Attention: Mr. Christopher P. Weafer

Dear Mr. Weafer:

Re: FortisBC Energy Inc. (FEI)

**Application for Approval of a Multi-Year Performance Based Ratemaking Plan
for 2014 through 2018 (the Application)**

**Response to the Commercial Energy Consumers Association of British
Columbia (CEC) Information Request (IR) No. 1 on FEI Rebuttal Evidence**

On June 10, 2013, FEI filed the Application as referenced above. In accordance with Commission Order G-9-14 setting out the Amended Regulatory Timetable for the review of the Application, FEI respectfully submits the attached response to CEC IR No. 1 on FEI Rebuttal Evidence.

Sincerely,

FORTISBC ENERGY INC.

Original signed:

Diane Roy

FortisBC Energy Inc. (FEI or the Company) Application for Approval of a Multi-Year Performance Based Ratemaking Plan for 2014 through 2018 (the Application)	Submission Date: April 11, 2014
Response to Commercial Energy Consumers Association of British Columbia (CEC) Information Request (IR) No. 1 on FEI Rebuttal Evidence	Page 1

1 **1. Reference: Exhibit B-46, Question 4**

- The FEU are unable to replicate Mr. Plunkett and Mr. Chernick's estimate of \$401 for the incremental cost of a natural replacement. FEU's estimate of this cost is \$977, based on the average of contractor feedback on program applications in the 2012 Furnace Replacement Pilot and validated by contractors attending the January 2013 Program Design workshop.
- Mr. Plunkett and Mr. Chernick do not appear to account for free ridership.
- Mr. Plunkett and Mr. Chernick do not appear to account for program administration costs of \$353,000.

2

3 1.1 Please provide the dataset for the estimates from the contractor feedback on
4 program applications in the 2012 Furnace Replacement Pilot.

5

6 **Response:**

7 Attachment 1.1 contains the dataset used to develop the incremental cost between a "code"
8 furnace and high efficiency furnace. This calculation was based on an average of contractor
9 estimates from the 2012 Furnace Replacement Contractor Application forms who responded to
10 the question:

11 "Estimate the difference in the installed equipment costs between this high efficiency
12 model (95 AFUE furnace and 94 AFUE boiler) compared to a basic code model (AFUE
13 90-92)".

14

15

16 1.2 How many contractors attended the 2013 Program Design workshop?

17

18 **Response:**

19 The FEU invited the top ten contractor companies representing 29 percent of the furnaces
20 installed in the 2012 Furnace Replacement Program and three of these businesses sent
21 representatives. In addition, six manufacturers representing their dealer networks and a
22 distributor were in attendance. Associations including Thermal Energy Comfort Association,
23 Canadian Institute of Plumbing and Heating and the BC Safety Authority attended and provided
24 input into program design and cost benefit inputs. Discussions with representatives from these
25 contractors, manufacturers and associations confirmed that the FEU's cost estimate of the
26 incremental cost of natural gas replacement was representative of their experience in the field.

27

FortisBC Energy Inc. (FEI or the Company) Application for Approval of a Multi-Year Performance Based Ratemaking Plan for 2014 through 2018 (the Application)	Submission Date: April 11, 2014
Response to Commercial Energy Consumers Association of British Columbia (CEC) Information Request (IR) No. 1 on FEI Rebuttal Evidence	Page 2

1 **2. Reference: Exhibit B-46, Question 5**

A5: Yes, the FEU's incentive is \$800, which is close to the incremental cost of premium efficiency equipment over standard efficiency of \$977 dollars. TNS Consumer Research study (April 2013) surveyed participants from the Appliance Service program to determine the incentive level that would result in appliance upgrades. Results suggested that the rebate should remain at \$800 at which 29% of participants would upgrade in an early replacement program. Lowering the rebate level to \$500 resulted in only 11% participation. Increasing to \$1,000 had minimal effect on increasing participating (33%). Refer also to Exhibit B-1, Appendix I-5, p. 4.

2

3 2.1 Please explain the incremental cost of premium efficiency.

4

5 **Response:**

6 The following response addresses CEC Rebuttal IRs 1.2.1 and 1.2.2.

7 The calculation of the incremental cost of premium efficiency equipment over a standard Base
8 or "Code" furnace is derived as follows:

9 A. The cost of a High Efficiency Furnace (AFUE ≥ 95) is \$4,365.

10 B. The cost of a Base "Code" Furnace (AFUE 90-92) is \$3,388.

11 C. The Incremental Cost of a High Efficiency Furnace over a Base "Code" Furnace is
12 therefore \$4,365 - \$3,388 or \$977.

13 Please also refer to the response to BCSEA IR 1.4.10 (FEI Exhibit B-7).

14

15

16

17 2.2 Please explain the standard efficiency of \$977.

18

19 **Response:**

20 Please refer to the response to FEI CEC Rebuttal IR 1.2.1. The \$977 refers to the incremental
21 cost of premium efficiency over code efficiency.

22

23

24

FortisBC Energy Inc. (FEI or the Company) Application for Approval of a Multi-Year Performance Based Ratemaking Plan for 2014 through 2018 (the Application)	Submission Date: April 11, 2014
Response to Commercial Energy Consumers Association of British Columbia (CEC) Information Request (IR) No. 1 on FEI Rebuttal Evidence	Page 3

1 2.3 Would FEU expect the incremental costs of natural replacement to be increasing,
2 declining or remaining steady over the next five years?

3

4 **Response:**

5 The following response addresses CEC Rebuttal IRs 1.2.3 and 1.2.3.1.

6 Through market transformation, one would expect the incremental cost of high efficiency
7 equipment over code efficiency equipment to decrease over time. However, in the cost-benefit
8 analysis for the Furnace Replacement Program described in section 3.4.2 of the 2014-2018
9 EEC Plan found in Appendix I-1 of Exhibit B-1, incremental cost was kept constant in order to
10 be conservative in the forecasts of program cost effectiveness.

11

12

13

14 2.3.1 Please provide the FEU's estimates for this cost over the next five
15 years, if available.

16

17 **Response:**

18 Please refer to the response to FEI CEC Rebuttal IR 1.2.3. The FEU have held the incremental
19 cost of high efficiency furnaces over code efficiency furnaces constant in their benefit-cost
20 analysis for the Furnace Replacement Program.

21

22

23

24 2.4 The FEU incentive is approximately 80% of the incremental cost of the premium
25 efficiency equipment. Would FEU expect to maintain that ratio in the event that
26 the incremental costs change over time? Please explain why or why not.

27

28 **Response:**

29 The FEU will evaluate the program on an ongoing basis to determine if the incentive level is
30 effective in inducing furnace early replacement. Based on customer and industry feedback and
31 cost effectiveness results, program design, including incentive level, may change over time.

32

33

34

FortisBC Energy Inc. (FEI or the Company) Application for Approval of a Multi-Year Performance Based Ratemaking Plan for 2014 through 2018 (the Application)	Submission Date: April 11, 2014
Response to Commercial Energy Consumers Association of British Columbia (CEC) Information Request (IR) No. 1 on FEI Rebuttal Evidence	Page 4

1 2.5 The data provided suggests a curve of declining participation for increased
 2 incentives. Please confirm the approximate interpolation of the curve as follows
 3 or provide better data if there is better data. \$1000/33%, \$950/32%, \$900/31 %,
 4 \$850/30%, \$800/29%, \$750/27%, \$700/25%, \$650/23%, \$ 600/19%, \$550/15%,
 5 \$500/11 %

6
 7 **Response:**

8 The following response addresses CEC Rebuttal IRs 1.2.5 and 1.2.6.

9 Correct. The incentive level analysis conducted by TNS indicated that \$800 is the optimal rebate
 10 level. There is a diminishing response rate beyond \$800 as illustrated in Table 1 and explained
 11 further in an excerpt from the report as follows:¹

12 *“Fifty-nine percent of TLC participants would not sign up at any of the rebate levels*
 13 *presented. These participants are either unaffected by a rebate, or do not feel that the*
 14 *highest level offered (\$1250) is sufficient. \$800 appears to be a natural rebate level – at*
 15 *this level, 29% of participants would upgrade. This conversion rate represents a best-*
 16 *case scenario, in which all participants are aware of the rebate. Lowering the current*
 17 *rebate level may result in a steep drop in upgrade intentions. Increasing it to \$1000 has*
 18 *a minimal effect on galvanizing interest. Raising the rebate level to \$1250 is needed to*
 19 *truly drive a higher rate of upgrades.”*

20 Figure 1 demonstrates the curve of diminishing returns on increased incentive levels.

21

¹ TNS Consumer Research Study

FortisBC Energy Inc. (FEI or the Company) Application for Approval of a Multi-Year Performance Based Ratemaking Plan for 2014 through 2018 (the Application)	Submission Date: April 11, 2014

2.6 Please provide an explanation as to how FEI has arrived at the choice of \$800 as the appropriate level. Has this involved an analytical quantitative analysis?

Response:

Yes. Please refer to the response to FEI CEC Rebuttal IR 1.2.5 and 1.2.7.

2.7 Please confirm that the appropriate trade-off is between the incremental cost of higher incentives and the savings results obtained.

Response:

Correct. The FEU aim to set appropriate incentive levels that are high enough to drive program participation and appliance upgrade decisions and capture cost effective energy savings. Through the studies and consultation activity undertaken, it was determined that \$800 would capture the most energy savings per dollar of incentive invested in this program.

2.8 What is the average benefit to customers from an appliance upgrade and the net total cost benefit minus the incentive at the \$800?

Response:

The customer impact is demonstrated in the table below for the early replacement scenario of a 4.3 year purchase advancement.

FortisBC Energy Inc. (FEI or the Company) Application for Approval of a Multi-Year Performance Based Ratemaking Plan for 2014 through 2018 (the Application)	Submission Date: April 11, 2014
Response to Commercial Energy Consumers Association of British Columbia (CEC) Information Request (IR) No. 1 on FEI Rebuttal Evidence	Page 6

Customer Impact (4.3 yr advancement)

	Furnace - Std	Furnace - Mid	Boiler	Program Avg
Direct Cost ¹	\$ 4,365	\$ 4,365	\$ 8,713	
Economic Cost ²	\$ 1,597	\$ 1,597	\$ 3,315	
Incentive	\$ 800	\$ 800	\$ 800	
Bill Savings (NPV)	\$ 1,090.95	\$ 599.21	\$ 957.67	
Customer Impact	\$ 294.32	\$ (197.42)	\$ (1,557.04)	\$ 155.18

1 ¹ The direct cost is the cost the customer pays at the time of installation of the furnace.

2 ² The economic cost is the incremental cost of the high efficiency furnace model over the base
3 model, based on the NPV calculation that adjusts for the time value of money due to 4.3 year
4 advancement of the purchase decision.

5

FortisBC Energy Inc. (FEI or the Company) Application for Approval of a Multi-Year Performance Based Ratemaking Plan for 2014 through 2018 (the Application)	Submission Date: April 11, 2014
Response to Commercial Energy Consumers Association of British Columbia (CEC) Information Request (IR) No. 1 on FEI Rebuttal Evidence	Page 7

1 **3. Reference: Exhibit B-46, Question 5 and Exhibit B-11, BCUC 1.222.4.1**

2 A7: Targeting high-users as suggested would add to the administrative costs of the program
3 and is currently not planned by the FEU. However, the Customer Engagement Tool will
4 allow the FEU to target customers more effectively in the coming years. Refer to Exhibit
5 B-11, response to BCUC IR 1.222.4.1 for a discussion of this issue.

6 **Response:**

7 The FEU segment customers when performing market analysis and determining communication
8 strategy but has yet to undertake customer segmentation extensively to the point of tailoring
9 programs to any specific sub segment of the market. Challenges of undertaking extensive
10 customer segmentation include ensuring that FEU remain within its guiding principles of
11 universal and uniform program offerings. In addition, targeted marketing such as direct mail can
12 be expensive and the ability to target bill inserts is limited at this stage of the new FEU billing
13 system. However, it is the FEU's intent to use customer segmentation more in the future such
14 as through the Customer Engagement Tool for Conservation Behaviours Program which will be
15 a means for capturing customer information and segmenting relevant messages.

16 3.1 Please provide an estimate of the administrative costs that would be added to the
17 program by targeting high-users.

18 **Response:**

19 Please refer to the response to FEI BCSEA Rebuttal IR 1.3.1.

20 3.2 Please explain whether or not the new FEU billing system could readily target bill
21 inserts to high-users as suggested and please provide an estimate as to when
22 this capability might be available.

23 **Response:**

24 The FEU billing system cannot selectively target bill inserts to high users. Detailed segmentation
25 to target specific groups within a rate class or region is not currently available, nor is it a future
26 planned feature for the FEU billing system.

27 The Customer Engagement Tool (CET) project, with implementation expected by late 2014, will
28 enable Home Energy Reports to be mailed or emailed to high users. Please refer to the
29 response to FEI BCSEA Rebuttal IR 1.3.1.
