B.C. Sustainable Energy Association  
c/o William J. Andrews, Barrister & Solicitor  
1958 Parkside Lane  
North Vancouver, B.C.  
V7G 1X5

Attention: Mr. William J. Andrews

Dear Mr. Andrews:

**Re: FortisBC Energy Inc. (FEI)**  
**Project No. 1598966**  
**Annual Review for 2019 Delivery Rates (the Application)**  
**Response to the B.C. Sustainable Energy Association and Sierra Club of British Columbia (BCSEA) Information Request (IR) No. 1**

---

On August 3, 2018, FEI filed the Application referenced above. In accordance with the British Columbia Utilities Commission Order G-143-18 setting out the Regulatory Timetable for the review of the Application, FEI respectfully submits the attached response to BCSEA IR No. 1.

If further information is required, please contact the undersigned.

Sincerely,

**FORTISBC ENERGY INC.**

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 1

1   **1.0   Topic:        2019-2022 Demand Side Management Application (Expenditures**  
2                               **Plan)**

3                               **Reference:   Exhibit B-2, section 1.2.2, pdf p. 12**

4                               “Approvals sought within the DSM Application include an increase in expenditures, an  
5                               adjustment of the amount of expenditures allowed as a forecast within FEI’s annual rate  
6                               setting mechanism and a change to the amortization period of DSM expenditures, all of  
7                               which will impact the 2019 forecasts within this Application. ... FEI anticipates that a  
8                               decision may be received for the DSM Application by the end of 2018 and if so will  
9                               incorporate the DSM Application decision in its compliance filing to this Application.”

10                              1.1    Please confirm that the increased DSM expenditures described above have  
11                              already been factored into FEI’s energy and demand forecasts for this current  
12                              application. If not confirmed, please explain.

13  
14    **Response:**

15    Not confirmed.

16    FEI forecasts use rates using a regression if a significant trend exists, or a 3-year average if a  
17    trend does not exist. The trend of decreased use rates due to DSM is already embedded in the  
18    forecast, and the only advantage of considering it separately would be if FEI expected a  
19    significant shift in the impact on use rates that was different than the annual impacts  
20    experienced in the past. Given the increase in spending over the 2019-2022 period that has  
21    been included in the DSM application there may be some impact that is incremental to the  
22    annual decreases we have observed in the past. FEI will review the final approved DSM plan  
23    for the potential for a step change impact once a decision is released, and in future years  
24    consider whether any adjustments need to be made.

25

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 2

1   **2.0   Topic:       Demand forecast**

2       **Reference:   Exhibit B-2, pdf pp. 33 - 49**

3       2.1   Please explain how the demand forecast methodology takes into account  
4           expected DSM savings.

5

6   **Response:**

7   Please refer to the response to BCSEA IR 1.1.1.

8

9

10

11       2.2   Please confirm that in FEI's 2019-2022 DSM Expenditure Schedule FEI  
12           proposes increased levels of DSM savings in 2019 to 2022. Are these higher  
13           levels of DSM savings taken into account in the demand forecasts in Chapter 3?

14

15   **Response:**

16   Confirmed that FEI's 2019-2022 DSM Expenditure Schedule includes increased levels of DSM  
17   spending and savings. Please refer to the response to BCSEA IR 1.1.1 for a discussion of how  
18   the DSM savings impact the demand forecasts.

19

20

21

22       2.3   Please provide in numeric and graphic form the levels of actual spending and  
23           savings on DSM programs for 2017 and 2018 to date, compared to the forecasts  
24           for 2017 and 2018.

25

26   **Response:**

27   FEI interprets the use of the term 'forecast' to mean 'plan' or in other words the values for 2017  
28   and 2018 contained in the 2014-2018 DSM Plan. The table and figures below are a summary of  
29   actual expenditures and GJ savings on DSM programs for 2017 and to the end of July 2018  
30   compared with the plan values for 2017 and 2018. The 2017 actual values are as presented in  
31   FEI's 2017 DSM Annual Report. FEI notes that DSM expenditures typically are highest in the  
32   second half of the year and has also presented the 2018 projected year-end values as prepared  
33   at the end of July.

Program Area	SPEND (\$000s)					GJ Savings				
	2017 Actual	2018 Actual July*	2017 Plan	2018 Plan	2018 Projected**	2017 Actual	2018 Actual July*	2017 Plan	2018 Plan	2018 Projected**
Residential	12,203	6,515	10,700	11,383	13,968	137,161	82,927	136,672	157,890	155,786
Commercial	10,834	4,865	10,416	10,051	11,361	238,688	88,073	237,665	183,258	248,590
Industrial	2,099	368	2,983	2,983	1,624	105,516	1,709	190,300	189,465	64,197
Low Income	2,644	1,097	3,247	3,483	2,878	47,263	13,849	27,768	28,190	56,973

2.4 Has the implementation of DSM measures by FEI customers been higher or lower than FEI forecast for 2017 and 2018 to date? Please respond in terms of major customer classes, for total energy used and for UPC.

**Response:**

There are many factors other than DSM Programs that can influence the total energy use and use per customer for FEI's customers and that are not possible to measure with any certainty. For this reason, total energy used and use per customer by rate class are not tracked as measures of performance for the DSM portfolio. Hence it is not possible to provide a response in terms of total energy used and for UPC.

Energy savings from DSM programs in 2017 were higher than plan for the Residential and Commercial Program Areas, but lower than plan for Industrial. These results can be viewed in FEI's DSM 2017 Annual Report. FEI did not prepare mid-year Plan values for the 2014-2018

19

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 4

- 1 DSM Plan and so cannot say at this point if 2018 implementation based on Energy Savings is
- 2 higher or lower than Plan.

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 5

1   **3.0   Topic:           Evaluation of the PBR Plan**

2           **Reference:   Exhibit B-2, section 1.4, pdf pp. 13-24**

3           3.1    Is it FEI's position that the current proceeding is the appropriate venue in which  
4                   to review and evaluate the current PBR system? Please explain.

5  
6    **Response:**

7    Consistent with past PBRs, FEI's position is that the appropriate venue to review and evaluate  
8    the current PBR Plan is in the regulatory period or periods following the current PBR Plan. As  
9    FEI is planning on filing an application for a next generation PBR plan to replace the current  
10   PBR Plan expiring at the end of 2019, the proceeding for review and consideration of a next  
11   Generation PBR application would be the appropriate venue to consider the experiences and  
12   incorporate the successes from the current PBR Plan.

13

14

15

16

17           3.2    Is it FEI's position that the O&M savings given in Table 1-2 represent savings  
18                   relative to spending that would have taken place under a cost-of-service  
19                   ratemaking formula, had PBR not been used?

20

21   **Response:**

22    FEI cannot speculate on whether the O&M savings, including both the formula O&M and PIF  
23    related savings indicated in Table 1-2, would have taken place under a cost-of-service  
24    ratemaking regime had PBR not been in place, as the conditions under a cost service  
25    ratemaking regime would have been different, including a shorter test period (i.e. one to two  
26    years) versus the six-year test period for the current PBR Plan.

27    Please also refer to the response to MoveUP IR 1.2.2.

28

29

30

31           3.2.1    If so, please detail FEI's methodology in making that assessment.

32

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 6

1 **Response:**

2 Please refer to the response to BCSEA IR 1.3.2.

3

4

5

6 3.2.2 If not, please explain how PBR should be assessed against cost-of-  
7 service ratemaking, in terms of savings.

8

9 **Response:**

10 Please refer to the response to BCSEA IR 1.3.2.

11

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 7

1   **4.0   Topic:        Biomethane O&M**

2       **Reference:   Exhibit B-2, section 6.3.3, pdf pp. 60 – 61 & section 7.2.2, pdf p. 68**

3       “The 2019 forecast O&M [for Biomethane] of \$1.369 million is \$0.248 million higher than  
4       the 2018 Approved O&M primarily due to assignment of additional resources to support  
5       supply development to meet the growing demand.” [pdf p. 61]

6       4.1     Please provide an update on the biomethane (RNG) program, addressing  
7       whether the price reductions from the BERC Rate Methodology proceeding and  
8       Commission Decision and Order G-133-16 have impacted biomethane sales.

9  
10    **Response:**

11    Since implementing the lower BERC rate approved by Commission Order G-133-16, FEI has  
12    noticed a strong increase in demand among residential and small commercial customers.  
13    Further, over the past year, FEI has also noted an increase in demand among commercial  
14    customers.

15    In the three years prior to the lower BERC rate (August 2013 to August 2016), growth in  
16    demand was fairly flat. There were 1,396 customers added for a cumulative total of 6,977 in that  
17    three-year period (an average of 465 new customers per year).

18    In contrast, FEI noticed a strong increase in demand starting in autumn 2016 when the new  
19    BERC rate took effect. In the two-year period from August 2016 through to August 2018 the  
20    customer count increased by 2,898 to a cumulative total of 9,875 (an average of 1,449 new  
21    customers per year).

22    Over the period leading up to August 2016, FEI was able to add several larger commercial  
23    customers (Rate Schedule 11B). After the BERC rate reduction in the fall of 2016, FEI added  
24    the University of BC as its first long-term customer.

25  
26

27

28       4.2     Please provide more detail on the “growing demand” for biomethane: is demand  
29       growing among both larger volume and smaller volume customers?

30  
31

31    **Response:**

32    Yes. Please refer to the response to BCSEA IR 1.4.1.

33  
34

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 8

1

2           4.3     Please discuss the outlook for further growth of the RNG program, including the  
3                   outlook for securing further biomethane supply contracts.

4

5     **Response:**

6     FEI has seen an increase in interest from suppliers to evaluate and develop new opportunities  
7     for RNG supply through active engagement and through a Request for Expressions of Interest  
8     released by FEI in July 2018. Several of these opportunities are progressing but until  
9     agreements have been signed, FEI will not comment on the specific location or size of these  
10    opportunities. Based on the existing status of the project evaluations and agreement  
11    discussions, FEI anticipates filing at least one new agreement this fall and additional  
12    agreements over the next few years. The current amount of RNG represented by these  
13    prospective projects is below the maximum allowance under section 2(3.8) of the Greenhouse  
14    Gas Reduction (Clean Energy) Regulation.

15

16

17

18                   4.3.1    What effect does FEI expect this to have on the BVA and recoveries  
19                            from delivery rates?

20

21     **Response:**

22     Generally, FEI expects some increase in O&M with an increase in supply as there will be a  
23     corresponding increase in the effort required to manage a larger number of supply projects. The  
24     BVA captures all costs for the RNG program, including the cost of securing new supply and  
25     offsetting recoveries from RNG customers (based on the BERC rate). To the extent that a costs  
26     are higher than revenues, the difference is recovered from all non-bypass customers through  
27     the BVA Rider and delivery rates. FEI expects an increase in total supply cost, an increase in  
28     total (BERC) recoveries driven by growth in demand and a corresponding increase in the BVA  
29     Rider. Given variability in natural gas commodity prices, carbon tax, new RNG supply cost,  
30     growth in company-wide throughput, and customer demand, it is difficult to determine the exact  
31     effect.

32

33

34

35

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 9

1           “The 2018 Projected O&M of \$1.928 million is \$0.807 million higher than the 2018  
2           Approved O&M of \$1.121 million. This is due to under forecasting of resources by  
3           approximately \$0.367 million, the Kelowna upgrader fire remediation cost of  
4           approximately \$0.463 million (partially offset by lower operating costs during  
5           remediation) and the Surrey interconnection regulatory proceeding costs \$0.075 million.”  
6           [pdf p. 61]

7           4.4     Please explain this under-forecasting of resources in more detail.

8

9           **Response:**

10          As discussed, FEI assigned more resources to the RNG program in order to increase supply in  
11          response to increased demand. The under-forecasting was a result of the timing of adding  
12          resources compared to the timing of filing the previous Annual Review.

13          The additional resources are being used to support new project development, existing  
14          operations and new project execution. Dedicated technical resources were added to support the  
15          increase in the number of operational projects and the initial feasibility analysis for new possible  
16          projects. Business resources were added to support new project assessment and contract  
17          negotiation.

18

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 10

1   **5.0   Topic:           Customer Satisfaction Index**

2           **Reference:   Exhibit B-2, Table 13-12, pdf p.156**

3           “The 2017 [CSI] result was 8.4, lower than the 8.8 score in 2016. Index contributor  
4           scores were lower in all areas. Although not conclusive, customer comments and  
5           statistical analysis suggest that the lower 2017 result may be associated with lower  
6           customer satisfaction with the cost of natural gas following commodity cost increases in  
7           October 2016, followed by a colder, wetter winter.”

8           5.1   Please provide the results of the statistical analysis related to whether the  
9           Customer Satisfaction Index is associated with commodity costs increases and  
10          colder, wetter winters.

11  
12   **Response:**

13   FEI clarifies that the analysis it conducted that suggests that the lower CSI scores were driven  
14   by a combination of commodity cost increases and a colder, wetter winter, was not “statistical”  
15   in nature. FEI’s review was a qualitative analysis of other research: first, to confirm that  
16   elements in FEI’s sphere of influence were not responsible for the drops; and second, to  
17   investigate customer verbatim captured from CSI study participants for indications as to what  
18   factor(s) were adversely affecting customer ratings of FEI.

19   FEI conducts continuous customer service research using a company called SQM to evaluate  
20   many customer interactions, including contact centre calls, self-service, and field interactions.  
21   This research includes outbound calls to a large sample of customers within 72 hours of their  
22   interaction with FEI representatives. The methodology is used, for example, to generate the  
23   company’s First Contact Resolution scores. The CSI study, by comparison, is conducted during  
24   a two-week period in the middle of each quarter using smaller sample sizes.

25   While all CSI sub-attributes were lower in comparison to 2016 results, our research data from  
26   SQM indicated that FEI service remained stable and of high-quality during 2017. The SQM  
27   research focuses exclusively on individual service transactions and feedback is gathered shortly  
28   after the transaction occurs. In contrast, although the CSI is helpful in providing a holistic  
29   impression of the Company’s overall service, its results are particularly sensitive to external  
30   factors like price or natural gas safety incidents that may have occurred in another jurisdiction.  
31   The CSI also asks customers to rate service quality for transactions up to six months in the  
32   past, so memories of events may have eroded with time. These types of factors are outside the  
33   control of FEI and it is for these reasons that FEI relies upon the CSI metric only as an  
34   informational indicator.

35   Because SQM results were stable in 2017, FEI next evaluated verbatim comments from CSI  
36   study participants to understand what factors might be adversely influencing scores. Results  
37   from this review follow.

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 11

1 During each CSI interview, participants are asked, “On a 10-point scale where 1 is “Not at all  
 2 satisfied” and 10 is “Fully satisfied,” how satisfied are you with the overall service provided by  
 3 FortisBC.” Respondents scoring FortisBC under 6 are asked why they evaluated the Company’s  
 4 service low. The following word cloud portrays the common words found in the verbatim  
 5 comments. The more prominent the word in the cloud, the more frequently it was mentioned in  
 6 responses.

7  
 8 From the review of verbatim comments, FEI concluded that the most prevalent factor repeatedly  
 9 mentioned by respondents related to underlying concerns about the price paid for natural gas.  
 10 FEI surmised that consumer concerns about prices were likely exacerbated because of the  
 11 particularly inclement weather experienced in late 2016 through the spring of 2017.

12  
 13  
 14  
 15 5.2 What does FEI plan to do to respond to the decline in the customer satisfaction  
 16 index score?  
 17

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 12

1 **Response:**

2 FEI continues to assess its practices and processes in order to improve customer satisfaction.  
3 While the CSI result in 2017 was lower than the score in 2016, this is attributed to lower scores  
4 in the first three quarters of 2017, possibly associated with the cost of natural gas and colder  
5 weather, as described in the reference above. CSI results since then have improved. In the  
6 fourth quarter of 2017, the CSI result rose to 8.8, and has averaged 8.6 for the first two quarters  
7 in 2018.

8

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 13

1   **6.0   Topic: SQI:   Transmission Reportable Incidents**

2   **Reference:   Exhibit B-2, section 13.2.3, pdf p. 157**

3   “The fourth Level 1 incident occurred in September 2017 and was the result of a  
4   contractor hitting a transmission pipeline while building an access road to a new  
5   residential development. The contractor had not called BC One Call to obtain location  
6   records, nor been issued a permit for work by FEI. Significant damage to the pipeline  
7   coating occurred. A stop work order was issued and the coating was repaired.” [pdf  
8   p.158]

9       6.1   Was there any release of natural gas in the above-noted incident?

10

11   **Response:**

12   There was no release of natural gas. The damage was limited to the coating.

13

14

15

16

17       “The first [2018] Level 1 incident took place in April 2018 when a mud slide struck and  
18       exposed a Transmission Pipeline near Castlegar. The pipeline was dented and will  
19       require repair.”

20       “The second [2018] Level 1 incident involved pipe along a section of river in the Falkland  
21       Valley that was exposed due to erosion. The potential for erosion was reported by  
22       patrols in April and May. The Company waited for water levels to recede in June before  
23       it could inspect and confirm the erosion.” [pdf p.158]

24       6.2   Does FEI expect there to be more incidents relating to erosion or slides in the  
25       future, as a result of climate change induced extreme weather events?

26

27   **Response:**

28   It is reasonable to expect the potential for more incidents relating to erosion or land slides in the  
29   future, whether due to climate change or other factors. FEI has a robust Natural Hazards  
30   Reduction Program to monitor and mitigate potential areas of concern that could impact FEI  
31   assets.

32

1    **7.0    Topic:            SQI: Annual GHG emissions**

2            **Reference:    Exhibit B-2, section 13.3, pdf p. 161**

3            BCSEA-SCBC has compiled the following table showing FEI's reported annual GHG  
4            emissions from 2009 to 2016:

	Estimated GHG Emission (tCO <sub>2</sub> e)
2009	171,312
2010	156,467
2011	137,059
2012	134,303
2013	127,940
2014	140,507*
2015	120,997
2016	124,077
2017	137,903
Source: FEU 2014 LTRP Proceeding, Exhibit B-4, BCSEA 1.18.4; FEI 2015 PBR Annual Review Proceeding, Exhibit B-4, BCSEA 7.1; FEI 2017 PBR Annual Review Proceeding, Exhibit B-2, p.145; current proceeding, pdf p. 161.	

5  
6

7            7.1        Please confirm that this table is accurate, or provide a corrected version.

8

9            **Response:**

10           Not confirmed. Please see the corrected table below. The 2009 to 2016 values were provided  
11           in FEI's response to BCSEA-SCBC IR 1.3.1 in FEI's Annual Review for 2018 Rates<sup>1</sup> and the  
12           2017 value is reported on page 152 of the Application.

Estimated GHG Emission (tCO <sub>2</sub> e)	
2009	161,793
2010	153,993
2011	137,059
2012	134,355
2013	127,940

<sup>1</sup> [http://www.bcuc.com/Documents/Proceedings/2017/DOC\\_50038\\_B-5\\_FEI\\_BCSEA-IR1-Resp.pdf](http://www.bcuc.com/Documents/Proceedings/2017/DOC_50038_B-5_FEI_BCSEA-IR1-Resp.pdf)

Estimated GHG Emission (tCO <sub>2</sub> e)	
2014	140,507 *
2015	120,997 *
2016	124,077 <sup>a</sup>
2017	137,903 <sup>b</sup>

1 Notes:

2 \* GHG Emissions for 2014-2017 adopted IPCC 4<sup>th</sup> Assessment Report for global warming potential.

3 <sup>a</sup> Value reported to BC Ministry of Environment. GHG emission reported to Environment Canada and  
4 Climate Change was 126,613 tCO<sub>2</sub>e. The difference is attributed to differing reporting requirements.

5 <sup>b</sup> Value reported to BC Ministry of Environment. GHG emission reported to Environment Canada and  
6 Climate Change was 142,534 tCO<sub>2</sub>e. The difference is attributed to differing reporting requirements.

7

8 The Environment Canada and Climate Change website provides GHG emission values for the  
9 organization based on the revised Global Warming Potential adopted in 2014 (as noted by the  
10 asterisk in the table provided above). Reporting using the Environment Canada Global Warming  
11 Potential standard provides a more comparable year to year comparison of GHG emissions.  
12 The revised GHG Emission values for FEI using the Environment Canada Global Warming  
13 Potential standard are as follows:

Estimated GHG Emission (tCO <sub>2</sub> e)	
2009	177,827
2010	171,059
2011	153,611
2012	150,648
2013	141,947

14

15

16

17 7.2 What measures did FEI take in 2017 and 2018 year-to-date to control and reduce  
18 its GHG emissions? Please provide an estimate of the cost in 2017 and 2018  
19 year-to-date of carrying out these measures.

20

21 **Response:**

22 FEI's 2017 and 2018 year-to-date programs designed for the direct reduction of GHG emissions  
23 or the improvement in GHG reporting estimates included leak detection and repair (LDAR), as  
24 well as a jointly sponsored fugitive emission best management plan for distribution facilities, an  
25 industry study on residential meter set leak emission factor estimates, and an industry study on

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 16

1 industrial meter set leak emission factor estimates. The cost of the LDAR program is estimated  
2 to be approximately \$50 to \$100 thousand per year while the contribution by FEI to the industry  
3 studies was approximately \$50 thousand.

4 In addition, there were both capital and O&M programs carried out that result in the potential  
5 reduction in GHG emissions. The programs included a continuation of the residential meter set  
6 replacement program, call before you dig (i.e. BC One Call), and leak detection surveys along  
7 distribution lines. These programs are driven by reasons other than GHG emissions reduction  
8 (i.e., public safety) with the potential reduction in GHGs as a co-benefit that cannot be  
9 quantified. As a result, the costs of these programs are not attributable to GHG emissions  
10 reduction measures.

11  
12  
13

14 7.3 How do these measures and their cost compare with measures taken in 2016?

15  
16 **Response:**

17 FEI's 2017 programs designed for the direct reduction of GHG emissions or the improvement in  
18 GHG reporting estimates included leak detection and repair surveys, similar to that completed in  
19 2016. Expenditures for the leak detection and repair surveys increased slightly for FEI LNG  
20 operations as third party vendors using thermal imaging were used at the Mt. Hayes LNG plant.  
21 This resulted in an increase of approximately \$15 thousand to O&M cost. The estimated GHG  
22 emissions accounted for through LDAR programs in 2017 were approximately equal to 2016.

23 Industry studies conducted in 2017 were approximately equal in expenditures for industry  
24 studies in 2016. Emission factors developed in these 2017 studies have not been adopted in  
25 FEI annual GHG emissions reporting and will be implemented in the subsequent calendar year.

26 FEI's 2016 capital and O&M programs carried out that resulted in the potential reduction in GHG  
27 emissions were similar to 2017 programs and included a residential meter set replacement  
28 program, call before you dig (i.e. BC One Call) and leak detection surveys along transmission  
29 and distribution lines.

30  
31  
32

33 7.4 How do these measures and their cost compare with measures expected in 2019  
34 and into the future?

35

FortisBC Energy Inc. (FEI or the Company) Annual Review for 2019 Rates (the Application)	Submission Date: September 18, 2018
Response to BC Sustainable Energy Association and Sierra Club BC (BCSEA) Information Request (IR) No. 1	Page 17

1 **Response:**

2 For existing programs, it is anticipated the cost of GHG emissions reduction programs will be  
3 similar to past years. These include residential meter set replacement program, call before you  
4 dig (i.e., BC One Call) and leak detection surveys along transmission and distribution lines.

5 Forecasting for industry studies is not available as projects for the next calendar year are  
6 proposed and selected annually in Q4.

7 The cost of Leak Detection and Repair Surveys at compressor and liquefied natural gas stations  
8 is expected to increase relative to 2017 levels. Use of thermal imaging devices by external third  
9 party accounts for this increase, as previous manual surveys were conducted using internal  
10 personnel time and resources. Cost is approximately \$15 to \$25 thousand per station; however,  
11 the rate of adoption by different assets may differ.

12 Lastly, other compliance measures associated with GHG emissions reporting and compliance  
13 requirements face uncertainty. Specifically, Environment and Climate Change Canada (ECCC)  
14 *Regulations Respecting Reduction in the Release of Methane and Certain Volatile Organic*  
15 *Compounds* are subject to equivalency agreements between ECCC with BC Ministry of  
16 Environment. Should ECCC requirements be adopted, additional O&M and capital compliance  
17 costs are expected. The timeframe associated with adopting these changes is not expected  
18 until 2020.
