performance

Assessment

Now that FTS has more or less digested the former Aquila assets in Alberta and British Columbia, added them to its body mass and cleared its mind from mundane preoccupations, it is time for FTS to open a new hunting season. As the outcome of any hunt is, by its nature, uncertain, we would still expect FTS to choose Western Canada as its hunting ground. This is where the opportunities lie and, this is where the action is. Knowing that FTS is not flashy, we would expect FTS to put some meat and potatoes on the table.

It has placed FortisAlberta (FA) and FortisBC (FBC) in a state of good health and fitness. It can take its mind off rate-case matters for a moment or two, because the former has a rate settlement under its belt for 2006 and 2007. In British Columbia, a negotiated settlement for 2006 is in place and so is a new, performance-based, rate-design system for 2007 and 2008, with an option for an extension to 2009, unless someone feels tempted to rattle the chain. The Alberta settlement has created breathing room for addressing 2008 and 2009. If a rate filing appears advisable, FTS's troops on the western front will, no doubt, prepare a rate filing that has hands and feet and is well thought-out.

The Mayan rain god has been benign to BECOL. The Chalillo generating has been operating more or less flat out, depriving Mexico of the sale of and protecting Belize Electricity customers from high-priced natural gas. Whatever reservoir depletion has occurred, a little precipitation here and there has replenished its drawdown and is keeping the reservoir full, equivalent to a reserve of about 45 GWh.

Newfoundland Power's (NP) results are a good example why one ought not be spellbound or disappointed by quarterly results. All's well, as far as we can see, and whatever earnings it has "lost" on the swings in the first half, it will gain on the roundabouts in the second half.

What almost keeps us awake at night is FTS's "Plan B" for the post-April 2009 period, when its arrangement with Ontario Power Generation (OPG) and its associated earnings stream will have expired. FTS is not known as an aficionado of subsidies, but it remains to be seen whether its leader from the Rock might not succumb to the Federal subsidy for wind electricity and decorate the Niagara Falls area with a windmill or two, although, we believe, his heart is in hydroelectricity.

Down South, we still believe that rounding-up FTS's equity interest in Caribbean Utilities (TSX-CUP.U) to 100% is still in the cards, subject to the looks of new licences. Should this occur soon, the appetite for hunting in the West may subside for a while.

No matter how we look at FTS, it remains on our radar screen as Canada's best diversified utility, in terms of earnings and dividend growth.

Q2 2006 highlights

Q2 2006 reported earnings: $37.9 million or $0.37 per share vs. $38.2 million or $0.37 per share in Q2 2005 (y/y).

Q2 2006 operational earnings: $34.4 million or $0.33 per share vs. $29.8 million vs. $0.29 y/y, after the exclusion in Q2 2006 of 1) a $2.1 million ($1.6 million after-tax) gain on the sale of Fortis Properties' (FP) Days Inn Sydney hotel, and 2) a $1.9 million after-tax reduction in income taxes at FP; and the exclusion in Q2 2005, of 1) a $7 million after-tax positive adjustment related to the resolution of tax-related matters pertaining to prior years at FortisAlberta (FA), and 2) $1.4 million (after-tax) of interest revenue related to a tax settlement with Canada Revenue Agency. Operational EPS of $0.33 were one penny higher than our estimate but in line with the Street.

Operational earnings increased y/y as a result of lower corporate income taxes (mostly at FA), improved hydroelectric production in Belize, higher earnings at FP and a $1.9 million ($1.6 million after-tax) net unrealized foreign exchange gain recorded during the quarter.

Business Segment Highlights

Segmented Reported Earnings ($Mln)	Q2 2006	Q2 2005
Regulated Utilities-Canadian	$25.4	$34.8
Regulated Utilities-Caribbean	$4.4	$5.0
Non-regulated-Fortis Generation	$6.7	$3.2
Non-regulated-Fortis Properties	$8.1	$4.8
Corporate	($6.7)	($9.6)
Total Reported Earnings	**$37.9**	**$38.2**
Source: FTS		

Regulated Utilities – Canadian

Newfoundland Power (NP): Reported Earnings: $8 million vs. $11.5 million y/y. The y/y decrease in earnings was primarily the result of a change (effective Jan. 1, 2006) in NP's revenue recognition policy (to the accrual basis from the revenue recognition basis), which lowered earnings by about $3 million vs. Q2 2005. This move to the accrual basis has **NO** material impact on annual earnings but has just shifted earnings from Q1 and Q2 to Q3 and, especially, Q4. Higher finance charges and lower interest revenue clipped earnings a bit, mitigated by lower corporate income taxes and operating expenses. We also note that $1.4 million (after-tax) of interest revenue related to a tax settlement with Canada Revenue Agency was recorded in Q2 2005.

In Q2, 1,137 GWh of electricity were sold vs. 1,240 GWh y/y. NP's allowed rate of return on equity for 2006 is 9.24%, unchanged from 2005 but still lower than the 9.75% in 2004.

Maritime Electric (ME): **Reported Earnings:** $2.2 million vs. $2.3 million y/y. Electricity sales were also flat y/y at 241 GWh. On June 27, 2006, the Island Regulatory and Appeals Commission (IRAC) issued its Order with respect to ME's Jan. 31, 2006 General Rate Application. The IRAC approved an overall average decrease in customer electricity rates of 1.2% effective July 1, 2006, approved the further amortization of the $20.8 million in recoverable costs accumulated (as at Dec.31, 2003) of $1.5 million in 2006, and approved ME's maximum allowed ROE at 10.25%.

FortisOntario (FO) consists mainly of the distribution businesses of **Canadian Niagara Power (CNP)** and **Cornwall Electric (CE)**. The **Port Colborne lease** (signed in 2000) as well as **Granite Power Corp.** (acquired in May 2003) are included in CNP. **Reported Earnings:** $0.5 million vs. $0.9 million y/y. The decrease in earnings was mostly due to higher corporate income taxes. FO experienced lower electricity sales (259 GWh vs. 272 GWh) due to moderate weather conditions.

FortisAlberta (FA) and FortisBC (FBC):
FA Reported Earnings: $11.3 million vs. $14.7 million y/y. Excluding a $7 million after-tax positive adjustment related to the resolution of tax-related matters pertaining to prior years recorded in Q2 2005, operational earnings were higher y/y mostly due to lower corporate income taxes and higher electricity sales (3,538 GWh vs. 3,402 GWh), partly offset by a 1.9% decrease in electricity sales as a result of the 2006/07 Negotiated Settlement Agreement. For 2006, FA is allowed to earn an 8.93% rate of return on common equity (RRCE), down from 9.5% in 2005. FA is forecast to spend about $184.5 million on capital expenditures in 2006.

FBC Reported Earnings: $3.4 million vs. $5.4 million y/y. The decrease in earnings was mostly due to higher energy supply costs, amortization costs and finance charges, and the impact of the new PBR mechanism, partly offset by the 5.9% electricity rate increase effective Jan. 1, 2006. In Q2, 662 GWh of electricity was sold vs. 642 GWh y/y. For 2006, FBC is allowed to earn an 8.69% RRCE, down from 9.43% in 2005.

On Jan. 31, 2006, FBC received approval from the British Columbia Utilities Commission (BCUC) for its 2006 Capital Plan of $111.7 million, net of customer contributions of which about $27 million in projects is subject to further review and approval.

Regulated Utilities – Caribbean:

Belize Electricity (BE) (70.1%-interest): Reported Earnings increased to $2.3 million from $1.9 million y/y. Earnings were higher y/y mostly due to a 11% increase in electricity rates effective July 1, 2005 (new four-year tariff agreement), and higher electricity sales, partly offset by the foreign exchange impact associated with BE's euro-denominated debt as well as the weak U.S. dollar. Electricity sales slightly increased to 93 GWh vs. 92 GWh y/y.

In Q2, Caribbean Utilities (CUP.U) (37.4%-interest) contributed $2.1 million in equity earnings vs. $3.1 million last year. Earnings were flat y/y after the exclusion of the $1.1 million positive adjustment to Q2 2005 equity earnings related to CUP.U's change in its accounting practice for recognizing unbilled revenue.

In June 2006, CUP.U's customer level reached and surpassed pre-Hurricane Ivan levels. At the end of July 2006, CUP.U's total owned generating capacity reached 120-MW vs. 123-MW pre-Ivan.

CUP.U's existing licence is scheduled to expire in 2011 and licence extension discussions with the Cayman Islands government are still ongoing. If all goes well, CUP.U may be replacing its existing licence with one or more licences and a price-cap regime.

Non-Regulated – Fortis Generation: Operates non-regulated generation in Canada, the United States and Belize. **Reported Earnings:** $6.7 million vs. $3.2 million y/y. Earnings increased y/y as a result of increased electricity production, a $1.2 million ($0.7 million after-tax) insurance gain related to the 2005 flood at the Dodgeville plant in Upper New York State, and lower finance charges and operating costs, partly offset by lower average wholesale energy prices in Ontario ($45.32/MWh vs. $60.24/MWh y/y).

Q2 energy sales increased 12.4% to 290 GWh from 258 GWh last year, due to higher hydroelectric production in Belize and Upper New York State, partially offset by lower production in Central Newfoundland. Production in Belize was aided by higher rainfall levels and the operation of the Chalillo dam and hydroelectric generating facility. The Chalillo reservoir is currently at its full supply level which is equal to 45 GWh of hydroelectric production. In late June 2006, the Dodgeville plant was once again forced out of commission until late Q3 2006 due to another flood. It seems to be flood-prone.

Non-Regulated – Fortis Properties (FP): Reported Earnings: $8.1 million vs. $4.8 million y/y. The $3.3 million y/y increase was mostly due to a $2.1 million ($1.6 million after-tax) gain on the sale of the Days Inn Sydney hotel as well as lower corporate income taxes related to income-tax-rate reductions, which we estimate at about $1.9 million after-tax.

During Q2, FP completed the $7.7 million expansion of the Holiday Inn Sarnia, the $2.5-million expansion to the catering and conference facilities at the Holiday Inn Kitchener-Waterloo, and the $7.2 million 57,000 square foot expansion to the Blue Cross Centre in Moncton, New Brunswick. We expect them to contribute incremental earnings as of Q3 2006. These assets as well as the three Greenwood Inn-branded hotels in Western Canada (acquired in February 2005) and the expanded Delta St. John's Hotel operations (completed on June 1, 2005) are expected to drive revenue and earnings growth in 2006. We continue to expect earnings growth, mainly organically, and perhaps from acquisitions.

Corporate: Reported Expenses: $6.7 million vs. $9.6 million y/y. The decrease in expenses was mostly due to the recording of a $1.9 million ($1.6 million after-tax) net unrealized foreign exchange gain during Q2 2006 compared with a $1.2 million ($1 million after-tax) net unrealized foreign exchange loss during Q2 2005, in addition to a higher corporate income tax recovery, partially offset by a decrease in inter-company interest revenue.

Financial and Outlook

Funds from operations in Q2 2006 were $70.7 million vs. $92.8 million y/y. Cash flow from operations after working capital adjustments increased to $57.8 million from $49.9 million y/y.

During Q2 2006, utility capital expenditures were $111.5 million vs. $97.7 million y/y, including about $80 million spent on FA and FBC.

For 2006, capital expenditures are expected to be about $450 million of which about $300 million will be invested in FA and FBC.

FTS expects the majority of its (organic) capital expenditures of about $2 billion over the next five years to be associated with FA and FBC. FTS's total utility assets are expected to grow at an average annual rate of 6% over the next five years. We expect FTS to achieve growth at this rate, if not slightly more.

FTS will continue to pursue electric utility asset acquisitions inside and outside Canada and will also focus on growing its non-regulated businesses including hydroelectric generation, hotels and real estate.

Valuation

For the 12-month period ending June 2008, we are estimating EPS of $1.46; DPS of $0.76; retained EPS of $0.70; a retained-EPS multiple of 13x; and a long-term corporate bond yield of 6.25%, tax-effected to 4.63% using a 1.35 dividend-tax-credit divisor. This generates a support price of $16.41 and a residual price of $9.10 for a target price of $25.50 (rounded).

Research Analysts

The Research Analyst(s) who prepare these reports certify that their respective report accurately reflects his or her personal opinion and that no part of his/her compensation was, is, or will be directly or indirectly related to the specific recommendations or views as to the securities or companies.

NBF compensates its Research Analysts from a variety of sources. The Research Department is a cost centre and is funded by the business activities of NBF including, Institutional Equity Sales and Trading, Retail Sales, the correspondent clearing business, and Corporate and Investment Banking. Since the revenues from these businesses vary, the funds for research compensation vary. No one-business line has a greater influence than any other for Research Analyst compensation.

Associate: Ramin Burney - (416) 869-7933
ramin.burney@nbfinancial.com

HIGHLIGHTS

- **On Aug. 28, FTS announced that its wholly owned subsidiary, Fortis Energy (Bermuda) Ltd., had acquired all of the outstanding shares of two electric utilities located in the Turks and Caicos Islands – 1) P.P.C. Limited (PPC), and 2) Atlantic Equipment and Power (Turks and Caicos) Limited (Atlantic) – from T.C. Energy Holdings Inc. for US$90 million including estimated assumed debt of about US$20 million.**

- **PPC is the sole provider of electricity in Provinciales, North Caicos and Middle Caicos through an exclusive 50-year licence that expires in 2037, while Atlantic is the sole provider of electricity in South Caicos through an exclusive 50-year licence that expires in 2036.**

- **Combined, the PPC and Atlantic electric utilities serve almost 7,500 customers or about 80% of electricity customers in the Turks and Caicos Islands, and own about 25-MW of diesel-fired generating capacity, meeting a peak demand of about 20 MW.**
  Both utilities are regulated under a traditional rate-of-return on rate-base formula with a fixed rate of return of 17.5% on a defined asset base.

- **FTS has stated that the acquisitions will be immediately EPS and cash flow accretive**
  We estimate the incremental 2006 EPS contribution at about $0.01 per share.

Stock Performance

Assessment

These acquisitions come as no surprise as we have been predicting that once FTS had fully digested the FortisAlberta and FortisBC assets, it would resume fishing for acquisitions in the English-speaking part of the Caribbean and/or Western Canada. Moreover, the silence surrounding FTS was so ominously deafening that we had expected an announcement for some time. While we require more detail, we are satisfied that the acquisitions are bite-sized and beautiful.

We estimate the incremental EPS-contribution of the acquisition at about $0.01 per share for 2006. For 2007 and 2008, depending on exchange rates and the timing and cost of permanent financing of the acquisitions, we are estimating annual incremental EPS contributions from the acquisitions of about $0.04 per share.

We still believe that rounding up FTS's equity interest (currently 37.4%) in Caribbean Utilities (TSX-CUP.U) to 100% is still in the cards, subject to the looks and feel of new licences. Moreover, we are counting on acquisitions in Western Canada over the next few years.

No matter how we look at FTS, it still remains on our radar screen as Canada's best diversified utility, with the best earnings and dividend growth profile.

Event

On Aug. 28, FTS announced that its wholly owned subsidiary, Fortis Energy (Bermuda) Ltd., had acquired all of the outstanding shares of two electric utilities located in the Turks and Caicos Islands – 1) P.P.C. Limited (PPC), and 2) Atlantic Equipment and Power (Turks and Caicos) Limited (Atlantic) – from T.C. Energy Holdings Inc. for US$90 million including assumed debt of about US$20 million.

***PPC** is the sole provider of electricity in Provinciales, North Caicos and Middle Caicos through an exclusive 50-year licence that expires in 2037.*

***Atlantic** is the sole provider of electricity in South Caicos through an exclusive 50-year licence that expires in 2036.*

Combined, the PPC and Atlantic electric utilities serve almost 7,500 customers or about 80% of electricity customers in the Turks and Caicos Islands, own about 25 MW of diesel-fired generating capacity meeting a peak demand of about 20 MW, and estimated annual sales of about 106 GWh in 2006. Both utilities are regulated light-handedly under a traditional rate-of-return on rate-base formula with a fixed rate of return of 17.5% on a defined asset base estimated at about US$53 million for 2006.

Operations

We understand that demand for electricity in the Turks and Caicos Islands is growing relatively strongly at estimated annual rates of 4-6% or better, driven primarily by commercial construction (hotels, condominiums). Commercial/institutional sales represent close to two-thirds of kWh-sales. The Islands have been enjoying an attractive reputation for some time. Historically, they have ducked major tropical storms, let alone hurricanes, although "a 100-year hurricane" can at some time visit the Islands.

The utilities have concentrated generation primarily in one location. The average size of diesel-electric generators is about 4 MW. If growth continues at anticipated rates, we could see the average size of incremental generators increase to perhaps 8-10 MW. We understand that the electricity supply system is structurally in good condition and well maintained, similar to that on Grand Cayman. In 2005, electricity sales were 101.5 GWh.

Regulation

While we require more detail, we understand that regulation is light-handed and, so far, smooth. Similar to Caribbean Utilities, the acquired utilities submit annually their financial statements for the purpose of rate design, followed and verified by an audit.

The cost of fuel is a flow-through. Under-recoveries and over-recoveries in rates are deferred for subsequent refund/collection so as to allow the utilities to earn their rates of return as closely as possible. We also understand that base rates for electricity have changed very little in recent years, because strong rates of electricity sales have enabled them to absorb non-fuel costs. This condition is not expected to change materially in the foreseeable future.

Licence Terms

The remaining licence terms are relatively long. While one cannot necessarily view them as cast in stone, we do not expect unilateral pressures for reopening them prior to the expiry of their stated term. The Turks and Caicos Islands have no history of governmental intervention. Should this condition change, we do not expect FTS to “roll-over and go-under without a bubble.” Apart from legal recourse for, e.g. breach of term of licence etc., there are international arbitration panels ready to adjudicate disputes.

Financial

Currently, the debt/balance-sheet rate is estimated at about 36%. We understand that the utilities are generating modest free cash flow. The gross asset base is about US$57 million. Depreciation rates are estimated at 3-3.5% per year. Annual capital expenditures are estimated at about US$6 million to US$10 million, financed out of cash flow.

We also understand that FTS will finance the acquisition (about US$70 million net) with holding-company debt initially, utilizing available lines of credit. While we do not expect FTS to rush into permanent financing of the acquisitions, we expect it to eventually finance them (permanently) with about 40% of total equity.

Earnings Estimate Revisions

Consistent with established practice, FTS has entered acquisitions that are immediately accretive to earnings and cash flow. We estimate the acquisitions to generate incremental EPS of about $0.04 for each of 2007 and 2008. Over three-to-five years, the annual earnings contributions are capable of growing by about $0.05 to $0.06 per share. **We have increased our estimated 2006 EPS by $0.01 to $1.29, and our estimated 2007 EPS by $0.04 to $1.42.**

Valuation

For the 12-month period ending June 2008, we are estimating EPS of $1.50; DPS of $0.78; retained EPS of $0.72; a retained-EPS multiple of 13x; and a long-term corporate bond yield of 6.25%, tax-effected to 4.63% using a 1.35 dividend-tax-credit divisor. This generates a support price of $16.85 and a residual price of $9.36 for a target price of $26.20 (rounded).

DISCLOSURES:

Ratings And What They Mean:

PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months.

SECONDARY STOCK RATING: Under Review – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock.

INDUSTRY RATING: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months.

RISK RATING: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

General

National Bank Financial (NBF) is an indirect wholly owned subsidiary of National Bank of Canada. National Bank of Canada is a public company listed on Canadian stock exchanges.

Hefty common share dividend increase

Hikes quarterly common dividend by 18.75% to $0.19 per share

HIGHLIGHTS

- **On Sept. 28, the Board of Directors of FTS increased the quarterly common share dividend by 18.75% to $0.19 from $0.16. The dividend is payable on Dec. 1, 2006 to common shareholders of record at the close of business on Nov. 3, 2006.**
- **We have increased our 12-month target price to $26.55 from $26.20 to reflect a higher estimated common share dividend.**
- **Our Sector Perform rating is sustained.**

Stock Performance

Hefty Common share dividend increase

On Sept. 28, the Board of Directors of FTS increased the quarterly common share dividend by 18.75% to $0.19 from $0.16. The dividend is payable on Dec. 1, 2006 to common shareholders of record at the close of business on Nov. 3, 2006.

The DPS increase is hefty, and presages, in our view, FTS' confidence in strong multi-year earnings growth.

By the same token, it also confirms our view that FTS is the Canadian utility with the best growth prospects. We are in the process of reviewing our earnings estimates and expect to disclose our conclusions after FTS has reported third-quarter results.

Valuation

For the 12-month period ending June 2008, we are estimating EPS of $1.50; DPS of $0.82; retained EPS of $0.68; a retained-EPS multiple of 13x; and a long-term corporate bond yield of 6.25%, tax-effected to 4.63% using a 1.35 dividend-tax-credit divisor. This generates a support price of $17.71 and a residual price of $8.84 for a target price of $26.55.

- **We are maintaining our Sector Perform rating and target price of $26.55.**

Stock Performance

Event

On Oct. 19, FTS's wholly owned subsidiary, Fortis Properties (FP), announced an agreement to purchase four hotels, with a total of 454 rooms, in Alberta and B.C. for $51.6 million including assumed debt from Lodge Motel (Kelowna) Ltd. The transaction is expected to close on Oct. 31, 2006.

The hotels are:

1) Holiday Inn Express and Suites in Medicine Hat, Alberta (93 rooms)

2) Best Western in Medicine Hat, Alberta (122 rooms)

3) Ramada Hotel and Suites in Lethbridge, Alberta (119 rooms)

4) Holiday Inn Express in Kelowna, B.C. (120 rooms)

The two latter properties may be expanded soon, given occupancy prospects. Based on our knowledge of the locations of these properties, we view the Kelowna one as the currently perhaps best of the four.

The four hotels will bolster FP's presence in Western Canada and FTS has stated that the acquisition will be immediately EPS accretive.

We expect FTS to continue to expand its property investments, commensurate with the issuance of holding-company debt. Overall, we expect strong earnings growth organically and from acquisitions.

Valuation

For the 12-month period ending June 2008, we are estimating EPS of $1.50; DPS of $0.82; retained EPS of $0.68; a retained-EPS multiple of 13x; and a long-term corporate bond yield of 6.25%, tax-effected to 4.63% using a 1.35 dividend-tax-credit divisor. HIGHLIGHTS

- **<u>Q3 2006 reported earnings:</u> $38.8 million or $0.37 per share vs. $37.4 million or $0.36 per share in Q3 2005 (y/y).**

- **<u>Q3 2006 operational EPS:</u> $0.37 vs. $0.34 y/y, after the removal in Q3 2005 of:**
  1) a $1.6-million future tax asset associated with the favourable resolution of a Canada Revenue Agency (CRA) reassessment related to Cornwall Electric, and 2) an estimated $1-million insurance recovery related to FortisAlberta's Aug. 8, 2005 settlement of the EPCOR litigation. Operational EPS exceeded our estimate by $0.02 and the Street's by $0.06.

- **Operational earnings increased y/y as a result of improved hydroelectric production at BECOL in Belize, lower corporate income taxes at FortisAlberta (FA), higher electricity rates (up 5.9% effective Jan. 1, 2006) at FortisBC (FBC), higher earnings at Fortis Properties (FP) and at Regulated Utilities – Caribbean due to the recent acquisition of two electric utilities in the Turks and Caicos Islands and increased electricity rates at FortisOntario (FO).**
  This was partly offset by higher corporate expenses and lower average wholesale energy prices in Ontario ($46.59/MWh vs. $85.91/MWh y/y).

- **We have increased our estimated 2006 EPS to $1.43 from $1.29, and our 2007 EPS to $1.53 from $1.42. Our target price moves to $27 from $26.55. Our Sector Perform rating is sustained.**

Stock Performance

NATIONAL BANK FINANCIAL

Assessment

As evidenced by Q3 2006 results, FTS reconfirmed our view that it is Canada's diversified utility with the best growth potential.

Q3 2006 EPS exceeded our estimate slightly, primarily because of better-than expected operational results at Fortis Alberta (FA) and Fortis Properties (FP). FA contributed close to 32% of quarterly earnings, followed by FP 16% and FortisBC (FBC) with close to 15%. In total, the Western Canada assets acquired from Aquila contributed about 46% of quarterly earnings.

Canadian regulated operations generated, **operationally,** about 65% of total earnings in Q3 2006 vs. about 57% y/y.

Cost control is at thread running cross- and lengthwise through FTS's fabric, as someone on the Rock is cracking the whip to mitigate what regulation does not provide.

Capital spending of $118 million in Q3 2006 vs. $104 million y/y is consistent with our 2006 estimate of about $475 million to $500 million and similar amounts in 2007.

Debt-to-capitalization at the end of September 2006 was 62.6% down from 64.6% at the end of December 2005.

Now that FTS has bought a few more properties and raised about $121 million through non-callable preference shares earlier this year, the tell-tale signs of prowling for acquisitions are ubiquitous. Western Canada and English-speaking Caribbean (embracing common-law) are what we see on FTS's radar screen (as if FTS had not enough organic-growth potential).

Q3 2006 highlights

Q3 2006 reported earnings: $38.8 million or $0.37 per share vs. $37.4 million or $0.36 per share in Q3 2005 (y/y).

Q3 2006 EPS: $0.37 vs. $0.34 y/y, after the removal in Q3 2005 of 1) a $1.6-million future tax asset associated with the favourable resolution of a Canada Revenue Agency (CRA) reassessment related to Cornwall Electric, and 2) an estimated $1-million insurance recovery related to FortisAlberta's Aug. 8, 2005 settlement of the EPCOR litigation. Operational EPS exceeded our estimate by $0.02 and the Street's by $0.06.

Operational earnings increased y/y as a result of improved hydroelectric production at BECOL in Belize, lower corporate income taxes at FortisAlberta (FA), higher electricity rates (up 5.9% effective Jan. 1, 2006) at FortisBC (FBC), higher earnings at FP and at Regulated Utilities – Caribbean due to the recent acquisition of two electric utilities in the Turks and Caicos Islands and increased electricity rates at FortisOntario. This was partially offset by higher corporate expenses and lower average wholesale energy prices in Ontario ($46.59/MWh vs. $85.91/MWh y/y).

Business Segment Highlights

Segmented Reported Earnings ($Mln)	Q3 2006	Q3 2005
Regulated Utilities -Canadian	$25.3	$22.4
Regulated Utilities -Caribbean	$7.7	$6.2
Non-regulated-Fortis Generation	$7.8	$7.8
Non-regulated-Fortis Properties	$6.3	$4.9
Corporate	($8.3)	($3.9)
Total Reported Earnings	**$38.8**	**$37.4**
Source: FTS		

Regulated Utilities – Canadian

Newfoundland Power (NP): Reported Earnings: $2.6 million vs. $3.4 million y/y. The y/y decrease in earnings was primarily the result of increased energy supply costs partially offset by the change (effective Jan. 1, 2006) in NP's revenue recognition policy (to the accrual basis from the billed basis), which increased earnings by about $0.2 million vs. Q3 2005. This move to the accrual basis has **NO** material impact on annual earnings but has just shifted earnings from Q1 and Q2 to Q3 and, especially, Q4. However, by year-end, all of the quarterly noise will have been silenced.

In Q3, 871 GWh of electricity were sold vs. 873 GWh y/y. NP's allowed rate of return on equity for 2006 is 9.24%, unchanged from 2005 but still lower than the 9.75% in 2004.

Maritime Electric (ME): **Reported Earnings:** $3.1 million vs. $3.0 million y/y. Electricity sales increased to 255 GWh from 250 GWh y/y due to customer growth in the residential sector and higher consumption by customers in the general service sector. On June 27, 2006, the Island Regulatory and Appeals Commission (IRAC) issued its Order with respect to ME's Jan. 31, 2006 General Rate Application. The IRAC approved an overall average decrease in customer electricity rates of 1.2% effective July 1, 2006, approved the further amortization of the $20.8 million in recoverable costs accumulated (as at Dec.31, 2003) of $1.5 million in 2006, and approved ME's maximum allowed ROE at 10.25%. Capital spending that ballooned in 2005 (purchase of a $30-million combustion turbine) is expected to fall back to the "customary" $20-milion level.

FortisOntario (FO) consists mainly of the distribution businesses of **Canadian Niagara Power (CNP)** and **Cornwall Electric (CE)**. The **Port Colborne lease** (signed in 2000) as well as **Granite Power Corp.** (acquired in May 2003) are included in CNP. **Reported Earnings:** $1.6 million vs. $2.1 million y/y. The decrease in earnings was mostly due to the inclusion in Q3 2005 of a $1.6 million future tax asset associated with the favourable resolution of a Canada Revenue Agency (CRA) reassessment related to Cornwall Electric. Excluding this item, earnings were $1.1 million higher y/y due to increases in distribution electricity rates effective May 1, 2006, and lower operating expenses. FO sales were flat y/y due to moderate weather conditions and the loss of an industrial customer at the end of 2005.

FortisAlberta (FA) and FortisBC (FBC):

FA Reported Earnings: $12.3 million vs. $ 9.3 million y/y. Earnings increased $3 million y/y mostly due to lower effective corporate income taxes and increased energy deliveries (3,658 GWh vs. 3,525 GWh), partly offset by a 1.9% decrease in distribution rates as a result of the 2006/07 Negotiated Settlement Agreement, higher amortization costs, finance charges and operating expenses. For 2006, FA is allowed to earn an 8.93% rate of return on common equity (RRCE), down from 9.5% in 2005. FA is forecast to spend about $184.5 million on capital expenditures in 2006.

FBC Reported Earnings: $5.7 million vs. $4.6 million y/y. The $1.1-million increase in earnings was mostly due to a 5.9% electricity rate increase effective Jan. 1, 2006, electricity sales growth, lower operating expenses and lower effective corporate income taxes, partially offset by higher amortization costs and finance charges, and electricity purchase expenses and the impact of the new PBR mechanism. In Q 3, 694 GWh of electricity was sold vs. 674 GWh y/y.

On July 26, 2006, FBC applied to the British Columbia Utilities Commission (BCUC) for approval of its 2007 and 2008 Capital Expenditure Plan of about $240 million, net of customer contributions of which about $15 million over the two-year period.

Regulated Utilities – Caribbean:

Belize Electricity (BE) (70.1%-interest): Reported Earnings increased to $3.8 million from $3.2 million y/y. Earnings were higher y/y due to lower finance charges and electricity sales growth, partly offset by the foreign exchange impact associated with BE's euro-denominated debt as well as the weak U.S. dollar and increased operating expenses.

Electricity sales slightly increased by 1 GWh to 96 GWh.

We understand that because of the increasing generating self-sufficiency, resulting from the completion of the Chalillo dam, BE has signed a new electricity-purchase contract for Mexican electricity at a reduced demand level, allowing for purchases of, at times, attractively-priced off-peak electricity.

In Q3, Caribbean Utilities (CUP.U) (37.4%-interest) contributed $3.2 million in equity earnings vs. $3.0 million last year. Earnings were higher y/y as a result of sales growth, the hurricane cost-recovery surcharge (CRS) and lower maintenance costs partially offset by increased amortized costs.

CUP.U's existing licence is scheduled to expire in 2011 and licence extension discussions with the Cayman Islands government are still ongoing. If all goes well, CUP.U may be replacing its existing licence with one or more licences and a price-cap regime.

On Sept. 28, FTS's wholly owned subsidiary, **Fortis Energy (Bermuda) Ltd.**, completed the acquisition (announced on Aug. 28) of all of the outstanding shares of two electric utilities located in the Turks and Caicos Islands – 1) P.P.C. Limited (PPC), and 2) Atlantic Equipment and Power (Turks and Caicos) Limited (Atlantic) – from T.C. Energy Holdings Inc. for about $97.4 million including assumed debt of about US$20 million. Together, PPC and Atlantic serve almost 7,500 customers or 80% of electricity customers in the Turks and Caicos Islands. The acquisition of PPC and Atlantic is immediately accretive to earnings. They contributed $0.7 million in Q3 (about one month of operation). We estimate annual incremental EPS-contribution at about $0.04.

Non-Regulated - Fortis Generation: Operates non-regulated generation in Canada, the United States and Belize (BECOL). **Reported Earnings:** $7.8 million – flat y/y. Earnings were aided by increased electricity production at BECOL, lower finance charges and lower effective corporate income taxes partly offset by lower average wholesale energy prices in Ontario ($46.59/MWh vs. $ 85.91/MWh y/y) and higher operating costs.

Q3 energy sales jumped 24% to 288 GWh from 232 GWh last year, due to higher hydroelectric production at the Mollejon and Chalillo generating facilities in Belize (65 GWh vs. 18 GWh y/y) due to the operation of the Chalillo storage facility and higher rainfall levels. The Chalillo reservoir is currently at its full supply level which is equal to 45 GWh of hydroelectric production. In late June 2006, the Dodgeville plant was once again forced out of commission due to another flood but resumed production in late Q3, but, this time it was a case of some houses that decided to become floatable.

Non-Regulated - Fortis Properties (FP): Reported Earnings: $6.3 million vs. $4.9 million y/y. The $1.4 million y/y increase was mostly due higher earnings from operations including contributions from the recently completed expansions of the Holiday Inn Sarnia, Holiday Inn Kitchener-Waterloo and Blue Cross Centre and lower effective corporate taxes.

On Oct. 19, FP announced an agreement to purchase four hotels, with a total of 454 rooms, in Alberta and B.C. for $51.6 million including assumed debt from Lodge Motel (Kelowna) Ltd (please refer to our Oct. 20, 2006 NBF bulletin note). The transaction is expected to close on Oct. 31, 2006. The four hotels will bolster FP's presence in Western Canada and FTS has stated that the acquisition will be immediately EPS accretive.

The tendency to add water-parks to otherwise somewhat staid commercial-travellers operations is probably a move to boost occupancy levels during weekends and holidays, if FTS so proceeds. We expect FTS to continue to expand its property investments, commensurate with the issuance of holding-company debt, although, at this stage, FTS may not be pursuing new acquisitions immediately. Overall, we expect strong earnings growth organically and from acquisitions, and from expansion of existing hotel properties.

Corporate: Reported Expenses: $8.3 million vs. $ 3.9 million y/y. The increase in expenses was mostly due to the recording in Q3 2005 of a $3.8 million ($3.1 million after-tax) net unrealized foreign exchange gain associated with unhedged U.S.-dollar-denominated debt, increased finance charges, higher operating expenses, and lower inter-company interest revenue, partially offset by a higher corporate income tax recovery.

Financial and Outlook

Funds from operations in Q3 2006 were $79.6 million vs. $69.2 million y/y. Cash flow from operations after working capital adjustments decreased to $96.4 million from $99.8 million y/y, largely because of a mismatch between collection and disbursement of funds by the Alberta System Operator. Balances, if any, are to disappear after two years.

During Q3 2006, utility capital expenditures were $114.8 million vs. $101.7 million y/y. For 2006, capital expenditures are expected to be about $475 million to possibly $500 million, depending on spending at FA ($346 million spent year-to-date) of which about $340 million will be invested in FA and FBC. For 2007, we are expecting spending of about $500 million.

FTS expects the majority of its (organic) capital expenditures of about $2 billion over the next five years to be associated with FA and FBC. FTS's total utility assets are expected to grow at an average annual rate of 6% over the next five years. We expect FTS to achieve growth at higher than this rate.

FTS will continue to pursue electric utility asset acquisitions inside and outside Canada and will also focus on growing its non-regulated businesses including hydroelectric generation, hotels and real estate.

We expect FTS to continue to expand its property investments, utilizing a prudent amount of holding-company debt commensurate therewith. Overall, we expect strong earnings growth organically and from acquisitions.

Valuation

For the 12-month period ending September 2008, we are estimating EPS of $1.52; DPS of $0.84; retained EPS of $0.68; a retained-EPS multiple of 13x; and a long-term corporate bond yield of 6.25%, tax-effected to 4.63% using a 1.35 dividend-tax-credit divisor. This generates a support price of $18.14 and a residual price of $8.84 for a target price of $27.00.

HIGHLIGHTS

- **Yesterday, FTS's wholly owned subsidiary, Fortis Properties (FP), announced an agreement to purchase Delta Regina located in Regina, Saskatchewan from Remai Investment Corporation for $49.95 million**
The transaction is expected to close in Q3 2007 and is subject to obtaining required approvals and assignments and normal closing conditions.

- **The Delta Regina includes 274 hotel rooms, the 26,600 sq. ft. Saskatchewan Trade and Convention Centre, 52,000 sq. ft. of Class A commercial office space and a parking garage**
The addition of the Delta Regina will bolster FP's presence in Western Canada and will allow FP to enter its eighth Canadian province.

- **Once the transaction closes in Q3, FP will own and operate 19 hotels with over 3,500 rooms in eight provinces, as well as over 2.7 million sq. ft. of office and retail space primarily in Atlantic Canada.**

- **FTS has stated that the acquisition is expected to be immediately accretive to earnings**
We expect FTS to continue to expand its property investments, utilizing a prudent amount of holding-company debt commensurate therewith. Overall, we expect strong earnings growth organically and from acquisitions.

- **We are maintaining our Outperform rating and target price of $30.00.**

Stock Performance

Event

Yesterday (July 23), FTS's wholly owned subsidiary, Fortis Properties (FP), announced an agreement to purchase Delta Regina located in Regina, Saskatchewan from Remai Investment Corporation for $49.95 million.

The transaction is expected to close in Q3 2007 and is subject to obtaining required approvals and assignments and normal closing conditions.

The Delta Regina includes 274 hotel rooms, the 26,600 sq. ft. Saskatchewan Trade and Convention Centre, 52,000 sq. ft. of Class A commercial office space and a parking garage. The addition of the Delta Regina will bolster FP's presence in Western Canada and will allow FP to enter its eighth Canadian province.

Once the transaction closes in Q3, FP will own and operate 19 hotels with over 3,500 rooms in eight provinces as well as over 2.7 million sq. ft. of office and retail space primarily in Atlantic Canada.

FTS has stated that the acquisition is expected to be immediately accretive to earnings. We expect FTS to continue to expand its property investments, utilizing a prudent amount of holding-company debt commensurate therewith. Overall, we expect strong earnings growth organically and from acquisitions.

We are maintaining our EPS estimates and target price. Our Outperform rating is sustained.

Valuation

We are using an average of P/E multiples and a dividend-based support/residual price approach to arrive at our 12-month target price.

Our target price of $30.00 is calculated by applying the following: 1) a 19x P/E multiple to our estimated 2008 EPS of $1.61 giving us a $30.59 target price. 2) Using our dividend-based support/residual price approach: for the 2008 fiscal year, we are estimating EPS of $1.61; DPS of $0.92; and retained EPS (REPS) of $0.69. Our assumed long-term corporate bond yield of nominally 6.25% is tax-effected to 4.63% using a dividend-tax-credit divisor of 1.35. This generates a support price of $19.87 and using a REPS multiple of 14x, a residual price of $9.66, for a target price of $29.53.

Ramin Burney - (416) 869-7933
ramin.burney@nbfinancial.com

HIGHLIGHTS

- **Q2 2007 reported earnings: $41.5 million or $0.31 per share vs. $37.9 million or $0.37 per share in Q2 2006 (y/y).**

- **Q2 2007 operational earnings: $41.5 million or $0.31 per share vs. $33.1 million or $0.32 per share y/y, after excluding in Q2 2006: 1) a $1.6 million after-tax gain on the sale of Fortis Properties' (FP) Days Inn Sydney hotel; 2) a $1.6-million. after-tax reduction in income taxes at FP; and 3) a $1.6-million, after-tax foreign exchange gain on U.S. dollar-denominated corporate debt.**

- **Operational EPS was lower y/y mostly due to the dilution arising from the $1.15 billion common share issue that helped fund the $3.7 billion Terasen Gas acquisition. Operational EPS was basically in line with our and the Street's estimate.**

- **Operational earnings increased y/y as a result of improved earnings from FortisAlberta and FortisBC, incremental earnings from Fortis Turks and Caicos and a $1.6-million contribution from the newly acquired Terasen Gas**
  This was partially offset by higher finance charges related to acquisitions and lower earnings from Non-Regulated Fortis Generation owing to lower rainfall in Belize, central Newfoundland and Upper New York State.

- **We are maintaining our EPS estimates and our target price of $30.00. Our Outperform rating remains.**

Stock Performance

Assessment

We continue to believe that FTS is Canada's most diversified utility with the best earnings and dividend growth profile.

FTS's Q2 2007 operational EPS of $0.31 vs. $0.32 last year (y/y) was basically in line with our and the Street's estimate. Operational EPS was lower y/y mostly due to the dilution arising from the $1.15 billion common share issue during Q2 that helped fund the $3.7 billion Terasen Gas acquisition.

Q2 2007 operational earnings of $41.5 million vs. $33.1 million y/y were higher as a result of improved earnings from FortisAlberta and FortisBC, incremental earnings from Fortis Turks and Caicos (acquired in August 2006) and a $1.6-million contribution from the newly acquired Terasen Gas. This was partially offset by higher finance charges related to acquisitions and lower earnings from Non-Regulated Fortis Generation due to lower rainfall in Belize, central Newfoundland and Upper New York State.

With the Terasen Gas regulated assets safely under its wing (as of May 17, 2007), FTS now has close to $10 billion in total assets (92% regulated), a customer base of almost two million, annual revenues that are expected to reach about $3.5 billion and a stable of Canadian assets that will now produce about 92% of total operating income.

FTS will take the next few quarters to digest the Terasen Gas acquisition. However, it has no plans of slowing down its acquisition pace as it continues to hunt for gas distribution and electric assets in Canada, the U.S. and the Caribbean. We still believe that rounding up FTS's equity interest (currently 54%) in Caribbean Utilities (TSX-CUP.U) to 100% is still in the cards, subject to the looks and feel of potential new licences that are currently being negotiated in the Cayman Islands. FTS will also focus on growing its non-regulated businesses including hydroelectric generation, hotels and real estate.

We are maintaining our EPS estimates and target price. Our Outperform rating is sustained.

Q2 2007 highlights

Q2 2007 reported earnings: $41.5 million or $0.31 per share vs. $37.9 million or $0.37 per share in Q2 2006 (y/y).

Q2 2007 operational earnings: $41.5 million or $0.31 per share vs. $33.1 million or $0.32 per share y/y, after excluding in Q2 2006: 1) a $1.6 million after-tax gain on the sale of Fortis Properties' (FP) Days Inn Sydney hotel, 2) a $1.6 million after-tax reduction in income taxes at FP, and 3) a $1.6 million after-tax foreign exchange gain on U.S. dollar-denominated corporate debt.

Business Segment Highlights

Segmented Reported Earnings ($Mln)	Q2 2007	Q2 2006
Regulated Gas Utilities - Canadian	$1.6	-
Regulated Electric Utilities - Canadian	$34.0	$25.4
Regulated Electric Utilities - Caribbean	$7.6	$4.4
Non-Regulated - Fortis Generation	$4.9	$6.7
Non-Regulated - Fortis Properties	$6.0	$8.1
Corporate and Other	($12.6)	($6.7)
Total Reported Earnings	**$41.5**	**$37.9**
Source: FTS		

Regulated Gas Utilities – Canadian

Terasan Gas (TG): Reported Earnings: $1.6 million (May 17 to June 30, 2007 period).

On May 17, 2007, FTS closed the acquisition of all the outstanding shares of Terasen Inc.

assumption of $2.46 billion in debt. The purchase included the regulated natural gas distribution business located in B.C. called Terasen Gas (TG) but excluded the Terasen Pipeline (renamed Kinder Morgan Canada) petroleum transportation assets.

Terasen Gas (TG) is the principal natural gas distribution utility in B.C., serving about 900,000 customers or 95% of natural gas customers in the province through 44,100-km of natural gas distribution pipelines and 4,300-km of natural gas transmission pipelines. TG serves the lower mainland, Vancouver Island and the southern Interior B.C. and has about $4.272 billion of assets (at the end of Q2 2007) and about 1,200 employees. TG includes Terasen Gas Inc. (TGI), Terasen Gas-Vancouver Island (TGVI), and Terasen Gas (Whistler) Inc. which distributes propane. TG's service territory overlaps with that of the FortisBC (FBC) electricity operations. TG's 30% interest in CustomerWorks, which is a non-regulated shared-service business, is now part of FTS's 'Corporate and Other' segment.

TG's regulated rate base earnings have been supplemented by incentive earnings through the performance-based return (PBR) mechanism, which allows for the 50/50 sharing of cost reductions between TG and its customers. TG earns about 60 basis points in "synergies" in its natural gas business. For 2007, TGI's allowed rate of return on common equity (ROE) is 8.37% while TGVI's is 9.07%. In a typical year, TG experiences higher earnings in Q1 and Q4, lower earnings in Q2 and losses in Q3.

Regulated Electric Utilities – Canadian

FortisAlberta (FA): Reported Earnings: $15.5 million vs. $11.3 million y/y. Earnings jumped $4.2 million y/y primarily due to higher revenue partially offset by higher operating expenses and finance charges. Energy deliveries increased to 3,650 GWh from 3,538 GWh y/y driven by customer growth buoyed by the hot Alberta economy. For 2007, FA is allowed to earn a ROE of 8.51%, down from 8.93% in 2006, reflecting the impact of lower long-term Canada bond yields on the automatic adjustment formula used to calculate the allowed ROE.

Fortis BC (FBC): Reported Earnings: $6.5 million vs. $3.4 million y/y. The $3.1-million earnings increase was mostly due to a 3.3% electricity rate hike, electricity sales growth and lower energy supply costs, partially offset by higher operating expenses, amortization costs and finance charges. In Q2, 670 GWh of electricity were sold vs. 662 GWh y/y, as there was a reduction in the estimate of electrical system losses and continued growth in the Okanagan area. For 2007, FBC is allowed to earn a ROE of 8.77%, down from 9.20% in 2006.

Newfoundland Power (NP): Reported Earnings: $8 million – flat y/y. Earnings were impacted by electricity sales growth offset by a lower allowed ROE of 8.60% for 2007 (vs. 9.24% in 2006) and increased amortization costs. In Q2, 1,172 GWh of electricity were sold vs. 1,137 GWh y/y reflecting customer growth and higher average consumption.

Other Canadian Electric Utilities - Maritime Electric (ME) and FortisOntario (FO): Reported Earnings: $4.0 million vs. $2.7 million y/y (ME:$2.8 million vs. $2.2 million y/y: FO: $1.2 million vs. $0.5 million). Earnings increased $1.3 million y/y as there was a 3.35% increase in basic electricity rates at ME (effective July 1, 2006), higher electricity sales and a lower effective corporate tax rate (38.5% vs. 47.1% y/y). Electricity sales of 516 GWh vs. 500 GWh y/y were driven by higher average consumption as a result of cooler than normal weather conditions experienced in PEI.

Regulated Utilities – Caribbean: Reported Earnings: $7.6 million vs. $4.4 million y/y. Earnings increased y/y mostly due to $2.4 million in incremental earnings from **Fortis Turks and Caicos (FTC)** (acquired in August 2006), electricity sales growth and lower finance charges at **Belize Electricity (BE)** (70.1%-interest) (earnings of $2.9 million vs. $2.3 million y/y), as well as a better earnings contribution from **Caribbean Utilities Company Ltd. (CUP.U)** ($2.3 million vs. $2.1 million y/y), arising from a higher ownership interest (54% vs. 37.3% last year).

CUP.U's existing licence is scheduled to expire in 2011 and licence extension discussions with the Cayman Islands government are still ongoing. If all goes well, CUP.U may be replacing its existing licence with one or more licences and perhaps a price-cap regime, although we would not rule out the possibility of the parties revisiting the current rate-of-return on allowable assets of rate base formula.

Non-Regulated - Fortis Generation: Reported Earnings: $4.9 million vs. $6.7 million y/y. Earnings decreased y/y as lower rainfall in Belize, central Newfoundland and Upper New York State resulted in lower overall electricity production (274 GWh vs. 290 GWh y/y).

Non-Regulated - Fortis Properties (FP): Reported Earnings: $6 million vs. $8.1 million y/y. Operational earnings increased $1.1 million y/y ($6 million vs. $4.9 million y/y after excluding in Q2 2006, a $1.6 million after-tax gain on the sale of the Days Inn Sydney hotel, and a $1.6-million after-tax reduction in income taxes) largely due to incremental earnings contributions from the four Western Canada hotels that were acquired last Nov. 1, 2006, partially offset by higher amortization costs and finance charges.

On Aug.1, 2007, FP acquired the Delta Regina hotel located in Regina, Saskatchewan from Remai Investment Corporation for $49.95 million.

The Delta Regina includes 274 hotel rooms, the 26,600 sq. ft. Saskatchewan Trade and Convention Centre, 52,000 sq. ft. of Class A commercial office space and a parking garage. The addition of the Delta Regina has bolstered FP's presence in Western Canada and has enabled FP to enter its eighth Canadian province. FP now owns and operates 19 hotels with over 3,500 rooms in eight provinces as well as over 2.7 million sq. ft. of office and retail space primarily in Atlantic Canada.

The acquisition is immediately accretive to earnings. We expect FTS to continue to expand its property investments, utilizing a prudent amount of holding-company debt commensurate therewith. Overall, we expect solid earnings growth organically and from acquisitions, and from expansion of existing hotel properties.

Corporate and Other: Reported Expenses: $12.6 million vs. $6.7 million y/y. The increase in expenses y/y was mostly due to higher finance charges (including Terasen Gas acquisition-related finance charges of $4.9 million), interest on the US$40 million of unsecured subordinated convertible debentures issued in November 2006, as well as the absence of a $1.6 million after-tax foreign exchange gain on U.S. dollar-denominated corporate debt that was recorded in Q2 2006.

Financial

Funds from operations in Q2 2007 were $115.7 million vs. $74 million y/y. During Q2 2007, utility capital expenditures increased to $192.7 million from $111.5 million last year. For 2007, **gross consolidated utility capital expenditures** are expected to be about $770 million including $642 million related to electric utilities (mostly FA and FBC) and $128 million on Terasen Gas.

FTS expects the majority of its **gross electric utility capital expenditures** of about $2.8 billion over the next five years to be driven by FA, FBC and regulated and non-regulated electric utilities in the Caribbean. **Gross gas utility capital expenditures** at Terasen Gas are expected to be over $1 billion during the next five years.

Valuation

We are using an average of P/E multiples and a dividend-based support/residual price approach to arrive at our 12-month target price.

Our target price of $30.00 is calculated by applying the following: 1) a 19x P/E multiple to our estimated 2008 EPS of $1.61 giving us a $30.59 target price. 2) Using our dividend-based support/residual price approach: for the 2008 fiscal year, we are estimating EPS of $1.61; DPS of $0.92; and retained EPS (REPS) of $0.69. Our assumed long-term corporate bond yield of nominally 6.25% is tax-effected to 4.63% using a dividend-tax-credit divisor of 1.35. This generates a support price of $19.87 and using a REPS multiple of 14x, a residual price of $9.66, for a target price of $29.53.

DISCLOSURES:

Ratings And What They Mean:

PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months;

Sector Perform – The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months.

SECONDARY STOCK RATING: Under Review – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock.

INDUSTRY RATING: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months.

RISK RATING: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

General

National Bank Financial (NBF) is an indirect wholly owned subsidiary of National Bank of Canada. National Bank of Canada is a public company listed on Canadian stock exchanges.

HIGHLIGHTS

- **<u>Q3 2007 reported earnings:</u> $30.8 million or $0.20 per share vs. $38.8 million or $0.37 per share in Q3 2006 (y/y). EPS was $0.02 below our estimate and a penny below the Street's.**

- **Higher earnings at FortisAlberta (FA), Fortis Turks and Caicos (FTC) and Fortis Properties (FP) were more than offset by higher finance charges…**
…(mostly related to the recent $3.7 billion Terasen Gas (TG) acquisition), lower non-regulated hydroelectric production due to lower rainfall primarily in Belize and Upper New York State as well as a $3.7-million loss at TG due to seasonality. The $1.15-billion common share issue during Q2 that helped fund the TG acquisition further diluted Q3 2007 EPS.

- **The integration of the TG assets is proceeding according to plan and the acquisition is still expected to be accretive over the first full year of ownership**

- **FTS is Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space**
FTS common shares offer investors a good combination of income and capital appreciation prospects.

- **We have lowered our 2007 EPS estimate to $1.38 from $1.41 and our 2008 EPS estimate to $1.59 from $1.61. Our target price is slightly decreased to $29.75 from $30.00. Our Outperform rating is sustained.**

Stock Performance

Assessment

FTS reported Q3 2007 earnings of $30.8 million or $0.20 per share compared with $38.8 million or $0.37 per share in Q3 2006 (y/y). EPS was $0.02 below our estimate and a penny below the Street's.

Higher earnings at FortisAlberta (FA), Fortis Turks and Caicos (FTC) and Fortis Properties (FP) were more than offset by higher finance charges (mostly related to the recent $3.7 billion Terasen Gas (TG) acquisition), lower non-regulated hydroelectric production due to lower rainfall primarily in Belize and Upper New York State as well as a net loss of $3.7 million at TG due to seasonality. The $1.15 billion common share issue during Q2 that helped fund the TG acquisition further diluted Q3 2007 EPS.

The integration of the TG assets is proceeding according to plan and the acquisition is still expected to be accretive over the first full year of ownership.

FTS is Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space. FTS common shares offer investors a good combination of income and capital appreciation prospects. The interest-sensitive FTS should continue to benefit from U.S. Fed easing and eventual interest rate cuts by the Bank of Canada (BoC). Yield-hungry investors should take notice of FTS, as it is consistent in growing the common share dividend on a yearly basis and we expect this trend to continue.

FTS will spend more than $3 billion on gross electric utility capital expenditures and over $1 billion in gross gas utility capital expenditures (Terasen Gas) over the next five years. FTS's rate base is expected to grow at an average 6% per year clip which will aid earnings growth going forward.

FTS will take a few more quarters to digest the TG acquisition, however, it is still actively hunting for gas distribution and electric assets in the U.S., Canada and the Caribbean. FTS could target companies with an enterprise value in the $1 to $6 billion range but could also make bite-size acquisitions of companies that are well-run and have good management in place. FTS would likely make a play for either of Ontario's two large gas distribution utilities (Union Gas, Enbridge Gas Distribution) should the opportunity arise in the future. For the time being, FTS is reluctant to partner with other entities such as pension funds for acquisitions as it prefers to go solo.

We still believe that rounding up FTS's equity interest (currently 54%) in Caribbean Utilities Company Ltd. (TSX-CUP.U) to 100% is still in the cards, subject to the looks and feel of potential new licences that are currently still being negotiated in the Cayman Islands. FTS will also focus on growing its non-regulated businesses including hydroelectric generation, hotels and real estate.

We have lowered our 2007 EPS estimate to $1.38 from $1.41 and our 2008 EPS estimate to $1.59 from $1.61. Our target price is slightly decreased to $29.75 from $30. Our Outperform rating is sustained.

Q3 2007 highlights

Q3 2007 reported earnings: $30.8 million or $0.20 per share vs. $38.8 million or $0.37 per share in Q3 2006 (y/y).

Segmented Reported Earnings ($Mln)	Q3 2007	Q3 2006
Regulated Gas Utilities - Canadian	($3.7)	-
Regulated Electric Utilities - Canadian	$28.0	$25.3
Regulated Electric Utilities - Caribbean	$9.8	$7.7
Non-Regulated - Fortis Generation	$5.0	$7.8
Non-Regulated - Fortis Properties	$8.0	$6.3
Corporate and Other	($16.3)	($8.3)
Total Reported Earnings	**$30.8**	**$38.8**
Source: FTS		

Regulated Gas Utilities – Canadian

Terasen Gas (TG): Reported Net Loss of $3.7 million.

(On May 17, 2007, FTS closed the acquisition of all the outstanding shares of Terasen Inc. [formerly BC Gas Inc.] from Kinder Morgan Inc. [KMI] for $3.7 billion including the assumption of $2.46 billion in debt. The purchase included the regulated natural gas distribution business located in B.C. called Terasen Gas [TG] but excluded the Terasen Pipeline [renamed Kinder Morgan Canada] petroleum transportation assets.)

In Q3 2007, TG reported a net loss of $3.7 million. We had expected a slightly lower net loss. In a typical year, TG experiences higher earnings in Q1 and Q4, lower earnings in Q2 and losses in Q3. Q3 gas volumes decreased 4.18% y/y as there was a 10.2% decrease in gas transportation volumes, partially offset by a 4.8% increase in gas sales volumes due to higher consumption as a result of cooler-than-normal weather.

For 2007, TGI's allowed rate of return on common equity (ROE) is 8.37% while TGVI's is 9.07%. TGI and TGVI are expected to have a higher allowed ROE in 2008 as long-term Canada bond yields have increased. FortisAlberta (FA), FortisBC (FBC) and Newfoundland Power (NP) should also have a higher allowed ROE in 2008 reflecting the impact of higher long-term Canada bond yields on the automatic adjustment formula used to calculate the allowed ROE.

Regulated Electric Utilities – Canadian

FortisAlberta (FA): Reported Earnings: $14.7 million vs. $12.3 million y/y. Earnings increased y/y primarily due to higher revenue and increased corporate income tax recoveries partially offset by higher operating expenses and finance charges. Energy deliveries increased to 123 GWh y/y to 3,781 GWh from 3,658 GWh y/y driven by customer demand growth buoyed by the hot Alberta economy. For 2007, FA is allowed to earn a ROE of 8.51%, down from 8.93% in 2006.

Fortis BC (FBC): Reported Earnings: $6.2 million vs. $5.7 million y/y. The $0.5-million earnings increase was mostly due to a 3.3% electricity rate hike and electricity sales growth partially offset by higher operating expenses, amortization costs and finance charges. In Q3, 703 GWh of electricity were sold vs. 694 GWh y/y, as once again there was a reduction in the estimate of electrical system losses and continued growth in the Okanagan area. For 2007, FBC is allowed to earn a ROE of 8.77%, down from 9.20% in 2006.

Newfoundland Power (NP): Reported Earnings: $2.7 million vs. $2.6 million – basically flat y/y. Earnings were impacted by electricity sales growth (874 GWh vs. 871 GWh y/y) offset by a lower allowed ROE of 8.60% for 2007 (vs. 9.24% in 2006), increased amortization costs and finance charges.

Other Canadian Electric Utilities - Maritime Electric (ME) and FortisOntario (FO): **Reported Earnings:** $4.4 million vs. $4.7 million y/y (ME: $3 million vs. $3.1 million y/y: FO: $1.4 million vs. $1.6 million). Earnings decreased $0.3 million y/y as a result of increased operating expenses and higher amortization costs partially offset by a lower effective corporate tax rate (36.2% vs. 37.3%). We had expected flat earnings y/y.

Regulated Utilities – Caribbean: Reported Earnings: $9.8 million vs. $7.7 million y/y.
Earnings increased y/y mostly due to incremental earnings from **Fortis Turks and Caicos (FTC)** (acquired in August 2006) ($2.7 million vs. $0.7 million y/y), and a higher earnings contribution from **Caribbean Utilities Company Ltd. (CUP.U)** ($4.1 million vs. $3.2 million y/y). This was partially offset by lower earnings from **Belize Electricity (BE)** (70.1%-interest) (earnings of $3 million vs. $3.8 million y/y), due mostly to increased operating expenses, amortization costs and finance charges.

CUP.U's existing licence is scheduled to expire in 2011 and licence extension discussions with the Cayman Islands government are still ongoing.

<u>Non-Regulated – Fortis Generation:</u> Reported Earnings: $5.0 million vs. $7.8 million y/y. Earnings decreased y/y as lower rainfall primarily in Belize and Upper New York State resulted in lower overall electricity production (254 GWh vs. 288 GWh y/y). We had expected earnings of $5.8 million. As per FTS, hydroelectric production in Belize recovered very strongly during the month of October resulting from higher rainfall and this has brought year-to-date production levels in line with budgeted amounts.

<u>Non-Regulated – Fortis Properties (FP)</u>: Reported Earnings: $8 million vs. $6.3 million y/y. Earnings increased y/y largely due to incremental earnings contributions from the four Western Canada hotels that were acquired last Nov. 1, 2006, partially offset by higher amortization costs and finance charges.

We expect FTS to continue to expand its property investments, utilizing a prudent amount of holding-company debt commensurate therewith. Overall, we expect solid earnings growth organically and from acquisitions, and from expansion of existing hotel properties.

<u>Corporate and Other:</u> Reported Expenses: $16.3 million vs. $8.3 million y/y. The increase in expenses y/y was mostly due to higher finance charges and preference share dividends associated with the financing of acquisitions such as TG and FTC.

Financial

Funds from operations in Q3 2007 increased to $145.7 million from $68.2 million y/y.

In FTS's 2006 Annual Report, it is stated that each $0.04 change in the Cdn$/US$-rate, will impact EPS by Cdn$0.01. This exposure has declined with FTS's recent private placement of US$200 million of U.S.-denominated senior unsecured debt. The interest expense on U.S.$-denominated debt is offsetting U.S.$ earnings exposure.

During Q3 2007, utility capital expenditures increased to $211.6 million from $114.8 million y/y. For 2007, gross consolidated utility capital expenditures are expected to be about $770 million including $630 million related to electric utilities (mostly FA and FBC) and about $140 million on TG.

FTS expects the majority of its gross electric utility capital expenditures of about $3 billion over the next five years to be driven by FA, FBC and regulated and non-regulated electric utilities in the Caribbean. Gross gas utility capital expenditures at TG are expected to be over $1 billion during the next five years.

Valuation

We are using an average of P/E multiples and a dividend-based support/residual price approach to arrive at our 12-month target price.

Our target price of $29.75 is calculated by applying the following: 1) a 19x P/E multiple to our estimated 2008 EPS of $1.59 giving us a $30.21 target price. 2) Using our dividend-based support/residual price approach: for the 2008 fiscal year, we are estimating EPS of $1.59; DPS of $0.92; and retained EPS (REPS) of $0.67. Our assumed long-term corporate bond yield of nominally 6.25% is tax-effected to 4.63% using a dividend-tax-credit divisor of 1.35. This generates a support price of $19.87 and using a REPS multiple of 14x, a residual price of $9.38, for a target price of $29.25.

DISCLOSURES:

Ratings And What They Mean:

PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months;
Sector Perform – The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months.
SECONDARY STOCK RATING: Under Review – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock.
INDUSTRY RATING: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months.
RISK RATING: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

General

National Bank Financial (NBF) is an indirect wholly owned subsidiary of National Bank of Canada. National Bank of Canada is a public company listed on Canadian stock exchanges.

Another common share dividend hike

Boosts quarterly common share dividend by a whopping 19% to $0.25 per share

HIGHLIGHTS

- **FTS's Board of Directors yesterday declared a quarterly common share cash dividend of $0.25 per share (up from $0.21), payable on March 1, 2008, to the common shareholders of record at the close of business on Feb. 8, 2008. This represents a whopping 19% increase in the quarterly common share dividend.**

- **We had assumed annual dividend increases of $0.08 per share in 2008 and 2009 as we were expecting retention of cash for growth (organic and non-organic)**
Our expected dividend hikes were in hindsight too conservative. Owing to FTS's legendary superior management, its Directors probably felt that this boost in the dividend would still leave FTS in a comfortable financial position between internally generated and externally raised funds, and with an estimated dividend payout of about 63% for 2008 placing it in the peer group range of 60-70%.

- **The integration of the Terasen Gas (TG) assets is proceeding according to plan and the acquisition is still expected to be accretive over the first full year of ownership**
FTS remains Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space. The interest-sensitive FTS should continue to benefit from rate cuts by the U.S. Fed and the Bank of Canada (BoC).

- **Our target price is slightly increased to $30.00 from $29.75 as a result of the higher than expected dividend increase. Our Outperform rating is sustained.**

Stock Performance

Valuation

We are using an average of P/E multiples and a dividend-based support/residual price approach to arrive at our 12-month target price.

Our target price of $30.00 is calculated by applying the following: 1) a 19x P/E multiple to our estimated 2008 EPS of $1.59 giving us a $30.21 target price. 2) Using our dividend-based support/residual price approach: for the 2008 fiscal year, we are estimating EPS of $1.59; DPS of $1.00; and retained EPS (REPS) of $0.59. Our assumed long-term corporate bond yield of nominally 6.25% is tax-effected to 4.63% using a dividend-tax-credit divisor of 1.35. This generates a support price of $21.60 and using a REPS multiple of 14x, a residual price of $8.26, for a target price of $29.86.

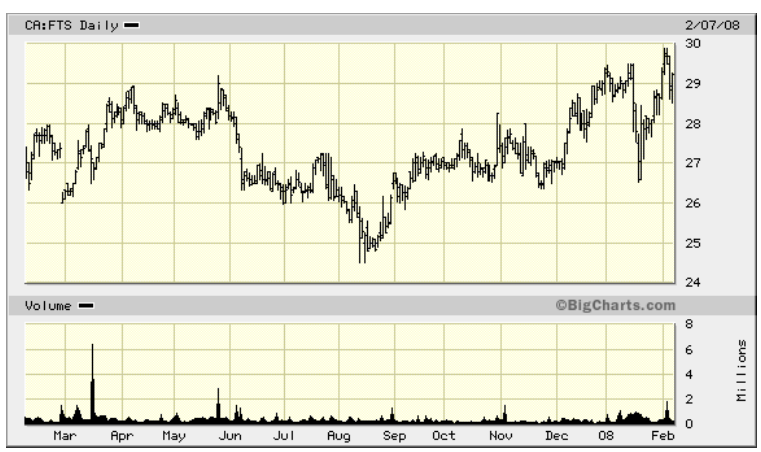
- **<u>Q4 2007 operational EPS:</u> $0.46 vs. $0.33 (y/y), after excluding in Q4 2007: a $7-million after-tax gain on the sale of surplus land at TG; a $2-million after-tax gain at FortisOntario (FO) related to a refund received associated with an interconnection arrangement from the late 1990s; a $4-million favourable corporate tax adjustment at Fortis Properties (FP), and about $5 million of non-recurring items included in the corporate segment. Operational EPS was basically in line with our and the Street's estimates.**

- **The Q4 earnings improvement was driven by $45 million of incremental operational earnings from Terasen Gas (TG), which was acquired in May 2007**
The integration of the TG assets is proceeding according to plan and the acquisition is still expected to be accretive over the first full year of ownership.

- **FTS is Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space**
FTS common shares offer investors a good combination of income and capital appreciation prospects.

- **We are maintaining our EPS estimates of $1.59 for 2008 and $1.68 for 2009. Our target price remains at $32.00 and our Outperform rating is sustained.**

Stock Performance



Assessment

FTS's Q4 2007 operational EPS of $0.46 vs. $0.33 y/y, was basically in line with our and the Street's estimates.

The Q4 earnings improvement was driven by $45 million of incremental operational earnings from Terasen Gas (TG) which was acquired in May 2007. In a typical year, TG experiences higher earnings in Q1 and Q4, lower earnings in Q2 and losses in Q3. The integration of the TG assets is proceeding according to plan and the acquisition is still expected to be accretive over the first full year of ownership.

FTS is Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space. FTS common shares offer investors a good combination of income and capital appreciation prospects. The interest-sensitive FTS should continue to benefit from U.S. Federal Reserve Board easing and more interest rate cuts by the Bank of Canada (BoC). Yield-hungry investors should take notice of FTS, as it is consistent in growing the common share dividend on a yearly basis (impressive 19% dividend hike in December 2007) and we expect this trend to continue.

FTS will spend more than $3 billion on gross electric utility capital expenditures and over $1 billion on gross gas utility capital expenditures (TG) over the next five years. FTS's rate base is expected to grow at an average 6% per year clip which will aid earnings growth going forward. In 2008, FTS will spend about $890 million on gross utility capital expenditures.

FTS is still actively hunting for gas distribution and electric assets in the U.S., Canada and the Caribbean although no deals are considered imminent at this time.

We still believe that rounding up FTS's equity interest (currently 54%) in Caribbean Utilities Company Ltd. (TSX-CUP.U) to 100% is still a very strong possibility given that CUP.U has finally reached an agreement in principle with the Cayman Islands Government on new 20-year Generation and T&D licences. FTS will also focus on growing its non-regulated businesses including hydroelectric generation, hotels and real estate.

We are maintaining our EPS estimates of $1.59 for 2008 and $1.68 for 2009. Our target price remains at $32.00 and our Outperform rating is sustained.

Q4 2007 highlights

Q4 2007 reported earnings: $79 million or $0.51 per share vs. $34 million or $0.33 per share in Q4 2006 (y/y).

Q4 2007 operational EPS: $0.46 vs. $0.33 (y/y) after excluding in Q4 2007: a $7-million after-tax gain on the sale of surplus land at TG; a $2-million after-tax gain at FortisOntario (FO) related to a refund received associated with an interconnection arrangement from the late 1990s; a $4-million favourable corporate tax adjustment at Fortis Properties (FP), and about $5 million of non-recurring items included in the corporate segment.

Segmented Reported Earnings ($Mln)	Q4 2007	Q4 2006
Regulated Gas Utilities - Canadian	$52	-
Regulated Electric Utilities - Canadian	$25	$27
Regulated Electric Utilities - Caribbean	$9	$8
Non-Regulated - Fortis Generation	$7	$7
Non-Regulated - Fortis Properties	$8	$3
Corporate and Other	($22)	($11)
Total Reported Earnings	**$79**	**$34**
Source: FTS		

Regulated Gas Utilities – Canadian

Terasen Gas (TG): Reported Earnings: $52 million.

(On May 17, 2007, FTS closed the acquisition of all the outstanding shares of Terasen Inc. [formerly BC Gas Inc.] from Kinder Morgan Inc. [KMI] for $3.7 billion including the assumption of $2.46 billion in debt. The purchase included the regulated natural gas distribution business located in B.C. called Terasen Gas [TG] but excluded the Terasen Pipeline [renamed Kinder Morgan Canada] petroleum transportation assets.)

In Q4 2007, TG reported earnings of $52 million which included a $7-million after-tax gain on the sale of surplus land. In a typical year, TG experiences higher earnings in Q1 and Q4, lower earnings in Q2 and losses in Q3. Fourth Quarter gas volumes increased 7.12% y/y to 69,108 TJ due primarily to cooler weather and customer growth.

For 2008, TGI's allowed rate of return on common equity (ROE) has increased to 8.62% from 8.37% in 2007 while TGVI's has increased to 9.32% from 9.07%.

Regulated Electric Utilities – Canadian

FortisAlberta (FA): Reported Earnings: $6 million vs. $9 million y/y. Earnings decreased y/y primarily due to higher operating expenses, amortization costs and finance charges related to the ongoing addition of capital assets. Energy deliveries increased 101 GWh y/y to 4,002 GWh driven by higher energy demand related to customer growth buoyed by the robust Alberta economy. For 2008, FA's allowed ROE has increased to 8.75% from 8.51% in 2007.

Fortis BC (FBC): Reported Earnings: $7 million vs. $6 million y/y. The $1-million earnings increase was mostly due to a 3.3% electricity rate hike offset by higher operating expenses, amortization costs and finance charges. For 2008, FBC is allowed to earn a ROE of 9.02%, up from 8.77% in 2007.

Newfoundland Power (NP): Reported Earnings: $9 million − flat y/y. Earnings were impacted by electricity sales growth (1,384 GWh vs.1,353 GWh y/y) offset by reduced electricity rates due to a lower allowed ROE of 8.60% for 2007 vs. 9.24% in 2006. For 2008, NP's allowed ROE has increased to 8.95%.

Other Canadian Electric Utilities - Maritime Electric (ME) and FortisOntario (FO): **Reported Earnings:** $3 million vs. $3 million y/y (ME: $1.5 million vs. $2.3 million y/y: FO: $1.5 million vs. $1 million y/y). Earnings were flat y/y as a $2 million after-tax gain at FO related to a refund received as ordered by the regulator associated with an interconnection arrangement from the late 1990s was offset by higher amortization costs and increased finance charges mostly at ME.

Regulated Utilities – Caribbean: Reported Earnings: $9 million vs. $8 million y/y. Earnings increased y/y mostly due to the impact of the increased investment in **Caribbean Utilities Company Ltd. (TSX-CUP.U)** (54% vs. 37% y/y) partially offset by higher operating expenses, and the unfavourable impact of foreign currency translation due to the weaker US$ ($1 million).

During December 2007, CUP.U and the Cayman Islands Government reached an agreement in principle on the terms of new 20-year Generation and T&D licences.

Non-Regulated – Fortis Generation: Reported Earnings: $7 million vs. $7 million y/y. Earnings were flat y/y as lower rainfall across virtually all regions of operations was mostly offset by higher average wholesale electricity prices in Ontario ($48.33/MWh vs. $42.69/MWh y/y) and lower operating expenses.

Non-Regulated – Fortis Properties (FP): Reported Earnings: $8 million vs. $3 million y/y. Earnings increased y/y largely due to 1) incremental earnings contributions from the four Western Canada hotels in B.C. and Alberta that were acquired on Nov. 1, 2006 and the Delta

Regina that was purchased on Aug. 1, 2007, and 2) a $4 million favourable corporate tax adjustment related to the lowering of future income tax liability balances resulting from enacted future Federal income tax rate reductions.

We expect FTS to continue to expand its property investments, utilizing a prudent amount of holding-company debt commensurate therewith. Overall, we expect solid earnings growth organically and from acquisitions, and from expansion of existing hotel properties.

Corporate and Other: **Reported Expenses:** $22 million vs. $11 million y/y. The increase in expenses y/y was mostly due to higher finance charges associated with the financing of the TG acquisition and about $5 million of non-recurring items related to purchase price adjustments, the impact of lower enacted future Federal income tax rates on future income tax assets and a $1 million penalty arising from the cancellation of an interest rate swap related to BECOL. It is expected that Corporate expenses will return to the $17-million quarterly run-rate in Q1 2008.

Financial

Funds from operations in Q4 2007 increased to $143 million from $81 million y/y driven by FA, CUP.U and TG. Funds from operations in 2007 increased strongly to $490 million from $300 million y/y.

During Q4 2007, utility capital expenditures increased to $252 million from $152 million y/y. In 2007, gross consolidated utility capital expenditures jumped to $790 million from $483 million in 2006 with the bulk spent at electric utilities (mostly FA-$285 million and FBC-$147 million) and about $120 million on TG. For 2008, gross consolidated utility capital expenditures is expected to be about $890 million including $640 million related to electric utilities (mostly FA and FBC) and about $250 million on TG (includes $50 million for the start of construction on a new 1.5 bcf LNG storage facility on Vancouver Island which is expected to be completed by 2001 at a total cost of about $175 million to $200 million).

FTS expects the majority of its gross electric utility capital expenditures of about $3 billion over the next five years to be driven by FA, FBC and regulated and non-regulated electric utilities in the Caribbean. Gross gas utility capital expenditures at TG are expected to be over $1 billion during the same period.

Valuation

We are using an average of P/E multiples and a dividend-based support/residual price approach to arrive at our 12-month target price.

Our target price of $32.00 is calculated by applying the following: 1) a 19x P/E multiple to our estimated 2009 EPS of $1.68 giving us a $31.92 target price. 2) Using our dividend-based support/residual price approach: for the 2009 fiscal year, we are estimating EPS of $1.68; DPS of $1.10; and retained EPS (REPS) of $0.58. Our assumed long-term corporate bond yield of nominally 6.25% is tax-effected to 4.63% using a dividend-tax-credit divisor of 1.35. This generates a support price of $23.76 and using a REPS multiple of 14x, a residual price of $8.12, for a target price of $31.88.

DISCLOSURES:

Ratings And What They Mean:

PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months.

SECONDARY STOCK RATING: Under Review – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock.

INDUSTRY RATING: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy.

The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months.

RISK RATING: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

FTS - ADDITIONAL COMPANY RELATED DISCLOSURES

If a company specific disclosure is not found herein for a listed company, NBF at this time does not provide research coverage or stock rating for the company in question

In the past 12 months NBF has not acted as financial advisor, fiscal agent or underwriter for the company that is the subject of this report. NBF may act in such a capacity in the future and receive, or expect to receive, compensation for such activities.

NBF is an indirect wholly owned subsidiary of the National Bank of Canada. From time to time the National Bank of Canada may enter into lending or financial arrangements with companies that are the subject of NBF Research Reports. At the date of this report, National Bank of Canada is a lender to the company which is the subject of this report.

NBF and/or its Affiliates may have a position in the securities mentioned herein and may make purchases and/or sales of these securities from time to time in the open market or otherwise. On the last day of the month preceding the date of this report, NBF and its Affiliates held in the aggregate less than 1% of the outstanding shares (of any class of equity securities) of this issuer.

The company discussed in this report has two or more classes of common shares existing with differential voting rights. (32)

HIGHLIGHTS

- **<u>Q1 2008 reported earnings:</u> $91 million or $0.58 per share (basic) vs. $42 million or $0.38 per share in Q1 2007 (y/y).**

- **<u>Q1 2008 operational EPS:</u> $0.58 vs. $0.40 (y/y), after excluding a one-time $2-million charge related to the disposal of steam turbine assets at Caribbean Utilities (CUP.U) in Q1 2007**
  Operational EPS was basically in line with our and the Street's estimates.

- **The strong earnings improvement was mostly driven by $58 million of incremental earnings from Terasen Gas (TG) (which was acquired in May 2007) and improved performance at CUP.U. This was partially offset by lower earnings at Newfoundland Power associated with a shift in the quarterly distribution of annual purchased power expense, and higher finance charges related to the TG acquisition**
  The integration of the TG assets is proceeding according to plan and the acquisition became accretive to EPS during the quarter as per FTS's original guidance.

- **FTS is Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space**
  FTS common shares offer investors a good combination of income and capital appreciation prospects.

- **We are maintaining our EPS estimates of $1.59 for 2008 and $1.68 for 2009. Our target price remains at $32.00 and our Outperform rating is sustained.**

Stock Performance

NATIONAL BANK FINANCIAL

Assessment

FTS's Q1 2008 operational EPS of $0.58 vs. $0.40 y/y, was basically in line with our and the Street's estimates.

The strong EPS improvement was mostly driven by $58 million of incremental earnings from Terasen Gas (TG), which was acquired in May 2007. In a typical year, TG experiences higher earnings in Q1 and Q4, lower earnings in Q2 and losses in Q3. The integration of the TG assets is proceeding according to plan and during Q1 the acquisition became accretive to EPS as per FTS's original guidance (accretive within the first full year of ownership).

FTS is Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space. FTS common shares offer investors a good combination of income and capital appreciation prospects. Yield-hungry investors should take notice of FTS, as it is consistent in growing the common share dividend on a yearly basis (impressive 19% dividend hike in December 2007) and we expect this trend to continue.

FTS will spend more than $3 billion on gross electric utility capital expenditures and more than $1 billion on gross gas utility capital expenditures (TG) over the next five years. FTS's rate base is expected to grow at an average 6% per year clip which will aid earnings growth going forward. In 2008, FTS will spend about $890 million on gross utility capital expenditures.

FTS is still actively hunting for gas distribution and electric assets in the U.S., Canada and the Caribbean in the $1 billion to $5 billion enterprise value range although no deals are considered imminent at this time.

We still believe that rounding up FTS's equity interest (currently 54%) in Caribbean Utilities Company Ltd. (TSX-CUP.U) to 100% is still a very strong possibility now that CUP.U has finally been granted a new exclusive 20-year T&D licence and a new non-exclusive 21.5-year Generation licence to replace the old licence that was scheduled to expire in 2011.

We are maintaining our EPS estimates of $1.59 for 2008 and $1.68 for 2009. Our target price remains at $32.00 and our Outperform rating is sustained.

Q1 2008 highlights

Q1 2008 reported earnings: $91 million or $0.58 per share (basic) vs. $42 million or $0.38 per share in Q1 2007 (y/y).

Q1 2008 operational EPS: $0.58 vs. $0.40 (y/y) after excluding a one-time $2-million charge related to the disposal of steam turbine assets at CUP.U in Q1 2007.

Corporate and Other	($16)	($10)
Total Reported Earnings	**$91**	**$42**
Source: FTS		

Regulated Gas Utilities – Canadian

Terasen Gas (TG): Reported Earnings: $58 million

In Q1 2008, TG reported better than expected earnings of $58 million. Q1 2008 gas volumes increased 2.9% y/y to 78,184 TJ resulting from higher consumption due to cooler weather.

For 2008, TGI's allowed rate of return on common equity (ROE) has increased to 8.62% from

8.37% in 2007 while TGVI's has increased to 9.32% from 9.07%.

Regulated Electric Utilities – Canadian

FortisAlberta (FA): Reported Earnings: $11 million vs. $12 million y/y. Earnings decreased y/y as the impact of customer growth and a 6.8% distribution rate increase was more than offset by lower corporate tax recoveries; higher labour and employee-benefit costs as well as increased general operating expenses; increased amortization costs associated with continued investment in capital assets, and higher amortization rates provided in the 2008/2009 Negotiated Settlement Agreement. Energy deliveries increased 193 GWhr y/y to 4,138 GWhr driven by higher energy demand related to customer growth buoyed by the robust Alberta economy. For 2008, FA's allowed ROE has increased to 8.75% from 8.51% in 2007.

Fortis BC (FBC): Reported Earnings: $12 million – flat y/y. Earnings were aided by a 2.9% electricity rate hike, lower effective corporate taxes and a reduction in the federal corporate income tax rate. This was offset by increased energy supply costs due to higher average power purchase prices, higher amortization costs and finance charges. For 2008, FBC is allowed to earn a ROE of 9.02%, up from 8.77% in 2007.

Newfoundland Power (NP): Reported Earnings: $6 million vs. $11 million y/y. Earnings dropped y/y due to a shift in the quarterly distribution of annual purchased power expense which reduced earnings by $6 million. Previously, NP estimated and recognized monthly purchased power expense based on forecast annual average cost per KWhr and any differences with actual cost per KWhr were adjusted to a regulatory reserve. As of Jan. 1, 2008, monthly purchased power expense is being recorded at actual cost per KWhr. This shift will have no impact to annual earnings but Q1 and Q4 earnings will be lower and Q2 and Q3 earnings higher when compared to the same periods in 2007. Excluding this $6 million shift in earnings, earnings improved by $1 million aided by electricity sales growth (1,716 GWhr vs. 1,663 GWhr y/y) and increased electricity rates. For 2008, NP's allowed ROE has increased to 8.95% from 8.60%.

Other Canadian Electric Utilities - Maritime Electric (ME) and FortisOntario (FO): **Reported Earnings:** $4 million - flat y/y (ME: $3 million vs. $2.6 million y/y: FO: $1 million vs. $1.3 million y/y). Electricity sales decreased 3 GWhr y/y to 599 GWhr as a result of lower average consumption due to warmer than normal weather conditions in Ontario, the impact of the loss of a major industrial customer and a temporary shutdown of operations of another industrial customer in Ontario.

Regulated Utilities – Caribbean: Reported Earnings: $7 million vs. $4 million y/y. Earnings increased y/y mostly due to revenue growth and the favourable impact on energy supply costs associated with the movement in deferred fuel costs at CUP.U due to a change in the basis of calculating such costs under its new T&D licence. This was partially offset by higher finance charges, increased amortization costs and a $1 million unfavourable impact of foreign currency translation due to the strong Canadian dollar.

Non-Regulated - Fortis Generation: Reported Earnings: $6 million vs. $7 million y/y. Earnings decreased y/y due to lower production (hydrology was down 50% y/y in Belize) and a $0.5 million unfavourable foreign exchange impact. Average wholesale electricity prices in Ontario dropped to $49.93/MWhr from $52.61/MWhr y/y but jumped in Upper New York State to US$72.91/MWhr from US$56.87/MWhr y/y. Construction on the $57 million 18-MW Vaca Hydroelectric facility in Belize is well underway with completion slated for Sept/Oct. 2009.

Non-Regulated - Fortis Properties (FP): Reported Earnings: $3 million vs. $2 million y/y. Earnings increased y/y largely due to incremental earnings from the Delta Regina that was purchased on Aug. 1, 2007.

We expect FTS to continue to expand its property investments, utilizing a prudent amount of holding-company debt commensurate therewith. Overall, we expect solid earnings growth organically and from acquisitions, and from expansion of existing hotel properties.

Corporate and Other: **Reported Expenses:** $16 million vs. $10 million y/y. The increase in expenses y/y was mostly due to higher finance charges associated with the financing of the TG acquisition (about $9.5 million or $6.5 million after-tax), about $1.5 million ($1 million after-tax) of Terasen corporate and CWLP amortization costs and expenses, and higher Fortis corporate operating expenses, partially offset by increased revenue (up $4 million y/y). It is expected that Corporate expenses will remain around the $17-million quarterly run-rate for at least this year.

Financial

Cash flow from operations in Q1 2008 jumped to $188 million from $94 million y/y driven by TG and FA.

During Q1 2008, utility capital expenditures increased to $162 million from $134 million y/y. For 2008, gross consolidated utility capital expenditures is expected to be about $890 million including $640 million related to electric utilities (mostly FA and FBC) and about $250 million on TG (includes $50 million for the Q2 start of construction on the 1.5 bcf LNG storage facility on Vancouver Island which is expected to be completed by 2001 at a total cost of about $200 million).

FTS expects the majority of its gross electric utility capital expenditures of about $3 billion over the next five years to be driven by FA, FBC and regulated and non-regulated electric utilities in the Caribbean. Gross gas utility capital expenditures at TG are expected to be over $1 billion during the same period.

Valuation

We are using an average of P/E multiples and a dividend-based support/residual price approach to arrive at our 12-month target price.

Our target price of $32.00 is calculated by applying the following: 1) a 19x P/E multiple to our estimated 2009 EPS of $1.68 giving us a $31.92 'target price'. 2) Using our dividend-based support/residual price approach: for the 2009 fiscal year, we are estimating EPS of $1.68; DPS of $1.10; and retained EPS (REPS) of $0.58. Our assumed long-term corporate bond yield of nominally 6.25% is tax-effected to 4.63% using a dividend-tax-credit divisor of 1.35, which generates a support price of $23.76 and using a REPS multiple of 14x, a residual price of $8.12, for a 'target price' of $31.88.

DISCLOSURES:

Ratings And What They Mean:

PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months.

SECONDARY STOCK RATING: **Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock.

INDUSTRY RATING: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months.

RISK RATING: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

NATIONAL BANK FINANCIAL

Event

Belize's Public Utilities Commission (PUC) has released its Final Decision on the 2008 Annual Rate Review Proceeding (ARP) for Belize Electricity (BE) (70.1%-owned by FTS) for implementation for the July 1, 2008 to June 30, 2009 period (ATP 2008/09).

The Final Decision retroactively disallows about BZ$36 million or Cdn$18 million (FTS share-Cdn$12.6 million) of previously incurred electricity costs, reduces BE's rate of return on assets (ROR) to 10% from 12%, and leaves the Average Electricity Rate (AER) unchanged at BZ$0.441/kWhr.

Regulated Parameters (BZ$kWhr)	ARP 2007 Final Decision	BE ARP 2008 Proposal	PUC Initial ARP 2008 Decision	Expert Recomm.	PUC Final ARP 2008 Decision
VAD	0.168	0.168	0.131	0.154	**0.135**
COP	0.253	0.287	0.307	0.298	**0.312**
CPRSA	0.02	0.045	0.004	0.025	**0.08**
CORRECTION					**-0.086**
AVG. ELECT. RATE	**0.441**	**0.500**	**0.441**	**0.477**	**0.441**

In a news release, BE's President and CEO, Lynn Young, said, "The Final Decision of the PUC threatens the financial health of the company. BE will not be able to meet all of its financial obligations." Also, BE stated that it plans to legally contest the Final Decision. FTS stated in its own news release, "the Final Decision violates both established regulatory practice and contractual obligations made by the Government of Belize at the time Fortis made its initial investment in Belize Electricity. Fortis is considering its options and legal remedies."

The disallowance of BZ$36,199,894 of previously incurred electricity costs is referred to as 'corrections' by the PUC and is related to prior years (2005, 2006 and 2007). The 'so-called corrections' are related to 1) allowed depreciation being in excess of actual depreciation for 2005, 2006 and 2007 totalling BZ$9,628,000, 2) the allowed return in VAD being in excess of the actual return that should have been received by BE for 2005, 2006, 2007, which amounts to BZ$14,686,000, 3) disallowance of Hurricane Cost Rate Stabilization Account (HCRSA)-related interest charges totalling BZ$1,552,664, and 4) disallowance of Mollejon Transmission Facility Loan Interest of BZ$10.34 million.

When the corrections (BZ$36,199,894) are divided by the expected electricity sales of 420,333,335 kWhr for the July 1, 2008 to June 30, 2009 period, this totals about BZ$0.086/kWhr which is the amount that the PUC has reduced the AER in order to keep it unchanged at BZ$0.441/kWhr. It is quite strange and hardly a coincidence that these corrections would allow for the AER to remain unchanged (zero rate increase), which is what the PUC and the Belize government had been striving for all along.

In the Final Decision, the PUC kept its hard-line stance and rejected most of the recommendations of the Independent Expert, Jonathan Lesser, a move that could make it appear that it is *attached to the hip* with the new Belize government, which came into power on an election promise of lowering or at least keeping the electricity rates unchanged. Also, it is ironic that absent the corrections, the AER would have totalled BZ$0.527/kWhr which is actually higher than the BZ$0.50/kWhr that BE was requesting and the Independent Expert's BZ$0.477/kWhr recommendation.

As previously mentioned, the PUC approved a ROR of 10% for the 2008/09 period with this ROR to be applied to BE's Regulated Asset Value (RAV) for the purpose of calculating the total return for calendar years 2008 and 2009. This ROR is much lower than the Independent Expert's recommendation of a 12% ROR as outlined in the 2008 Rate Setting Methodology (RSM). The Expert had stated in his report that the PUC's initial proposed 8.5% ROR "will clearly not be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and attract capital."

In the Final Decision, the PUC stated that a new RSM will be implemented for Sept. 1, 2008 and that the RSM will provide an Automatic Adjustment Mechanism (AAM) to adjust the Cost of Power (COP) component of rates on a monthly basis to reflect the true and current price of power.

In our view (and we caution that we are not lawyers and are not expressing a legal opinion), the PUC's Final Decision appears to be on shaky ground and will most likely be legally challenged. Over the years, FTS has shown that it is the undisputed master of skilfully dealing with provincial energy regulatory boards in Canada. In terms of regulatory acumen it has no equals. FTS's dealings with regulatory agencies have usually achieved fair settlements that have balanced the interests of all stakeholders. We believe that FTS/BE's position is warranted and that a remedy for the situation must be pursued. The Belize courts are perceived to be politically independent in their judgments, which bodes well for a better outcome in this ongoing saga.

Impact to FTS

We note that BE provides an annual earnings contribution of only about $11 million to FTS and therefore is not a major contributor to FTS's overall annual earnings. If the PUC's Decision is not contested in the courts and remains in effect, we estimate that FTS's annual EPS will be negatively impacted by about $0.04 per share. Pending the final resolution of the BE/PUC situation, we have slightly reduced our EPS estimates for 2008 to $1.57 from $1.59 and for 2009 to $1.66 from $1.68. Our target price is reduced to $31.60 from $32.00. Our Outperform rating is sustained.

Belize Situation Background

In 2007, about 51% of BE's electricity supply came from Mexico's Comision Federal de Electricidad (CFE) which has pricing indexed to global oil prices. About 40% of BE's electricity was supplied from hydroelectric sources (38% from FTS's 100%-owned BECOL and about 3% from Hydro Maya) while the remaining 8% came from diesel-fired plants.

For the July, 1, 2007 to June 30, 2008 period, BE's overall Average Electricity Rate (AER) was BZ$0.441 /kWhr. This rate included the following three components:

1) VALUE ADDED OF DELIVERY (VAD): BZ$0.168/kWhr - a fixed component to cover overhead expenses and provide a reasonable return on investment,
2) UNIT COST OF POWER (SALES) (COP): BZ$0.253/kWhr - a variable component that reflects the cost of electricity, and
3) COST OF POWER RATE STABILIZATION ACCOUNT ADJUSTMENT (CPRSA): BZ$0.02/kWhr − a deferred cost of power recovery or rebase component.

Unlike other neighbouring countries, which mostly source electricity from higher-costing diesel-fired or gas and oil-fired plants, Belize has been able to benefit from electricity sourced from less expensive hydroelectric facilities (40% of its total supply) which usually helps stabilize electricity rates. During 2007, the cost of power purchased from Mexico's CFE increased by 28.7% to BZ$0.21/kWhr while the cost of hydroelectric power remained relatively stable at BZ$0.18/kWhr.

In December 2007, amendments to Belize's Electricity Bylaws were enacted affecting the tariff-setting process at BE resulting in a simplified tariff-setting methodology allowing for improved rate stabilization. The amendments settled outstanding matters related to the PUC's June 2007 Final Decision on tariffs.

However, in March 2008, the newly elected Government of Belize (which had made an election promise of lowering electricity rates) repealed the December 2007 amendments to the Bylaws and expressed its intent to further simplify the tariff-setting methodology. Also during March, BE filed an application requesting an increase in the cost of power component (COP) to BZ$0.318 from BZ$0.253/kWhr (thereby increasing the AER by about 15% to BZ$0.506/kWhr from BZ$0.441/kWhr) as a result of the rapid increase in the cost of power due to rising global oil prices. This application was disallowed by the PUC which said that BE could still meet and satisfy its financial obligations in 2008 and that "in the interim, a decrease in BE's operating expenses and capital expenditures levels would help offset the impact of the cash flow of the increasing cost of power." Also, the PUC indicated that it would defer its detailed analysis of the high deferrals of the cost of power into BE's rate stabilization account until the next Annual Tariff Review Proceeding for the annual tariff period for July 1, 2008 to June 30, 2009.

In April 2008, BE filed its Annual Tariff Review Application for the annual tariff period for July 1, 2008 to June 30, 2009, requesting a 13.4% increase in the AER (to BZ$0.50/kWhr) as a result on an increase in the COP (to BZ$0.287/kWhr from BZ$0.253/kWhr) and an increase in the CPRSA (to BZ$0.045/kWhr from BZ$0.02/kWhr). It kept the VAD at BZ$0.168/kWhr.

On May 2, 2008, the PUC rendered its initial decisions under the ARP wherein it kept the average electricity rate unchanged at BZ$0.441/kWhr but modified the rates of the various components:

1) VAD: BZ$0.13/kWhr (down from BZ$0.168/kWhr)
2) COP: BZ$0.307/kWhr (up from BZ$0.253/kWhr)
3) CPRSA: BZ$0.004/kWhr (down from BZ$0.02/kWhr).

On June 11, 2008, the PUC released the Independent Expert's (IE) report on the ARP. The IE, Jonathan Lesser, pointed out that although some initial findings of the PUC "may provide short-term rate relief to ratepayers, the longer-term consequences of those findings, if enacted, are likely to exacerbate future rate increases and economic harm to those same ratepayers."

The IE recommended that the average electricity rate be increased to BZ$0.477/kWhr from the current BZ$0.441/kWhr. Also, the IE stated that the PUC's initial proposed 8.5% Rate of Return "will clearly not be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and attract capital." The IE recommended that the target ROR should be 12% as outlined in the 2008 Rate Setting Methodology (RSM).

We had viewed the findings of the IE's report as being balanced as a whole and generally positive for BE. The IE had recommended an Average Electricity Rate increase of about 8.16% (roughly 61% of BE's 13.4% rate hike request vs. the PUC's zero increase).

FTS Snapshot

FTS is Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space. FTS common shares offer investors a good combination of income and capital appreciation prospects. Yield-hungry investors should take notice of FTS, as it is consistent in growing the common share dividend on a yearly basis (impressive 19% dividend hike in December 2007) and we expect this trend to continue.

FTS will spend more than $3 billion on gross electric utility capital expenditures and more than $1 billion on gross gas utility capital expenditures (Terasen Gas) over the next five years. FTS's rate base is expected to grow at an average 6% per year clip which will aid earnings growth going forward. In 2008, FTS will spend about $900 million on gross utility capital expenditures.

FTS is still actively hunting for gas distribution and electric assets in the U.S., Canada and the Caribbean in the $1 billion to $5 billion enterprise value range although no deals are considered imminent at this time.

Valuation

We are using an average of P/E multiples and a dividend-based support/residual price approach to arrive at our 12-month target price.

Our target price of $31.60 is calculated by applying the following: 1) a 19x P/E multiple to our estimated 2009 EPS of $1.66 giving us a $31.54 'target price'. 2) Using our dividend-based support/residual price approach: for the 2009 fiscal year, we are estimating EPS of $1.66; DPS of $1.10; and retained EPS (REPS) of $0.56. Our assumed long-term corporate bond yield of nominally 6.25% is tax-effected to 4.63% using a dividend-tax-credit divisor of 1.35, which generates a support price of $23.76 and using a REPS multiple of 14x, a residual price of $7.84, for a 'target price' of $31.60.

Company Profile:
FTS is a holding company that owns 100% of Newfoundland Power, Atlantic Canada's second-largest utility. FTS is quite active outside Newfoundland through investments in Maritime Electric (100%)-P.E.I.; FortisOntario (100%); FortisAlberta (100%); FortisBC (100%); Terasen Gas (100%); FortisUS Energy (100%) - N.Y. State; Fortis Turks & Caicos (100%); Belize Electricity (70.1%); Belize Electricity Company Ltd. (BECOL) (100%); and Caribbean Utilities (54%)-Cayman Islands. FTS has also diversified into commercial real estate through Fortis Properties in B.C., Alberta, Manitoba, Ontario and Atlantic Canada, where FTS is the largest hotelier and investor in commercial real estate.

Ramin Burney - (416) 869-7933

HIGHLIGHTS

- **Q2 2008 reported earnings: $29 mln or $0.19 per share (basic) vs. $41 mln or $0.31 per share in Q2 2007 (y/y).**
- **Q2 2008 operational earnings: $44 mln or $0.28 per share vs. $41 mln or $0.31 per share y/y, after excluding a $13 mln charge at Belize Electricity (BE) resulting from an unfavourable regulatory decision related to prior periods, and a $2 mln charge at FortisOntario (FO) associated with the repayment of interconnection agreement amounts received in Q4 2007. Operational EPS matched our estimate and was a penny higher than the Street.**
- **The y/y earnings improvement was mostly driven by a better than expected $12 mln contribution from Terasen Gas (TG), higher earnings at Newfoundland Power (NP) reflecting a shift in the quarterly distribution of annual purchased power expenses ($2.5 mln benefit), higher production and electricity pricing at Non-Regulated Generation and improved performance at FTS Properties. This was partially offset by lower than expected earnings at FortisAlberta (FA) due to higher corporate income taxes and higher finance charges related to the TG acquisition.**
- **FTS is Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space. FTS's capital program over the next five years has been increased to $4.5 bln from $4 bln, which will further aid earnings growth.**
- **We are maintaining our EPS estimates, target price and Outperform rating.**

Stock Performance

Assessment

FTS's Q2 2008 operational earnings of $44 million or $0.28 per share vs. $41 million or $0.31 per share y/y, matched our EPS estimate and was a penny higher than the Street.

The y/y earnings improvement was mostly driven by a better than expected $12 million earnings contribution from Terasen Gas (TG) (which was acquired in May 2007), higher earnings at Newfoundland Power (NP) reflecting a shift in the quarterly distribution of annual purchased power expenses ($2.5 million benefit), higher production and electricity pricing at Non-Regulated Generation and improved performance at FTS Properties. This was partially offset by lower than expected earnings at FortisAlberta (FA) due to higher corporate income taxes and higher finance charges related to the TG acquisition.

In a typical year, TG experiences higher earnings in Q1 and Q4, lower earnings in Q2 and losses in Q3. The integration of the TG assets is now substantially complete and the acquisition became accretive to EPS as per FTS's original guidance (accretive within the first full year of ownership) during Q1 2008.

FTS will spend about $3.5 billion on gross electric utility capital expenditures and more than $1 billion on gross gas utility capital expenditures (TG) over the next five years. This is up from the previous overall guidance of $4 billion and reflects additional capital projects forecasted by the Terasen companies, FortisBC (FBC) and Caribbean Utilities Company Ltd. (TSX-CUP.U). In 2008, FTS will spend over $900 million on gross utility capital expenditures. FTS's rate base is expected to grow at an average 6% per year clip which will aid earnings growth going forward.

FTS is still actively hunting for gas distribution and electric assets in the U.S., Canada and the Caribbean in the $1 billion to $5 billion enterprise value range although no large deals are considered imminent at this time. FTS's FortisOntario (FO) subsidiary is in the process of acquiring a 10% minority interest in Grimsby Power Inc.'s electricity distribution business and could be on the verge of acquiring larger utilities in the province.

We still believe that rounding up FTS's equity interest (currently 54%) in CUP.U to 100% is just a matter of time now that CUP.U has finally been granted a new exclusive 20-year T&D licence and a new non-exclusive 21.5-year Generation licence to replace the old licence that was scheduled to expire in 2011.

FTS is Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space. FTS common shares offer investors a good combination of income and capital appreciation prospects. Yield-hungry investors should take notice of FTS, as it is consistent in growing the common share dividend on a yearly basis (impressive 19% dividend hike in December 2007) and we expect this trend to continue.

We are maintaining our EPS estimates of $1.57 for 2008 and $1.66 for 2009. Our target price of $31.60 and Outperform rating are sustained.

Regulated Gas Utilities – Canadian

Terasen Gas (TG): Reported Earnings: $12 million vs. $1 million y/y

In Q2 2008, TG reported better than expected earnings of $12 million aided by the increase in allowed ROEs for 2008 and lower effective corporate taxes. This was partially offset by higher amortization costs and finance charges. Q2 2008 gas volumes increased 1.9% y/y to 45,324 TJ resulting from higher consumption due to cooler weather.

For 2008, TGI's allowed rate of return on common equity (ROE) is 8.62%, up from 8.37% in 2007 while TGVI's is 9.32% vs. 9.07% in 2007.

Regulated Electric Utilities – Canadian

FortisAlberta (FA): Reported Earnings: $7 million vs. $15 million y/y. Earnings fell y/y due to higher corporate income taxes (up $9 million y/y) mostly associated with the regulator-approved AESO charges deferral account and the timing of its collection. This will be reversed over the next two years. Energy deliveries increased 118 GWhr y/y to 3,768 GWhr driven by higher energy demand related to customer growth buoyed by the robust Alberta economy. FA's allowed 2008 ROE is 8.75%, up from 8.51% in 2007.

Fortis BC (FBC): Reported Earnings: $7 million vs. $6 million y/y. Earnings were aided by a 2.9% electricity rate hike, lower energy supply costs due to lower average power purchase prices and the receipt of $0.6 million of insurance proceeds associated with a turbine generator failure in 2006. This was partially offset by higher finance charges related to the capital program. For 2008, FBC is allowed to earn a ROE of 9.02%, up from 8.77% in 2007.

Newfoundland Power (NP): Reported Earnings: $10 million vs. $8 million y/y. Earnings were higher y/y due to the shift in the quarterly distribution of annual purchased power expense which increased earnings by about $2.5 million. Prior to 2008, NP estimated and recognized monthly purchased power expense based on forecast annual average cost per KWhr and any differences with actual cost per KWhr were adjusted to a regulatory reserve. As of Jan. 1, 2008, monthly purchased power expense is being recorded at actual cost per KWhr. This shift will have no impact to annual earnings but Q1 and Q4 earnings will be lower and Q2 and Q3 earnings higher when compared with the same periods in 2007. Excluding this $2.5 million shift in earnings, earnings were lower by about $0.5 million y/y. Q2 electricity sales increased to 1,183 GWhr from 1,172 GWhr y/y driven by customer growth. For 2008, NP's allowed ROE is 8.95% vs. 8.60% last year.

Other Canadian Electric Utilities − Maritime Electric (ME) and FortisOntario (FO): **Reported Earnings:** $2 million vs. $4 million y/y (ME: $3 million vs. $2.8 million y/y; FO: $1 million loss vs. $1.2 million y/y). **Operational Earnings:** $4 million – flat y/y.

Reported earnings decreased y/y reflecting a $2 million charge (after-tax) at FO associated with the repayment of interconnection agreement amounts received in Q4 2007 from Niagara Mohawk Power Corporation. Electricity sales decreased 8 GWhr y/y to 508 GWhr as a result of lower average consumption due to warmer than normal weather conditions in Ontario, the impact of a temporary shutdown of operations of an industrial customer in Ontario and an unscheduled maintenance outage by a large customer at ME.

Regulated Utilities – Caribbean: Reported Earnings: $5 million loss vs. $8 million y/y. (BE: $10 million loss vs. $2.9 million y/y; CUP.U: $3 million vs. $2.3 million y/y; Turks & Caicos: $2 million vs. $2.4 million y/y). **Operational Earnings:** $8 million – flat y/y.

This segment suffered a $5 million loss due to a $13 million charge at BE representing FTS's 70.1% share of $18 million of disallowed previously incurred fuel and purchased power costs. On June 27, 2008, Belize's Public Utilities Commission (PUC) released its Final Decision on the 2008 Annual Rate Review Proceeding (ARP) for BE for implementation for the July 1, 2008, to June 30, 2009, period (ATP 2008/09).The Final Decision retroactively disallowed about BZ$36 million or Cdn$18 million of previously incurred electricity costs, reduced BE's unchanged at BZ$0.441/kWhr. This unfavourable PUC decision is expected to decrease BE's earnings contribution by $5 million or about $0.03 per share over the next 12 months.

On July 25, 2008, BE filed an application for judicial review and appeal of the PUC decision with the Supreme Court of Belize. We believe that BE's position is warranted and that a remedy for the situation had to be pursued. The Belize courts are perceived to be politically independent in their judgments which bodes well for a better outcome in this ongoing saga.

Non-Regulated – Fortis Generation: Reported Earnings: $7 million vs. $5 million y/y. Earnings were higher y/y due to higher production (energy sales: 312 GWhr vs. 274 GWhr y/y) and higher average wholesale electricity prices (Ontario-$46.86/MWhr vs. $42.93/MWhr y/y; Upper New York State-US$80.89/MWhr vs. US$56.97/MWhr y/y). This was partially offset by the unfavourable impact of foreign exchange. Construction on the $57 million 18-MW Vaca Hydroelectric facility in Belize is well underway with completion slated for late Q3/early Q4 2009.

Non-Regulated – Fortis Properties (FP): Reported Earnings: $7 million vs. $6 million y/y. Earnings increased y/y largely due to incremental earnings from the Delta Regina that was purchased on Aug. 1, 2007 and improved performance at hospitality operations in Atlantic Canada.

We expect FTS to continue to increase its property investments (particularly in Western Canada), utilizing a prudent amount of holding-company debt commensurate therewith. Overall, we expect solid earnings growth organically and from acquisitions, and from expansion of existing hotel properties.

Corporate and Other: Reported Expenses: $18 million vs. $12 million y/y. The increase in expenses y/y was mostly due to higher finance charges associated with the financing of the TG acquisition.

Financial

Cash flow from operations in Q2 2008 jumped to $244 million from $68 million y/y driven mostly by a $142 million contribution from TG.

During Q2 2008, utility capital expenditures increased to $219 million from $193 million y/y. In 2008, gross consolidated utility capital expenditures are expected to exceed $900 million including $640 million related to electric utilities (mostly FA and FBC) and about $250 million at TG (including $50 million for the start of construction on the 1.5 bcf LNG storage facility on Vancouver Island which is expected to be completed by 2011 at a total cost of about $200 million).

Valuation

We are using an average of P/E multiples and a dividend-based support/residual price approach to arrive at our 12-month target price.

Our target price of $31.60 is calculated by applying the following: 1) a 19x P/E multiple to our estimated 2009 EPS of $1.66 giving us a $31.54 'target price'. 2) Using our dividend-based support/residual price approach: for the 2009 fiscal year, we are estimating EPS of $1.66; DPS of $1.10; and retained EPS (REPS) of $0.56. Our assumed long-term corporate bond yield of nominally 6.25% is tax-effected to 4.63% using a dividend-tax-credit divisor of 1.35, which generates a support price of $23.76 and using a REPS multiple of 14x, a residual price of $7.84, for a 'target price' of $31.60.

DISCLOSURES:

Ratings And What They Mean:

PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months;
Sector Perform – The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months.

SECONDARY STOCK RATING: Under Review – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock.

INDUSTRY RATING: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months.

RISK RATING: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

General

National Bank Financial (NBF) is an indirect wholly owned subsidiary of National Bank of Canada. National Bank of Canada is a public company listed on Canadian stock exchanges.

Company Profile:
FTS is a holding company that owns 100% of Newfoundland Power, Atlantic Canada's second-largest utility. FTS is quite active outside Newfoundland through investments in Maritime Electric (100%)-P.E.I.; FortisOntario (100%); FortisAlberta (100%); FortisBC (100%); Terasen Gas (100%); FortisUS Energy (100%) - N.Y. State; Fortis Turks & Caicos (100%); Belize Electricity (70.1%); Belize Electricity Company Ltd. (BECOL) (100%); and Caribbean Utilities (57%)-Cayman Islands. FTS has also diversified into commercial real estate through Fortis Properties in B.C., Alberta, Manitoba, Ontario and Atlantic Canada, where FTS is the largest hotelier and investor in commercial real estate.

Ramin Burney - (416) 869-7933
ramin.burney@nbfinancial.com

HIGHLIGHTS

- **Q3 2008 reported earnings: $49 mln or $0.31 per share (basic) vs. $31 mln or $0.20 per share in Q3 2007 (y/y)**
  Q3 2008 operational EPS: $0.26 vs. $0.20 y/y, after excluding $7.5 mln in tax reductions associated with the settlement of historical corporate tax matters at Terasen. Operational EPS beat our $0.23 estimate and the Street's $0.21.

- **The y/y earnings improvement was mostly driven by higher earnings at Newfoundland Power (NP) reflecting a shift in the quarterly distribution of annual purchased power expenses; the almost doubling of earnings at Non-Regulated Fortis Generation, mainly due to higher hydroelectric production in Belize and Upper New York State; and better earnings at FortisBC (FBC) mostly due to lower energy supply costs. This was partially offset by lower earnings at the Caribbean operations.**

- **The interest-sensitive FTS should benefit from ongoing interest rate cuts by the U.S. Fed and the Bank of Canada, and FTS's recent inclusion into the S&P/TSX 60 index bodes well for the share price. FTS's $4.5-bln capital program over the next five years will aid earnings growth.**

- **We have lowered our 2009 EPS estimate to $1.62 from $1.66 to reflect changes in our model**
  Given the recent P/E multiple compression that the pipelines and utilities sector has experienced, we are reducing our P/E multiple to 17.5x from 19x and our REPS multiple to 13x. Our target price declines to $29.45 from $31.60 and our Outperform rating is sustained.

Stock Performance

Assessment

FTS's Q3 2008 operational EPS of $0.26 vs. $0.20 y/y, beat our $0.23 estimate and the Street's $0.21.

The y/y earnings improvement was mostly driven by higher earnings at Newfoundland Power (NP) reflecting a shift in the quarterly distribution of annual purchased power expenses ($5.5 million benefit); the almost doubling of earnings at Non-Regulated Fortis Generation mainly due to higher hydroelectric production in Belize and Upper New York State resulting from higher rainfall as well as higher average wholesale electricity prices; and better earnings at FortisBC (FBC), mostly due to lower energy supply costs. This was partially offset by lower earnings at the Caribbean operations mostly due to a 3.25% electricity rate reduction at Caribbean Utilities (TSX-CUP.U); a reduction in the allowed ROA to 10% from 12% at Belize Electricity (BE); and a $1-million reduction in earnings at FTS Turks and Caicos due to loss of revenue from the impact of Hurricane Ivan.

The current global credit and financial crisis has forced FTS to take a break from hunting for gas and electric utilities assets in the U.S., Canada and the Caribbean in the $1 billion to $5 billion enterprise value range. Smaller bite-sized acquisitions in the utilities space are now more likely (i.e. FortisOntario's acquiring of a 10% minority interest in Grimsby Power Inc.'s electricity distribution business, which is expected to close in Q1 2009). FTS is still eyeing the expansion of its FTS Properties business particularly on the hotel side as prices have plummeted given current market conditions.

We still believe that rounding up FTS's equity interest (currently 57%) in CUP.U to 100% is just a matter of time now that CUP.U has finally been granted a new exclusive 20-year T&D licence and a new non-exclusive 21.5-year Generation licence to replace the old licence that was scheduled to expire in 2011.

Although the hunt for large acquisitions has been put on hold until market conditions improve and stabilize, FTS is still moving forward with its large capital program that is not expected to be delayed or curtailed. FTS will spend about $3.5 billion on gross electric utility capital expenditures and more than $1 billion on gross gas utility capital expenditures over the next five years with a focus on the Terasen companies, FortisBC (FBC), and FortisAlberta (FA). In 2008, FTS will spend over $900 million on gross utility capital expenditures. FTS's rate base is expected to grow at an average 6% per year clip that will aid earnings growth.

Regarding the ongoing global credit crisis, FTS has consolidated credit facilities of $2.2 billion, of which $1.5 billion is unused. Over the next five years, average annual long-term debt maturities are expected to be about $180 million. On Dec. 1, 2008, Terasen Inc.'s 6.3% $200 million Unsecured debentures will become due and will most likely be covered by an operating line of credit ($600 million facility of which $550 million is unused with an interest rate of less than 4%). FTS has about $115 million of debt maturing in 2009. FTS has stated that its current sufficient credit facilities allows it to be selective when attempting to issue term debt and that it is capable of going through the 2009 fiscal year without issuing term debt if markets stay volatile.

FTS is Canada's most diversified utility with the best earnings and dividend growth profile and hence remains our top pick in the utilities space. Yield-hungry investors should take notice of FTS, as it is consistent in growing the common share dividend on a yearly basis (impressive 19% dividend hike in December 2007). FTS and the other interest-sensitive pipelines and utilities companies should benefit from ongoing interest rate cuts by the U.S. Federal Reserve and the Bank of Canada, and FTS's recent inclusion into the S&P/TSX 60 index bodes well for the share price.

We have lowered our 2009 EPS estimate to $1.62 from $1.66 to reflect changes in our model. Given the recent P/E multiple compression that the pipelines and utilities sector has experienced, we are reducing our P/E multiple to 17.5x from 19x and our REPS multiple to 13x. Our target price declines to $29.45 from $31.60 and our Outperform rating is sustained.

Regulated Electric Utilities - Caribbean	$7	$10
Non-Regulated - Fortis Generation	$9	$5
Non-Regulated - Fortis Properties	$9	$8
Corporate and Other	($17)	($16)
Total Operational Earnings	**$41.5**	**$31**
Operational EPS	**$0.26**	**$0.20**
Source: FTS		

Regulated Gas Utilities – Canadian

Terasen Gas (TG): Reported Earnings: $1 million vs. -$4 million y/y

In Q3 2008, TG reported $1 million of earnings aided by a $5.5-million tax reduction associated with the settlement of historical corporate tax matters (which we have treated as an out-of-period item). Excluding this item, TG incurred a loss of $4.5 million. In a typical year, TG experiences higher earnings in Q1 and Q4, lower earnings in Q2 and losses in Q3. The integration of the TG assets is substantially complete and the acquisition became accretive to EPS as per FTS's original guidance (accretive within the first full year of ownership) during Q1 2008.

For 2008, TGI's allowed rate of return on common equity (ROE) is 8.62%, up from 8.37% in 2007 while TGVI's is 9.32% vs. 9.07% in 2007.

Regulated Electric Utilities – Canadian

FortisAlberta (FA): Reported Earnings: $17 million vs. $15 million y/y. Earnings were higher y/y due to increased future income tax recoveries primarily associated with the regulator-approved AESO charges deferral account. Future income tax recoveries totalling $4.5 million were recorded in Q3 that were previously expensed during the first-half of 2008. Energy deliveries decreased 0.9% y/y, reflecting the previous year's hotter-than-normal July. FA's allowed 2008 ROE is 8.75%, up from 8.51% in 2007.

Fortis BC (FBC): Reported Earnings: $8 million vs. $6 million y/y. Earnings were aided by lower energy supply costs, partially offset by higher amortization costs arising from the large capital program. For 2008, FBC is allowed to earn a ROE of 9.02%, up from 8.77% in 2007.

Newfoundland Power (NP): Reported Earnings: $8 million vs. $2 million y/y. Earnings were higher y/y due to the shift in the quarterly distribution of annual purchased power expense, which increased earnings by about $5.5 million. Prior to 2008, NP estimated and recognized monthly purchased power expense based on forecast annual average cost per KWh and any differences with actual cost per KWh were adjusted to a regulatory reserve. As of Jan. 1, 2008, monthly purchased power expense is being recorded at actual cost per KWh. This shift will have no impact to annual earnings but Q1 and Q4 earnings will be lower and Q2 and Q3 earnings higher when compared with the same periods in 2007. Excluding this $5.5 million shift in earnings, earnings were flat y/y. Q3 electricity sales increased to 897 GWh from 874 GWh y/y driven by customer growth. For 2008, NP's allowed ROE is 8.95% vs. 8.60% last year.

Other Canadian Electric Utilities − Maritime Electric (ME) and FortisOntario (FO): **Reported Earnings:** $5 million – flat y/y (ME: $3.4 million vs. $3 million y/y; FO: $1.2 million loss vs. $1.4 million y/y).

Electricity sales decreased 5 GWh y/y to 532 GWh as a result of lower average consumption in Ontario, partially offset by the impact of an increase in the number of residential customers on P.E.I.

Regulated Utilities – Caribbean: Reported Earnings: $7 million vs. $10 million y/y. (BE: $2.1 million vs. $3.1 million y/y; CUP.U: $3 million vs. $4.1 million y/y; Turks & Caicos: $2.3 million vs. $2.6 million y/y).

Earnings declined $3 million y/y primarily due to: a 3.25% electricity rate reduction and the elimination of the Cost Recovery Charge (CRS) at CUP.U; a reduction in the allowed ROA to 10% from 12% as well as the VAD component of the average electricity rate at Belize Electricity (BE); higher amortization and operating expenses; and a $1 million reduction in earnings at FTS Turks and Caicos due to loss of revenue from the impact of Hurricane Ivan (in Q4 2008, revenue loss will total $1 million).

On July 25, 2008, BE filed an application for judicial review and appeal of the recent unfavourable PUC decision with the Supreme Court of Belize. Leave was granted on Oct. 3, 2008, and the judicial review is expected to be heard in December 2008. The Belize courts are perceived to be politically independent in their judgments, which bodes well for a better outcome in this ongoing saga.

Non-Regulated – Fortis Generation: Reported Earnings: $9 million vs. $5 million y/y. Earnings almost doubled y/y mainly due to higher production in Belize and Upper New York State arising from higher rainfall as well as increased average wholesale electricity prices (Ontario-$49.19/MWh vs. $47.63/MWh y/y; Upper New York State-US$77.19/MWh vs. US$56.92/MWh y/y). Energy sales jumped to 305 GWh from 254 GWh y/y. Construction on the $57-million, 18-MW Vaca Hydroelectric facility in Belize has been slowed over the past five to six weeks because of flooding caused by heavy rainfall, which is likely to delay the start-up of the facility to the end of 2009 (was scheduled for around October 2009) resulting in $2-$3 million in lost revenues. At the end of October 2008, the Chalillo reservoir in Belize was at its full supply level.

Non-Regulated – Fortis Properties (FP): Reported Earnings: $9 million vs. $8 million y/y. Earnings increased y/y largely due improved performance at the Hospitality and Real Estate Divisions and incremental earnings from the Delta Regina that was purchased on Aug. 1, 2007. We expect FTS to continue to increase its property investments (particularly in Western Canada on the hotel side). Overall, we still expect solid earnings growth organically (expansion of existing hotel properties) and from acquisitions.

Corporate and Other: Reported Expenses: $15 million vs. $16 million y/y. The decrease in expenses y/y was due to a $2-million tax reduction (which we have excluded) associated with the settlement of historical tax matters at Terasen and lower finance charges.

In Q3 2008, utility capital expenditures increased to $231 million from $212 million y/y driven by the Terasen companies, FA and FTS Turks and Caicos. In 2008, gross consolidated utility capital expenditures are expected to exceed $900 million, including $640 million related to electric utilities (mostly FA and FBC) and about $250 million at TG (including $50 million for the start of construction on the 1.5 bcf LNG storage facility on Vancouver Island which is expected to be completed by 2011 at a total cost of about $200 million).

Valuation
We are using an average of P/E multiples and a dividend-based support/residual price approach to arrive at our 12-month target price.

Our target price of $29.45 is calculated by applying the following: 1) a 17.5x P/E multiple to our estimated 2009 EPS of $1.62 giving us a $28.35 'target price'. 2) Using our dividend-based support/residual price approach: for the 2009 fiscal year, we are estimating EPS of $1.62; DPS of $1.10; and retained EPS (REPS) of $0.52. Our assumed long-term corporate bond yield of nominally 6.25% is tax-effected to 4.63% using a dividend-tax-credit divisor of 1.35, which generates a support price of $23.76 and using a REPS multiple of 13x, a residual price of $6.76, for a 'target price' of $30.52.

DISCLOSURES:

Ratings And What They Mean:

PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months.

SECONDARY STOCK RATING: Under Review – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock.

INDUSTRY RATING: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months.

RISK RATING: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

(NBF Economics & Strategy group)

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State with aggregate generation capacity of ~120 MW. The Company also owns and operates a hospitality and commercial real estate division with 21 hotels and over 4,000 rooms throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

Action List Bulletin
Pipelines & Utilities

Fortis Inc.

Upcoming provincial regulatory announcements

Attractive valuation + ROE decision catalyst, Adding stock to NBF Action List

HIGHLIGHTS

- **The catalyst – upcoming regulatory announcement...**
  In response to declining long-term treasury yields, the British Columbia Utilities Commission (BCUC), Newfoundland and Labrador Board of Commissioners of Public Utilities, and the Ontario Energy Board are currently undertaking cost of capital reviews, with decisions expected by year-end or early 2010.

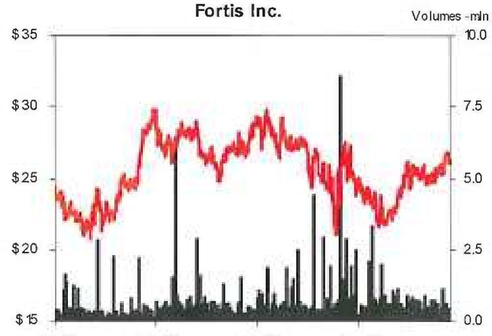
- **...and requested ROE decisions**
  In conjunction with the cost of capital reviews by provincial regulators, Terasen Gas has requested an ROE increase to 11.0% (from 8.5%) while Newfoundland Power has requested an increase to 11.0% (from 8.95%).

- **The impact – highlighting valuation sensitivities**
  For every 1.0% increase to our long-term ROE assumption across FTS's Canadian-based regulated utilities, our DCF per share valuation of $30.50 climbs ~$2.50 (or 8%).

- **Potential upside already priced in?**
  Our EPS (FD) estimate of $1.63 is based on current ROE assumptions for Terasen Gas, Newfoundland Power, and FortisOntario, and is in line with consensus estimates of $1.64 (per ThomsonOne). Furthermore, Fortis is currently trading at 16.1x earnings and 6.3x cash flow, below five-year average multiples of 16.9x and 7.1x, suggesting the earnings upside potential is not reflected in the current stock price.

- **Attractive valuation + ROE decision catalyst**
  With a $30.00 target and a group high 12-month total return opportunity of 19% (group avg. 7%), we recommend investors accumulate a position in the stock ahead of the upcoming provincial regulatory announcements, namely the BCUC's decision expected by year-end or early 2010.

Stock Performance



Source: Bloomberg

The catalyst – upcoming provincial regulatory announcements...

In response to declining long-term treasury yields and a squeeze on the allowable return on equity (ROE) for regulated utilities, provincial utility regulators are currently undertaking reviews of cost of capital and related ROE adjustment mechanisms in light of recent financial market conditions. In fact, on Nov. 13, 2009, the Alberta Utilities Commission (AUC) announced that the generic ROE for all Alberta Utilities for 2009 and 2010 has been set at 9.0%, a 0.39% increase over the 8.61% ROE that would have been provided for 2009 under the old ROE formula. In addition, for FortisAlberta (~20% of FTS), the AUC approved a 400 basis point increase in equity thickness to 41% from 37%.

Meanwhile, the British Columbia Utilities Commission (BCUC), Newfoundland and Labrador Board of Commissioners of Public Utilities (PUB), and the Ontario Energy Board (OEB) are currently undertaking their own cost of capital reviews with decisions expected by year-end or early 2010 (see table below).

PROVINCIAL REGULATED COST OF CAPITAL REVIEWS

Regulator	2009 Allowable ROE	Equity Ratio	Review Status	Estimated Timing
Alberta Utilities Commission (AUC)				
Electric Distribution (FortisAlberta)	9.00%	41.0%	Completed	Q4 2009
British Columbia Utilities Commission (BCUC)				
Gas Distribution (Terasen - TGI)	**8.47%**	**35.0%**	**Under Review**	**Q4 2009 / Q1 2010**
Newfoundland and Labrador Board of Commissioners of Public Utilities (PUB)				
Electricity Distribution (Newfoundland Power)	**8.95%**	**45.0%**	**Under Review**	**Q4 2009 / Q1 2010**
Ontario Energy Board (OEB)				
Electricity Distribution (FortisOntario)	**8.01%**	**43%**	**Under Review**	**Q4 2009 / Q1 2010**

Source: Regulator's websites, Company Reports

...and requested ROE decisions

In conjunction with the cost of capital reviews by provincial regulators, utilities themselves have filed applications with their respective regulators, requesting an increase in allowable ROEs. The table below outlines the current allowable ROEs for Fortis, highlighting the requested ROE of 11.0% by Terasen Gas Inc. (from 8.47%) and 11.0% by Newfoundland Power (from 8.95%).

CANADIAN UTILITY ALLOWED ROE SUMMARY

Company	Allowed ROE	Equity Ratio	Requested ROE	Requested Equity Ratio	Decision Timing
Fortis Inc.					
Terasen Gas Inc.	**8.47%**	**35.0%**	**11.00%**	**40.0%**	**Q4 2009 / Q1 2010**
Terasen Gas Vancouver Island	**9.17%**	**35.0%**	**11.70%**	**40.0%**	**Q4 2009 / Q1 2010**

Source: Company Reports

The impact – highlighting valuation sensitivities

Our discounted cash flow (DCF) valuation per share of $30.50 is based on an average long-term ROE assumption of 8.9% for FTS's Canadian-based regulated utilities. For every 1.0% increase to our long-term ROE assumption across FTS's Canadian-based regulated utilities, our DCF per share valuation climbs ~$2.50 (or 8%).

FTS - DCF PER SHARE SENSITIVITY TO REGULATED ROE[1]

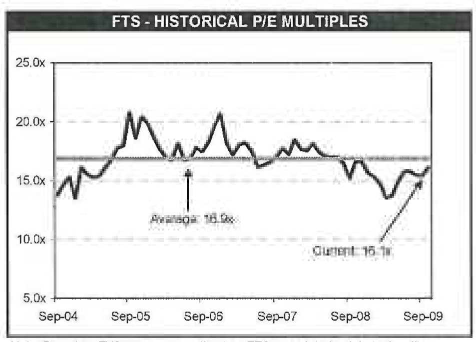
		% Change in ROE				
		-1.00%	-0.50%	0.00%	0.50%	1.00%
% Change in equity ratio	-10%	24.25	25.25	26.50	27.50	28.50
	-5%	26.00	27.25	28.50	29.50	30.75
	0%	27.75	29.25	30.50	31.75	33.00
	5%	29.75	31.00	32.50	33.75	35.25
	10%	31.50	33.00	34.50	36.00	37.50

[1] Reflect changes to each Canadian-based utility.
Source: NBF estimates

Potential upside already priced in?

Our 2010e EPS (FD) estimate of $1.63 is based on ROE assumptions of 8.5% for Terasen Gas, 8.95% for Newfoundland Power, and 8.01% for FortisOntario – i.e., in line with current allowable ROEs. As such, consensus 2010e EPS of $1.64 (per ThomsonOne) appears to exclude any upside potential from the upcoming regulatory decisions.

Furthermore, Fortis is currently trading at a discount to its historical multiples – i.e., 16.1x earnings and 6.3x cash flow, versus the five-year average multiples of 16.9x and 7.1x, suggesting the share price does not reflect the upside potential from the upcoming ROE decisions.



Note: Based on FY2 consensus estimates. FTS completed a 4:1 stock split on October 12, 2005.

Attractive valuation + ROE decision catalyst

We currently rate Fortis an Outperform with a $30.00 target. With a group high 12-month total return opportunity of 19% (group avg. 7%), we recommend investors accumulate a position in the stock ahead of the upcoming provincial regulatory announcements, namely the BCUC's decision surrounding the requested ROE of 11.0% at Terasen Gas (versus 8.5% currently).

Underweight, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

General – National Bank Financial (NBF) is an indirect wholly owned subsidiary of National Bank of Canada. National Bank of Canada is a public company listed on Canadian stock exchanges.

Industry Rating: Underweight (Gas Utilities, Multi-Utilities & Unregulated Power, Electric Utilities, Oil & Gas Storage & Transportation)
(NBF Economics & Strategy group)

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State with aggregate generation capacity of ~120 MW. The Company also owns and operates a hospitality and commercial real estate division with 21 hotels and over 4,000 rooms throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

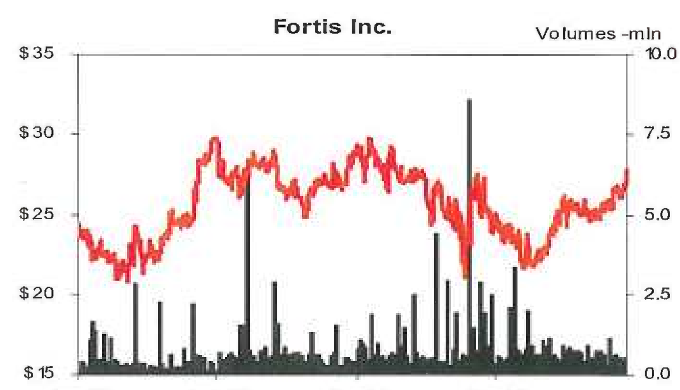
HIGHLIGHTS

- **NFLD Power + FortisOntario receive 2010 ROE decisions**
  Newfoundland Power (~12% of FTS) and FortisOntario (~3% of FTS) have received ROE decisions, with Newfoundland Power's 2010 allowed ROE set at 9.0% (was 8.95%) based on an equity thickness of 45.0% (unchanged), while FortisOntario has been granted a 2010 allowed ROE of 9.75% (up from 8.01%) with a common equity structure of 40.0% (down from 43%). Overall, we view the decisions as having a neutral impact on our outlook and valuation.

- **Next up, BCUC's decision for Terasen Gas**
  With Terasen Gas representing ~35% of FTS, the upcoming ROE decision by the British Columbia Utilities Commission (BCUC) expected by year-end could provide a catalyst for the stock. Recall, Terasen Gas has requested a 2010 ROE of 11.0% (currently 8.5%) based on a common equity structure of 40.0% (currently 35.0%). For every 1.0% increase to our long-term ROE assumption for Terasen Gas, our DCF per share valuation moves up ~$1.00 (or 3%).

- **Maintain $30 target and Outperform rating**
  With minor changes to our estimates, we maintain our $30.00 target. Despite the stock moving up 7% since the end of November (group avg.: 2%), FTS continues to trade in line with historical multiples – i.e., 17.0x earnings and 7.3x cash flow, suggesting the upside potential from the upcoming BCUC regulatory cost of capital decision is not yet priced into the stock. Combined with a 12-month total return opportunity of 12% (group avg.: 4%), we maintain our Outperform rating and recommend investors accumulate a position in the stock ahead of the upcoming BCUC decision.

Stock Performance



Source: Bloomberg

Newfoundland Power and FortisOntario receive 2010 ROE decisions

On Friday (Dec. 11), Newfoundland Power Inc. (a wholly owned subsidiary of Fortis) received a ruling on its allowable return on equity (ROE) from the Newfoundland and Labrador Board of Commissioners of Public Utilities (PUB). For 2010, the PUB has set Newfoundland Power Inc.'s allowed ROE at 9.0% (was 8.95%) with a maximum equity thickness of 45.0% (unchanged). Of note, Newfoundland Power accounts for approximately 12% of our 2010e EBITDA contributions. Although we would view the decision as a slight disappointment, Newfoundland Power's allowable ROE remains in line with other provincially regulated utilities, most notably FortisAlberta – recall, on Nov. 13, 2009, the Alberta Utilities Commission (AUC) announced that the generic ROE for all Alberta Utilities for 2009 and 2010 has been set at 9.0%, a 0.39% increase over the 8.61% ROE that would have been provided for 2009 under the old ROE formula.

Meanwhile, the Ontario Energy Board (OEB) also released its cost of capital policy for electricity distributors on Friday (Dec. 11), setting the allowed ROE at 9.75% for 2010, representing an increase of 174 basis points from the 2009 allowed ROE of 8.01%. As a slight offset however, the OEB reduced the allowed equity thickness to 40.0% from 43.3% for FortisOntario. Overall, we would view the announcement as a win for Fortis, however, FortisOntario contributes just 3% to FTS's consolidated earnings.

Next up, BCUC's decision for Terasen – refreshing sensitivities

The table below outlines the current allowable ROEs for Fortis, highlighting the requested ROE of 11.0% by Terasen Gas (from 8.47%) and 11.7% by Terasen Gas Vancouver Island (from 9.17%). Of note, Terasen Gas represents ~35% of our 2010e earnings contributions for Fortis. The British Columbia Utilities Commission (BCUC) is expected to announce the results of its cost of capital review before year-end.

CANADIAN UTILITY ALLOWED ROE SUMMARY

Company	Allowed ROE	Equity Ratio	Requested ROE	Requested Common equity	Timing
Fortis Inc.					
Terasen Gas Inc.	8.47%	35.0%	11.00%	40.0%	Q4 2009

Source: NBF estimates

Estimate revisions – largely unchanged

In line with the PUB and OEB announcements, we have revised our go-forward ROE assumptions and our allowed equity thickness assumptions for Newfoundland Power and Fortis Ontario. Overall, our 2010e earnings per share (FD) remains largely unchanged at $1.64 (was $1.63), and our 2010e D/EBITDA remains at 5.7x.

Maintain target and Outperform rating

With minor changes to our estimates, we maintain our $30.00 target, which is based on a risk-adjusted dividend yield of 3.7% applied to our 2010e dividend of $1.09/sh, a 14.4x multiple of our 2010e Free-EBITDA of $847 million, and our discounted cash flow valuation of $30.50.

Despite the stock moving up 7% since the end of November (group avg.: 2%), FTS continues to trade in line with historical multiples – i.e., 17.0x earnings and 7.3x cash flow, suggesting the upside potential from the upcoming BCUC regulatory cost of capital decision is not yet priced into the stock. Combined with a 12-month total return opportunity of 12% (group avg.: 4%), we maintain our Outperform rating and recommend investors accumulate a position in the stock ahead of the upcoming BCUC decision.

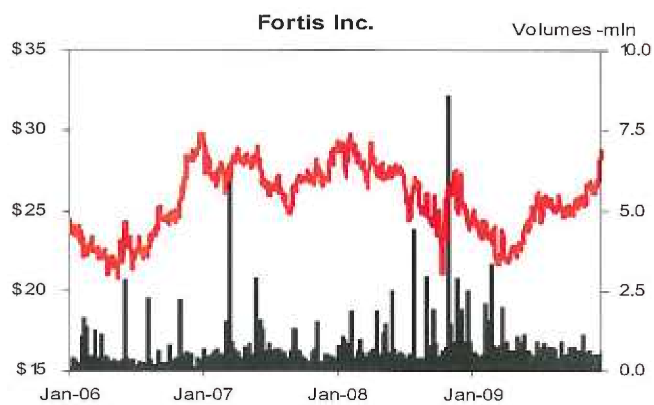
HIGHLIGHTS

- **BCUC delivers positive ROE decisions**
  The British Columbia Utilities Commission (BCUC) has set the ROE for Terasen Gas Inc. (~35% of Fortis) at 9.5% (a 1.0% increase from the current level of 8.5%) while increasing the allowable common equity thickness to 40% (from 35%). The ROE for Terasen Gas (Vancouver Island) Inc. and Terasen Gas (Whistler) Inc. has been set at 10.0%, a 0.8% increase from 9.2%. Meanwhile, FortisBC (~11% of Fortis) also benefits with a 1.0% increase to its allowable ROE to 9.9% from 8.9%.

- **Estimate revisions – increasing earnings and dividends**
  In line with the BCUC's decisions, we have revised our go-forward ROE assumptions for Terasen Gas and FortisBC, as well as our allowed equity thickness assumption for Terasen Gas. Overall, our 2010e EPS (FD) increases $0.15 to $1.79, while our 2010e distributable cash flow per share (FD) estimate increases a similar $0.15 to $2.16. We have also increased our 2010e dividend to $1.14/share from $1.09/share, representing a 10% increase over the current annual dividend rate of $1.04/share – i.e., maintaining an expected earnings payout ratio of 60-70%. On the leverage front, our 2010e D/EBITDA declines to 5.5x from 5.7x.

- **Increasing target $2.00, maintaining Outperform**
  Based on upward revisions to our valuation estimates, our target increases $2.00 to $32.00. Fortis currently trades at 16.1x earnings, below historical P/E multiples of 16.9x – suggesting further upside potential for the stock as the market digests the full impact of the BCUC's decisions. Combined with a 12-month total return opportunity of 14.9% (group avg.: 2.4%), we maintain our Outperform rating.

Stock Performance



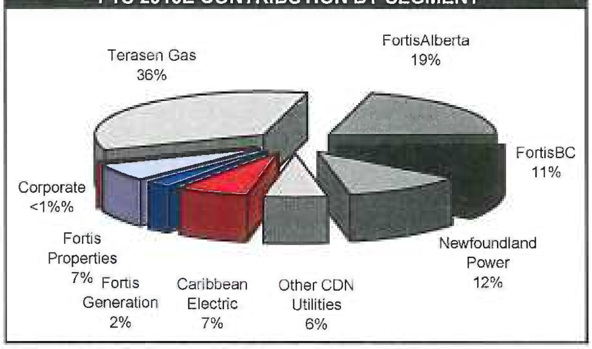
Source: Bloomberg

BCUC delivers positive ROE decisions

Fortis announced today (Dec. 17th), that its wholly owned subsidiary, Terasen Gas Inc., has received the British Columbia Utilities Commission's (BCUC) decision on its return on equity (ROE) and capital structure application. The BCUC set the ROE for Terasen Gas Inc. at 9.5% (a 1.0% increase from the current level of 8.5%) while increasing the allowable common equity thickness to 40% (from 35%). The ROE for Terasen Gas (Vancouver Island) Inc. and Terasen Gas (Whistler) Inc. has been set at 10.0%, a 0.8% increase from 9.2% with the allowable common equity thickness remaining unchanged at 40%. The BCUC's decision is applicable effective July 1, 2009.

As part of the agreement, the BCUC also announced that the previous automatic adjustment mechanism that was used to determine the ROE on an annual basis will no longer apply and the current ROE and common equity thickness will apply until it is further reviewed by the BCUC. As well, the new negotiated settlement agreements will not include provisions for performance-based rate-setting incentive mechanisms that were included as part of the previous agreement. As shown below, Terasen Gas now accounts for ~36% (was 34%) of our 2010e EBITDA contributions.

FTS 2010E CONTRIBUTION BY SEGMENT(1)



(1) Consolidated EBITDA contribution.
Source: NBF

Meanwhile, FortisBC also benefits from the BCUC's decisions with its allowable ROE set at 9.9%, a 1.0% increase from 8.9% and the allowable common equity thickness remaining unchanged at 40%. FortisBC represents approximately 11% of our 2010e EBITDA contributions.

Estimate revisions – increasing earnings and dividends

In line with the BCUC's decisions, we have revised our go-forward ROE assumptions for Terasen Gas and FortisBC, as well as our allowed equity thickness assumption for Terasen Gas. Overall, our 2010e EPS (FD) increases $0.15 to $1.79, while our 2010e distributable cash flow per share (FD) estimate increases a similar $0.15 to $2.16. We have also increased our 2010e dividend to $1.14/share from $1.09/share, representing a 10% increase over the current annual dividend rate of $1.04/share – i.e., maintaining an expected earnings payout ratio of 60-70%. On the leverage front, our 2010e D/EBITDA declines to 5.5x from 5.7x.

Increasing target $2.00, maintain Outperform

Based on upward revisions to our valuation estimates, our target increases $2.00 to $32.00, which is based on a risk-adjusted dividend yield of 3.7% applied to our 2010e dividend of $1.14/sh, a 14.4x multiple of our 2010e Free-EBITDA of $880 million, and our discounted cash flow valuation of $32.75.

As shown in the figure on the following page, based on our 2010 estimates, Fortis currently trades at 16.1x earnings and 7.3x cash flow – below historical P/E multiples of 16.9x, and in line with historical P/CF multiples of 7.1x – suggesting further upside for the stock as the market digests the full impact of the BCUC's decisions. Combined with a 12-month total return opportunity of 14.9% (group avg.: 2.4%), we maintain our Outperform rating.

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and

Underweight, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State with aggregate generation capacity of ~120 MW. The Company also owns and operates a hospitality and commercial real estate division with 21 hotels and over 4,000 rooms throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

HIGHLIGHTS

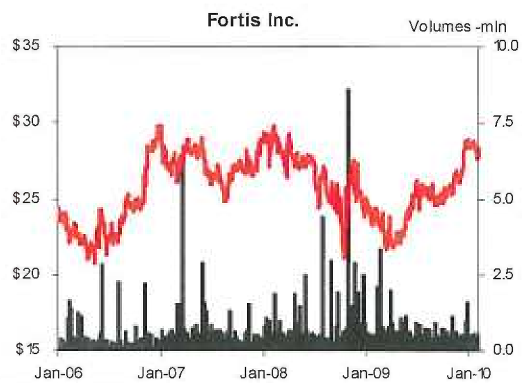
- **Q4 results slightly below expectations**
  Fortis reported Q4 2009 earnings per share (FD) of $0.45, slightly below our estimate of $0.50. Differences related to slightly weaker than expected results within Fortis Generation and Fortis Properties owing to the economic recession, as well as certain one-time Corporate expenses.

- **Refreshing liquidity analysis**
  Fortis has identified ~$1.1 billion of capital investment opportunities for 2010, while approaching $5.0 billion through 2014 (i.e., ~$1.0 billion capex per year). Inside, we refresh our liquidity analysis, highlighting FTS' healthy balance sheet position with ~$500 million of cash available through 2011e. With 32.9% common equity as at year-end 2009 (versus 30.0% target), and S&P confirming FTS' credit rating at A- (stable outlook) in September 2009, we would expect additional preferred share financings ahead of common equity financings to fund near-term growth capex.

- **Estimate revisions – minor changes**
  Overall, our 2011e EPS (FD) edges down a modest $0.02 to $1.85, our 2011e distributable cash flow per share (FD) estimate declines a similar $0.02 to $2.50, and our 2011e D/EBITDA remains largely unchanged at 5.4x.

- **Our choice for weathering a choppy market**
  In line with changes to our estimates, our target nudges down $0.50 to $32.00. Fortis currently trades at 15.4x earnings and 6.4x cash flow – below historical multiples of 16.9x P/E and 7.1x P/CF. With a 12-month total return opportunity of 19.4% (group avg.: 9.9%), and a group low five-year adjusted beta of 0.54 (group ave.: 0.62), we maintain our Outperform rating and continue to recommend Fortis as our top choice amid choppy markets and commodity prices.

Stock Performance



Source: Bloomberg

Q4 results slightly below expectations

Fortis Inc. (FTS) reported Q4 2009 earnings per share (FD) of $0.45, slightly below our estimate of $0.50. Differences related to slightly weaker than expected results within Fortis Generation and Fortis Properties owing to the economic recession, as well as certain one-time Corporate expenses.

Source: NBF Estimates and Company Data

Terasen Gas – contributed earnings of $48.0 million, in line with our estimate. Recall, Terasen's regulated ROE increased to 9.5% from 8.5% effective July 1, 2009 (see our previous note, *"BCUC delivers positive ROE decision"*, December 18, 2009 available at www.nbfinancial.com), which was partially offset by higher operating expenses associated with the recent conversion of Whistler customer appliances to natural gas from propane – i.e., $5 million after-tax cost overruns expensed during the quarter. Of note, Fortis is seeking regulatory approval to include the additional conversion costs into the rate base to be recovered from customers in the future.

FortisAlberta – contributed earnings of $15.0 million, in line with our estimate. Recall, FortisAlberta received an increase in allowed ROE to 9.00% (from 8.51%) and increase in the deemed equity component to 41% (from 37%) in November 2009.

FortisBC – contributed earnings of $8.0 million, slightly below our estimate of $9.7 million due to increased operating expenses related to property taxes and water fees.

Newfoundland Power – contributed earnings of $8.0 million, largely in line with our estimate of $8.7 million.

Other Canadian Utilities – contributed earnings of $6.0 million, in line with our estimate. Recall, FortisOntario recently completed the $75 million acquisition of Great Lakes Power Distribution Inc., subsequently renamed Algoma Power Inc. The Company continues to integrate the northern Ontario utility with pro forma operations performing as expected.

Caribbean Utilities – contributed earnings of $7.0 million, in line with our estimate of $6.8 million.

Fortis Generation – contributed earnings of $3.0 million, $2.1 million below our estimate of $5.1 million. Lower earnings were due to lower average wholesale market energy prices in Upper New York State as well as lower than expected generation levels in Belize and Upper New York State due to weather conditions. We have trimmed our contribution assumptions for Fortis Generation through 2011 reflecting weaker than expected power prices in the northeastern U.S. market.

Fortis Properties – contributed earnings of $5.0 million, slightly below our estimate of $6.5 million. Lower revenue per available room was due to lower room occupancies, largely in Western Canada and Ontario. We expect the segment's 2010 results to perform in line with 2009, with a modest recovery in 2011.

Corporate & Other – corporate & other expenses exceeded our estimate by $1.6 million with slightly higher than expected corporate finance charges and slightly higher income taxes.

NATIONAL BANK FINANCIAL

Refreshing liquidity analysis

Consolidated capital expenditures are expected to total ~$1.1 billion for 2010, and approach $5.0 billion through 2014 (i.e., ~$1.0 billion per year). As shown below, Fortis maintains a healthy liquidity position with ~$500 million of cash available through 2011e. As at Dec. 31, 2009, the Company's debt-to-capitalization was 60.2%, with 32.9% common equity and 6.9% preferred shares – versus its long-term target capital structure of 60% debt, 30% common equity, and 10% preferred shares. With S&P confirming the Company's credit rating at A- (stable outlook) in September 2009, and the common equity portion of FTS' capital structure slightly above its target weighting of 30.0%, we would expect additional preferred share financings ahead of common equity financings to fund near-term growth capex.

Estimate revisions – minor changes

We have updated our 2010 capex and rate base assumptions in line with guidance. Elsewhere, we have trimmed our earnings expectations from the Company's Generation division and Properties division as noted above, while bumping up our go-forward corporate expense assumption in line with the quarter.

Overall, our 2011e EPS (FD) edges down a modest $0.02 to $1.85 (was $1.87) while our 2011e distributable cash flow per share (FD) estimate declines a similar $0.02 to $2.50 (was $2.52). On the leverage front, our 2011e D/EBITDA remains largely unchanged at 5.4x.

Trimming target $0.50, maintain Outperform rating

In line with changes to our estimates, we are trimming our target $0.50 to $32.00, which is based on a risk-adjusted dividend yield of 3.8% applied to our 2011e dividend of $1.20/share, a 13.6x multiple of our 2011e Free-EBITDA of $955 million, and our discounted cash flow valuation of $32.00.

As shown on the following page, based on our 2011 estimates, Fortis currently trades at 15.4x earnings and 6.4x cash flow – below historical multiples of 16.9x P/E and 7.1x P/CF (based on consensus estimates per ThomsonOne). Combined with a 12-month total return opportunity of 19.4% (group avg.: 9.9%), and a group low five-year adjusted beta of 0.54 (group ave.: 0.62), we maintain our Outperform rating and continue to recommend Fortis as our top choice amid choppy markets and commodity prices.

Ratings And What They Mean: PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State with aggregate generation capacity of ~120 MW. The Company also owns and operates a hospitality and commercial real estate division with 21 hotels and over 4,000 rooms throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

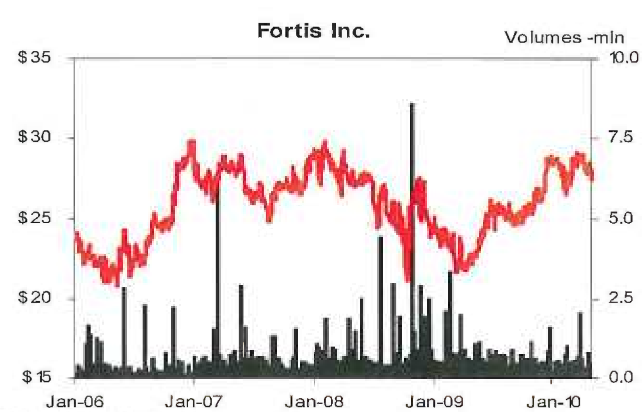
HIGHLIGHTS

- **Q1 results largely in line**
  Fortis reported Q1 EPS (FD) of $0.56, largely in line with our $0.59 estimate and consensus of $0.58. With 90% earnings determined on a rate-regulated basis, we expect the segmented regulated earnings over the next three quarters to normalize in line with our annual expectations. Overall, our 2011e EPS (FD) remains largely unchanged at $1.80 (was $1.79).

- **Alberta draft legislation – a moot point for FortisAlberta**
  On March 31, the Government of Alberta introduced draft legislation which grants the Alberta Utilities Commission (AUC) authority to determine the allocation of proceeds (i.e., gain on sale), associated with the disposition of regulated assets, between the Utilities and ratepayers. Despite the proposed legislation having a potentially negative impact on the company's regulatory risk in Alberta, Fortis has maintained its overall capex guidance of ~$5.0 billion through 2014, with ~70% allocated to its regulated electric utilities, largely driven by FortisAlberta and FortisBC. Based on our going concern outlook for Fortis, and management's plans to grow its core asset base, as opposed to selling or trading assets, we do not foresee a material impact to our valuation of FTS should the proposed legislation be implemented.

- **Maintain $32 target and Outperform rating**
  With little changes to our estimates, we maintain our $32.00 target. Fortis currently trades at 15.5x earnings and 6.3x cash flow (based on consensus) – i.e., well below historical multiples of 16.8x P/E and 7.0x P/CF. Combined with a 12-month total return opportunity of 18.1% (group avg.: 6.1%), we maintain our Outperform rating.

Stock Performance



Source: Bloomberg

Q1 results largely in line

Fortis Inc. (FTS) released its Q1 2010 results on Friday, April 30, reporting EPS (FD) of $0.56, largely in line with our $0.59 estimate and consensus of $0.58 (per ThomsonOne). Lower than expected earnings from FortisAlberta, Newfoundland Power, Fortis Generation and Fortis Properties were partially offset by higher than expected earnings at Terasen Gas. Recall, annual earnings from the company's regulated utilities are determined based on an allowable rate of return on equity (ROE) and equity thickness. As such, we would expect the company's segmented regulated earnings over the next three quarters to normalize in line with our annual expectations.

FTS - Q1 2010 EARNINGS RECONCILIATION		
Q1 2010	**$ mlns**	**Per Share**
Estimated Earnings - FD	**$106.4**	**$0.59**
Difference Related to:		
Terasen Gas	$10.1	0.05
FortisAlberta	-$7.0	(0.04)
Newfoundland Power	-$7.0	(0.04)
Fortis Generation	-$1.1	(0.01)
Fortis Properties	-$2.6	(0.01)
Corporate & other	$1.3	0.01
Actual Earnings - FD	**$100.0**	**0.56**

Source: NBF Estimates and Company Data

Terasen Gas – Contributed earnings of $73.0 million, $10.1 million above our $62.9 million estimate and $15.0 million above Q1 2009 earnings of $58.0 million. Recall, effective Jan. 1, 2010, Terasen Gas Inc.'s (TGI) allowable ROE increased to 9.5% from 8.5% on a common equity thickness of 40% (was 35%), while Terasen Gas (Vancouver Island) Inc.'s (TGVI) allowable ROE increased to 10.0% from 9.2%.

FortisAlberta – Reported earnings of $14.0 million, $7.0 million below our estimate of $21.0 million. Lower earnings were due to higher than expected higher operating and depreciation expense. We have increased our earnings estimates for Q2 to Q4, maintaining our full year 2010 contribution from FortisAlberta of $59.9 million (i.e., adjusting our seasonality assumptions).

FortisBC – Contributed earnings of $14.0 million, in line with our estimate of $13.4 million.

Newfoundland Power – Contributed earnings of $7.0 million, below our estimate of $14.0 million. Lower earnings were due to higher than expected operating expenses and energy supply costs. We have increased our earnings estimates for Q2 to Q4, maintaining our full year 2010 contribution from Newfoundland Power of $35.0 million (i.e., adjusting our seasonality assumptions).

Other Canadian Utilities – Contributed earnings of $5.0 million, matching our estimate.

Caribbean Utilities – Reported earnings of $7.0 million, in line with our estimate of $7.2 million.

Fortis Generation – Reported earnings of $2.0 million, slightly below our estimate of $3.1 million. Lower earnings were due to lower hydrology in Belize as well as slightly lower than expected realized pricing.

Fortis Properties – Contributed earnings of $2.0 million, $2.6 million below our estimate of $4.6 million owing to lower revenue per available room (i.e., $62.93 vs. our $67.01 estimate and Q4 2009 levels of $68.87) as a result of lower occupancies in Western Canada.

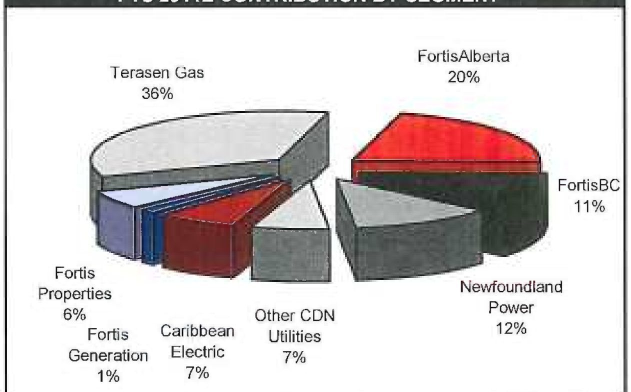
Corporate & Other – Corporate & Other expenses were below our estimate by $1.3 million owing to slightly higher cash tax recoveries.

Alberta draft legislation – a moot point for FortisAlberta

On March 31, the Government of Alberta introduced draft regulation on the Disposition of Regulated Properties. Under the terms of the draft regulation, upon disposition of regulated assets, the utility should attempt to work with its ratepayers surrounding the allocation of proceeds from the disposition (i.e., potential gain on sale). If an agreement cannot be reached, the AUC retains the right to review the case and may determine an appropriate allocation of the settlement proceeds, if necessary. Of note, the draft regulation is not intended to apply retroactively to any disposition of utility assets previously approved by negotiations or agreements made with the Energy and Utilities Board (EUB) and AUC.

Despite the proposed legislation having a potentially negative impact on the company's regulatory risk in Alberta, Fortis has maintained its overall capex guidance of ~$5.0 billion through 2014, with ~70% allocated to its regulated electric utilities, largely driven by FortisAlberta and FortisBC. Of note, we currently forecast ~$1.8 billion of capital spending for FortisAlberta through 2014 with our average rate base increasing 10% per year to ~$2.1 billion by 2014e from ~$1.3 billion in 2009. As shown in the following figure, FortisAlberta contributes ~20% to Fortis' total EBITDA. Based on our going concern outlook for Fortis, and management's plans to grow its core asset base, as opposed to selling or trading assets, we do not foresee a material impact to our valuation of the name should the proposed legislation be implemented.

FTS 2011E CONTRIBUTION BY SEGMENT(1)



(1) Consolidated EBITDA contribution.
Source: NBF

Estimate revisions – little changes

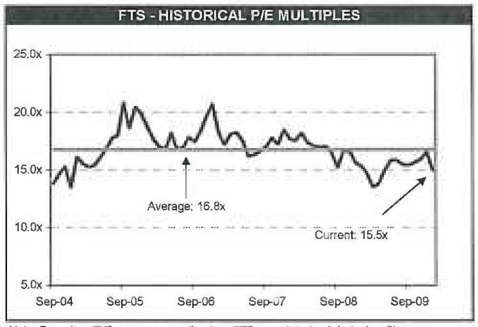
We have nudged up our go-forward earnings contributions from Terasen Gas Inc., reflecting slightly higher customer delivery rates. Meanwhile, we have trimmed our earnings contributions from Fortis Generation and Fortis Properties based on a slower than expected recovery from the economic recession. Elsewhere, we have tweaked our DRIP participation rate in line with the quarter.

Overall, our 2011e EPS (FD) remains largely unchanged at $1.80 (was $1.79) while our 2011e distributable cash flow per share (FD) edges up a similar $0.01 to $2.45. On the leverage front, our 2011e D/EBITDA remains largely unchanged at 6.0x.

Maintain target and Outperform rating

With little change to our estimates, we maintain our $32.00 target, which is based on a risk-adjusted dividend yield of 3.8% applied to our 2011e dividend of $1.20/share, a 14.8x multiple of our 2011e Free-EBITDA of $924.2 million, and our discounted cash flow valuation of $32.00.

As shown on the following page, Fortis currently trades at 15.5x 2011e earnings and 6.3x cash flow (based on consensus estimates per ThomsonOne) – i.e., well below historical consensus multiples of 16.8x P/E and 7.0x P/CF. Combined with a 12-month total return opportunity of 18.1% (group avg.: 6.1%), we maintain our Outperform rating.



Note: Based on FY2 consensus estimates. FTS completed a 4:1 stock split on October 12, 2005.

Source: NBF Estimates and Company Data

Terasen Gas – contributed earnings of $17.0 million, in line with our estimate of $17.2 million.

Electric Utilities – reported earnings of $47.0 million, slightly below our estimate of $49.2 million. Earnings at FortisBC and Other Cdn Utilities were slightly below expectations owing to lower average electricity consumption as a result of cooler temperatures.

Fortis Generation – reported earnings of $3.0 million, slightly above our estimate of $2.3 million owing to higher than expected hydrology at the Vaca, Belize generating facility.

Fortis Properties – contributed earnings of $8.0 million, largely in line with our estimate of $8.6 million. While revenues per available room (revpar) was 4.5% higher than our estimate (i.e., $83.77 vs. our $83.00), Fortis experienced a 1.8% decrease in hotel occupancies and 1.1% decrease in real estate occupancies compared with Q2 2009.

Capital program remains unchanged – $5.0 billion through 2014e

Overall, Fortis' capital spending program remains unchanged from our last update with $1.1 billion in gross consolidated capital expenditures expected for 2010e. Over the five-year period 2010e through 2014e, the company continues to expect gross capital expenditures to approach $5.0 billion with the bulk of the spending being incurred within Terasen Gas, FortisAlberta and FortisBC. Meanwhile, the company continues to pursue regulated gas and electric distribution opportunities throughout the U.S., Canada and Caribbean.

On the liquidity front, as at June 30, 2010, Fortis' capital structure was comprised 58% debt and 42% equity (including 9% preferred shares) – versus its longer-term target of 60% debt, 40% equity (including preferred shares). Meanwhile, $1.4 billion remains available on $2.1 billion of consolidated credit facilities.

Overall impact – Neutral

With the quarter in line, and no change to capex guidance, we anticipate little changes to our estimates and target. Fortis currently trades at 16.3x 2011e EPS (based on consensus per ThomsonOne), below historical average P/E multiples of 16.9x. We continue to rate Fortis an Outperform with a $32.00 target.

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State with aggregate generation capacity of ~120 MW. The Company also owns and operates a hospitality and commercial real estate division with 21 hotels and over 4,000 rooms throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

HIGHLIGHTS

- **Q2 results in line with expectations**
  FTS reported Q2 2010 EPS (FD) of $0.32, matching both our estimate and consensus. The company also reiterated its rate-regulated capex guidance of $1.1 billion for 2010 and ~$5.0 billion over the next five years, confirming our ~7% annual EPS growth estimates through 2014.
- **Funding analysis – no immediate equity needs**
  Despite ~$1.6 billion of capex committed through 2011e, we continue to forecast abundant cash available of $0.7 billion by year-end 2011e, with a D/Cap ratio of 59% versus the company's longer-term target ratio of 60%. As such, although we do not forecast any need for an equity issue over the next 12 months (all else equal), a modest equity issue in the order of ~$200 million could be in the cards in late 2011e.
- **Estimate revisions – modest changes**
  Overall, our 2011e EPS (FD) declines a modest $0.02 to $1.80 while our 2011e distr. cash flow (FD) remains largely unchanged at $2.46 (was $2.47). On the leverage front, our 2011e D/EBITDA remains largely unchanged at 5.9x.
- **Maintain target, reiterate Outperform rating**
  With our estimates in tact, we maintain our $32.00 target. Despite steady profits and an attractive 7% annual EPS / dividend growth profile, Fortis continues to trade at discounted 2011e multiples of 16.0x EPS (group avg.: 17.0x) and 6.8x CFPS (group avg.: 7.3x), below historical multiples of 16.7x P/E and 7.0x P/CF. Combined with a group high 12-month total return opportunity of 14.9% (group avg.: 4.0%), we maintain our Outperform rating and Action List Buy recommendation.

Stock Performance

Source: Bloomberg

Q2 results in line with expectations

Fortis Inc. reported Q2 2010 earnings per share (FD) of $0.32, matching both our estimate and consensus of $0.32 (per ThomsonOne). Slightly lower earnings from the company's electricity distribution utilities were offset by lower than expected corporate expenses.

FTS - Q2 2010 EARNINGS RECONCILIATION						
					Per Share	
($mlns except per share values	Actual	Estimates	Variance	Actual	Estimate	Variance

Caribbean Utilities	$7.0	$5.0	$2.0	$0.04	$0.03	$0.01
Fortis Generation	$3.0	$2.3	$0.7	$0.02	$0.01	$0.00
Fortis Properties	$8.0	$8.6	-$0.6	$0.05	$0.05	$0.00
Corporate & other	-$20.0	-$22.2	$2.2	-$0.12	-$0.13	$0.01
Total	**$55.0**	**$55.1**	**-$0.1**	**$0.32**	**$0.32**	**$0.00**

Source: NBF Estimates and Company Data

Terasen Gas – Contributed earnings of $17.0 million, in line with our $17.2 million estimate. Effective Jan. 1, 2010, Terasen Gas Inc. received regulatory approval of a negotiated settlement agreement (NSA) for its 2010-2011 revenue requirements. The approved NSA does not include an earnings' sharing mechanism for earnings above or below the allowed ROE with customers – i.e., Fortis will retain 100% of the potential earnings upside or downside from its operations.

FortisAlberta – Reported earnings of $17.0 million, in line with our $16.9 million estimate.

FortisBC – Contributed earnings of $8.0 million, $1.2 million below our estimate of $9.2 million on lower average consumption owing to decreased air-conditioning (i.e., cooler temperatures).

Newfoundland Power – Contributed earnings of $11.0 million, slightly below our estimate of $11.9 million. The variance was attributable to higher finance charges, increased amortization costs associated with investment in utility capital assets, and higher retirement and severance expenses.

Other Canadian Utilities – Contributed earnings of $4.0 million, falling short of our estimated $6.4 million on decreased electricity sales.

Caribbean Utilities – Reported earnings of $7.0 million, above our estimate of $5.0 million on higher customer electricity rates and an increase in electricity sales.

Fortis Generation – Reported earnings of $3.0 million, slightly above our estimate of $2.3 million owing to higher production in Belize as well as lower than expected financing charges.

Fortis Properties – Contributed earnings of $8.0 million, slightly below our estimate of $8.6 million owing to a decrease in the occupancy rate in Western Canada. Overall, we continue to expect the segment's 2010 and 2011 results to perform in line with 2009.

Corporate & Other – Corporate & other expenses were below our estimate by $2.2 million.

Overall, Fortis's capital spending program remains unchanged with $1.1 billion in gross consolidated capital expenditures expected for 2010e. Through 2014e, management expects to spend ~$5 billion in capital expenditures with ~71% allocated to its regulated electric utilities, largely driven by FortisAlberta and FortisBC. A further ~27% of the capital program is expected to be allocated to the company's regulated gas utilities (i.e., Terasen Gas) with the remaining ~2% to be absorbed by non-regulated operations. Of note, the company continues to pursue regulated gas and electric distribution opportunities throughout the U.S., Canada and Caribbean.

Refreshing funding analysis – no immediate equity needs

Despite ~$1.6 billion in capex committed through 2011e ($4.5 billion through 2014e, ~50% of EV), we continue to forecast abundant cash available of $0.7 billion by year-end 2011e to finance the company's aggressive capex program. However, by the end of 2011e, we forecast a debt to total capitalization ratio of 59%, nudging up against the company's longer-term target of 60% debt and 40% equity (including preferred shares). As such, although we do not forecast any immediate needs for an equity issue (i.e., next 12 months), all else equal, a modest equity issue in the order of ~$200 million could be in the cards in late 2011e. Of note, we forecast 2011e D/EBITDA of 5.9x (including preferred shares; 5.1x excluding preferred shares), slightly above the low payout group average of 4.8x (including preferred shares), but in line with the company's relatively low cash flow risk profile – i.e., ~90% of earnings are generated through rate-regulated activities versus the low payout group average of 70%.

FTS - FUNDING REQUIREMENT ANALYSIS

(2) Excluding preferred shares.

Source: NBF Estimates, Company Reports

Estimate revisions – modest changes

With Q2 results matching expectations, we have made very few changes to our model, aside from tweaking our distribution reinvestment rate assumption to 29% from 20%, in line with actuals for the quarter.

Overall, our 2011e EPS (FD) declines a modest $0.02 to $1.80 (higher DRIP assumption) while our 2011e distributable cash flow per share (FD) remains largely unchanged at $2.46 (was $2.47).

Maintain target, reiterate Outperform rating

With little changes to our estimates, we maintain our $32.00 target, which is based on a risk-adjusted dividend yield of 3.8% applied to our 2011e dividend of $1.20/share, a 14.4x multiple of our 2011e Free-EBITDA of $949 million, and our discounted cash flow valuation of $32.00.

As shown on the following page, Fortis currently trades at 16.4x earnings and 6.6x cash flow (based on consensus estimates per ThomsonOne) versus our estimates of 16.0x earnings and 6.8x cash flow – i.e., both below historical consensus multiples of 16.7x P/E and 7.0x P/CF despite steady profits and a relatively attractive 7% EPS / dividend growth profile through 2014e. Combined with a 12-month total return opportunity of 14.9% (group avg.: 4.0%), we reiterate our Outperform rating and Action List Buy recommendation.

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

HIGHLIGHTS

- **To construct $900-mln, 335-MW hydro facility in B.C.**
  FTS has entered into a partnership with the Government of British Columbia (FTS: 51% interest) to construct the 335-MW Waneta hydroelectric generating facility for ~$900 mln (~$450 mln net), online in 2015. Overall, the project increases consolidated capex over the next five years to $5.5 billion (i.e., ~10% above prior guidance). Of note, the project is exposed to objections by industry given the absence of a competitive process for the project. Interested parties have until Sept. 13, 2010, to file an objection.

- **Executing low risk, NON-regulated growth**
  Despite being a non-regulated growth project, FTS will receive fixed energy and capacity entitlements under a long-term agreement with BC Hydro on 101 MW based on long-term average water flows (i.e., no volume risk), with pricing similar to the recent BC Hydro 2008 Clean Power Call. Meanwhile, FortisBC is expected to purchase the remaining capacity under a long-term capacity purchase agreement.

- **Assuming 10% ROE, adds $0.50/share to DCF valuation**
  Assuming a 10% ROE for the project and based on 35% long-term equity financing, we estimate $0.50/share accretion to our discounted cash flow valuation.

- **Maintain target, reiterate Outperform rating**
  We await the expiry of the competitive process objection deadline (Sept. 13) before building into our model and valuation. However, with FTS trading at discounted multiples of 16.2x 2011e EPS (historical: 16.7x; group avg.: 16.9x), combined with $0.50 upside to our $32.00 target, we maintain our Outperform rating and Action List Buy recommendation.

Stock Performance

To construct $900-mln, 335-MW hydro facility in B.C.

Fortis announced it has entered into a partnership with the Government of British Columbia (FTS: 51% interest) to construct a 335 MW hydroelectric generating facility located in the southeastern part of the province south of Trail, B.C., near the Waneta Dam and powerhouse facilities along the Pend d'Oreille River. Capital costs are expected to run ~$900 million (~$450 million net) with commissioning of the project expected in 2015.

Fortis will receive fixed energy and capacity entitlements under a long-term agreement with BC Hydro on 101 MW based on long-term average water flows (630 GWh per year; ~70% utilization rate), with pricing similar to the recent BC Hydro 2008 Clean Power Call. Meanwhile, FortisBC will purchase the remaining 234 MW of capacity under a long-term capacity purchase agreement, subject to regulatory approval of the British Columbia Utilities Commission. Overall, the project increases total consolidated capital expenditures over the next five years to $5.5 bln (i.e., ~10% above prior guidance).

Of note, the project has received all necessary environmental approvals, but is exposed to objections by industry given FTS and the Government of British Columbia entered into the partnership without a competitive process for the project. Interested parties have until September 13, 2010 to file an objection.

Assuming 10% ROE, adds $0.50 to our DCF/share valuation

Assuming a 10% ROE for the project, in line with management guidance, we estimate the project adds $0.50 to our discounted cash flow valuation per share of $32.00 (see table below). Of note, FTS will draw on available credit facilities to finance construction of the project and will look to permanently finance the project with ~35% equity longer-term (i.e., ~$150 million).

WANETA EXPANSION PROJECT - NPV PER SHARE

		Return on Equity (%)

Maintain target, reiterate Outperform rating

We await the expiration of the competitive process objection deadline before building the project into our model and valuation (i.e., Sept. 13, 2010). As such, we maintain our $32.00 target, which is based on a risk-adjusted dividend yield of 3.8% applied to our 2011e dividend of $1.20/share, a 14.4x multiple of our 2011e Free-EBITDA of $949 million, and our discounted cash flow valuation of $32.00.

As shown on the following page, Fortis currently trades at 16.4x earnings and 6.6x cash flow (based on consensus estimates per ThomsonOne) and 16.2x earnings and 6.9x cash flow based on our estimates – i.e., both below historical consensus multiples of 16.7x P/E and 7.0x P/CF despite a low risk earnings profile, impressive track record of developing and acquiring accretive projects, and a relatively attractive 7% EPS / dividend growth profile through 2014e. Combined with a group high 12-month total return opportunity of 14.1% (group avg.: 3.7%), we reiterate our Outperform rating and Action List Buy recommendation.

DISCLOSURES:

Ratings And What They Mean: PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. SECONDARY STOCK RATING: **Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. INDUSTRY RATING: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

General – National Bank Financial (NBF) is an indirect wholly owned subsidiary of National Bank of Canada. National Bank of Canada is a public company listed on Canadian stock exchanges.

HIGHLIGHTS

- **Removing from Action List on strong out-performance**
  Since adding Fortis to the NBF Action List on Nov. 27, 2009, the stock has provided a total return (i.e., including dividends) of 28% versus the S&P/TSX composite index total return performance of 13% over the same timeframe – despite representing a group low market beta of 0.53. With our NBF Action List performance benchmarked to the S&P/TSX composite index (as opposed to our coverage list), we are removing Fortis from the NBF Action List following significant out-performance.

- **Maintain $33.50 target – reiterate Outperform**
  FTS is currently yielding 3.5%, in line with its historical average. However, when compared with the average 10-year BBB corporate bond yield, FTS is currently trading at a cash yield spread of -1.5% versus historical averages of -2.7% – implying further upside should investors lower their equity risk premiums in line with historical averages. Meanwhile, relative to our coverage list, despite an attractive 7% EPS / dividend growth profile through 2014e, and a lower cash flow risk profile, Fortis currently trades at 18.9x earnings and 7.8x cash flow, largely in line with the low payout group's average of 18.5x P/E and 7.9x P/CF. As such, combined with a 12-month total return opportunity of 7.2% (group avg.: 1.3%), we reiterate our Outperform rating.

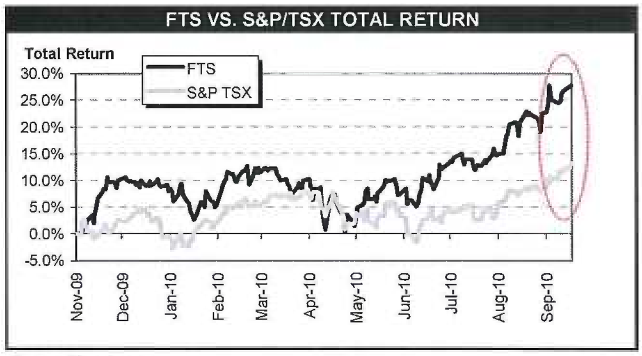
Removing from NBF Action List on significant out-performance

Since adding Fortis to the NBF Action List on November 27, 2009, the stock has provided a total return (i.e., including dividends) of 28% versus the S&P/TSX Index total return performance of 13% over the same timeframe – despite FTS's group low five-year beta of 0.53. With our Action List performance benchmarked to the S&P/TSX Index (as opposed to our coverage list), we are removing Fortis from the NBF Action List following significant out-performance.



Source: Bloomberg

Maintain $33.50 target – reiterate Outperform rating

We maintain our $33.50 target, which is based on a risk-adjusted dividend yield of 3.6% applied to our 2011e dividend of $1.20/share, a 14.6x multiple of our 2011e Free-EBITDA of $949 million, and our discounted cash flow valuation of $33.75.

With government bond yields falling to all time lows, cash yields within the sector have followed suit as investors shift into lower risk, high-yield investments. As shown below, FTS is currently yielding 3.5%, in line with its historical average. However, when compared with the average 10-year BBB corporate bond yield, FTS is currently trading at a cash yield spread of -1.5% versus historical averages of -2.7%, i.e., implying further upside should investors lower their equity risk premiums in line with historical averages.

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING**: **Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING**: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

HIGHLIGHTS

- **Q3 results in line**
  FTS reported Q3 EPS (FD) of $0.26, in line with our estimate of $0.25 and consensus of $0.24 (per ThomsonOne) with stronger earnings from Fortis Generation partially offset by lower earnings from Terasen Gas.

- **Growth outlook – Waneta Expansion begins construction**
  During the quarter, FTS announced that it has concluded definitive agreements to construct the $900 million ($459 million net), 335 MW Waneta hydroelectric generation facility in British Columbia. Construction of the project is expected to begin in November 2010 and placed into service in 2015. Overall, FTS' capital program remains in check with ~$5.5 billion of capital expenditures from 2011 through 2015. Meanwhile, we refresh our liquidity analysis inside suggesting little need for equity through mid-2011.

- **Target up $0.50 – revising rating on relative strength**
  Overall, our 2011e EPS nudges up $0.02 to $1.77 while our target bumps up $0.50 following the regulatory approval of the $900 million Waneta Expansion. Since initiating coverage on FTS with an Outperform rating on November 24, 2009, the stock has gained 28%, outperforming the group average performance of +22%. Combined with a 12-month total return opportunity of 5.6% (group avg.: 1.9%) we are revising our rating on FTS to Sector Perform from Outperform.

Stock Performance

Q3 results in line

Fortis Inc. reported Q3 2010 EPS (FD) of $0.26, in line with our estimate of $0.25 and consensus of $0.24 (per ThomsonOne). Higher than expected earnings from the company's non-regulated power generation assets (+$0.03) and Caribbean Utilities segment (+$0.02) were partially offset by lower earnings within Terasen Gas Distribution (-$0.03) and Newfoundland Power (-$0.02).

Actual Earnings - FD	**$45.0**	**$0.26**

Source: NBF Estimates and Company Data

Terasen Gas – contributed a net loss of $5.0 million, below our earnings estimate of nil. Differences from our estimates include higher than expected labour and employee-benefit costs and higher planned maintenance and operating expenses as a result of the company's Negotiated Settlement Agreement (NSA) that was approved by the British Columbia Utilities Commission (BCUC) effective Jan. 1, 2010. Recall, the approved NSA does not include an earnings' sharing mechanism for earnings above or below the allowed ROE with customers – i.e., Fortis will retain 100% of the potential earnings upside or downside from its operations. Of note, Q3 typically represents a lower period of earnings due to lower customer demand as a result of warmer temperatures expected over the quarter.

FortisAlberta – reported earnings of $19.0 million, slightly above our estimate of $16.4 million owing to higher than expected investment in electrical infrastructure, customer growth and regulatory approved expenses.

FortisBC – contributed earnings of $11.0 million, $2.2 million above our estimate of $8.8 million on higher than expected performance bonus rate-setting (PBR) incentive mechanisms to be received from customers.

Newfoundland Power – reported earnings of $8.0 million, below our $12.6 million estimate owing to increased pension and wage expenses and the impact of Hurricane Igor impacting over half of FTS' service area on Sept. 1, 2010. The company is currently assessing the necessary regulatory action to respond to the additional costs resulting from the hurricane.

Other Canadian Utilities – earnings of $5.0 million were slightly below our estimate of $7.2 million.

Caribbean Utilities – reported earnings of $8.0 million, $4.3 million above our estimate of $3.7 million owing to the deferral of income taxes and lower than expected operating expenses.

Fortis Generation – earnings of $9.0 million were $5.8 million above our estimate of $3.2 million. During the quarter, Fortis reported aggregate energy sales of 134 GWh versus our 80 GWh estimate owing to higher rainfall in Belize.

Fortis Properties – contributed earnings of $9.0 million, largely in line with our estimate of $9.6 million. Revenues per available room (revpar) came in 1.8% higher than our estimate (i.e., $89.54 vs. our $88.00), while real estate occupancy decreased to 93.7% from 96.2% the year prior.

Growth outlook – Waneta hydro project begins construction

Overall, Fortis' capital spending program remains unchanged with $1.1 billion in gross consolidated capital expenditures expected for 2010e. Through 2011e-2015e, management expects to spend ~$5.5 billion in capital expenditures with ~63% allocated to its regulated electric utilities, largely driven by FortisAlberta and FortisBC. A further ~21% of the capital program is expected to be allocated to the company's regulated gas utilities (i.e., Terasen Gas) with the remaining 16% to be absorbed by non-regulated operations. Of note, the company continues to pursue regulated gas and electric distribution opportunities throughout the U.S., Canada and Caribbean.

Waneta hydro – In October, FTS concluded definitive agreements to construct the $900 million ($459 million net), 335 MW Waneta hydroelectric generating facility in British Columbia. Recall, we had previously awaited final completion and expiration of the competitive process objection deadline prior to building the project into our model and valuation (see our previous note, *"Executing low risk, NON-regulated growth"*, August 27, 2010 available at www.nbfinancial.com). Of note, FTS owns a 51% interest and will operate and maintain the non-regulated investment when the facility comes into service, which is expected in Spring 2015. Construction of the project is expected to begin in November 2010.

Terasen Gas – Fortis is currently considering an amalgamation of the three companies: Terasen Gas Inc. (TGI), Terasen Gas Vancouver Island Inc. (TGVI) and Terasen Gas Whistler Inc. (TGWI) which would require regulatory approval by the BCUC and consent from the Government of British Columbia. The company is considering bringing forth an application in 2011.

Refreshing liquidity analysis – well funded through mid-2011

Of note, in October 2010, DBRS upgraded FTS' unsecured debt credit rating to A (low) from BBB (high). Based on ~$1.4 billion of capex expected from Q4 2010e through 2011e, we continue to forecast sufficient cash available of ~$611 million by year-end 2011e. Meanwhile, by year-end 2011e, we forecast a debt-to-total capitalization ratio of 59%, i.e., largely in line with the company's longer-term target of 60% debt and 40% equity (including preferred shares), suggesting little need for equity through mid-2011.

FTS - FUNDING REQUIREMENT ANALYSIS

(mlns)	Q4 2010e	2011e

Estimate revisions – little changes

We have adjusted our capex assumptions in line with management guidance. We have also trimmed our earnings contributions from Fortis Properties in light of lower than expected real estate occupancy rates. Elsewhere, we have nudged up our realized power pricing assumptions for Fortis Generation in line with the quarter and have modeled in the $900 million ($459 million net), 335 MW Waneta hydroelectric project.

Overall, our 2011e EPS (FD) nudges up a modest $0.02 to $1.77 while our 2011e distributable cash flow per share (FD) increases a similar $0.02 to $2.43. Meanwhile, we forecast a 2011e earnings payout ratio of 66% (was 67%) and an adjusted funds from operations (AFFO) payout ratio of 48% (unchanged). On the leverage front, our 2011e D/EBITDA remains unchanged at 6.0x.

Target up $0.50 – revising rating on relative price strength

Overall, our target bumps up $0.50 to $34.00 following regulatory approval of the $900 million ($459 million net), 335 MW Waneta Expansion project. Our target is based on a risk-adjusted dividend yield of 3.6% applied to our 2011e dividend of $1.20/share, a 14.9x multiple of our 2011e Free-EBITDA of $943 million, and our discounted cash flow valuation of $34.00.

Since initiating coverage on FTS with an Outperform on November 24, 2009, the stock has outperformed the group average by ~6% (group: +22%; FTS: +28%). Combined with a 12-month total return opportunity of 5.6% (group avg.: 1.9%), we are revising our rating on Fortis to Sector Perform from Outperform.

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative.** The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

HIGHLIGHTS

- **Announces 3.6% dividend increase for 2011**
  FTS announced a 3.6% increase to its quarterly dividend rate to $0.29/share ($1.16/share annualized) from $0.28/share ($1.12/share annualized), below our previous estimate of a 7.1% increase to $0.30/share ($1.20/share annualized) and 2011e consensus calling for a 5.3% increase to $0.295/share ($1.18/share annualized).

- **Trimming annual EPS growth expectations to 6%**
  Recall, based on a $5.5 billion capital program through 2015, Fortis expected annual EPS growth of 6-8%. Given a slower than expected economic recovery within the Caribbean electric distribution and Fortis Properties segments, the company is guiding towards the lower end of its 6-8% annual growth range, while maintaining a 60-70% earnings payout ratio (i.e., in line with the low payout peer group). As such, we expect the company's dividend growth rate to migrate back towards our five-year EPS growth outlook of 6% (was 7%) for 2012 onwards. Based on our unchanged 2011e EPS of $1.77 and distr. CFPS of $2.43, we now forecast a 2011 earnings payout ratio of 64% (was 66%) and adjusted funds from operations payout of 46% (was 48%), i.e., remaining below the low payout group's average of 80% EPS and 49% AFFO.

- **Nudging target down $0.50 – maintain Sector Perform**
  Overall, our dividend discount model (DDM) valuation declines $1.00 to $32.75, however, with little changes to our Free-EBITDA and discounted cash flow valuation, our target nudges down $0.50 to $33.50. Combined with a 12-month total return opportunity of 1.5% (group avg.: 0.7%) we maintain our Sector Perform rating.

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative.** The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State with aggregate generation capacity of ~120 MW. The Company also owns and operates a hospitality and commercial real estate division with 21 hotels and over 4,000 rooms throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

HIGHLIGHTS

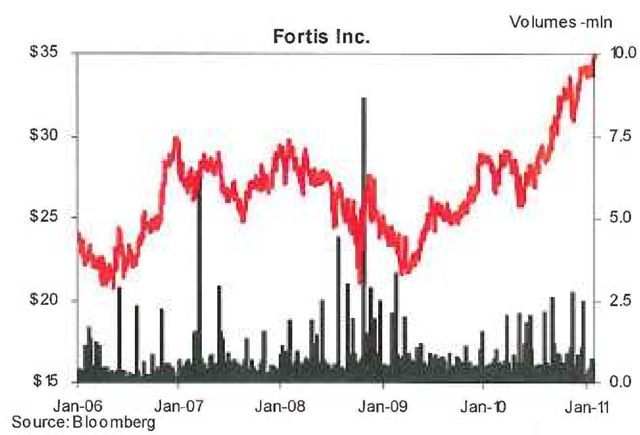
- **Q4 results in line with our expectations**
  FTS reported Q4 EPS (FD) of $0.47, in line with our estimate of $0.49, but slightly below consensus of $0.51 (per ThomsonOne). Higher earnings from FortisAlberta, FortisBC and Fortis Properties were partially offset by higher-than-expected corporate and other expenses.

- **Liquidity analysis – well funded through 2012e**
  Despite a $2.2 billion capital program over the next two years, we continue to forecast sufficient cash available of ~$660 million by year-end 2012e. That said, we forecast a 2012e D/Cap ratio of 59% – nudging up against the high end of the company's target ratio of 60%, suggesting the potential for an opportunistic equity (or preferred share) issue well before year-end 2012e.

- **Revisiting ROE upside... and downside**
  The allowed ROE for 2011 at Newfoundland Power has decreased to 8.38% from 9.00% in 2010 as a result of the automatic ROE adjustment mechanism. With FortisAlberta also currently reviewing their ROE methodology, we refresh our discounted cash flow (DCF) valuation sensitivities, highlighting that a 50 basis point change in ROE across all segments will increase / decrease our DCF per share valuation by ~$1.25 (or 4%).

- **Target unchanged – maintain Sector Perform**
  With our 2012e EPS largely unchanged at $1.83 (was $1.82), we maintain our $34.00 target. Combined with a 12-month total return opportunity of 4.0% (group avg.: 4.8%), we maintain our Sector Perform rating.

Stock Performance



Q4 results in line with our expectations

Fortis Inc. reported Q4 2010 EPS (FD) of $0.47, in line with our estimate of $0.49, but slightly below consensus of $0.51 (per ThomsonOne). Higher-than-expected earnings from the company's regulated electricity distribution assets in Western Canada (i.e., FortisAlberta and FortisBC) and Fortis Properties were partially offset by higher-than-expected corporate and other expenses. Meanwhile, for 2010, Fortis reported earnings (FD) of $1.62/share – representing an ~7% increase from 2009 EPS of $1.52, on track with the company's five-year annual EPS growth rate guidance.

FTS - Q4 2010 EARNINGS RECONCILIATION		
	$ mlns	Per Share
Estimated Earnings - FD	**$88.4**	**$0.49**
Difference Related to:		
Terasen Gas	-$1.7	(0.01)
FortisAlberta	$3.6	0.02
FortisBC	$4.0	0.02
Newfoundland Power	-$2.1	(0.01)
Other Cdn Utilities	-$1.1	(0.01)
Caribbean Utilities	$0.3	0.00
Fortis Generation	-$1.6	(0.01)
Fortis Properties	$2.0	0.01
Corporate & other	-$6.6	(0.04)
Actual Earnings - FD	**$85.0**	**$0.47**

Source: NBF Estimates and Company Data

Terasen Gas – reported net earnings of $45 million, slightly below our estimate of $47 million on slightly higher-than-expected labour and employee-benefit costs, as well as higher planned maintenance and operating expenses. Recall, owing to the seasonal nature of natural gas consumption patterns, earnings at Terasen are generally highest in Q1 and Q4.

FortisAlberta – contributed earnings of $17 million, ~$4 million above our estimate of $13 million owing to higher customer growth and higher-than-expected recoveries of regulatory-approved expenses.

FortisBC – contributed earnings of $10 million, ~$4 million above our estimate of $6 million. Higher than expected earnings were due to increased performance bonus rate-setting incentive adjustments and lower than expected income tax expenses.

Newfoundland Power – reported earnings of $9.0 million, slightly below our estimate of $11 million owing to higher energy supply costs associated with the company's hydroelectric generating facilities and increased pension and wage expenses.

Other Canadian Utilities – earnings of $5 million fell largely in line with our estimate.

Caribbean Utilities – reported earnings of $5 million, matching our estimate.

Fortis Generation – contributed earnings of $5 million, slightly below our estimate of $7 million with higher-than-expected production levels more than offset by unfavourable foreign exchange losses on the translation of U.S. denominated revenue.

Fortis Properties – reported earnings of $7 million, slightly above our estimate of $5 million with revenues per available room (revpar) ~6% below our estimate (i.e., $70.75 vs. our $75.00), more than offset by higher real estate revenues owing to rent increases.

Elsewhere, Fortis has opted to adopt U.S. generally accepted accounting principles (US GAAP) for all interim and annual periods beginning on or after Jan. 1, 2012. Of note, several other Canadian investor-owned rate-regulated utilities are also expected to take a similar approach in the adoption of US GAAP beginning 2012.

Growth outlook – five-year capital program remains in check

Overall, Fortis' capital spending program remains largely unchanged with $1.2 billion in gross consolidated capital expenditures expected for 2011e. Through 2011-2015e, management expects to spend ~$5.5 billion in capital expenditures (unchanged) with ~63% allocated to its regulated electric utilities – largely driven by FortisAlberta and FortisBC. A further ~20% of the capital program is expected to be allocated to the company's regulated gas utilities (i.e., Terasen Gas) with the remaining 17% to be absorbed by non-regulated operations. Of note, the company has reiterated that it will continue to pursue acquisitions of regulated electric and natural gas utilities in the United States and Canada as well as non-regulated businesses, supplementing the company's organic growth strategy.

Waneta hydro – Elsewhere, the $900 million ($459 million net, 51% interest), 335 MW Waneta expansion project remains on track. Recall, in October 2010, FTS concluded definitive agreements to construct the hydroelectric generating facility in British Columbia. Power generation of ~630 GWh will be sold to BC Hydro under a long-term energy purchase agreement while ~234 GWh will be sold to FortisBC under a long-term capacity purchase agreement. Construction of the project began in November 2010 and is expected to be in service by Spring 2015.

Refreshing liquidity analysis – well funded through 2012e

Based on ~$2.2 billion of net capex expected for 2011-2012e, we continue to forecast sufficient cash available of ~$660 million by year-end 2012e. That said, by year-end 2012e, we forecast a debt-to-total capitalization ratio of 59%, i.e., nudging up to the high end of the company's longer-term target ratio of 60%, suggesting the potential for an opportunistic equity (or preferred share) issue well before year-end 2012e.

FTS - FUNDING REQUIREMENT ANALYSIS

Revisiting ROE upside... and downside

Despite an expected increase in long-term interest rates, the allowed ROE for 2011 at Newfoundland Power has decreased to 8.38% from 9.00% in 2010 as a result of the automatic ROE adjustment mechanism. Meanwhile, other provincial regulators are currently reviewing their ROE formulas – namely FortisAlberta (currently 9.0%). As such, we include our discounted cash flow (DCF) valuation sensitivities, highlighting both valuation upside and downside should regulators implement higher / lower ROE's longer-term. Overall, each 50 basis point change in ROE across all segments increases / decreases our DCF/share valuation by ~$1.25 (or 4%).

FTS - DCF VALUATION SENSITIVITY							
	Change in ROE						
Change in Equity Capitalization	-0.75%	-0.50%	-0.25%	0.00%	0.25%	0.50%	0.75%

Source: NBF Estimates, Bloomberg

Estimate revisions – little change to outlook

We have tweaked our 2011e capex assumptions in line with guidance while also trimming our earnings contributions from Newfoundland Power reflecting a lower 2011 ROE, and nudging up our earnings contributions from Fortis Properties in line with the quarter.

Overall, our 2012e EPS (FD) remains largely unchanged at $1.83 (was $1.82) while our 2012e distributable cash flow per share (FD) bumps up $0.02 to $2.75. Meanwhile, we forecast a 2012e earnings payout ratio of 64% (was 65%) and an adjusted funds from operations (AFFO) payout ratio of 43% (unchanged) versus the low payout group averages of 84% and 50%. On the leverage front, our 2012e D/EBITDA trims to 5.9x from 6.0x.

Target and rating unchanged

With little changes to our estimates, we maintain our $34.00 target – which is based on a risk-adjusted dividend yield of 3.8% applied to our 2012e dividend of $1.22/share, a 13.0x multiple of our 2012e Free-EBITDA of $1,039 million, and our discounted cash flow valuation of $35.25. Combined with a 12-month total return opportunity of 4.0% (group avg.: 4.8%), we maintain our Sector Perform rating.

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State with aggregate generation capacity of ~120 MW. The Company also owns and operates a hospitality and commercial real estate division with 21 hotels and over 4,000 rooms throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

Pipelines, Utilities & Energy Infrastructure

Fortis Inc.

Q1 results in line

How to make $5.5-bln of growth look easy

HIGHLIGHTS

- **Q1 results in line**
FTS reported Q1 2011 EPS (FD) of $0.65, in line with our estimate and consensus (per ThomsonOne) of $0.62. Higher than expected earnings from FortisAlberta and FortisBC Electric were partially offset by lower earnings at Newfoundland Power and Fortis Generation.

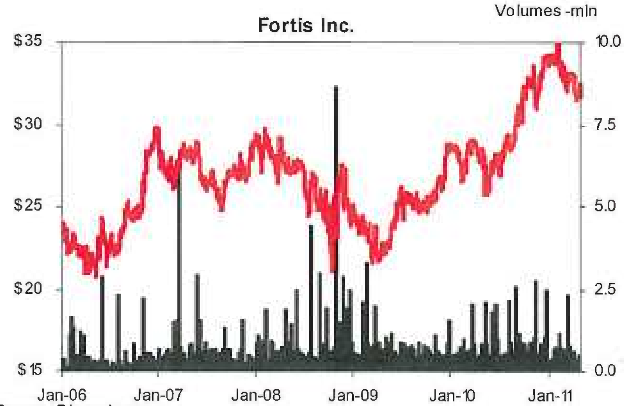
- **Making a $5.5-bln growth program look easy**
Once again, FTS reiterated its five-year capex guidance of ~$5.5 billion, with work continuing on the $900 million ($459 million net) 335 MW Waneta hydroelectric project in B.C. – remaining on track for a spring 2015 in service date.

- **Funding analysis – any equity requirements?**
Given a robust ~$2.0 billion (net) growth capital program through 2012 (~15% of current EV), we continue to highlight a D/Cap ratio of 60% by year-end 2012e – reaching FTS' target ratio of 60%. As such, we could see an opportunistic $200-300 million equity or preferred share issue before year-end 2012.

- **Estimates – largely unchanged**
Our 2012e EPS (FD) nudges up $0.02 to $1.80 (67% payout vs. group: 78%). while our 2012e AFFO/share remains unchanged at $2.64 (45% payout vs. group: 50%).

- **$34 target – trading multiples underpin Sector Perform**
With our outlook intact, we maintain our $34.00 target. FTS trades at forward consensus multiples of 17.7x P/E and 6.9x P/CF – in line with historical averages of 16.9x and 7.0x. Combined with a 12-month total return opportunity of 8.7% (group: 4.9%), we maintain our Sector Perform rating.

Stock Performance



Source: Bloomberg

Q1 results in line

Fortis reported Q1 2011 EPS (FD) of $0.65, largely in line with our estimate and consensus of $0.62 (per ThomsonOne). Overall, higher than expected earnings across the company's regulated electricity distribution assets in Western Canada (i.e., FortisAlberta and FortisBC Electric) were partially offset by lower earnings at Newfoundland Power and Fortis Generation.

Actual Earnings - FD	**$117.0**	**$0.65**

Source: NBF Estimates and Company Data

FortisBC Energy (Gas; formerly Terasen Gas) – contributed earnings of $76 million, matching our estimate. Recall, owing to the seasonal nature of natural gas consumption patterns, earnings at FortisBC's gas utilities generally peak in Q1 and Q4.

Meanwhile, effective March 1st, Terasen Gas Inc. was renamed to FortisBC Energy Inc. – in line with FTS' FortisBC Electric distribution utility for the purpose of sharing a common brand identity in the region.

FortisAlberta – reported earnings of $21 million, largely in line with our estimate of $20 million. Going-forward, the Alberta Utilities Commission (AUC) has initiated a process to reform utility rate regulation in Alberta, which could result in a performance-based rate-setting formula – potentially allowing FortisAlberta to earn higher incentive-based returns for 2012 and beyond. For 2011, the utility is expected to earn a ROE of 9.00% (subject to final approvals) based on a common equity capitalization of 41% (unchanged).

FortisBC Electric – reported earnings of $19 million, $5 million above our estimate of $14 million owing to higher than expected regulated rate-base growth.

Newfoundland Power – contributed earnings of $7 million, below our estimate of $9 million due to the timing of labour costs and initiatives completed in Q1 2011.

Other Canadian Utilities – earnings of $6 million fell in line with our estimate.

Caribbean Utilities – reported earnings of $4 million, matching our estimate.

Fortis Generation – contributed earnings of $3 million, below our estimate of $5 million owing to lower than expected generation of 76 GWh versus our 92 GWh estimate.

Fortis Properties – reported earnings of $1 million, slightly below our estimate of $2 million.

Growth outlook intact – $900-mln Waneta Expansion remains on track

Overall, Fortis has maintained its forecast of gross consolidated capex for 2011 at ~$1.2 billion. Meanwhile, through 2011-2015e, the company continues to anticipate capital expenditures of ~$5.5 billion with ~63% allocated to its regulated electric utilities – largely driven by FortisAlberta and FortisBC Electric. A further ~20% of the capital program is expected to be allocated to the company's regulated gas utilities (i.e., FortisBC Energy) with the remaining 17% to be absorbed by non-regulated operations. Of note, work continues on the $900 million ($459 million net) 335 MW Waneta hydroelectric project in B.C., which remains on track for a spring 2015 in service date.

FortisBC Gas – Construction of the $214 million liquefied natural gas storage facility on Vancouver Island continues and is expected to be completed in the next several weeks. Elsewhere, the company is expected to complete its $110 million customer care project by January 2012. Of note, capital projects within the company's regulated utilities are subject to regulatory approval.

FortisAlberta – FortisAlberta filed its 2012-2013 rate application in March proposing gross capital expenditures of ~$776 million, slightly above our previous assumptions of ~$760 million.

Fortis Properties – In March, Fortis Properties filed a development application to construct a 12-storey office building in St. John's, Newfoundland subject to municipal government approval. The $50 million project will provide ~145,000 sq. ft. of commercial office space and is expected to be completed in 2013. We continue to await final approvals prior to building the project into our estimates or valuation.

Funding analysis – any equity requirements?

With ~$2.0 billion in net capital spending through 2012 (~15% of current EV), we continue to forecast sufficient cash available of ~$675 million by year-end 2012. However, by year-end 2012, we forecast a debt-to-total capitalization ratio of 60% – i.e., reaching the company's long-term target capital structure of 60% debt and 40% equity (including preferred shares), suggesting the potential for an opportunistic $200-300 million equity or preferred share issue well before year-end 2012 (see sensitivity below).

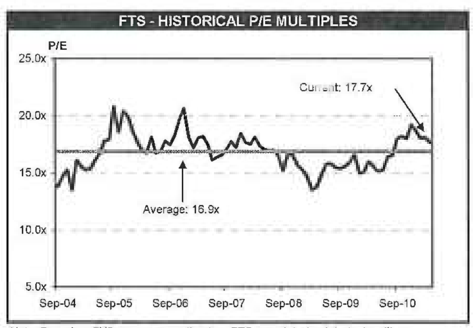
$34 target – trading multiples underpin Sector Perform rating

With little change to our estimates and outlook, we maintain our $34.00 target – which is based on a risk-adjusted dividend yield of 3.6% applied to our 2012e dividend of $1.22/share, a 13.0x multiple of our 2012e Free-EBITDA of $1,025 million, and our discounted cash flow valuation of $35.00.

As shown below, FTS is currently trading at forward consensus multiples of 17.7x P/E and 6.9x P/CF – in line with historical averages of 16.9x and 7.0x. Combined with a 12-month total return opportunity of 8.7% (group avg.: 4.9%), we maintain our Sector Perform rating.



Note: Based on FY2 consensus estimates. FTS completed a 4:1 stock split on October 12, 2005.

DISCLOSURES:

Ratings And What They Mean: PRIMARY STOCK RATING: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

(NBF Economics & Strategy group)

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State with aggregate generation capacity of ~120 MW. The Company also owns and operates a hospitality and commercial real estate division with 21 hotels and over 4,000 rooms throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

HIGHLIGHTS

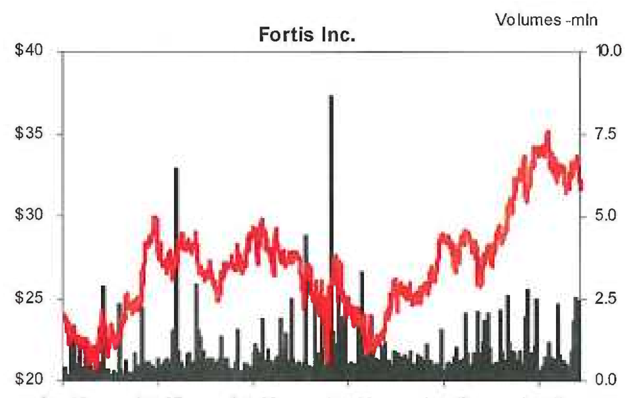
- **US$700-mln Vermont utility acquisition + $300-mln equity**
  We are resuming coverage of FTS following the closing of its ~$300-mln equity financing at $33.00 per share, with net proceeds being used to partially finance the recently announced US$700 million acquisition of rate regulated Central Vermont Public Service Corporation (CVPS; CV-NYSE) – Vermont's largest electric utility.

- **Deal metrics: 1.4x rate base; 3% EPS accretion**
  The US$700-mln purchase price represents a deal metric of ~1.4x rate base (in line with precedent transactions). CVPS is the largest electric utility in the state of Vermont serving ~160,000 customers across two-thirds of Vermont's cities and towns. With a 9.45% allowable ROE and 57% equity thickness approved for 2011, combined with 9% annual growth in rate base through at least 2015, we calculate ~3% accretion to our long-term EPS estimates (i.e., 2013 onward).

- **Funding analysis – equity needs fully satisfied**
  Despite a robust ~$2.0-bln (net) capital program through 2012 on top of the US$700-mln price tag for CVPS, we now forecast a D/Cap ratio of 60% by year-end 2012e – i.e., back in line with the company's long-term target ratio. As such, we have removed any further equity issue assumptions through 2012e.

- **$34.50 target, resuming coverage with Outperform rating**
  In line with a bump to our long-term EPS estimates, we resume coverage with a $34.50 target (was $34.00 prior to Restriction). Combined with a 12-month total return opportunity of 13.8% (group avg.: 6.1%), and no further equity needs through 2012, we are resuming coverage with an Outperform rating (was Sector Perform prior to Restriction).

Stock Performance



Source: Bloomberg

US$700-mln Vermont utility acquisition + $300-mln equity

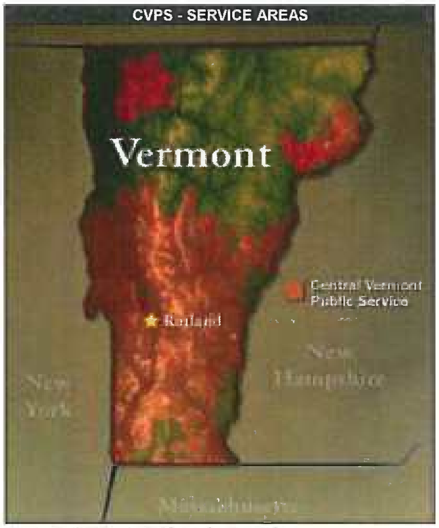
We are resuming coverage of Fortis following the closing of its ~$300 million equity financing of 9.1 million shares at $33.00 per share. Net proceeds are being used to partially fund the recently announced US$700 million acquisition of rate regulated Central Vermont Public Service Corporation (CVPS; CV-NYSE). The acquisition is expected to close over the next six to 12 months, representing the company's initial penetration into the U.S. regulated electric utility market. The acquisition is subject to CVPS shareholder approval as well as customary regulatory approvals including by the Vermont Public Service Board (PSB) and the U.S. Federal Energy Regulatory Commission (FERC).

Deal metrics: 1.4x rate base; ~3% EPS accretion

The ~US$700 million purchase price (including the assumption of US$230 million of corporate debt) represents a **transaction metric of ~1.4x 2011e mid-year rate base.**

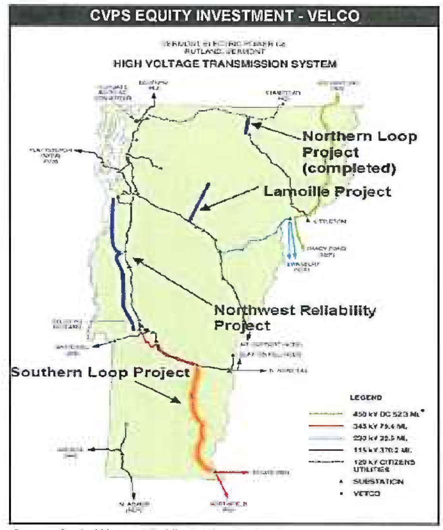
CVPS is the largest electric utility in Vermont primarily engaged in purchasing, producing, transmitting, distributing and selling electricity. CVPS serves ~160,000 customers across approximately two-thirds of the cities and towns throughout the state of Vermont. The majority of electricity sold by CVPS is purchased from Hydro-Quebec and to a lesser extent the Vermont Yankee nuclear power plant through long-term power purchase agreements. The PSB has approved a **return on equity for 2011 of 9.45% on deemed common equity of 57%.** Elsewhere, CVPS holds an ~41% common equity interest in Vermont Electric Power Company (Velco), which manages and partly owns the operations of Vermont Transco LLC – a high-voltage transmission system in the state of Vermont (see figures below).

CVPS - SERVICE AREAS



Source: Central Vermont Public Service Corporation

CVPS EQUITY INVESTMENT - VELCO



Source: Central Vermont Public Service Corporation

Overall, we forecast **~3% accretion to our longer-term EPS estimates** upon the first full year's contribution (i.e., 2013 onward). Of note, we have modeled a Q3 2012 closing date (i.e., 12 months) versus the company's guidance range for closing of six to 12 months. As shown in the chart below, CVPS expects to grow its rate base by 9% per year through at least 2015e (above Fortis' expected consolidated growth rate of ~6%). Of note, CVPS's current equity thickness of 57% sits well above the average U.S. utility's allowable equity thickness of ~50%, suggesting modest downside risk to our estimated EPS accretion assumption (see sensitivity below).

Funding analysis – equity needs satisfied

Despite ~$2.0 billion of net organic capital spending through 2012 (~15% of current EV) on top of the US$700 million price tag related to the CVPS acquisition, we continue to forecast sufficient cash available of ~$520 million (was ~$675 million) by year-end 2012. Meanwhile, our forecast debt-to-total capitalization ratio remains at or below 60%, in line with the company's long-term target capital structure of 60% debt and 40% equity (including preferred shares). As such, we have removed any further equity issue assumptions through 2012e.

Belize Government announces intention to acquire Belize Electric

On June 10, the Government of Belize announced its intention to acquire a majority ownership in Belize Electricity Limited (BEL) following several months of subsidizing the utility's energy purchases. To date, no purchase proposal has been received by Fortis. BEL is an integrated electric utility and principal distributor in Belize, Central America. Fortis currently holds an ~70% ownership interest in BEL (~25% by a Government pension fund and ~5% by local investors). The utility was acquired in 1999 following invitation by the Government for a net purchase price of ~$37 million. Currently, the utility represents a net investment of ~$125 million on FTS' balance sheet (i.e., ~2% of consolidated assets) with a 2010 ending rate base of ~$144 million.

Meanwhile, the Government of Belize also announced that should it take up a majority ownership stake in BEL, the Government will continue to honour all existing power purchase agreements (PPAs) with current stakeholders, including FTS' ~51 MW of non-regulated hydro-electric power generation capacity in Belize which sells power generation to BEL under 50-year PPAs expiring in 2055 and 2060.

Recall, on March 15th, the Supreme Court of Belize dismissed BEL's pursuit to overturn a rate order allowing the company to earn a reasonable rate of return on the company's investments that significantly impacted the financial position and operations of the entity. BEL has been in default of its debt covenants since 2008 and the Government has been subsidizing energy purchases over the past few months given the company's inability to access liquidity. A hearing is set for Q1 2012 to appeal the decision by the Supreme Court of Belize. Of note, BEL had previously earned an ROA of ~10.0%.

Overall, we have removed any future earnings contribution assumptions from BEL's assets, however, given the relative size of the investment (less than 2% FTS earnings), the impact on our valuation is largely immaterial.

Estimates – modest near-term dilution offset by long-term accretion

We have updated our financial model for the acquisition, equity financing and Belize update. Overall, our 2012e EPS (FD) nudges down a modest $0.03 to $1.77 while our 2012e adjusted funds from operations (AFFO) per share declines $0.09 to $2.55. Meanwhile, we forecast a 2012e earnings payout ratio of 68% and an AFFO payout ratio of 46% – both remaining below the low payout group averages of 78% and 50%. As noted above, we estimate ~3% accretion to our EPS estimates commencing in 2013 upon the first full year of contributions from the CVPS acquisition.

$34.50 target – resuming coverage with Outperform rating

In line with accretion to our long-term earnings estimates stemming from the CVPS acquisition, partially offset by lower contributions from the company's Caribbean Utilities segment (i.e., Belize), we are resuming coverage with a $34.50 target (was $34.00 prior to

Restriction). Overall, our target is based on a risk-adjusted dividend yield of 3.6% applied to our 2012e dividend of $1.22/share, a 13.0x multiple of our 2012e Free-EBITDA of $1,055 million and our discounted cash flow valuation of $36.00. Combined with a 12-month total return opportunity of 13.8% (group avg.: 6.1%), and no further equity needs through 2012, we are resuming coverage with an Outperform rating (was Sector Perform prior to Restriction).

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

HIGHLIGHTS

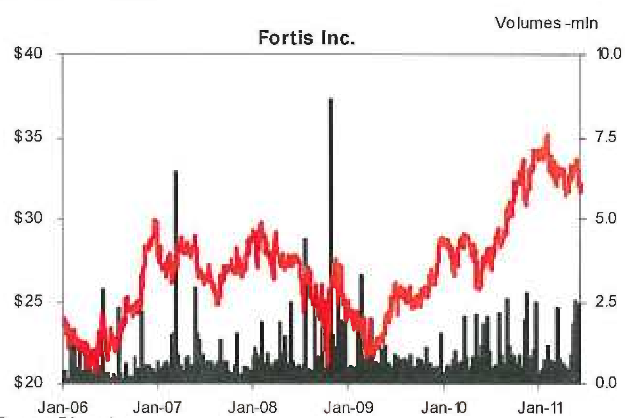
- **Gaz Métro seeks to trump CVPS deal with unsolicited bid**
  Gaz Métro has submitted to the Board of Directors of Central Vermont Public Service Corporation (CVPS; NYSE: CV) an unsolicited offer for US$35.25 per share (cash) – i.e., a 0.4% premium to Fortis' US$35.10 per share cash offer (see our June 16, 2011 note, *"US$700-mln Vermont utility acquisition – Resuming coverage with Outperform rating"*).

- **Assessing valuation downside risk**
  Recall, we estimated the transaction to be ~3% accretive to our go-forward EPS estimates, including the impact of the recent $300 million equity issuance at $33/share. As such, losing the transaction to another bidder would reduce our go-forward EPS estimates by ~7% (i.e., net ~4% dilution from the recent equity offering). From a valuation perspective, our discounted cash flow valuation would decline by ~$2.50 per share (~7%) to $33.50, with lower cash flow contributions partially offset by slightly lower leverage.

- **Potential bidding war?**
  Inside, we highlight a relatively immaterial impact to our expected accretion for every $0.50/share bump in offer price for CVPS. Therefore, we expect Fortis to increase its offer for CVPS, in line or above, Gaz Métro's current offer of US$35.25/share, while viewing the potential for a long-winded bidding war between the two companies as extremely high.

- **Downgrading rating amid bidding war uncertainty**
  Although we maintain our $34.50 target pending further clarity, we are revising our rating to Sector Perform from Outperform given the significant uncertainty surrounding a potential bidding war, final outcome and ultimate valuation impact.

Stock Performance



Source: Bloomberg

Gaz Métro seeks to trump CVPS acquisition with unsolicited offer

Gaz Métro LP announced yesterday (June 23rd) that it has submitted to the Board of Directors of Central Vermont Public Service Corporation (CVPS; NYSE: CV) an unsolicited offer to acquire all of the outstanding common shares of CVPS for US$35.25 per share (cash) – i.e., a 0.4% premium to Fortis' US$35.10 per share cash offer (see our June 16, 2011 note, *"US$700-mln Vermont utility acquisition – Resuming coverage with Outperform rating"*). As part of the transaction, Gaz Métro would consolidate the businesses of 100%-owned Green Mountain Power Corporation (an integrated electric utility in Vermont) with CVPS, while citing ~$144 million in customer savings over the first 10 years of operations through natural synergies. Meanwhile, Gaz Métro has committed to paying CVPS shareholders its regular quarterly dividend until closing (expected eight to 12 months), versus normal dividends for two quarters and $0.01 dividends through deal approval under the Fortis offer.

Impact of a potential bidding war?

Fortis has stated that it will respond in due course to any actions taken by CVPS following their review of the Gaz Métro offer. Recall, we estimated the transaction to be ~3% accretive to our go-forward EPS estimates, including the impact of the recent $300 million equity issuance at $33/share. As such, a loss of the transaction would reduce our go-forward EPS estimates by ~7% (i.e., net ~4% dilution from the recent equity offering). From a valuation perspective, our discounted cash flow valuation would decline by ~$2.50 per share (~7%) to $33.50, with lower cash flow contributions partially offset by lower leverage (see table below).

Meanwhile, as shown in the table below, each $0.50 per share bump in offer price for CVPS reduces our go-forward EPS estimates by a relatively immaterial 0.1% (i.e., no change to our valuation). As such, we expect Fortis to increase its offer for CVPS, in line or above, Gaz Metro's current offer of US$35.25/share, while viewing the potential for a long-winded bidding war between the two companies as extremely high.

CVPS - 2012E EPS ACCRETION SENSITIVITY(1)

		Offer (US$/share)				
		$35.10	$35.60	$36.10	$36.60	$37.10
ROE	9.0%	2.3%	2.2%	2.1%	2.0%	1.9%
	9.2%	2.5%	2.4%	2.3%	2.2%	2.1%
	9.5%	2.8%	2.7%	2.6%	2.5%	2.4%
	9.7%	3.0%	2.9%	2.8%	2.7%	2.6%
	10.0%	3.3%	3.2%	3.1%	3.0%	2.9%

Revising rating to Sector Perform amid bidding war uncertainty

We anticipate an extended review process on the part of CVPS, as well as an ensuing bidding war between Fortis and Gaz Métro (given the relative valuation downside for Fortis). With little clarity as to the outcome of the situation at this point, we expect the market to price in a worst case scenario over the near term – i.e., up to a $2.50 per share reduction to the current market price. As such, although we maintain our $34.50 target pending further clarity surrounding the situation, we are revising our rating to Sector Perform from Outperform.

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

Fortis Inc. – (TSX: FTS) $32.67

STOCK RATING: Sector Perform (Unchanged)

TARGET: $34.50 (Unchanged)

RISK RATING: Average (Unchanged)

Gaz Métro to acquire CVPS – Fortis merger agreement terminated

The Board of Directors of Central Vermont Public Service Corporation (CVPS; NYSE: CV) has informed Fortis (TSX: FTS) that it has determined that a proposed unsolicited acquisition of CVPS by Gaz Métro LP represents a 'superior offer' to that of Fortis' previously announced acquisition. Recall, on June 23rd Gaz Métro submitted an unsolicited offer to acquire all of the outstanding common shares of CVPS for US$35.25 per share (cash) – i.e., a 0.4% premium to Fortis' US$35.10 per share cash offer (see our June 16, 2011 note, "*US$700-mln Vermont utility acquisition*"). As part of the transaction, Gaz Métro will consolidate the businesses of 100% owned Green Mountain Power Corporation (an integrated electric utility in Vermont) with CVPS, having cited ~$144 million in customer savings over the first 10 years of operations through synergies. Meanwhile, Gaz Métro has committed to paying CVPS shareholders its regular quarterly dividend until closing (expected 8-12 months), versus normal dividends for two quarters and $0.01 dividends through deal approval under the Fortis deal. Overall, the Merger Agreement between Fortis and CVPS has been terminated resulting in an immediate payment of the termination fee to Fortis by CVPS of US$17.5 million as well as a US$2 million recovery of expenses.

Removing previous accretion, equity now dilutive to estimates

Recall, we estimated the transaction to be ~3% accretive to our go-forward EPS estimates, including the impact of the recent $300 million equity issuance at $33/share. The loss of this transaction reduces our go-forward EPS estimates by ~7% (i.e., net ~4% dilution from the recent equity offering). Of note, we had previously modelled for a Q3 2012 acquisition – i.e., our 2012e EPS lowers by ~3%.

Impact – negative to target, neutral to Sector Perform rating

From a valuation perspective, our discounted cash flow valuation declines by ~$2.50 per share (~7%) to $33.50, with lower cash flow contributions partially offset by lower leverage. However, with little change to our Free-EBITDA or Dividend Discount Model valuations, we expect a $1.00 reduction to our target. We currently rate FTS a Sector Perform with a $34.50 target.

Research Analysts – The Research Analyst(s) who prepare these reports certify that their respective report accurately reflects his or her personal opinion and that no part of his/her compensation was, is, or will be directly or indirectly related to the specific recommendations or views as to the securities or companies.

HIGHLIGHTS

- **Gaz Métro wins CVPS deal by first round knockout**
The Board of Directors of Central Vermont Public Service Corporation (CVPS; NYSE: CV) has determined that the unsolicited US$35.25/share offer by Gaz Métro LP represents a 'superior offer' to Fortis' US$35.10/share friendly deal. We had expected Fortis to counter with a higher offer, however, the knockout punch appears to stem from the regulatory (and political) side of the approval process – i.e., Gaz Métro citing ~$144 million in customer savings over the first 10 years of operations through synergies with Green Mountain Power. With the Merger Agreement terminated, Fortis receives a termination fee and recovery of expenses ($19.5 mln total).

- **Liquidity analysis – a little dry powder for the next deal?**
We now forecast cash available of ~$1.0 billion by year-end 2012 (was ~$520 million) with a debt-to-total cap ratio of 57% – i.e., slightly below the company's long-term target capital structure of 60% debt / 40% equity (including pref. shares), providing a little dry powder for another mid-size acquisition without further equity requirements.

- **Target down $1.00, maintain Sector Perform**
Our EPS estimates decline ~7% (2013e onward) with our discounted cash flow valuation (33% of target) declining $2.50 to $33.50. However, with little change to our Free-EBITDA and Dividend Discount Model valuations, our target declines $1.00 to $33.50 and we maintain our Sector Perform rating based on a 12-month total return opportunity of 6.9% (group avg.: 4.9%).

NATIONAL BANK FINANCIAL

CVPS deal terminated – Gaz Métro wins by first round knockout

The Board of Directors of Central Vermont Public Service Corporation (CVPS; NYSE: CV) has informed Fortis (TSX: FTS) that the unsolicited offer for CVPS by Gaz Métro LP represents a 'superior offer' to the FTS friendly agreement. Recall, on June 23rd Gaz Métro submitted an unsolicited offer to acquire all of the outstanding common shares of CVPS for US$35.25 per share (cash) – i.e., a 0.4% premium to Fortis' US$35.10 per share cash offer (see our June 16, 2011 note, "*US$700-mln Vermont utility acquisition*").

Despite the skinny premium offered by Gaz Métro to CVPS shareholders relative to the FTS deal, Gaz Métro will consolidate the businesses of 100%-owned Green Mountain Power Corporation (an integrated electric utility in Vermont) with CVPS, citing ~$144 million in customer savings (rate payers) over the first 10 years of operations through synergies – i.e., the knockout punch from a regulatory (and political) approval perspective, effectively making a higher bid by Fortis to CVPS shareholders largely inconsequential.

Overall, the Merger Agreement between Fortis and CVPS has been terminated, resulting in an immediate payment of the termination fee to Fortis by CVPS of US$17.5 million as well as a US$2 million recovery of expenses.

Liquidity analysis – a little dry powder for the next deal?

With ~$2.0 billion of net organic capital spending through 2012 (~15% of current EV), we now forecast cash available of ~$1.0 billion (was ~$520 million) by year-end 2012 after removing the ~$700 million price tag for CVPS. Meanwhile, we forecast a debt-to-total capitalization ratio of 57% (including the recent exercise of the Underwriter's over-allotment option) – i.e., slightly below the company's long-term target capital structure of 60% debt and 40% equity (including preferred shares), providing a little dry powder for another mid-size acquisition without further equity requirements.

Estimates – Removing CVPS accretion

We have removed the CVPS transaction from our model (half-year contribution in 2012e based on an expected closing date of Q3 2012), reducing our long-term EPS estimates by ~7% (i.e., 2013e onward).

Overall, our 2012e EPS (FD) nudges down $0.07 to $1.70 while our 2012e adjusted funds from operations (AFFO) per share declines $0.06 to $2.49. Meanwhile, we forecast a 2012e earnings payout ratio of 71% and an AFFO payout ratio of 48% – both remaining below the low payout group averages of 78% and 50%.

Target down $1.00 – maintain Sector Perform rating

Our target declines $1.00 to $33.50, based on a risk-adjusted dividend yield of 3.6% (unchanged) applied to our 2012e dividend of $1.22/share, a 13.0x multiple (unchanged) of our 2012e Free-EBITDA of $1,020 million and our discounted cash flow valuation of $33.50 (was $36.00). Combined with a 12-month total return opportunity of 6.9% (group avg.: 4.9%), we maintain our Sector Perform rating.

DISCLOSURES:

Ratings And What They Mean: <u>**PRIMARY STOCK RATING**</u>: NBF has a three-tiered rating system that is relative to the <u>coverage universe</u> of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. <u>**SECONDARY STOCK RATING**</u>: **Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. <u>**INDUSTRY RATING**</u>: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. <u>**RISK RATING**</u>: NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State with aggregate generation capacity of ~120 MW. The Company also owns and operates a hospitality and commercial real estate division with 21 hotels and over 4,000 rooms throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

HIGHLIGHTS

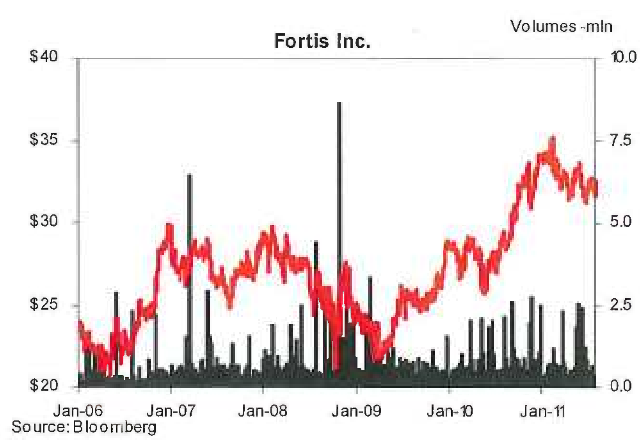
- **Q2 results slightly below expectations**
  FTS reported Q2 2011 EPS (FD) of $0.33, slightly below our estimate and consensus of $0.35. Overall, slightly lower earnings from FortisBC – Gas, Fortis Generation and higher than expected corporate costs were partially offset by stronger contributions from Caribbean Utilities and Fortis Properties.

- **Five-year capex program bumps up $200-mln to $5.7-bln**
  Fortis has bumped up its five-year capital guidance to ~$5.7 billion through 2015e, an increase of ~4% from previous guidance of ~$5.5 billion – reflecting higher capital expenditures expected at FortisBC Energy (Gas). Elsewhere, the ~$900 million, 335 MW Waneta hydroelectric project remains on track to be commissioned in the spring of 2015.

- **Estimate revisions – modest changes**
  Overall, our 2012e EPS (FD) nudges down to $1.68 (was $1.70) while our 2012e AFFO per share bumps up $0.11 to $2.60. We forecast a 2012e earnings payout ratio of 72% (group avg.: 78%) and an AFFO payout ratio of 46% (group avg.: 49%). Going-forward, we forecast a 2012e D/Cap of 56%, well below the company's long-term target of 60%.

- **$33 target, trading multiples cap near-term upside**
  Overall, our target declines a modest $0.50 to $33.00. FTS is currently trading at forward consensus multiples of 16.8x P/E and 6.8x P/CF – both in line with historical averages of 16.9x and 7.0x, but below our forecast multiples of 18.4x and 7.5x, suggesting downside risk to the Street's estimates. As such, we maintain our Sector Perform rating with a 12-month total return opportunity of 12.4% (group avg.: 8.2%).

Stock Performance



Q2 results slightly below expectations

Fortis reported Q2 2011 EPS (FD) of $0.33, slightly below our estimate and consensus of $0.35 (per ThomsonOne). Overall, lower than expected earnings from FortisBC – Gas, Fortis Generation and higher than expected corporate costs were partially offset by stronger contributions from Caribbean Utilities and Fortis Properties.

FTS - Q2 2011 EARNINGS RECONCILIATION	$ mlns	Per Share
Estimated Earnings - FD	$62.2	$0.35
Difference Related to:		
FortisBC - Gas	-$1.1	(0.01)
FortisAlberta	$0.8	0.00
FortisBC - Electric	$0.6	0.00
Newfoundland Power	$0.1	0.00
Other Cdn Utilities	$0.7	0.00
Caribbean Utilities	$1.0	0.01
Fortis Generation	-$1.9	(0.01)
Fortis Properties	$1.2	0.01
Corporate & other	-$5.6	(0.03)
Actual Earnings - FD	$58.0	$0.33

Source: NBF Estimates and Company Data

FortisBC Energy (Gas; formerly Terasen Gas) – contributed earnings of $15 million, slightly below our $16 million estimate due to higher than expected labour and consulting expense owing to the timing of these expenditures. Recall, owing to the seasonal nature of natural gas consumption patterns, earnings at FortisBC's gas utilities generally peak in Q1 and Q4.

FortisAlberta – reported earnings of $19 million versus our $18 million estimate. Of note, FortisAlberta has filed its two-year rate application (2012-2013) with the Alberta Utilities Commission (AUC) – proposing gross capital expenditures of ~$775 million over the two-year period (unchanged). Going-forward, the AUC has initiated a process to reform utility rate regulation in Alberta which could result in a performance-based rate-setting formula – potentially allowing FortisAlberta to earn higher incentive-based returns for 2012 and beyond. For 2011, the utility is expected to earn an ROE of 9.00% (subject to final approvals) based on a common equity capitalization of 41% (unchanged).

FortisBC Electric – reported earnings of $9 million versus our $8 million estimate.

Newfoundland Power – earnings of $11 million matched our estimate. In July, the utility filed an application with the Newfoundland and Labrador Board of Commissioners of Public Utilities (PUB) for its 2012 capital expenditure plan totalling ~$77 million.

Other Canadian Utilities – contributed earnings of $6 million, slightly above our estimate of $5 million owing to stronger than expected electricity sales growth.

Caribbean Utilities – reported earnings of $7 million, slightly above our estimate of $6 million owing to operating cost control efforts. Effective September 2011, the Government of the Turks and Caicos Islands plans to implement a carbon tax which may not be permitted to be passed onto the utility's customers. If the carbon tax is implemented as scheduled, earnings from Fortis Turks and Caicos will decrease by ~$1 million for 2011. We continue to await further clarity surrounding management's negotiations with the Government prior to adjusting our estimates.

Fortis Generation – contributed earnings of $2 million, $2 million below our estimate of $4 million. While energy sales of 90 GWh fell in line with our 89 GWh estimate, the company reported higher than expected financing charges as a result of lower interest revenue on inter-company lending to regulated operations in Ontario.

Fortis Properties – earnings of $7 million versus our estimate of $6 million on stronger than expected rent increases across the company's real estate division.

Corporate & Other – reported operating expenses of $18 million, well above our estimate of $12 million on lower than expected corporate income tax recoveries.

Portfolio update – Five-year capital program bumps up $200 million

Overall, Fortis has bumped up its five-year capex guidance to ~$5.7 billion through 2015e, an increase of ~4% from previous guidance of ~$5.5 billion. The increase largely reflects higher capital expenditures expected at FortisBC Energy (Gas). Of note, ~61% of the capital spending is expected to be incurred at the regulated electric utilities driven by FortisAlberta and FortisBC. Meanwhile, ~23% and 16% of the company's capital guidance is expected to be incurred at FortisBC Energy and the company's other non-regulated operations.

Fortis Generation – The ~$900 million ($459 million net), 335 MW Waneta hydroelectric project remains on track to be commissioned in the spring of 2015.

Fortis Properties – In March, Fortis Properties filed a development application to construct a 12-storey office building in St. John's, Newfoundland subject to municipal government approval. The $50 million project will provide ~145,000 sqft of commercial office space and is expected to be completed in 2013. We continue to await final approvals prior to building the project into our estimates or valuation.

Accounting Standards – Elsewhere, in June, the Ontario Securities Commission (OSC) issued a decision allowing FTS and its subsidiaries to prepare their financial statements in accordance with U.S. GAAP effective January 1, 2012.

Belize Government expropriates Belize Electric

On June 20th, the Government of Belize (GOB) passed legislation and issued an order which was delivered on June 21st to expropriate FTS' ~70% ownership interest in Belize Electric Limited (BEL) – i.e., an integrated electric utility and the principal electricity distributor in Belize. The Government has also dismissed the Board of Directors of BEL including the nominees of FTS. Fortis has initiated proceedings for compensation from the GOB for the value of the company's previous investment in BEL (~$112 million in net book value, or <1% of enterprise value).

Of note, the GOB has indicated publicly that it does not intend to expropriate FTS' wholly-owned Belize Electric Company Limited (BECOL) and will honor all existing power purchase agreements (PPAs) with current stakeholders – including FTS' ~51 MW of non-regulated hydro-electric generation capacity in Belize which sells power generation to BEL under 50-year PPAs expiring in 2055 and 2060.

Recall, we had previously removed our contributions from BEL following regulatory uncertainty surrounding the ability for the company to earn an appropriate rate of return (see our previous note, *"Resuming coverage with Outperform rating"*, June 16, 2011 available at www.nbfinancial.com).

Estimates revisions – modest changes

Overall, our 2012e EPS (FD) nudges down to $1.68 (was $1.70) while our 2012e adjusted funds from operations (AFFO) per share bumps up $0.11 to $2.60 owing largely to revisions to our depreciation assumptions. Meanwhile, we forecast a 2012e earnings payout ratio of 72% (was 71%) and an AFFO payout ratio of 46% (was 48%) – both remaining slightly below the low payout group averages of 78% and 49%. On the leverage front, our 2012e D/EBITDA declines to 5.7x from 5.8x and we forecast a 2012e debt-to-capitalization of 56% (~64% including preferred shares as debt), well below the company's long-term target of 60%.

$33 target, trading multiples cap near-term upside

Overall, our target nudges down a modest $0.50 to $33.00 – which is based on a risk-adjusted dividend yield of 3.6% applied to our 2012e dividend of $1.22/share, a 13.0x multiple of our 2012e Free-EBITDA of $1,011 million, and our discounted cash flow valuation of $32.75.

As shown below, FTS is currently trading at forward consensus multiples of 16.8x P/E and 6.8x P/CF – both in line with historical averages of 16.9x and 7.0x, but below our forecast multiples of 18.4x and 7.5x – suggesting downside risk to the Street's estimates. As such, we maintain our Sector Perform with a 12-month total return opportunity of 12.4% (group avg.: 8.2%).

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State with aggregate generation capacity of ~120 MW. The Company also owns and operates a hospitality and commercial real estate division with 21 hotels and over 4,000 rooms throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

HIGHLIGHTS

- **Q3 results largely in line**
  FTS reported Q3 2011 EPS (FD) of $0.25 (net of $11 million or $0.06/share in one-time termination fees received) – largely in line with our estimate of $0.23 and consensus of $0.24.

- **$5.7 billion, five-year growth capital program in check**
  Fortis has reiterated its five-year growth capex guidance at ~$5.7 billion (gross) through 2015e. Of note, ~61% of capex is expected to be incurred at the regulated electric utilities driven by FortisAlberta and FortisBC, while ~23% and 16% of the company's capital guidance is expected to be incurred at FortisBC Energy and the company's other non-regulated operations. Meanwhile, the ~$900 million ($459 million net), 335 MW Waneta hydroelectric project in B.C. remains on track to be commissioned in the spring of 2015. Elsewhere, the company recently acquired a 160-room hotel in Winnipeg for $25 million while receiving regulatory approval to develop a $50 million office tower in St. John's, Newfoundland by H2 2013.

- **Estimate revisions – modest bump to earnings**
  Overall, our 2012e EPS (FD) nudges up to $1.70 (was $1.68; earnings payout of 70% vs. group avg.: 78%) while our 2012e adjusted funds from operations per share bumps up $0.04 to $2.64 (AFFO payout of 45% vs. group avg.: 50%).

- **$33.50 target, maintain Sector Perform**
  In line with the changes to our estimates, our target bumps up $0.50 to $33.50. Combined with a 12-month total return opportunity of 1.9% (group avg.: 6.5%) we maintain our Sector Perform rating.

Stock Performance

(1) Net of $11 million ($0.06/share) in after-tax earnings related to the termination fee paid by Central Vermont Public Service in July.
Source: NBF Estimates and Company Data

FortisBC Energy (Gas; formerly Terasen Gas) – contributed a loss of $3 million, largely in line with our estimated loss of $4 million. Recall, owing to the seasonal nature of natural gas consumption patterns, earnings at FortisBC's gas utilities generally peak in Q1 and Q4.

FortisAlberta – reported earnings of $19 million, $1 million above our estimate of $18 million on higher than expected customer growth and energy deliveries (i.e., 3,911 GWh versus our 3,780 GWh estimate).

Of note, FortisAlberta has filed its two-year rate application (2012-2013) with the Alberta Utilities Commission (AUC) – proposing gross capital expenditures of ~$775 million over the two-year period (unchanged). The AUC is currently undergoing a process to finalize the allowed ROE for 2011 (currently 9.0%; 41% common equity) and is also considering whether a return to a formula-based approach for setting the allowed ROE is warranted beginning 2012 – which could result in higher incentive-based returns for 2012 and beyond.

FortisBC Electric – earnings of $10 million matched our estimate.

Newfoundland Power – contributed earnings of $8 million, slightly below our estimate of $9 million owing to generally higher than expected operating expenses.

Other Canadian Utilities – earnings of $6 million were slightly ahead of our $5 million estimate reflecting higher than expected rate base growth.

Caribbean Utilities – contributed earnings of $6 million, matching our estimate.

Fortis Generation – reported earnings of $8 million, ahead of our $5 million estimate. Overall, energy sales of 111 GWh were largely in line with our 104 GWh estimate while realized pricing of ~$99/MWh exceeded our estimate of $85/MWh.

Fortis Properties – contributed earnings of $9 million, $2 million above our estimate of $7 million owing to higher revenues per available room in the hospitality division (i.e., $94.83 versus our $89.50 estimate).

Portfolio update – $5.7 billion growth capital program in check

Overall, Fortis has reiterated its five-year capex guidance at ~$5.7 billion (gross) through 2015e. Of note, ~61% of the capital spending is expected to be incurred at the regulated electric utilities driven by FortisAlberta and FortisBC (unchanged). Meanwhile, ~23% and ~16% of the company's capital guidance is expected to be incurred at FortisBC Energy and the company's other non-regulated operations.

Fortis Generation – The ~$900 million ($459 million net), 335 MW Waneta hydroelectric project remains on track to be commissioned in the spring of 2015. Major construction activities on-site include excavation of intake, powerhouse and power tunnels.

FortisAlberta – Fortis continues with the replacement of vintage poles under its pole management program, of which ~96,000 poles will be replaced. The total capital cost of the program through 2019 is now estimated to be ~$335 million (was $283 million) owing to higher labour and material costs estimated later in the project.

Fortis Properties – In August, Fortis Properties received approval to construct a 12-storey office building in St. John's, Newfoundland. The $50 million project will provide ~152,000 sqft of commercial office space and is expected to be completed in H2 2013. Elsewhere, the segment acquired the 160-room, full-service Hilton Suites Winnipeg Airport hotel in October for $25 million.

Belize Electric – Recall, on June 20th, the Government of Belize (GOB) passed legislation and issued an order which was delivered on June 21st to expropriate FTS' ~70% ownership interest in Belize Electric Limited (BEL) – i.e., an integrated electric utility and the principal electricity distributor in Belize. Fortis has commissioned an independent valuation of its previous investment in Belize and expects to submit a claim to the GOB during Q4 2011 (~$120 million in net book value, or <1% of enterprise value). Meanwhile, FTS has also commenced an action in the Belize Supreme Court – challenging the legality of the expropriation of its investment in BEL.

Of note, the GOB has indicated publicly that it does not intend to expropriate FTS' wholly-owned Belize Electric Company Limited (BECOL) and will honour all existing power purchase agreements (PPAs) with current stakeholders – including FTS' ~51 MW of non-regulated hydro-electric generation capacity in Belize which sells power generation to BEL under 50-year PPAs expiring in 2055 and 2060.

Estimate revisions – modest bump to earnings

Overall, our 2012e EPS (FD) nudges up to $1.70 (was $1.68) while our 2012e adjusted funds from operations (AFFO) per share bumps up $0.04 to $2.64 owing largely to revisions to our depreciation assumptions. Meanwhile, we forecast a 2012e earnings payout ratio of 70% (was 72%) and an AFFO payout ratio of 45% (was 46%) – both remaining slightly below the low payout group averages of 78% and 50%. On the leverage front, our 2012e D/EBITDA declines to 5.6x from 5.7x and we forecast a 2012e debt-to-capitalization of 56% (~64% including preferred shares as debt), well below the company's long-term target of 60%.

Target up $0.50, maintain Sector Perform rating

Overall, our target bumps up $0.50 to $33.50 – which is based on a risk-adjusted dividend yield of 3.5% applied to our 2012e dividend of $1.22/share, a 13.0x multiple of our 2012e Free-EBITDA of $1,020 million, and our discounted cash flow valuation of $33.25. Combined with a 12-month total return opportunity of 1.9% (group avg.: 6.5%) we maintain our Sector Perform rating.

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

Associate: Anthony Sze, CA, CFA - (403) 290-5445
anthony.sze@nbfinancial.com

HIGHLIGHTS

- **Q4 results in line**
  FTS reported Q4 2011 EPS (FD) of $0.45 – matching our estimate. For 2011, FTS reported EPS (FD) of $1.74, representing ~4% growth from 2010 levels (excluding $0.06 of one-time items).

- **Revisiting regulatory downside risk**
  In light of the current low interest rate environment, regulators in B.C., Alberta and Newfoundland have launched cost of capital reviews, which may result in lower allowable ROEs for FortisBC, FortisAlberta and Newfoundland Power. Inside, we highlight our 2013e EPS and DCF valuation sensitivities – highlighting that for every 50 bps decline in allowable ROEs at FortisBC (Gas and Electric), FortisAlberta and Newfoundland Power, we calculate a ~5% decline to our 2013e EPS (~$0.09/share) and $34.50 DCF valuation (~$1.50/share).

- **Estimates – largely unchanged**
  Our 2013e EPS (FD) remains largely unchanged at $1.86 (was $1.85) while our 2013e AFFO per share declines ~3% to $2.69 (owing to higher than expected maintenance capex) – representing an earnings payout ratio of 67% (low payout group avg.: 78%) and an AFFO payout ratio of 46% (low payout group avg.: 48%).

- **Target edges down $0.50 – maintain Underperform**
  With slightly higher maintenance capex going forward, our target edges down $0.50 to $34.00. Based on forward consensus multiples suggesting limited near-term upside (18.8x P/E vs. 17.0x historical avg.), combined with regulatory downside risk and a 12-month total return opportunity of 3.9% (group avg.: 11.4%), we maintain our Underperform rating.

Q4 results in line

Fortis Inc. reported Q4 2011 EPS (FD) of $0.45 – matching our estimate (consensus: $0.46 per ThomsonOne). Overall, stronger earnings contributions from FortisBC (Gas & Electric) were partially offset by lower earnings from Caribbean Utilities. Meanwhile, FTS reported 2011 EPS (FD) of $1.74 – an increase of ~4% from 2010 levels of $1.62 (excluding ~$0.06/share related to an $11 million after-tax fee payable to FTS following the termination of its merger agreement with Central Vermont Public Service Corp. (CVPS) in July 2011).

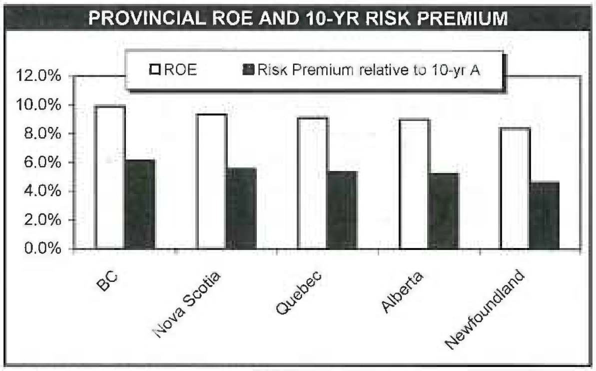
Revisiting regulatory downside risk

Recall, in our 2012 sector outlook (*"2012 sector outlook & top picks... Encore! Encore!"*, Feb. 1, 2012) we highlighted downside risk to our earnings and cash flow estimates for the utilities on our coverage list given the current low interest rate environment. In other words, provincial regulators have initiated cost of capital reviews which may result in lower allowable ROEs on the basis of relatively wide implied equity risk premiums (i.e., 4.0 to 6.0%).

PROVINCIAL ROE AND 10-YR RISK PREMIUM



Source: Company Reports, Bloomberg

B.C. Utilities Commission (BCUC) – In November 2011, the BCUC gave preliminary notification to public utilities subject to its regulation that it will initiate a Generic Cost of Capital proceeding in early 2012 which will: 1) set the appropriate cost of capital for a benchmark low-risk utility; 2) establish a ROE automatic adjustment mechanism; and 3) establish a deemed capital structure / cost of capital methodology. For 2012, the allowed ROEs at FortisBC Gas and Electric will be maintained pending the outcome of the proceeding (FortisBC Gas: 9.5% – B.C.;10.0% – Vancouver Island / Whistler / 40% equity; FortisBC Electric: 9.9% / 40% equity).

Alberta Utilities Commission (AUC) – The AUC issued a decision in December 2011 which set the 2011 and 2012 allowed ROE at 8.75% (was 9.0% in 2010) and maintained this rate for 2013 on an interim basis (equity thickness unchanged at 41%). Going forward, the AUC concluded that it would not return to a formula-based ROE automatic adjustment mechanism at this time and would initiate a proceeding to determine the final allowable ROE for 2013e in due time.

Newfoundland & Labrador – In November 2011, Newfoundland Power's allowed ROE for 2012 was calculated at 7.85% under the ROE automatic adjustment formula – a decrease of 53 bps from 8.38% for 2011. However, the Newfoundland and Labrador Board of Commissioners of Public Utilities (PUB) suspended the use of the ROE automatic adjustment formula for 2012 and has maintained an 8.38% ROE for 2012 on an interim basis subject to a full cost of capital review expected to be held sometime in 2012.

In the following tables, we refresh our 2013e EPS and discounted cash flow (DCF) valuation sensitivities – highlighting that for every 50 bps decline in allowable ROEs at FortisBC (Gas and Electric), FortisAlberta and Newfoundland Power, we calculate ~5% decline to our 2013e EPS (~$0.09/share) and DCF valuation (~$1.50/share).

Portfolio update – five-year, $5.5 billion capital program

Overall, Fortis expects to incur ~$5.5 billion of capital expenditures through 2016 with ~64% incurred at the regulated electric utilities driven largely by FortisAlberta and FortisBC. Meanwhile, ~23% and ~13% of the company's capital expenditures are expected to be incurred at FortisBC Gas and the company's other non-regulated operations. Overall, ~38% of utility capital spending (~$1.8 billion) is earmarked for sustaining capital expenditures.

Fortis Generation – The ~$900 million (FTS: 51%), 335 MW Waneta hydroelectric project remains on track to be commissioned in the spring of 2015. Generation from the facility is contracted to both BC Hydro and FortisBC Electric under a long-term PPA. To date, ~$244 million has been incurred on the project for excavation of the intake, powerhouse and power tunnels.

FortisAlberta – Fortis continues with the replacement of vintage poles under its pole management program, of which ~96,000 poles will be replaced. The total capital cost of the program through 2019 is now estimated to be ~$335 million (was $283 million) owing to higher labour and material costs.

Fortis Properties – In August, Fortis Properties received approval to construct a 12-storey office building in St. John's, Newfoundland. The $47 million project will provide ~152,000 sq ft of commercial office space and is expected to be completed in H2 2013.

Estimates – largely unchanged

Overall, our 2013e EPS (FD) remains largely unchanged at $1.86 (was $1.85) – representing an unchanged 2013e earnings payout ratio of 67% (low payout group avg.: 78%). However, our 2013e adjusted funds from operations (AFFO) per share declines ~3% to $2.69 (owing to higher than expected maintenance capex) – representing an AFFO payout ratio of 46% (was 44%), in line with the low payout group average of 48%.

On the leverage front, our 2013e D/EBITDA remains unchanged at 5.9x (low payout group avg.: 5.0x) and we forecast a 2013e debt-to-capitalization of 57% (~64% including preferred shares as debt), below the company's long-term target ratio of 60%.

Target edges down $0.50, maintain Underperform

With slightly higher than expected maintenance capex through 2016, our target edges down $0.50 to $34.00 – which is based on a risk-adjusted dividend yield of 3.5% applied to our 2013e dividend of $1.24/share, a 13.5x multiple of our 2013e free-EBITDA of $981 million and our DCF valuation of $34.50.

As shown in the following tables, FTS is currently trading at forward consensus multiples of 18.8x P/E and 7.3x P/CF – both ahead of historical averages of 17.0x and 7.0x. Combined with regulatory downside risk noted above and a 12-month total return opportunity of 3.9% (group avg.: 11.4%), we maintain our Underperform rating.

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight, Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low, Average, Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

STOCK RATING: Underperform (Unchanged)

TARGET: $34.00 (Unchanged)

RISK RATING: Low (Unchanged)

To acquire CH Energy Group for US$1.5-bln

Fortis Inc. (TSX: FTS) announced today that it has entered into an agreement to acquire CH Energy Group Inc. (NYSE: CHG) for US$65.00 per common share and representing an aggregate purchase price of US$1.5 billion (including the assumption of US$500 million of debt). The purchase price represents a 10.5% premium to CHG's closing price of US$58.77 on Feb. 17 and is expected to close within 12-months – subject to the receipt of shareholder, regulatory and other approvals including those of the New York Public Service Commission (NYPSC) and the Federal Energy Regulatory Commission (FERC).

Approximately 93% of the company's assets are involved in regulated electric and natural gas distribution in New York State servicing ~300,000 electric and ~75,000 natural gas customers. The remaining 7% is comprised primarily of a fuel delivery business servicing ~56,000 customers in the mid-Atlantic region. That said, the company generated US$45 million in net income in 2011 with the company's regulated assets contributing ~97% under a regulated return on equity (ROE) of 10% based on an equity capitalization of 48%.

Modest accretion – paying ~17x 2013e earnings

In 2011, CHG reported adjusted EPS of $3.15. Based on capex guidance of $100 million per year through 2016, we estimate ~10% annual earnings growth and 2013e EPS of ~$3.80 (i.e., 17.1x transaction multiple). With FTS currently trading at 17.7x, we anticipate modest accretion to our 2013 estimates.

On the financing front, Fortis intends to initially finance the transaction with existing credit facilities, with more permanent financing longer-term in line with the company's current capital structure (i.e., ~60% debt; 40% equity including preferred shares). Recall, in mid-2011, FTS raised $300 million of equity – potentially limiting equity needs for this transaction (~US$600 million).

Fortis Inc.

To acquire CH Energy Group for US$1.5-bln

$1.00 target bump pending shareholder approval

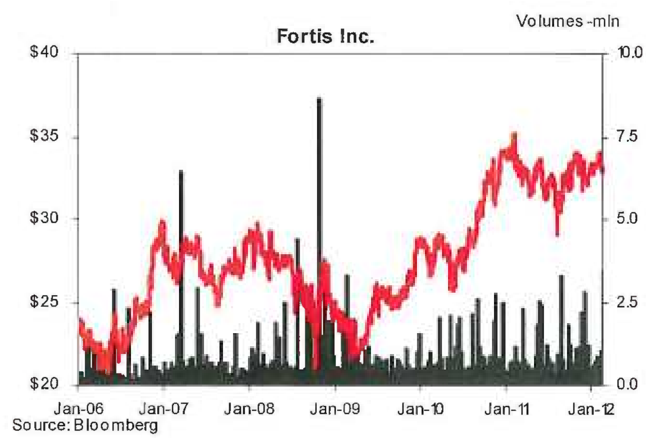
HIGHLIGHTS

- **To acquire CH Energy Group for US$1.5 billion**
  FTS announced that it entered into an agreement to acquire CH Energy Group Inc. (CHG: NYSE; a New York based rate regulated electric and gas distribution utility) for US$65.00/share, representing an aggregate purchase price of US$1.5 billion (including the assumption of US$500 million of debt). The transaction is expected to close within 12 months, subject to shareholder / regulatory approvals.

- **Transaction metrics: 18x 2013e earnings, 1.4x rate base**
  Overall, we calculate a 2013e P/E transaction multiple of 18.2x versus FTS' 2013e P/E multiple of 17.4x (low payout group avg.: 17.9x). From a rate base perspective, we calculate a transaction metric of 1.4x current rate base (excluding ~$90 million in value attributed to the Griffith assets) – in line with precedent transaction metrics.

- **$1.00 target bump pending shareholder approval**
  Assuming a Dec. 31, 2012 closing date, we calculate ~2% accretion to our estimates, with pro-forma 2013e EPS (FD) of $1.90 (was $1.86) and adjusted funds from operations (AFFO) per share of $2.75 (was $2.69). Overall, we estimate the transaction adds $1.00/share to our $34.00 target. However, we continue to exclude the transaction from our estimates and valuation pending shareholder approval (expected within the next six months) and the potential for a superior offer to emerge (CHG closing today at US$66.22/share; a 2% premium to FTS' offer of US$65.00/share). Combined with the potential for a significant equity issue pending shareholder approval, and a 12-month total return opportunity of 8.7% (group avg.: 11.0%), we maintain our Underperform rating.

Stock Performance

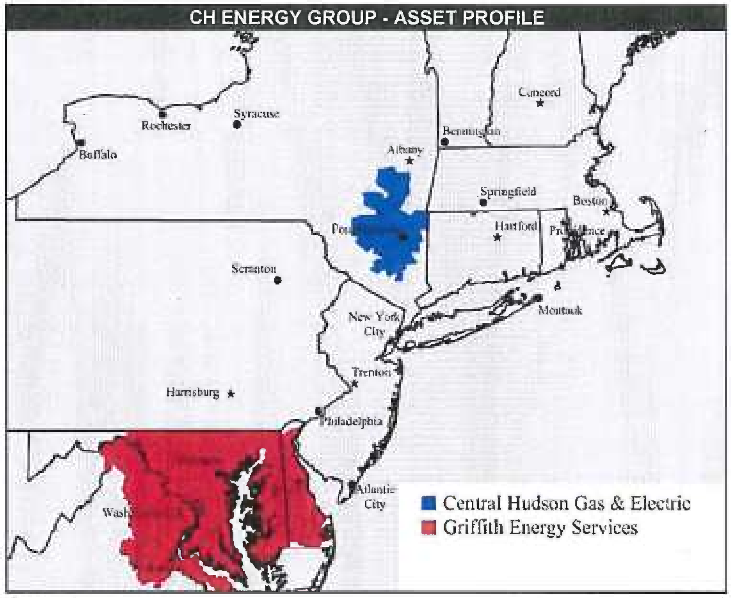


To acquire CH Energy Group for US$1.5 billion

Fortis Inc. (FTS: TSX) announced today that it entered into an agreement to acquire CH Energy Group Inc. (CHG: NYSE) for US$65.00 per common share, representing an aggregate purchase price of US$1.5 billion (including the assumption of US$500 million of debt). The purchase price represents a 10.5% premium to CHG's closing price of US$58.77 on Feb. 17 and is expected to close within 12 months, subject to the receipt of shareholder and regulatory approvals – including the New York Public Service Commission (NYPSC) and the Federal Energy Regulatory Commission (FERC).

Approximately 93% of CHG's assets (Central Hudson Gas & Electric) are comprised of regulated electric and natural gas distribution activities in New York State servicing ~300,000 electric and ~75,000 natural gas customers. The remaining 7% is comprised primarily of a fuel delivery business (Griffith Energy Services) servicing ~56,000 customers in the mid-Atlantic region. In 2011, CHG reported ~US$47 million of adjusted net income with regulated assets contributing ~97% under a regulated return on equity (ROE) of 10% based on an equity thickness of 48%.

CH ENERGY GROUP - ASSET PROFILE



Source: Company Reports

Transaction metrics: 18x 2013e earnings; 1.4x rate base

Based on capex guidance of $100 million per year through 2016 (~40% maintenance), we estimate long-term rate base growth of ~6-7% (in line with management guidance) suggesting 2013e EPS of ~$3.57 – i.e., representing an 18.2x transaction multiple versus FTS' 2013e P/E multiple of 17.4x (low payout group avg.: 17.9x). From a rate base perspective, we calculate a transaction metric of 1.4x current rate base (excluding ~$90 million in value attributed to the Griffith assets) – in line with precedent transaction metrics.

Source: Company reports, NBF Estimates, pricing per ThomsonOne

On the financing front, Fortis intends to initially finance the transaction with existing credit facilities, with more permanent financing longer term in line with the company's current capital structure (i.e., ~60% debt; 40% equity including preferred shares). Recall, in mid-2011, FTS raised $300 million of equity – partially mitigating the equity needs for this transaction to ~$500 million (~33% of gross transaction value), with timing of an equity issue pending shareholder approval in June / July 2012.

Pro-forma estimates – calculating ~2% accretion

Assuming a Dec. 31, 2012 closing date, we calculate ~2% accretion to our estimates, with pro-forma 2013e EPS (FD) of $1.90 (was $1.86) and adjusted funds from operations (AFFO) per share of $2.75 (was $2.69). Meanwhile, we forecast a pro-forma 2013e earnings payout ratio of 66% (low payout group avg.: 78%) and an AFFO pro-forma payout ratio of 45% (low payout group avg.: 48%). On the leverage front, our 2013e pro-forma D/EBITDA nudges down to 5.8x – remaining above the low payout group average of 4.0x.

However, we exclude the transaction from our estimates and valuation pending shareholder approval expected within the next six months. Recall, in mid-2011, Fortis terminated its agreement to acquire Central Vermont Public Service Corp. (CVPS; CV: NYSE) for US$700 million owing to the emergence of a superior offer from Gaz Metro LP. Combined with CHG closing today at US$66.22/share (i.e., a 2% premium to FTS' offer of US$65.00/share), we cautiously await shareholder approval prior to building the acquisition into our estimates and valuation.

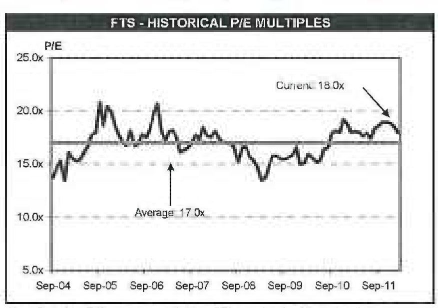
Maintain $34.00 target and Underperform, noting ~$1.00/share upside

With ~2% earnings and cash flow accretion, we estimate the transaction will add ~$1.00 per share to our valuation upon regulatory and shareholder approvals. Our current target of $34.00 remains based on a risk-adjusted dividend yield of 3.5% applied to our 2013e dividend of $1.24/share, a 13.5x multiple of our 2013e free-EBITDA of $981 million and our DCF valuation of $34.50.

As shown in the following figures, FTS is currently trading at consensus multiples of 18.0x P/E and 7.0x P/CF – versus historical averages of 17.0x and 7.0x. Combined with a significant equity issue pending shareholder approval, and a 12-month total return opportunity of 8.7% (group avg.: 11.0%), we maintain our Underperform rating.



Note: Based on FY2 consensus estimates. FTS completed a 4:1 stock split on October 12, 2005.
Source: ThomsonOne, Bloomberg, NBF

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

Fortis Inc.

Q1 results in line

Refreshing regulatory downside risk

HIGHLIGHTS

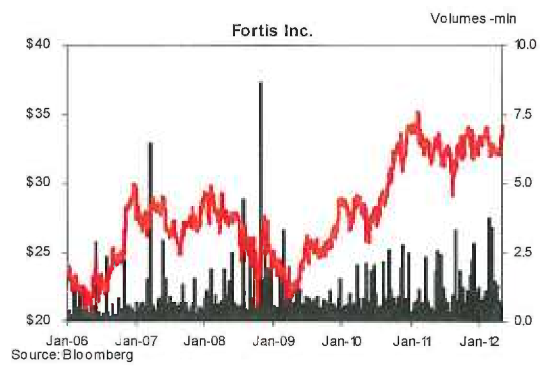
- **Q1 results in line**
  Fortis reported Q1 2012 EPS (basic) of $0.66 (net of $0.02/share in one-time acquisition expenditures) – in line with our expectations and consensus of $0.67.

- **Refreshing regulatory downside risk**
  With interest rates remaining below long-term averages, regulators in B.C. and Newfoundland have set cost of capital reviews – which could result in lower allowable ROEs (as recently experienced in Alberta). Inside, we refresh our 2013e EPS and long-term DCF valuation sensitivities – highlighting that for every 50 bps decline in allowable ROEs at FortisBC (Gas and Electric) and Newfoundland Power, we calculate ~4% decline to our 2013e EPS (~$0.07/share) and DCF valuation (~$1.25/share).

- **Estimates – EPS largely unchanged**
  Our 2013e EPS (FD) remains largely unchanged at $1.84 (payout: 67%; group avg.: 72%). Meanwhile, our 2013e AFFO/share bumps up $0.12 to $2.81 (payout: 44%; group avg.: 46%) and our 2013e D/EBITDA nudges up to 6.1x (was 5.9x) on account of changes to U.S. GAAP reporting.

- **$34.00 target, maintain Underperform**
  Overall, we maintain our $34.00 target. FTS is currently trading at a forward P/E of 18.7x – exceeding its long-term average of 17.0x and the peer group average of 18.1x. Combined with regulatory downside risk and a 12-month total return opportunity of 1.9% (group avg.: 9.9%), we maintain our Underperform rating.

Stock Performance



Q1 results in line

Fortis reported Q1 2012 EPS (basic) of $0.66 (net of $0.02/share in one-time acquisition expenditures related to the CH Energy transaction) – in line with our expectations and consensus of $0.67 (per ThomsonOne). Overall, regulated earnings of $133 million from the company's Canadian natural gas and electric distribution utilities were largely in line with our estimate of $130 million. That said, Fortis reported lower than expected contributions from Caribbean Utilities and Fortis Properties.

FTS - Q1 2012 EARNINGS RECONCILIATION		
	$ mlns	Per Share
Estimated Earnings - basic	**$126.7**	**$0.67**

Actual Earnings - basic(1)	**$125.0**	**$0.66**

(1) Net of $4 million ($0.02/share) in one-time acquisition charges related to CH Energy Group, Inc.
Source: NBF Estimates and Company Data

Caribbean Utilities – reported earnings of $3 million, half our estimate of $6 million. Earnings were impacted by higher insurance and employee-related costs at Caribbean Utilities along with depreciation expense and finance charges associated with the company's continued investment in rate-base.

Recall, on June 20, 2011, the Government of Belize (GOB) passed legislation and issued an order to expropriate FTS' ~70% ownership interest in Belize Electric Limited (BEL) – an integrated electric utility and the principal electricity distributor in Belize. In Q4 2011, FTS submitted its claim for compensation to the GOB who has determined that the fair value of Belize Electricity is substantially lower than Fortis' claim. Fortis has recorded ~$104 million in assets related to Belize Electricity and is currently assessing alternative options for fair compensation.

Fortis Properties – contributed earnings of $1 million, $2 million below our estimate of $3 million on account of higher than expected operating costs.

Refreshing regulatory downside risk

BC Utilities Commission (BCUC) – In November 2011, the BCUC gave preliminary notification to public utilities subject to its regulation that it will initiate a Generic Cost of Capital (GCOC) proceeding in early 2012 which will: 1) set the appropriate cost of capital for a benchmark low-risk utility; 2) establish a ROE automatic adjustment mechanism; and 3) establish a deemed capital structure / cost of capital methodology. For 2012, the allowed ROEs at FortisBC Gas and Electric will be maintained pending the outcome of the proceeding (FortisBC Gas: 9.5% – B.C.; 10.0% – Vancouver Island / Whistler / 40% equity; FortisBC Electric: 9.9% / 40% equity).

Newfoundland Power – Newfoundland Power's allowed ROE for 2012 was calculated at 7.85% under the ROE automatic adjustment formula – a decrease of 53 bps from 8.38% for 2011. However, the Newfoundland and Labrador Board of Commissioners of Public Utilities (PUB) suspended the use of the ROE automatic adjustment formula for 2012 and has maintained an 8.38% ROE for 2012 on an interim basis subject to a full cost of capital review expected to be held in June 2012.

Recall, the Alberta Utilities Commission (AUC) issued a decision in December 2011 which reduced the 2011 and 2012 allowed ROE to 8.75% (from 9.0% in 2010) and maintained this rate for 2013 on an interim basis (equity thickness unchanged at 41%) – potentially setting further precedence to provincial regulator's cost of capital reviews.

In the following tables, we refresh our 2013e EPS and discounted cash flow (DCF) valuation sensitivities – highlighting that for every 50 bps decline in allowable ROEs at FortisBC (Gas and Electric) and Newfoundland Power, we calculate ~4% decline to our 2013e EPS (~$0.07/share) and DCF valuation (~$1.25/share).

US$1.5 billion CH Energy acquisition on track

On Feb. 21, FTS announced that it had entered into an agreement to acquire CH Energy Group, Inc. – a New York-based rate regulated electric and gas distribution utility. The US$1.5 billion acquisition (including the assumption of US$500 million of debt) remains on track to be completed by the end of Q1 2013 (unchanged). In April 2012, FTS and CH Energy filed a joint petition with the New York State Public Service Commission as well as similar filings with the Federal Energy Regulatory Commission seeking regulatory approvals. Meanwhile, CH Energy shareholders are expected to vote on the transaction in mid-2012. Recall, we had previously highlighted 2% accretion to our estimates – representing ~$1.00/share upside to our valuation pending approvals (see our previous note *"$1.00 target bump pending shareholder approval"*, Feb. 22, 2012 available at www.nbfinancial.com).

Meanwhile, over the next five years, Fortis continues to forecast ~$5.5 billion of capital expenditures (excluding acquisitions) with ~$1.3 billion expected to be incurred in 2012. The company's capital will be deployed ~64% at its regulated electric utilities (largely FortisAlberta and FortisBC), ~23% at FortisBC Gas and the remaining ~13% at the company's non-regulated operations.

Fortis Generation – Elsewhere, the ~$900 million (FTS: 51%), 335 MW Waneta hydroelectric project remains on track to be commissioned in the spring of 2015. Generation from the facility is contracted to both BC Hydro and FortisBC Electric under a long-term PPA. To date, ~$290 (gross) million has been incurred on the project for excavation of the intake, powerhouse and power tunnels.

Estimates – EPS largely unchanged

We have reduced our rate base assumptions for Caribbean Utilities and increased our operating cost assumptions for Fortis Properties. Elsewhere, we have bumped up our go-forward regulated depreciation expenses in line with the quarter and the company's revised reporting under U.S. GAAP. Recall, effective Q1 2012, Fortis is reporting its financial statements under U.S. GAAP (previously Canadian GAAP), resulting in an increase to both assets and liabilities for changes in the classification of regulatory / utility capital assets, capital lease obligations and pension liabilities.

Overall, our 2013e EPS (FD) remains largely unchanged at $1.84 (was $1.85) – representing an unchanged 2013e earnings payout ratio of 67% (low payout group avg.: 72%). However, our 2013e adjusted funds from operations (AFFO) per share bumps up $0.12 to $2.81 – representing an AFFO payout ratio of 44% (was 46%), in line with the low payout group average of 46%. On the leverage front, our 2013e D/EBITDA nudges up to 6.1x (was 5.9x; low payout group avg.: 5.2x) and we forecast a 2013e debt-to-capitalization of 58% (~66% including preferred shares as debt), slightly below the company's long-term target ratio of 60%.

$34.00 target, maintain Underperform rating

With higher cash flows offset by an increase in debt levels, we maintain our $34.00 target – which is based on a risk-adjusted dividend yield of 3.5% applied to our 2013e dividend of $1.24/share, a 13.5x multiple of our 2013e free-EBITDA of $1,020 million and our DCF valuation of $34.50 (unchanged).

As shown in the following table, FTS is currently trading at a forward P/E of 18.7x – exceeding the long-term average of 17.0x and the peer group average of 18.1x. Combined with regulatory downside risk noted above and a 12-month total return opportunity of 1.9% (group avg.: 9.9%), we maintain our Underperform rating.

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING**: NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

Company Profile:
Fortis Inc. is primarily a natural gas and electricity distribution utility holding company providing service to more than 2,000,000 customers. Fortis' regulated holdings include a natural gas distribution utility in British Columbia and electric utilities in five Canadian provinces and three Caribbean countries. The company also holds a regulated natural gas / electric utility in New York. Its non-regulated holdings include electricity generation assets in Canada, Belize and upper New York State. The Company also owns and operates a hospitality and commercial real estate division with over 20 hotels throughout Canada and 2.8 million square feet of commercial real estate in Atlantic Canada.

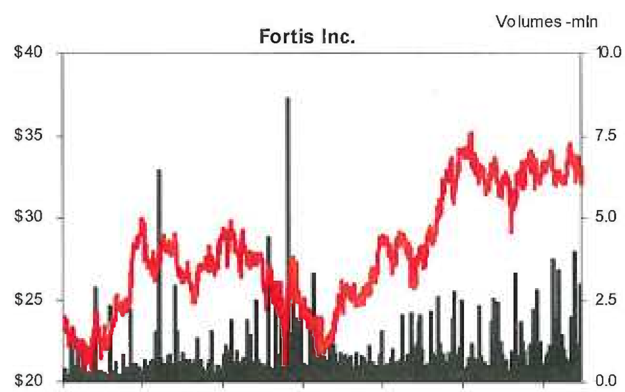
HIGHLIGHTS

- **Completes $601 million equity issue**
  We are resuming coverage of FTS following the completion of its $601 million offering of subscription receipts (18.5 million receipts at $32.50/receipt; TSX: FTS.R). Net proceeds will be used to finance the 40% equity component of the company's US$1.5 billion acquisition of CH Energy Group Inc. (expected to close by the end of Q1 2013).

- **CH Energy financing in place; growth strategy intact**
  With the CH Energy financing in place, over the next five years, Fortis expects to incur ~$5.9 billion of capital expenditures (excluding acquisitions) with ~$1.3 billion expected to be deployed in 2012. Overall, we forecast a debt-to-capitalization ratio of 58% by 2013e, remaining slightly under the company's long-term target of 60%. Combined with over ~$2.0 billion of available credit facilities as at Q1 2012, we forecast sufficient liquidity with ~$0.9 billion of available cash resources as at YE2013e.

- **$35 tgt, BCUC downside priced in – revising rating to SP**
  Based on ~2% accretion to our long-term estimates stemming from the CH Energy acquisition, we resume coverage with a $35.00 target (was $34.00 prior to restriction). That said, we continue to highlight ~4% downside risk to our valuation for every 50 bps decline in allowable ROEs for B.C. and Newfoundland (hearings throughout 2012) and recommend investors await final regulatory decisions prior to accumulating the name. However, with a 12-month total return opportunity of 12.9% (group avg.: 18.5%), suggesting the BCUC (British Columbia Utilities Commission) downside risk is largely priced into the stock, we resume coverage with a Sector Perform rating (was Underperform prior to restriction).

Stock Performance



Source: Bloomberg

Completes $601 million equity issue

We are resuming coverage of Fortis Inc. following the completion of its $601 million offering of subscription receipts (18.5 million receipts at $32.50/receipt). The subscription receipts began trading on the TSX under the symbol FTS.R on June 27, 2012. Net proceeds from the financing will be used to finance the equity component of the company's previously announced US$1.5 billion (including US$0.5 billion of debt) acquisition of CH Energy Group Inc. (see our previous note, *"$1.00 target bump pending shareholder approval"*, Feb. 22, 2012 available at www.nbfinancial.com). Each subscription receipt will entitle the holder to receive one common share of Fortis and a cash payment equal to dividends accrued from the closing of the offering to the date of issuance of the common shares – expected upon closing of the CH Energy acquisition (end of Q1 2013). Of note, the underwriters have been granted an over-allotment option to acquire an additional 2.775 million subscription receipts (15%) under the same terms and conditions up to 30 days following closing the offering.

Recall, on Feb. 21, 2012, FTS announced the acquisition of CH Energy for US$65.00 per common share representing an aggregate purchase price of US$1.5 billion. The company received shareholder approvals on June 19, 2012. Approximately 93% of CH Energy's assets (Central Hudson Gas & Electric) are comprised of regulated electric and natural gas distribution activities in New York State servicing ~300,000 electric and ~75,000 natural gas customers. The remaining 7% is comprised primarily of a fuel delivery business (Griffith Energy Services) servicing ~56,000 customers in the mid-Atlantic region. Overall, we calculate a rate base transaction metric of 1.4x – matching precedent transaction metrics.

CH Energy financing in place; long-term growth strategy intact

Overall, the acquisition will be financed ~60% debt and ~40% equity (excluding the over-allotment option) – in line with the company's long-term capital structure of 60/40 D/E (including preferred shares as equity).

CH ENERGY - ACQUISITION FINANCING

Financing	Type	($mlns) [1]	Proportion
Subscription Receipts	Equity	601	40%
Assumed Debt	Debt	500	33%
Remaining Debt	Debt	399	27%
Total		**1500**	100%

(1) Note assumes an USD/CAD exchange rate of parity and excludes the impact of the over-allotment option.

Source: Company Reports

Meanwhile, over the next five years, Fortis expects to incur ~$5.9 billion of capital expenditures (excluding acquisitions) with ~$1.3 billion expected to be deployed in 2012. Overall, we estimate FTS' debt-to-capitalization ratio will nudge up to 58% by 2013e (from 57% in 2012e), remaining slightly under the company's long-term target of 60%. Combined with over ~$2.0 billion of available credit facilities as at Q1 2012, we forecast sufficient liquidity with ~$0.9 billion of available cash resources as at year-end 2013e.

FTS - FUNDING REQUIREMENT ANALYSIS

(mlns)	Q2-Q4 2012e	2013e
Cash flow from operations	600	954

Estimates: ~2% accretive to long-term estimates

Recall, we had previously highlighted ~2% accretion to our long-term estimates – representing ~$1.00/share upside to our valuation pending shareholder approvals. With the acquisition expected to close in late Q1 2013, our 2013e EPS (FD) nudges up $0.03 (1%) to $1.87 – representing a 2013e earnings payout ratio of 71% (low payout group avg.: 72%).

Meanwhile, our 2013e adjusted funds from operations (AFFO) per share bumps up $0.02 to $2.83 – representing an AFFO payout ratio of 47% (was 44%), in line with the low payout group average of 46%. On the leverage front, our 2013e D/EBITDA remains unchanged at 6.1x. Going forward, we continue to call for a 3% dividend increase to $1.24/share annually beginning Q1 2013e.

$35.00 target, BCUC downside priced in – revising rating to SP

In line with the changes to our estimates, we resume coverage of Fortis with a $35.00 target (was $34.00 prior to restriction) – which is based on a risk-adjusted dividend yield of 3.5% applied to our 2013e dividend of $1.24/share, a 13.5x multiple (unchanged) of our 2013e free-EBITDA of $1,135 million and our DCF valuation of $35.50 (was $34.50).

That said, we continue to highlight ~4% downside risk to our 2013e EPS (~$0.07/share) and DCF valuation ($1.25/share) for every 50 bps decline in allowable ROEs at FortisBC (Gas & Electric) and Newfoundland Power. Recall, in November 2011 the BC Utilities Commission (BCUC) gave preliminary notification to public utilities subject to its regulation that it will initiate a generic cost of capital proceeding in 2012. Meanwhile, the Newfoundland and Labrador Board of Commissioners of Public Utilities also suspended its use of the ROE automatic adjustment formula for 2012 and has initiated a full cost of capital review (see our previous note, *"Refreshing regulatory downside risk"*, May 3, 2012 available at www.nbfinancial.com). Both hearings are expected throughout 2012 and we recommend investors await both decisions prior to accumulating a position in the name. However, with a 12-month total return opportunity of 12.9% (group avg.: 18.5%), suggesting the downside related to the BCUC decision is largely priced into the stock, we resume coverage of Fortis with a Sector Perform rating (was Underperform prior to restriction).

NATIONAL BANK FINANCIAL

DISCLOSURES:

Ratings And What They Mean: <u>PRIMARY STOCK RATING</u>: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **<u>SECONDARY STOCK RATING</u>: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **<u>INDUSTRY RATING</u>:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **<u>RISK RATING</u>:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

General – National Bank Financial (NBF) is an indirect wholly owned subsidiary of National Bank of Canada. National Bank of Canada is a public company listed on Canadian stock exchanges.

HIGHLIGHTS

- **Solid Q2 results**
  FTS reported Q2 2012 EPS (FD) of $0.35 (net of $0.02/share in one-time acquisition expenditures) – in line with our estimate and consensus of $0.34 (per ThomsonOne).

- **BCUC downside risk largely priced in**
  The BCUC (British Columbia Utilities Commission) cost of capital proceedings are expected to take place through December 2012 – which could result in lower allowable ROEs for FortisBC (Gas and Electric) effective Jan. 1, 2013. As highlighted inside, assuming a 50 bps reduction in allowable ROEs at FortisBC (Gas and Electric), our 2013e EPS declines ~$0.06 (~3%) while our DCF per share valuation declines ~$1.00 (~3%) to $33.75 versus the current share price of $33.54 – suggesting the downside risk associated with the upcoming BCUC decision is largely priced into the stock.

- **Estimates – offsetting changes**
  Overall, our 2013e EPS (FD) remains unchanged at $1.86 – representing a 2013e earnings payout ratio of 71% (low payout group avg.: 74%). Meanwhile, our 2013e AFFO per share declines a modest $0.06 to $2.74 owing to higher maintenance capex – representing an AFFO payout ratio of 48% (was 47%; group avg.: 47%).

- **Maintain $35 target and Sector Perform rating**
  With our estimates intact, we maintain our $35.00 target. Combined with a 12-month total return opportunity of 8.0% (group avg.: 12.4%), we maintain our Sector Perform rating.

Stock Performance

Solid Q2 results

Fortis reported Q2 2012 EPS (FD) of $0.35 (excluding $0.02 in one-time acquisition expenditures related to the CH Energy transaction) – in line with our estimate and consensus of $0.34 (per ThomsonOne). Stronger contributions from FortisAlberta were partially offset by lower contributions from FortisBC - Gas.

Fortis Properties	$0.1	0.00
Corporate & other(1)	$1.8	0.01
Actual Earnings - basic(1)	**$65.0**	**$0.35**

(1) Net of $3 million ($0.02/share) in one-time acquisition charges related to CH Energy Group, Inc.

Source: NBF Estimates and Company Data

FortisBC: Gas – earned $13 million, $5 million below our estimate of $18 million. Lower earnings were due to lower than expected capitalized allowance for funds used during construction and lower rate-base growth. Recall, owing to the seasonal nature of natural gas consumption patterns, FortisBC's earnings generally peak during Q1 and Q4 of each year.

FortisAlberta – earnings of $26 million came in $4 million ahead of our estimate of $22 million. Overall, higher earnings were due to continued rate-base growth and ~$3 million in transmission revenue recognized during Q2 (~$1 million related to Q1 2012) as a result of a favourable regulatory decision.

Portfolio update – BCUC proceedings to last through late 2012

BC Utilities Commission (BCUC) – In November 2011, the BCUC gave preliminary notification to public utilities subject to its regulation that it will initiate a Generic Cost of Capital (GCOC) proceeding in early 2012 which will: 1) set the appropriate cost of capital for a benchmark low-risk utility; 2) establish a benchmark ROE for 2013; 3) determine whether a ROE automatic adjustment mechanism would be warranted post 2014; 4) a generic methodology in establishing a utility's cost of capital; 5) establish a deemed capital structure / cost of capital methodology; and 6) methodology to determine a deemed interest rate. The allowed ROEs at FortisBC Gas and Electric will be maintained pending the outcome of the proceedings expected to be held through December 2012, with any ROE revisions taking effect Jan. 1, 2013. (FortisBC Gas: 9.5% – B.C.; 10.0% – Vancouver Island / Whistler / 40% equity; FortisBC Electric: 9.9% / 40% equity).

Recall, the Alberta Utilities Commission (AUC) issued a decision in December 2011 which reduced the 2011 and 2012 allowed ROE to 8.75% (from 9.0% in 2010) and maintained this rate for 2013 on an interim basis (equity thickness unchanged at 41%) – potentially setting further precedence to provincial regulator's cost of capital reviews.

Alberta – The AUC (Alberta Utilities Commission) expects to commence a proceeding in due course to establish a final allowed ROE for 2013. During this proceeding, the AUC will revisit the matter of a return to a formula-based approach. A decision is also expected in Q4 2012 for the introduction of performance-based service rates beginning in 2013 for a five-year term.

Newfoundland Power – In March 2012, Newfoundland Power filed a cost of capital application with the Newfoundland and Labrador Board of Commissioners of Public Utilities (PUB) to discontinue the use of the current ROE adjustment mechanism and to approve a just and reasonable rate of return for 2012. In June 2012, Newfoundland Power received regulatory approval of an increase to its allowed ROE to 8.8% for 2012, up from 8.38% for 2011.

Meanwhile, over the next five years, Fortis continues to forecast ~$6.0 billion of capital expenditures (excluding acquisitions; ~$5.5 billion excluding CH Energy) with ~$1.3 billion expected to be incurred in 2012. The company's capital will be deployed ~65% at its regulated electric utilities (largely FortisAlberta and FortisBC), ~21% at FortisBC Gas and the remaining ~14% at the company's non-regulated operations.

CH Energy acquisition on track for Q1 2013 – Recall, on Feb. 21, FTS announced that it entered into an agreement to acquire CH Energy Group, Inc. – a New York based rate regulated electric and gas distribution utility. The US$1.5 billion acquisition received shareholder approvals in June 2012 and FERC / Foreign Investment regulatory approvals in July 2012. The acquisition remains on track to be closed by the end of Q1 2013 (of note, we previously modeled in ~2% accretion to our long-term estimates).

FortisBC Electric – FortisBC is currently in preliminary discussions with the City of Kelowna to acquire the City's electricity distribution utility which currently services ~15,000 customers. The assets have been operated and maintained by FortisBC since 2000. Subject to the negotiation of definitive agreements and certain approvals (municipal and regulatory), the transaction could close by the end of Q1 2013.

Fortis Generation – Elsewhere, the ~$900 million (FTS: 51%), 335 MW Waneta hydroelectric project remains on track to be commissioned in the spring of 2015. Generation from the facility is contracted to both BC Hydro and FortisBC Electric under a long-term PPA. To date, ~$345 (gross) million has been incurred on the project for excavation of the intake, powerhouse and power tunnels.

Estimates – offsetting changes

We updated our rate base assumptions at FortisBC Gas and FortisAlberta and bumped up our go-forward ROE assumption at Newfoundland Power in line with an increase to the company's approved ROE. Elsewhere, we nudged up our maintenance capex expenditures in line with management guidance.

Overall, our 2013e EPS (FD) remains unchanged at $1.86 – representing a 2013e earnings payout ratio of 71% (low payout group avg.: 74%). Meanwhile, our 2013e adjusted funds from operations (AFFO) per share declines a modest $0.06 to $2.74 – representing an AFFO payout ratio of 48% (was 47%), in line with the low payout group average of 47%. On the leverage front, our 2013e D/EBITDA declines to 6.0x (was 6.1x; low payout group avg.: 5.3x) and we forecast a 2013e debt-to-capitalization of 58% (~65% including preferred shares as debt), slightly below the company's long-term target ratio of 60%.

$35 target – BCUC downside largely priced in, maintain Sector Perform

With our estimates intact, we maintain our $35.00 target – which is based on a risk-adjusted dividend yield of 3.5% applied to our 2013e dividend of $1.24/share, a 13.5x multiple of our 2013e free-EBITDA of $1,125 million and our DCF valuation of $34.75 (was $35.50).

As shown below, assuming a 50 bps reduction in allowable ROEs at FortisBC (Gas and Electric), our 2013e EPS declines ~$0.06 (~3%) while our DCF per share valuation declines ~$1.00 (~3%) to $33.75 versus the current share price of $33.54 – suggesting the downside risk associated with the BCUC decision is largely priced into the stock. Combined with a 12-month total return opportunity of 8.0% (group avg.: 12.4%), we maintain our Sector Perform rating.

DISCLOSURES:

Ratings And What They Mean: **PRIMARY STOCK RATING**: NBF has a three-tiered rating system that is relative to the coverage universe of the particular analyst. Here is a brief description of each: **Outperform –** The stock is expected to outperform the analyst's coverage universe over the next 12 months; **Sector Perform –** The stock is projected to perform in line with the sector over the next 12 months; **Underperform –** The stock is expected to underperform the sector over the next 12 months. **SECONDARY STOCK RATING: Under Review** – Our analyst has withdrawn the rating because of insufficient information and is awaiting more information and/or clarification; **Tender** – Our analyst is recommending that investors tender to a specific offering for the company's stock; **Restricted** – Because of ongoing investment banking transactions or because of other circumstances, NBF policy and/or laws or regulations preclude our analyst from rating a company's stock. **INDUSTRY RATING:** NBF has an Industry Weighting system that reflects the view of our Economics & Strategy Group, using its sector rotation strategy. The three tiered system rates industries as **Overweight**, **Market Weight** and **Underweight**, depending on the sector's projected performance against broader market averages over the next 12 months. **RISK RATING:** NBF utilizes a four-tiered risk rating system, **Low**, **Average**, **Above Average** and **Speculative**. The system attempts to evaluate risk against the overall market. In addition to sector-specific criteria, analysts also utilize quantitative and qualitative criteria in choosing a rating. The criteria include predictability of financial results, share price volatility, credit ratings, share liquidity and balance sheet quality.

General – National Bank Financial (NBF) is an indirect wholly owned subsidiary of National Bank of Canada. National Bank of Canada is a public company listed on Canadian stock exchanges.

The particulars contained herein were obtained from sources which we believe to be reliable but are not guaranteed by us and may be incomplete. Event

Fortis reported its fourth quarter results.

Investment Opinion

- **Results Largely In Line.** Fortis' normalized Q4/05 EPS were $0.27 compared to our estimate of $0.28, consensus of $0.27, and normalized Q4/04 EPS of $0.27. Management disclosed a number of normalizations that were not explicitly broken out in the fourth quarter release that brought most segmented results into line with our estimates. Only FortisBC was lower than our expectations due to higher-than-expected operating expenses, amortization costs and finance charges.
- **2006 and 2007 EPS Estimates Increased.** Reflecting several changes to our financial model, we have increased our 2006 and 2007 EPS estimates from $1.20 and $1.28, respectively, to $1.26 and $1.33.
- **FortisAlberta and Fortis Generation Drive Changes to Earnings.** We have increased our 2006 and 2007 earnings forecasts for FortisAlberta to reflect higher anticipated efficiencies at the utility and we increased our estimates for Fortis Generation to reflect the larger-than-expected difference between our forecast Ontario power prices and Fortis'. We have also increased our earnings forecasts for Caribbean Utilities to reflect cost recoveries of Hurricane Ivan, which are expected to last three years. Partially offsetting the aforementioned positive deltas to our forecast is a change in our projected C$/US$ exchange rate to reflect a higher-than-previously forecast Canadian dollar.
- **Conclusion.** We continue to view Fortis as one of the more attractively valued Energy Infrastructure companies in our coverage universe. We believe that growth will be driven by capital spending at the regulated utilities FortisAlberta and FortisBC. We also believe we will see continued improvement in the earnings contributions from Caribbean Utilities and BECOL. Furthermore, Fortis has a low payout ratio, thereby providing the company with room for above average increases in its dividend.
- **Valuation.** Our target price of $27.50 reflects a forecast 12-month dividend distribution one-year forward of $0.74 and a required dividend yield of 2.60%. Fortis is ranked Outperform, Average Risk.

Source: Company reports, RBC Capital Markets estimates

Fourth Quarter Results

The normalized results from most of Fortis' business segments were largely in line with our expectations. After the more detailed breakdown of normalizations provided by management, only FortisBC was notably out of line with our forecast. FortisBC's earnings were $5.7 million in Q4/05 compared to our estimate of $7.1 million due to higher-than-expected operating expenses, amortization costs and finance charges. There were pluses and minuses in other segments, but the shortfall at

FortisBC was just over $0.01 per share and accounts for most of the discrepancy between our estimates and the normalized results for the quarter.

EPS Estimates

We have revised our financial model for Fortis to reflect a number of changes. We have increased our 2006 and 2007 earnings forecasts for FortisAlberta to reflect higher anticipated efficiencies at the utility and we increased our estimates for Fortis Generation to reflect the larger-than-expected difference between our forecast Ontario power prices and Fortis'. We have also increased our earnings forecasts for Caribbean Utilities to reflect cost recoveries of Hurricane Ivan, which are expected to last three years. Partially offsetting the aforementioned positive deltas to our forecast is a change in our projected C$/US$ exchange rate to reflect a higher-than-previously forecast Canadian dollar. Based on these changes to our financial model, we have increased our 2006 and 2007 EPS estimates from $1.20 and $1.28, respectively, to $1.26 and $1.33.

Conclusion

We continue to view Fortis as one of the more attractively valued Energy Infrastructure companies in our coverage universe. We believe that growth will be driven by capital spending at the regulated utilities FortisAlberta and FortisBC. We also believe we will see continued improvement in the earnings contributions from Caribbean Utilities and BECOL. Furthermore, Fortis has a low payout ratio, thereby providing the company with room for above average increases in its dividend.

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $27.50 reflects a forecast 12-month dividend distribution one-year forward of $0.74 and a required dividend yield of 2.60%. We believe a required yield of 2.60% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The political environment in Belize, economic/tourism conditions in Atlantic Canada, operational issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 37% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	404	42.57	172	42.57

Event

The British Columbia Utilities Commission (BCUC) revised the calculation of the ROE allowed in rates for public utilities.

Investment Opinion

- **Revises Automatic Adjustment Mechanism.** The BCUC revised the Automatic Adjustment Mechanism (AAM) used to calculate the ROE allowed in rates for public utilities regulated by the BCUC. For 2006, the approved generic ROE for a low-risk utility increases to 8.80% from the previously calculated 8.29% and is effective January 1, 2006. FortisBC's ROE is set at a 40bp premium to that of the "generic" low-risk utility to reflect its higher risk profile.
- **Changes to AAM.** The BCUC reduced the base ROE for the benchmark low-risk utility to 9.145% from 9.50% assuming a 30-year long Canada bond yield of 5.25%. The previously assumed long Canada bond yield was 6.0%. Partially offsetting the reduced long Canada bond yield was an increase in the equity risk premium to 3.895% from 3.5%. In addition, the BCUC implemented a symmetric adjustment factor of 75% of the change in forecast long Canada bond yields.
- **Impact to Fortis.** We view the BCUC decision as slightly positive for Fortis relative to our expectations. Under the decision, FortisBC's allowed ROE was increased to 9.20% from 8.69%. FortisBC's deemed common equity component was not impacted by the decision, remaining at 40%.
- **EPS Estimates Increased.** We have revised our financial model to reflect the actual approved ROE of 9.20% for FortisBC. Accordingly, we have increased our 2006 and 2007 EPS estimates for Fortis from $1.26 and $1.33, respectively, to our new estimates of $1.27 and $1.34.
- **Valuation.** Our target price of $27.50 reflects a forecast 12-month dividend distribution one-year forward of $0.74 and a required dividend yield of 2.60%. Fortis is ranked Outperform, Average Risk.

Details

The British Columbia Utilities Commission (BCUC) revised the Automatic Adjustment Mechanism (AAM) used to calculate the ROE allowed in rates for public utilities regulated by the BCUC. For 2006, the approved generic ROE for a low-risk utility increases to 8.80% from the previously calculated 8.29% and is effective January 1, 2006. FortisBC's ROE is set at a 40bp premium to that of the "generic" low-risk utility to reflect its higher risk profile.

BCUC Generic ROE

The BCUC reduced the base ROE for the benchmark low-risk utility to 9.145% from 9.50% assuming a 30-year long Canada bond yield of 5.25%. The previously assumed long Canada bond yield was 6.0%. Partially offsetting the reduced long Canada bond yield was an increase in the equity risk premium for a low-risk benchmark utility from 3.5% to 3.895%. In addition, the BCUC implemented a symmetric adjustment factor of 75% of the change in forecast long Canada bond yields.

Previously, the AAM utilized an asymmetric adjustment factor which increased the annual allowed ROE by 80% of the change in forecast long Canada yields above 6.0%, and reduced the annual allowed ROE by 100% of the change in forecast long Canada yields below 6.0%. The move to a symmetric adjustment factor of 75% puts B.C. utilities on a similar footing as their Canadian peers.

Exhibit 1 summarizes the calculation of the generic ROE with the new assumptions and new adjustment factor.

Exhibit 1: 2006 BCUC Generic ROE For a Low-Risk Benchmark Utility

BCUC 2006E ROE Calculation	
Consensus economic forecast 10-yr bond yield (3 Months Out)	4.40%
Consensus economic forecast 10-yr bond yield (12 Months Out)	4.70%
Average	4.55%
Add: average basis point spread between 10-year and 30-year GOC bond	0.24%
2006 Forecast of the 30-year Government of Canada bond yield	4.79%
Base 30-year Government of Canada bond yield	5.25%
Difference between 2006 and 5.25% base forecast	-0.46%
Adjustment Factor	0.75
	-0.35%
Base ROE	9.145%
2006 ROE	8.80%

Source: Consensus Economics Inc., Bloomberg, BCUC

EPS Estimates

We view the BCUC decision as slightly positive for Fortis relative to our expectations. Under the decision, since FortisBC is deemed to have a 40bp risk premium (unchanged) over the benchmark low-risk utility ROE, its allowed ROE was increased to 9.20% from 8.69%. FortisBC's deemed common equity component was not impacted by the decision, remaining at 40%. Accordingly, to reflect the actual approved ROE of 9.20% for FortisBC we have increased our 2006 and 2007 EPS estimates for Fortis from $1.26 and $1.33, respectively, to our new estimates of $1.27 and $1.34.

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $27.50 reflects a forecast 12-month dividend distribution one-year forward of $0.74 and a required dividend yield of 2.60%. We believe a required yield of 2.60% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The political environment in Belize, economic/tourism conditions in Atlantic Canada, operational issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 37% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	391	41.24	168	42.97

Event

Fortis reported its Q1/06 results.

Investment Opinion

- **Q1/06 Results.** Fortis' normalized Q1/06 EPS of $0.36 was higher than our estimate of $0.33. The consensus Q1/06 EPS estimate was $0.36 and Q1/05 normalized EPS was $0.31. Better-than-expected earnings from FortisBC, FortisAlberta and Belize Electricity were partially offset by lower-than-expected earnings contribution from Newfoundland Power.
- **Strong Earnings From Western Canada.** FortisAlberta's earnings were higher due in part to a $2.9 million benefit from a lower effective tax rate as a result of changing its accounting for federal taxes from a deferred tax method to a cash basis. FortisBC's earnings benefited from a $2.4 million increase in capitalized overhead, which reduced operating expenses. Each of these accounting changes consisted of the bulk of the difference between our estimates and actual results for FortisAlberta and FortisBC. Management expressed confidence in Fortis' ability to maintain the earnings benefits of these changes.
- **Newfoundland Power Accounting Change.** Newfoundland Power changed its revenue recognition policy to an accrual basis, which reduced earnings in the first quarter of 2006 by approximately $2.0 million, or $0.02 per share. The accounting change is simply a timing difference that will result in reduced earnings in the first and second quarters of 2006 compared to 2005, and increased earnings in the third and fourth quarters of 2006 compared to 2005.
- **EPS Estimates Increased.** Largely reflecting continued high capital expenditures and greater achieved efficiencies at FortisBC and FortisAlberta, we have increased our 2006 and 2007 EPS estimates from $1.25 and $1.34 respectively, to $1.28 and $1.39.
- **Conclusion.** Fortis continues to appear to be one of the more attractively valued Energy Infrastructure companies in our coverage universe. We believe that capital spending and earning efficiencies at the regulated utilities FortisAlberta and FortisBC will drive growth. Fortis has a low payout ratio as well as strong forecast earnings per share growth, which combine to provide room for above average increases in its dividend.
- **Valuation.** Our target price of $24.50 reflects a forecast 12-month dividend distribution one-year forward of $0.75 and a required dividend yield of 3.10%. Fortis is ranked Outperform, Average Risk.

Details

Fortis' normalized Q1/06 EPS of $0.36 was higher than our estimate of $0.33. The consensus first quarter 2006 EPS estimate was $0.36 and Q1/05 normalized EPS was $0.31. Better-than-expected earnings from FortisBC, FortisAlberta and Belize Electricity were partially offset by lower-than-expected earnings contribution from Newfoundland Power.

Source: Company reports; RBC Capital Markets estimates

Issues of Note:

NEWFOUNDLAND POWER

Newfoundland Power changed its revenue recognition policy to an accrual basis, which reduced earnings in the first quarter of 2006 by approximately $2.0 million, or $0.02 per share. Under the previous accounting method, revenue was recognized when bills were sent to customers. The result was that the quarterly revenue recorded by Newfoundland Power would reflect approximately 15 days of sales from the previous quarter, and exclude the sales from the last 15 days of the calendar quarter. Under the newly implemented accrual basis of recognizing revenue, revenue is recorded in the same month that the electricity is delivered. The change has resulted in the last 15 days of December, which were previously recorded in the first quarter, being replaced with electricity sales made during the last 15 days in March. The accounting change is simply a timing difference that will result in reduced earnings in the first and second quarters of 2006 compared to 2005, and increased earnings in the third and fourth quarters of 2006 compared to 2005. There should be no material annual impact.

WESTERN UTILITIES

FortisAlberta's earnings were higher due in part to a $2.9 million benefit from a lower effective tax rate as a result of changing its accounting for federal taxes from a deferred tax method to a cash basis. FortisBC's earnings benefited from a $2.4 million increase in capitalized overhead which reduced operating expenses. Each of these accounting changes consisted of the bulk of the difference between our estimates and actual results for FortisAlberta and FortisBC respectively. Going forward, management expressed confidence in its ability to maintain the earnings benefits of these changes.

EPS Estimates

We revised our financial model for Fortis to incorporate a number of changes. Largely reflecting greater anticipated achieved efficiencies at FortisBC and FortisAlberta, we have increased our 2006 and 2007 earnings estimates for both utilities. We also modestly increased our 2006 and 2007 estimates for Caribbean Utilities. Partially offsetting these positive changes are slightly higher expected Corporate expenses due to higher anticipated corporate development costs. The net effect of these modifications to our model is that we have increased our 2006 and 2007 EPS estimates from $1.25 and $1.34 respectively, to $1.28 and $1.39.

Conclusion

Fortis continues to appear to be one of the more attractively valued Energy Infrastructure companies in our coverage universe. We believe that growth will be driven by capital spending at the regulated utilities FortisAlberta and FortisBC. In addition, Fortis has a low payout ratio as well as strong forecast earnings per share growth, which combine to provide room for above average increases in its dividend.

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $24.50 reflects a forecast 12-month dividend distribution one-year forward of $0.75 and a required dividend yield of 3.10%. We believe a required yield of 3.10% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in Atlantic Canada, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 37% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	380	40.99	165	43.42

Event

Fortis reported its Q2/06 results.

Investment Opinion

- **Target price increased to $26.00 to reflect Fortis' low P/E and low payout ratio.** Fortis has one of the lowest P/E multiples in the sector and one of the better outlooks for growth in earnings per share. It also has one of the lowest payout ratios in the sector implying that there is room for dividend growth going forward. For these reasons, we believe that the spread between Fortis' dividend yield and the 10-year Government of Canada yield will widen in the future, implying a lower required dividend yield by investors. Reflecting this view, we have increased our target price to $26.00 from our previous target of $24.50.
- **FortisAlberta drives increases to EPS estimates.** FortisAlberta's earnings during the quarter benefited from the reversal of a previous tax provision. Looking forward, we believe that FortisAlberta will be able to maintain high efficiencies and earn above its allowed ROE. Some what tempering the positive impact on earnings from our change in outlook for FortisAlberta is a slightly higher forecast Corporate expense than previously reflected in our financial model The net effect is that we have increased our 2006 and 2007 EPS estimates to $1.29 and $1.40 respectively, from $1.27 and $1.38.
- **Q2/06 EPS in line.** Fortis' Q2/06 normalized EPS was $0.32 compared to our estimate of $0.33 and compared to Q2/05 normalized EPS of $0.28. The consensus estimate for the quarter was $0.33.
- **Segment variations net out.** Higher-than-expected earnings at FortisAlberta were essentially offset by lower-than-expected earnings from the remaining Canadian regulated utilities.
- **Outlook.** Fortis has one of the most attractive valuations in the sectors and one of the best outlooks for EPS growth. We believe there is significant room for dividend growth going forward. Fortis is ranked Outperform, Average Risk
- **Valuation.** Our target price of $26.00 reflects a forecast 12-month dividend distribution one-year forward of $0.77 and a required dividend yield of 3.00%.

Details

Fortis' Q2/06 normalized EPS was $0.32 compared to our estimate of $0.33 and compared to Q2/05 normalized EPS of $0.28. The Consensus Estimate for the quarter was $0.33. Higher-than-expected earnings at FortisAlberta were essentially offset by lower-than-expected earnings from the remaining Canadian regulated utilities.

EPS Estimates Increased on Improved Outlook for FortisAlberta

As previously stated, FortisAlberta's earnings benefited during the quarter from the reversal of a previous period's tax provision. Looking forward, we believe that FortisAlberta will be able to maintain high efficiencies and earn above its allowed ROE. Partially offsetting our improved outlook for FortisAlberta is higher expected Corporate expenses due to higher-than-previously-forecast corporate development costs. The net effect is that we have increased our 2006 and 2007 EPS estimates to $1.29 and $1.40 respectively, from $1.27 and $1.38.

Valuation: Target Price Increased to $26.00

Fortis' 2007 P/E multiple of 16.2x is one of the lowest in the sector and well below the average for Canadian Corporate Energy Infrastructure companies of 17.9x. Further, its payout ratio of 50.4% is also among the lowest in the sector and compares to the group average of 64.1%. Combined with our view that Fortis has one of the best EPS growth outlooks in the group, and that this growth is fueled by low-risk organic growth in the company's regulated sector, leads us to the view that the spread between the 10-year Government of Canada yield and the company's dividend yield will widen in the future, resulting in a lower required dividend yield for Fortis. Reflecting this view, we have increased the spread used in our valuation to 150 basis points, up from the spread previously used of 140 basis points. The required dividend yield used in our valuation for Fortis is 3.00%. The forecast 10-year GOC yield is 4.5%. The forecast 12-month dividend distribution one-year forward is $0.77. Our new target price for Fortis increases to $26.00, up from our previous target of $24.50.

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. We believe a required yield of 3.00% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Conclusion

The Company delivered solid second quarter results. Looking forward, we believe the company will deliver above average EPS growth, largely driven by the expansion of its western Canadian regulated businesses. Notwithstanding this low risk source of organic growth, Fortis has one of the most attractive valuations in the Canadian corporate Energy Infrastructure sector. Reflecting this view and its above average all in return, we rank Fortis Outperform – Average Risk.

Price Target Impediments

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in Atlantic Canada, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 37% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	405	42.72	167	41.23

Event

Fortis announced that it has acquired P.P.C. Limited and Atlantic Equipment and Power Limited.

Investment Opinion

- **Acquires two utilities in Caribbean for US$90 million.** Fortis acquired all of the outstanding shares of P.P.C. Limited (PPC) and Atlantic Equipment and Power Limited (Atlantic) from T.C. Energy Holdings Inc. for approximately US$90 million, including assumed debt of about US$20 million. With an estimated 3% EPS accretion in 2007 coupled with Fortis' track record for successful transactions, we view the acquisition as a modest positive.
- **Attractive regulated rate of return.** Each utility is regulated under a cost-of-service methodology with a fixed 17.5% return on rate base. The two utilities have a combined defined asset base of approximately US$50 million at June 30, 2006.
- **Positive EPS impact.** We estimate that the acquisition is accretive to earnings. As such, our 2006, 2007 and 2008 EPS estimates increase from $1.29, $1.40 and $1.48 respectively, to $1.30, $1.44 and $1.53.
- **Strong rate base growth expected.** Discussions with management revealed that Fortis expects energy sales at the utilities to grow by 30%-60% over the next 5 years, driven by 20-30 hotels/condominium developments that are either under construction or planned during this period. To meet this growth, Fortis expects capital expenditures to be approximately US$6-US$10 million per year, resulting in an excess of 10% growth in rate base per year over the next 5 years.
- **Utilities serve Turks and Caicos Islands.** Together, PPC and Atlantic serve approximately 80% of electricity customers in the Turks and Caicos Islands with a combined diesel-fired generating capacity of about 35 MW. PPC has an exclusive 50-year license that expires in 2037 to provide electricity in Providenciales, North Caicos and Middle Caicos. Atlantic has an exclusive 50-year license that expires in 2036 to provide electricity in South Caicos.
- **Valuation.** Our target price of $26.00 reflects a forecast 12-month dividend distribution one-year forward of $0.77 and a required dividend yield of 3.00%.

Details

Fortis acquired all of the outstanding shares of P.P.C. Limited (PPC) and Atlantic Equipment and Power Limited (Atlantic) from T.C. Energy Holdings Inc. for approximately US$90 million, including assumed debt of about US$20 million. Each utility is regulated under a cost-of-service methodology with a fixed 17.5% return on rate base. The two utilities have a combined defined asset base of approximately US$50 million at June 30, 2006.

Together, PPC and Atlantic serve approximately 80% of electricity customers in the Turks and Caicos Islands with a combined diesel-fired generating capacity of about 35 MW. The vast majority of the value of the acquisition is in PPC, which operates in the highest population areas on the islands. PPC has an exclusive 50-year license that expires in 2037 to provide electricity in Providenciales, North Caicos and Middle Caicos. Atlantic has an exclusive 50-year license that expires in 2036 to provide electricity in South Caicos.

Ratebase Growth Outlook and Risks

Discussions with management revealed that Fortis expects energy sales at the utilities to grow by 30%-60% over the next 5 years, driven by 20-30 hotels/condominium developments that are either under construction or planned during this period. To meet this growth, Fortis expects capital expenditures to be approximately US$6-US$10 million per year, resulting in an excess of 10% growth in rate base per year over the next 5 years.

Potential risks that could affect Fortis' growth assumptions include the general risk of hurricanes in the region as well as the possibility of government intervention in the license.

Analysis: Incremental EPS Impact is a Modest Positive

Assuming acquisition financing of 40% equity, a cost of debt of 6%, and an after-tax opportunity cost of equity of 4%, we estimate the EPS impact in 2007 (the first full year of ownership) to be about $0.04. Management has indicated that the acquired utilities are not subject to income taxes. In 2008, we expect the effect of rate base growth to increase the EPS impact to $0.05. The transaction closed on August 28, 2006, implying a 2006 EPS impact of about $0.01. As such, our 2006, 2007 and 2008 EPS estimates increase from $1.29, $1.40 and $1.48 respectively, $1.30, $1.44 and $1.53. Our analysis set out in Exhibit 1.

With an estimated 3% EPS accretion in 2007 coupled with Fortis' track record for successful transactions, we view the acquisition as a modest positive.

Exhibit 1: Estimated EPS impact of acquisition of electric utilities in Turks and Caicos Islands ($MM except EPS or otherwise noted)

			2007E	2008E	Comments

Source: Company reports; RBC Capital Markets estimates

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $26.00 reflects a forecast 12-month dividend distribution one-year forward of $0.77 and a required dividend yield of 3.00% We believe a required yield of 3.00% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in Atlantic Canada, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 37% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	405	43.32	162	40.00

Event

Fortis announced an 18.75% increase to its dividend.

Investment Opinion

- **18.75% dividend increase is slightly lower than expected, but our view on the stock remains the same.** Fortis' Board of Directors increased the annual dividend by $0.12, or 18.75%, to a new annual rate of $0.76. We had forecast a $0.14 increase. The new dividend is payable on December 1, 2006 to the common shareholders of record at the close of business on November 3, 2006. In spite of the slightly lower-than-expected dividend increase, our view on the stock remains the same.
- **Payout ratio still relatively low.** Fortis' payout ratio is still lower than the sector average, giving it more room for dividend growth going forward than for many other stocks in the sector. Notwithstanding the increased dividend, Fortis' dividend yield and payout ratio remain lower than the sector average.
- **Valuation.** Despite the slightly lower-than-expected dividend increase, we have maintained our target price of $31.00 (unchanged), which reflects a forecast 12-month dividend distribution one-year forward of $0.76 and a required dividend yield of 2.45%.

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $31.00 reflects a forecast 12-month dividend distribution one-year forward of $0.76 and a required dividend yield of 2.45% We believe a required yield of 2.45% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in Atlantic Canada, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 37% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	404	43.02	147	36.39

Event

Fortis Properties announced the acquisition of four hotels in Alberta and British Columbia.

Investment Opinion

- **Slightly accretive, but maintaining EPS estimates.** We estimate that the acquisition is slightly accretive to earnings, but the EPS impact in 2007, the first full year, is minimal. As such, we have left our EPS estimates unchanged.
- **$51.6 million for 4 hotels.** Fortis Properties acquired Holiday Inn Express and Suites, and Best Western, in Medicine Hat, Alberta; Ramada Hotel and Suites in Lethbridge, Alberta; and Holiday Inn Express in Kelowna, British Columbia. The $51.6 million (including assumed debt) acquisition adds 454 rooms to the hospitality operations of Fortis Properties.
- **Hotel expansion potential.** Management disclosed that included with the purchase of each of the hotels in Lethbridge and Kelowna is some adjacent land. This offers some expansion potential that could create further upside to the acquisition.
- **Valuation.** Our target price of $31.00 reflects a forecast 12-month dividend distribution one-year forward of $0.83 and a required dividend yield of 2.70%.

Acquires Four Hotels for $51.6 Million

Fortis' subsidiary, Fortis Properties, acquired Holiday Inn Express and Suites, and Best Western, in Medicine Hat, Alberta; Ramada Hotel and Suites in Lethbridge, Alberta; and Holiday Inn Express in Kelowna, British Columbia. The $51.6 million (including assumed debt) acquisition adds 454 rooms to the hospitality operations of Fortis Properties. The transaction is expected to close on October 31, 2006.

Minimal EPS Impact

We estimate that the earnings impact in 2007, before considering the opportunity cost of equity, would add about $0.01 per share. However, after factoring in the opportunity cost of equity, the EPS impact of the acquisition is minimal. As such, we have left our estimates unchanged. Exhibit 1 outlines our analysis.

Expansion Potential

Management disclosed that included with the purchase of each of the hotels in Lethbridge and Kelowna is some adjacent land. This offers some expansion potential that could create further upside to the acquisition.

No Equity Issue Yet

We have not assumed an equity issue, but with the completion of this acquisition we feel that Fortis is starting to approach the upper end of its debt-to-total capital target and that any further acquisitions would likely trigger an equity issue. While we have not built it into our model, given Fortis' track record of making acquisitions on a relatively regular basis, we would anticipate further acquisition announcements in the next 12 months with an equity issue before the end of 2007 to maintain its debt-to-total capital target of approximately 65%.

Exhibit 1: Estimated Earnings Impact of Hotel Acquisitions ($MM except EPS or otherwise noted)

Purchase price	($MM)	51.6	
Assumed equity component		35%

Source: Company reports; RBC Capital Markets estimates

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $31.00 reflects a forecast 12-month dividend distribution one-year forward of $0.83 and a required dividend yield of 2.70% We believe a required yield of 2.70% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in Atlantic Canada, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 37% interest in Caribbean Utilities.

First Impression

- **FortisAlberta drives higher-than-expected Q3/06 results.** Fortis' Q3/06 normalized EPS was $0.37 compared to our estimate of $0.30 and compared to Q3/05 normalized EPS of $0.29. The consensus estimate for the quarter was $0.31. Higher-than-expected earnings from FortisAlberta due to increased deductions for income tax purposes were partially offset by lower-than-expected earnings from Newfoundland Power due to the adoption of accrual accounting.
- **Adoption of accrual accounting shifts Newfoundland Power earnings.** The adoption of accrual accounting at Newfoundland Power continues to shift earnings from earlier quarters to the end of the year. We had expected the shift in earnings in the first two quarters of the year to start balancing out in the third quarter, however it appears that the shift will balance out almost entirely in the fourth quarter of 2006. The shift in earnings is not expected to affect annual earnings.

Priced as of prior trading day's market close, EST (unless otherwise stated).

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 37% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings

Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

Event

Fortis reported its third quarter results.

Investment Opinion

- **2006-2008 EPS estimates increased.** We have increased our 2006, 2007 and 2008 EPS estimates to $1.42, $1.49, and $1.56, respectively, from $1.27, 1.38, and $1.47. Our higher forecasts reflect the better-than-expected earnings contribution from FortisAlberta during the quarter as well as an improved outlook for FortisAlberta, Fortis Generation and Fortis Properties in 2006, 2007 and 2008.
- **FortisAlberta drives higher-than-expected Q3/06 results.** Fortis' Q3/06 normalized EPS was $0.37 compared to our estimate of $0.30 and compared to Q3/05 normalized EPS of $0.29. The Consensus Estimate for the quarter was $0.31. Higher-than-expected earnings from FortisAlberta were due to lower taxes and higher efficiencies earned under its negotiated settlement. This was partially offset by lower-than-expected earnings during the quarter from Newfoundland Power due to the adoption of accrual accounting.
- **Adoption of accrual accounting shifts Newfoundland Power earnings.** The adoption of accrual accounting at Newfoundland Power continues to shift earnings from earlier quarters to the end of the year. We had expected the shift in earnings in the first two quarters of the year to start balancing out in the third quarter, however it appears that the shift will balance out almost entirely in the fourth quarter of 2006. The shift in earnings is not expected to affect annual earnings.
- **Attractive valuation.** Fortis offers good EPS growth, and its P/E ratio, P/ACFFO and dividend payout ratio are all below the averages for the Utilities sector in Canada. The combination of Fortis' growth outlook and its attractive valuation provides investors with an implied all-in return of 24%. Our target price of $31.00 reflects a forecast 12-month dividend distribution one-year forward of $0.84 and a required dividend yield of 2.70%.

Higher-Than-Expected Third Quarter Results

Fortis' third quarter 2006 normalized EPS was $0.37 compared to our estimate of $0.30 and compared to third quarter 2005 normalized EPS of $0.29. The Consensus Estimate for the quarter was $0.31. Higher-than-expected earnings from FortisAlberta were due to lower taxes and higher efficiencies earned under its negotiated settlement. This was partially offset by lower-than-expected earnings during the quarter from Newfoundland Power due to the adoption of accrual accounting.

We believe that the earnings pickup from lower taxes at FortisAlberta is in part due to a higher amount of CCA being claimed for tax purposes than for in the calculation of taxes payable under the regulatory model. This situation that Fortis has inherited has arisen because the assets were written-up for tax purposes when Aquila originally purchased them from TransAlta. The result is that FortisAlberta can recover a higher tax expense in rates charged to customers than it pays in the form of cash taxes. We expect this impact to continue into the future.

The adoption of accrual accounting at Newfoundland Power continues to shift earnings from earlier quarters to the end of the year. We had expected the shift in earnings in the first two quarters of the year to start balancing out in the third quarter, however it appears that the shift will balance out almost entirely in the fourth quarter of 2006. The shift in earnings is not expected to affect annual earnings.

Source: Company reports; RBC Capital Markets estimates

2006-2008 EPS Estimates Increased

We have increased our 2006, 2007 and 2008 EPS estimates to $1.42, $1.49, and $1.56, respectively, from $1.27, 1.38, and $1.47. Our higher forecasts reflect the better-than-expected earnings contribution from FortisAlberta during the quarter as well as an improved outlook for FortisAlberta, Fortis Generation and Fortis Properties in 2006, 2007 and 2008. Most notably, we expect that FortisAlberta will continue to benefit from lower taxes and higher efficiencies in the fourth quarter of 2006 through our forecast period.

We have also increased our 2006-2008 forecast generation for the hydroelectric facilities in Belize within the Fortis Generation segment as well as raised our earnings estimates at Fortis Properties for the greater-than-expected impact of expansions to hotel and real estate properties.

Conclusion

We believe that Fortis is still capable of delivering above-average EPS growth from the expansion of its western Canadian regulated businesses despite our recent forecast of lower ROEs for 2007. In particular, we expect that FortisAlberta will continue to earn in excess of its allowed ROE due to lower taxes and higher efficiencies. With the low-risk organic growth of Fortis' western Canadian regulated businesses and its above-average, all-in return, Fortis has one of the most attractive valuations in the Canadian corporate Energy Infrastructure sector. As such, we rank Fortis Outperform, Average Risk.

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $31.00 reflects a forecast 12-month dividend distribution one-year forward of $0.84 and a required dividend yield of 2.70% We believe a required yield of 2.70% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in Atlantic Canada, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 37% interest in Caribbean Utilities.

We reserve the right to amend or supplement this policy at any time. For the current policy, please check our website.

Important Disclosures

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors, including total revenues of the member companies of RBC Capital Markets and its affiliates, a portion of which are or have been generated by investment banking activities of the member companies of RBC Capital Markets and its affiliates.

The author(s) of this report are employed by RBC Dominion Securities Inc., a securities broker-dealer with principal offices located in Toronto, Canada.

A member company of RBC Capital Markets or one of its affiliates received compensation for investment banking services from Fortis Inc. in the past 12 months.

RBC Capital Markets is currently providing Fortis Inc. with non-investment banking securities-related services.

RBC Capital Markets is currently providing Fortis Inc. with non-securities services.

RBC Capital Markets has provided Fortis Inc. with investment banking services in the past 12 months.

RBC Capital Markets has provided Fortis Inc. with non-investment banking securities-related services in the past 12 months.

RBC Capital Markets has provided Fortis Inc. with non-securities services in the past 12 months.

A member company of RBC Capital Markets or one of its affiliates received compensation for products or services other than investment banking services from Fortis Inc. during the past 12 months. During this time, a member company of RBC Capital Markets or one of its affiliates provided non-investment banking securities-related services to Fortis Inc.

A member company of RBC Capital Markets or one of its affiliates received compensation for products or services other than investment banking services from Fortis Inc. during the past 12 months. During this time, a member company of RBC Capital Markets or one of its affiliates provided non-securities services to Fortis Inc.

Additional Disclosures

RBC Capital Markets is the business name used by certain subsidiaries of Royal Bank of Canada, including RBC Dominion Securities Inc., RBC Capital Markets Corporation, Royal Bank of Canada Europe Limited and Royal Bank of Canada - Sydney Branch. The information contained in this report has been compiled by RBC Capital Markets from sources believed to be reliable, but no representation or warranty, express or implied, is made by Royal Bank of Canada, RBC Capital Markets, its affiliates or any other person as to its accuracy, completeness or correctness. All opinions and estimates contained in this report constitute RBC Capital Markets' judgement as of the date of this report, are subject to change without notice and are provided in good faith but without legal responsibility. Nothing in this report constitutes legal, accounting or tax advice or individually tailored investment advice. This material is prepared for general circulation to clients and has been prepared without regard to the individual financial circumstances and objectives of persons who receive it. The investments or services contained in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about the suitability of such investments or services. This report is not an offer to sell or a solicitation of an offer to buy any securities. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. RBC Capital Markets research analyst compensation is based in part on the overall profitability of RBC Capital Markets, which includes profits attributable to investment banking revenues. Every province in Canada, state in the U.S., and most countries throughout the world have their own laws regulating the types of securities and other investment products which may be offered to their residents, as well as the process for doing so. As a result, the securities discussed in this report may not be eligible for sale in some jurisdictions. This report is not, and under no circumstances should be construed as, a solicitation to act as securities broker or dealer in any jurisdiction by any person or company that is not legally permitted to carry on the business of a securities broker or dealer in that jurisdiction. To the full extent permitted by law neither RBC Capital Markets nor any of its affiliates, nor any other person, accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or the information contained herein. No matter contained in this document may be reproduced or copied by any means without the prior consent of RBC Capital Markets.

Additional information is available on request.

Event

Fortis purchased an additional 4.1 million shares of Caribbean Utilities for US$48.9 million, increasing its interest to 54%.

Investment Opinion

- **Increased 2007 and 2008 EPS estimates.** As a result of Fortis' increased interest in Caribbean Utilities Co. (CUC), we have increased our 2007 and 2008 EPS estimates by $0.03 per share to $1.52 and $1.59 respectively, from $1.49 and $1.56. The 2006 EPS impact is expected to be minimal.
- **Becomes controlling shareholder.** Fortis' purchase of an additional 4.1 million shares of CUC from International Power Holdings increased its ownership interest in CUC from approximately 37% to a controlling interest level of 54%. The purchase price was about US$48.9 million and was completed on November 7, 2006. As a result of gaining control of CUC, Fortis will begin consolidating CUC's results in its financial statements.
- **Effective tax rate will decline.** As CUC is a non-taxable entity, the consolidation of its results will serve to lower Fortis' effective tax rate. However, the incremental impact of the investment on the effective tax rate will be minimal as Fortis was for practical purposes already benefiting from the tax-free equity income of its previous investment in CUC.
- **US$40 million convertible debenture issue.** Fortis also announced a private placement, US$40 million issue of convertible debentures. The debentures have an annual interest rate of 5.5% and are convertible into Fortis common shares at a 30% premium to current market prices.
- **Attractive valuation.** Fortis offers good EPS growth, and its P/E ratio, P/ACFFO and dividend payout ratio are all below the averages for the Utilities sector in Canada. The combination of Fortis' growth outlook and its attractive valuation provides investors with an implied all-in return of 19%, supporting our ranking of Outperform, Average Risk (unchanged). Our target price of $31.00 (unchanged) reflects a forecast 12-month dividend distribution one-year forward of $0.84 and a required dividend yield of 2.70%.

Priced as of prior trading day's market close, EST (unless otherwise stated).

For Required Disclosures, please see page 3.

Gains Control of Caribbean Utilities

Fortis purchased an additional 4.1 million shares of Caribbean Utilities Co. (CUC) from International Power Holdings, increasing its ownership interest in CUC from approximately 37% to a controlling interest level of 54%. The purchase price was about US$48.9 million. As a result of gaining control of CUC, Fortis will begin consolidating CUC's results in its financial statements.

As CUC is a non-taxable entity, the consolidation of its results will serve to lower Fortis' effective tax rate. However, the incremental impact of the investment on the effective tax rate will be minimal as Fortis was for practical purposes already benefiting from the tax-free equity income of its previous investment in CUC.

Fortis also announced a private placement, US$40 million issue of convertible debentures. The debentures have an annual interest rate of 5.5% and are convertible into Fortis common shares at a 30% premium to current market prices.

EPS Estimates Increased for 2007 and 2008

The transaction was completed on November 7, 2006, and we estimate that the impact of Fortis' increased interest in CUC in the first full year will be about $0.03 per share. As such, we have maintained our 2006 EPS estimate and increased our 2007 and 2008 EPS estimates to $1.52 and $1.59 respectively, from $1.49 and $1.56. Our analysis in Exhibit 1 assumes the use of the entire proceeds of its US$40 million issue of convertible debentures. We think that Fortis is approaching a balance sheet leverage level that could require an equity issue if it undertakes additional acquisitions or major capital expenditures.

Exhibit 1: Estimated earnings impact of increased interest in Caribbean Utilities

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $31.00 reflects a forecast 12-month dividend distribution one-year forward of $0.84 and a required dividend yield of 2.70% We believe a required yield of 2.70% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in Atlantic Canada, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 37% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	395	41.15	149	37.72
HOLD [SP]	461	48.02	125	27.11
SELL [U]	104	10.83	29	27.88

Event

We are resuming coverage after a publishing restriction.

Investment Opinion

- **Target price increased to $33.00.** In light of the growth opportunities available to Fortis, we expect to see its valuation parameters improve and move more in line with the companies with premium valuations in the group.
- **2007 and 2008 EPS estimates lowered.** As a result of Fortis' share issuance and subsequent dilution, we have lowered our 2007 and 2008 EPS estimates from $1.52 and $1.59 respectively to $1.49 and 1.54.
- **Issues 5.17 million common shares for $149.9 million.** Fortis recently issued 5.17 million common shares at $29.00 per share for gross proceeds of approximately $149.9 million. With the 2006 acquisitions of the two utilities in the Turks & Caicos and four more hotels in Western Canada, as well as its increased interest in Caribbean Utilities, we were expecting any additional acquisitions to trigger an equity issue by the end of 2007 to maintain its debt-to-capital target of approximately 65%.
- **Growth opportunities.** Discussions with management identified several areas where the company expects growth to occur. Fortis expects substantial spending in its regulated utilities, particularly in Western Canada, to drive growth in the company over the next five years. Fortis also expects growth through economic recovery in the Caribbean region, expansion of its non-regulated hydro business and opportunistic additions of hotels to its Properties business.
- **Major initiatives.** In addition to ongoing optimization of the company's operations referenced above, we believe Fortis is well positioned to make a major acquisition, such as the purchase of a gas or power distribution company.
- **Attractive valuation.** Fortis offers good EPS growth, and its P/E ratio, P/ACFFO and dividend payout ratio are all below the averages for the Utilities sector in Canada. The combination of Fortis' growth outlook and its attractive valuation provides investors with an implied all-in return of 23%, supporting our ranking of Outperform, Average Risk (unchanged). Our target price of $33.00 (increased from $31.00) reflects a forecast 12-month dividend distribution one-year forward of $0.85 and a required dividend yield of 2.60%.

Priced as of prior trading day's market close, EST (unless otherwise stated).

For Required Disclosures, please see page 3.

Dilution Lowers 2007 and 2008 EPS Estimates

As a result of Fortis' share issuance and subsequent dilution, we have lowered our 2007 and 2008 EPS estimates from $1.52 and $1.59 respectively to $1.49 and 1.54.

Equity Issue Raises Approximately $149.9 Million

Fortis recently issued 5.17 million common shares at $29.00 per share for gross proceeds of approximately $149.9 million. With the 2006 acquisitions of the two utilities in the Turks & Caicos and four more hotels in Western Canada, as well as its increased interest in Caribbean Utilities, we were expecting any additional acquisitions to trigger an equity issue by the end of 2007 to maintain its debt-to-capital target of approximately 65%.

Growth Opportunities

Discussions with Fortis' management identified several areas where the company expects growth to occur:

- **Substantial capex in Utilities.** Management expects substantial spending in its regulated utilities will drive growth in the company over the next five years. In particular, the utilities in Western Canada are expected to lead the way in capital spending in 2007, with FortisAlberta expecting to spend approximately $273 million and FortisBC expecting to spend approximately $128 million.
- **Economic recovery in the Caribbean.** The region has largely recovered from the damage from recent hurricanes and appears to be back on the economic upswing. In addition, there could be further upside associated with customer growth at the recently acquired Turks & Caicos utilities.
- **Expansion of non-regulated hydro business.** Fortis is looking to expand their non-regulated hydroelectric business in Canada and the Caribbean.
- **Opportunistically looking to expand Properties expansion.** Fortis is always on the lookout for the purchase of new hotels across Canada.

Looking for the Next Big Acquisition

After now having absorbed the utilities in Western Canada (FortisAlberta and FortisBC) through their acquisition from Aquila in 2003, Fortis management now feels that they are ready to once again grow in a material way. Fortis would consider the acquisition of a gas or electric distribution utility if available. We believe that a couple potential opportunities on the gas distribution side could include companies such as Terasen Gas or Union Gas. On the electric utility side, we believe companies such as Nova Scotia Power or Emera [TSX: EMA; $22.25; Sector Perform, Average Risk] (subject to removal of existing ownership restrictions) would make sense geographically, although we suspect the Board of Emera may not be receptive to a sale or merger.

Valuation: Target Price Increased to $33.00

Fortis offers good EPS growth, and its P/E ratio, P/ACFFO and dividend payout ratio are all below the averages for the Utilities sector in Canada. In light of the growth opportunities available to Fortis, we expect to see its valuation parameters improve and move more in line with the premium valuations of the group. As such, we have increased our target price to $33.00 from $31.00.

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $33.00 reflects a forecast 12-month dividend distribution one-year forward of $0.85 and a required dividend yield of 2.60% We believe a required yield of 2.60% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 68%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	407	42.48	159	39.07
HOLD [SP]	450	46.97	114	25.33
SELL [U]	101	10.54	24	23.76

Important Disclosures

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors, including total revenues of the member companies of RBC Capital Markets and its affiliates, a portion of which are or have been generated by investment banking activities of the member companies of RBC Capital Markets and its affiliates.

Royal Bank of Canada, together with its affiliates, beneficially owns 1 percent or more of a class of common equity securities of Emera Incorporated.

A member company of RBC Capital Markets or one of its affiliates received compensation for investment banking services from Fortis Inc. in the past 12 months.

RBC Capital Markets is currently providing Fortis Inc. with non-investment banking securities-related services.

RBC Capital Markets is currently providing Fortis Inc. and Emera Incorporated with non-securities services.

RBC Capital Markets has provided Fortis Inc. with investment banking services in the past 12 months.

RBC Capital Markets has provided Fortis Inc. with non-investment banking securities-related services in the past 12 months.

RBC Capital Markets has provided Fortis Inc. and Emera Incorporated with non-securities services in the past 12 months.

A member company of RBC Capital Markets or one of its affiliates received compensation for products or services other than investment banking services from Fortis Inc. during the past 12 months. During this time, a member company of RBC Capital Markets or one of its affiliates provided non-investment banking securities-related services to Fortis Inc.

A member company of RBC Capital Markets or one of its affiliates received compensation for products or services other than investment banking services from Fortis Inc. and Emera Incorporated during the past 12 months. During this time, a member company of RBC Capital Markets or one of its affiliates provided non-securities services to Fortis Inc. and Emera Incorporated.

Additional Disclosures

RBC Capital Markets is the business name used by certain subsidiaries of Royal Bank of Canada, including RBC Dominion Securities Inc., RBC Capital Markets Corporation, Royal Bank of Canada Europe Limited and Royal Bank of Canada - Sydney Branch. The information contained in this report has been compiled by RBC Capital Markets from sources believed to be reliable, but no representation or warranty, express or implied, is made by Royal Bank of Canada, RBC Capital Markets, its affiliates or any other person as to its accuracy, completeness or correctness. All opinions and estimates contained in this report constitute RBC Capital Markets' judgement as of the date of this report, are subject to change without notice and are provided in good faith but without legal responsibility. Nothing in this report constitutes legal, accounting or tax advice or individually tailored investment advice. This material is prepared for general circulation to clients and has been prepared without regard to the individual financial circumstances and objectives of persons who receive it. The investments or services contained in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about the suitability of such investments or services. This report is not an offer to sell or a solicitation of an offer to buy any securities. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. RBC Capital Markets research analyst compensation is based in part on the overall profitability of RBC Capital Markets, which includes profits attributable to investment banking revenues. Every province in Canada, state in the U.S., and most countries throughout the world have their own laws regulating the types of securities and other investment products which may be offered to their residents, as well as the process for doing so. As a result, the securities discussed in this report may not be eligible for sale in some jurisdictions. This report is not, and under no circumstances should be construed as, a solicitation to act as securities broker or dealer in any jurisdiction by any person or company that is not legally permitted to carry on the business of a securities broker or dealer in that jurisdiction. To the full extent permitted by law neither RBC Capital Markets nor any of its affiliates, nor any other person, accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or the information contained herein. No matter contained in this document may be reproduced or copied by any means without the prior consent of RBC Capital Markets.

Dividend:	$0.84	Yield:	3.1%
Strategic Shareholders:		Widely held	

All values in Canadian unless otherwise noted.

Impact

Positive.

First Impression

- **Q4/06 EPS.** Fortis' fourth quarter 2006 normalized EPS was $0.33 compared to our estimate of $0.37 and compared to fourth quarter 2005 EPS of $0.27. The Thomson One consensus estimate for the quarter was $0.27. The shortfall from our estimates was primarily due to lower-than-expected earnings from its western operations and higher Corporate expenses.
- **Surprise 10.5% dividend increase – bigger and earlier.** Fortis increased its annual dividend by 10.5% to $0.84 per share from $0.76 per share. This is $0.01 more than the $0.83 annual dividend that we were expecting to be declared in September 2007.
- **Positive implications.** Although the quarter's results fell short of our estimates, they were well ahead of the consensus estimate. In addition, we believe the improved year-over-year results, and the surprise dividend increase, will be received positively by the market.

Priced as of prior trading day's market close, EST (unless otherwise stated).

Event

Fortis reported its fourth quarter 2006 results.

Investment Opinion

- **Q4/06 results strong, but not as strong as we were expecting.** Fortis' fourth quarter 2006 normalized EPS was $0.33 compared to our estimate of $0.37 and compared to fourth quarter 2005 EPS of $0.27. The Thomson One consensus estimate for the quarter was $0.27. The shortfall from our estimates was primarily due to lower-than-expected earnings from its western operations and higher Corporate expenses.
- **Surprise 10.5% dividend increase – bigger and earlier.** Fortis increased its annual dividend by 10.5% to $0.84 per share from $0.76 per share. This is $0.01 more than the $0.83 annual dividend that we were expecting to be declared in September 2007.
- **$2.6 billion investment in utilities over 5 years.** We expect organic earnings growth to be driven by Fortis' plan to invest approximately $2.6 billion in all of its utilities over the next 5 years. Further, over the next 2 years, the rate bases for FortisAlberta and FortisBC are each expected to grow by about 30%.
- **Looking for more acquisitions.** We continue to believe that Fortis is well positioned to make a major acquisition, such as the purchase of a gas or power distribution company. Further, Fortis stated that it "will continue to seek regulated utility acquisitions in Canada, the Caribbean and the United States."
- **Positive implications.** Although the quarter's results fell short of our estimates, they were well ahead of the consensus estimate. In addition, we believe the improved year-over-year results, the surprise dividend increase, and the significant utility spending program bode well for the company.
- **Attractive valuation.** Fortis offers good EPS growth, and its P/E ratio, P/ACFFO and dividend payout ratio are all below the averages for the Utilities sector in Canada. The combination of Fortis' growth outlook and its attractive valuation provides investors with a forecasted implied all-in return of 28%, supporting our ranking of Outperform, Average Risk (unchanged). Our target price of $33.00 (unchanged) reflects a forecast 12-month dividend distribution one-year forward of $0.92 and a required dividend yield of 2.80%.

Strong, But Still Lower-Than-Expected Fourth Quarter Results

Fortis’ fourth quarter 2006 normalized EPS was $0.33 compared to our estimate of $0.37 and compared to fourth quarter 2005 EPS of $0.27. The Thomson One consensus estimate for the quarter was $0.27. The shortfall from our estimates was primarily due to lower-than-expected earnings from its western operations and higher Corporate expenses.

Source: Company reports, RBC Capital Markets estimates

Surprise 10.5% Dividend Increase

Fortis increased its annual dividend by 10.5% to $0.84 per share from $0.76 per share. This is $0.01 more than the $0.83 annual dividend that we were expecting to be declared in September 2007. Fortis has now increased its dividend by 47% over the past 18 months, but at 56% its 2007 payout ratio remains below 60% and is still lower than the average 2007 payout ratio of 62% for the Canadian energy infrastructure companies in our coverage universe.

$2.6 Billion Spending Program In Utilities to Drive Organic Earnings Growth

We expect organic earnings growth to be driven by Fortis' plan to invest approximately $2.6 billion in all of its utilities over the next 5 years. Further, over the next 2 years, the rate bases for FortisAlberta and FortisBC are each expected to grow by about 30%. In particular, the company will benefit form low-risk earnings growth from its regulated utilities, especially FortisAlberta and FortisBC.

Well Positioned and Looking For Acquisitions

We continue to believe that Fortis is well positioned to make a major acquisition, such as the purchase of a gas or power distribution company. Further, Fortis stated that it "will continue to seek regulated utility acquisitions in Canada, the Caribbean and the United States."

Conclusion

Although the quarter's results fell short of our estimates, they were well ahead of the consensus estimate. In addition, we believe the improved year-over-year results, the surprise dividend increase, and the significant utility spending program bode well for the company. Most notably, we expect the company to benefit from low-risk, organic earnings growth from its significant planned spending program in its utility businesses.

Valuation

Fortis offers good EPS growth, and its P/E ratio, P/ACFFO and dividend payout ratio are all below the averages for the Canadian energy infrastructure sector companies that we cover (Exhibit 2). We believe that this combination of growth, attractive valuation and the low-risk nature of its regulated operations give Fortis an attractive risk/return profile relative to the sector.

Exhibit 2: Fortis' valuation ratios are all below the averages in our coverage universe

	2007 P/E	2007 P/ACFFO	2007 Payout Ratio
Energy Infrastructure (Average)	19.0x	13.3x	62%
Fortis	17.8x	11.4x	56%

Note: The Energy Infrastructure average does not include Canadian Hydro Developers.
Source: RBC Capital Markets estimates

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $33.00 reflects a forecast 12-month dividend distribution one-year forward of $0.92 and a required dividend yield of 2.80% We believe a required yield of 2.80% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	416	43.33	154	37.02
HOLD [SP]	445	46.35	111	24.94

We are resuming coverage following a publishing restriction.

Investment Opinion

- **Terasen Acquisition Looks Attractive.** Fortis acquired the B.C.-based gas distribution utility from Kinder Morgan for $3.7 billion including the assumption of about $2.3 billion in debt. Based on Fortis' financing of the acquisition, we estimate that the company paid about 14.5x 2008E earnings for Terasen. The acquisition is subject to regulatory approval and is expected to close in mid-2007.
- **Immediately Accretive to EPS.** We estimate that the acquisition is approximately $0.08 accretive to EPS in 2008, the first full year of the acquisition. We have increased our 2007 and 2008 EPS estimates from $1.49 and $1.54 respectively, to our new estimates of $1.52 and $1.62. Our 2007 estimate assumes a mid-year 2007 close of the transaction.
- **Acquisition Financing Includes $1.15 Billion of Equity.** Fortis issued 44.3 million subscription receipts (including over-allotment option) at $26.00 for gross proceeds of $1.15 billion. The company also plans to finance the balance of the purchase price (approximately $200 million) using preferred shares.
- **Entry into Gas Distribution Business.** The assets acquired include the gas distribution utilities in the B.C. Lower Mainland, Vancouver Island and the southern interior of the province. The acquisition does not include the crude oil pipelines that were previously owned by Terasen. Terasen Gas is a cost-of-service regulated gas distribution business that allows the recovery of prudently-incurred gas and operational costs. Further, Terasen Gas is not exposed to throughput risk.
- **Strategic Acquisition.** Management commented on the geographic fit with its western electric utility operations. Further, management stated that experience in the gas distribution business would better position Fortis for a potential acquisition in the U.S. where there are companies that own a combined gas & electric utility.
- **Positive Move for Fortis.** We view the acquisition positively as it immediately contributes to EPS and increases the company's earnings contribution from Canadian regulated operations.
- **Valuation.** Our target price of $33.00 (unchanged) reflects a forecast 12-month dividend distribution one-year forward of $0.93 and a required dividend yield of 2.80%. Fortis is ranked Outperform, Average Risk.

Priced as of prior trading day's market close, EST (unless otherwise stated).

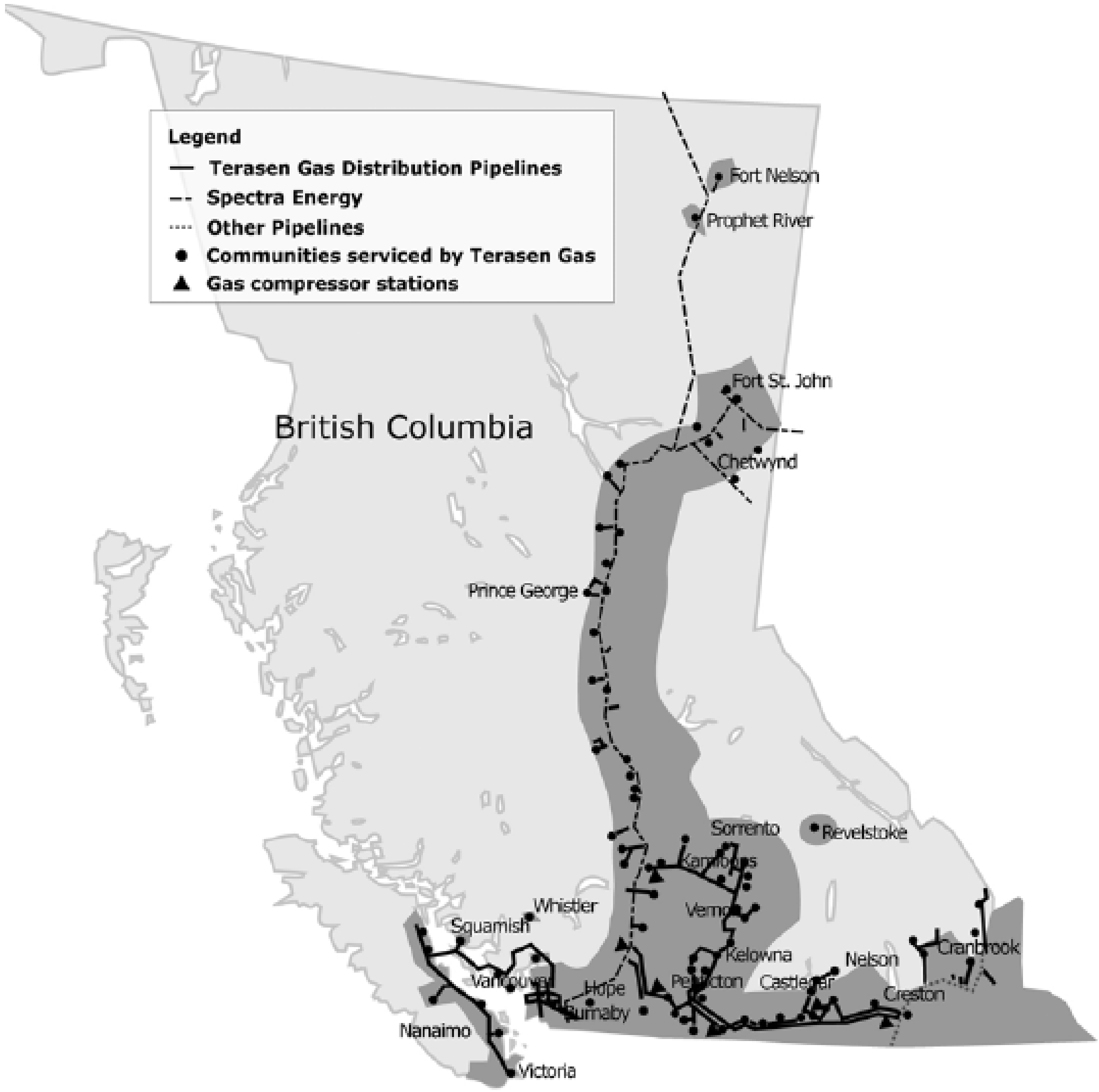
Description of Acquired Assets

The assets acquired include the gas distribution utilities in the B.C. Lower Mainland, Vancouver Island and the southern interior of the province. The acquisition does not include the crude oil pipelines that were previously owned by Terasen. Terasen Gas is a cost-of-service regulated gas distribution business that allows the recovery of prudently-incurred gas and operational costs. Further, Terasen Gas is not exposed to throughput risk.

Terasen Gas is British Columbia's largest natural gas distribution utility serving about 900,000 customers (approximately 95% of the natural gas customers in the province). The utility owns 44,100 kilometres of natural gas distribution pipelines and 4,300 kilometres of natural gas transmission pipelines.

Exhibit 2: Map of Terasen Gas and TGVI Service Territories



Source: Company reports

Conclusion

We view the acquisition positively as it immediately contributes to EPS and increases the company's earnings contribution from Canadian regulated operations. The acquisition of Terasen Gas fits geographically with Fortis' western Canadian operations, and will provide management with a base of knowledge and experience in natural gas distribution resulting in a platform for future growth through acquisitions of gas distribution utilities.

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $33.00 reflects a forecast 12-month dividend distribution one-year forward of $0.93 and a required dividend yield of 2.80% We believe a required yield of 2.80% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediments

The failure to close the Terasen acquisition, political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities. The company has agreed to acquire Terasen Inc., which operates gas distribution utilities in British Columbia.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings
Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.

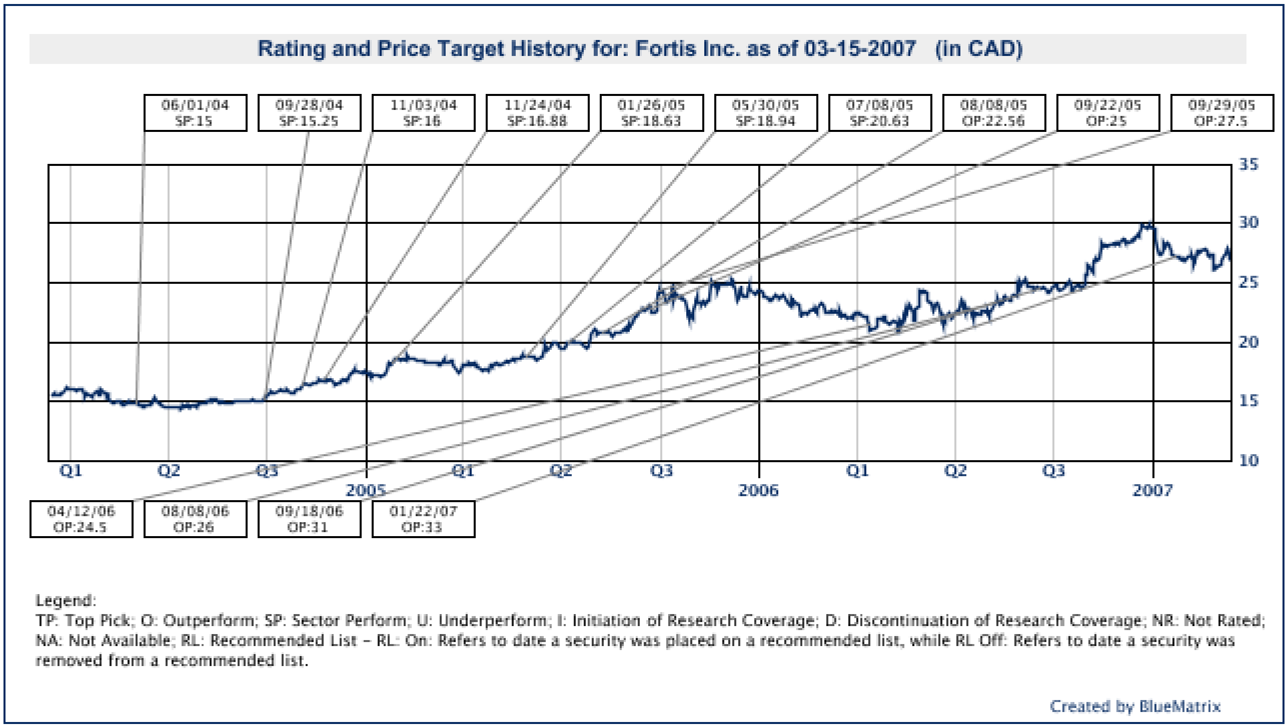
Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories–Buy, Hold/Neutral, or Sell–regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of Ratings, Firmwide

	RBC Capital Markets		Investment Banking Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [TP/O]	437	43.57	171	39.13
HOLD [SP]	461	45.96	138	29.93
SELL [U]	105	10.47	20	19.05



In the event that this is a compendium report (covers more than six subject companies), RBC Capital Markets may choose to provide specific disclosures for the subject companies by reference. To access current disclosures, clients should refer to http://www7.rbccm.com/GLDisclosure/PublicWeb/DisclosureLookup.aspx?EntityID=1 or send a request to RBC CM Research Publishing, P.O. Box 50, 200 Bay Street, Royal Bank Plaza, 29th Floor, South Tower, Toronto, Ontario M5J 2W7.

References to a Recommended List in the recommendation history chart may include one or more recommended lists or model portfolios maintained by a member company of RBC Capital Markets or one of its affiliates. RBC Dain Rauscher Inc. Recommended Lists include a former list called the Western Region Focus List (1), a former list called Model Utility Portfolio (2), and the Prime Opportunity List (3) (formerly called the Private Client Selects), Private Client Prime Portfolio (4), a former list called Private Client Portfolio (5), the Prime Income List (6), and the Guided Portfolio: Large Cap (7). The abbreviation "RL On" means the date a security was placed on a Recommended List. The abbreviation "RL Off" means the date a security was removed from a Recommended List.

Analyst Certification

All of the views expressed in this report accurately reflect the personal views of the responsible analyst(s) about any and all of the subject securities or issuers. No part of the compensation of the responsible analyst(s) named herein is, or will be, directly or indirectly, related to the specific recommendations or views expressed by the responsible analyst(s) in this report.

Dissemination of Research

RBC Capital Markets endeavours to make all reasonable efforts to provide research simultaneously to all eligible clients, having regard to local time zones in overseas jurisdictions. RBC Capital Markets' equity research is posted to our proprietary websites to ensure eligible clients receive coverage initiations and changes in rating, targets and opinions in a timely manner. Additional distribution may be done by the sales personnel via email, fax or regular mail. Clients may also receive our research via third party vendors. Please contact your investment advisor or institutional salesperson for more information regarding RBC Capital Markets research.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities. The company has agreed to acquire Terasen Inc., which operates gas distribution utilities in British Columbia.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings

Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.

Outperform (O): Expected to materially outperform sector average over 12 months.

Sector Perform (SP): Returns expected to be in line with sector average over 12 months.

Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):

Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.

Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.

Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories--Buy, Hold/Neutral, or Sell--regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

First Quarter 2007 Results In Line With Expectations

Outperform
Average Risk

Price:	28.02	**Price Target:**	33.00
		Implied All-In Return:	20.8%
Shares O/S (MM):	153.9	**Market Cap (MM):**	4,312.3
Dividend:	0.84	**Yield:**	3.0%
Float (MM):	153.9		
Debt to Cap:	56.9%		

Event

Fortis reported its first quarter results for 2007.

Investment Opinion

- **Q1 Results In Line.** Fortis' normalized first quarter 2007 EPS was $0.40 compared to our estimate of $0.39, consensus of $0.37, and first quarter 2006 normalized EPS of $0.36. In general, segment results were all in line with slightly higher-than-expected results from Belize Electricity offset by slightly lower-than-expected results from Turks & Caicos. Fortis also benefited from slightly better-than-expected hydroelectric production during the quarter.
- **Heavy Planned Capex Drives Strong Rate Base Growth.** In 2007, Fortis plans to spend approximately $631 million in capital expenditures on its electric utilities. Over the next 5 years, Fortis plans to spend approximately $2.8 billion at its electric utilities and over $1 billion of capex at its gas utilities. Most of this spending will be to meet customer growth and update infrastructure at FortisAlberta and FortisBC. We expect Fortis to benefit from low-risk, organic earnings growth from significant additions to rate base.
- **Adjusting 2007 EPS Estimate for Terasen Seasonality.** Fortis recently received BCUC approval for its acquisition of Terasen, which it expects to close by the end of the quarter. Reflecting the significant seasonality in Terasen's results (Q3 is Terasen's worst quarter) partially offset by other changes to our financial model, we have reduced our 2007 EPS estimate from $1.52 to $1.50. Our 2008 EPS estimate is unchanged.
- **Attractive Outlook.** We expect Fortis to benefit from low-risk, organic earnings growth from its significant rate base expansion program in its utility businesses. Fortis offers good EPS growth, and its P/E ratio and dividend payout ratio are both below the averages for the Canadian energy infrastructure companies that we cover. We believe that this combination of growth, attractive valuation and the low-risk nature of its regulated operations give Fortis an attractive risk/return profile relative to the sector.
- **Valuation.** Our target price of $33.00 (unchanged) reflects a forecast 12-month dividend distribution one-year forward of $0.94 and a required dividend yield of 2.80%. Fortis is ranked Outperform, Average Risk.

Priced as of prior trading day's market close, EST (unless otherwise noted).

For Required Disclosures, please see Page 5.

First Quarter Results On Track

Fortis' normalized first quarter 2007 EPS was $0.40 compared to our estimate of $0.39, consensus of $0.37, and first quarter 2006 normalized EPS of $0.36. In general, segment results were all in line with slightly higher-than-expected results from Belize Electricity offset by slightly lower-than-expected results from Turks & Caicos. Fortis also benefited from slightly better-than-expected hydroelectric production during the quarter.

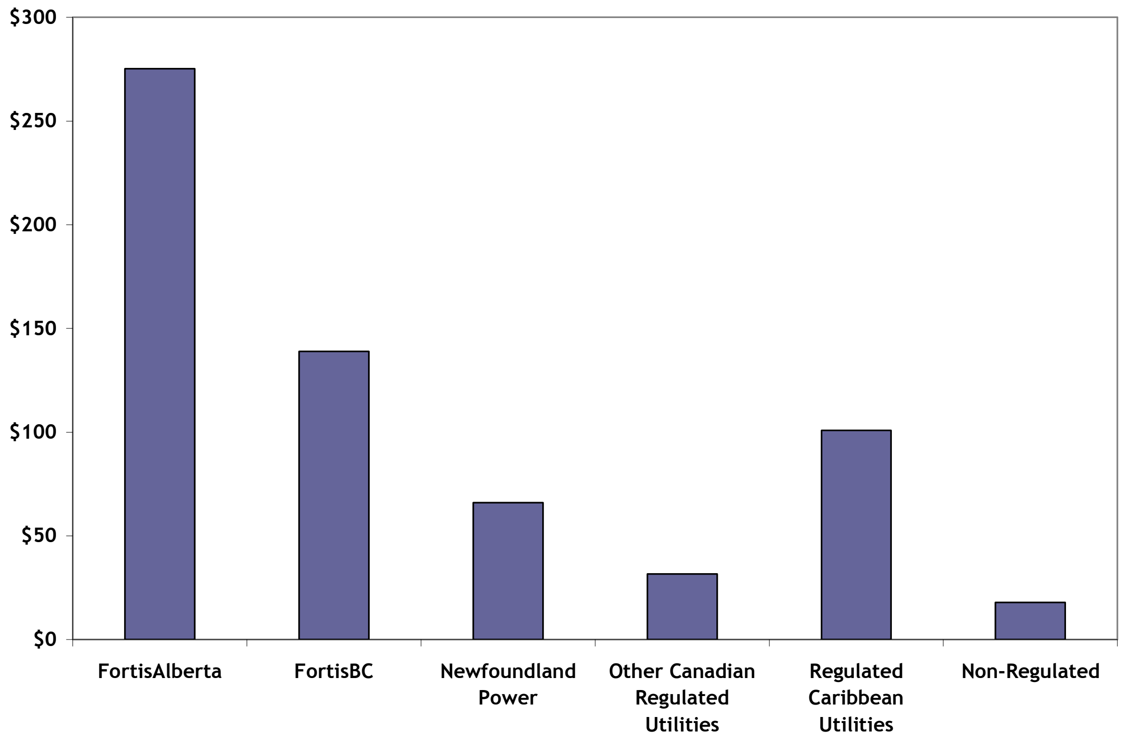
$631 Million of Utilities Capex Planned for 2007

In 2007, Fortis plans to spend approximately $631 million in capital expenditures on its electric utilities. Over the next 5 years, Fortis plans to spend approximately $2.8 billion at its electric utilities with gross consolidated gas utility capex of over $1 billion (assuming the Terasen Gas acquisition closes in the second quarter of 2007). Most of this electric utility spending will be to meet customer growth and update infrastructure at FortisAlberta and FortisBC. Exhibit 2 illustrates the company's planned spending on electric utilities for 2007.

Exhibit 2: Forecast Gross Utility Capital Expenditures for 2007 ($MM)



Source: Company reports, RBC Capital Markets

Upcoming Regulatory Filings for FortisAlberta, Newfoundland Power and Maritime Electric

- **FortisAlberta.** During the second quarter of 2007, FortisAlberta intends to file its 2008/2009 Distribution Access Tariff Application for Alberta Energy and Utilities Board approval of customer rates and capital expenditures for 2008 and 2009. According to management, rate increases will be required to recover the large capital expenditures planned for 2008 and 2009 as well as to recover the excess capex spent in 2006 and 2007 due to the stronger-than-expected growth in Alberta.
- **Newfoundland Power.** In the second quarter of 2007, Newfoundland Power plans to file a general rate application with the Newfoundland and Labrador Board of Public Commissioners of Public Utilities to set customer rates for 2008.
- **Maritime Electric.** In the fall of 2007, Maritime Electric expects to file a rate application with the Island Regulatory and Appeals Commission to set rates for 2008.

2007 EPS Estimate Adjusted for Terasen Seasonality

Fortis recently received BCUC approval for its acquisition of Terasen, which it expects to close by the end of the quarter. Reflecting the significant seasonality in Terasen's results (Q3 is Terasen's worst quarter) partially offset by other changes to our financial model, we have reduced our 2007 EPS estimate from $1.52 to $1.50. Our 2008 EPS estimate is unchanged.

Conclusion

We expect Fortis to benefit from low-risk, organic earnings growth from its significant rate base expansion program in its utility businesses. Fortis offers good EPS growth, and its P/E ratio and dividend payout ratio are both below the averages for the Canadian energy infrastructure companies that we cover. We believe that this combination of growth, attractive valuation and the low-risk nature of its regulated operations give Fortis an attractive risk/return profile relative to the sector.

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $33.00 reflects a forecast 12-month dividend distribution one-year forward of $0.94 and a required dividend yield of 2.80% We believe a required yield of 2.80% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediment

The failure to close the Terasen acquisition, political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities. The company has agreed to acquire Terasen Inc., which operates gas distribution utilities in British Columbia.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings

Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.

Outperform (O): Expected to materially outperform sector average over 12 months.

Sector Perform (SP): Returns expected to be in line with sector average over 12 months.

Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):

Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.

Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.

Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories--Buy, Hold/Neutral, or Sell--regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Dividend:	0.84	**Yield:**	3.0%
Float (MM):	153.9		
Debt to Cap:	56.9%		

Event

Newfoundland Power filed a General Rate Application (GRA).

Investment Opinion

- **No Major Impact Expected to our Earnings Forecast.** Based on our assessment, we do not expect the filing of the GRA to impact our 2007 and 2008 earnings estimates. Although Newfoundland Power has proposed to increase its allowed ROE to 10.25% (from 8.6%), we do not expect the Newfoundland and Labrador Board of Commissioners to Public Utilities (PUB) to approve the change in ROE.
- **Rate Application Expected to Benefit Cash Flow.** For the past couple of years, Newfoundland Power has deferred the amortization of certain costs per a previous PUB order, which also stated the intention to deal with these costs at a later date. In the GRA, Newfoundland Power has applied for higher depreciation to recover these previously incurred costs in rates.
- **Application for Higher ROE Unlikely to Succeed.** Newfoundland Power has applied for an increase in its allowed ROE to 10.25% (from 8.6%). Despite support for higher allowed returns, allowed ROEs for most regulated utilities in Canada are sub-9%. The company has also applied for a change in the automatic ROE adjustment mechanism to more closely follow other utilities in Canada, which could be approved. However, a change in the formula is not expected to materially impact our earnings forecast.
- **Overall Rate Increase Appears Manageable.** Newfoundland Power applied for a 5.3% average increase in 2008 electricity rates (primarily based on higher cost recovery and a higher ROE). For 2008, not changing the ROE would reduce the average rate increase to approximately 3.4%, which we believe is more than manageable from a ratepayer perspective.
- **No Change to Outlook.** We expect the company to be successful in its application for cost recovery, but not its application for a higher ROE. As such, we do not expect the outcome of the GRA to materially change our earnings outlook for Fortis.
- **Valuation.** Our target price of $33.00 (unchanged) reflects a forecast 12-month dividend distribution one-year forward of $0.94 and a required dividend yield of 2.80%.

Priced as of prior trading day's market close, EST (unless otherwise noted).

For Required Disclosures, please see Page 3.

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $33.00 reflects a forecast 12-month dividend distribution one-year forward of $0.94 and a required dividend yield of 2.80% We believe a required yield of 2.80% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediment

The failure to close the Terasen acquisition, political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Event

Fortis announced the completion of its acquisition of Terasen Gas.

Investment Opinion

- **Completes $3.7 Billion Purchase.** Fortis closed its $3.7-billion purchase of Terasen from Kinder Morgan. Please refer to our *Morning Comment* published March 19, 2007 for details regarding the announcement of the transaction.
- **Adjusting 2007 EPS Estimate to Reflect Earlier-than-Expected Closing; No Change in Positive Outlook.** Our previous estimates assumed that the transaction would close on June 30, 2007. Due to the seasonality of Terasen Gas' results (Q2 and Q3 are seasonally weak quarters), the early closing has a modest negative impact on our 2007 estimates. As such, we have reduced our 2007 FD EPS estimate from $1.47 to $1.44. Our 2008 EPS estimate and our positive view on the transaction remain unchanged.
- **Subscription Receipts Converted to Common Shares.** The 44.3 million subscription receipts issued in March 2007 to finance a significant portion of the Terasen acquisition have been automatically exchanged for common shares along with a $0.21/receipt cash payment to reflect dividends declared since the issuance of the receipts.
- **Entry into Gas Distribution Business.** The assets acquired include the gas distribution utilities in the B.C. Lower Mainland, Vancouver Island and the southern interior of the province. The acquisition does not include the crude oil pipelines that were previously owned by Terasen. Terasen Gas is a cost-of-service regulated gas distribution business that allows the recovery of prudently-incurred gas and operational costs. Further, Terasen Gas is not exposed to throughput risk. The Terasen Gas business is a well run, low-risk gas distribution utility that we expect to provide Fortis with an enhanced platform for future acquisitions of North American utility operations.
- **Valuation.** Our target price of $33.00 (unchanged) reflects a forecast 12-month dividend distribution one-year forward of $0.94 and a required dividend yield of 2.80%.

Priced as of prior trading day's market close, EST (unless otherwise noted).

For Required Disclosures, please see Page 3.

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $33.00 reflects a forecast 12-month dividend distribution one-year forward of $0.94 and a required dividend yield of 2.80% We believe a required yield of 2.80% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediment

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings

Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.
Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories--Buy, Hold/Neutral, or Sell--regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

COMPANY UPDATE | COMMENT

MAY 31, 2007

Fortis Inc. (TSX: FTS)

Building New Hydro Facility in Belize

Outperform
Average Risk

Price:	28.32	**Price Target:**	33.00
		Implied All-In Return:	19.5%
Shares O/S (MM):	153.9	**Market Cap (MM):**	4,358
Dividend:	0.84	**Yield:**	3.0%
Float (MM):	153.9		
Debt to Cap:	56.9%		

Event

Fortis will construct an 18 MW hydro facility in Belize.

Investment Opinion

- **New US$52.5 Million Hydro Plant in Belize.** Fortis, through its BECOL subsidiary, will construct an 18 megawatt hydroelectric facility in Belize at an estimated cost of US$52.5 million. All major approvals have been received and the construction has begun with an estimated commissioning in late 2009. The facility will be located at Vaca on the Macal River, which is the same river as the company's existing 25-MW Mollejon and 7-MW Chalillo plants. The output from the plant will be sold to Belize Electricity Limited under a 50-year contract.
- **Project Appears to be $0.02 Accretive to EPS in 2010, the First Full Year of Operations.** The Vaca facility looks like an attractive project for Fortis with an expected earnings accretion of $0.02 per share, even when we factor in a full common share issuance to fund the equity for the project. Further, the ROE appears attractive at approximately 15%.
- **Estimates Unchanged.** As the commissioning of the project (expected in late 2009) is outside of our forecast period, we have left our EPS estimates unchanged.
- **Solid Growth, and Below Average P/E and Payout Ratio Drive Outperform Ranking.** We continue to recommend Fortis due to its above average growth rate (about 8% CAGR from 2006 through 2008 vs. sector average of about 5%), and its below average P/E (17.5x 2008E EPS vs. sector average of 18.5x) and payout ratio (52% of 2008E EPS vs. sector average of 58%).
- **Valuation.** Our target price of $33.00 (unchanged) reflects a forecast 12-month dividend distribution one-year forward of $0.94 and a required dividend yield of 2.80%. A 10 bp change in our required yield would impact our target price by approximately $1.00 per share.

New Hydro Facility in Belize Looks Accretive to Earnings

Fortis, through its BECOL subsidiary, will construct an 18 megawatt hydroelectric facility in Belize at an estimated cost of US$52.5 million. All major approvals have been received and the construction has begun with an estimated commissioning in late 2009. The facility will be located at Vaca on the Macal River, which is the same river as the company's existing 25-MW Mollejon and 7-MW Chalillo plants. The output from the plant will be sold to Belize Electricity Limited under a 50-year contract.

Our forecast earnings analysis is set out in Exhibit 1. In our analysis, we would note the following:

- **Project Appears to be $0.02 Accretive to EPS in 2010, the First Full Year of Operations.** As shown in the sensitivity analysis in Exhibit 1, the EPS accretion is not very sensitive to either our equity issue price or our foreign exchange rate assumption. Predictably, the EPS accretion is sensitive to the actual hydrology. However, we would note that even if water flows were 50% of the long-term expectation, the project would still be very modestly accretive to earnings. As we do not have a published 2010 EPS estimate, we have used our 2008E EPS grown at 5% in our analysis as a proxy for 2010. With the expiration of the water rights for the 75 MW Rankine hydro facility in Ontario in April 2009, we believe that lower expected growth from 2008 through 2010 is reasonable.
- **Financing:** The company expects to finance the project using approximately 40% debt (estimated interest rate of 10%). Although the company will not explicitly finance the equity portion of the project using new common shares, we expect the company to issue equity to fund its growth capex (new projects such as Vaca, and utility rate base expansion). As such, we have examined the project economics as if Fortis issued new common shares to fund the equity portion. Our assumed issue price is our one-year price target for Fortis, which is $33.00.
- **Capital Cost Protection:** As part of the power sales agreement, the energy price will be adjusted upward or downward if the actual capital cost varies outside of a tight band around the estimated US$52.5 million forecast cost. This helps reduce the capital cost risk for Fortis.

Generation	125%	$0.029	$0.031	$0.032	$0.034	$0.035
	150%	$0.038	$0.040	$0.042	$0.044	$0.046

Source: Company reports, RBC Capital Markets estimates

Conclusion

The Vaca facility looks like an attractive project for Fortis with an expected earnings accretion of $0.02 per share, even when we factor in a full common share issuance to fund the equity for the project. Further, the ROE appears attractive at approximately 15%.

Valuation

Our valuation for Fortis is based on a dividend yield approach. When the current yield of the 10-year Government of Canada benchmark bond is below 6%, we believe that a dividend yield approach is an appropriate valuation method for Fortis. Our target price of $33.00 reflects a forecast 12-month dividend distribution one-year forward of $0.94 and a required dividend yield of 2.80% We believe a required yield of 2.80% is appropriate based on expected interest rate levels, Fortis' risk profile, its low payout ratio and growth prospects.

Price Target Impediment

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Terasen Inc., Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities.

Event

Fortis Properties acquired the Delta Regina for $49.95 million.

Investment Opinion

- **Purchases the Delta Regina for $50 Million.** Fortis Properties agreed to purchase the Delta Regina from Remai Investment Corp. for $49.95 million. The transaction is expected to close in the third quarter of 2007. The Delta Regina is comprised of 274 hotel rooms, the Saskatchewan Trade and Convention Centre, 52,000 square feet of Class A commercial office space and a parking garage.
- **Small EPS Accretion.** We estimate that the transaction will be less than $0.01 per share accretive in 2008, the first full year after the acquisition. As such, we have left our estimates unchanged.
- **Valuation.** Our target price of $30.00 (unchanged) reflects a forecast 12-month dividend distribution one-year forward of $0.96 and a required dividend yield of 3.20%. A 10 bp change in our required yield would impact our target price by approximately $1.00 per share.

Priced as of prior trading day's market close, EST (unless otherwise noted).

Small EPS Accretion from Delta Regina Acquisition

Fortis Properties agreed to purchase the Delta Regina from Remai Investment Corp. for $49.95 million. The transaction is expected to close in the third quarter of 2007. The Delta Regina is comprised of 274 hotel rooms, the Saskatchewan Trade and Convention Centre (26,600 square feet), 52,000 square feet of Class A commercial office space and a parking garage.

Based on our financial analysis of the acquisition in Exhibit 1, we estimate that the transaction will be less than $0.01 per share accretive in 2008, the first full year after the acquisition. As such, we have left our estimates unchanged.

Valuation

Our target price for Fortis of $30.00 is based on a 12-month dividend distribution one year forward of $0.96 and a required dividend yield of 3.20%. A 10 bp change in the required dividend yield would impact our price target by approximately $1.00 per share.

Price Target Impediment

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Terasen Inc., Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings

Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.

Outperform (O): Expected to materially outperform sector average over 12 months.

Sector Perform (SP): Returns expected to be in line with sector average over 12 months.

Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):

Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.

Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.

Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories--Buy, Hold/Neutral, or Sell--regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

COMPANY UPDATE | COMMENT

AUGUST 7, 2007

Fortis Inc. (TSX: FTS)

Results In Line; Low Payout Ratio Supports Outlook for Solid Dividend Growth

Outperform
Average Risk

Price:	26.05	**Price Target:**	30.00
		Implied All-In Return:	18.4%
Shares O/S (MM):	154.2	**Market Cap (MM):**	4,017
Dividend:	0.84	**Yield:**	3.2%
Float (MM):	154.2		
Debt to Cap:	63.0%		

Event

Fortis reported its second quarter results for 2007.

Investment Opinion

- **Low Risk and Visible Utility Growth.** We expect Fortis' EPS to grow at a 6% CAGR through 2009 despite the expiration of the hydro license at the 75 MW Rankine facility in April 2009 (approximate $0.10/share drag on earnings). The majority of growth is expected to come from significant utility rate base expansion at the western Canadian electric utilities coupled with earnings accretion from the Terasen acquisition.
- **Low Payout Ratio Supports the Potential for Superior Dividend Growth.** We expect Fortis to grow dividends by $0.10 per share annually (about 10% per year), which would result in a 2009E payout ratio of 63%. A 63% payout ratio is lower than the current and projected 2009E payout ratios for Emera, Enbridge and TransCanada.
- **Q2 Results.** Fortis' normalized Q2/07 EPS was $0.31 compared to our estimate of $0.32, and Q2/06 normalized EPS of $0.32. Higher-than-expected earnings from the regulated Canadian utilities (primarily FortisAlberta and FortisBC), were offset by lower-than-expected results from non-regulated Generation due to below average hydrology and higher-than-forecast Corporate costs.
- **Reducing 2007 EPS Primarily for Greater Terasen Seasonality and Poor Hydrology.** As a result of lower hydrology in Q2/07 coupled with greater seasonality than previously modeled into our 2007 forecast for Terasen, we have reduced our 2007 EPS estimate to $1.38 (previously $1.47).
- **Rolling Out 2009 EPS Estimate.** Our 2009 EPS estimate is $1.66. The drag on earnings from the loss of the Rankine facility is forecast to be more than offset by continued strong earnings growth at the western Canadian electric utilities as a result of rate base growth.
- **Valuation.** Our target price of $30.00 (unchanged) reflects a forecast 12-month dividend distribution one-year forward of $0.99 and a required dividend yield of 3.30%. We estimate that a 10 bp change in our required yield would impact our target price by approximately $1.00 per share.

Priced as of prior trading day's market close, EST (unless otherwise noted).

Q2/07 Results In Line With Expectations

Fortis' normalized second quarter 2007 EPS was $0.31 compared to our estimate of $0.32, and second quarter 2006 normalized EPS of $0.32. Higher-than-expected earnings from the regulated Canadian utilities (primarily FortisAlberta and FortisBC), were offset by lower-than-expected results from non-regulated Generation due to lower hydrology and higher-than-forecast Corporate costs.

Source: Company reports, RBC Capital Markets estimates

Highlights of the Quarter

Canadian Regulated Utilities

- **Terasen:** Fortis acquired Terasen on May 17, 2007, and the incremental earnings contribution during the second quarter 2007 from this acquisition was $1.6 million, which was less than the $4.0 million we had expected for the quarter. As further described below, we have adjusted our 2007 EPS estimate to account for greater than previously forecast seasonality in the Terasen results.
- **FortisAlberta:** Normalized earnings increased $3.5 million due to higher revenues associated with customer growth, a 0.7% increase in distribution rates, and increased tax recoveries. Management commented that the H1/07 results, and Q2 in particular, were very strong, and the expectation is for a moderating of the growth in the second half.
- **FortisBC:** Normalized earnings increased to $6.5 million in the second quarter 2007 from $3.4 million in the second quarter 2006 primarily due to a 2.1% increase in electricity rates (effective April 1, 2007), higher electricity sales and lower energy supply costs, partially offset by higher operating expenses, amortization costs and finance charges.
- **Other Canadian Regulated Utilities:** The combined normalized earnings of FortisOntario and Maritime Electric increased $1.8 million year over year primarily due to the 3.35% increase in Maritime Electric's electricity rates, higher electricity sales and a lower effective corporate tax rate.

Caribbean Regulated Electric Utilities

- **Turks & Caicos:** The increase in normalized earnings during the quarter in Caribbean Regulated Electric Utilities was primarily driven by the incremental $2.4 million contribution by Turks and Caicos, which was acquired on August 28, 2006.

Non-Regulated

- **Fortis Generation:** Lower hydrology in Belize, central Newfoundland and upper New York state decreased hydroelectric production, which resulted in lower normalized earnings in the second quarter 2007 compared to the same quarter last year.
- **Fortis Properties:** Higher year-over-year quarterly normalized earnings were primarily due to the four hotels acquired in western Canada in November 2006.
- **Corporate:** Normalized expenses increased to $12.6 million from $8.3 million last year primarily due to the allocation of finance charges related to the acquisition of Terasen.

Outlook for Earnings (2007 – 2009)

We have made the following changes to our 2007 and 2008 EPS estimates in addition to rolling out our financial model to 2009:

- **2007:** Reduced EPS estimate to $1.38 (previously $1.47).
- **2008:** EPS estimate unchanged at $1.62
- **2009:** Roll-out of our financial model with an EPS estimate of $1.66.

Additional detail regarding our estimates from 2007 through 2009 is provided below.

2007: Results Negatively Impacted by Timing of Terasen Acquisition and Poor Q2/07 Hydrology

As a result of lower hydrology in Q2/07 coupled with greater seasonality than previously modeled into our 2007 forecast for Terasen, we have reduced our 2007 EPS estimate to $1.38 (previously $1.47). As the Terasen acquisition closed in mid-Q2/07, we expect 2007 annual results will be negatively impacted as Q1 is typically the strongest quarter for the gas distribution business with over half of the expected annual earnings occurring in that quarter.

2008: Forecast for Strong Growth from Terasen and Regulated Utilities

In 2008, we expect strong earnings growth (EPS of $1.62) due to the first full-year of results from the Terasen acquisition, earnings growth from significant rate base expansion primarily at the western Canadian electric utilities, continued growth in the Caribbean electric utilities, and a return to normal hydrology for the unregulated hydro operations. To maintain a target debt to capital of 60%, we expect Fortis to issue $100 million of preferred equity and $50 million of common equity in 2008.

2009: Continued Strong Utility Growth Dragged Down by Expiration of Hydro License for the Rankine Facility

We are looking for 2009 EPS growth to moderate due to the expiration of the license for the 75 MW Rankine hydro facility in Ontario at the end of April, which we estimate will negatively impact 2009 earnings by about $10 million ($0.06 per share). However, the drag on earnings from the loss of the Rankine facility is forecast to be more than offset by continued earnings growth from most of the other segments and, in particular, the western Canadian electric utilities as a result of rate base growth. From 2007 through 2011, management expects to invest $2.8 billion in electric utility rate base with the majority being spent at FortisAlberta and FortisBC.

Exhibit 2: Segmented Earnings Forecast (In C$ millions except per share figures)

	2006	2007E	2008E	2009E	06-09E CAGR
Newfoundland Power	$30	$29	$30	$32	2%

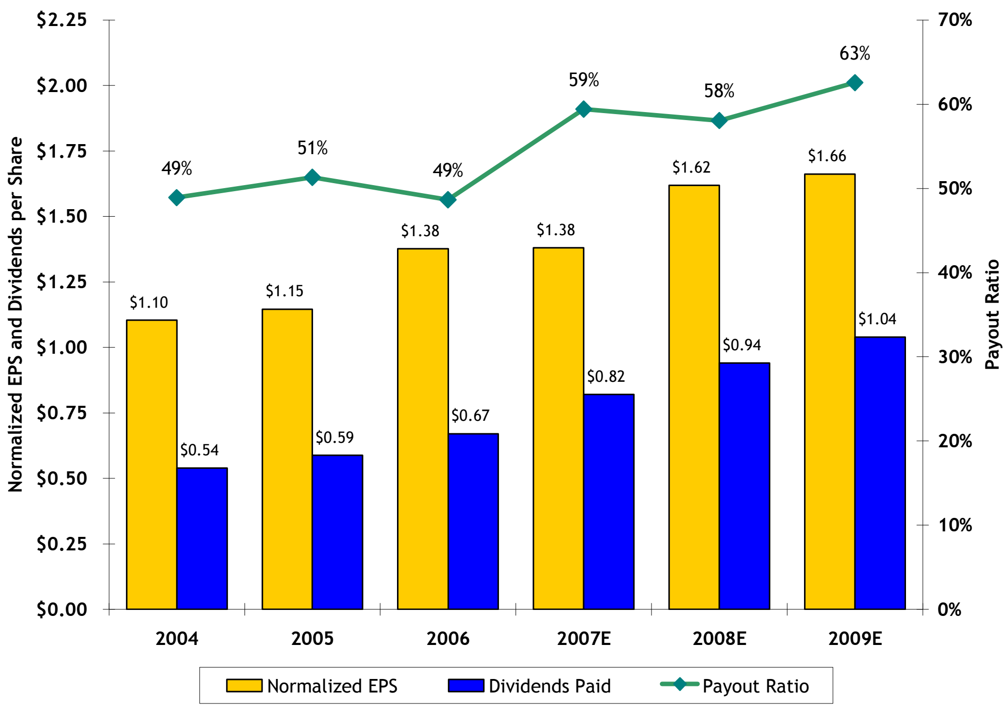
Payout Ratio	49%	59%	58%	63%	

Source: RBC Capital Markets estimates

Despite 2009 Earnings Slowdown, Low Payout Ratio Supports Ability to Deliver Continued Strong Dividend Increases

Despite a temporary moderating of earnings growth in 2009 as a result of the expiration of the license at the 75 MW Rankine hydro facility in Ontario, we believe that the company has the ability to continue increasing its annual dividend by roughly 10% (about $0.10/share) each year through 2009. As a result of the earnings drag from the loss of the Rankine facility, we estimate that Fortis' payout ratio would increase to 63% in 2009. A payout ratio at 63% would still be below both the current and projected 2009E payout ratios for Emera, Enbridge, and TransCanada.

Exhibit 3: EPS, Dividends and Payout Ratios (In C$ per share)



Source: Company reports, RBC Capital Markets estimates

Companies Mentioned:

Emera Incorporated (EMA.TO; Sector Perform; Average Risk; 20.56 CAD)

Enbridge Inc. (ENB.TO; Sector Perform; Average Risk; 11.20 CAD)

TransCanada Corporation (TRP.TO; Outperform; Average Risk; 37.25 CAD)

Valuation

Our target price for Fortis of $30.00 is based on a 12-month dividend distribution one year forward of $0.99 and a required dividend yield of 3.30%. We estimate that a 10 bp change in the required dividend yield would impact our price target by approximately $1.00 per share.

Price Target Impediment

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Terasen Inc., Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. Additional Disclosures

RBC Capital Markets is the business name used by certain subsidiaries of Royal Bank of Canada, including RBC Dominion Securities Inc., RBC Capital Markets Corporation, Royal Bank of Canada Europe Limited and Royal Bank of Canada - Sydney Branch. The information contained in this report has been compiled by RBC Capital Markets from sources believed to be reliable, but no representation or warranty, express or implied, is made by Royal Bank of Canada, RBC Capital Markets, its affiliates or any other person as to its accuracy, completeness or correctness. All opinions and estimates contained in this report constitute RBC Capital Markets' judgement as of the date of this report, are subject to change without notice and are provided in good faith but without legal responsibility. Nothing in this report constitutes legal, accounting or tax advice or individually tailored investment advice. This material is prepared for general circulation to clients and has been prepared without regard to the individual financial circumstances and objectives of persons who receive it. The investments or services contained in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about the suitability of such investments or services. This report is not an offer to sell or a solicitation of an offer to buy any securities. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. RBC Capital Markets research analyst compensation is based in part on the overall profitability of RBC Capital Markets, which includes profits attributable to investment banking revenues. Every province in Canada, state in the U.S., and most countries throughout the world have their own laws regulating the types of securities and other investment products which may be offered to their residents, as well as the process for doing so. As a result, the securities discussed in this report may not be eligible for sale in some jurisdictions. This report is not, and under no circumstances should be construed as, a solicitation to act as securities broker or dealer in any jurisdiction by any person or company that is not legally permitted to carry on the business of a securities broker or dealer in that jurisdiction. To the full extent permitted by law neither RBC Capital Markets nor any of its affiliates, nor any other person, accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or the information contained herein. No matter contained in this document may be reproduced or copied by any means without the prior consent of RBC Capital Markets.

Event

Newfoundland Power filed a revised 2008 rate application with its regulator.

Investment Opinion

- **Files Partial Negotiated Settlement.** The revised application that Newfoundland Power submitted to the Newfoundland and Labrador Board of Commissioners of Public Utilities (PUB) is the result of negotiations between Newfoundland Power and the Consumer Advocate, with the assistance of a PUB-appointed facilitator. Most major issues have been settled, but it was agreed that a few remaining issues should be discussed in a public hearing.
- **Overall Rate Increase Lowered.** The revised application requests an average increase to electricity rates of 2.8% in 2008 instead of the 5.3% previously requested. This is largely due to a lower requested ROE in addition to agreeing to continue to recognize post-employment benefits on a cash basis (instead of changing to an accrual basis).
- **Smaller Increase to ROE Sought.** Under the revised application, Newfoundland Power has reduced the size of the increase it was seeking for its allowed ROE. Its current allowed ROE is 8.60%, and it is now seeking an allowed ROE of 8.95% instead of the 10.25% it requested in its original application. In our *Morning Comment* published May 11, 2007, we commented that we did not expect the company to be successful in its application for an ROE of 10.25%. Based on changes in interest rates over the past year, coupled with the agreement with the Consumer Advocate, we believe that an allowed ROE of 8.95% is likely to be approved.
- **Modest Financial Impact - Outlook Unchanged.** We do not expect the PUB to make any major changes to the revised application since the parties involved have reached agreement on most issues. Furthermore, if the PUB approves the increase in the allowed ROE to 8.95% (from 8.60%), we do not expect it to have a material impact on our earnings estimates. As such, we have left our estimates unchanged.
- **Valuation.** Our target price of $30.00 (unchanged) reflects a forecast 12-month dividend distribution one-year forward of $1.01 and a required dividend yield of 3.30%. We estimate that a 10 bp change in our required yield would impact our target price by approximately $1.00 per share.

Priced as of prior trading day's market close, EST (unless otherwise noted).

For Required Disclosures, please see Page 4.

Files Revised 2008 Rate Application With Partial Negotiated Settlement

The revised application that Newfoundland Power submitted to the Newfoundland and Labrador Board of Commissioners of Public Utilities (PUB) is the result of negotiations between Newfoundland Power and the Consumer Advocate, with the assistance of a PUB-appointed facilitator. Most major issues have been settled, but it was agreed that a few remaining issues should be discussed in a public hearing.

Overall Increase to Electricity Rates Lowered

The revised application requests an average increase to electricity rates of 2.8% in 2008 instead of the 5.3% previously requested. This is largely due to a lower requested ROE in addition to agreeing to continue to recognize post-employment benefits on a cash basis (instead of changing to an accrual basis).

Seeking 8.95% Allowed ROE Instead of 10.25%

Under the revised application, Newfoundland Power has reduced the size of the increase that it is seeking to its allowed ROE. Its current allowed ROE is 8.60% and it is now seeking an allowed ROE of 8.95% instead of the 10.25% it requested in its original application. In our *Morning Comment* published May 11, 2007, we commented that we did not expect the company to be successful in its application for an ROE of 10.25%. Based on changes in interest rates over the past year, coupled with the agreement with the Consumer Advocate, we believe that an allowed ROE of 8.95% is likely to be approved.

The 8.95% reflects the ROE that would be expected based on the current formula approach. Furthermore, due to the close proximity to the time period when the ROE would be set this fall, it has been agreed that if the application is approved by the PUB, 8.95% will be the allowed ROE for 2008 regardless of changes in interest rates between now and the date the allowed ROE would normally be set.

Application Still Expected to Benefit Cash Flow

The revised application includes an agreement for higher depreciation to recover previously incurred costs in rates. Higher depreciation to recover these costs was part of the original application and pertains to Newfoundland Power's deferral of the amortization of certain costs per a previous PUB order, which also stated the intention to deal with these costs at a later date.

Shorter Public Hearings Expected

With agreement on most major issues, the public hearings scheduled to commence on October 22, 2007 are expected to conclude much faster than usual. Instead of the typical several weeks of hearings, Newfoundland Power expects that the hearings with the PUB will last approximately seven days.

Outlook Unchanged

We do not expect the PUB to make any major changes to the revised application since the parties involved have reached agreement on most issues. Furthermore, if the PUB approves the increase in the allowed ROE to 8.95% (from 8.60%), we do not expect it to have a material impact on our earnings estimates. As such, we have left our estimates unchanged.

Valuation

Our target price for Fortis of $30.00 is based on a 12-month dividend distribution one year forward of $1.01 and a required dividend yield of 3.30%. We estimate that a 10 bp change in the required dividend yield would impact our price target by approximately $1.00 per share.

Price Target Impediment

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Terasen Inc., Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings

Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.

Outperform (O): Expected to materially outperform sector average over 12 months.

Sector Perform (SP): Returns expected to be in line with sector average over 12 months.

Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):

Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.

Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.

Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories--Buy, Hold/Neutral, or Sell--regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Debt to Cap:	64.0%		

Event

Fortis reported its Q3/07 results.

Investment Opinion

- **In Line Results for Q3/07.** Fortis' normalized Q3/07 EPS of $0.19 matched our estimate of $0.19. The Thomson One consensus estimate for the quarter was $0.22 and Q3/06 normalized EPS was $0.37. Slightly better-than-expected earnings from Canadian regulated utilities and Fortis Properties were offset by lower earnings from Belize Electricity and Fortis Generation.
- **Segment Results Largely In Line.** Canadian regulated utilities benefited from slightly better-than-expected earnings from Terasen and FortisAlberta. Fortis Properties also came in ahead of expectations, partly due to better-than-expected performance from the recently acquired Delta Regina hotel. However, these benefits were offset by higher expenses realized at Belize Electricity as well as lower hydrology in Fortis Generation.
- **Dividend Growth Supported by Low Payout Ratio.** We believe that the company has the ability to continue increasing its annual dividend by roughly 10% each year through 2009. As a result of the earnings drag from the loss of the Rankine hydro facility in Ontario, we estimate that Fortis' payout ratio would increase to 63% in 2009, which would still be below both the current and projected 2009E payout ratios for Emera, Enbridge, and TransCanada.
- **2008 and 2009 EPS Estimates Lowered Slightly.** We have lowered our 2008 and 2009 EPS estimates to $1.60 and $1.64, respectively, from $1.62 and $1.66 to primarily reflect a change in our CAD/USD foreign exchange assumption from 1.05 to 0.95 coupled with some other minor changes to our model. Our 2007 EPS estimate remains unchanged.
- **Valuation.** Our target price of $30.00 (unchanged) reflects a forecast 12-month dividend distribution one year forward of $1.01 and a required dividend yield of 3.35%. We estimate that a 10 bp change in our required yield would impact our target price by approximately $1.00 per share.

Priced as of prior trading day's market close, EST (unless otherwise noted).

For Required Disclosures, please see Page 5.

Q3/07 Results In Line With Expectations

Fortis' normalized Q3/07 EPS of $0.19 matched our estimate of $0.19. The Thomson One consensus estimate for the quarter was $0.22, and Q3/06 normalized EPS was $0.37. Slightly better-than-expected earnings from Canadian regulated utilities and Fortis Properties were offset by lower earnings from Belize Electricity and Fortis Generation. Of note, the significant year-over-year decline in EPS was due to the natural seasonality of Terasen's earnings as Q3 is a historically weak quarter typically resulting in losses.

Source: Company reports, RBC Capital Markets estimates

Highlights of the Quarter

Canadian Regulated Utilities

- **Terasen:** Terasen's earnings of ($3.7) million were better than our forecast of ($4.9) million. The modest loss in the quarter was expected as the third quarter is seasonally the weakest quarter in the gas distribution business. Fortis acquired Terasen on May 17, 2007.
- **FortisAlberta:** Normalized earnings were slightly higher-than-expected due to higher-than-forecast customer growth in addition to the timing of O&M spending. During the quarter, FortisAlberta booked an approximate $2.0 million future tax benefit related to the sale of an AESO deferral account. We normalized this amount in Q3/07 and re-allocated the amount to prior periods. In a separate news release from Fortis' Q3/07 results, FortisAlberta announced that it had filed a Negotiated Settlement Agreement with the Alberta Energy and Utilities Board regarding its 2008 and 2009 revenue requirement. Its revised revenue requirements for each year are broadly in line with our expectations.

Caribbean Regulated Electric Utilities

- **Belize Electricity:** The lower-than-expected Caribbean Regulated Electric Utilities' normalized earnings during the quarter were primarily driven by Belize Electricity, which had higher-than-forecast operating expenses, amortization costs and finance charges.

Non-Regulated

- **Fortis Generation:** Lower hydrology in Belize and upper New York state decreased hydroelectric production, which resulted in lower normalized earnings in Q3/07 compared to our estimate and the same quarter last year.
- **Fortis Properties:** Higher year-over-year quarterly normalized earnings were primarily due to the four hotels acquired in western Canada in November 2006 as well as the Delta Regina, which was acquired in August 2007. The higher-than-forecast earnings were partly due to strong performance from the Delta Regina (hosted events related to the Canadian Country Music Awards in September).

- **Corporate:** Normalized expenses increased to $16.3 million from $8.3 million last year primarily due to the allocation of finance charges related to the acquisition of Terasen. The Corporate charges were in line with our expectations.

2008 and 2009 EPS Estimates Lowered Slightly

We have lowered our 2008 and 2009 EPS estimates to $1.60 and $1.64, respectively, from $1.62 and $1.66 to primarily reflect a change in our CAD/USD foreign exchange assumption from 1.05 to 0.95 coupled with some other minor changes to our model. Our 2007 EPS estimate remains unchanged.

Low Payout Ratio Supports Ability to Deliver Continued Strong Dividend Increases

Despite a temporary moderating of earnings growth in 2009 as a result of the expiration of the license at the 75 MW Rankine hydro facility in Ontario, we believe that the company has the ability to continue increasing its annual dividend by roughly 10% each year through 2009. As a result of the earnings drag from the loss of the Rankine hydro facility in Ontario, we estimate that Fortis' payout ratio would increase to 63% in 2009, which would still be below both the current and projected 2009E payout ratios for Emera, Enbridge, and TransCanada.

RBC Capital Markets

Valuation

Our target price for Fortis of $30.00 is based on a 12-month dividend distribution one year forward of $1.01 and a required dividend yield of 3.35%. We estimate that a 10 bp change in the required dividend yield would impact our price target by approximately $1.00 per share.

Price Target Impediment

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Terasen Inc., Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings

Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.
Outperform (O): Expected to materially outperform sector average over 12 months.
Sector Perform (SP): Returns expected to be in line with sector average over 12 months.
Underperform (U): Returns expected to be materially below sector average over 12 months.
Risk Qualifiers (any of the following criteria may be present):
Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.
Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.
Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories--Buy, Hold/Neutral, or Sell--regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

COMPANY UPDATE | COMMENT

DECEMBER 12, 2007

Fortis Inc. (TSX: FTS)

Dividend Increased By 19%

Outperform
Average Risk

Price:	28.19	**Price Target:**	30.00
		Implied All-In Return:	10.0%
Shares O/S (MM):	155.3	**Market Cap (MM):**	4,378
Dividend:	1.00	**Yield:**	3.5%
Float (MM):	155.3		
Debt to Cap:	64.0%		

Event

Fortis announced a 19% ($0.16/share) increase to its dividend.

Investment Opinion

- **Higher-than-Expected Dividend Increase.** Fortis' Board of Directors increased the annual dividend by $0.16, or 19%, to a new annual rate of $1.00. We had forecast a $0.10 increase. The new dividend is payable on March 1, 2008, to the common shareholders of record at the close of business on February 8, 2008.
- **Payout Ratio Still Relatively Low.** Despite the higher-than-expected dividend increase, Fortis' 2008E payout ratio (62%) is still lower than the projected 2008E payout ratios (range of 64%-75%) for Emera, Enbridge, TransAlta and TransCanada. Given its low payout ratio, we continue to believe that the company has the ability to increase its annual dividend by about 10% in 2009.
- **Valuation.** Our target price of $30.00 (unchanged) reflects a forecast 12-month dividend distribution one year forward of $1.10 and a required dividend yield of 3.65%. We estimate that a 10 bp change in our required yield would impact our target price by approximately $1.00 per share.

Event

Caribbean Utilities (54%-owned by Fortis) reached an Agreement in Principle on the terms of new 20-year licenses.

Investment Opinion

- **Earnings Trade-off: Long-term Positive, Near-term Weakness.** With Caribbean Utilities Company's (CUC) exclusive license set to expire in 2011, the removal of uncertainty with the 20-year license extension agreement in principle (AIP) is a positive long-term development. However, as part of the license extension, we estimate that CUC's concessions will negatively impact Fortis' EPS by roughly $0.02/share in 2008 and $0.01/share in 2009.
- **Agreement in Principle Expected to be Formalized by February 2008.** The AIP is not legally binding. However, CUC expects that the new licensing documents will be signed by February 2008.
- **Exclusive 20-Year Licenses for T&D and Existing Generation.** CUC will receive an exclusive 20-year license for Transmission and Distribution, and a 20-year license for its existing Generation assets. For future generation capacity, the Cayman Islands Government has asked CUC to commission a 16 MW generator by mid-2009, with future generation requirements to be procured through a competitive bidding process, which will commence for 16 MW for operation by May 2011 and another 16 MW by May 2012.
- **Concessions Include Lower Returns, Foregone Recovery of Remaining Hurricane Ivan Surcharge.** As part of the agreement, CUC's current permitted return-on-rate-base (RORB) of 15% will change to a rate cap and adjustment mechanism with a targeted RORB in the range of 9% to 11%. Further, CUC has agreed to forgo the remaining Hurricane Ivan cost recovery surcharge (about US$2.5 million), which was supposed to be fully recovered by the end of 2008.
- **EPS Estimates Modestly Decreased.** As a result of the Agreement in Principle, we have modestly decreased our 2008 and 2009 EPS estimates to reflect the expected impact of the license extension terms. As such, our 2008 and 2009 EPS estimates decrease to $1.58 and $1.63, respectively (from $1.60 and $1.64, respectively).
- **Valuation.** Our target price for Fortis of $30.00 (unchanged) is based on a 12-month dividend distribution one year forward of $1.10 and a required dividend yield of 3.65%. We estimate that a 10 bp change in the required dividend yield would impact our price target by approximately $0.75 per share.

Priced as of prior trading day's market close, EST (unless otherwise noted).

For Required Disclosures, please see Page 3.

Valuation

Our target price for Fortis of $30.00 is based on a 12-month dividend distribution one year forward of $1.10 and a required dividend yield of 3.65%. We estimate that a 10 bp change in the required dividend yield would impact our price target by approximately $0.75 per share.

Price Target Impediment

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Terasen Inc., Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities.

Required Disclosures

Explanation of RBC Capital Markets Rating System

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings

Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.

Outperform (O): Expected to materially outperform sector average over 12 months.

Sector Perform (SP): Returns expected to be in line with sector average over 12 months.

Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):

Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.

Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.

Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For purposes of disclosing ratings distributions, regulatory rules require member firms to assign all rated stocks to one of three rating categories--Buy, Hold/Neutral, or Sell--regardless of a firm's own rating categories. Although RBC Capital Markets' stock ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

COMPANY UPDATE | COMMENT

FEBRUARY 8, 2008

Fortis Inc. (TSX: FTS)

Q4 Earnings Modestly Below Our Estimates, In Line With Consensus

Outperform
Average Risk

Price:	29.24	**Price Target:**	35.00
		Implied All-In Return:	23.1%
Shares O/S (MM):	156.6	**Market Cap (MM):**	4,579
Dividend:	1.00	**Yield:**	3.4%
Float (MM):	156.6		
Debt to Cap:	64.0%		

Event

Fortis reported Q4 results.

Investment Opinion

- **Q4 Earnings Modestly Below Our Estimates, but In Line With Consensus.** Fortis' normalized EPS in the fourth quarter of 2007 was $0.45 compared to our estimate of 0.48, consensus of $0.45 and fourth quarter 2006 normalized EPS of $0.33.
- **Small Decline in 2009 Dividend Forecast.** As a result of the 19% increase in the dividend in December 2007, our forecast payout ratio for 2008 is 63%. For 2009, we have modestly decreased our dividend estimate to $1.08/share (from $1.10/share) to bring the payout ratio closer to 65%, which is a level where we believe the board may be more comfortable, particularly in a year where EPS growth slows due to the expiration of the hydro license at the Rankine facility in Ontario.
- **A Good Choice for Investors Seeking a Defensive Position, Particularly in This Market Environment.** With almost 75% of Fortis' 2008E earnings expected to come from Canadian regulated utilities, we believe that Fortis represents an attractive choice for investors looking for a strong defensive position against both volatile markets and a potential recession.
- **We Think Equity is Required by Year-End.** Currently, Fortis' capital structure is approximately 64% debt and 36% equity (including preferred shares), and the company's target equity component is 40% (including preferreds). As such, we believe that Fortis will need to raise roughly $400 million of equity through a combination of common and preferred shares by the end of 2008.
- **An Acquisition by the End of 2008 is Possible.** Historically, Fortis has been an active acquiror of utility businesses (FortisAlberta and FortisBC in 2004, Terasen in 2007) and we believe that it is possible that Fortis will make another acquisition towards the end of 2008. An acquisition has the potential to both increase earnings in addition to possibly shoring up the company's equity by issuing shares to finance the acquisition.
- **Valuation.** Our target price for Fortis of $35.00 (unchanged) is based on a 12-month dividend distribution one year forward of $1.09 and a required dividend yield of 3.1%. We estimate that a 10 bp change in the required dividend yield would impact our price target by approximately $1.25 per share.

Priced as of prior trading day's market close, EST (unless otherwise noted).

For Required Disclosures, please see Page 5.

Fourth Quarter Results Generally In Line With Forecast

Fortis' normalized EPS in the fourth quarter of 2007 was $0.45 compared to our estimate of 0.48, consensus of $0.45 and fourth quarter 2006 normalized EPS of $0.33. Earnings from each unit were in line with our forecasts except for slightly lower-than-expected performance at FortisOntario & Maritime Electric and Corporate.

Source: Company reports, RBC Capital Markets estimates

Highlights of the Quarter

Canadian Regulated Utilities

All of the segments except FortisOntario & Maritime Electric were in line with our expectations. For FortisOntario & Maritime Electric, earnings were $3.1 million lower than expected. The shortfall appears to be due to a number of small items during the quarter, and the full-year 2007 earnings from the segment were generally in line with 2006.

Caribbean Regulated Electric Utilities

Earnings from each of the three utilities within the Caribbean Regulated Electric Utilities segment were in line with our expectations.

Non-Regulated

Earnings from Fortis Generation and Fortis Properties were in line with our forecasts, however normalized Corporate and Other expenses were $1.8 million higher than expected due to several small items including a $0.7-million charge to unwind an interest rate swap on a loan for a hydro plant in Belize.

Organic Earnings Growth Driven by $4-Billion Capital Spending Program

Expected organic earnings growth at Fortis continues to be driven by the company's significant capital spending program. With the acquisition of Terasen, Fortis' capital spending program is expected to exceed $4 billion over the next 5 years. About $3 billion of this capital spending will be driven by electric utilities FortisAlberta, FortisBC and electric utility operations in the Caribbean, while approximately $1 billion will be spent on Terasen's gas utility operations during this period.

Financing Requirements

Currently, Fortis' capital structure is approximately 64% debt and 36% equity (including preferred shares). The company's target equity component is 40% (including preferreds). As such, we believe that Fortis will need to raise roughly $400 million of equity through a combination of common and preferred shares by the end of 2008. It is possible that all or a portion of the equity requirements could be funded in conjunction with an acquisition (see below). In our financial forecast, we have not modeled in any acquisitions and, as such, we have assumed that Fortis issues a combination of preferred shares and common stock at the end of 2008.

Acquisition Strategy

Fortis continues to monitor regulated electric utilities and gas utilities in Canada, the Caribbean and the U.S. for potential acquisitions. Opportunities in Canada appear somewhat limited due to the small pool of potential targets and our view that most owners of utilities in Canada are not likely sellers in the near-term. The U.S. has a greater number of potential acquisition candidates, and although the more volatile U.S. state regulatory environment poses a number of risks, Fortis has a reputation of maintaining constructive relationships with regulators. Other acquisition targets include utilities in the Caribbean, with a going-private acquisition of the 46% of Caribbean Utilities that it does not already own as a possibility.

Reducing 2009 Dividend Forecast Due to High Expected Payout Ratio

As a result of the 19% increase in the dividend in December 2007, our forecast payout ratio for 2008 is 63%. For 2009, we have modestly decreased our dividend estimate to $1.08/share (from $1.10/share) to bring the payout ratio closer to 65%, which is a level where we believe the board may be more comfortable, particularly in a year where EPS growth slows due to the expiration of the hydro license at the Rankine facility in Ontario.

Our updated segmented financial forecast and dividend estimate is set out in Exhibit 2.

Exhibit 2: Segment Earnings Forecast (In C$ millions except per share figures)

	2006	2007	2008E	2009E	06-09E CAGR	Comments

All of the views expressed in this report accurately reflect the personal views of the responsible analyst(s) about any and all of the subject securities or issuers. No part of the compensation of the responsible analyst(s) named herein is, or will be, directly or indirectly, related to the specific recommendations or views expressed by the responsible analyst(s) in this report.

Dissemination of Research

RBC Capital Markets endeavours to make all reasonable efforts to provide research simultaneously to all eligible clients, having regard to local time zones in overseas jurisdictions. RBC Capital Markets' equity research is posted to our proprietary websites to ensure eligible clients receive coverage initiations and changes in rating, targets and opinions in a timely manner. Additional distribution may be done by the sales personnel via email, fax or regular mail. Clients may also receive our research via third party vendors. Please contact your investment advisor or institutional salesperson for more information regarding RBC Capital Markets research.

RBC Capital Markets also provides eligible clients with access to a database which may contain Short-Term trading calls on certain of the subject companies for which it currently provides equity research coverage. The database may be accessed via the following hyperlink https://www2.rbccm.com/cmonline/index.html. The information regarding Short-Term trading calls accessible through the database does not constitute a research report. These Short-Term trading calls are not formal ratings and reflect the research analyst's views with respect to market and trading events in the coming days or weeks and, as such, may differ from the price targets and recommendations in our published research reports reflecting the research analyst's views of the longer-term (one year) prospects of the subject company. Thus, it is possible that a subject company's common equity that is considered a long-term 'sector perform' or even an 'underperform' might be a Short-Term buying opportunity as a result of temporary selling pressure in the market; conversely, a subject company's common equity rated a long-term 'outperform' could be considered susceptible to a Short-Term downward price correction.

Conflicts Disclosures

RBC Capital Markets Policy for Managing Conflicts of Interest in Relation to Investment Research is available from us on request. To access our current policy, clients should refer to

Implied All-In Return:	14.4%
Market Cap (MM):	4,387
Yield:	3.6%

Event

Reported Q1/08 results; reducing ranking to Sector Perform (from Outperform); reducing price target to $31.00 (from $35.00).

Investment Opinion

- **Reducing Ranking to Sector Perform (from Outperform) on Belize Concerns and Other Headwinds.** In addition to the loss of earnings beginning in May 2009 due to the expiration of the hydro license at the 75-MW Rankine facility in Ontario, we are increasingly concerned about the risk to earnings from assets in Belize due to a change in government, in addition to the current equity financing environment reducing the growth potential from acquisitions.
- **New Government in Belize Does Not Appear Friendly to the Utility Sector.** In February 2008, a new party came into power in Belize. Although there is likely some measure of political posturing, statements from the government cause us concern over the ability to maintain earnings from Belize Electricity (regulated utility) and, to a lesser extent, from BECOL (non-regulated power). We estimate that about $17 million of earnings (about $0.11/share) is from Belize, with about 70% coming from Belize Electricity.
- **Upcoming Earnings Decline from the Rankine License Expiration.** Although widely anticipated, the expiration of the license for the Rankine facility is now only one year away. Last year, the facility contributed about $15 million ($0.10/share) to earnings.
- **Acquisition Growth Increasingly Challenged in the Current Environment.** With $1+ billion of new TransCanada equity set to hit the market, we are concerned that the market may have trouble digesting a U.S. acquisition by Fortis with a similar sized equity issuance.
- **Q1/08 Results Generally In Line.** Fortis' normalized EPS in Q1/08 was $0.58 compared to our estimate of $0.62. The Thomson One consensus EPS estimate for the quarter was $0.56 (range of $0.43 to $0.62). Almost the entire variance between actual results and our estimate related to a change in regulatory accounting at Newfoundland Power that has no impact on annual earnings.
- **Valuation - Target Price Reduced to $31.00 (from $35.00).** We have reduced our price target to $31.00 (from $35.00) to reflect the lower growth potential over the next couple of years. Our target implies a 2009E P/E of 19x, which is a 1x discount to implied P/Es for higher growth companies (TransCanada and TransAlta), but still a 1x premium to Emera as a result of Fortis' stronger long-term growth potential.

Priced as of prior trading day's market close, EST (unless otherwise noted).

For Required Disclosures, please see Page 7.

Ranking Reduced to Sector Perform Based on Belize Concerns and Other Headwinds

We have reduced our ranking on the shares of Fortis to Sector Perform (from Outperform), while maintaining our Average risk qualifier. We are increasingly concerned with the risk to earnings in Belize due to a change in government. Further, the company faces the loss of earnings beginning in May 2009 due to the expiration of the hydro license at the 75-MW Rankine facility in Ontario and we believe that the current equity financing environment may reduce the company's growth potential from acquisitions.

New Government in Belize Does Not Appear Friendly to the Utility Sector

In February 2008, the United Democratic Party (UDP) came into power in Belize, defeating the People's United Party (PUP), which had ruled for about the last 10 years. Although there is likely some measure of political posturing, statements from the new government cause us concern over the ability to maintain earnings from 70%-owned Belize Electricity (regulated utility) and, to a lesser extent, from BECOL (non-regulated power).

Pending the annual review by the Belize Public Utilities Commission (PUC), electricity rates have been frozen at a level at which increased power purchase costs are not being recovered in rates. A PUC decision in March 2008 denied Belize Electricity's request for higher rates to recover increased power purchase costs. The PUC's annual review is expected to be completed very shortly, and we would be somewhat more optimistic should the decision allow for higher rates to recover increased power costs. However, the new government has broadly articulated that it is looking at ways to reduce the cost of living for citizens of Belize and various statements have been made, including an excerpt from the Throne Speech that stated, "My Government recognizes that the high cost of electricity, water, and telephone services is a major obstacle to economic development. The Public Utilities Commission will be empowered to better carry out its obligation to regulate the utilities in support of the consumer and our national interests." We are concerned by the omission of a statement balancing those interests with the ability for providers of capital to earn a fair and reasonable return, which is typical of the approach by most regulators.

Increased oil prices resulting in higher power costs are expected to result in Belize Electricity incurring roughly $13 million of extra power costs that will not be collected in rates. Further, the balance in the rate stabilization account (i.e. cash paid to power suppliers, but not yet collected in rates) sits at roughly $12 million. We estimate that about $17 million of earnings (about $0.11/share) is generated in Belize, with roughly 70% coming from Belize Electricity.

Expiration of Rankine Hydro License at the End of April 2009

At the end of April 2009, the license for the 75-MW Rankine hydro facility in Ontario will expire. In 2007, the facility contributed about $15 million of earnings (about $0.10/share). As such, we expect the loss of the facility to result in an approximate $0.06/share drag on EPS in 2009 and an additional $0.04/share drag on earnings in 2010.

Acquisition Growth May be Challenged; Ability to Finance May Limit Acquisition Size and Potential EPS Accretion

With EPS growth slowing from the existing asset base, we have looked to accretive acquisitions to improve EPS growth over the next couple of years. Fortis' management has done a very good job in identifying large, strategic acquisitions of Canadian regulated utilities that have contributed to EPS growth (e.g. Terasen and the Aquila Canada assets). However, we are concerned that the current financing environment may limit possible growth from acquisitions. For some time, the company has stated that it is looking at potential utility acquisitions of size in Canada and the U.S. At this time, we do not forsee any of the sizable Canadian utility businesses for sale, although we do believe that there is the potential down the road that Enbridge Gas Distribution and/or Union Gas in Ontario could be for sale.

When looking at potential U.S. acquisitions, a key consideration is the transaction financing as we believe Fortis may have difficulty effecting a large cross-border share exchange offer. Management has stated that it would look at an acquisition that is accretive in the first year, and one that could be financed separately in Canada (i.e. not a share exchange offer). With a general negative sentiment regarding TransCanada's recent U.S. acquisition and associated $1+ billion equity issue, we are more cautious about the potential for EPS growth for Fortis from a U.S. acquisition. Although an acquisition of a U.S. utility would likely be viewed as strategic, we would expect some concerns and uncertainty to arise regarding state regulation of the utility that Fortis might acquire, particularly in light of TransCanada's recent experience where there has been concern and uncertainty regarding the Federal Energy Regulatory Commission (FERC) as a regulator of the Ravenswood power plant. Of the North American regulators, we would consider FERC to be one of the most progressive, if not the most progressive, utility regulator. Although it must be looked at on a case-by-case basis, we have much more concern regarding U.S. state regulation, which governs electric and gas utilities, as it can be more political. With respect to the Terasen and Aquila Canada acquisitions, we think that investor receptivity to the transactions (and associated equity issues) was enhanced as a result of familiarity with the regulators' history and form of regulation.

Given the upcoming new supply of common stock to be sold to Energy Infrastructure investors (i.e. TransCanada shares) and concerns regarding receptivity by Canadian investors of a potential acquisition, we believe that Fortis may be limited to an equity purchase price of no more than $1 billion, and likely less. As shown in Exhibit 1, even an acquisition of $1 billion of equity value at an attractive 15x P/E (similar to the Terasen acquisition) would result in expected EPS accretion of only $0.04/share (just under a 3% improvement in EPS) assuming no meaningful synergies. Since we think that Fortis requires roughly $200 million of new common equity over the next 24 months, we do not see an opportunity to apply extra leverage to an acquisition to improve EPS accretion.

Exhibit 1: Generic Acquisition Analysis (In $MM except per share figures)

Acquisition Assumptions	
Acquisition Size (Equity)	$1,000

Source: Company reports, RBC Capital Markets estimates

Price Target Reduced to $31.00 (from $35.00)

We have reduced our price target to $31.00 (from $35.00) to reflect the lower growth potential over the next couple of years. Our target implies a 2009E P/E of 19x, which is a 1x discount to implied P/Es for higher growth companies (TransCanada and TransAlta), but still a 1x premium to Emera as a result of Fortis' stronger long-term growth potential.

Our new price target implies a forward yield of 3.6%, which is a 40 basis point spread to the 10-year GOC yield that we use in valuing the sector of 4.0%. A 40 basis point spread is roughly the midpoint between the current spread of -15 basis points and the 3-year average spread of about 100 basis points.

First Quarter Results Generally In Line With Forecast

Fortis' normalized EPS in Q1/08 was $0.58 compared to our estimate of $0.62 and Q1/07 normalized EPS of $0.40. The Thomson One consensus EPS estimate for the quarter was $0.56 (range of $0.43 to $0.62). During the quarter, Newfoundland Power shifted its method for accounting for purchased power costs, and management estimated that quarterly earnings were reduced by approximately $6 million (about $0.04/share). However, the accounting change will not impact annual earnings booked at Newfoundland Power. As expected, the year-over-year improvement in EPS is largely due to the Terasen acquisition, which closed in the second quarter of 2007. As a result of natural seasonality in the gas distribution business, we forecast that over 50% of annual earnings at Terasen is generated in Q1.

A table showing the Q1/08 results compared to our forecasts is set out in Exhibit 2.

Exhibit 2: Normalized Earnings (In $MM except per share figures)

	Q1 2008	RBC CM Q1/08 Est.	Q1 2007	Comments

Companies Mentioned

Emera [TSX: EMA; $21.87; Sector Perform, Average Risk]

Enbridge [TSX/NYSE: ENB; $41.45; Outperform, Average Risk]

TransAlta [TSX/NYSE: TA/TAC; $34.05; Sector Perform, Above Average Risk]

TransCanada [TSX/NYSE: TRP; $37.25; Outperform, Average Risk]

Valuation

Our target price for Fortis of $31.00 is based on a 12-month dividend distribution one year forward of $1.11 and a required dividend yield of 3.6%. We estimate that a 10 bp change in the required dividend yield would impact our price target by approximately $0.75 per share.

Price Target Impediment

The political environment in Belize, risk of punitive regulatory decisions, economic/tourism conditions in its service territories, operational or financial issues at newly acquired businesses or power prices in Ontario may have implications for our target price as well as our earnings and dividend estimates.

Company Description

Fortis Inc. is a utility holding company for Newfoundland Power, FortisAlberta, FortisBC, Terasen Inc., Maritime Electric, Canadian Niagara Power, Cornwall Electric, BECOL, two electric utilities in the Turks and Caicos, and 70%-owned Belize Electricity. It also holds a 100% interest in Fortis Properties and a 54% interest in Caribbean Utilities.

Explanation of RBC Capital Markets Rating System

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector.

Ratings

Top Pick (TP): Represents best in Outperform category; analyst's best ideas; expected to significantly outperform the sector over 12 months; provides best risk-reward ratio; approximately 10% of analyst's recommendations.

Outperform (O): Expected to materially outperform sector average over 12 months.

Sector Perform (SP): Returns expected to be in line with sector average over 12 months.

Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Qualifiers (any of the following criteria may be present):

Average Risk (Avg): Volatility and risk expected to be comparable to sector; average revenue and earnings predictability; no significant cash flow/financing concerns over coming 12-24 months; fairly liquid.

Above Average Risk (AA): Volatility and risk expected to be above sector; below average revenue and earnings predictability; may not be suitable for a significant class of individual equity investors; may have negative cash flow; low market cap or float.

Speculative (Spec): Risk consistent with venture capital; low public float; potential balance sheet concerns; risk of being delisted.

Distribution of Ratings, Firmwide

For the purpose of ratings distributions, regulatory rules require member firms to assign ratings to one of three rating categories - Buy, Hold/Neutral, or Sell - regardless of a firm's own rating categories. Although RBC Capital Markets' ratings of Top Pick/Outperform, Sector Perform and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

All of the views expressed in this report accurately reflect the personal views of the responsible analyst(s) about any and all of the subject securities or issuers. No part of the compensation of the responsible analyst(s) named herein is, or will be, directly or indirectly, related to the specific recommendations or views expressed by the responsible analyst(s) in this report.

Dissemination of Research

RBC Capital Markets endeavours to make all reasonable efforts to provide research simultaneously to all eligible clients, having regard to local time zones in overseas jurisdictions. RBC Capital Markets' equity research is posted to our proprietary websites to ensure eligible clients receive coverage initiations and changes in rating, targets and opinions in a timely manner. Additional

distribution may be done by the sales personnel via email, fax or regular mail. Clients may also receive our research via third party vendors. Please contact your investment advisor or institutional salesperson for more information regarding RBC Capital Markets research.

RBC Capital Markets also provides eligible clients with access to a database which may contain Short-Term trading calls on certain of the subject companies for which it currently provides equity research coverage. The database may be accessed via the following hyperlink https://www2.rbccm.com/cmonline/index.html. The information regarding Short-Term trading calls accessible through the database does not constitute a research report. These Short-Term trading calls are not formal ratings and reflect the research analyst's views with respect to market and trading events in the coming days or weeks and, as such, may differ from the price targets and recommendations in our published research reports reflecting the research analyst's views of the longer-term (one year) prospects of the subject company. Thus, it is possible that a subject company's common equity that is considered a long-term 'sector perform' or even an 'underperform' might be a Short-Term buying opportunity as a result of temporary selling pressure in the market; conversely, a subject company's common equity rated a long-term 'outperform' could be considered susceptible to a Short-Term downward price correction.

Fortis Inc. (TSX: FTS)

Sum-of-the-Parts Drives Lower Target of $29.00; Update on Belize Situation

Sector Perform
Average Risk

Price:	27.29	**Price Target:**	29.00 ↓ 31.00
		Implied All-In Return:	10%
Shares O/S (MM):	156.9	**Market Cap (MM):**	4,282
Dividend:	1.00	**Yield:**	3.7%
Float (MM):	156.9		
Debt to Cap:	63%		

Event

Lower price target based on sum-of-the-parts analysis; lower EPS estimates due to negative decision for Belize Electricity.

Investment Opinion

- **Revised $29.00 Price Target (Previously $31.00) Based on Sum-of-the-Parts Analysis.** We have performed a sum-of-the-parts analysis for the various businesses using different multiples to reflect each segment's growth and risk characteristics. The P/E multiples in our analysis range from 15x for the Caribbean operations to a high of 20x for the Western Canadian regulated utilities. We have also used a 12x AFFO multiple for the Properties division reflecting a blend between lodging and commercial multiples.
- **Situation in Belize Getting Worse.** We continue to remain concerned regarding the change in government in Belize (please see our *Research Comment* dated May 2, 2008 for further details). Shortly after our previous comment, the Belize Public Utilities Commission (PUC) denied Belize Electricity's (BEL) proposed rate increase to recover higher fuel costs. Last week, Stan Marshall (Fortis' CEO) delivered a speech at BEL's annual general meeting warning of blackouts if new rates are not approved rather than Fortis injecting new capital to cover purchased power costs.
- **EPS Estimates Reduced for Negative Belize Regulatory Decision.** We estimate that the negative regulatory decision by the Belize PUC could impact annual EPS by about $0.04/share. As such, we have reduced our 2008 and 2009 EPS estimates to $1.56 and $1.59, respectively (from $1.58 and $1.63, respectively). After the reduction in our EPS estimates, we forecast that Fortis will annually earn roughly $0.07/share from operations in Belize (down from $0.11/share).
- **Valuation.** Our target price of $29.00 is based on a 12-month dividend distribution one year forward of $1.12 and a required dividend yield of 3.9%, and is supported by our sum-of-the-parts analysis. We estimate that a 10 bp change in the required dividend yield would impact our price target by approximately $0.75 per share.

Priced as of prior trading day's market close, EST (unless otherwise noted).

For Required Disclosures, please see Page 6.

Reducing Price Target for Sum-of-the-Parts Analysis, Reduction in Belize Earnings

We have reduced our price target for Fortis' shares to $29.00 (from $31.00) to reflect our sum-of-the-parts analysis, in which we have assigned different multiples for each of the company's major segments based on expected growth and associated risk profile. Further, our new price target reflects lower expected earnings from the Belize Electricity investment due to a recent negative regulatory decision.

Sum-of-the-Parts Analysis

Our sum-of-the-parts analysis (shown in Exhibit 1) sets out our estimated value for each of the company's major segments. Assumptions in deriving the value for the various segments are as follows:

- **Eastern Canadian Regulated Utilities.** This segment primarily consists of Newfoundland Power, and to a lesser extent FortisOntario and Maritime Electric. These utilities have a low risk profile, but are generally expected to have lower growth rates, particularly when compared to the western utilities. We have used a P/E of 18x, which is similar to the multiple that we use for Emera, which owns Nova Scotia Power.
- **Western Canadian Regulated Utilities.** The Western Canadian utilities consist of Terasen, FortisAlberta and FortisBC. These utilities are expected to have higher growth rates than the Eastern Canadian utilities (although Terasen is expected to be more modest than the two electric utilities). The risk profile is low, and due to higher forecast rate base growth than the Eastern Canadian utilities, we use a higher P/E multiple of 20x, which is more consistent with the valuation that we use for the higher growth names in our coverage (namely TransCanada and TransAlta). Although the Western Canadian utilities are expected to experience modestly lower expected growth than TransCanada and TransAlta, these utilities have lower risk profiles.
- **Caribbean Regulated Utilities.** The multiple that we have used for the investments in Belize Electric (BEL), the Turks & Caicos, and Caribbean Utilities Company (CUC), is similar to the forward trading multiple for CUC of roughly 15x. We believe that a lower multiple than the Canadian regulated utilities is warranted given the heightened regulatory and political risk as evidenced by recent issues/rate decreases in Belize and Grand Cayman, which would be partially offset by the potential for stronger rate base growth.
- **Fortis Generation.** We have used a 17.5x multiple, which is a blend between the lower multiple that we use for the Caribbean assets and higher multiples that we use for the Canadian utility investments. For our analysis, we have adjusted our segment earnings to remove the Rankine facility (license expires in April 2009) and add the Vaca hydro facility in Belize, which is expected to be commissioned in late 2009. After the Rankine expiry and the Vaca commissioning, almost half of this segment's earnings is expected to come from Belize (BECOL).
- **Properties.** For the property division, we have used an Adjusted Funds from Operations (AFFO) multiple of 12x, which is a blend between multiples for lodging REITs (about 10x) and commercial REITs (about 14x).
- **Corporate.** We have subtracted corporate costs at the proportionate multiple for each of the operating segments.

Exhibit 1: Sum-of-the-Parts Valuation (In $MM except per share figures)

	2009E Earnings	P/E	Value Total	Value Per Share	Comments/Comparison Group
Eastern Canadian Regulated Utilities	$49	18x	$879	$5.55	Slower growth more similar to Emera with comparable low risk profile
Western Canadian Regulated Utilities	191	20x	3,829	24.20	Better growth somewhat lags TRP, TA, but offset by lower risk profile
Caribbean Regulated Utilities	30	15x	448	2.85	Caribbean Utilities (CUC) estimated P/E
Fortis Generation	16 (1)	18x	272	1.70	P/E is mix between Caribbean reg. utilities and power generation (TransAlta)
Fortis Properties	25 (2)	12x (2)	300	1.90	Blend of AFFO multiples for lodging (10x) and commercial (14x)
Corporate	(59)	18x	(1,096)	(6.95)	Selected P/E is the proportionate multiples from the segments
Total		**18x**	**$4,631**	**$29.00**	(rounded to nearest dollar)
Shares Outstanding (MM)				158	

Notes:
(1) "Continuing" earnings (adjusted for Rankine license expiration and the commissioning of Vaca).
(2) Represents AFFO and P/AFFO instead of earnings and P/E.

Source: Company reports, RBC Capital Markets estimates

Target Price Reduced to $29.00 (from $31.00) to Reflect Sum-of-the-Parts Valuation

On a dividend-yield valuation basis, our new price target implies a forward dividend yield of 3.9% that remains below that of Emera (at 4.2%), which has a modestly higher payout ratio (about 75% versus 65%-70% for Fortis) and modestly lower expected EPS growth. On a P/E basis, our new price target is approximately 18.5x "sustainable" 2009 earnings (i.e. excluding Rankine, but including Vaca). The implied P/E is a modest discount to higher growth companies such as TransAlta and TransCanada that we value at 20x, and a slight premium to Emera at 18x.

Earnings Estimates Reduced: Negative Regulatory Decision in Belize; Murky Outlook Based on Fortis CEO's Comments at BEL AGM

In our *Research Comment* dated May 2, 2008, we initially expressed concern with the new government in Belize and the potential impact on earnings due to a negative regulatory decision. The Belize Public Utilities Commission (PUC) provided its Initial Decision, which did not approve new rates that would allow BEL to fully recover rising fuel costs. We estimate that the negative decision will have an approximate $6 million (about $0.04/share) annual negative impact on earnings. We have assumed that Fortis will begin booking earnings based on the new rates as of July 1, 2008 (the effective date of the new rates) resulting in our new 2008 and 2009 EPS estimates of $1.56 and $1.59, respectively (from $1.58 and $1.63, respectively).

Last week, Belize Electricity held its Annual General Meeting and Stan Marshall (CEO of Fortis) delivered a speech warning that rising power costs (primarily due to the increase in oil prices) threaten to exceed the rates being charged to customers resulting in the deferred fuel account expected to be BZ$33 million at the end of May 2008 (about $17 million). In his speech, Mr. Marshall made it clear that Fortis will not inject further capital into BEL until it receives regulatory assurances that all costs will be collected including an acceptable return on capital. Instead, rotating blackouts will occur should BEL not be able to cover purchased power costs. Whether it be capital injections (potentially throwing good money after bad) or rotating blackouts (stepping up the political battle), we are concerned about the ongoing earnings being generated in Belize.

Although Fortis intends to appeal the PUC's decision, we would also note that there is additional downside risk to earnings from the investments in Belize. We estimate that there is an additional $11 million (about $0.07/share) currently being generated from investments in the country (combination of BEL and BECOL) after taking into account the $6 million reduction in our earnings estimates.

Investment Summary
